In fact, we may easily perceive that among the differences, which distinguish men, several pass for natural, which are merely the work of habit and the different kinds of life adopted by men living in a social way. Thus a robust or delicate constitution, and the strength and weakness which depend on it, are oftener produced by the hardy or effeminate manner in which a man has been brought up, than by the primitive constitution of his body. It is the same thus in regard to the forces of the mind; and education not only produces a difference between those minds which are cultivated and those which are not, but even increases that which is found among the first in proportion to their culture; for let a giant and a dwarf set out in the same path, the giant at every step will acquire a new advantage over the dwarf. Now, if we compare the prodigious variety in the education and manner of living of the different orders of men in a civil state, with the simplicity and uniformity that prevails in the animal and savage life, where all the individuals make use of the same aliments, live in the same manner, and do exactly the same things, we shall easily conceive how much the difference between man and man in the state of nature must be less than in the state of society, and how much every inequality of institution must increase the natural inequalities of the human species.

But though nature in the distribution of her gifts should really affect all the preferences that are ascribed to her, what advantage could the most favoured derive from her partiality, to the prejudice of others, in a state of things, which scarce admitted any kind of relation between her pupils? Of what service can beauty be, where there is no love? What will wit avail people who don't speak, or craft those who have no affairs to transact? Authors are constantly crying out, that the strongest would oppress the weakest; but let them explain what they mean by the word oppression. One man will rule with violence, another will groan under a constant subjection to all his caprices: this is indeed precisely what I observe among us, but I don't see how it can be said of savage men, into whose heads it would be a harder matter to drive even the meaning of the words domination and servitude. One man might, indeed, seize on the fruits which another had gathered, on the game which another had killed, on the cavern which another had occupied for shelter; but how is it possible he should ever exact obedience from him, and what chains of dependence can there be among men who possess nothing? If I am driven from one tree, I have nothing to do but look out for another; if one place is made uneasy to me, what can hinder me from taking up my quarters elsewhere? But suppose I should meet a man so much superior to me in strength, and withal so wicked, so lazy and so barbarous as to oblige me to provide for his subsistence while he remains idle; he must resolve not to take his eyes from me a single moment, to bind me fast before he can take the least nap, lest I should kill him or give him the slip during his sleep: that is to say, he must expose himself voluntarily to much greater troubles than what he seeks to avoid, than any he gives me. And after all, let him abate ever so little of his vigilance; let him at some sudden noise but turn his head another way; I am already buried in the forest, my fetters are broke, and he never sees me again.

But without insisting any longer upon these details, every one must see that, as the bonds of servitude are formed merely by the mutual dependence of men one upon another and the reciprocal necessities which unite them, it is impossible for one man to enslave another, without having first reduced him to a condition in which he can not live without the enslaver's assistance; a condition which, as it does not exist in a state of nature, must leave every man his own master, and render the law of the strongest

altogether vain and useless.

Having proved that the inequality, which may subsist between man and man in a state of nature, is almost imperceivable, and that it has very little influence, I must now proceed to show its origin, and trace its progress, in the successive developments of the human mind. After having showed, that perfectibility, the social virtues, and the other faculties, which natural man had received _in potentia_, could never be developed of themselves, that for that purpose there was a necessity for the fortuitous concurrence of several foreign causes, which might never happen, and without which he must have eternally remained in his primitive condition; I must proceed to consider and bring together the different accidents which may have perfected the human understanding by debasing the species, render a being wicked by rendering him sociable, and from so remote a term bring man at last and the world to the point in which we now see them.

I must own that, as the events I am about to describe might have happened many different ways, my choice of these I shall assign can be grounded on nothing but mere conjecture; but besides these conjectures becoming reasons, when they are not only the most probable that can be drawn from the nature of things, but the only means we can have of discovering truth, the consequences I mean to deduce from mine will not be merely conjectural, since, on the principles I have just established, it is impossible to form any other system, that would not supply me with the same results, and from which I might not draw the same conclusions.

This will authorize me to be the more concise in my reflections on the manner, in which the lapse of time makes amends for the little verisimilitude of events; on the surprising power of very trivial causes, when they act without intermission; on the impossibility there is on the one hand of destroying certain Hypotheses, if on the other we can not give them the degree of certainty which facts must be allowed to possess; on its being the business of history, when two facts are proposed, as real, to be connected by a chain of intermediate facts which are either unknown or considered as such, to furnish such facts as may actually connect them; and the business of philosophy, when history is silent, to point out similar facts which may answer the same purpose; in fine on the privilege of similitude, in regard to events, to reduce facts to a much smaller number of different classes than is generally imagined. It suffices me to offer these objects to the consideration of my judges; it suffices me to have conducted my inquiry in such a manner as to save common readers the trouble of considering them.

SECOND PART

The first man, who, after enclosing a piece of ground, took it into his head to say, "This is mine," and found people simple enough to believe him, was the true founder of civil society. How many crimes, how many wars, how many murders, how many misfortunes and horrors, would that man have saved the human species, who pulling up the stakes or filling up the ditches should have cried to his fellows: Be sure not to listen to this imposter; you are lost, if you forget that the fruits of the earth belong equally to us all, and the earth itself to nobody! But it is highly probable that things were now come to such a pass, that they could not continue much longer in the same way; for as this idea of property depends on several prior ideas which could only spring up gradually one after another, it was not formed all at once in the human mind: men must have made great progress; they must have acquired a great stock of industry and knowledge, and transmitted and increased it from age to age before they could arrive at this last term of the state of nature. Let us therefore take up things a little higher, and collect into one point of view, and in their most natural order, this slow succession of events and mental improvements.

The first sentiment of man was that of his existence, his first care that of preserving it. The productions of the earth yielded him all the assistance he required; instinct prompted him to make use of them. Among the various appetites, which made him at different times experience different modes of existence, there was one that excited him to perpetuate his species; and this blind propensity, quite void of anything like pure love or affection, produced nothing but an act that was merely animal. The present heat once allayed, the sexes took no further notice of each other, and even the child ceased to have any tie in his mother, the moment he ceased to want her assistance.

Such was the condition of infant man; such was the life of an animal confined at first to pure sensations, and so far from harbouring any thought of forcing her gifts from nature, that he scarcely availed himself of those which she offered to him of her own accord. But difficulties soon arose, and there was a necessity for learning how to surmount them: the height of some trees, which prevented his reaching their fruits; the competition of other animals equally fond of the same fruits; the fierceness of many that even aimed at his life; these were so many circumstances, which obliged him to apply to bodily exercise. There was a necessity for becoming active, swift-footed, and sturdy in battle. The natural arms, which are stones and the branches of trees, soon offered themselves to his assistance. He learned to surmount the obstacles of nature, to contend in case of necessity with other animals, to dispute his

subsistence even with other men, or indemnify himself for the loss of whatever he found himself obliged to part with to the strongest.

In proportion as the human species grew more numerous, and extended itself, its pains likewise multiplied and increased. The difference of soils, climates and seasons, might have forced men to observe some difference in their way of living. Bad harvests, long and severe winters, and scorching summers which parched up all the fruits of the earth, required extraordinary exertions of industry. On the sea shore, and the banks of rivers, they invented the line and the hook, and became fishermen and ichthyophagous. In the forests they made themselves bows and arrows, and became huntsmen and warriors. In the cold countries they covered themselves with the skins of the beasts they had killed; thunder, a volcano, or some happy accident made them acquainted with fire, a new resource against the rigours of winter: they discovered the method of preserving this element, then that of reproducing it, and lastly the way of preparing with it the flesh of animals, which heretofore they devoured raw from the carcass.

This reiterated application of various beings to himself, and to one another, must have naturally engendered in the mind of man the idea of certain relations. These relations, which we express by the words, great, little, strong, weak, swift, slow, fearful, bold, and the like, compared occasionally, and almost without thinking of it, produced in him some kind of reflection, or rather a mechanical prudence, which pointed out to him the precautions most essential to his preservation and safety.

The new lights resulting from this development increased his superiority over other animals, by making him sensible of it. He laid himself out to ensnare them; he played them a thousand tricks; and though several surpassed him in strength or in swiftness, he in time became the master of those that could be of any service to him, and a sore enemy to those that could do him any mischief. 'Tis thus, that the first look he gave into himself produced the first emotion of pride in him; 'tis thus that, at a time he scarce knew how to distinguish between the different ranks of existence, by attributing to his species the first rank among animals in general, he prepared himself at a distance to pretend to it as an individual among those of his own species in particular.

Though other men were not to him what they are to us, and he had scarce more intercourse with them than with other animals, they were not overlooked in his observations. The conformities, which in time he might discover between them, and between himself and his female, made him judge of those he did not perceive; and seeing that they all behaved as himself would have done in similar circumstances, he concluded that their manner of thinking and willing was quite conformable to his own; and this important truth, when once engraved deeply on his mind, made him follow, by a presentiment as sure as any logic, and withal much quicker, the best rules of conduct, which for the sake of his own safety and advantage it was proper he should observe towards them.

Instructed by experience that the love of happiness is the sole principle of all human actions, he found himself in a condition to distinguish the few cases, in which common interest might authorize him to build upon the assistance of his fellows, and those still fewer, in which a competition of interests might justly render it suspected. In the first case he united with them in the same flock, or at most by some kind of free association which obliged none of its members, and lasted no longer than the transitory necessity that had given birth to it. In the second case every one aimed at his own private advantage, either by open force if he found himself strong enough, or by cunning and address if he thought himself too weak to use violence.

Such was the manner in which men might have insensibly acquired some gross idea of their mutual engagements and the advantage of fulfilling them, but this only as far as their present and sensible interest required; for as to foresight they were utter strangers to it, and far from troubling their heads about a distant futurity, they scarce thought of the day following. Was a deer to be taken? Every one saw that to succeed he must faithfully stand to his post; but suppose a hare to have slipped by within reach of any one of them, it is not to be doubted but he pursued it without scruple, and when he had seized his prey never reproached himself with having made his companions miss theirs.

We may easily conceive that such an intercourse scarce required a more refined language than that of crows and monkeys, which flock together almost in the same manner. Inarticulate exclamations, a great many gestures, and some imitative sounds, must have been for a long time the universal language of mankind, and by joining to these in every country some articulate and conventional sounds, of which, as I have already hinted, it is not very easy to explain the institution, there arose particular languages, but rude, imperfect, and such nearly as are to be found at this day among several savage nations. My pen straightened by the rapidity of time, the abundance of things I have to say, and the almost insensible progress of the first improvements, flies like an arrow over numberless ages, for the slower the succession of events, the quicker I may allow myself to be in relating them.

At length, these first improvements enabled man to improve at a greater rate. Industry grew perfect in proportion as the mind became more enlightened. Men soon ceasing to fall asleep under the first tree, or take shelter in the first cavern, lit upon some hard

and sharp kinds of stone resembling spades or hatchets, and employed them to dig the ground, cut down trees, and with the branches build huts, which they afterwards bethought themselves of plastering over with clay or dirt. This was the epoch of a first revolution, which produced the establishment and distinction of families, and which introduced a species of property, and along with it perhaps a thousand quarrels and battles. As the strongest however were probably the first to make themselves cabins, which they knew they were able to defend, we may conclude that the weak found it much shorter and safer to imitate than to attempt to dislodge them: and as to those, who were already provided with cabins, no one could have any great temptation to seize upon that of his neighbour, not so much because it did not belong to him, as because it could be of no service to him; and as besides to make himself master of it, he must expose himself to a very sharp conflict with the present occupiers.

The first developments of the heart were the effects of a new situation, which united husbands and wives, parents and children, under one roof; the habit of living together gave birth to the sweetest sentiments the human species is acquainted with, conjugal and paternal love. Every family became a little society, so much the more firmly united, as a mutual attachment and liberty were the only bonds of it; and it was now that the sexes, whose way of life had been hitherto the same, began to adopt different manners and customs. The women became more sedentary, and accustomed themselves to stay at home and look after the children, while the men rambled abroad in quest of subsistence for the whole family. The two sexes likewise by living a little more at their ease began to lose somewhat of their usual ferocity and sturdiness; but if on the one hand individuals became less able to engage separately with wild beasts, they on the other were more easily got together to make a common resistance against them.

In this new state of things, the simplicity and solitariness of man's life, the limitedness of his wants, and the instruments which he had invented to satisfy them, leaving him a great deal of leisure, he employed it to supply himself with several conveniences unknown to his ancestors; and this was the first yoke he inadvertently imposed upon himself, and the first source of mischief which he prepared for his children; for besides continuing in this manner to soften both body and mind, these conveniences having through use lost almost all their aptness to please, and even degenerated into real wants, the privation of them became far more intolerable than the possession of them had been agreeable; to lose them was a misfortune, to possess them no happiness.

Here we may a little better discover how the use of speech insensibly commences or improves in the bosom of every family, and may likewise from conjectures concerning the manner in which divers particular causes might have propagated language, and accelerated its progress by rendering it every day more and more necessary. Great inundations or earthquakes surrounded inhabited districts with water or precipices, portions of the continent were by revolutions of the globe torn off and split into islands. It is obvious that among men thus collected, and forced to live together, a common idiom must have started up much sooner, than among those who freely wandered through the forests of the main land. Thus it is very possible that the inhabitants of the islands formed in this manner, after their first essays in navigation, brought among us the use of speech; and it is very probable at least that society and languages commenced in islands and even acquired perfection there, before the inhabitants of the continent knew anything of either.

Everything now begins to wear a new aspect. Those who heretofore wandered through the woods, by taking to a more settled way of life, gradually flock together, coalesce into several separate bodies, and at length form in every country distinct nations, united in character and manners, not by any laws or regulations, but by an uniform manner of life, a sameness of provisions, and the common influence of the climate. A permanent neighborhood must at last infallibly create some connection between different families. The transitory commerce required by nature soon produced, among the youth of both sexes living in contiguous cabins, another kind of commerce, which besides being equally agreeable is rendered more durable by mutual intercourse. Men begin to consider different objects, and to make comparisons; they insensibly acquire ideas of merit and beauty, and these soon produce sentiments of preference. By seeing each other often they contract a habit, which makes it painful not to see each other always. Tender and agreeable sentiments steal into the soul, and are by the smallest opposition wound up into the most impetuous fury: Jealousy kindles with love; discord triumphs; and the gentlest of passions requires sacrifices of human blood to appease it.

In proportion as ideas and sentiments succeed each other, and the head and the heart exercise themselves, men continue to shake off their original wildness, and their connections become more intimate and extensive. They now begin to assemble round a great tree: singing and dancing, the genuine offspring of love and leisure, become the amusement or rather the occupation of the men and women, free from care, thus gathered together. Every one begins to survey the rest, and wishes to be surveyed himself; and public esteem acquires a value. He who sings or dances best; the handsomest, the strongest, the most dexterous, the most eloquent, comes to be the most respected: this was the first step towards inequality, and at the same time towards vice. From these first preferences there proceeded on one side vanity and contempt, on the other envy and shame; and the fermentation raised by these new leavens at length produced combinations fatal to happiness and innocence.

Men no sooner began to set a value upon each other, and know what esteem was, than each laid claim to it, and it was no longer safe for any man to refuse it to another. Hence the first duties of civility and politeness, even among savages; and hence every voluntary injury became an affront, as besides the mischief, which resulted from it as an injury, the party offended was sure to find in it a contempt for his person more intolerable than the mischief itself. It was thus that every man, punishing the contempt expressed for him by others in proportion to the value he set upon himself, the effects of revenge became terrible, and men learned to be sanguinary and cruel. Such precisely was the degree attained by most of the savage nations with whom we are acquainted. And it is for want of sufficiently distinguishing ideas, and observing at how great a distance these people were from the first state of nature, that so many authors have hastily concluded that man is naturally cruel, and requires a regular system of police to be reclaimed; whereas nothing can be more gentle than he in his primitive state, when placed by nature at an equal distance from the stupidity of brutes, and the pernicious good sense of civilized man; and equally confined by instinct and reason to the care of providing against the mischief which threatens him, he is withheld by natural compassion from doing any injury to others, so far from being ever so little prone even to return that which he has received. For according to the axiom of the wise Locke, Where there is no property, there can be no injury.

But we must take notice, that the society now formed and the relations now established among men required in them qualities different from those, which they derived from their primitive constitution; that as a sense of morality began to insinuate itself into human actions, and every man, before the enacting of laws, was the only judge and avenger of the injuries he had received, that goodness of heart suitable to the pure state of nature by no means suited infant society; that it was necessary punishments should become severer in the same proportion that the opportunities of offending became more frequent, and the dread of vengeance add strength to the too weak curb of the law. Thus, though men were become less patient, and natural compassion had already suffered some alteration, this period of the development of the human faculties, holding a just mean between the indolence of the primitive state, and the petulant activity of self-love, must have been the happiest and most durable epoch. The more we reflect on this state, the more convinced we shall be, that it was the least subject of any to revolutions, the best for man, and that nothing could have drawn him out of it but some fatal accident, which, for the public good, should never have happened. The example of the savages, most of whom have been found in this condition, seems to confirm that mankind was formed ever to remain in it, that this condition is the real youth of the world, and that all ulterior improvements have been so many steps, in appearance towards the perfection of individuals, but in fact towards the decrepitness of the species.

As long as men remained satisfied with their rustic cabins; as long as they confined themselves to the use of clothes made of the skins of other animals, and the use of thorns and fish-bones, in putting these skins together; as long as they continued to consider feathers and shells as sufficient ornaments, and to paint their bodies of different colours, to improve or ornament their bows and arrows, to form and scoop out with sharp-edged stones some little fishing boats, or clumsy instruments of music; in a word, as long as they undertook such works only as a single person could finish, and stuck to such arts as did not require the joint endeavours of several hands, they lived free, healthy, honest and happy, as much as their nature would admit, and continued to enjoy with each other all the pleasures of an independent intercourse; but from the moment one man began to stand in need of another's assistance; from the moment it appeared an advantage for one man to possess the quantity of provisions requisite for two, all equality vanished; property started up; labour became necessary; and boundless forests became smiling fields, which it was found necessary to water with human sweat, and in which slavery and misery were soon seen to sprout out and grow with the fruits of the earth.

Metallurgy and agriculture were the two arts whose invention produced this great revolution. With the poet, it is gold and silver, but with the philosopher it is iron and corn, which have civilized men, and ruined mankind. Accordingly both one and the other were unknown to the savages of America, who for that very reason have always continued savages; nay other nations seem to have continued in a state of barbarism, as long as they continued to exercise one only of these arts without the other; and perhaps one of the best reasons that can be assigned, why Europe has been, if not earlier, at least more constantly and better civilized than the other quarters of the world, is that she both abounds most in iron and is best qualified to produce corn.

It is a very difficult matter to tell how men came to know anything of iron, and the art of employing it: for we are not to suppose that they should of themselves think of digging it out of the mines, and preparing it for fusion, before they knew what could be the result of such a process. On the other hand, there is the less reason to attribute this discovery to any accidental fire, as mines are formed nowhere but in dry and barren places, and such as are bare of trees and plants, so that it looks as if nature had taken pains to keep from us so mischievous a secret. Nothing therefore remains but the extraordinary circumstance of some volcano, which, belching forth metallic substances ready fused, might have given the spectators a notion of imitating that operation of nature; and after all we

must suppose them endued with an extraordinary stock of courage and foresight to undertake so painful a work, and have, at so great a distance, an eye to the advantages they might derive from it; qualities scarcely suitable but to heads more exercised, than those of such discoverers can be supposed to have been.

As to agriculture, the principles of it were known a long time before the practice of it took place, and it is hardly possible that men, constantly employed in drawing their subsistence from trees and plants, should not have early hit on the means employed by nature for the generation of vegetables; but in all probability it was very late before their industry took a turn that way, either because trees, which with their land and water game supplied them with sufficient food, did not require their attention; or because they did not know the use of corn; or because they had no instruments to cultivate it; or because they were destitute of foresight in regard to future necessities; or in fine, because they wanted means to hinder others from running away with the fruit of their labours. We may believe that on their becoming more industrious they began their agriculture by cultivating with sharp stones and pointed sticks a few pulse or roots about their cabins; and that it was a long time before they knew the method of preparing corn, and were provided with instruments necessary to raise it in large quantities; not to mention the necessity there is, in order to follow this occupation and sow lands, to consent to lose something at present to gain a great deal hereafter; a precaution very foreign to the turn of man's mind in a savage state, in which, as I have already taken notice, he can hardly foresee his wants from morning to night.

For this reason the invention of other arts must have been necessary to oblige mankind to apply to that of agriculture. As soon as men were wanted to fuse and forge iron, others were wanted to maintain them. The more hands were employed in manufactures, the fewer hands were left to provide subsistence for all, though the number of mouths to be supplied with food continued the same; and as some required commodities in exchange for their iron, the rest at last found out the method of making iron subservient to the multiplication of commodities. Hence on the one hand husbandry and agriculture, and on the other the art of working metals and of multiplying the uses of them.

To the tilling of the earth the distribution of it necessarily succeeded, and to property once acknowledged, the first rules of justice: for to secure every man his own, every man must have something. Moreover, as men began to extend their views to futurity, and all found themselves in possession of more or less goods capable of being lost, every one in particular had reason to fear, lest reprisals should be made on him for any injury he might do to others. This origin is so much the more natural, as it is impossible to conceive how property can flow from any other source but industry; for what can a man add but his labour to things which he has not made, in order to acquire a property in them? 'Tis the labour of the hands alone, which giving the husbandman a title to the produce of the land he has tilled gives him a title to the land itself, at least till he has gathered in the fruits of it, and so on from year to year; and this enjoyment forming a continued possession is easily transformed into a property. The ancients, says Grotius, by giving to Ceres the epithet of Legislatrix, and to a festival celebrated in her honour the name of Thesmorphoria, insinuated that the distribution of lands produced a new kind of right; that is, the right of property different from that which results from the law of nature.

Things thus circumstanced might have remained equal, if men's talents had been equal, and if, for instance, the use of iron, and the consumption of commodities had always held an exact proportion to each other; but as this proportion had no support, it was soon broken. The man that had most strength performed most labour; the most dexterous turned his labour to best account; the most ingenious found out methods of lessening his labour; the husbandman required more iron, or the smith more corn, and while both worked equally, one earned a great deal by his labour, while the other could scarce live by his. It is thus that natural inequality insensibly unfolds itself with that arising from a variety of combinations, and that the difference among men, developed by the difference of their circumstances, becomes more sensible, more permanent in its effects, and begins to influence in the same proportion the condition of private persons.

Things once arrived at this period, it is an easy matter to imagine the rest. I shall not stop to describe the successive inventions of other arts, the progress of language, the trial and employments of talents, the inequality of fortunes, the use or abuse of riches, nor all the details which follow these, and which every one may easily supply. I shall just give a glance at mankind placed in this new order of things.

Behold then all our faculties developed; our memory and imagination at work, self-love interested; reason rendered active; and the mind almost arrived at the utmost bounds of that perfection it is capable of. Behold all our natural qualities put in motion; the rank and condition of every man established, not only as to the quantum of property and the power of serving or hurting others, but likewise as to genius, beauty, strength or address, merit or talents; and as these were the only qualities which could command

respect, it was found necessary to have or at least to affect them. It was requisite for men to be thought what they really were not. To be and to appear became two very different things, and from this distinction sprang pomp and knavery, and all the vices which form their train. On the other hand, man, heretofore free and independent, was now in consequence of a multitude of new wants brought under subjection, as it were, to all nature, and especially to his fellows, whose slave in some sense he became even by becoming their master; if rich, he stood in need of their services, if poor, of their assistance; even mediocrity itself could not enable him to do without them. He must therefore have been continually at work to interest them in his happiness, and make them, if not really, at least apparently find their advantage in labouring for his: this rendered him sly and artful in his dealings with some, imperious and cruel in his dealings with others, and laid him under the necessity of using ill all those whom he stood in need of, as often as he could not awe them into a compliance with his will, and did not find it his interest to purchase it at the expense of real services. In fine, an insatiable ambition, the rage of raising their relative fortunes, not so much through real necessity, as to over-top others, inspire all men with a wicked inclination to injure each other, and with a secret jealousy so much the more dangerous, as to carry its point with the greater security, it often puts on the face of benevolence. In a word, sometimes nothing was to be seen but a contention of endeavours on the one hand, and an opposition of interests on the other, while a secret desire of thriving at the expense of others constantly prevailed. Such were the first effects of property, and the inseparable attendants of infant inequality.

Riches, before the invention of signs to represent them, could scarce consist in anything but lands and cattle, the only real goods which men can possess. But when estates increased so much in number and in extent as to take in whole countries and touch each other, it became impossible for one man to aggrandise himself but at the expense of some other; and the supernumerary inhabitants, who were too weak or too indolent to make such acquisitions in their turn, impoverished without losing anything, because while everything about them changed they alone remained the same, were obliged to receive or force their subsistence from the hands of the rich. And hence began to flow, according to the different characters of each, domination and slavery, or violence and rapine. The rich on their side scarce began to taste the pleasure of commanding, when they preferred it to every other; and making use of their old slaves to acquire new ones, they no longer thought of anything but subduing and enslaving their neighbours; like those ravenous wolves, who having once tasted human flesh, despise every other food, and devour nothing but men for the future.

It is thus that the most powerful or the most wretched, respectively considering their power and wretchedness as a kind of title to the substance of others, even equivalent to that of property, the equality once broken was followed by the most shocking disorders. It is thus that the usurpations of the rich, the pillagings of the poor, and the unbridled passions of all, by stifling the cries of natural compassion, and the as yet feeble voice of justice, rendered man avaricious, wicked and ambitious. There arose between the title of the strongest, and that of the first occupier a perpetual conflict, which always ended in battery and bloodshed. Infant society became a scene of the most horrible warfare: Mankind thus debased and harassed, and no longer able to retreat, or renounce the unhappy acquisitions it had made; labouring, in short merely to its confusion by the abuse of those faculties, which in themselves do it so much honour, brought itself to the very brink of ruin and destruction.

Attonitus novitate mali, divesque miserque, Effugere optat opes; et quoe modo voverat, odit.

But it is impossible that men should not sooner or later have made reflections on so wretched a situation, and upon the calamities with which they were overwhelmed. The rich in particular must have soon perceived how much they suffered by a perpetual war, of which they alone supported all the expense, and in which, though all risked life, they alone risked any substance. Besides, whatever colour they might pretend to give their usurpations, they sufficiently saw that these usurpations were in the main founded upon false and precarious titles, and that what they had acquired by mere force, others could again by mere force wrest out of their hands, without leaving them the least room to complain of such a proceeding. Even those, who owed all their riches to their own industry, could scarce ground their acquisitions upon a better title. It availed them nothing to say, 'Twas I built this wall; I acquired this spot by my labour. Who traced it out for you, another might object, and what right have you to expect payment at our expense for doing that we did not oblige you to do? Don't you know that numbers of your brethren perish, or suffer grievously for want of what you possess more than suffices nature, and that you should have had the express and unanimous consent of mankind to appropriate to yourself of their common, more than was requisite for your private subsistence? Destitute of solid reasons to justify, and sufficient force to defend himself; crushing individuals with ease, but with equal ease crushed by numbers; one against all, and unable, on account of mutual jealousies, to unite with his equals against banditti united by the common hopes of pillage; the rich man, thus pressed by necessity, at last conceived the deepest project that ever entered the human mind: this was to employ in his favour the very forces that attacked him, to make allies of his enemies, to inspire them with other maxims, and make them adopt other institutions as favourable to his pretensions, as the law of nature was unfavourable to them.

With this view, after laying before his neighbours all the horrors of a situation, which armed them all one against another, which rendered their possessions as burdensome as their wants were intolerable, and in which no one could expect any safety either in poverty or riches, he easily invented specious arguments to bring them over to his purpose. "Let us unite," said he, "to secure the weak from oppression, restrain the ambitious, and secure to every man the possession of what belongs to him: Let us form rules of justice and peace, to which all may be obliged to conform, which shall not except persons, but may in some sort make amends for the caprice of fortune, by submitting alike the powerful and the weak to the observance of mutual duties. In a word, instead of turning our forces against ourselves, let us collect them into a sovereign power, which may govern us by wise laws, may protect and defend all the members of the association, repel common enemies, and maintain a perpetual concord and harmony among us."

Much fewer words of this kind were sufficient to draw in a parcel of rustics, whom it was an easy matter to impose upon, who had besides too many quarrels among themselves to live without arbiters, and too much avarice and ambition to live long without masters. All offered their necks to the yoke in hopes of securing their liberty; for though they had sense enough to perceive the advantages of a political constitution, they had not experience enough to see beforehand the dangers of it; those among them, who were best qualified to foresee abuses, were precisely those who expected to benefit by them; even the soberest judged it requisite to sacrifice one part of their liberty to ensure the other, as a man, dangerously wounded in any of his limbs, readily parts with it to save the rest of his body.

Such was, or must have been, had man been left to himself, the origin of society and of the laws, which increased the fetters of the weak, and the strength of the rich; irretrievably destroyed natural liberty, fixed for ever the laws of property and inequality; changed an artful usurpation into an irrevocable title; and for the benefit of a few ambitious individuals subjected the rest of mankind to perpetual labour, servitude, and misery. We may easily conceive how the establishment of a single society rendered that of all the rest absolutely necessary, and how, to make head against united forces, it became necessary for the rest of mankind to unite in their turn. Societies once formed in this manner, soon multiplied or spread to such a degree, as to cover the face of the earth; and not to leave a corner in the whole universe, where a man could throw off the yoke, and withdraw his head from under the often ill-conducted sword which he saw perpetually hanging over it. The civil law being thus become the common rule of citizens, the law of nature no longer obtained but among the different societies, in which, under the name of the law of nations, it was qualified by some tacit conventions to render commerce possible, and supply the place of natural compassion, which, losing by degrees all that influence over societies which it originally had over individuals, no longer exists but in some great souls, who consider themselves as citizens of the world, and forcing the imaginary barriers that separate people from people, after the example of the Sovereign Being from whom we all derive our existence, make the whole human race the object of their benevolence.

Political bodies, thus remaining in a state of nature among themselves, soon experienced the inconveniences which had obliged individuals to quit it; and this state became much more fatal to these great bodies, than it had been before to the individuals which now composed them. Hence those national wars, those battles, those murders, those reprisals, which make nature shudder and shock reason; hence all those horrible prejudices, which make it a virtue and an honour to shed human blood. The worthiest men learned to consider the cutting the throats of their fellows as a duty; at length men began to butcher each other by thousands without knowing for what; and more murders were committed in a single action, and more horrible disorders at the taking of a single town, than had been committed in the state of nature during ages together upon the whole face of the earth. Such are the first effects we may conceive to have arisen from the division of mankind into different societies. Let us return to their institution.

I know that several writers have assigned other origins of political society; as for instance, the conquests of the powerful, or the union of the weak; and it is no matter which of these causes we adopt in regard to what I am going to establish; that, however, which I have just laid down, seems to me the most natural, for the following reasons: First, because, in the first case, the right of conquest being in fact no right at all, it could not serve as a foundation for any other right, the conqueror and the conquered ever remaining with respect to each other in a state of war, unless the conquered, restored to the full possession of their liberty, should freely choose their conqueror for their chief. Till then, whatever capitulations might have been made between them, as these capitulations were founded upon violence, and of course _de facto_ null and void, there could not have existed in this hypothesis either a true society, or a political body, or any other law but that of the strongest. Second, because these words strong and weak, are ambiguous in the second case; for during the interval between the establishment of the right of property or prior occupation and that of political government, the meaning of these terms is better expressed by the words poor and rich, as before the establishment of laws men in reality had no other means of reducing their equals, but by invading the property of these equals, or by parting with some of their own property to them. Third, because the poor having nothing but their liberty to lose, it would have

been the height of madness in them to give up willingly the only blessing they had left without obtaining some consideration for it: whereas the rich being sensible, if I may say so, in every part of their possessions, it was much easier to do them mischief, and therefore more incumbent upon them to guard against it; and because, in fine, it is but reasonable to suppose, that a thing has been invented by him to whom it could be of service rather than by him to whom it must prove detrimental.

Government in its infancy had no regular and permanent form. For want of a sufficient fund of philosophy and experience, men could see no further than the present inconveniences, and never thought of providing remedies for future ones, but in proportion as they arose. In spite of all the labours of the wisest legislators, the political state still continued imperfect, because it was in a manner the work of chance; and, as the foundations of it were ill laid, time, though sufficient to discover its defects and suggest the remedies for them, could never mend its original vices. Men were continually repairing; whereas, to erect a good edifice, they should have begun as Lycurgus did at Sparta, by clearing the area, and removing the old materials. Society at first consisted merely of some general conventions which all the members bound themselves to observe, and for the performance of which the whole body became security to every individual. Experience was necessary to show the great weakness of such a constitution, and how easy it was for those, who infringed it, to escape the conviction or chastisement of faults, of which the public alone was to be both the witness and the judge; the laws could not fail of being eluded a thousand ways; inconveniences and disorders could not but multiply continually, till it was at last found necessary to think of committing to private persons the dangerous trust of public authority, and to magistrates the care of enforcing obedience to the people: for to say that chiefs were elected before confederacies were formed, and that the ministers of the laws existed before the laws themselves, is a supposition too ridiculous to deserve I should seriously refute it.

It would be equally unreasonable to imagine that men at first threw themselves into the arms of an absolute master, without any conditions or consideration on his side; and that the first means contrived by jealous and unconquered men for their common safety was to run hand over head into slavery. In fact, why did they give themselves superiors, if it was not to be defended by them against oppression, and protected in their lives, liberties, and properties, which are in a manner the constitutional elements of their being? Now in the relations between man and man, the worst that can happen to one man being to see himself at the discretion of another, would it not have been contrary to the dictates of good sense to begin by making over to a chief the only things for the preservation of which they stood in need of his assistance? What equivalent could he have offered them for so fine a privilege? And had he presumed to exact it on pretense of defending them, would he not have immediately received the answer in the apologue? What worse treatment can we expect from an enemy? It is therefore past dispute, and indeed a fundamental maxim of political law, that people gave themselves chiefs to defend their liberty and not be enslaved by them. If we have a prince, said Pliny to Trajan, it is in order that he may keep us from having a master.

Political writers argue in regard to the love of liberty with the same philosophy that philosophers do in regard to the state of nature; by the things they see they judge of things very different which they have never seen, and they attribute to men a natural inclination to slavery, on account of the patience with which the slaves within their notice carry the yoke; not reflecting that it is with liberty as with innocence and virtue, the value of which is not known but by those who possess them, though the relish for them is lost with the things themselves. I know the charms of your country, said Brasidas to a satrap who was comparing the life of the Spartans with that of the Persepolites; but you can not know the pleasures of mine.

As an unbroken courser erects his mane, paws the ground, and rages at the bare sight of the bit, while a trained horse patiently suffers both whip and spur, just so the barbarian will never reach his neck to the yoke which civilized man carries without murmuring but prefers the most stormy liberty to a calm subjection. It is not therefore by the servile disposition of enslaved nations that we must judge of the natural dispositions of man for or against slavery, but by the prodigies done by every free people to secure themselves from oppression. I know that the first are constantly crying up that peace and tranquillity they enjoy in their irons, and that _miserrimam servitutem pacem appellant_: but when I see the others sacrifice pleasures, peace, riches, power, and even life itself to the preservation of that single jewel so much slighted by those who have lost it; when I see free-born animals through a natural abhorrence of captivity dash their brains out against the bars of their prison; when I see multitudes of naked savages despise European pleasures, and brave hunger, fire and sword, and death itself to preserve their independency; I feel that it belongs not to slaves to argue concerning liberty.

As to paternal authority, from which several have derived absolute government and every other mode of society, it is sufficient, without having recourse to Locke and Sidney, to observe that nothing in the world differs more from the cruel spirit of despotism that the gentleness of that authority, which looks more to the advantage of him who obeys than to the utility of him who commands; that by the law of nature the father continues master of his child no longer than the child stands in need of his assistance; that after

that term they become equal, and that then the son, entirely independent of the father, owes him no obedience, but only respect. Gratitude is indeed a duty which we are bound to pay, but which benefactors can not exact. Instead of saying that civil society is derived from paternal authority, we should rather say that it is to the former that the latter owes its principal force: No one individual was acknowledged as the father of several other individuals, till they settled about him. The father's goods, which he can indeed dispose of as he pleases, are the ties which hold his children to their dependence upon him, and he may divide his substance among them in proportion as they shall have deserved his attention by a continual deference to his commands. Now the subjects of a despotic chief, far from having any such favour to expect from him, as both themselves and all they have are his property, or at least are considered by him as such, are obliged to receive as a favour what he relinquishes to them of their own property. He does them justice when he strips them; he treats them with mercy when he suffers them to live. By continuing in this manner to compare facts with right, we should discover as little solidity as truth in the voluntary establishment of tyranny; and it would be a hard matter to prove the validity of a contract which was binding only on one side, in which one of the parties should stake everything and the other nothing, and which could turn out to the prejudice of him alone who had bound himself.

This odious system is even, at this day, far from being that of wise and good monarchs, and especially of the kings of France, as may be seen by divers passages in their edicts, and particularly by that of a celebrated piece published in 1667 in the name and by the orders of Louis XIV. "Let it therefore not be said that the sovereign is not subject to the laws of his realm, since, that he is, is a maxim of the law of nations which flattery has sometimes attacked, but which good princes have always defended as the tutelary divinity of their realms. How much more reasonable is it to say with the sage Plato, that the perfect happiness of a state consists in the subjects obeying their prince, the prince obeying the laws, and the laws being equitable and always directed to the good of the public?" I shall not stop to consider, if, liberty being the most noble faculty of man, it is not degrading one's nature, reducing one's self to the level of brutes, who are the slaves of instinct, and even offending the author of one's being, to renounce without reserve the most precious of his gifts, and submit to the commission of all the crimes he has forbid us, merely to gratify a mad or a cruel master; and if this sublime artist ought to be more irritated at seeing his work destroyed than at seeing it dishonoured. I shall only ask what right those, who were not afraid thus to degrade themselves, could have to subject their dependants to the same ignominy, and renounce, in the name of their posterity, blessings for which it is not indebted to their liberality, and without which life itself must appear a burthen to all those who are worthy to live.

Puffendorf says that, as we can transfer our property from one to another by contracts and conventions, we may likewise divest ourselves of our liberty in favour of other men. This, in my opinion, is a very poor way of arguing; for, in the first place, the property I cede to another becomes by such cession a thing quite foreign to me, and the abuse of which can no way affect me; but it concerns me greatly that my liberty is not abused, and I can not, without incurring the guilt of the crimes I may be forced to commit, expose myself to become the instrument of any. Besides, the right of property being of mere human convention and institution, every man may dispose as he pleases of what he possesses: But the case is otherwise with regard to the essential gifts of nature, such as life and liberty, which every man is permitted to enjoy, and of which it is doubtful at least whether any man has a right to divest himself: By giving up the one, we degrade our being; by giving up the other we annihilate it as much as it is our power to do so; and as no temporal enjoyments can indemnify us for the loss of either, it would be at once offending both nature and reason to renounce them for any consideration. But though we could transfer our liberty as we do our substance, the difference would be very great with regard to our children, who enjoy our substance but by a cession of our right; whereas liberty being a blessing, which as men they hold from nature, their parents have no right to strip them of it; so that as to establish slavery it was necessary to do violence to nature, so it was necessary to alter nature to perpetuate such a right; and the jurisconsults, who have gravely pronounced that the child of a slave comes a slave into the world, have in other words decided, that a man does not come a man into the world.

It therefore appears to me incontestably true, that not only governments did not begin by arbitrary power, which is but the corruption and extreme term of government, and at length brings it back to the law of the strongest, against which governments were at first the remedy, but even that, allowing they had commenced in this manner, such power being illegal in itself could never have served as a foundation to the rights of society, nor of course to the inequality of institution.

I shall not now enter upon the inquiries which still remain to be made into the nature of the fundamental pacts of every kind of government, but, following the common opinion, confine myself in this place to the establishment of the political body as a real contract between the multitude and the chiefs elected by it. A contract by which both parties oblige themselves to the observance of the laws that are therein stipulated, and form the bands of their union. The multitude having, on occasion of the social relations between them, concentered all their wills in one person, all the articles, in regard to which this will explains itself, become so many fundamental laws, which oblige without exception all the members of the state, and one of which laws regulates the choice and the

power of the magistrates appointed to look to the execution of the rest. This power extends to everything that can maintain the constitution, but extends to nothing that can alter it. To this power are added honours, that may render the laws and the ministers of them respectable; and the persons of the ministers are distinguished by certain prerogatives, which may make them amends for the great fatigues inseparable from a good administration. The magistrate, on his side, obliges himself not to use the power with which he is intrusted but conformably to the intention of his constituents, to maintain every one of them in the peaceable possession of his property, and upon all occasions prefer the good of the public to his own private interest.

Before experience had demonstrated, or a thorough knowledge of the human heart had pointed out, the abuses inseparable from such a constitution, it must have appeared so much the more perfect, as those appointed to look to its preservation were themselves most concerned therein; for magistracy and its rights being built solely on the fundamental laws, as soon as these ceased to exist, the magistrates would cease to be lawful, the people would no longer be bound to obey them, and, as the essence of the state did not consist in the magistrates but in the laws, the members of it would immediately become entitled to their primitive and natural liberty.

A little reflection would afford us new arguments in confirmation of this truth, and the nature of the contract might alone convince us that it can not be irrevocable: for if there was no superior power capable of guaranteeing the fidelity of the contracting parties and of obliging them to fulfil their mutual engagements, they would remain sole judges in their own cause, and each of them would always have a right to renounce the contract, as soon as he discovered that the other had broke the conditions of it, or that these conditions ceased to suit his private convenience. Upon this principle, the right of abdication may probably be founded. Now, to consider as we do nothing but what is human in this institution, if the magistrate, who has all the power in his own hands, and who appropriates to himself all the advantages of the contract, has notwithstanding a right to divest himself of his authority; how much a better right must the people, who pay for all the faults of its chief, have to renounce their dependence upon him. But the shocking dissensions and disorders without number, which would be the necessary consequence of so dangerous a privilege, show more than anything else how much human governments stood in need of a more solid basis than that of mere reason, and how necessary it was for the public tranquillity, that the will of the Almighty should interpose to give to sovereign authority, a sacred and inviolable character, which should deprive subjects of the mischievous right to dispose of it to whom they pleased. If mankind had received no other advantages from religion, this alone would be sufficient to make them adopt and cherish it, since it is the means of saving more blood than fanaticism has been the cause of spilling. But to resume the thread of our hypothesis.

The various forms of government owe their origin to the various degrees of inequality between the members, at the time they first coalesced into a political body. Where a man happened to be eminent for power, for virtue, for riches, or for credit, he became sole magistrate, and the state assumed a monarchical form; if many of pretty equal eminence out-topped all the rest, they were jointly elected, and this election produced an aristocracy; those, between whose fortune or talents there happened to be no such disproportion, and who had deviated less from the state of nature, retained in common the supreme administration, and formed a democracy. Time demonstrated which of these forms suited mankind best. Some remained altogether subject to the laws; others soon bowed their necks to masters. The former laboured to preserve their liberty; the latter thought of nothing but invading that of their neighbours, jealous at seeing others enjoy a blessing which themselves had lost. In a word, riches and conquest fell to the share of the one, and virtue and happiness to that of the other.

In these various modes of government the offices at first were all elective; and when riches did not preponderate, the preference was given to merit, which gives a natural ascendant, and to age, which is the parent of deliberateness in council, and experience in execution. The ancients among the Hebrews, the Geronts of Sparta, the Senate of Rome, nay, the very etymology of our word seigneur, show how much gray hairs were formerly respected. The oftener the choice fell upon old men, the oftener it became necessary to repeat it, and the more the trouble of such repetitions became sensible; electioneering took place; factions arose; the parties contracted ill blood; civil wars blazed forth; the lives of the citizens were sacrificed to the pretended happiness of the state; and things at last came to such a pass, as to be ready to relapse into their primitive confusion. The ambition of the principal men induced them to take advantage of these circumstances to perpetuate the hitherto temporary charges in their families; the people already inured to dependence, accustomed to ease and the conveniences of life, and too much enervated to break their fetters, consented to the increase of their slavery for the sake of securing their tranquillity; and it is thus that chiefs, become hereditary, contracted the habit of considering magistracies as a family estate, and themselves as proprietors of those communities, of which at first they were but mere officers; to call their fellow-citizens their slaves; to look upon them, like so many cows or sheep, as a part of their substance; and to style themselves the peers of Gods, and Kings of Kings.

By pursuing the progress of inequality in these different revolutions, we shall discover that the establishment of laws and of the right of property was the first term of it; the institution of magistrates the second; and the third and last the changing of legal into arbitrary power; so that the different states of rich and poor were authorized by the first epoch; those of powerful and weak by the second; and by the third those of master and slave, which formed the last degree of inequality, and the term in which all the rest at last end, till new revolutions entirely dissolve the government, or bring it back nearer to its legal constitution.

To conceive the necessity of this progress, we are not so much to consider the motives for the establishment of political bodies, as the forms these bodies assume in their administration; and the inconveniences with which they are essentially attended; for those vices, which render social institutions necessary, are the same which render the abuse of such institutions unavoidable; and as (Sparta alone excepted, whose laws chiefly regarded the education of children, and where Lycurgus established such manners and customs, as in a great measure made laws needless,) the laws, in general less strong than the passions, restrain men without changing them; it would be no hard matter to prove that every government, which carefully guarding against all alteration and corruption should scrupulously comply with the ends of its institution, was unnecessarily instituted; and that a country, where no one either eluded the laws, or made an ill use of magistracy, required neither laws nor magistrates.

Political distinctions are necessarily attended with civil distinctions. The inequality between the people and the chiefs increase so fast as to be soon felt by the private members, and appears among them in a thousand shapes according to their passions, their talents, and the circumstances of affairs. The magistrate can not usurp any illegal power without making himself creatures, with whom he must divide it. Besides, the citizens of a free state suffer themselves to be oppressed merely in proportion as, hurried on by a blind ambition, and looking rather below than above them, they come to love authority more than independence. When they submit to fetters, 'tis only to be the better able to fetter others in their turn. It is no easy matter to make him obey, who does not wish to command; and the most refined policy would find it impossible to subdue those men, who only desire to be independent; but inequality easily gains ground among base and ambitious souls, ever ready to run the risks of fortune, and almost indifferent whether they command or obey, as she proves either favourable or adverse to them. Thus then there must have been a time, when the eyes of the people were bewitched to such a degree, that their rulers needed only to have said to the most pitiful wretch, "Be great you and all your posterity," to make him immediately appear great in the eyes of every one as well as in his own; and his descendants took still more upon them, in proportion to their removes from him: the more distant and uncertain the cause, the greater the effect; the longer line of drones a family produced, the more illustrious it was reckoned.

Were this a proper place to enter into details, I could easily explain in what manner inequalities in point of credit and authority become unavoidable among private persons the moment that, united into one body, they are obliged to compare themselves one with another, and to note the differences which they find in the continual use every man must make of his neighbour. These differences are of several kinds; but riches, nobility or rank, power and personal merit, being in general the principal distinctions, by which men in society measure each other, I could prove that the harmony or conflict between these different forces is the surest indication of the good or bad original constitution of any state: I could make it appear that, as among these four kinds of inequality, personal qualities are the source of all the rest, riches is that in which they ultimately terminate, because, being the most immediately useful to the prosperity of individuals, and the most easy to communicate, they are made use of to purchase every other distinction. By this observation we are enabled to judge with tolerable exactness, how much any people has deviated from its primitive institution, and what steps it has still to make to the extreme term of corruption. I could show how much this universal desire of reputation, of honours, of preference, with which we are all devoured, exercises and compares our talents and our forces: how much it excites and multiplies our passions; and, by creating an universal competition, rivalship, or rather enmity among men, how many disappointments, successes, and catastrophes of every kind it daily causes among the innumerable pretenders whom it engages in the same career. I could show that it is to this itch of being spoken of, to this fury of distinguishing ourselves which seldom or never gives us a moment's respite, that we owe both the best and the worst things among us, our virtues and our vices, our sciences and our errors, our conquerors and our philosophers; that is to say, a great many bad things to a very few good ones. I could prove, in short, that if we behold a handful of rich and powerful men seated on the pinnacle of fortune and greatness, while the crowd grovel in obscurity and want, it is merely because the first prize what they enjoy but in the same degree that others want it, and that, without changing their condition, they would cease to be happy the minute the people ceased to be miserable.

But these details would alone furnish sufficient matter for a more considerable work, in which might be weighed the advantages and disadvantages of every species of government, relatively to the rights of man in a state of nature, and might likewise be unveiled all the different faces under which inequality has appeared to this day, and may hereafter appear to the end of time, according to the nature of these several governments, and the revolutions time must unavoidably occasion in them. We should then see the

multitude oppressed by domestic tyrants in consequence of those very precautions taken by them to guard against foreign masters. We should see oppression increase continually without its being ever possible for the oppressed to know where it would stop, nor what lawful means they had left to check its progress. We should see the rights of citizens, and the liberties of nations extinguished by slow degrees, and the groans, and protestations and appeals of the weak treated as seditious murmurings. We should see policy confine to a mercenary portion of the people the honour of defending the common cause. We should see imposts made necessary by such measures, the disheartened husbandman desert his field even in time of peace, and quit the plough to take up the sword. We should see fatal and whimsical rules laid down concerning the point of honour. We should see the champions of their country sooner or later become her enemies, and perpetually holding their poniards to the breasts of their fellow citizens. Nay, the time would come when they might be heard to say to the oppressor of their country:

Pectore si fratris gladium juguloque parentis Condere me jubeas, gravidoeque in viscera partu Conjugis, in vita peragam tamen omnia dextra.

From the vast inequality of conditions and fortunes, from the great variety of passions and of talents, of useless arts, of pernicious arts, of frivolous sciences, would issue clouds of prejudices equally contrary to reason, to happiness, to virtue. We should see the chiefs foment everything that tends to weaken men formed into societies by dividing them; everything that, while it gives society an air of apparent harmony, sows in it the seeds of real division; everything that can inspire the different orders with mutual distrust and hatred by an opposition of their rights and interest, and of course strengthen that power which contains them all.

'Tis from the bosom of this disorder and these revolutions, that despotism gradually rearing up her hideous crest, and devouring in every part of the state all that still remained sound and untainted, would at last issue to trample upon the laws and the people, and establish herself upon the ruins of the republic. The times immediately preceding this last alteration would be times of calamity and trouble: but at last everything would be swallowed up by the monster; and the people would no longer have chiefs or laws, but only tyrants. At this fatal period all regard to virtue and manners would likewise disappear; for despotism, _cui ex honesto nulla est spes_, tolerates no other master, wherever it reigns; the moment it speaks, probity and duty lose all their influence, and the blindest obedience is the only virtue the miserable slaves have left them to practise.

This is the last term of inequality, the extreme point which closes the circle and meets that from which we set out. 'Tis here that all private men return to their primitive equality, because they are no longer of any account; and that, the subjects having no longer any law but that of their master, nor the master any other law but his passions, all notions of good and principles of justice again disappear. 'Tis here that everything returns to the sole law of the strongest, and of course to a new state of nature different from that with which we began, in as much as the first was the state of nature in its purity, and the last the consequence of excessive corruption. There is, in other respects, so little difference between these two states, and the contract of government is so much dissolved by despotism, that the despot is no longer master than he continues the strongest, and that, as soon as his slaves can expel him, they may do it without his having the least right to complain of their using him ill. The insurrection, which ends in the death or despotism of a sultan, is as juridical an act as any by which the day before he disposed of the lives and fortunes of his subjects. Force alone upheld him, force alone overturns him. Thus all things take place and succeed in their natural order; and whatever may be the upshot of these hasty and frequent revolutions, no one man has reason to complain of another's injustice, but only of his own indiscretion or bad fortune.

By thus discovering and following the lost and forgotten tracks, by which man from the natural must have arrived at the civil state; by restoring, with the intermediate positions which I have been just indicating, those which want of leisure obliges me to suppress, or which my imagination has not suggested, every attentive reader must unavoidably be struck at the immense space which separates these two states. 'Tis in this slow succession of things he may meet with the solution of an infinite number of problems in morality and politics, which philosophers are puzzled to solve. He will perceive that, the mankind of one age not being the mankind of another, the reason why Diogenes could not find a man was, that he sought among his cotemporaries the man of an earlier period: Cato, he will then see, fell with Rome and with liberty, because he did not suit the age in which he lived; and the greatest of men served only to astonish that world, which would have cheerfully obeyed him, had he come into it five hundred years earlier. In a word, he will find himself in a condition to understand how the soul and the passions of men by insensible alterations change as it were their nature; how it comes to pass, that at the long run our wants and our pleasures change objects; that, original man vanishing by degrees, society no longer offers to our inspection but an assemblage of artificial men and factitious passions, which are the work of all these new relations, and have no foundation in nature. Reflection teaches us nothing on that head, but what experience perfectly confirms. Savage man and civilised man differ so much at bottom in point of inclinations and passions, that what constitutes the supreme happiness of the one would reduce the other to despair. The first sighs for nothing but repose and

liberty; he desires only to live, and to be exempt from labour; nay, the ataraxy of the most confirmed Stoic falls short of his consummate indifference for every other object. On the contrary, the citizen always in motion, is perpetually sweating and toiling, and racking his brains to find out occupations still more laborious: He continues a drudge to his last minute; nay, he courts death to be able to live, or renounces life to acquire immortality. He cringes to men in power whom he hates, and to rich men whom he despises; he sticks at nothing to have the honour of serving them; he is not ashamed to value himself on his own weakness and the protection they afford him; and proud of his chains, he speaks with disdain of those who have not the honour of being the partner of his bondage. What a spectacle must the painful and envied labours of an European minister of state form in the eyes of a Caribbean! How many cruel deaths would not this indolent savage prefer to such a horrid life, which very often is not even sweetened by the pleasure of doing good? But to see the drift of so many cares, his mind should first have affixed some meaning to these words power and reputation; he should be apprised that there are men who consider as something the looks of the rest of mankind, who know how to be happy and satisfied with themselves on the testimony of others sooner than upon their own. In fact, the real source of all those differences, is that the savage lives within himself, whereas the citizen, constantly beside himself, knows only how to live in the opinion of others; insomuch that it is, if I may say so, merely from their judgment that he derives the consciousness of his own existence. It is foreign to my subject to show how this disposition engenders so much indifference for good and evil, notwithstanding so many and such fine discourses of morality; how everything, being reduced to appearances, becomes mere art and mummery; honour, friendship, virtue, and often vice itself, which we at last learn the secret to boast of; how, in short, ever inquiring of others what we are, and never daring to question ourselves on so delicate a point, in the midst of so much philosophy, humanity, and politeness, and so many sublime maxims, we have nothing to show for ourselves but a deceitful and frivolous exterior, honour without virtue, reason without wisdom, and pleasure without happiness. It is sufficient that I have proved that this is not the original condition of man, and that it is merely the spirit of society, and the inequality which society engenders, that thus change and transform all our natural inclinations.

I have endeavoured to exhibit the origin and progress of inequality, the institution and abuse of political societies, as far as these things are capable of being deduced from the nature of man by the mere light of reason, and independently of those sacred maxims which give to the sovereign authority the sanction of divine right. It follows from this picture, that as there is scarce any inequality among men in a state of nature, all that which we now behold owes its force and its growth to the development of our faculties and the improvement of our understanding, and at last becomes permanent and lawful by the establishment of property and of laws. It likewise follows that moral inequality, authorised by any right that is merely positive, clashes with natural right, as often as it does not combine in the same proportion with physical inequality: a distinction which sufficiently determines, what we are able to think in that respect of that kind of inequality which obtains in all civilised nations, since it is evidently against the law of nature that infancy should command old age, folly conduct wisdom, and a handful of men should be ready to choke with superfluities, while the famished multitude want the commonest necessaries of life.

[Transcriber's Note: Some words which appear to be potential typos are printed as such in the original book: These possible words include cotemporaries and oftens. The paragraph starting with the words "This odius system is even" contains unmatched quotes, which have been reproduced as they appeared in the orginal. This work was transcribed from a anthology (Harvard Classics Volume 34) published in 1910. The editor of the entire series was Charles W. Eliot. The name of the translator was not given, nor was the name of the author of the introduction. Indented lines indicate embedded verse that should not be re-wrapped.]

==========

Twenty-Two Years a Slave, and Forty Years a Freeman

Austin Steward

Project Gutenberg Release: February 01, 2004 · eBook #11137

[Illustration: [Signature of] Austin Steward]

TWENTY-TWO YEARS A SLAVE, AND FORTY YEARS A FREEMAN;

EMBRACING A CORRESPONDENCE OF SEVERAL YEARS, WHILE PRESIDENT OF WILBERFORCE COLONY, LONDON, CANADA WEST,

BY AUSTIN STEWARD.

1856

FROM GOVERNOR CLARK.

STATE OF NEW YORK, EXECUTIVE DEPARTMENT,

Albany, May 10, 1856.

MR. A. STEWARD, Canandaigua,

Dear Sir:--I notice a paragraph in the "Ontario Times" of this date, making the announcement that you are preparing "a sketch of events occurring under your own observation during an eventful life," to be entitled, "Twenty Years a Slave, and Forty Years a Freeman;" and that you design soon to make an effort to obtain subscribers for the book.

Being desirous of rendering you what encouragement I may in the work, you are permitted to place my name on your list of subscribers.

Respectfully Yours,

MYRON H. CLARK.

* * * * *

ROCHESTER, SEPTEMBER, 1856

MR. WM. ALLING,

Dear Sir:--The undersigned have heard with pleasure, that you are about issuing a Book made up from incidents in the life of Austin STEWARD. We have been the early acquaintances and associates of Mr. Steward, while a business man in Rochester in an early day, and take pleasure in bearing testimony to his high personal, moral and Christian character. In a world of vicissitude, Mr. Steward has received no ordinary share, and we hope, while his book may do the world good, it may prove a substantial benefit to him in his declining years.

ASHLEY SAMPSON, THOMAS KEMPSHALL, FREDERICK STARR, CHAS. J. HILL, L.A. WARD, EDWIN SCRANTOM, JACOB GOULD.

* * * * *

RECOMMENDATORY.

ROCHESTER, JULY 1, 1856.

A. STEWARD, ESQ.,

Dear Sir:--In reply to your letter upon the propriety of publishing your life, I answer, that there is not only no objection to it, but it will be timely, and is demanded by every consideration of humanity and justice. Every tongue which speaks for Freedom, which has once been held by the awful gag of Slavery, is trumpet-tongued--and he who pleads against this monstrous oppression, if he can say, "here are the scars," can do much.

It is a great pleasure to me to run back to my boyhood, and stop at that spot where I first met you. I recollect the story of your wrongs, and your joy in the supposition that all were now ended in your freedom; of your thirst for knowledge, as you gathered up from the rudimental books--not then very plenty--a few snatches of the elements of the language; of playing the school-master to you, in "setting copies" for your writing-- book; of guiding your mind and pen. I remember your commencement in business, and the outrage and indignity offered you in Rochester, by white competitors on no other ground than that of color.[1] I saw your bitter tears, and recollect assuring you--what afterwards proved true--that justice would overtake the offenders, and that you would live to see these enemies bite the dust! I remember your unsullied character, and your prosperity, and when your word or endorsement was equal to that of any other citizen. I remember too, when yourself, and others of your kind, sunk all the gatherings of years of toil, in an unsuccessful attempt to establish an asylum for your enslaved and oppressed brethren--and, not to enumerate, which I might do much farther, I remember when your "old master," finding you had been successful, while he himself had lost in the changes on fortune's wheel--came here and set up a claim to yourself and your property--a claim which might have held both, had not a higher power suddenly summoned him to a tribunal, where both master and slave shall one day answer each for himself!

But to the book. Let its plain, unvarnished tale be sent out, and the story of Slavery and its abominations, again be told by one who has felt in his own person its scorpion lash, and the weight of its grinding heel. I think it will do good service, and could not have been sent forth at a more auspicious period. The downfall of the hateful system of Slavery is certain. Though long delayed, justice is sure to come at length; and he must be a slow thinker and a poor seer, who cannot discern in the elements already at work, the mighty forces which must eventually crush this oppression. I know that you and I have felt discouraged at the long delay, years ago,--when we might have kept up our hopes by the fact that every thing that is slow is _sure_. Your book may be humble and your descriptions tame, yet truth is always mighty; and you may furnish the sword for some modern Sampson, who shall shout over more slain than his ancient prototype. I close with the wish, that much success may attend your labors, in more ways than one, and that your last days may be your best--and am,

Your old Friend,

And obed't serv't,

EDWIN SCRANTOM.

[Footnote 1: The indignity spoken of was this: Mr. Steward had established a grocery and provision store on Buffalo Street, in a part of Abner Wakelee's building, opposite the Eagle Hotel. He put up his sign, a very plain and proper one, and at night, some competitors, whom he knew, as well as he could know anything which he could not prove, smeared his sign with black paint, utterly destroying it! But the misguided men who stooped to such an act--the victims of sensuality and excess--have years ago ended their journey, and passed to the bar of a higher adjudication.]

CORRESPONDENCE

PREFACE.

The author does not think that any apology is necessary for this issue of his Life and History. He believes that American Slavery is now the great question before the American People: that it is not merely a political question, coming up before the country as the grand element in the making of a President, and then to be laid aside for four years; but that its moral bearings are of such a nature that the Patriot, the Philanthropist, and all good men agree that it is an evil of so much magnitude, that longer to permit it, is to wink at _sin_, and to incur the righteous judgments of God. The late outrages and aggressions of the slave power to possess itself of new soil, and extend the influence of the hateful and God-provoking "Institution," is a practical commentary upon its benefits and the moral qualities of those who seek to sustain and extend it. The author is therefore the more willing--nay, anxious, to lay alongside of such arguments the history of his own life and experiences _as a slave_, that those who read may know what are some of the characteristics of that highly favored institution, which is sought to be preserved and perpetuated. "Facts are stubborn things,"--and this is the reason why all systems, religious, moral, or social, which are founded in injustice, and supported by fraud and robbery, suffer so much by faithful exposition.

The author has endeavored to present a true statement of the practical workings of the system of Slavery, as he has seen and _felt it himself._ He has intended "nothing to extenuate, nor aught set down in malice;" indeed, so far from believing that he has misrepresented Slavery as an institution, he does not feel that he has the power to give anything like a true picture of it in all its deformity and wickedness; especially _that_ Slavery which is an institution among an enlightened and Christian people, who profess to believe that all men are born _free_ and _equal_, and who have certain inalienable _rights_, among which are _life, liberty_, and the pursuit of happiness.

The author claims that he has endeavored since he had his freedom, as much as in him lay, to benefit his suffering fellows in bondage; and that he has spent most of his free life in efforts to elevate them in manners and morals, though against all the opposing forces of prejudice and pride, which of course, has made much of his labor vain. In his old age he sends out this history--presenting as it were his _own body_, with the marks and scars of the tender mercies of slave drivers upon it, and asking that these may plead in the name of Justice, Humanity, and Mercy, that those who have the power, may have the magnanimity to strike off the chains from the enslaved, and bid him stand up, a Freeman and a Brother!

CHAPTER I.

SLAVE LIFE ON THE PLANTATION.

I was born in Prince William County, Virginia. At seven years of age, I found myself a slave on the plantation of Capt. William Helm. Our family consisted of my father and mother--whose names were Robert and Susan Steward--a sister, Mary, and myself. As was the usual custom, we lived in a small cabin, built of rough boards, with a floor of earth, and small openings in the sides of the cabin were substituted for windows. The chimney was built of sticks and mud; the door, of rough boards; and the whole was put together in the rudest possible manner. As to the furniture of this rude dwelling, it was procured by the slaves themselves, who were occasionally permitted to earn a little money after their day's toil was done. I never knew Capt. H. to furnish his slaves with household utensils of any description.

The amount of provision given out on the plantation per week, was invariably one peck of corn or meal for each slave. This allowance was given in meal when it could be obtained; when it could not, they received corn, which they pounded in mortars after they returned from their labor in the field. The slaves on our plantation were provided with very little meat In addition to the peck of corn or meal, they were allowed a little salt and a few herrings. If they wished for more, they were obliged to earn it by over-work. They were permitted to cultivate small gardens, and were thereby enabled to provide themselves with many trifling conveniences. But these gardens were only allowed to some of the more industrious. Capt. Helm allowed his slaves a small quantity of meat during harvest time, but when the harvest was over they were obliged to fall back on the old allowance.

It was usual for men and women to work side by side on our plantation; and in many kinds of work, the women were compelled to do as much as the men. Capt. H. employed an overseer, whose business it was to look after each slave in the field, and see that he performed his task. The overseer always went around with a whip, about nine feet long, made of the toughest kind of cowhide, the but-end of which was loaded with lead, and was about four or five inches in circumference, running to a point at the opposite extremity. This made a dreadful instrument of torture, and, when in the hands of a cruel overseer, it was truly fearful. With it, the skin of an ox or a horse could be cut through. Hence, it was no uncommon thing to see the poor slaves with their backs mangled in a most horrible manner. Our overseer, thus armed with his cowhide, and with a large bull-dog behind him, followed the slaves all day; and, if one of them fell in the rear from any cause, this cruel weapon was plied with terrible force. He would strike the dog one

blow and the slave another, in order to keep the former from tearing the delinquent slave in pieces,--such was the ferocity of his canine attendant.

It was the rule for the slaves to rise and be ready for their task by sun-rise, on the blowing of a horn or conch-shell; and woe be to the unfortunate, who was not in the field at the time appointed, which was in thirty minutes from the first sounding of the horn. I have heard the poor creatures beg as for their lives, of the inhuman overseer, to desist from his cruel punishment. Hence, they were usually found in the field "betimes in the morning," (to use an old Virginia phrase), where they worked until nine o'clock. They were then allowed thirty minutes to eat their morning meal, which consisted of a little bread. At a given signal, all hands were compelled to return to their work. They toiled until noon, when they were permitted to take their breakfast, which corresponds to our dinner.

On our plantation, it was the usual practice to have one of the old slaves set apart to do the cooking. All the field hands were required to give into the hands of the cook a certain portion of their weekly allowance, either in dough or meal, which was prepared in the following manner. The cook made a hot fire and rolled up each person's portion in some cabbage leaves, when they could be obtained, and placed it in a hole in the ashes, carefully covered with the same, where it remained until done. Bread baked in this way is very sweet and good. But cabbage leaves could not always be obtained. When this was the case, the bread was little better than a mixture of dough and ashes, which was not very palatable. The time allowed for breakfast, was one hour. At the signal, all hands were obliged to resume their toil. The overseer was always on hand to attend to all delinquents, who never failed to feel the blows of his heavy whip.

The usual mode of punishing the poor slaves was, to make them take off their clothes to the bare back, and then tie their hands before them with a rope, pass the end of the rope over a beam, and draw them up till they stood on the tips of their toes. Sometimes they tied their legs together and placed a rail between. Thus prepared, the overseer proceeded to punish the poor, helpless victim. Thirty-nine was the number of lashes ordinarily inflicted for the most trifling offence.

Who can imagine a position more painful? Oh, who, with feelings of common humanity, could look quietly on such torture? Who could remain unmoved, to see a fellow-creature thus tied, unable to move or to raise a hand in his own defence; scourged on his bare back, with a cowhide, until the blood flows in streams from his quivering flesh? And for what? Often for the most trifling fault; and, as sometimes occurs, because a mere whim or caprice of his brutal overseer demands it. Pale with passion, his eyes flashing and his stalwart frame trembling with rage, like some volcano, just ready to belch forth its fiery contents, and, in all its might and fury, spread death and destruction all around, he continues to wield the bloody lash on the broken flesh of the poor, pleading slave, until his arm grows weary, or he sinks down, utterly exhausted, on the very spot where already stand the pools of blood which his cruelty has drawn from thee mangled body of his helpless victim, and within the hearing of those agonized groans and feeble cries of "Oh do, Massa! Oh do, Massa! Do, Lord, have mercy! Oh, Lord, have mercy!" &c.

Nor is this cruel punishment inflicted on the bare backs of the male portion of slaves only. Oh no! The slave husband must submit without a murmur, to see the form of his cherished, but wretched wife, not only exposed to the rude gaze of a beastly tyrant, but he must unresistingly see the heavy cowhide descend upon her shrinking flesh, and her manacled limbs writhe in inexpressible torture, while her piteous cries for help ring through his ears unanswered. The wild throbbing of his heart must be suppressed, and his righteous indignation find no voice, in the presence of the human monster who holds dominion over him.

After the infuriated and heartless overseer had satiated his thirst for vengeance, on the disobedient or delinquent slave, he was untied, and left to crawl away as best he could; sometimes on his hands and knees, to his lonely and dilapidated cabin, where, stretched upon the cold earth, he lay weak and bleeding and often faint from the loss of blood, without a friend who dare administer to his necessities, and groaning in the agony of his crushed spirit. In his cabin, which was not as good as many of our stables at the North, he might lie for weeks before recovering sufficient strength to resume the labor imposed upon him, and all this time without a bed or bed clothing, or any of the necessaries considered so essential to the sick.

Perhaps some of his fellow-slaves might come and bathe his wounds in warm water, to prevent his clothing from tearing open his flesh anew, and thus make the second suffering well nigh equal to the first; or they might from their scanty store bring him such food as they could spare, to keep him from suffering hunger, and offer their sympathy, and then drag their own weary bodies to their place of rest, after their daily task was finished.

Oh, you who have hearts to feel; you who have kind friends around you, in sickness and in sorrow, think of the sufferings of the helpless, destitute, and down-trodden slave. Has sickness laid its withering hand upon you, or disappointment blasted your fairest

earthly prospects, still, the outgushings of an affectionate heart are not denied you, and you may look forward with hope to a bright future. Such a hope seldom animates the heart of the poor slave. He toils on, in his unrequited labor, looking only to the grave to find a quiet resting place, where he will be free from the oppressor.

CHAPTER II.

AT THE GREAT HOUSE.

When eight years of age, I was taken to the "great house," or the family mansion of my master, to serve as an errand boy, where I had to stand in the presence of my master's family all the day, and a part of the night, ready to do any thing which they commanded me to perform.

My master's family consisted of himself and wife, and seven children. His overseer, whose name was Barsly Taylor, had also a wife and five children. These constituted the white population on the plantation. Capt. Helm was the owner of about one hundred slaves, which made the residents on the plantation number about one hundred and sixteen persons in all. One hundred and seven of them, were required to labor for the benefit of the remaining nine, who possessed that vast domain; and one hundred of the number doomed to unrequited toil, under the lash of a cruel task-master during life, with no hope of release this side of the grave, and as far as the cruel oppressor is concerned, shut out from hope beyond it.

And here let me ask, why is this practice of working slaves half clad, poorly fed, with nothing or nearly so, to stimulate them to exertion, but fear of the lash? Do the best interests of our common country require it? I think not. Did the true interest of Capt. Helm demand it? Whatever may have been his opinion, I cannot think it did. Can it be for the best interest or good of the enslaved? Certainly not; for there is no real inducement for the slaveholder to make beasts of burden of his fellow men, but that which was frankly acknowledged by Gibbs and other pirates: "we have the power,"--the power to rob and murder on the high seas!--which they will undoubtedly continue to hold, until overtaken by justice; which will certainly come some time, just as sure as that a righteous God reigns over the earth or rules in heaven.

Some have attempted to apologize for the enslaving of the Negro, by saying that they are inferior to the Anglo-Saxon race in every respect. This charge I deny; it is utterly false. Does not the Bible inform us that "God hath created of one blood all the nations of the earth?" And certainly in stature and physical force the colored man is quite equal to his white brother, and in many instances his superior; but were it otherwise, I can not see why the more favored class should enslave the other. True, God has given to the African a darker complexion than to his white brother; still, each have the same desires and aspirations. The food required for the sustenance of one is equally necessary for the other. Naturally or physically, they alike require to be warmed by the cheerful fire, when chilled by our northern winter's breath; and alike they welcome the cool spring and the delightful shade of summer. Hence, I have come to the conclusion that God created all men free and equal, and placed them upon this earth to do good and benefit each other, and that war and slavery should be banished from the face of the earth.

My dear reader will not understand me to say, that all nations are alike intelligent, enterprising and industrious, for we all know that it is far otherwise; but to man, and not to our Creator, should the fault be charged. But, to resume our narrative,

Capt. Helm was not a very hard master; but generally was kind and pleasant. Indulgent when in good humor, but like many of the southerners, terrible when in a passion. He was a great sportsman, and very fond of company. He generally kept one or two race horses, and a pack of hounds for fox-hunting, which at that time, was a very common and fashionable diversion in that section of country. He was not only a sportsman, but a gamester, and was in the habit of playing cards, and sometimes betting very high and losing accordingly.

I well remember an instance of the kind: it was when he played cards with a Mr. W. Graham, who won from him in one sweep, two thousand and seven hundred dollars in all, in the form of a valuable horse, prized at sixteen hundred dollars, another saddle-horse of less value, one slave, and his wife's gold watch. The company decided that all this was fairly won, but Capt. Holm demurred, and refused to give up the property until an application was made to Gen. George Washington, ("the father of his country,") who decided that Capt. Helm had lost the game, and that Mr. Graham had fairly won the property, of which Mr. G. took immediate possession, and conveyed to his own plantation.

Capt. Helm was not a good business man, unless we call horse-racing, fox-hunting, and card-playing, business. His overseer was entrusted with every thing on the plantation, and allowed to manage about as he pleased, while the Captain enjoyed himself in

receiving calls from his wealthy neighbors, and in drinking what he called "grog," which was no more nor less than whisky, of which he was extremely fond, notwithstanding his cellar contained the choicest wines and liquors. To show his partiality for his favorite beverage, I will relate an incident which occurred between Capt. Helm and Col. Charles Williamson. The Colonel, believing wine to be a healthier beverage than whisky, accepted a bet made by Capt. Helm, of one thousand dollars, that he would live longer and drink whisky, than the Colonel, who drank wine. Shortly after, Col. Williamson was called home by the British government, and while on his way to England, died, and his body, preserved in a cask of brandy, was taken home. The bet Capt. Helm made considerable effort to get, but was unsuccessful.

Mrs. Helm was a very industrious woman, and generally busy in her household affairs--sewing, knitting, and looking after the servants; but she was a great scold,--continually finding fault with some of the servants, and frequently punishing the young slaves herself, by striking them over the head with a heavy iron key, until the blood ran; or else whipping them with a cowhide, which she always kept by her side when sitting in her room. The older servants she would cause to be punished by having them severely whipped by a man, which she never failed to do for every trifling fault. I have felt the weight of some of her heaviest keys on my own head, and for the slightest offences. No slave could possibly escape being punished--I care not how attentive they might be, nor how industrious--punished they must be, and punished they certainly were. Mrs. Helm appeared to be uneasy unless some of the servants were under the lash. She came into the kitchen one morning and my mother, who was cook, had just put on the dinner. Mrs. Helm took out her white cambric handkerchief, and rubbed it on the inside of the pot, and it crocked it! That was enough to invoke the wrath of my master, who came forth immediately with his horse-whip, with which he whipped my poor mother most unmercifully--far more severely than I ever knew him to whip a horse.

I once had the misfortune to break the lock of master's shot gun, and when it came to his knowledge, he came to me in a towering passion, and charged me with what he considered the _crime_ of carelessness. I denied it, and told him I knew nothing about it; but I was so terribly frightened that he saw I was guilty, and told me so, foaming with rage; and then I confessed the truth. But oh, there was no escaping the lash. Its recollection is still bitter, and ever will be. I was commanded to take off my clothes, which I did, and then master put me on the back of another slave, my arms hanging down before him and my hands clasped in his, where he was obliged to hold me with a vise-like grasp. Then master gave me the most severe flogging that I ever received, and I pray God that I may never again experience such torture. And yet Capt. Helm was not the worst of masters.

These cruelties are daily occurrences, and so degrading is the whole practice of Slavery, that it not only crushes and brutalizes the wretched slave, but it hardens the heart, benumbs all the fine feelings of humanity, and deteriorates from the character of the slaveholders themselves,--whether man or woman. Otherwise, how could a gentle, and in other respects, amiable woman, look on such scenes of cruelty, without a shudder of utter abhorrence? But slaveholding ladies, can not only look on quietly, but with approbation; and what is worse, though very common, they can and do use the lash and cowhide themselves, on the backs of their slaves, and that too on those of their own sex! Far rather would I spend my life in a State's Prison, than be the slave of the best slaveholder on the earth!

When I was not employed as an errand-boy, it was my duty to stand behind my master's chair, which was sometimes the whole day, never being allowed to sit in his presence. Indeed, no slave is ever allowed to sit down in the presence of their master or mistress. If a slave is addressed when sitting, he is required to spring to his feet, and instantly remove his hat, if he has one, and answer in the most humble manner, or lay the foundation for a flogging, which will not be long delayed.

I slept in the same room with my master and mistress. This room was elegantly furnished with damask curtains, mahogany bedstead of the most expensive kind, and every thing else about it was of the most costly kind. And while Mr. and Mrs. Helm reposed on their bed of down, with a cloud of lace floating over them, like some Eastern Prince, with their slaves to fan them while they slept, and to tremble when they awoke, I always slept upon the floor, without a pillow or even a blanket, but, like a dog, lay down anywhere I could find a place.

Slaves are never allowed to leave the plantation to which they belong, without a written pass. Should any one venture to disobey this law, he will most likely be caught by the _patrol_ and given thirty-nine lashes. This patrol is always on duty every Sunday, going to each plantation under their supervision, entering every slave cabin, and examining closely the conduct of the slaves; and if they find one slave from another plantation without a pass, he is immediately punished with a severe flogging.

I recollect going one Sunday with my mother, to visit my grand-mother; and while there, two or three of the patrol came and looked into the cabin, and seeing my mother, demanded her pass. She told them that she had one, but had left it in another cabin, from

whence she soon brought it, which saved her a whipping but we were terribly frightened.

The reader will obtain a better knowledge of the character of a Virginia patrol, by the relation of an affair, which came off on the neighboring plantation of Col. Alexander, in which some forty of Capt. Helm's slaves were engaged, and which proved rather destructive of human life in the end.

But I must first say that it is not true, that slave owners are respected for kindness to their slaves. The more tyrannical a master is, the more will he be favorably regarded by his neighboring planters; and from the day that he acquires the reputation of a kind and indulgent master, he is looked upon with suspicion, and sometimes hatred, and his slaves are watched more closely than before.

Col. Alexander was a very wealthy planter and owned a great number of slaves, but he was very justly suspected of being a kind, humane, and indulgent master. His slaves were always better fed, better clad, and had greater privileges than any I knew in the Old Dominion; and of course, the patrol had long had an eye on them, anxious to flog some of "those pampered niggers, who were spoiled by the indulgence of a weak, inefficient, but well-meaning owner."

Col. A. gave his slaves the liberty to get up a grand dance. Invitations were sent and accepted, to a large number of slaves on other plantations, and so, for miles around, all or many of the slaves were in high anticipation of joining in the great dance, which was to come off on Easter night. In the mean time, the patrol was closely watching their movements, and evinced rather a joyful expectancy of the many they should find there without a pass, and the flogging they would give them for that, if not guilty of any other offence, and perhaps they might catch some of the Colonel's slaves doing something for which they could be taught "to know their place," by the application of the cowhide.

The slaves on Col. A.'s plantation had to provide and prepare the supper for the expected vast "turn out," which was no light matter; and as slaves like on such occasions to pattern as much as possible after their master's family, the result was, to meet the emergency of the case, they _took_ without saying, "by your leave, Sir," some property belonging to their master, reasoning among themselves, as slaves often do, that it can not be _stealing_, because "it belongs to massa, and so do _we_, and we only use one part of his property to benefit another. Sure, 'tis all massa's." And if they do not get detected in this removal of "massa's property" from one location to another, they think no more of it.

Col. Alexander's slaves were hurrying on with their great preparations for the dance and feast; and as the time drew near, the old and knowing ones might be seen in groups, discussing the matter, with many a wink and nod; but it was in the valleys and by-places where the younger portion were to be found, rather secretly preparing food for the great time coming. This consisted of hogs, sheep, calves; and as to master's _poultry_, that suffered daily. Sometimes it was missed, but the disappearance was always easily accounted for, by informing "massa" that a great number of hawks had been around of late; and their preparation went on, night after night, undetected. They who repaired to a swamp or other by-place to cook by night, carefully destroyed everything likely to detect them, before they returned to their cabins in the morning.

The night for the dance _came_ at last, and long before the time, the road leading to Col. Alexander's plantation presented a gay spectacle. The females were seen flocking to the place of resort, with heads adorned with gaudy bandanna turbans and new calico dresses, of the gayest colors, --their whole attire decked over with bits of gauze ribbon and other fantastic finery. The shades of night soon closed over the plantation, and then could be heard the rude music and loud laugh of the unpolished slave. It was about ten o'clock when the _aristocratic slaves_ began to assemble, dressed in the cast-off finery of their master and mistress, swelling out and putting on airs in imitation of those they were forced to obey from day to day.

When they were all assembled, the dance commenced; the old fiddler struck up some favorite tune, and over the floor they went; the flying feet of the dancers were heard, pat, pat, over the apartment till the clock warned them it was twelve at midnight, or what some call "low twelve," to distinguish it from twelve o'clock at noon; then the violin ceased its discordant sounds, and the merry dancers paused to take breath.

Supper was then announced, and all began to prepare for the sumptuous feast. It being the pride of slaves to imitate the manners of their master and mistress, especially in the ceremonies of the table, all was conducted with great propriety and good order. The food was well cooked, and in a very plentiful supply. They had also managed in some way, to get a good quantity of excellent wine, which was sipped in the most approved and modern style. Every dusky face was lighted up, and every eye sparkled with joy. However ill fed they might have been, here, for once, there was plenty. Suffering and toil was forgotten, and they all seemed with one accord to give themselves up to the intoxication of pleasurable amusement.

House servants were of course, "the stars" of the party; all eyes were turned to them to see how they conducted, for they, among slaves, are what a military man would call "fugle-men." The field hands, and such of them as have generally been excluded from the dwelling of their owners, look to the house servant as a pattern of politeness and gentility. And indeed, it is often the only method of obtaining any knowledge of the manners of what is called "genteel society;" hence, they are ever regarded as a privileged class; and are sometimes greatly envied, while others are bitterly hated. And too often justly, for many of them are the most despicable tale-bearers and mischief-makers, who will, for the sake of the favor of his master or mistress, frequently betray his fellow-slave, and by tattling, get him severely whipped; and for these acts of perfidy, and sometimes downright falsehood, he is often rewarded by his master, who knows it is for his interest to keep such ones about him; though he is sometimes obliged, in addition to a reward, to send him away, for fear of the vengeance of the betrayed slaves. In the family of his master, the example of bribery and treachery is ever set before him, hence it is, that insurrections and stampedes are so generally detected. Such slaves are always treated with more affability than others, for the slaveholder is well aware that he stands over a volcano, that may at any moment rock his foundation to the center, and with one mighty burst of its long suppressed fire, sweep him and his family to destruction. When he lies down at night, he knows not but that ere another morning shall dawn, he may be left mangled and bleeding, and at the mercy of those maddened slaves whom he has so long ruled with a rod of iron.

But the supper, like other events, came to an end at last. The expensive table service, with other things, which had been secretly brought from the "great house," was hurriedly cleansed by the slaves, and carefully returned. The floor was again cleared, the violin sounded, and soon they were performing another "break down," with all the wild abandon of the African character,--in the very midst of which, the music suddenly ceased, and the old musician assumed a listening attitude. Every foot was motionless; every face terrified, and every ear listening for the cause of the alarm.

Soon the slave who was kept on the "look-out," shouted to the listeners the single word "_patrol!_" and then the tumult that followed that announcement, is beyond the power of language to describe! Many a poor slave who had stolen from his cabin, to join in the dance, now remembered that they had no pass! Many screamed in affright, as if they already felt the lash and heard the crack of the overseer's whip; others clenched their hands, and assumed an attitude of bold defiance, while a savage frown contracted the brow of all. Their unrestrained merriment and delicious fare, seemed to arouse in them the natural feelings of self-defence and defiance of their oppressors. But what could be done? The patrol was nearing the building, when an athletic, powerful slave, who had been but a short time from his "fatherland," whose spirit the cowardly overseer had labored in vain to quell, said in a calm, clear voice, that we had better stand our ground, and advised the females to lose no time in useless wailing, but get their things and repair immediately to a cabin at a short distance, and there remain quiet, without a light, which they did with all possible haste. The men were terrified at this bold act of their leader; and many with dismay at the thought of resistance, began to skulk behind fences and old buildings, when he opened the door and requested every slave to leave who felt unwilling to fight. None were urged to remain, and those who stood by him did so voluntarily.

Their number was now reduced to twenty-five men, but the leader, a gigantic African, with a massive, compact frame, and an arm of great strength, looked competent to put ten common men to flight. He clenched his powerful fist, and declared that he would resist unto death, before he would be arrested by those savage men, even if they promised not to flog him. They closed the door, and agreed not to open it; and then the leader cried, "Extinguish the lights and let them come! we will meet them hand to hand!" Five of the number he stationed near the door, with orders to rush out, if the patrol entered, and seize their horses, cut the bridles, or otherwise unfit them for use. This would prevent them from giving an alarm and getting a reinforcement from surrounding plantations. In silence they awaited the approach of the enemy, and soon the tramping of horses' feet announced their approach, but when within a few yards of the house they halted, and were overheard by one of the skulking slaves, maturing their plans and mode of attack. There was great hesitancy expressed by a part of the company to engage in the affair at all.

"Coming events cast their shadow before."

The majority, however, seemed to think it safe enough, and uttered expressions of triumph that they had got the rascals at last.

"Are you not afraid that they will resist?" said the weaker party.

"Resist?" was the astonished answer. "This old fellow, the Colonel, has pampered and indulged his slaves, it is true, and they have slipped through our fingers whenever we have attempted to chastise them; but they are not such fools as to dare resistance! Those niggers know as well as we, that it is _death_, by the law of the State, for a slave to strike a white man."

"Very true," said the other, "but it is dark and long past midnight, and beside they have been indulging their appetites, and we cannot tell what they may attempt to do."

"Pshaw!" he answered, contemptuously, "they are unarmed, and I should not fear in the least, to go in among them _alone_, armed only with my cowhide!"

"As you please, then," he said, rather dubiously, "but look well to your weapons; are they in order?"

"In prime order, Sir." And putting spurs to their horses, were soon at the house, where they dismounted and requested one of the party to remain with the horses.

"What," said he, "are you so chicken-hearted as to suppose those d----d cowardly niggers are going to get up an insurrection?"

"Oh no," he replied, carelessly, but would not consent to have the horses left alone. "Besides," said he, "they may forget themselves at this late hour; but if they do, a few lashes of the cowhide will quicken their memory, I reckon."

The slaves were aware of their movements, and prepared to receive them.

They stepped up to the door boldly, and demanded admittance, but all was silent; they tried to open it, but it was fastened. Those inside, ranged on each side of the door, and stood perfectly still.

The patrol finding the slaves not disposed to obey, burst off the slight fastening that secured the door, and the chief of the patrol bounded into their midst, followed by several of his companions, all in total darkness!

Vain is the attempt to describe the tumultuous scene which followed. Hand to hand they fought and struggled with each other, amid the terrific explosion of firearms,--oaths and curses, mingled with the prayers of the wounded, and the groans of the dying! Two of the patrol were killed on the spot, and lay drenched in the warm blood that so lately flowed through their veins. Another with his arm broken and otherwise wounded, lay groaning and helpless, beside the fallen slaves, who had sold their lives so dearly. Another of his fellows was found at a short distance, mortally wounded and about to bid adieu to life. In the yard lay the keeper of the horses, a stiffened corpse. Six of the slaves were killed and two wounded.

It would be impossible to convey to the minds of northern people, the alarm and perfect consternation that the above circumstance occasioned in that community. The knowledge of its occurrence was carried from one plantation to another, as on the wings of the wind; exaggerated accounts were given, and prophecies of the probable result made, until the excitement became truly fearful. Every cheek was blanched and every frame trembled when listening to the tale, that "insurrection among the slaves had commenced on the plantation of Col. Alexander; that three or four of the patrol had been killed, &c." The day after, people flocked from every quarter, armed to the teeth, swearing vengeance on the defenceless slaves. Nothing can teach plainer than this, the constant and tormenting fear in which the slaveholder lives, and yet he repents not of his deeds.

The kind old Colonel was placed in the most difficult and unenviable position. His warm heart was filled with sorrow for the loss of his slaves, but not alone, as is generally the case in such instances, because he had lost so much property. He truly regretted the death of his faithful servants, and boldly rebuked the occasion of their sudden decease. When beset and harassed by his neighbors to give up his slaves to be tried for insurrection and murder, he boldly resisted, contending for the natural right of the slaves, to act in their own defence, and especially when on his own plantation and in their own quarters. They contended, however, that as his slaves had got up a dance, and had invited those of the adjoining plantations, the patrol was only discharging their duty in looking after them; but the gallant old Colonel defended his slaves, and told them plainly that he should continue to do so to the extent of his ability and means.

The poor slaves were sad enough, on the morning after their merry meeting, and they might be seen standing in groups, conversing with a very different air from the one they had worn the day before.

Their business was now to prepare the bodies of their late associates for the grave. Robert, the brave African, who had so boldly led them on the night before, and who had so judiciously provided for their escape, was calmly sleeping in death's cold embrace. He left a wife and five slave children. Two of the other slaves left families, whose pitiful cries it was painful to hear.

The Colonel's family, deeply afflicted by what was passing around them, attended the funeral. One of the slaves, who sometimes officiated as a minister, read a portion of Scripture, and gave out two hymns;--one of which commences with

"Hark! from the tomb a doleful sound."

Both were sung with great solemnity by the congregation, and then the good old man offered a prayer; after which he addressed the slaves on the shortness of human life and the certainty of death, and more than once hinted at the hardness of their lot, assuring, however, his fellow-slaves, that if they were good and faithful, all would be right hereafter. His master, Col. Alexander, was deeply affected by this simple faith and sincere regard for the best interests of all, both master and slave.

When the last look at their fellow-servants had been taken, the procession was formed in the following manner: First, the old slave minister, then the remains of the dead, followed by their weeping relatives; then came the master and his family; next the slaves belonging to the plantation; and last, friends and strangers, black and white; all moved on solemnly to the final resting-place of those brave men, whose descendants may yet be heard from, in defence of right and freedom.

CHAPTER III.

HORSE-RACING AND ITS CONSEQUENCES.

Capt. Helm had a race-course on his plantation, on which he trained young horses for the fall races. One very fine horse he owned, called _Mark Anthony_, which he trained in the most careful manner for several months previous to the races. He would put him on the course every morning, sometimes covering him with a blanket, and then put him to his utmost speed, which he called "sweating him." Mark Anthony was to be put on the race-course in October following, as a competitor for the purse of ten thousand dollars, which was the amount to be lost or gained on the first day of the fall races. Capt. H. had also another young horse, called _Buffer_, under a course of training, which he designed to enter the lists for the second day. His course of training had been about the same as Mark Anthony's, but being a year or two younger, it was thought that he had not sufficient "bottom" to risk so much money on, as was at stake on the first day.

[Illustration: "Away they go, sweeping round the course with lightning speed, while every spectator's eye is strained, and every countenance flushed with intense anxiety."]

When the time for the races to commence came, all was bustle and excitement in the house and on the plantation. It was a fine October morning, and the sun shed a mellow radiance on all around, when people began to throng the race-course. Some came with magnificent equipages, attended by their numerous train of black servants, dressed in livery, --some in less splendid array,--and others on foot, all hurrying on to the exciting scene. There the noblest blood of Old Virginia, of which many are wont to boast, was fully represented, as was also the wealth and fashion of the country for many miles around.

All were in high spirits, and none seemed to fear that they would be the losers in the amount of money about to change hands. And for what, pray, is all this grand outlay--this vast expenditure? Merely the pleasure and gratification of witnessing the speed of a fine horse, and the vanity of prejudging concerning it.

The arrangements were at length completed,--the horses regularly entered, Mark Anthony among the rest,--and then the word "go!" was given, when each horse sprang as if for his life, each striving to take the lead. Away they go, sweeping round the course with lightning speed, while every spectator's eye is strained, and every countenance flushed with intense anxiety.

Some of the noble animals were distanced the first heat, and others were taken away by their owners.

The judges allowed twenty minutes to prepare the horses for the second trial of their speed--a trial which must enrich or empoverish many of the thousands present. Already there were sad countenances to be seen in the crowd.

The horses were again in readiness, and the word given,--away they flew with the fleetness of the wind, to come in the second time.

But who can describe the anxiety written on every face, as they prepared for the third and last trial? I cannot. Many had already lost all they had staked, and others who had bet high began to fear for the result. Soon, however, all was again prepared and those foaming steeds, after having exerted their animal power to the utmost, have accomplished their task and come in for the last time. The purse was won, _but not by Mark Anthony_. Capt. Helm was more fortunate the second day. Buffer won the smaller purse, but the Captain came from the races, a much poorer man than when they commenced. These repeated failures and heavy losses had the effect to arouse him to a sense of his pecuniary position, and he soon after began to think and talk about going to some new country.

He resolved at last to visit the far-off "Genesee Country," which he shortly after put in practice, and after an absence of about three weeks he returned in good health, and delighted with the country; the more so, doubtless, because he said, "the more slaves a man possessed in that country the more he would be respected, and the higher would be his position in society."

Capt. Helm finally concluded to sell his plantation and stock, except the slaves, and remove to the Genesee Country, where he designed to locate his future residence.

The plantation and stock (retaining the slaves) were advertised for sale, and on a certain day named, all would be disposed of at a public sale, or to the highest bidder.

When the day of sale arrived, there flocked from all parts of the surrounding country the largest assemblage of people I ever saw in that place. A large number of wealthy and respectable planters were present, whose gentlemanly behavior should have been an example to others.

The majority of that vast crowd, however, were a rough, quarrelsome, fighting set, just such as might be expected from slave-holding districts. There were several regularly fought battles during the first day of the sale.

One Thomas Ford, a large, muscular, ferocious-looking fellow, a good specimen of a southern bully and woman-whipper, had been victorious through the day in numerous fights and brawls; but he had to pay dear for it when night came. Some one or more of the vanquished party, took advantage of the dark night to stab him in both sides. The knife of the assassin had been thrust into his thigh, tearing the flesh upward, leaving a frightful and dangerous wound; but what is most singular, both sides were wounded in nearly the same manner, and at the same time, for so quickly was the deed committed that the offenders made their escape, before an alarm could be raised for their detection; nor have I ever heard of any one being arrested for the crime.

Ford's groans and cries were painful to hear, but his brother acted like a madman; rushing hither and thither, with a heavy bludgeon in his hand, with which he indiscriminately beat the fences and whatever came in his way, crying "Oh my brother, my poor brother! Who has murdered my poor brother?"

Physicians came to the aid of the wounded man who at first thought he might recover, but in a climate like that of Virginia it was impossible. His friends did all they could to save him, but the poor wretch lingered a few days and died. Thus ended the life of a bad man and a hard master.

And who will wonder, if his slaves rejoiced to hear of his death? If they must be sold to pay his debts, they could not fall into the hands of a more heartless tyrant. Who then can blame those feeble women and helpless children, long held as chattels in his iron grasp, if they are grateful that the man-stealer is no more?

This Ford was a fair specimen of that class, known in more modern parlance as a "Border Ruffian." Such as are at this time endeavoring, by their swaggering and bullying, to cast on the fair fields of Kansas the deep curse of Slavery--a curse which, like the poison of the deadly Upas, blights all within its influence: the colored and the white man, the slave and the master. We were thankful, however, that no more lives were lost during the vendue, which was commenced with the stock; this occupied two days.

The reader will see that we had cause to be grateful, when he takes into consideration that drinking and fighting was the order of the day, and drunkenness and carousing the order of the night.

Then too, the practice of dueling was carried on in all its hideous barbarity. If a gentleman thought himself insulted, he would immediately challenge the offender to mortal combat, and if he refused to do so, then the insulted gentleman felt bound by that barbarous code of honor, to take his life, whenever or wherever he might meet him, though it might be in a crowded assembly, where the lives of innocent persons were endangered.

A case of this kind happened in Kentucky, where the belligerent parties met in a large concourse of people, the majority of them women and children; but the combat ensued, regardless of consequences. One woman was shot through the face, but that was not worthy of notice, for she was only a _colored woman_; and in that, as in other slave States, the laws give to the white population the liberty to trample under foot the claims of all such persons to justice. Justly indignant ladies present remonstrated, but all to no purpose. The Governor of the State was there and was in danger of being wounded by their flying bullets, and it is possible that if he had been in the place of the poor African, some action would have been taken, and laws made to protect the people against such inhuman practices. But I must return to Capt. Helm and the vendue.

The sale continued for several days, during which there was no such thing as rest or sleep or one quiet moment on the premises. As was customary in that State, Capt. Helm provided the food and drink for all who came, and of course a great many came to drink and revel and not to buy; and that class generally took the night time for their hideous outbreaks, when the more respectable class had retired to their beds or to their homes. And many foul deeds and cruel outrages were committed; nor could the perpetrators be detected or brought to justice. Nothing could be done but to submit quietly to their depredations.

One peaceable old slave was killed by having his head split open with an ax. He was found in the morning lying in the yard, with the bloody instrument of death by his side. This occasioned some excitement among the slaves, but as the white people paid but little attention to it, it soon passed off, and the sorrowful slaves put the old man's remains in a rough box, and conveyed them to their last resting-place.

After the sale was over, the slaves were allowed a holiday, with permission to go and visit their friends and relatives previous to their departure for their new home in a strange land.

The slaves generally on Capt. Helm's plantation looked upon this removal as the greatest hardship they had ever met; the severest trial they had ever endured; and the separation from our old home and fellow-slaves, from our relatives and the old State of Virginia, was to us a contemplation of sorrowful interest. Those who remained, thought us the most unfortunate of human beings to be taken away off into the State of New York, and, as they believed, beyond the bounds of civilization, where we should in all probability be destroyed by wild beasts, devoured by cannibals, or scalped by the Indians. We never expected to meet again in this life, hence our parting interviews were as solemn as though we were committing our friends to the grave. But He whose tender mercies are over all his creatures, knew best what was for our good.

Little did Capt. Helm think when bringing his slaves to New York that in a few short years, they would be singing the song of deliverance from Slavery's thralldom; and as little thought he of the great and painful change, to be brought about in his own circumstances. Could any one have looked into futurity and traced the difficult path, my master was to tread,--could any one have foreseen the end to which he must soon come, and related it to him in the days of his greatness and prosperity, he would, I am certain, have turned from such a narrator of misfortune in a greater rage than did Namaan when the man of God told him "to go and dip seven times in the Jordan."

He could not have believed, nor could I, that in a few years the powerful, wealthy slaveholder, living in luxury and extravagance, would be so reduced that the _necessaries_ of life even, were beyond his means, and that he must be supported by the town!

But I anticipate. Let us return to the old plantation which seems dearer than ever, now that we are about to leave it forever.

We thought Capt. Helm's prospects pretty fair, and yet we shuddered when we realized our condition as slaves. This change in our circumstances was calculated to awaken all our fears that had been slumbering, and bring all the perilous changes to which we might be subjected most vividly to mind.

We were about to leave the land of our birth, the home of our childhood, and we felt that untried scenes were before us. We were slaves, it is true, but we had heart-felt emotions to suppress, when we thought of leaving all that was so familiar to us, and chose rather to "bear the ills we had, than to fly to those we knew not of." And oh, the terrible uncertainty of the future, that ever rests on the slave, even the most favored, was now felt with a crushing weight. To-day, they are in the old familiar cabin surrounded by their family, relatives and friends; to-morrow, they may be scattered, parted forever. The master's circumstances, not their own, may have assigned one to the dreadful slave-pen, and another to the distant rice-swamp; and it is this continual dread of some perilous future that holds in check every joyous emotion, every lofty aspiration, of the most favored slave at the South. They know that their owners indulge in high living, and they are well aware also that their continual indulgences engender disease, which make them very liable to sudden death; or their master may be killed in a duel, or at a horse-race, or in a drunken brawl; then his creditors are active in looking after the estate; and next, the blow of the auctioneer's hammer separates them perhaps for life.

Now, after the lapse of so many years, when my thoughts wander back, as they often do, to my native State, I confess that painful recollections drive from my mind those joyful emotions that should ever arise in the heart of man, when contemplating the familiar scenes of his youth, and especially when recurring to the venerable shades and the sheltering roof under which he was born. True, around the well-remembered spot where our childhood's years were spent, recollection still loves to linger; yet memory, ever ready with its garnered store, paints in glowing colors, Virginia's crouching slaves in the foreground. Her loathsome slave-pens and slave markets--chains, whips and instruments of torture; and back of all this is as truthfully recorded the certain doom, the retributive

justice, that will sooner or later overtake her; and with a despairing sigh I turn away from the imaginary view of my native State.

What though she may have been justly styled, "The Mother of Presidents?" What avails the honor of being the birth-place of the brave and excellent Washington, while the prayers and groans of the down-trodden African daily ascend to heaven for redress? What though her soil be fertile, yielding a yearly product of wealth to its possessors? And what matter is it, that their lordly mansions are embowered in the shade of trees of a century's growth, if, through their lofty and tangled branches, we espy the rough cabin of the mangled bondman, and know that the soil on which he labors has drunk his heart's blood?

Ah! to me, life's sweetest memories are all embittered. Slavery had cast its dark and fearful shadow over my childhood, youth, and early manhood, and I went out from the land of my birth, a fettered slave. A land which I can regard only as "the house of bondage and the grave of freedom." But God forgive me for having envied my master his fair prospects at this time.

After the sale of the plantation, Capt. Helm was in possession of quite a large sum of money, and having never paid much attention to his pecuniary interests, he acted as if there could be no end of it. He realized about forty thousand dollars from the sale of his estate in Virginia, which would have been a pretty sum in the hands of a man who had been accustomed to look after his own interests; but under the management of one who had all his life lived and prospered on the unrequited toil of slaves, it was of little account. He bought largely of every thing he thought necessary for himself or the comfort of his family, for which he always paid the most extravagant prices. The Captain was not as well qualified to take care of himself and family as some of his slaves were; but he thought differently, and so the preparations for leaving the old plantation for a home in the wilds of New York, went on under his direction, and at last we bade a final adieu to our friends and all we held dear in the State of Virginia.

CHAPTER IV.

JOURNEY TO OUR NEW HOME IN NEW YORK.

All things having been prepared for our departure, our last "Good-bye" spoken, and our last look taken of the old plantation, we started, amid the sobs and prolonged cries of separating families, in company with our master, the overseer and another white man named Davis, who went with us to take back the five-horse "Pennsylvania team," which was provided for the conveyance of the food for the slaves, and what little baggage they might have, and also that of the overseer.

Capt. Helm had determined to leave his family until he could get his slaves settled in their future quarters, and a home provided for himself, when they were expected to join him.

We traveled northward, through Maryland, Pennsylvania, and a portion of New York, to Sodus Bay, where we halted for some time. We made about twenty miles per day, camping out every night, and reached that place after a march of twenty days. Every morning the overseer called the roll, when every slave must answer to his or her name, felling to the ground with his cowhide, any delinquent who failed to speak out in quick time.

After the roll had been called, and our scanty breakfast eaten, we marched on again, our company presenting the appearance of some numerous caravan crossing the desert of Sahara. When we pitched our tents for the night, the slaves must immediately set about cooking not their supper only, but their breakfast, so as to be ready to start early the next morning, when the tents were struck; and we proceeded on our journey in this way to the end.

At Sodus Bay there was then one small tavern, kept by a man named Sill.

The bay is ten miles in length and from a half to two miles in breadth, and makes an excellent harbor. The surrounding country then was almost an unbroken wilderness.

After Capt. Helm had rested a few days at Sodus, he went six miles up the bay and purchased a large tract of land lying on both sides of that beautiful sheet of water, and put his slaves on to clear and cultivate it. Then came the "tug of war." Neither the overseer nor the slaves had the least knowledge of _clearing_ land, and that was the first thing to be done. It was useless to consult the Captain, for he knew still less about matters of that kind. To obviate this difficulty, our master bought out a Mr. Cummings, who had some cleared land on the west side of the bay. On this he put the overseer and a part of the slaves, and then hired a Mr. Herrington to take charge of the remainder. Herrington and his gang of slaves was sent to the east side to chop down the heavy timber and clear the land for cultivation, all of which had first to be learned, for we knew nothing of felling trees, and the poor slaves had rather a hard time of it.

Provisions were scarce and could not be procured for cash in that section. There was no corn to be had, and we had but little left. We had no neighbors to assist us in this trying time, and we came near starvation. True, the wild, romantic region in which we were located abounded in game,--elk, deer, bear, panther, and wolves, roamed abroad through the dense forest, in great abundance, but the business of the slaves was not hunting or fishing, but clearing the land, preparatory to raising crops of grain the coming season.

At last Capt. Helm chartered a boat, and manned it to go to the mouth of the Genesee River to buy corn. They embarked under favorable auspices, but soon there came on such a tremendous storm, that the boat could no longer be managed, and the crew in despair threw themselves on the bottom of the boat to await their inevitable destruction, when one of their number, a colored man named Dunbar, sprang to the helm, and with great difficulty succeeded in running her safely into a Canadian port, where they were obliged to part with every thing in their possession to obtain the means to return to their families in Sodus, who had given them up as lost. But, to the great joy of all, they came back at last with their lives, but with nothing for the famishing slaves. Before another boat could be sent for our relief, we were reduced to the last extremity. We became so weak we could not work, and it was difficult to drag ourselves about, as we were now obliged to do, to gather up all the old bones we could find, break them up fine and then boil them; which made a sort of broth sufficient barely to sustain life. This we drank, and merely existed, until at last, the long looked for boat returned, loaded with provision, which saved us from starvation and gave us strength to pursue our labor.

CHAPTER V.

INCIDENTS AT SODUS BAY.

About this time two slaves who were laboring in the forest, instead of returning to their cabin as was expected, got lost, and wandered eight days in the dense forest without provision, except what they could procure from roots and the bark of trees. Great exertion was made to find them; guns were fired, horns blown, and shouts raised, but all to no purpose. Finally, we gave them up, supposing they had starved to death or had been killed by wild beasts. One of them was an elderly man, named Benjamin Bristol, and the other, Edmund Watkins, a lad of about eighteen years of age. They wandered in an easterly direction, a distance of some sixty or seventy miles, through an unbroken wilderness, vainly trying to find their way home. On the eighth day, to their inexpressible joy, they came out on the shore of Lake Ontario, near Oswego; but young Watkins was so completely exhausted that he declared himself incapable of further exertion, and begged to be left to his fate. Bristol, however, who chewed tobacco, which it was supposed kept him from sinking so low as his companion, took him on his back, and carried him home, which they reached in a famished state and reduced to skeletons. All were thankful for the preservation of their lives, and, with the best we could do for them, they soon recruited and became strong as ever.

One day, two others and myself thought we saw some animal swimming across the bay. We got a boat and went out to see what it was. After rowing for some time we came near enough to perceive it was a large bear. Those who watched us from the shore expected to see our boat upset, and all on board drowned, but it was not so to be; the, bear was struck on the nose with a blow that killed him instantly, and he was hauled ashore in great triumph.

While these things were transpiring on the east side of the bay, the overseer on the west side determined to punish one of the slaves who worked on the east side. The name of the slave was Williams; a strong, athletic man, and generally a good workman, but he had unfortunately offended the overseer, for which nothing could appease his wrath but the privilege of flogging him. The slave, however, thought as he was no longer in Virginia, he would not submit to such chastisement, and the overseer was obliged to content himself with threatening what he would do if he caught him on the west side of the bay.

A short time after, the overseer called at the cabin of one of the slaves, and was not a little surprised to find there the refractory slave, Williams, in company with three other men. He immediately walked up to him and asked him some question, to which Williams made no reply. Attended, as he always was, by his ferocious bull-dog, he flourished his cowhide in great wrath and demanded an instant reply, but he received none, whereupon he struck the slave a blow with the cowhide. Instantly Williams sprang and caught him by the throat and held him writhing in his vise-like grasp, until he succeeded in getting possession of the cowhide, with which he gave the overseer such a flogging as slaves seldom get. Williams was seized at once by the dog who endeavored to defend his brutal master, but the other slaves came to the rescue, and threw the dog into a huge fire which was near by, from which, after a singeing, he ran off, howling worse than his master when in the hands of Williams. He foamed and swore and still the blows descended; then he commanded the slaves to assist him, but as none obeyed, he commenced begging in the most humble manner, and at last entreated them as "gentlemen" to spare him; but all to no purpose. When Williams thought he had

thrashed him sufficiently, he let him go and hurried to his boat and rowed down the bay, instead of crossing it. The overseer no sooner found himself at liberty than he ran out, calling to a servant girl to bring his rifle, which was loaded. The rifle was brought, but before he could get to the bay, Williams had gone beyond his reach; but unfortunately another boat was at this moment crossing the bay, which he, mad with rage, fired into. The men in the boat immediately cried out to him not to repeat the shot, but he was so angry that he swore he would shoot somebody, and sent another bullet after them. No one was hurt, however, but the brave overseer was vanquished. Crest-fallen and unrevenged, he shortly after called on Capt. Helm for a settlement, which was granted, and bidding a final adieu to the "Genesee Country," he departed for Virginia, where he could beat slaves without himself receiving a cow-hiding. No one regretted his absence, nor do I think any but the most heartless would cordially welcome his return to the land of Slavery.

CHAPTER VI.

REMOVAL FROM SODUS TO BATH.

Capt. Helm went to Virginia for his family, and returning with them, concluded to locate his future residence in the village of Bath, Steuben County. He purchased a large tract of land near the village, a large grist mill, and two saw mills; also, two farms; one called the "Maringo," east of the village; and the other, called "Epsam," north of it; and a fine house and lot in the village. He also kept a distillery, which in those days was well patronized, for nearly every body drank whisky; and with Capt. Helm it was a favorite beverage.

The slaves were removed to Bath, where our master was well suited, and was everywhere noted for his hospitality. He had a great deal of land to cultivate, and carried on a multiplicity of business.

Soon after we were settled at Bath, Capt. Helm's eldest daughter, Jenny, was married to Mr. John Fitzhugh, her cousin, who had come from Virginia to claim his bride.

The wedding was a splendid affair. No pains were spared to make it more imposing than any thing that had ever happened in that country. Never before had the quiet village of Bath seen such splendor. All that wealth, power and ambition could do, was done to make the event one of great brilliancy. Europe contributed her full proportion; Turkey, the Indias, East and West, were heavily taxed to produce their finest fabrics to adorn the bride and bridal guests; and contribute delicacies to add elegance to the festal scene. Two days previous to the wedding, the invited guests began to arrive with their retinue of servants, and on the evening of the marriage the large mansion was thrown open, and there was the most magnificent assemblage I ever beheld. In the drawing-room, where the ceremony took place, every thing was surpassingly elegant. Costly chandeliers shed their light on the rich tapestry, and beautiful dresses glittering with diamonds, and the large mirrors everywhere reflecting the gay concourse. While the servants were preparing supper it was announced that the hour had arrived for the ceremony to commence. The bridal pair took their place in the center of the apartment. Pearls, diamonds, and jewelry glittered on the bride with such luster, that it was almost painful to the eye to look upon her.

The minister, after asking God to bless the assembled guests, and those he was about to unite in the holy bonds of wedlock, proceeded in a very solemn and impressive manner with the marriage service. The ceremony concluded, and good wishes having been expressed over the sparkling wine, the man of God took his leave, two hundred dollars richer than when he came. The company were all very happy, or appeared so; mirth reigned supreme, and every countenance wore a smile. They were seated at tables loaded with luxuries of every description, and while partaking, a band of music enlivened the scene.

All business was suspended for several days, the wedding party making a tour of ten days to Niagara Falls. After a while, however, affairs assumed their usual aspect, and business took its regular routine.

The grist mill belonging to the Captain was the only one for many miles around, and was a source of great profit to him; the saw mills also, were turning out a large quantity of lumber, which was in good demand; and the distillery kept up a _steaming_ business. It yielded, however, a handsome income to Capt. Helm, who was now, for the first time since I knew him, overseeing his affairs himself, dispensing altogether with the service of a regularly installed overseer.

The oldest son of our master had been absent from home for sometime, nor did he return to attend his sister's grand wedding. He had sought and obtained a commission in the United States service as a Lieutenant. This had been his own choice; he had preferred the service and hardships of a soldier, to a plantation well stocked with slaves, and the quietude of domestic life. He had cheerfully given up his friends and prospects as a planter, and entered the service of his country. Frank Helm, the second son, soon followed the example of his older brother, Lina. He obtained a like commission, but he did not, like his brother, get along quietly. His prospects as an officer were soon blighted, and all hope of being serviceable to his country vanished forever.

CHAPTER VII.

DUELING.

Lina Helm was an easy, good-natured, clever fellow; but his brother Frank was his opposite in nearly every thing; proud, fractious and unyielding. As might be expected, Frank, soon after entering the army, got into an "affair of honor," according to the duelist's code of laws. He was not, however, the principal in the difficulty. One of his friends and a brother officer, had a quarrel with a gentleman whom he challenged to mortal combat. Frank was the bearer of his friend's challenge, and on presenting it, the gentleman refused to accept it, saying that the challenger "was no gentleman." Then, according to the rules of dueling, no alternative was left for Frank, but to take his brother officer's place, and fight. This he did and came from the bloody field disabled for life. In consequence of his lameness, he was under the necessity of resigning his commission in the army, which he did, and came home a cripple, and nearly unfitted for any kind of business whatever.

While on the subject of dueling, permit me to record some of the incidents of another "affair of honor," which occurred in the District of Columbia, between Gen. Mason and Mr. M'Carter, two antagonistic politicians.

M'Carter offered his vote to the inspectors, and Mason challenged it. M'Carter offered to swear it in, when Mason said if he did so he would perjure himself. This blew what appeared to be but a spark into an angry blaze, and a duel was momentarily expected; but their warlike propensities subsided into a newspaper combat, which was kept up for several weeks, each party supposing they had the advantage of their adversary. In this stage of the quarrel, Gen. Jackson, with one of his aid-de-camps, Dr. Bruno, visited Washington. Dr. Bruno was a friend of Gen. Mason's, and to him the General submitted the correspondence, desiring his opinion relative to the advantage one had obtained over the other. Dr. Bruno decided against his friend, which probably exasperated him still more, and the General expressed his determination to fight his antagonist. Dr. Bruno wrote to M'Carter to come to Washington, and he came immediately, and was as readily waited upon by the Doctor, who inquired if he would receive a communication from his friend, Gen. Mason. M'Carter replied, that he "would receive no communication from Gen. Mason, except a challenge to fight." The challenge was therefore sent, and accepted, and the Doctor appointed to make the necessary arrangements for the duel. He proposed the weapons to be pistols, and the distance, ten paces; to which M'Carter objected, because he said, "the General was a dead shot with the pistol, while he hardly knew how to use one." Then it was left to M'Carter to choose the mode of warfare. He proposed muskets and ten paces distance. This was agreed upon, and finally the morning arrived for the conflict, and people began to assemble in great numbers to witness this murderous scene.

The belligerent parties unflinchingly took their place, each with his loaded musket at his shoulder, and gazing in each other's face, with feelings of the most bitter hatred, while their eyes flashed vengeance.

Oh! what a state of mind was this in which to meet inevitable death? How could intelligent men, or gentlemen, if you please so to term them, look placidly on such a horrid scene? Was there no heart of humanity to interfere and arrest the murderous designs of these madmen? Alas, no! The slaveholder's "code of honor" must be acknowledged, though it outrage the laws of God and his country.

Dr. Bruno asks, "Gentlemen, are you ready?" and the duelists take their deadly aim at each other. The signal to fire is given, and both weapons are discharged, and when the smoke had cleared away, what a spectacle was there presented to the duelist and spectator? Gen. Mason, a husband, a father, a statesman, and a kind friend, lies bleeding, and gasping for breath. He is no more! Who will bear to his loving and unsuspecting wife, the sad intelligence of her sudden bereavement? Who will convey his lifeless body to his late residence, and throw grief and consternation into the bosom of his family, and drape in sadness his whole household? And yet this painful task must be performed. The family of General Mason remained entirely ignorant of what was transpiring regarding the duel, until his mangled corpse was brought into his dwelling, from which he had so recently gone forth in all the vigor of life and manhood. And here let us drop the curtain, nor intrude on that scene of domestic affliction around the

deserted hearth-stone of the bereaved family of General Mason.

But where is Mr. M'Carter, the more fortunate party in the duel? Hurrying away from the frightful scene, his hands dripping with the blood of his fellow-man, he skulks about, until an opportunity is given him to step on board a vessel bound to a foreign port; he leaves home, friends and country, in the vain hope of finding peace of mind, and ridding himself of that guilt and censure which must attach itself to a crime so heinous as that of taking the life of another. I can but regard the inhuman practice of dueling as the legitimate fruit of Slavery.

Men who have been raised in the Slave States, where, if the laws do not give them the power, they do not restrain them from cruelly punishing every offender with personal violence, even unto death, if their insulted dignity seems to demand it. It is, however, encouraging to know that for a few years past the practice of dueling has somewhat fallen into disrepute among the more humane and candid class of community.

CHAPTER VIII.

HORSE-RACING AND GENERAL TRAINING.

After the return of the wedding party, Mr. Fitzhugh purchased a tract of land near that of Capt. Helm, on which the newly-married couple commenced keeping house. They, however, became dissatisfied with their location, and soon after sold their possessions and returned to the South.

Capt. Helm still continued to take the oversight of his slaves, and was out every day, superintending his business, just as his overseer used to do.

About this time a man named Henry Tower came to Bath to hire "slave boys," as we were called. The Captain hired to him Simon and myself, and a Mr. Baker also hired to him one slave named Vol. McKenzie. We three started for Dresden, Ontario County, where we arrived in due time.

Mr. Tower had just bought a tract of land, three miles this side of the village of Lyons, on the Canandaigua outlet. Here Mr. Tower contemplated making great improvements, building mills, opening stores &c. This tract of land was comparatively wild, there being but a small frame house for a dwelling, one for a store, and another for a blacksmith shop. Mr. Tower had two brothers; James, the eldest, who took charge of the store, and John, the younger, who took charge of the hands who worked on the farm; Henry himself superintending the building of the mills. This firm had a great number of men in their employ that year. I was kept busy helping the women about the cooking and house-work. And here, for the first time in my life, I had a comfortable bed to sleep on, and plenty of wholesome food to eat; which was something both new and strange to me.

The Towers were thorough-going business-men; they built a large grist mill, with four run of stone, and also a distillery. In those days it was customary for nearly all classes to drink spirituous liquors; hence, the distilleries were sources of great pecuniary interest to those who owned them. But having lived to see the dreadful evils which the drinking of alcoholic beverages have produced on community, I can hardly speak of distilleries in the favorable light in which they were then regarded.

The Towers, with commendable enterprise, cleared a great number of acres of land during the first year I lived with them, besides doing a heavy business in the mill, store and distillery.

It was customary then for men to assemble at some public place for the purpose of drinking whisky and racing horses.

One Saturday afternoon there was to be a race, and all was excitement. Being young, I wished to go with the rest. I hurried through my work as fast as possible, and then, with a trembling heart, set off in search of my master, fearing lest he would refuse me the simple request. But he happened to be in uncommon good humor, and readily gave his consent; and away I went, "as happy as a lark." When I reached the race-ground, they were just preparing to run the horses. Seeing me, they knew me to be a poor friendless little slave boy, helpless and unprotected, and they could therefore do with me as they pleased, and have some fine sport at my expense.

When I was asked to ride one of the fast horses, I felt proud of the honor conferred, and was assisted to mount, feeling highly elated with the lofty position I had gained.

The word "go," was shouted, and the horse whirled off, and it seemed to me as if he flew with the speed of lightning. My hat fell off the first thing; and there I was, clinging with might and main to the neck of the fiery animal, my head bare, my feet bootless, and my old stripped shirt blown from my back, and streaming out behind, and fluttering like a banner in the breeze; my ragged pants off at the knees, and my long legs dangling down some length below; and at the same time crying "Whoa! whoa!" as loud as I could. Nor was this all; frightened as I was, nearly to death, I cast a despairing look behind me, and the loud, derisive laugh of the bystanders rung in my ears.

Ludicrous as I must have appeared, this was too much,--I felt a giddiness coming over me, my brain reeled, my hold relaxed, and the next instant I had fallen to the ground, where all consciousness left me. When I came to my senses I was lying in bed, surrounded by all the appurtenances of a dying person.

The first thing I heard was Mr. Tower scolding the men who put me on the horse, and threatening them with a law-suit for presuming to do such a thing without his permission. Mr. Tower considered himself holden to Capt. Helm for my safe return, and was therefore justly indignant at their placing my life in such peril. It was indeed a narrow escape, for the horse was running with all his speed when I fell. My bones were unbroken, however, and I suppose it must have been the tremendous jar I got when I fell that rendered me unconscious; nor do I think it impossible that the fright may not have contributed somewhat to the catastrophe.

It was while I was living with that gentleman that the greatest "general training" ever known in Western New York, came off at "Oak's Corners," in the town of Phelps. It really seemed to me that the whole world were going to the training, and I, of course, felt a great curiosity to go where "all creation" appeared to be going. Mr. Tower permitted me to go, and I started off in high spirits. When I arrived within two or three miles of the place the road was almost blocked up with people, and when I got to Oak's Corners the crowd beggared all description; carriages of all sorts were there, containing eatables of all kinds, and tents of all dimensions were on the road-side, for the houses could not begin to accommodate the people. The entire brigade was to meet at that place, and Gov. Lewis was expected to review the different companies, and all were anxious to see the Governor, for, in those days, it was a rare thing to see so high a dignitary in Western New York; the eastern portion of the State having had every thing of that kind their own way.

Nor was the means and mode of traveling brought to such perfection as now. The roads were new and rough, and our best public conveyances only the slow lumbering stage-coach; yet, notwithstanding these inconveniences, there was an innumerable crowd gathered at that place. I spent the day in walking about the encampment, and seeing what was to be seen, for it was all new to me.

Officers were riding over the ground, dressed in uniform, and mounted on their splendid steeds: their plumes waving over their cocked-hats in true military array. A band of music, as is usual, accompanied the soldiers. There was also a "sham-fight," before the breaking up of the encampment, and it was really terrifying to me, who had never seen a battle fought, to witness two columns of troops drawn up, and, at the roll of the drum, behold them engage in deadly conflict, to all appearance, and the smoke curling up in a blackened mass toward heaven; and, above all, the neighing of horses, with the feigned groans of the wounded and dying. I inwardly prayed to God that those men might ever draw their weapons in a feigned encounter.

The first night I spent at the encampment was one long to be remembered; it was like the confusion of Babel. Of all the hideous noises I ever heard none could exceed those made there that night. They fired guns, quarreled, drank, and swore, till day light. There was such a crowd at the tavern that I did not suppose I could get a bed, so I threw myself down upon a door-step, and began to compose myself to sleep, when a man came and wakened me, inquiring at the same time whose boy I was. I replied that I lived with Mr. Tower. "Follow me," said he; I arose and followed him into the house, where he procured for me a bed, to be shared with another "boy," who had already occupied it.

I had just began to doze, when the explosion of firearms startled all in the house. The keeper of the tavern ran up stairs in great alarm, and when an examination was made, we found that a drunken fellow had discharged his musket in the room below the one where we were sleeping, and that the ball had passed up through the second floor and completely through the bed on which I slept, to the roof, where, having passed through that also, rolled from thence to the ground! And yet, strange as it may appear, no one was injured, though the house was filled to overflowing with guests.

There were groups of disorderly and drunken men continually roaming over the camp-ground at night, who seemed to have no other object than to annoy others, and torment any one they might find sleeping, by shaking them, or, if soundly asleep, dragging them out of their beds by their feet. Among these thus annoyed by them was a physician from Canandaigua. Being a passionate man, they seemed to think it fine sport to arouse him from sleep and hear him scold. The first time they dragged him from his tent

he merely remonstrated in a very gentlemanly manner, and quietly crept back again. The rowdies were disappointed; they had expected a "scene." As soon as he was asleep they attacked him again, dragging him out by the heels; then he was angry, and told them if they repeated the offence it would be at the peril of their lives, and a third time retired to his tent; but a third party soon came, and one, more bold than the rest, entered the tent and laid hold of the Doctor. He sprang to his feet and drew his sword, which he ran through the body of a man supposed to be that of his tormentor; but oh! what sorrow and consternation possessed him when he found he had taken the life of a quiet, unoffending person who happened to be standing by, attracted to the spot probably by the noise of the revelers. The unhappy Doctor was obliged to flee from his country for a time, but after a while the shadows which had so suddenly fallen on his fair prospects were cleared away, and he returned to his home and country.

The second day of the encampment was one of surpassing beauty. The sun shone in all its softened radiance on that vast concourse of human beings. The field presented a spectacle which must have been imposing to those of more experienced vision than mine; but to me, in my ignorant simplicity, it was superbly grand; fascinating beyond my power of resistance, and made an impression on my mind never to be effaced.

The brigade was drawn up in a line, each colonel stationed just so many paces in front of the line, and all the other officers, such as majors, quarter-masters, &c., were stationed at an equal distance in the rear. When all were paraded, the Governor of the State made his appearance, dressed in full uniform, his hat being one of the Bonaparte style, attended by his aid-de-camp, who was dressed much in the same manner as his Excellency Governor Lewis, who, after the salute, took his place at the head of the brigade, and the military exercises commenced. When the Governor issued his orders, they were first given to his aid, who passed them to the officers, and they gave the word of command to the soldiers; for instance if the Governor wished the brigade to "shoulder arms,"--the order went to the officer who commanded the first regiment, and he repeated the order, and was obeyed; then the same order passed to the next, and so on, until the whole brigade had complied with the order of his Excellency.

But this, I believe, was the first and last time that the military were ever called out on so large a scale, in the State of New York. It was supposed that the effect would be decidedly injurious to a community and the idea was abandoned. Young men were so liable to be fascinated by the magnificent spectacle, that not the rabble only were attracted by the "trappings of war," but they have a tendency to induce young, and _old men even_, of fair prospects, to neglect _their agricultural interests_ for military pursuits, which, in a new country, were certainly of paramount importance, if not the greater of the two.

I know that it became very hard for me to content myself to labor as I had done, after witnessing this grand display. I was completely intoxicated with a military spirit, and sighed for the liberty to go out "on the lines" and fight the British.

The martial music, the waving plumes, and magnificent uniform, had driven from my mind entirely the bloodshed and carnage of the battle field; beside, I was sick and tired of being a slave, and felt ready to do almost any thing to get where I could act and feel like a free man.

I became acquainted with a Mr. McClure, a merchant in Bath, who, while on a journey to Philadelphia, to purchase goods, was taken suddenly ill and died; when his brother, George McClure, came on to attend to his diseased brother's business. He was a fine, persevering kind of man, and very soon got to be General McClure, and commanded the brigade in Steuben County, and, as such, was liable to be called at any time when his services were required, to go to the frontier and guard our lines from the invasion of the English army.

To him I applied for a situation as waiter, which he readily agreed to give me if I could get the consent of Captain Helm. I thought there would be no trouble about that; and oh! how I dreamed of and anticipated the happiness of being _something_ beside a slave, for a _little while at least_. Almost every day I went to the store to talk to Gen. McClure of this greatest happiness imaginable, "going to the lines!" and was impatient for the chance to arrive that would send me there.

At last Gen. McClure wrote to Gen. Armstrong, to say that he was ready to obey any order that he might send him, and march to "the lines," if his services were needed; and, to _my_ inexpressible joy, marching orders were returned. I nearly flew in search of Capt. Helm, never once suspecting that he would object; because I knew that he did not then require my services himself, and the pay would be quite as good as he had been receiving for my time; besides I had so completely set my heart on going, that it was impossible for me to dream of a disappointment so bitter as that of being denied going "to the lines."

Oh! how then were my high hopes fallen, and how much more hateful appeared that slavery which had blighted all my military prospects? Nor was Capt. Helm's heartless and mercenary reply to my humble pleading any antidote to my disappointed feelings

and desire for freedom. He said, "you shall not go; I will permit nothing of the kind, so let there be an end to it. The _pay_ is all well enough, I know, but if you get killed your wages will stop; and then who, do you suppose, will indemnify me for the loss? Go about your business, and let me hear no more of such nonsense!"

There was an emergency I had not provided for; and, as I then believed, the master could make no demand on or for the slaves beyond the grave, I was silent; but both master and myself were mistaken on that point; for I have since learned numerous instances where slaves have fought and died in the service of their master's country, and the slave-owner received his wages up to the hour of his death, and then recovered of the United States the full value of his person as property!

Gen. McClure left soon after for the frontier; my saddened heart followed him, and that was all; my body was in slavery still, and painful though it was, I must quietly submit.

The General, however, reaped but few if any laurels in that campaign; he burned the small village of Newark, in Canada, for which he got very little credit on either side of the lake; so I comforted myself as well as I could with the reflection, that all who "went to the wars" did not return covered with glory and laurels of victory.

I continued to live with the Towers; and in the fall of that year, I had the misfortune to cut my foot badly. While chopping fire wood at the door, I accidentally struck my ax against a post, which glanced the blow in such a manner that it came down with sufficient force to nearly sever my great toe from my left foot, gashing upward completely through the large joint, which made a terrible wound. Dr. Taylor was immediately called, and sewed the flesh together, taking two stitches on the upper, and one on the under, side of the foot, before it began to swell; but when the swelling came on, the stitches on the upper side gave way, which occasioned the toe to fall over so much, that I have been slightly lame from that day to this. For several weeks I was unable to be moved, and was regularly attended by Dr. Taylor, but as soon as it could be done without danger, I was taken back to Capt. Helm's, where I found things in much the same condition as when I left them over a year before.

On leaving the family of Mr. Tower, I endeavored to express to them as well in my power the gratitude I felt for their kindness, and the attention I had received during my lameness.

We returned to Bath in a sleigh, and arrived without accident or any great suffering. But the kind treatment I had always received from the Messrs. Tower and family, made it very hard for me to reconcile myself to my former mode of living; especially now that I was lame and weak, from sickness and long confinement; besides, it was cold weather. Oh! how hard it did seem to me, after having a good bed and plenty of bed clothes every night for so long time, to now throw myself down, like a dog, on the "_softest side_" of a rough board, without a pillow, and without a particle of bedding to cover me during the long cold nights of winter. To be reduced from a plentiful supply of good, wholesome food, to the mere pittance which the Captain allowed his slaves, seemed to me beyond endurance.

And yet I had always lived and fared thus, but I never felt so bitterly these hardships and the cruelties of Slavery as I did at that time; making a virtue of necessity, however, I turned my thoughts in another direction.

I managed to purchase a spelling book, and set about teaching myself to read, as best I could. Every spare moment I could find was devoted to that employment, and when about my work I could catch now and then a stolen glance at my book, just to refresh my memory with the simple lesson I was trying to learn. But here Slavery showed its cloven foot in all its hideous deformity. It finally reached the ears of my master that I was learning to read; and then, if he saw me with a book or a paper in my hand, oh, how he would swear at me, sending me off in a hurry, about some employment. Still I persevered, but was more careful about being seen making any attempt to learn to read. At last, however, I was discovered, and had to pay the penalty of my determination.

I had been set to work in the sugar bush, and I took my spelling book with me. When a spare moment occurred I sat down to study, and so absorbed was I in the attempt to blunder through my lesson, that I did not hear the Captain's son-in-law coming until he was fairly upon me. He sprang forward, caught my poor old spelling book, and threw it into the fire, where it was burned to ashes; and then came my turn. He gave me first a severe flogging, and then swore if he ever caught me with another book, he would "whip every inch of skin off my back," &c.

This treatment, however, instead of giving me the least idea of giving it up, only made me look upon it as a more valuable attainment. Else, why should my oppressors feel so unwilling that their slaves should possess that which they thought so essential to themselves? Even then, with my back bleeding and smarting from the punishment I had received, I determined to learn to read and write, at all hazards, if my life was only spared. About this time Capt. Helm began to sell off his slaves to different persons, as

he could find opportunity, and sometimes at a great sacrifice. It became apparent that the Captain, instead of prospering in business, was getting poorer every day.

CHAPTER IX.

DEATH BED AND BRIDAL SCENES.

Neither Capt. Helm nor his wife made any religious pretensions. I hardly know whether or not they were avowed infidels; but they alike ridiculed all religious professions and possessed some very singular notions regarding life and death.

I have often heard the Captain say, that no person need die unless they choose to do so; and his wife was of the same belief. I have frequently heard her remark that if mankind would firmly resist death it would flee from them.

An opportunity, however, was soon after given to test the truth of this strange dogma. Mrs. Helm's health began to decline, but she would pay no attention to it, following her usual course and regular routine of household duties; but all in vain; she was taken down, alarmingly ill, and it became apparent to all, that the "king of terrors" had chosen his victim. She tried with all her natural energy of character, to baffle his pursuit and escape his steady approach, but all to no purpose. "The valley and the shadow of death" were before her, and she had no assurance that the "rod and staff" of the Almighty would sustain and comfort her through the dark passage. She shrank with perfect horror from the untried scenes of the future.

If any one had ever envied Mrs. Helm in her drawing-room, richly attired and sparkling with jewels, or as she moved with the stately step of a queen among her trembling slaves, they should have beheld her on her death bed! They should have listened to her groans and cries for help, while one piercing shriek after another rang through the princely mansion of which she had been the absolute mistress!

[Illustration: "If any one had ever envied Mrs. Helm in her drawing-room, richly attired and sparkling with jewels, or as she moved with the stately step of a queen among her trembling slaves, they should have beheld her on her death-bed!"]

Surrounded as she was with every elegance and luxury that wealth could procure, she lay shrieking out her prayers for a short respite, a short lengthening out of the life she had spent so unprofitably; her eyes wandering restlessly about the apartment, and her hands continually clinching the air, as if to grasp something that would prevent her from sinking into the embrace of death! There was not a slave present, who would have exchanged places with her. Not one of those over whom she had ruled so arbitrarily would have exchanged their rough, lowly cabin and quiet conscience, for all the wealth and power she had ever possessed.

Nothing of all she had enjoyed in life, nor all that she yet called her own, could give her one hour of life or one peaceful moment in death!

Oh! what a scene was that! The wind blew, and great drops of rain fell on the casements. The room lighted only with a single taper; the wretched wife mingles her dying groans with the howling of the storm, until, as the clock struck the hour of midnight she fell back upon her pillow and expired, amid the tears and cries of her family and friends, who not only deplored the loss of a wife and mother, but were grieved by the manner in which she died.

The slaves were all deeply affected by the scene; some doubtless truly lamented the death of their mistress; others rejoiced that she was no more, and all were more or less frightened. One of them I remember went to the pump and wet his face, so as to appear to weep with the rest.

What a field was opened for reflection, by the agonizing death of Mrs. Helm? Born and reared in affluence; well educated and highly accomplished, possessed of every means to become a useful woman and an ornament to her sex; which she most likely would have been, had she been instructed in the Christian religion, and had lived under a different influence. As infidelity ever deteriorates from the female character, so Slavery transforms more than one, otherwise excellent woman, into a feminine monster. Of Mrs. Helm, with her active intellect and great force of character, it made a tyrannical demon. Her race, however, is ended; her sun gone down in darkness, and her soul we must leave in the keeping of a righteous God, to whom we must all give an account for the deeds done in the body. But in view of the transitory pleasures of this life; the unsatisfactory realization of wealth, and the certainty of death, we may well inquire, "What shall it profit a man to gain the whole world and lose his own soul?"

Some little time after the scene just recorded, there came to Bath a young physician named Henry, who commenced practice under very flattering prospects. He was an accomplished young man, well educated and very skillful in his profession. He was affable and gay in his manners, and very fond of company. An intimate acquaintance was soon formed with Capt. Helm and family, and he called almost daily to chat and drink wine with the Captain,--both being quite fond of a social glass.

One night in the depth of winter, the Doctor was called to see a patient who lived six miles down the Conhocton river. Previous, however, to the call, he had accepted an invitation to attend a party at Capt. Helm's, and there he was found. They had music and dancing, while the wine passed around very freely. None seemed to join in the dance and other amusements of the evening with more enjoyment than did Dr. Henry; but after he was sent for, it being a most bitter cold night, he asked the Captain for a horse to ride to see his patient, to which he readily assented, and had his fine _race-horse_ (for the Captain had not left off all his old habits), brought out from the stable, and the Doctor sprang lightly into the saddle. Unfortunately his way led by the race-course, and when the trained animal came to it he started with such speed as to throw the Doctor to the ground, where he lay all that terrible cold night. In the morning, some person going after wood, came in sight of the Doctor as he was trying to creep away on his frozen hands and feet. He was put into the sleigh and taken to the village with all possible speed. All was done for him that could be, but his feet and legs were frozen solid. His uncle, Dr. Henry, was brought as soon as possible, who decided that nothing could save his life but the amputation of both legs, just below the knee. This was done; but what a change in the prospects of this promising young man! Instead of stepping lightly about as he used to do, with a smiling countenance, he at last came forth after a tedious confinement, a cripple for life, hobbling about on his knees, sad and dejected. And what, think you, was the cause of this terrible calamity? What prevented the Doctor from an exertion to save his life? Wine, intoxicating wine, was undoubtedly the occasion of the heedless and reckless conduct of both himself and Capt. Helm. And should not this circumstance be a warning to parents and guardians, to young men and children, "to look not upon the wine when it is red," and remember that at last "it will bite like a serpent and sting like an adder?" Should it not also remind those who have guests to entertain, of the sinfulness of putting the cup to their neighbor's lips? Certainly it should. But I must resume my story.

About this time Major Thornton of Bath, died. He had long been an intimate friend and acquaintance of Capt. Helm, and as the reader is already informed of the death of Mrs. Helm, they will not be surprised to know that he began to look earnestly after the widow of his late friend. It become apparent that his solicitude for the loneliness of Madam Thornton was not so much as a disconsolate widow, as that of making her the future Mrs. Helm; nor was it less observable that the new-made widow accepted the Captain's attentions with great favor, and more as a lover than a comforter.

The result was, after the Major had been dead six weeks, Capt. Helm was married to his widow, and brought her and her servants in great triumph to his house, giving her the charge of it. His own servants were discharged, and hers took their places.

All went on pleasantly for a while; then the slaves began to grow sullen and discontented; and two of them ran away. Capt. Helm started a man named Morrison, a Scotchman, in pursuit, who hunted them ten days, and then returned without any tidings of the absconding slaves. They made good their escape and were never heard from afterwards, by those whose interest suffered by the loss.

I was one afternoon at a neighbor's house in the village, when I was suddenly taken so violently ill with pain in my head and side, that I had to be carried home. When we arrived there, I was allowed a pallet of straw to lie on, which was better than nothing. Day after day, my disease increased in violence, and my master employed a physician to attend me through my illness, which brought me very low indeed. I was constantly burning with fever, and so thirsty that I knew not what I would have given for a draught of cold water, which was denied me by the physician's direction. I daily grew weaker until I was reduced to helplessness, and was little else than "skin and bones." I really thought my time had come to die; and when I had strength to talk, I tried to arrange the few little business affairs I had, and give my father direction concerning them. And then I began to examine my own condition before God, and to determine how the case stood between Him and my poor soul. And "there was the rub." I had often excused myself, for frequent derelictions in duty, and often wild and passionate outbreaks, on account of the hardness of my lot, and the injustice with which I was treated, even in my best endeavors to do as well as I knew how. But now, with death staring me in the face, I could see that though I was a friendless "slave-boy," I had _not_ always done as well as I knew how; that I had _not_ served God as I knew I ought, nor had I always set a good example before my fellow-slaves, nor warned them as well as I might, "to flee the wrath to come." Then I prayed my Heavenly Father to spare me a little longer, that I might serve Him better; and in His mercy and gracious goodness, He did so; though when the fever was turning they gave me up; and I could hear them say, when they came to feel my pulse, "he is almost gone," "it will soon be over," &c., and then inquire if I knew them. I did, but was too weak to say so. I recollect with gratitude, the kindness of Mrs. H.A. Townsend, who sent me many delicacies and cooling drinks to soften the rigor of my

disease; and though I suppose she has long since "passed away" and gone to her reward, may the blessing of those who are ready to perish, rest upon the descendants of that excellent woman.

Capt. Helm was driving on in his milling, distillery and farming business. He now began to see the necessity of treating his slaves better by far than he had ever done before, and granted them greater privileges than he would have dared to do at the South. Many of the slaves he had sold, were getting their liberty and doing well.

CHAPTER X.

HIRED OUT TO A NEW MASTER.

While I was staying with my master at Bath, he having little necessity for my services, hired me out to a man by the name of Joseph Robinson, for the purpose of learning me to drive a team. Robinson lived about three miles from the village of Bath, on a small farm, and was not only a poor man but a very mean one. He was cross and heartless in his family, as well as tyrannical and cruel to those in his employ; and having hired me as a "slave boy," he appeared to feel at full liberty to wreak his brutal passion on me at any time, whether I deserved rebuke or not; nor did his terrible outbreaks of anger vent themselves in oaths, curses and threatenings only, but he would frequently draw from the cart-tongue a heavy iron pin, and beat me over the head with it, so unmercifully that he frequently sent the blood flowing over my scanty apparel, and from that to the ground, before he could feel satisfied.

These kind of beatings were not only excessively painful, but they always reminded me of the blows I had so often received from the key, in the hand of Mrs. Helm, when I was but a little waiter lad; and in truth I must say that the effect of these heavy blows on the head, have followed me thus far through life; subjecting me to frequent and violent head-aches, from which I never expect to be entirely free. Even to this day I shudder at the thought, when I think how Robinson used to fly at me, swearing, foaming, and seeming to think there was no weapon too large or too heavy to strike me with.

He and I were at one time logging with a yoke of oxen, which it was my business to drive. At that time rattle-snakes were numerous, and a great terror to the inhabitants. To be bitten by one of these poisonous reptiles was certain and almost instant death; hence, the greatest caution and constant vigilance was necessary to avoid them while at work. I had been sent with the oxen to draw a log to the pile, and when I came up to it, I observed that it appeared to be hollow; but stepping forward, with the chain in my hand, ready to attach it to the log, when, oh, horror! the warning rattle of a snake sounded like a death knell in my ears, proceeding from the log I was about to lay hold of. I was so much frightened by the sound, that I dropped the chain as though it were red hot, left my team, and ran with all the speed in my power, screaming "murder, murder!" as loud as I could.

This proceeding, which was the fearful impulse of the moment, offended Robinson, and gave him another opportunity to beat me most cruelly. He was himself as much afraid of rattle-snakes as I; but he was the master and I the "slave boy," which made a vast difference. He caught hold of me, and, with horrid oaths, beat me with his fist again and again; threatening me with awful punishment if I did not instantly return and bring the log to the desired spot. I never can forget the mortal agony I was in, while compelled by his kicks and blows to return and fasten the chain around the log containing the deadly serpent. I, however, succeeded with trembling hands, and drove the oxen, but keeping myself at the fartherest possible distance from them and the log. When I finally arrived at the pile, Mr. Robinson and some other men, cut a hole with an ax in the log, and killed the large, venomous rattle-snake that had occasioned me so much alarm and such a cruel beating. Nor was the uncontrollable and brutal passion of Robinson his only deficiency; he was mean as he was brutal.

He had, at one time, borrowed a wagon of a neighbor living two miles distant, through a dense forest. On the day of the total eclipse of the sun, it entered his head that it would be fine sport, knowing my my ignorance and superstition, to send me, just as the darkness was coming on, to return the borrowed wagon. I accordingly hitched the ox-team to it and started. As I proceeded through the wood, I saw, with astonishment and some alarm, that it was growing very dark, and thought it singular at that hour of the day. When I reached the place of my destination it was almost total darkness, and some persons, ignorant as myself, were running about, wringing their hands, and declaring that they believed the Day of Judgment had come, and such like expressions.

The effect of all this was, however, very different from what my master had expected. I thought, of course, if the judgment day had come, I should be no longer a slave in the power of a heartless tyrant. I recollect well of thinking, that if indeed all things earthly were coming to an end, I should be free from Robinson's brutal force, and as to meeting my Creator, I felt far less dread of that than of meeting my cross, unmerciful master. I felt that, sinful as I had been, and unworthy as I was, I should be far better off than I then

was; driven to labor all day, without compensation; half starved and poorly clad, and above all, subjected to the whims and caprices of any heartless tyrant to whom my master might give the power to rule over me. But I had not much time for reflection, I hurried home; my mind filled with the calm anticipation that the end of all things was at hand; which greatly disappointed my expectant master, who was looking for me to return in a great fright, making some very ludicrous demonstration of fear and alarm. But after a few months more of hardship I was permitted to return to Capt. Helm's, where I was treated much better than at Robinson's, and much, better than the Captain used to treat his slaves.

Capt. Helm, not having demand for slave labor as much as formerly, was in the practice of hiring out his slaves to different persons, both in and out of the village; and among others, my only sister was hired out to a _professed_ gentleman living in Bath. She had become the mother of two or three children, and was considered a good servant.

One pleasant Sabbath morning, as I was passing the house where she lived, on my way to the Presbyterian church, where I was sent to ring the bell as usual, I heard the most piteous cries and earnest pleadings issuing from the dwelling. To my horror and the astonishment of those with me, my poor sister made her appearance, weeping bitterly, and followed by her inhuman master, who was polluting the air of that clear Sabbath morning, with the most horrid imprecations and threatenings, and at the same time flourishing a large raw-hide. Very soon his bottled wrath burst forth, and the blows, aimed with all his strength, descended upon the unprotected head, shoulders and back of the helpless woman, until she was literally cut to pieces. She writhed in his powerful grasp, while shriek after shriek died away in heart-rending moanings; and yet the inhuman demon continued to beat her, though her pleading cries had ceased, until obliged to desist from the exhaustion of his own strength.

What a spectacle was that, for the sight of a brother? The God of heaven only knows the conflict of feeling I then endured; He alone witnessed the tumult of my heart, at this outrage of manhood and kindred affection. God knows that my will was good enough to have wrung his neck; or to have drained from his heartless system its last drop of blood! And yet I was obliged to turn a deaf ear to her cries for assistance, which to this day ring in my ears. Strong and athletic as I was, no hand of mine could be raised in her defence, but at the peril of both our lives;--nor could her husband, had he been a witness of the scene, be allowed any thing more than unresisting submission to any cruelty, any indignity which the master saw fit to inflict on _his wife_, but the other's _slave_.

Does any indignant reader feel that I was wanting in courage or brotherly affection, and say that he would have interfered, and, at all hazards, rescued his sister from the power of her master; let him remember that he is a _freeman_; that he has not from his infancy been taught to cower beneath the white man's frown, and bow at his bidding, or suffer all the rigor of the slave laws. Had the gentlemanly woman-whipper been seen beating his horse, or his ox, in the manner he beat my poor sister, and that too for no fault which the law could recognize as an offence, he would have been complained of most likely; but as it was, she was but a "slave girl,"--with whom the slave law allowed her master to do what he pleased.

Well, I finally passed on, with a clinched fist and contracted brow, to the church, and rung the bell, I think rather furiously, to notify the inhabitants of Bath, that it was time to assemble for the worship of that God who has declared himself to be "no respecter of persons." With my own heart beating wildly with indignation and sorrow, the kind reader may imagine my feelings when I saw the smooth-faced hypocrite, the inhuman slave-whipper, enter the church, pass quietly on to his accustomed seat, and then meekly bow his hypocritical face on the damask cushion, in the reverent acknowledgment of that religion which teaches its adherents "to do unto others as they would be done by," just as if nothing unusual had happened on that Sabbath morning. Can any one wonder that I, and other slaves, often doubted the sincerity of every white man's religion? Can it be a matter of astonishment, that slaves often feel that there is no just God for the poor African? Nay, verily; and were it not for the comforting and sustaining influence that these poor, illiterate and suffering creatures feel as coming from an unearthly source, they would in their ignorance all become infidels. To me, that beautiful Sabbath morning was clouded in midnight darkness, and I retired to ponder on what could be done.

For some reason or other, Capt. Helm had supplied every lawyer in that section of country with slaves, either by purchase or hire; so when I thought of seeking legal redress for my poor, mangled sister, I saw at once it would be all in vain. The laws were in favor of the slave owner, and besides, every legal gentleman in the village had one or more of the Captain's slaves, who were treated with more or less rigor; and of course they would do nothing toward censuring one of their own number, so nothing could be done to give the slave even the few privileges which the laws of the State allowed them.

The Captain sold my aunt Betsy Bristol to a distinguished lawyer in the village, retaining her husband, Aaron Bristol, in his own employ; and two of her children he sold to another legal gentleman named Cruger. One day Captain Helm came out where the slaves were at work, and finding Aaron was not there, he fell into a great rage and swore terribly. He finally started off to a beach

tree, from which he cut a stout limb, and trimmed it so as to leave a knot on the but end of the stick, or bludgeon rather, which was about two and a half feet in length. With this formidable weapon he started for Aaron's lonely cabin. When the solitary husband saw him coming he suspected that he was angry, and went forth to meet him in the street. They had no sooner met than my master seized Aaron by the collar, and taking the limb he had prepared by the smaller end, commenced beating him with it, over the head and face, and struck him some thirty or more terrible blows in quick succession; after which Aaron begged to know for what he was so unmercifully flogged.

"Because you deserve it," was the angry reply. Aaron said that he had ever endeavored to discharge his duty, and had done so to the best of his ability; and that he thought it very hard to be treated in that manner for no offence at all. Capt. Helm was astonished at his audacity; but the reader will perceive that the slaves were not blind to the political condition of the country, and were beginning to feel that they had some rights, and meant to claim them.

Poor Aaron's face and head, however, was left in a pitiable condition after such a pummeling with a knotty stick. His face, covered with blood, was so swollen that he could hardly see for some time; but what of that? Did he not belong to Capt. Helm, soul and body; and if his brutal owner chose to destroy his own property, certainly had he not a right to do so, without let or hindrance? Of course; such is the power that Slavery gives one human being over another.

And yet it must be confessed that among the poor, degraded and ignorant slaves there exists a foolish pride, which loves to boast of their master's wealth and influence. A white person, too poor to own slaves, is as often looked upon with as much disdain by the miserable slave as by his wealthy owner. This disposition seems to be instilled into the mind of every slave at the South, and indeed, I have heard slaves object to being sent in very small companies to labor in the field, lest that some passer-by should think that they belonged to a poor man, who was unable to keep a large gang. Nor is this ridiculous sentiment maintained by the slaves only; the rich planter feels such a contempt for all white persons without slaves, that he does not want them for his neighbors. I know of many instances where such persons have been under the necessity of buying or hiring slaves, just to preserve their reputation and keep up appearances; and even among a class of people who profess to be opposed to Slavery, have I known instances of the same kind, and have heard them apologize for their conduct by saying that "when in Rome, we must do as the Romans do."

Uncle Aaron Bristol was one of Capt. Helm's slaves who had a large amount of this miserable pride; and for him to be associated with a white man in the same humble occupation, seemed to give him ideas of great superiority, and full liberty to treat him with all the scorn and sarcasm he was capable of, in which my uncle was by no means deficient.

At this time the Captain owned a fine and valuable horse, by the name of _Speculator_. This horse, groomed by uncle Aaron, stood sometimes at Bath and sometimes at Geneva; and at the latter village another horse was kept, groomed by a white man. The white groom was not very well pleased with Aaron's continual disparagement of the clumsy animal which my uncle called "a great, awkward plow-horse;" and then he would fling out some of his proud nonsense about "_poor white people_ who were obliged to groom their own old dumpy horses," &c.

Well, things went on in this unpleasant manner for several weeks, when at last the white groom and Aaron met at Geneva, and the horse belonging to the former, designedly or accidentally, escaped from his keeper, and came with full speed, with his mouth wide open, after Speculator. When the fiery fellow had overtaken uncle Aaron he attempted to grasp the wethers of Speculator with his teeth, instead of which he caught Aaron on the inside of his thigh, near the groin, from whence he bit a large piece of flesh, laying the bone entirely bare; at the same moment flinging Aaron to the ground, some rods off; and the next instant he kicked Speculator down a steep embankment Aaron was taken up for dead, and Dr. Henry sent for, who dressed his wounds; and after several months' confinement he finally recovered. It is probable that the biting and overthrow of Aaron saved his life, as he must have otherwise been killed in the encounter of the two horses.

A while after his recovery, uncle Aaron succeeded in procuring a team and some kind of vehicle, in which he put his wife and children, and between two days, took "French leave" of his master as well as of the lawyer to whom his wife belonged.

The lawyer, however, was far from being pleased when he missed his property, and immediately set his wits to work to reclaim her. All was kept secret as possible, but it was whispered about that it was to be done by a State's warrant, for removing the clothing and furniture they had taken, and so, being thus arrested, "Madam Bristol" would be glad to return to her work in the lawyer's kitchen. But Aaron was a smart, shrewd man, and kept out of their reach, where he soon found friends and employment, and could go where he pleased, without having an infuriated master to beat and disfigure him with a knotted stick, until his clothes were

bespattered with blood. They appreciated their liberty, and lived and died in peace and freedom.

Capt. Helm continued his old manner of treating slaves, dealing out their weekly allowance of corn or meal; but living as we now did, so much more intimately with white inhabitants, our condition was materially improved. The slaves became more refined in manners and in possession of far greater opportunities to provide for themselves, than they had ever before enjoyed, and yet it was _Slavery_. Any reverse in the fortunes of our master would be disadvantageous to us. Oh, how this fearful uncertainty weighed upon us as we saw that our master was not prospering and increasing in wealth; but we had not the dismal fears of the loathsome slave-pen, rice swamps, and many other things we should have to fear in Virginia. We were still _slaves_, and yet we had so much greater chance to learn from the kind, intelligent people about us, so many things which we never knew before, that I think a slave-trader would have found it a difficult task to take any one of us to a Southern slave market, if our master had so ordered it.

The village of Bath is rather an out-of-the-way place, hemmed in on all sides by mountains of considerable height, leaving an opening on the north, through a pleasant valley, to the head of Crooked Lake. Produce of every kind, when once there, met a ready sale for the New York market.

In the first settlement of the country this was the only outlet for the country produce, which was transported in rude boats or vessels called _arks_, built during the winter season to await the spring freshet; then they loaded them with wheat or other produce, and sent them to Baltimore or elsewhere. They used also to obtain great quantities of fine lumber, and floated it through the same rivers every spring; but it was attended with great loss of life and property.

Bath assumed a warlike appearance during the last war with Great Britain; the public square was dotted all over with officers, marquees, and soldiers' tents. Some of these soldiers were unprincipled and reckless men, who seemed to care very little what they did.

One evening I was walking around the encampment in company with a Mr. James Morrison, a clerk in the land office, looking at the soldiers, until we came near a sentinel on duty. He kept his gun to his shoulder until we came near enough, and then he attempted to run me through with his bayonet. Young Morrison sprang forward, and seizing the musket, told me to run; I did so, which probably saved my life.

CHAPTER XI.

THOUGHTS ON FREEDOM.

After living sometime in Bath, and having the privilege of more enlightened society, I began to think that it was possible for me to become a free man in some way besides going into the army or running away, as I had often thought of doing. I had listened to the conversation of others, and determined to ask legal counsel on the subject the first opportunity I could find. Very soon after, as I was drawing wood, I met on the river bridge, Mr. D. Cruger, the eminent lawyer before mentioned, and I asked him to tell me if I was not free, by the laws of New York. He started, and looked around him as if afraid to answer my question, but after a while told me I was _not_ free. I passed on, but the answer to my question by no means satisfied me, especially when I remembered the hesitancy with which it was given.

I sought another opportunity to speak with Mr. Cruger, and at last found him in his office alone; then he conversed freely on the subject of Slavery, telling me that Capt. Helm could not hold me as a slave in that State, if I chose to leave him, and then directed me to D. Comstock and J. Moore; the first being at the head of a manumission society, and the last named gentleman one of its directors.

Our condition, as I have said before, was greatly improved; and yet the more we knew of freedom the more we desired it, and the less willing were we to remain in bondage. The slaves that Capt. Helm had sold or hired out, were continually leaving him and the country, for a place of freedom; and I determined to become my own possessor.

There is no one, I care not how favorable his condition, who desires to be a slave, to labor for nothing all his life for the benefit of others. I have often heard fugitive slaves say, that it was not so much the cruel beatings and floggings that they received which induced them to leave the South, as the idea of dragging out a whole life of unrequited toil to enrich their masters.

Everywhere that Slavery exists, it is nothing but _slavery_. I found it just as hard to be beaten over the head with a piece of iron in New York as it was in Virginia. Whips and chains are everywhere necessary to degrade and brutalize the slave, in order to reduce

him to that abject and humble state which Slavery requires. Nor is the effect much less disastrous on the man who holds supreme control over the soul and body of his fellow beings. Such unlimited power, in almost every instance transforms the man into a tyrant; the brother into a demon.

When the first of our persecuted race were brought to this country it was to teach them to reverence the only true and living God; or such was the answer of Her Majesty Queen Elizabeth of England, when her subjects desired the liberty to bring from their native land the poor, ignorant African. "Let them," said the Queen, "be brought away only by their own consent, otherwise the act will be detestable, and bring down the vengeance of heaven upon us." A very different position truly, from the one assumed at the present day by apologists for the traffic in human flesh. But, to return to myself.

I had determined to make an effort to own myself, and as a preliminary step, I obtained permission of Capt. Helm to visit some friends living in Canandaigua and Geneva. This was in the winter of 1814. I went first to Geneva; from there to Canandaigua. Between the two villages I met a company of United States' troops, returning from Buffalo, where they had been to repel an invasion of the British.

The two villages above named, were small but very pretty, having been laid out with taste and great care. Some wealthy and enterprising gentlemen had come from the East into this great Western country, who were making every improvement in their power. The dense forest had long since fallen under the stroke of the woodman's ax, and in that section, flourishing villages were springing up as if by magic, where so lately roamed wild beasts and rude savages, both having fallen back before the march of civilization.

I called on James Moore, as directed by Mr. Cruger, and found he was one of the directors of the "Manumission Society," as it was then called. This was an association of humane and intelligent gentlemen whose object it was to aid any one who was illegally held in bondage. The funds of the society were ample; and able counsel was employed to assist those who needed it. The late lamented John C. Spencer, one of the most eminent lawyers in Western New York, was then counsel for that society.

I soon got an interview with Mr. Moore, to whom I related the history of my life,--the story of my wrongs and hardships. I told him about my having been hired out by Capt. Helm, which he said was sufficient to insure my freedom! Oh! how my heart leaped at the thought! The tears started, my breast heaved with a mighty throb of gratitude, and I could hardly refrain from grasping his hand or falling down at his feet; and perhaps should have made some ludicrous demonstration of my feelings, had not the kind gentleman continued his conversation in another direction.

He said that indispensable business called him to Albany, where he must go immediately, but assured me that he would return in March following; then I must come to him and he would see that I had what justly belonged to me--my freedom from Slavery. He advised me to return to Bath and go on with my work as usual until March, but to say nothing of my intentions and prospects. I returned according to his directions, with a heart so light, that I could not realize that my bonds were not yet broken, nor the yoke removed from off my neck. I was already free in spirit, and I silently exulted in the bright prospect of liberty.

Could my master have felt what it was to be relieved of such a crushing weight, as the one which was but partially lifted from my mind, he would have been a happier man than he had been for a long time.

I went cheerfully back to my labor, and worked with alacrity, impatient only for March to come; and as the time drew near I began to consider what kind of an excuse I could make to get away. I could think of none, but I determined to go without one, rather than to remain.

Just before the time appointed for me to meet Mr. Moore, a slave girl named Milly, came secretly to Bath. She had been one of Capt. Helm's slaves, and he had a while before sold her to a man who lived some distance west of the village. Milly had now taken the matter into her own hands. She had left her master to take care of himself, and was in short, "running away," determined as myself, that she would be a slave no longer; resolved on death, or freedom from the power of the slaveholder.

The time I had set for my departure was so near at hand, that I concluded to accompany her in her flight. When the dark night came on, we started together, and traveled all night, and just as the day dawned we arrived at Manchester, where we stopped a short time with one Thomas Watkins.

But I was not to be let go so easily. I had been missed at Capt. Helm's, and several men started in immediate pursuit. I was weary, and so intent on getting a little rest that I did not see my pursuers until they had well nigh reached the house where I was; but I

did see them in time to spring from the house with the agility of a deer, and to run for the woods as for life. And indeed, I so considered it. I was unarmed to be sure, and not prepared to defend myself against two or three men, armed to the teeth; but it would have gone hard with me before I surrendered myself to them, after having dreamed as I had, and anticipated the blessings of a free man. I escaped them, thank God, and reached the woods, where I concealed myself for some time, and where I had ample opportunity to reflect on the injustice and cruelty of my oppressors, and to ask myself why it was that I was obliged to fly from my home. Why was I there panting and weary, hungry and destitute--skulking in the woods like a thief, and concealing myself like a murderer? What had I done? For what fault, or for what crime was I pursued by armed men, and hunted like a beast of prey? God only knows how these inquiries harrowed up my very soul, and made me well nigh doubt the justice and mercy of the Almighty, until I remembered my narrow escape, when my doubts dissolved in grateful tears.

But why, oh why, had I been forced to flee thus from my fellow men? I was guilty of no crime; I had committed no violence; I had broken no law of the land; I was not charged even with a fault, except of _the love of liberty_ and a desire to be _free_! I had claimed the right to possess my own person, and remove it from oppression. Oh my God, thought I, can the American People, who at this very hour are pouring out their blood in defence of their country's liberty; offering up as a sacrifice on the battle field their promising young men, to preserve their land and hearthstones from English oppression; can they, will they, continue to hunt the poor African slave from their soil because he desires that same liberty, so dear to the heart of every American citizen? Will they not blot out from their fair escutcheon the foul stain which Slavery has cast upon it? Will they not remember the Southern bondman, in whom the love of freedom is as inherent as in themselves; and will they not, when contending for equal rights, use their mighty forces "to break _every yoke_, and let the oppressed go free?" God grant that it may be so!

As soon as I thought it prudent, I pursued my journey, and finally came out into the open country, near the dwelling of Mr. Dennis Comstock, who, as I have said, was president of the Manumission Society. To him I freely described my situation, and found him a friend indeed. He expressed his readiness to assist me, and wrote a line for me to take to his brother, Otis Comstock, who took me into his family at once. I hired to Mr. Comstock for the season, and from that time onward lived with him nearly four years.

When I arrived there I was about twenty-two years of age, and felt for the first time in my life, that I was my own master. I cannot describe to a free man, what a proud manly feeling came over me when I hired to Mr. C. and made my first bargain, nor when I assumed the dignity of collecting my own earnings. Notwithstanding I was very happy in my freedom from Slavery, and had a good home, where for the first time in my life I was allowed to sit at table with others, yet I found myself very deficient in almost every thing which I should have learned when a boy.

These and other recollections of the past often saddened my spirit; but _hope _,--cheering and bright, was now mine, and it lighted up the future and gave me patience to persevere.

In the autumn when the farm work was done, I called on Mr. Comstock for some money, and the first thing I did after receiving it I went to Canandaigua where I found a book-store kept by a man named J.D. Bemis, and of him I purchased some school books.

No king on his throne could feel prouder or grander than I did that day. With my books under my arm, and money of my own earning in my pocket, I stepped loftily along toward Farmington, where I determined to attend the Academy. The thought, however, that though I was twenty-three years old, I had yet to learn what most boys of eight years knew, was rather a damper on my spirits. The school was conducted by Mr. J. Comstock, who was a pleasant young man and an excellent teacher. He showed me every kindness and consideration my position and ignorance demanded; and I attended his school three winters, with pleasure and profit to myself at least.

When I had been with Mr. Comstock about a year, we received a visit from my old master, Capt. Helm, who had spared no pains to find me, and when he learned where I was he came to claim me as "his boy," who, he said he "wanted and must have."

Mr. Comstock told him I was _not_ "his boy," and as such he would not give me up; and further, that I was free by the laws of the State. He assured the Captain that his hiring me out in the first instance, to Mr. Tower, forfeited his claim to me, and gave me a right to freedom,--but if he chose to join issue, they would have the case tried in the Supreme Court; but this proposition the Captain declined: he knew well enough that it would result in my favor; and after some flattery and coaxing, he left me with my friend, Mr. Comstock, in liberty and peace!

CHAPTER XII.

CAPT. HELM--DIVORCE--KIDNAPPING.

The business affairs of Capt. Helm had for some time been far from prosperous; and now he was quite poor. His slave property proved a bad investment, and Madam Thornton a far worse one. She had already applied for a divorce, and a good share of the estate as alimony; both of which she succeeded in getting, the Captain allowing her to take pretty much her own course. These troubles, with costs of lawsuits, bad management, &c., had now emptied the coffers of my old master almost to the last farthing; and he began to cast about him for some way to replenish his purse, and retrieve his fallen fortunes.

Had Capt. Helm been brought up to honorable industry, and accustomed to look after his own pecuniary interests, he doubtless would have sustained his position; or if reverses were unavoidable, he would have by persevering industry, regained what he had lost. But he had been raised in a slave State, and Southern principles were as deeply instilled into his mind, as Southern manners were impressed on his life and conduct.

He had no partiality for labor of any kind; horse-racing and card-playing were far more congenial to his tastes; reduced as he now was, he would deny himself no luxury that his means or credit would procure. His few remaining slaves were given into the hands of an idle, brutal overseer --while they, half fed, half clothed, grew more and more discontented, and ran away on every opportunity that offered.

The Captain at last hit upon a method of making money, which, if it had been carried into operation on the high seas, would in all probability have been called by its right name, and incurred the penalty of the gallows--as piracy. Ought it then to be deemed less criminal because transpiring on the free soil of the American Republic? I think not. Nor was it less censurable on account of its failure.

The Captain's plan was to collect all the slaves he had once owned, many of whom had escaped to the surrounding villages, and when once in his grasp, to run them speedily into a slave State, and there sell them for the Southern market. To carry forward this hellish design, it was necessary to have recourse to stratagem. Some person must be found to lure the unsuspecting slaves into the net he was spreading for them. At last he found a scoundrel named Simon Watkins, who for the consideration of fifty dollars, was to collect as many of the slaves as he could at one place; and when he had done so, he was to receive the money, leaving Capt. Helm to do the rest.

Simon set immediately about the business, which was first to go to Palmyra, and in great kindness and generosity, give a large party to the colored people,--desiring that all Capt. Helm's former slaves, _in particular_, should be present to have a joyous re-union, and celebrate their freedom in having a fine time generally.

Invitations were sent to all, and extensive preparation made for a large "social party," at Palmyra, at the house of Mrs. Bristol. My parents were invited; and Simon took the pains to come to Farmington to give me a special invitation. When the time arrived for the party, I went to Palmyra with the intention of attending. I had not the least suspicion of any thing wrong; yet, by some mysterious providence, or something for which I can not account, a presentiment took possession of my mind that all was not right. I knew not what I feared, and could in no way define my apprehensions; but I grew so uneasy, that I finally gave up the party and returned home, before the guests were assembled.

Capt. Helm and his assistants came on to Palmyra in disguise, before evening, and secreted themselves in one of the hotels to await the arrival of their victims.

At the appointed hour the slaves began to assemble in large numbers and great glee, without the least suspicion of danger. They soon began their amusements, and in the midst of their mirth, Capt. Helm and party stealthily crept from their hiding place and surrounded the house; then bursting in suddenly upon the revelers, began to make arrests. Such a tumult, such an affray as ensued would be hard to describe.

The slaves fought for their lives and their liberty, and the Captain's party for their property and power. Fists, clubs, chairs, and any thing they could get hold of, was freely used with a strength and will of men who had tasted the joys of freedom. Cries and curses were mingled, while blows fell like hail on both sides. Commands from our old master were met with shouts of bold defiance on the part of the negroes, until the miserable kidnappers were glad to desist, and were driven of--not stealthily as they came, but in quick time and in the best way they could, to escape the threatened vengeance of the slaves, who drove them like "feathers before the wind." But it was a terrible battle and many were severely wounded; among them was my father. He was taken to his home, mangled and bleeding, and from the effects of that night's affray he never recovered. He lingered on in feeble health until death

finally released him from suffering, and placed him beyond the reach of kidnappers and tyrants.

The Captain and his party, enraged and disappointed in their plans at Palmyra, returned to Bath to see what could be done there toward success, in getting up a gang of slaves for the Southern market. When they came among the colored people of Bath, it was like a hawk alighting among a flock of chickens at noon-day. They scattered and ran in every direction, some to the woods, some hid themselves in cellars, and others in their terror plunged into the Conhocton River. In this manner the majority of the negroes escaped, but not all; and those were so unfortunate as to get caught were instantly thrown into a large covered "Pennsylvania wagon," and hurried off, closely guarded, to Olean Point. Among those taken were Harry Lucas, his wife, Lucinda, and seven children; Mrs. Jane Cooper and four children, with some others, were also taken.

When Capt. Helm arrived at Olean Point with his stolen freight of human beings, he was unexpectedly detained until he could build a boat,--which, to his great dismay took him several days.

The sorrow and fearful apprehension of those wretched recaptured slaves can not be described nor imagined by any one except those who have experienced a like affliction. They had basked for a short season in the sunshine of liberty, and thought themselves secure from the iron grasp of Slavery, and the heel of the oppressor, when in the height of their exultation, they had been thrust down to the lowest depths of misery and despair, with the oppressor's heel again upon their necks. To be snatched without a moment's warning from their homes and friends,--hurried and crowded into the close slave wagon, regardless of age or sex, like sheep for the slaughter, to be carried they knew not whither; but, doubtless to the dismal rice swamp of the South,--was to them an agony too great for endurance. The adult portion of the miserable company determined at last to go no farther with their heartless master, but to resist unto death if need be, before they surrendered themselves to the galling chains they had so recently broken, or writhed again under the torturing lash of the slave-driver.

Harry Lucas and wife, and Jane Cooper, silently prepared themselves for the conflict, determined to sell their lives as dearly as possible. When they were nearly ready to start, Jane Cooper sent her oldest daughter and younger sister, (she who is now our worthy friend Mrs. P. of Bath), into the woods, and then when the men undertook to get Lucas and the two women on board the boat the struggle commenced. The women fought the Captain and his confederates like a lioness robbed of her whelps! They ran and dodged about, making the woods ring with their screams and shouts of "Murder! Murder! Help! Help! Murder!" until the Captain's party, seeing they could do nothing to quell them, became so exceedingly alarmed lest they should be detected in their illegal proceedings, that they ran off at full speed, as if they thought an officer at their heels. In their hurry and fright they caught two of Harry's children, and throwing them into the boat, pushed off as quick as possible, amid the redoubled cries of the agonized parents and sympathizing friends, all trying in every way possible, to recover from the merciless grasp of the man-stealer, the two frightened and screaming children. Guns were fired and horns sounded, but all to no purpose--they held tightly the innocent victims of their cupidity, and made good their escape.

Mr. D. C----, a gentleman of wealth and high standing in Steuben County, became responsible for the fifty dollars which Capt. Helm promised to pay Simon Watkins for his villainy in betraying, Judas-like, those unsuspecting persons whom it should have been his pleasure to protect and defend against their common oppressor,--his own as well as theirs.

In addition to this rascality, it can not appear very creditable to the citizens of Steuben County, that Capt. Helm and Thomas McBirney should both hold high and important offices at the time, and _after_ they had been tried and convicted of the crime of kidnapping. Both of these gentlemen, guilty of a State's prison offence, were judges of the common pleas. T. McBirney was first judge in the county, and Capt. Helm was side judge; and notwithstanding their participation in, and conviction of, a flagrant outrage on the laws of God and man, they managed not only to escape the penalty, but to retain their offices and their respectable standing in community for years after.

CHAPTER XIII.

LOCATE IN THE VILLAGE OF ROCHESTER.

I continued to labor in the employ of Mr. O. Comstock, whose son, Zeno, was married during the year 1816, and purchased a farm on the site of the present flourishing village of Lockport, to which he moved his family and effects; but from a mistaken supposition that the Erie Canal, which was then under contemplation, would take a more southern route, he was induced to sell his farm in Hartland, which has proved a mine of wealth to the more fortunate purchaser.

In the winter of that year, I was sent by my employer to Hartland with a sleigh-load of produce, and passed through the village of Rochester, which I had never before seen. It was a very small, forbidding looking place at first sight, with few inhabitants, and surrounded by a dense forest.

I recollect that while pursuing my journey, I overtook a white man driving a span of horses, who contended that I had not a right to travel the public highway as other men did, but that it was my place to keep behind him and his team. Being in haste I endeavored to pass him quietly, but he would not permit it and hindered me several hours, very much to my annoyance and indignation. This was, however, but a slight incident indicating the bitter prejudice which every man seemed to feel against the negro. No matter how industrious he might be, no matter how honorable in his dealings, or respectful in his manners,--he was a "nigger," and as such he must be treated, with a few honorable exceptions.

This year also, my father died in the village of Palmyra, where, as I have before mentioned, he received injuries from which he never entirely recovered. After about six months severe illness which he bore with commendable patience and resignation, his spirit returned to God who gave it; and his sorrowing friends and bereaved family followed his remains to their final abode, where we laid him down to rest from unrequited labor and dire oppression, until "all they who are in their graves shall hear the voice of the Son of God, and they that hear shall live forever," where the "tears shall be wiped from off all faces"--and where the righteous bondman shall no longer fear the driver's lash or master's frown, but freely join in the song of "Alleluia! The Lord God Omnipotent reigneth!"

My father had a good reputation for honesty and uprightness of character among his employers and acquaintances, and was a kind, affectionate husband and a fond, indulgent parent. His, I believe was the life and death of a good man. "Peace be to his ashes."

The following season I commenced a new business--that of peddling in the village of Rochester such articles as my employer, Mr. Comstock, desired to sell: the products of his farm,--wheat, corn, oats, butter, cheese, meat, and poultry--all of which met a ready sale, generally for cash at liberal prices. That market was then but little known to the generality of farmers, and the enterprising gentlemen of that place, were desirous of encouraging commerce with the surrounding country, offered every encouragement in their power. Hence, we found it a profitable business, which I continued in for several months.

The present flourishing city of Rochester was then, as I have said, but a village in its infancy, situated near the upper falls of the Genesee River, and about seven miles from its mouth. Here, some time previously, three gentlemen from Maryland bought a large tract of land, and as no business man could fail to observe and appreciate its rare advantages they commenced laying out a village. Sirs Fitzhugh, Carroll, and Rochester, composed the company; but the management of the business devolved almost wholly on Col. Rochester, whose wealth, enterprise, and intelligence well qualified him for the undertaking; and as it had been assigned him to cognominate the new village, I have heard it said that he jocularly gave his reason for selecting its present title, as follows: "Should he call it _Fitzhugh_ or _Carroll_, the slighted gentleman would certainly feel offended with the other; but if he called it by his own name, they would most likely _both_ be angry with him; so it was best to serve them alike."

There was then two grist mills,--one owned by Mr. Ely, and the other by Mr. Brown; one small building for religious worship, occupied by the Presbyterians on Carroll street (now State street); and but two stone buildings within what now comprises that beautiful city. There were then no brick buildings at all, but business was good; merchants and mechanics from the East soon began to settle there and give it a thriving aspect.

About this time another company was formed, whose moving spirit was Mr. E. Stone, a man of worth and talent; the object of which was to locate another village at the head of navigation and about half way between the mouth of the river and Rochester, which they called _Carthage_.

The company commenced building and improving the place so rapidly, that many who came to purchase residences and business stations were at a loss to decide which of the two places would finally become the center of business. It, however, was soon perceivable that the advantage of water privileges, stone, and access to both, was greatly in favor of Rochester. At Carthage the Genesee is narrow and its banks steep and abrupt, rising in many places three hundred feet above the bed of the river, which of course render the privileges and business on it far less easy of access for building purposes. I may have occasion to speak hereafter of the expensive and magnificent bridge at Carthage, which was the wonder and admiration of the times.

The following year I concluded to go into business for myself, and was as much at loss as others, whether to locate at Rochester or Carthage; but after considering the matter in all its bearings, and closely watching the progress of events, my choice preponderated

in favor of Rochester, and to that place I went, designing to enter into business on my own account.

It was indeed painful to my feelings to leave the home and family of Mr. Comstock, where I had experienced so much real comfort and happiness, where I had ever been treated with uniform kindness, where resided those kind friends to whom I felt under the greatest obligation for the freedom and quietude I then enjoyed, as well as for the little knowledge of business and of the world that I then possessed. Thinking, however, that I could better my condition, I subdued, as well as I could, my rising emotions, and after sincerely thanking them for their goodness and favors--wishing them long life and prosperity,--I took my departure for the chosen place of my destination.

Soon after I left Mr. Comstock's, that gentleman, sent his hired man, named John Cline, to Rochester with a wagon load of produce to sell, as had been his custom for some time. In vain the family looked for his return at the usual hour in the evening, and began to wonder what had detained him; but what was their horror and surprise to find, when they arose the next morning, the horses standing at the door, and the poor unfortunate man lying in the wagon, _dead_! How long they had been there nobody knew; no one had heard them come in; and how the man had been killed was a matter of mere conjecture. The coroner was sent for and an inquest held, and yet it was difficult to solve the whole mystery.

The most probable explanation was, that he was sitting in the back part of the wagon, and fell over on his left side, striking his neck on the edge of the wagon box, breaking it instantly.

The verdict of the jury was, in accordance with these facts, "accidental death," &c.

When I left Mr. Comstock's I had acquired quite a knowledge of reading, writing, arithmetic, and had made a small beginning in English grammar.

It had been for some time a question which I found hard to decide, whether or not I should pursue my studies as I had done. If I went into business as I contemplated, I knew it would end my proficiency in the sciences; and yet I felt a desire to accumulate more of the wealth that perisheth. Considering too that I was advancing in age, and had no means of support but by my own labor, I finally concluded to do what I have from that time to this deeply regretted,--give up the pursuit of an education, and turn my attention wholly to business. I do not regret having desired a competency, nor for having labored to obtain it, but I _do_ regret not having spared myself sufficient leisure to pursue some regular system of reading and study; to have cultivated my mind and stored it with useful knowledge.

Truly has it been said, "knowledge is power." But it is not like the withering curse of a tyrant's power; not like the degrading and brutalizing power of the slave-driver's lash, chains, and thumb-screws; not like the beastly, demonical power of rum, nor like the brazen, shameless power of lust; but a power that elevates and refines the intellect; directs the affections; controls unholy passions; a power so God-like in its character, that it enables its possessor to feel for the oppressed of every clime, and prepares him to defend the weak and down-trodden.

What but ignorance renders the poor slave so weak and inefficient in claiming his right to liberty, and the possession of his own being! Nor will that God who is "no respecter of persons," hold him guiltless who assumes unlimited control over his fellow. The chain of Slavery which fetters every slave south of Mason and Dixon's Line, is as closely linked around the master as the slave. The time has passed by when African blood alone is enslaved. In Virginia as well as in some other slave States, there is as much European blood in the veins of the enslaved as there is African; and the increase is constantly in favor of the white population. This fact alone speaks volumes, and should remind the slave-breeding Southerner of that fearful retribution which must sooner or later overtake him.

In September, 1817, I commenced business in Rochester. Having rented a room of Mr. A. Wakely, I established a meat market, which was supplied mostly by my former employer, Mr. Comstock, and was liberally patronized by the citizens; but there were butchers in the village who appeared to be unwilling that I should have any share in public patronage. Sometimes they tore down my sign, at others painted it black, and so continued to annoy me until after I had one of their number arrested, which put a stop to their unmanly proceedings.

The village was now rapidly increasing, and yet the surrounding country was mostly a wilderness. Mr. E. Stone, who then owned the land on the east side of the river, thought his farm a very poor one; he, however, commenced clearing it in the midst of wild beasts and rattlesnakes, both of which were abundant, and in a few years was richly rewarded for his labor, in the sale of village lots, which commanded high prices.

In the summer of 1818, I commenced teaching a Sabbath School for the neglected children of our oppressed race. For a while it was well attended, and I hoped to be able to benefit in some measure the poor and despised colored children, but the parents interested themselves very little in the undertaking, and it shortly came to naught. So strong was the prejudice then existing against the colored people, that very few of the negroes seemed to have any courage or ambition to rise from the abject degradation in which the estimation of the white man had placed him.

This year, also, I purchased a lot of land, eighteen by fifty feet, situated on Main street, for which I was to pay five hundred dollars. Having secured my land, I began making preparations for building, and soon had a good two story dwelling and store, into which I moved my effects, and commenced a more extensive business.

Some disadvantage as well as sport was occasioned on business men, who resided on the confines of Ontario and Genesee Counties. It was indeed laughable to witness the races and maneuvering of parties in those days when men were imprisoned for debt. If a man in Ontario County had a suspicion that an officer was on his track, he had only to step over the line into Genesee, to be beyond the power of an officer's precept.

A great deal of trouble as well as unpleasant feeling was engendered by the exercise of that law, which allowed the creditor so great advantage over the debtor. This, together with the fact that very many of the citizens of Rochester were men of small means, the more wealthy portion felt called upon to protect their interests, by forming themselves into what was called a "Shylock Society," the object of which was to obtain a list of all the names of persons who had been, or were then, on "the limits" for debt. This list of names was printed, and each member of the society furnished with a copy, which enabled him to decide whether or not to trust a man when he came to trade. The formation of this society gave rise to another, whose members pledged themselves to have no dealing with a member of the "Shylock Society," and also to publish all defaulters in "high life," which served to check these oppressive measures and restore harmony.

Among others who came to settle in the thriving village of Rochester, was a colored man named Daniel Furr, who came from the East. He soon became acquainted with a very respectable young white lady, of good family, who after a short acquaintance appeared to be perfectly enamored of her dusky swain; and notwithstanding the existing prejudice, she did not scruple to avow her affection for him,--a devotion which appeared to be as sincerely returned by the young "Othello." They resolved to marry; but to this, serious objections arose, and all that the lady's family and friends could do to break off the match was done, but without effect. They could, however, prevail on no one to perform the marriage ceremony in the village, and finally concluded to go to a magistrate in the town of Brighton, four miles distant. At this stage of the proceedings I was appealed to, to accompany them. I took the matter into consideration and came to the conclusion that I could take no active part in the affair, nor bear any responsible station in the unpleasant occurrence. Is it no sin in the sight of the Almighty, for Southern gentlemen(?) to mix blood and amalgamate the races? And if allowed to them, is it not equally justifiable when the commerce is prompted by affection rather than that of lust and force? But I at length consented to accompany them, after learning that all the mischief was already done that could be feared, and that the gallant lover desired to marry the lady as the only atonement he could make for the loss of her reputation.

We arrived at the house of the magistrate about one o'clock at night, and all were soundly sleeping. They were, however, aroused, and when our business was made known, an exciting scene followed. The magistrate refused at first to marry them; and the lady of the house took aside the intended bride, spending two hours in endeavoring to dissuade her from the contemplated union; assuring her that her house should be freely opened to her, that no attention should be spared during her expected confinement, &c.; but all to no purpose. They returned to the parlor where the magistrate again tried his power of persuasion, but with as little success as his lady had met: and then he reluctantly married them. The newly-made husband paid a liberal fee, and we took our leave. I returned to my home to reflect on the scenes of the past night, and Mr. and Mrs. Furr to the house of a friend of the bride in Penfield.

The report soon reached the village that the marriage had been consummated, which produced a great excitement. Threats of an alarming character were openly made against the "nigger" who had dared to marry a white woman, although at her own request. And there was also a class of persons who associated together, professing great friendship for the persecuted husband, and often drew him into their company, pretending to defend his cause while they were undoubtedly plotting his destruction.

One day, after Furr had been drinking rather freely with his pretended friends, he was taken so violently ill, that a physician was immediately called. I was with him when the doctor arrived. He gazed upon the suffering man with an angry expression, and inquired in a tone of command, "Daniel, what have you been doing?" In vain the poor creature begged for relief, the doctor merely repeating his question. After looking at him for some time, he finally administered a potion and hastily left the room, saying as he

did so, "that Furr was as sure to die as though his head had been cut off." And so it proved, though not so speedily as the medical man had predicted; nor did he ever visit him again, notwithstanding he lingered for several days in the most intense agony. It was a strong man grappling with disease and death, and the strife was a fearful one. But death at last ended the scene, with none of all his professed friends, except his faithful but heart-broken wife, to administer to his necessities. No sound save that of the moaning widow broke the stillness of his death-chamber. A few friends collected, who prepared the emaciated body for the grave; enclosing it in a rude board coffin it was conveyed to its last resting place, followed by three or four men, just as the shades of evening had fallen upon this sin-cursed world; there in darkness and silence we lowered his remains, and left the gloomy spot to return to his disconsolate wife, who had been too ill to join the meager procession.

It has ever been my conviction that Furr was poisoned, most likely by some of his false friends who must have mingled some deadly drug with his drinks or food; nor do I believe that the medicine administered by the physician was designed to save his life. But to Him who knoweth all things, we leave the matter.

His despised, forsaken, and bereaved wife soon followed him to the grave, where she sleeps quietly with her innocent babe by her side; and where probably this second Desdemonia finds the only refuge which would have been granted her by a heartless and persecuting world.

Oh, when will this nation "cease to do evil and learn to do well?" When will they judge character in accordance with its moral excellence, instead of the complexion a man unavoidably bears to the world?

CHAPTER XIV.

INCIDENTS IN ROCHESTER AND VICINITY.

After long petitioning, the inhabitants of that section succeeded in having the new county of Monroe set off from Genesee and Ontario Counties, in 1821, which gave a new impulse to the business interests of the already flourishing town, which had heretofore labored under some disadvantages in consequence of having all public business done at Canandaigua or Batavia.

About this time, too, was the Carthage bridge built by a company of enterprising gentlemen of that village which at that day was considered one of the wonders of the age; but as its history is well known to all interested in the enterprises of those days, it is only necessary to say, that the magnificent structure, so grand in its appearance, such a pattern of mechanical ingenuity, exhibiting in all its vast proportions, both strength and beauty, combined with utility and grandeur; and erected at such an enormous expense of time, labor, and cash, was destined soon to fall.

It had cost some ten thousand dollars; and had been warranted by the builders to stand one year. How great then must have been the loss and disappointment when in a little more than twenty-four hours after the time specified, the ruins of that beautiful structure were found floating on the broad bosom of the Genesee! And yet when we take into consideration the vast amount of human life which hourly passed over its solid surface, we can but wonder at the intervention of a kind Providence which prevented any loss of life at the time of its fall. A child had but just passed over it, when with one general crash it sank to the waters below; mocking in its rapid flight, the wisdom of the architect and foresight of frail humanity. The fall of Carthage bridge was indeed a calamity felt by the public generally, and sounded the death-knell of all future greatness to Carthage, or at least for some years to come.

About this time the village was thrown into a state of excitement by the arrest of a colored woman named Ellen, who it was charged had escaped from service due to a Mr. D., south of Mason and Dixon's Line. She had been arrested in accordance with a law passed by Congress in 1793, which forbids persons owing service in one State to flee to another; and which also obliges those receiving such service, to render to the claimant any fugitive from labor due, &c. Poor Ellen! She had many friends and able counsel, but nothing short of an open violation of the law of the land, could prevent her return to the house of bondage. She was tried and given up to him who claimed dominion over her. Hopeless and heart-broken, she was escorted from the boasted land and village of freedom, by a company of the "Light Horse," under the command of Capt. Curtis. One poor, persecuted slave woman, upon whose heart had fallen a shadow darker than death's; driving every earthly hope of liberty from her wounded spirit; helpless and forlorn! She indeed must have required this military parade--this show of power! And that too, by men who throw up their caps with a shout for freedom and equal rights! Oh, "consistency, thou art a jewel!"

As I recollect but one other incident of the kind occurring in Rochester, I will now name it.

A colored man named Davis, generally known as "Doctor Davis," with a reputation unsullied for industry, truth and sobriety, was arrested as a fugitive from slave labor in Kentucky. Two men came on from that State, acting in the double capacity of agents for the claimant and witnesses against the slave. They employed Mr. L. as counsel, and hastened on the trial of the afflicted African. When it became generally known that Davis was arrested, and about to be tried, the excitement grew intense among all classes; but more particularly among the colored people. When the trial came on, the Court room was crowded to overflowing, and every avenue leading to it densely thronged with deeply anxious persons, assembled to witness the result. It became evident, however, that the poor man must be given up to his grasping master, unless some means were devised to rescue him from the power of an unjust law. His friends were on the alert, and as the trial proceeded, the colored men found an opportunity to get him into a corner of the crowded apartment; where, while the officers stood at the door, they dressed him in disguise, and otherwise so completely changed his personal appearance, that he passed out of the Court room, undetected by the officers, and as all supposed was safely pursuing his way to Canada.

The hawk-eyed counsel for the Kentuckians, however, too soon observed exultation written on every dusky countenance, to keep quiet. Starting to his feet in great alarm, he cried out "Where is Davis?" And oh, how that question startled every one present. Every eye gazed hither and thither, and every ear intently listened for the answer. After a moment of breathless silence, the excited counselor was assured that the "bird had flown," which announcement was received with a rapturous shout of joy by the audience, greatly, however, to the discomfiture of the gentlemen from Kentucky, who had thought themselves so sure of their prize. Nor would they be thwarted now. It was not yet too late to overtake their victim, and slavery required at their hands a sacrifice which they were ready to make. Hand-bills were in immediate circulation, offering a reward of fifty dollars for the apprehension of the flying fugitive. Fifty dollars, for the body and soul of a man to plunge into the degradation of Slavery! Fifty dollars for the ruin of a fellow being, for whom Christ gave his precious life! Yes, fifty dollars are offered to any human blood-hound who will hunt and worry the poor slave, who must fly from this boasted land of liberty, to seek protection in the dominion of England's Queen!

Unfortunately for Davis, some of these hand-bills were thrown on board the very packet on which he had embarked for Buffalo; nor was this all. The bills would have left him uninjured, but a scoundrel--an apology for a man--was there also, who, for the consideration of fifty dollars was willing to compromise all pretensions to manhood and humanity, and drag from the boat the panting slave, whom he cast beneath the heel of his oppressor. When Davis was finally retaken, those Kentucky dealers in human chattels, held him with a grasp that banished all hope of escape by flight; and then in his sorrow and despair the wretched, hopeless man cried out "Oh, my God, must I return to the hell of Slavery? Save me, Oh, dear Lord, save this, thy helpless, friendless servant, from a fate so dreadful! Oh, Christian friends and neighbors, I appeal to you to rescue me from a life far more terrible than death in any form! Oh, God, is there no protection for me in the laws of New York? I claim it, by all that is sacred in her past history! Give me liberty or death! or death!" he repeated, with a shudder; then casting one glance of hopeless agony on his persecutors, he secretly drew from his pocket a razor, and before he could be prevented he drew it across his throat, and fell gasping in the midst of his slave-hunting tormentors, while a collection of bystanders cried "Shame! shame! on the institution of Slavery!"

Poor Davis was not dead, but supposing he soon would be, these gentlemen were requested to give security, and indemnify the town for all expenses it might incur on Davis' account. But instead of giving their bond as requested, they took a sudden start for Kentucky, where it was very generally desired they might remain.

With good treatment, Davis, after a long time, recovered sufficiently to be removed by his friends to a place of safety; and when so far restored as to be able he returned to Rochester, where he received assistance which enabled him to reach Canada. I have often heard from him during his residence in that country, where no slaves exist and he has done well, having quite an extensive practice in medicine, and lives in the quiet enjoyment of that liberty which he struggled so hard to obtain and came so near losing; yet, to this day he prefers death to Slavery. And who does not? None, who have breathed the air of freedom after an experience of unrequited toil to enrich a brutal and selfish master. Truly is it said, "a contented slave is a degraded being."

CHAPTER XV.

SAD REVERSES OF CAPT. HELM.

I must again introduce to the kind reader my old master, Capt. Helm, who we left residing in Bath, several years ago. And as I have before intimated he had now become a very poor man; indeed so reduced was he now that he lived with one of his slave women, and was supported by public charity! Learning, too, that I had saved by my industry a few hundred dollars, it seemed very congenial

with his avaricious habits to endeavor to obtain what I possessed. In accordance with his plan he employed a lawyer named Lewland to come to my place of business, which he did, and demanded of me to pay Capt. Helm two hundred dollars. He also left a notice, forbidding all persons to take or destroy any property in my possession; and then impudently inquired how I expected to gain my freedom; if I thought of applying for a writ of _habaeus corpus_; and many other questions; to which I replied that I should pay no money on the order of Capt. Helm; apply for no writ; but should continue to maintain my personal rights and enjoy the freedom which was already mine, and which I designed to keep, assuring him that the Captain had forfeited his claim, if he had any, to me or my services, when he hired me to Mr. Tower.

He hung about me for a day or two, and then left me to pursue my business --I saw no more of him. Some time afterward Mr. H.E. Rochester informed me that he had a _subpoena_ for me, which I found was issued by the direction of Capt. Helm. By Mr. Rochester's counsel, I took it to Mr. A. Sampson, who assured me that my old master had commenced a suit against me in the Court of Equity, and the case would be tried before Wm. B. Rochester, Esq., who was one of the circuit judges. Capt. Helm claimed every particle of property I possessed; a claim that occasioned me great anxiety and some cost.

Mr. Sampson encouraged me to hope, however, that the case would be dismissed as two other cases of that kind had been.

I labored to the best of my ability to prepare myself for the trial, which was to decide whether I had a right to possess myself and command my own services and earnings, or whether all belonged to Capt. Helm. As I looked forward with anxious forebodings to the day appointed for the suit to commence, I was startled by the announcement of my old master's _death_! Yes, Capt. Helm was dead; and with him died the law suit. He who had so wronged me, who had occasioned me so much suffering and sorrow had gone to his account. He who had once been thought to be one of the wealthiest as well as one of the greatest men in the county, died a pauper--neglected and despised, and scarcely awarded a decent burial. Like his wife, who died such a horrid death, he had been reared in affluence and was an inheritor of vast possessions, but his home was in a slave State; he was raised on a plantation, and nurtured in the atmosphere of Slavery.

In his youth he had contracted the habit of drinking to excess, beside that of gambling, horse-racing and the like, which followed him through life. Forgotten and scorned in his poverty by many who had partaken of his abundance, sipped his wine, and rode his fast horses.

During the last war his princely mansion was ever open to the officers of the army, and many a wounded soldier has been cheered and comforted by his hospitality. But now he is regarded as no better than his poorest slave, and lies as lowly as they, in the narrow house appointed for all the living.

My old master had two brothers: the oldest, Thomas Helm, was a Captain in the United States Army, and had been in many hard-fought battles. His younger brother, William, was a Captain also; but Thomas was the man to awaken curiosity. I have lived with him, but never knew of his going unarmed for an hour, until he left Virginia and came to Steuben County, where he died. When at the South, I have seen strangers approach him, but they were invariably commanded to "stand" and to "approach him at their peril." He finally came to the State of New York, bringing with him his "woman" with whom he lived, and two children, with whom he settled on a piece of land given him by my old master, where the old soldier lived, died, and was buried on one of his small "clearings" under an old apple tree. He owned a few slaves, but at his death his "woman" collected every thing she could, and among the rest, two or three slave children, to whom she had no right or claim whatever, and made her way to Kentucky. About a year ago I visited the spot where the brave old defender of his country had been buried, but found very little to mark the resting place of the brother of my old master. They had passed away. Their wealth, power and bravery had come to nought; and no tribute was now paid to the memory of one of "Old Virginia's best families." The _blood_ of which they were wont to boast, was now no more revered than that which commingled with the African and circulated in the veins of his despised and downtrodden slaves.

CHAPTER XVI.

BRITISH EMANCIPATION OF SLAVERY.

As time passed on I found myself progressing in a profitable business. I had paid for my house and lot, and purchased another adjoining, on which I had erected a valuable brick building. The Lord prospered all my undertakings and I felt grateful for my good fortune. I kept all kinds of groceries and grain, which met a ready sale; and now I began to look about me for a partner in life, to share my joys and sorrows, and to assist me on through the tempestuous scenes of a life-long voyage. Such a companion I found in the intelligent and amiable Miss B----, to whom I was married on the eleventh of May, 1825. She was the youngest daughter of a

particular friend, who had traveled extensively and was noted for his honesty and intelligence.

About this time, too, "Sam Patch" made his last and fatal leap from a scaffold twenty five feet above the falls of Genesee, which are ninety-six feet in height. From thence he plunged into the foaming river to rise no more in life. The following spring the body of the foolish man was found and buried, after having lain several months in the turbulent waters of the Genesee.

This year was also rendered memorable by the efficient labors of Professor Finney, through whose faithful preaching of the gospel, many were brought to a saving knowledge of the truth.

The "Emancipation Act" had now been passed, and the happy time for it to take effect was drawing nigh. Slavery could no longer exist in the Empire State nor receive the protection of her laws. Would to God it had so continued to be what it professed--the refuge of the bondman and the home of the free. But alas! Now the flying fugitive from Slavery finds no security within her borders; he must flee onward, to the dominion of Queen Victoria, ere he rests, lest the exaction of the odious "Fugitive Slave Law" return him to the house of bondage.

But the Emancipation Bill had been passed, and the colored people felt it to be a time fit for rejoicing. They met in different places and determined to evince their gratitude by a general celebration. In Rochester they convened in large numbers, and resolved to celebrate the glorious day of freedom at Johnson's Square, on the _fifth_ day of July. This arrangement was made so as not to interfere with the white population who were everywhere celebrating the day of their independence--"the Glorious Fourth,"--for amid the general and joyous shout of liberty, prejudice had sneeringly raised the finger of scorn at the poor African, whose iron bands were loosed, not only from English oppression, but the more cruel and oppressive power of Slavery.

They met according to previous appointment, Mr. A. H----, having been chosen president, Mr. H. E----, marshal, and Mr. H. D----, reader of the "Act of Emancipation," and "The Declaration of Independence." A large audience of both white and colored people assembled, and the day which had been ushered in by the booming cannon, passed by in the joyous realization that we were indeed free men. To the music of the band the large procession marched from the square to the hotel, where ample provision was made for dinner, after listening to the following oration, which I had been requested to deliver.

I must not omit to mention that on the morning of that happy day, a committee of colored men waited upon the Hon. Matthew Brown, and in behalf of the citizens of Monroe County, presented their thanks for his noble exertions in the Legislature, in favor of the Act by which thousands were made free men.

They were received by that worthy gentleman with grateful and pleasing assurances of his continued labor in behalf of freedom.

Now I will lay before the reader my address to the audience on that eventful day.

CHAPTER XVII.

ORATION--TERMINATION OF SLAVERY.

The age in which we live is characterised in no ordinary degree, by a certain boldness and rapidity in the march of intellectual and political improvements. Inventions the most surprising; revolutions the most extraordinary, are springing forth, and passing in quick succession before us,--all tending most clearly to the advancement of mankind towards that state of earthly perfection and happiness, from which they are yet so far distant, but of which their nature and that of the world they inhabit, are most certainly capable. It is at all times pleasing and instructive to look backward by the light of history, and forward by the light of analogical reasoning, to behold the gradual advancement of man from barbarism to civilization, from civilization toward the higher perfections of his nature; and to hope--nay, confidently believe, that the time is not far distant when liberty and equal rights being everywhere established, morality and the religion of the gospel everywhere diffused,--man shall no longer lift his hand for the oppression of his fellow man; but all, mutually assisting and assisted, shall move onward throughout the journey of human life, like the peaceful caravan across the burning sands of Arabia. And never, on this glorious anniversary, so often and so deservedly celebrated by millions of free men, but which we are to-day for the first time called to celebrate--never before, has the eye been able to survey the past with so much satisfaction, or the future with hopes and expectations so brilliant and so flattering; it is to us a day of two-fold joy. We are men, though the strong hand of prejudice and oppression is upon us; we can, and we will rejoice in the advancement of the rapidly increasing happiness of mankind, and especially of our own race. We can, and we will rejoice in the growing power and glory of the country we inhabit. Although Almighty God has not permitted us to remain in the land of our forefathers and our own, the glories of national independence, and the sweets of civil and religious liberty, to their full extent; but the strong hand of the

spoiler has borne us into a strange land, yet has He of His great goodness given us to behold those best and noblest of his gifts to man, in their fairest and loveliest forms; and not only have we beheld them, but we have already felt much of their benignant influence. Most of us have hitherto enjoyed many, very many of the dearest rights of freemen. Our lives and personal liberties have been held as sacred and inviolable; the rights of property have been extended to us, in this land of freedom; our industry has been, and still is, liberally rewarded; and so long as we live under a free and happy government which denies us not the protection of its laws, why should we fret and vex ourselves because we have had no part in framing them, nor anything to do with their administration. When the fruits of the earth are fully afforded us, we do not wantonly refuse them, nor ungratefully repine because we have done nothing towards the cultivation of the tree which produces them. No, we accept them with lively gratitude; and their sweetness is not embittered by reflecting upon the manner in which they were obtained. It is the dictate of sound wisdom, then, to enjoy without repining, the freedom, privileges, and immunities which wise and equal laws have awarded us--nay, proudly to rejoice and glory in their production, and stand ready at all times to defend them at the hazard of our lives, and of all that is most dear to us.

But are we alone shut out and excluded from any share in the administration of government? Are not the clergy, a class of men equally ineligible to office? A class of men almost idolized by their countrymen, ineligible to office! And are we alone excluded from what the world chooses to denominate polite society? And are not a vast majority of the polar race excluded? I know not why, but mankind of every age, nation, and complexion have had lower classes; and, as a distinction, they have chosen to arrange themselves in the grand spectacle of human life, like seats in a theater--rank above rank, with intervals between them. But if any suppose that happiness or contentment is confined to any single class, or that the high or more splendid order possesses any substantial advantage in those respects over their more lowly brethren, they must be wholly ignorant of all rational enjoyment. For what though the more humble orders cannot mingle with the higher on terms of equality. This, if rightly considered, is not a curse but a blessing. Look around you, my friends: what rational enjoyment is not within your reach? Your homes are in the noblest country in the world, and all of that country which your real happiness requires, may at any time be yours. Your industry can purchase it; and its righteous laws will secure you in its possession. But, to what, my friends, do you owe all these blessings? Let not the truth be concealed. You owe them to that curse, that bitter scourge of Africa, whose partial abolishment you are this day convened to celebrate. Slavery has been your curse, but it shall become your rejoicing. Like the people of God in Egypt, you have been afflicted; but like them too, you have been redeemed. You are henceforth free as the mountain winds. Why should we, on this day of congratulation and joy, turn our view upon the origin of African Slavery? Why should we harrow up our minds by dwelling on the deceit, the forcible fraud and treachery that have been so long practised on your hospitable and unsuspecting countrymen? Why speak of fathers torn from the bosom of their families, wives from the embraces of their husbands, children from the protection of their parents; in fine, of all the tender and endearing relations of life dissolved and trampled under foot, by the accursed traffic in human flesh? Why should we remember, in joy and exultation, the thousands of our countrymen who are to-day, in this land of gospel light, this boasted land of civil and religious liberty, writhing under the lash and groaning beneath the grinding weight of Slavery's chain? I ask, Almighty God, are they who do such things thy chosen and favorite people? But, away with such thoughts as these; we will rejoice, though sobs interrupt the songs of our rejoicing, and tears mingle in the cup we pledge to Freedom; our harps though they have long hung neglected upon the willows, shall this day be strung full high to the notes of gladness. On this day, in one member at least of this mighty Republic, the Slavery of our race has ceased forever! No more shall the insolent voice of a master be the main-spring of our actions, the sole guide of our conduct; no more shall their hands labor in degrading and profitless servitude. Their toils will henceforth be voluntary, and be crowned with the never failing reward of industry. Honors and dignities may perhaps never be ours; but wealth, virtue, and happiness are all within the compass of our moderate exertions. And how shall we employ a few moments better than in reflecting upon the means by which these are to be obtained. For what can be more proper and more profitable to one who has just gained an invaluable treasure, than to consider how he may use it to the best possible advantage? And here I need not tell you that a strict observance to all the precepts of the gospel ought to be your first and highest aim; for small will be the value of all that the present world can bestow, if the interests of the world to come are neglected and despised. None of you can be ignorant of what the gospel teaches. Bibles may easily be obtained; nor can there be a greater disgrace, or a more shameful neglect of duty than for a person of mature age, and much more, for any father of a family to be without that most precious of all books--the Bible. If, therefore, any of you are destitute of a Bible, hasten to procure one. Will any of you say that it can be of no use to you, or that you cannot read it? Look then to that noblest of all remedies for this evil, the Sunday School--that most useful of all institutions. There you may learn without loss of time or money, that of which none should be ignorant--to read.

Let me exhort you with earnestness to give your most sincere attention to this matter. It is of the utmost importance to every one of you. Let your next object be to obtain as soon as may be, a competency of the good things of this world; immense wealth is not necessary for you, and would but diminish your real happiness. Abject poverty is and ought to be regarded as the greatest, most terrible of all possible evils. It should be shunned as a most deadly and damning sin. What then are the means by which so dreadful a calamity may be avoided? I will tell you, my friends, in these simple words--hear and ponder on them; write them upon the tablets of your memory; they are worthy to be inscribed in letters of gold upon every door-post--"industry, prudence, and economy." Oh! they are words of power to guide you to respectability and happiness. Attend, then, to some of the laws which industry impose, while you have health and strength. Let not the rising sun behold you sleeping or indolently lying upon your beds. Rise ever with the morning light; and, till sun-set, give not an hour to idleness. Say not human nature cannot endure it. It can--it almost requires it. Sober, diligent, and moderate labor does not diminish it, but on the contrary, greatly adds to the health, vigor, and duration of the human frame. Thousands of the human race have died prematurely of disease engendered by indolence and inactivity. Few, very few indeed, have suffered by the too long continuance of bodily exertion. As you give the day to labor, so devote the night to rest; for who that has drunk and reveled all night at a tippling shop, or wandered about in search of impious and stolen pleasures, has not by so doing not only committed a most heinous and damning sin in the sight of Heaven, but rendered himself wholly unfit for the proper discharge of the duties of the coming day. Nor think that industry or true happiness do not go hand in hand; and to him who is engaged in some useful avocation, time flies delightfully and rapidly away. He does not, like the idle and indolent man, number the slow hours with sighs--cursing both himself and them for the tardiness of their flight. Ah, my friends, it is utterly impossible for him who wastes time in idleness, ever to know anything of true happiness. Indolence, poverty, wretchedness, are inseparable companions,--fly them, shun idleness, as from eminent and inevitable destruction. In vain will you labor unless prudence and economy preside over and direct all your exertions. Remember at all times that money even in your own hands, is power; with it you may direct as you will the actions of your pale, proud brethren. Seek after and amass it then, by just and honorable means; and once in your hand never part with it but for a full and fair equivalent; nor let that equivalent be something which you do not want, and for which you cannot obtain more than it cost you. Be watchful and diligent and let your mind be fruitful in devises for the honest advancement of your worldly interest. So shall you continually rise in respectability, in rank and standing in this so late and so long the land of your captivity.

Above all things refrain from the excessive use of ardent spirits. There is no evil whose progress is so imperceptible; and at the same time so sure and deadly, as that of intemperance; and by slow degrees it undermines health, wealth, and happiness, till all at length tumble into one dreadful mass of ruin. If God has given you children, he has in so doing imposed upon you a most fearful responsibility; believe me, friends, you will answer to God for every misfortune suffered, and every crime committed by them which right education and example could have taught them to avoid. Teach them reverence and obedience to the laws both of God and man. Teach them sobriety, temperance, justice, and truth. Let their minds be rightly instructed--imbued with kindness and brotherly love, charity, and benevolence. Let them possess at least so much learning as is to be acquired in the common schools of the country. In short, let their welfare be dearer to you than any earthly enjoyment; so shall they be the richest of earthly blessings.

My countrymen, let us henceforth remember that we are men. Let us as one man, on this day resolve that henceforth, by continual endeavors to do good to all mankind, we will claim for ourselves the attention and respect which as men we should possess. So shall every good that can be the portion of man, be ours--this life shall be happy, and the life to come, glorious.

* * * * *

The opinion of the public regarding the celebration and performances of that day, together with the behavior of the colored people, will be seen by the following short extract from the _Rochester Daily Advertiser_, published soon after the occurrence of those events:

"ABOLITION OF SLAVERY.

"The extinction of that curse by the laws of our State, was marked with appropriate rejoicings on the part of the African race in this neighborhood. A procession of considerable length and respectable appearance, preceded by a band of music, moved from Brown's Island through the principal streets to the public square, yesterday forenoon, where a stage and seats were erected, for the speakers and audience. The throne of Grace was addressed by the Rev. Mr. Allen, a colored clergyman. The act declaring all slaves free in this State, on the fourth day of July, 1827, was read, which was succeeded by the reading of the Declaration of Independence and delivery of an oration by Mr. Steward. We have heard but one opinion from several gentlemen who were present, and that was highly complimentary to the composition and delivery of the same.

"The exercises were concluded by a short discourse from the Rev. Mr. Allen, and the procession moved off to partake of an entertainment prepared for the occasion. The thing was got up in good order, and passed off remarkably well. The conduct of the emancipated race was exemplary throughout, and if their future enjoyment of freedom be tinctured with the prudence that characterised their celebration of its attainment, the country will have no reason to mourn the philanthropy that set them free."

* * * * *

Thus ended our first public celebration of our own and our country's freedom. All conducted themselves with the strictest propriety and decorum, retiring to their homes soberly and in proper season.

CHAPTER XVIII.

CONDITION OF FREE COLORED PEOPLE.

Pursuant to a call given in the summer of 1830, by the colored residents of Philadelphia, for a National Convention of their race, I started in company with a friend to attend it; having previously engaged seats inside Mr. Coe's stage-coach as far as Utica, N.Y., to which place we had paid our fare the same as other passengers.

We rode on to Auburn very pleasantly, but when at that place, we with others moved to resume our seats; we were met by a stern rebuke for presuming to seat ourselves on the inside, and were ordered to ride on the outside of the coach. In vain we expostulated; in vain we reminded the driver of the agreement, and of our having paid for an inside seat; we were told to take the outside of the coach or remain behind.

Desiring to attend the convention, we concluded to go on, submitting to this rank injustice and dishonesty, until our return, when we determined to sue the proprietor of that line of stages. An opportunity was offered soon after, when I commenced a suit for damages against Mr. Sherwood, who was the great stage proprietor of those days. He, however, cleared himself by declaring that he was in no way responsible for the failures of Mr. Coe, to whom I must look for remuneration. I never found it convenient to sue Mr. Coe, and so the matter ended.

We passed through New York City to the place of our destination, where we found many of our brethren already assembled.

Philadelphia, which I now saw for the first time, I thought the most beautiful and regularly laid out city I ever beheld. Here had lived the peaceable, just, and merciful William Penn; and here many of his adherents still reside. Here, too, was the place where the Rt. Rev. Bishop Allen, the first colored American bishop in the United States, had labored so successfully. When the Methodists sought to crush by cruel prejudice the poor African, he stepped boldly forward in defence of their cause, which he sustained, with a zeal and talent ever to be revered.

Thousands were brought to a knowledge of the truth, and induced "to seek first the kingdom of heaven and its righteousness," through his instrumentality. Through the benign influence of this good man, friends and means were raised for his poor brethren, to build houses of worship, where they would no more be dragged from their knees when in prayer, and told to seat themselves by the door. Oh, how much good can one good and faithful man do, when devoted to the cause of humanity--following in the footsteps of the blessed Christ; doing unto others as they would be done by; and remembering those in bonds as bound with them. What though his skin be black as ebony, if the heart of a brother beats in his bosom? Oh, that man could judge of character as does our Heavenly Father; then would he judge righteous judgment, and cease to look haughtily down upon his afflicted fellow, because "his skin is colored not like his own."

We convened at the specified time, and organized by appointing Rev. R. Allen, president, A. Steward, vice-president, and J.C. Morrell, secretary. The convention which continued in session three days, was largely attended by all classes of people, and many interesting subjects were ably discussed; but the most prominent object was the elevation of our race. Resolutions were passed calculated to encourage our brethren to take some action on the subjects of education and mechanism. Agricultural pursuits were also recommended;--and here allow me to give my opinion in favor of the latter, as a means of sustenance and real happiness.

I knew many colored farmers, all of whom are well respected in the neighborhood of their residence. I wish I could count them by hundreds; but our people mostly flock to cities where they allow themselves to be made "hewers of wood and drawers of water;" barbers and waiters,--when, if they would but retire to the country and purchase a piece of land, cultivate and improve it, they would be far richer and happier than they can be in the crowded city. It is a mistaken idea that there is more prejudice against color in the

country. True, it exists everywhere, but I regard it less potent in the country, where a farmer can live less dependant on his oppressors. The sun will shine, the rains descend, and the earth bring forth her increase, just as readily for the colored agriculturist as for his pale face neighbor. Yes, and our common mother Earth will, when life is ended, as readily open her bosom to receive your remains in a last embrace, as that of the haughty scorner of our rights.

In the city, however, there is no escape from the crushing weight of prejudice, to ramble over fields of your own cultivation; to forget your sorrows in the refreshing air that waves the loaded branches of an orchard of your own planting; nor to solace yourself with a gambol over the green meadow with your little ones. It is all toil, toil, with a burthened heart until shadows fall across the hearth-stone, and dismal forebodings darken the fireside, from whence the weary wife retires to refresh herself in broken slumber for the renewed toil of another day. Will not my friends think of these and many other advantages in favor of a country life, and practice accordingly?

After the close of the convention, I returned to my business in Rochester.

Until the discussion, which commenced about this time on the subject of temperance, I had been engaged, as most other grocers were at that time, in the sale of spirituous liquors somewhat extensively. My attention had never before been called especially to the subject, though I had witnessed some of its direst evils; but now, when I saw the matter in its true light, I resolved to give it up. I was doing well and making handsome profits on the sale of alcoholic beverages. I had also experienced a good deal of trouble with it. My license allowed me to sell any quantity less than five gallons; but it was a fine of twenty-five dollars if drunk on the premises,--one half of the sum to go to the complainant. If a vicious man got out of funds it became both easy and common for him to give some person a sixpence, half of which was to be spent for whisky, which made him a witness for the other, who would make immediate complaint, and collect his share of the fine. Nor could I prevent men who came with bottles, and purchased whisky, from drinking it where they pleased; consequently I was often called to answer to such complaints.

One morning a man entered my store and called for liquor, which the clerk gave him. After drinking it, he went directly to the office of A. House, Esq., and entered a complaint against the clerk who had served him; then stepped out for consultation with his counsel. At that moment I arrived at the office of the magistrate to whom I immediately made complaint against myself, relating to him also just how the event happened. In a few minutes the original complainant returned, to whom 'Squire House explained that he should have arraigned the proprietor of the store, and not the clerk as he had done. Determined on making a speculation, however, he demanded a precept for myself. The 'Squire, laughing most heartily, informed him that he was too late,--that Mr. Steward had the start of him, having just entered a complaint against himself, by which he saves one half of the fine. The man walked out, looking rather "cheap," nor did he or others annoy me afterwards by making complaints of that kind.

But now I saw, as never before, the sin of selling that which would make beasts of men, and only stopped to inquire what was duty in the matter. All the arguments in favor of its sale were more forcible then than now. All classes of persons used and drank the article; and it required more moral courage, to relinquish the business than it does now. Nevertheless, it appeared plain to my mind, that duty to God and my fellow-men required it, and I cheerfully gave it up forever.

I could not conscientiously, nor do I see how any man can, continue to traffic in this most fruitful source of pauperism and crime. No benefit whatever arises from its use as a beverage or from its sale. It is a curse to the drinker, to the seller, and to the community. Those who are licensed venders take from the government fifty dollars for every one put into the treasury. The money paid for licenses is a very meager compensation for the beggary, crime, and bloodshed which rum produces. All who have any knowledge of the statistics of the State, or of our prison and police records know, that intemperance has done more to fill the prisons, work-houses, alms-houses, and asylums of the State than all other influences combined; and yet men uphold the traffic. Their favors are for those who love its use and sale, and their anathemas for him, who is striving to save a nation of drunkards from swift destruction; yea, their own sires, sons, and brothers from the grave of the inebriate.

When in Rochester a short time since, soliciting subscribers for this work, I stepped into a distillery and asked a man to subscribe for it. He hesitated in his decision until he took a tumbler and filling it with brandy, invited me to drink. I thanked him, saying I never drink brandy. "Never drink!" he growled, "then I tell you, sir, that you stand a much better chance of being struck by lightning than of getting a subscriber here." Oh, very well; most likely had he agreed to take a copy, he would have been sorely displeased with my views of the liquor traffic, and perhaps with the compliment I have here paid him.

But in the foregoing remarks I have said but a tithe of what my heart feels, when I think of the sufferings occasioned by drunkenness.

Even the cup of the burthened slave, writhing in his chains and toiling under the lash, is not full of bitterness until the demon rum throws in its dregs and fills it to overflowing.

How often does it occur that a passionate master, heated with wine,--mad with himself and all about him, pours out his vengeful ire on the head and back of some helpless slave, and leaves him weltering in his blood! How often may be heard the agonized wail of the slave mother, deploring the departure of some innocent child that has been lost in gambling, while the master was intoxicated!

How often do the shrieks of the poor but virtuous slave girl, ring through the midnight air, as she, pleading for death rather than life, rushes screaming away from a brutal master, infuriated and drunk! If it is a fact, and certainly it is, that the master is thus affected by his costly wine; what, think you, will be the temper and condition of the coarse and heartless overseer who drinks his miserable whisky or bad brandy? It is horrible, beyond description. I have often myself seen a drunken overseer, after pouring down dram after dram, mount his horse and ride furiously among the slaves, beating, bruising, mangling with his heavy cowhide every one he chanced to meet, until the ground presented the appearance of a battlefield.

CHAPTER XIX.

PERSECUTION OF THE COLORED PEOPLE.

While the colored population of New York were rejoicing in the measure of freedom allowed them by the more wholesome laws of that State, our brethren in Ohio were being oppressed and maltreated by the unjust and odious "black laws" of that professedly free State, enacted with special reference to the disposition of the colored race.

In Cincinnati, O., within sight of the slave land of Kentucky, a terrible persecution had commenced, and an effort was made to drive all colored persons from the place.

Our people had settled there in large numbers, but now a mob had assembled in that city with the determination to drive them, not only from their homes and city, but from the State. A bloody conflict ensued, in which the white and black man's blood mingled freely. So great had been the loss of property; and go horrid and fearful had been the scene, that our people chose to leave, rather than remain under such untoward circumstances. They lived in constant fear of the mob which had so abused and terrified them. Families seated at the fireside started at every breath of wind, and trembled at the sound of every approaching footstep. The father left his family in fear, lest on his return from his daily labor, he should find his wife and children butchered, and his house left desolate.

Meetings were held to devise plans and means for leaving the place where they had been so cruelly treated. But where should they go? And why should they be compelled to leave the State of Ohio? The fact is, that the African race there, as in all parts of this nominally free Republic, was looked down upon by the white population as being little above the brute creation; or, as belonging to some separate class of degraded beings, too deficient in intellect to provide for their own wants, and must therefore depend on the superior ability of their oppressors, to take care of them. Indeed, both the time and talents of eminent men have been wasted in unsuccessful research for the line of demarcation, between the African and the highest order of animals,--such for instance as the monkey or the ourang-outang. Some even, have advanced the absurd idea, that wicked Cain transmitted to them the "mark" which the Almighty set upon him for the murder of his brother; and that he, (who then must have survived the deluge), is the progenitor of that despised and inferior race--the negro slave of the United States of America!

If it be true, that the natural inferiority of the black man, connects him so closely with the animal creation, it looks passing strange to me that he should be made responsible for the violation of laws which he has been declared too imbecile to aid in framing or of comprehending. Nor is it less strange to see him enslaved and compelled by his labor to maintain both his master and himself, after having declared him incapable of doing either. Why not let him go then? Why hold with an unyielding grasp, so miserable and useless a piece of property? Is it benevolence that binds him with his master's chain? Judge ye. Stranger still is the fact of attaching such vast influence to his presence and so much concern regarding his movements, when in a state of freedom, if indeed, he is of so little worth and consequence, and so nearly related to the brutes that perish.

Surely, the Legislature of Ohio, or of any other State, would never feel called upon to sit in grave counsel, for the purpose of framing laws which would impose fine and imprisonment on a monkey, should one chance to locate within its jurisdiction; nor would they think it advisable for the court to assemble, or a jury to be empanelled, to drive from their midst an ourang-outang. And yet this and more must be done to get rid of the hated negro, who has been born in that State, or has fled to it for protection from the

manstealer.

When strangers pass hastily through this country, and after a careless glance at the colored population, report them to be "an indolent, improvident, and vicious class of persons," they should consider some of the many obstacles thrown in the way of the most favored of that race. Knowing as they do, the rigor of the law, and feeling as they do, the oppressive power of prejudice, it becomes almost impossible for them to rise to that station they were designed to fill, and for which their natural abilities as certainly qualify them, as though they had never been robbed of their God-given rights. But let us return to our tried friends in Cincinnati.

They finally resolved to collect what they could of their possessions and establish a colony in Canada. In accordance with this resolution, they agreed to first send an agent to obtain liberty to settle there, and if successful to select and purchase a large tract of land, making such arrangements as he thought best for their speedy removal to their new home. Israel Lewis was their appointed agent, who departed immediately for Upper Canada to perform his mission; and there for the present we will leave him and return to Rochester.

Our more favored brethren in New York felt a deep sympathy for their outraged countrymen in Cincinnati; a sympathy equaled only by their indignation at the cause of such demand.

A meeting expressive of their views and feelings on that subject, was convened in the city of Rochester during which, the following preamble and resolutions were read and unanimously adopted:

Whereas, The city of Cincinnati has again become the scene of another dreadful mob and bloodshed, where nothing but terror and confusion reigned for a number of hours together.

And Whereas, Our brethren and fellow citizens were left exposed to the fury of an ungovernable mob, made up of the base, the ignorant, and vile, the very dregs of society; and probably led on by slaveholders, who of all men are the most execrable; while boasting of liberty, he tramples on the dearest rights of men and in the greatest robber of it on earth.

Resolved, That we deprecate an appeal to arms by any class of our fellow citizens, except in extreme cases, and we think that such a case has been presented in the late outrage at Cincinnati.

Resolved, That when a class of men so far forget the duty they owe to God, their fellow men, and their country, as to trample under their feet the very laws they have made, and are in duty bound to obey and execute, we believe it to be the duty of our brethren and fellow citizens, to protect their lives against such lawless mobs; and if in the conflict, any of the mobocrats perish, every good citizen should say Amen.

Resolved, That we do truly sympathize with the friends of God's poor; the friends of the oppressed, throughout this boasted land of liberty, in the losses they have sustained in consequence of the mob.

Resolved, That we believe the time is not far distant, when the _Queen City of the West_, shall be redeemed from the hateful influence of the slaveholder; redeemed from that cruel prejudice of caste which, hangs like a mill-stone around the neck of our people; redeemed from all those unequal laws, which have a tendency to make the strong stronger and the weak weaker; redeemed from their falsehearted friends, whose sarcastic smile is more to be feared than the frowns of an open enemy.

Resolved, That the untiring exertions of our friends, and the indefatigable industry of our brethren, are sure guarantees that the State of Ohio will not long be what she now is,--a hissing and by-word on account of her iniquitous laws; but that she will rise above every narrow minded prejudice, and raise up her sable sons and daughters and place them on an equality with the rest of her citizens.

Resolved, That we deeply deplore the loss our friends have sustained in the destruction of their printing press in Cincinnati.

Resolved, That we as an oppressed people, feel it our duty to give our undivided support to the press and the laborers in our cause.

* * * * *

Mr. Israel Lewis made his way to Canada, and having obtained permission to establish a colony, he bargained with the Canada Company for one township of land, for which he agreed to pay the money demanded, in a few days, and then returned to Cincinnati, by way of Rochester. The poor, persecuted colored people, had in the mean time made ready for their flight from their

homes, their native land, and from this boasted free Republic, to seek a residence in the cold and dreary wilds of Canada; to claim that protection from the English government which had been denied them in the land of their birth; and like the overtasked Israelites, "they went out with their wives and their little ones," but with smaller possessions.

During the stay of Mr. Lewis in Rochester, he reported there and elsewhere, that eleven hundred persons were then in the dense woods of Canada in a state of actual starvation, and called upon the humane everywhere, to assist them in such extreme suffering.

To me he also told the story of their destitution, which affected me deeply. I had at that time just made a public profession of my faith in the Christian religion and my determination to be governed by its holy precepts, I felt for the distressed and suffering everywhere; but particularly for those who had fled, poor and destitute, from cruel task-masters, choosing rather the sufferings of cold and hunger, with liberty, than the meager necessities of life and Slavery. I concluded to go to Canada and try to do some good; to be of some little service in the great cause of humanity.

As soon as practicable therefore, I left Rochester for Toronto, the capital of Upper Canada, which I found quite a thriving town, and containing some fine brick buildings, and some I saw were built of mud, dried in the sun, wearing rather a poor than pretty appearance. At Toronto we hired a team to take us on to Ancaster, fifty miles distant. We traveled now through a new country; the roads were very bad, and the inhabitants few. We, however, reached Ancaster, a small village, where we remained one night and next morning pursued our journey to the settlement of the poor fugitives from Cincinnati. After some hard traveling, we finally arrived at the place where we found our brethren, it is true, but in quite destitute circumstances. Our fare was poor indeed, but as good as they could get. The township was one unbroken wilderness when purchased for the colony, and of course their lands must be cleared of the heavy timber before crops could be got in, hence, there was a great deal of destitution and suffering before their harvest could ripen after the land was prepared for the seed.

The day after I arrived at the settlement, which consisted of a few rude log cabins, a meeting was called to give the township a name. Several were suggested, but I at length motioned to name it in honor of the great philanthropist, Wilberforce. This was carried, and the township from that time has been known by that name. It is situated on what is known as the Huron Tract, Kent County, London District, and is the next north of the township of London. Our neighbors on the south, were a company of Irish people, who owned the township, and on the west side were a township of Welshmen, a hardy, industrious and enterprising people.

In Wilberforce there were no white inhabitants; the land appeared level and handsome, with but one stream of any magnitude running through it; this was the Oxsable, which was dry during a part of the year. All was one vast forest of heavy timber, that would compare well with that of Western New York. Beech, maple, ash, elm, oak, whitewood, bass, balm of gilead, &c. The soil was good for corn, wheat, rye, oats, and most kinds of the grain and vegetables raised in New York, and was a superior grazing country, about fifteen miles from London. This was a village containing perhaps thirty dwellings, and two hundred inhabitants; a court-house and jail all under one roof, built of stone and plastered; small doors and windows in the style of some of the old English castles. London was built in the forks, or between the east and west branches of the river Thames; hence, you would hear people speak of "going to the forks," instead of the village; it is about two hundred miles from Buffalo, and the nearest port between the two is Port Stanley, thirty miles from London.

I returned from Canada, where I had seen an oppressed people struggling with the hardships and privations of a new settlement; I had seen wretchedness in some places, but by no means sufficient to justify the report made by Mr. Lewis, and I determined I would remove there with my family, and do all in my power to assist the colored people in Canada.

I had witnessed a disposition on the part of some to prevent our brethren from settling in Wilberforce, while the colonizationists made a grand argument of it in favor of their wicked policy. All must see that it became a necessity with those who fled to Canada to save themselves from constant abuse or from Slavery, and in some instances their lives; and not because they admitted the justice of one portion of American citizens driving another from their native land; nor their right to colonize them anywhere on the habitable globe.

All these things taken into consideration, determined me to join them in the enterprize of building up an asylum for the oppressed, where our colored friends could obtain a home, and where, by their industry they could obtain a competency for themselves, besides providing a safe retreat for the weary fugitive from Slavery; guiding by its beacon light of liberty, the destitute and oppressed everywhere, to home and plenty.

I felt willing to make any sacrifice in my power to serve my Lord, by administering to the necessities of my down-trodden countrymen. How far my desire has been accomplished God only knows, but I do know that the purest motives influenced me, and an honest purpose directed my steps in removing to Wilberforce. Not so with all, however. Some there were, Judas-like, who "cared not for the poor; but because he was a thief and had the bag, and bore what was put therein," made great exertions for a time in favor of the settlement. It too soon became apparent that to make money was the prominent object with by far too great a number of the colonists; hence, our future difficulties.

CHAPTER XX.

REMOVAL TO CANADA.

In 1830, I closed my business in Rochester, preparatory to leaving for Canada. Some of my friends thought I had better remain in the States and direct emigrants to Wilberforce; while others were certain I could benefit them more by going myself at once,--the latter I had determined to do; but as the time drew near for me to start, an unaccountable gloominess and forebodings of evil took possession of my mind. Doubts of the practicability of the undertaking began to arise, though nothing unfavorable had occurred. To the throne of grace, I often bore the subject and besought my Heavenly Father to enlighten my mind, and direct my steps in duty's path regarding it; but to confess the truth, I never received any great encouragement from that source, though it occupied my mind constantly. During the hours of slumber I was continually being startled by frightful dreams,--sometimes I thought I saw a monstrous serpent as large as a log stretched across the road between Rochester and the Genesee River; at another I thought myself in the air so high that I could have a full view of the shores of Lake Ontario, and they were alive with snakes; and then I saw a large bird like an eagle, rise up out of the water and fly toward the south.

Notwithstanding these omens, I turned my steps toward Wilberforce. In May, 1831, we bid adieu to our friends in Rochester, and taking passage to Buffalo on a canal boat, we arrived in due time, and from whence we sailed for Port Stanley, or as it is sometimes called, Kettle Creek. It took a week to make this trip, which, with favorable wind might have been made in two days. The mouth of the creek makes a safe harbor at that place, where there is also a dock, one ware-house and several farm houses. The place was then very wild and picturesque in its appearance; we did not stop long, however, to admire its beauty, but engaged a farmer to take us on to London.

Ten miles on our way, and we came to a newly laid out village, called St. Thomas, from whence we pursued our journey through a new country to London, where we arrived tired and hungry, and put up for the night with a Mr. Faden. There I purchased a span of horses for one hundred and fifty dollars, and putting them before a new lumber wagon brought on from Rochester, we started for our wild and new home in good spirits, at which we arrived in good time.

The colony was comprised of some fourteen or fifteen families, and numbered some over fifty persons in all. The first business done after my arrival, was to appoint a board of managers, to take the general oversight of all the public business of the colony. The board consisted of seven men, chosen by the settlers, and as I was now one of them, they gave me the office of President. It was also resolved by the board, to send out two agents for the purpose of soliciting aid for the erection of houses for worship, and for the maintenance of schools in the colony.

The Rev. N. Paul was chosen one of their agents, and he received from me a power of attorney, authorising him to collect funds for the above purposes in England, Ireland, and Scotland; the other, I. Lewis was empowered to solicit and collect funds for the same objects in the United States.

Preparations were immediately made to fit Mr. Paul out for his mission to England, from whence he was to remit any funds he might receive to Arthur Tappan, of New York City; first to pay for his outfit, and afterwards to the treasurer of the board of managers, for the support of schools in Wilberforce. Mr. Paul, however, still lacked money to proceed to England, and therefore went to Rochester, where he found my old and tried friend Everard Peck; who was ever known as the poor man's friend, and the support of the weak everywhere. To this good man, whose memory is still dear to thousands, Mr. Paul showed his power of attorney, at the same time informing him of the condition and wants of the colony; and as was ever his wont, when help was needed, his purse, (though not one of the heaviest), was at his service. Through the kind influence of Mr. Peck, and some of the colored friends in that city, a note for seven hundred dollars was drawn up, signed by Mr. P. and cashed at the Bank, which enabled the agent to make the voyage without further delay. He reached England, and collected quite large sums of money, but entirely failed in the remittance of any sums, either to Mr. Tappan or myself. When the note of seven hundred dollars became due, Mr. Peck was obliged to pay,

and lose it. It was out of my power, nor had any of the friends the means to do any thing towards paying it, inasmuch as they had assisted Paul all they could and got nothing in return. There was one thing, however, that the reverend gentleman did do,--he wrote me from time to time, to keep me advised of the success of his mission, and once informed me that he had then twelve hundred dollars on hand; but not a farthing could we get. We wrote him again and again, reminding him of the bank debt, and the uneasiness of his friends on account of it, but all to no purpose,--the Atlantic was between us, and he was making money too easily, to like to be interrupted. He never paid one dollar.

Let us now look after the other agent, who had likewise been fitted out, to prosecute his mission in the States. That he collected money professedly for the assistance of the colony, is too well known to require proof, but how much, we could not determine; we had reason to believe, however, that he retained quite a large sum. He would neither pay it over to the board, nor give any account of his proceedings. Very little did he ever pay over to the aid of the colony as designed. He was frequently written to, and every means in our power used, to induce him to give some account of his mission, but in vain; he would do nothing of the kind. Things went on in this way for two years, when it became evident that he had no intention of satisfying the minds of the settlers; and farther, that he meant to collect what he could, and use it as he pleased. We learned too, that when abroad, he lived extravagantly,--putting up at the most expensive hotels, giving parties, and doing many things, not only beyond his means, but that brought dishonor on the cause and colony. When he returned to the settlement, he would, if he had funds, make presents to his particular friends instead of paying it to the treasurer, as he was pledged to do, until the majority of the colony became thoroughly disgusted with his heartlessness and dishonesty. It was also perceivable that Lewis and Paul both, were getting weary of the solicitations of the board and complaints of the settlers, and were anxious to be rid of them, and enjoy their ill gotten gains in their own way.

It was never intended by the managers, to send out agents to beg money to be divided among the colonists; but to support schools, &c. Most of the settlers were able to work and did so; and were now getting along quite pleasantly.

Finally, after we had tried every means in vain, to get a settlement with Lewis, and to obtain his papers, there was nothing more we could do, but to warn the public against him, by publishing the facts in the case; this we did in various newspapers of Canada and in the States. An article inserted in the "Rochester Observer," to that effect, was like throwing a lighted match into a keg of powder. The excitement was intense on the part of Lewis and his friends, who were joined by the friends of N. Paul, to destroy, if they could, the board of managers. I, however, being the only member of that devoted board, who happened to be extensively known in the States, their anathemas were all poured out on me, and all their energies brought forward to insure my destruction. They were few in number, it is true, but they had money, and I had little to spend in litigation; besides, Lewis was in debt, and his creditors did not like to see his means of paying them swept away. The Canadians seemed to think there was no harm done if Lewis did get money out of the "Yankees," as long as it came into their hands at last, and so, on the whole, they raised a tremendous storm, designed, however, to sweep nobody away but myself; and I have continued to this day, notwithstanding all their artful malignity. Nothing, I am persuaded, could have saved me from imprisonment at that time, had I not possessed a high reputation for truth and honesty during my previous sojourn in the colony.

Lewis had dealt somewhat extensively with Mr. Jones, who was the principal agent for the Canada Company; but failing to fulfil his agreement, regarding the payment for a large tract of land, it so exasperated Mr. Jones, that he declared he would have nothing to do with any of the colored people; and so when I wanted to buy a lot of land, he would not sell it to me because he so despised Lewis.

How much harm can one wicked man do! and yet it cannot be right to judge the character of a whole class or community by that of one person.

CHAPTER XXI.

ROUGHING IT IN THE WILDS OF CANADA.

The "Canada Company," of which I have so frequently spoken, was an association of wealthy gentlemen, residing in England; something like the East India Company, especially regarding the title of lands. They had sent on their agent and purchased a large tract of land known as the "Huron Tract," extending from London to Lake Huron, where they laid out a village, named Goderich, sixty miles distant from Wilberforce. With this company, Mr. Lewis had contracted for a township of land, as agent for the Cincinnati refugees; but failing to meet the demand, the company kindly extended the time of payment; but when that time also passed

without receiving any thing from Lewis, the general agent, Mr. Jones became so indignant, that he utterly refused to sell a foot of land to any colored person whatever. This proved to be one of the greatest detriments to the prosperity of the colony it ever met.

The Society of Friends at this time, however, with commendable sympathy for the oppressed and abused colored residents of Cincinnati, and with their proverbial liberality, raised a sum of money sufficient to purchase eight hundred acres of land of the Canada Company for the benefit of the colony. The funds were placed in the hands of one of their number, Frederick Stover, who went to Canada as their agent, purchased the land, and settled colored people upon it, which comprised nearly all of the Wilberforce settlement. This occurred before I settled in Canada, and the consequence was, when I desired to purchase land, none could be obtained. At the time, however, of which I am speaking, the Canada Company were constructing a road through their possessions, some seventy miles in length, and the principal contractor, Mr. Ingersoll, had agreed to take land in part payment for his services on the road. In accordance with this agreement, he accepted one lot of land situated within the Wilberforce settlement, which he agreed to sell to Mr. Lewis for twenty-five dollars. Mr. Lewis, knowing that I was anxious to purchase, accepted the offer, and then came and showed the contract, offering it to me on condition that I paid him the twenty-five dollars which he had just paid Mr. Ingersoll. This I was glad to do; I paid the demand; took an assignment on the back of the receipt, and passed into immediate possession of the land. He at the same time requested me to take up a note of twenty-five dollars for him; which I did, on his promising to refund the money in a short time.

I commenced laboring on the wild land I had purchased; cleared some ten acres, which in consequence of its being so heavily timbered, cost me at least twenty-five dollars per acre; built a house and barn--supposing myself its legal possessor,--until I chanced to meet Mr. Ingersoll, who informed me that Mr. Jones had refused to sell him the land to be disposed of to a colored person; that he had duly informed Lewis of the fact, and had returned to him the twenty-five dollars received. Not a word of this, had Lewis communicated to me, though he knew I was making expensive improvements, in the faith that I was its only owner. Instead of atoning for the wrong already done me, he made it the basis of a deeper injury.

After one year's residence in Wilberforce, I found it necessary to return to Rochester to settle some unfinished business; and when on my way thither I stopped at London, where I found Lewis, who had not only preceded me but had taken out a _capias_, for forty pounds currency. I was therefore obliged to get bail for my appearance at court, after which I pursued my journey.

On my arrival in Rochester, I found business at a stand; and the community in a state of excitement and alarm, on account of that fell destroyer, the cholera. This was its first visit to the United States, and the fearful havoc it was making, spread terror and consternation throughout the land. I returned to Canada; but found on my arrival at London, that "the pestilence that walketh at noon-day," had preceded me, and taken from that village my friend, Mr. Ingersoll, with several others. So great had been the alarm, that instead of my appearing at court as I expected to do, I found it adjourned, and the judge returned to his home.

I hastened on to Wilberforce, which had fortunately escaped the fearful scourge, with terrible apprehensions.

Having a little spare time, I went out with my rifle, in search of deer; but soon came upon a large wolf, which I wounded with the first shot; he, however, sprang aside and was gone. On looking about for him I espied another!--reloading my rifle, I fired, and he fell dead at my feet, while my dog at the same time I heard barking furiously. Having dispatched this second intruder, I saw that my dog had the first one, entangled in the branches of a fallen tree. I searched for my balls, and was vexed to find that I had left them at home. In this predicament I cut with my knife, a knot from a beech limb, put it in my rifle, and took deadly aim at the enraged wolf. The wooden ball struck him between the eyes and killed him on the spot.

The two dead animals, with their skins, I sold for nine dollars and a half,--making pretty good wages for a few hours labor.

Hunting was very generally pursued by the settlers, with great earnestness and considerable skill. The forest abounded with deer, wolves, bears, and other wild animals. Bears were plenty, and very troublesome because so dangerously tame. One day, our children had built for themselves a play-house, a few rods from the door, and were enjoying their play when they were called in to dinner. A moment after, I observed one of the settlers gazing intently at the play-house; I called to know what so attracted his attention, and he informed me that an old bear, with three cubs, had just then taken possession of the playhouse. And sure enough there they were! knocking about among the dishes, and munching the crumbs of bread which the children had left. The man was supplied with a loaded rifle and urged to shoot them, but he begged to be excused from a pitched battle with so many; and the bears leisurely took their departure for the woods without molestation. The play-house, however, was soon deserted by the children after these unbidden guests had made so free with it; and we were ourselves somewhat alarmed for the safety of our children, who were accustomed to roam in the edge of the forest, and make swings of the luxuriant grape vines.

But such incidents are common in a new country, surrounded as we were by a dense wilderness.

CHAPTER XXII.

NARROW ESCAPE OF A SMUGGLER.

From the time I first settled in Wilberforce, my house had ever been open to travelers and strangers; but a conversation I happened to overhear, led me to take a course different from what I had at first intended. I was at a public house about twenty miles from home, when I heard the landlord advising his guest to eat heartily, for, said he, "you will find nothing more worthy of your attention, until you reach Wilberforce. When you arrive at that settlement, inquire for A. Steward, from the States, and he will give you a meal fit for a prince." I began to reflect on the subject and concluded, inasmuch as people would send company to me, it would be better to make some preparation for entertaining them. I had plenty of furniture, and all I needed was a larger supply of food, to commence keeping a tavern. This was easily obtained, and I opened a public house which was well patronized.

One day while I was absent from home, a man drove to the door the finest span of horses, I think I ever saw,--black as jet, with proudly arched necks, and glossy tails that nearly swept the ground. The gentleman sprang from his carriage, bounded through the open door, and in the most excited manner, began to inquire "who owns this establishment? When will he return? Can I be accommodated? Can I see your barn?" &c. The stable boy took him to the barn, from whence he soon returned; his face flushed, and breathing so heavily as to be heard all through the apartment; trembling so violently that he could scarcely speak at all,--but made out to inquire, "if there was not some place besides the barn where he could put his horses?" He was told that there was a small shelter built for cows, in bad weather, and the next moment he was examining it. In a very short time he had his horses and carriage stowed away in the cow-shed. He acted like a crazy man; but when he had secured his horses, he re-entered the house and frankly apologized for his conduct. "I may as well tell you the truth," said he; "I am suspected of smuggling goods; a reward is offered for my arrest, and the constables are on my track, in pursuit of me. My name is Cannouse, and I am from M----, in Ontario County."

But perhaps they can not prove you guilty of smuggling, said I, in an after conversation.

"Ah," said he, "there is for me no such hope or probability; I have been engaged for the last few months in the sale of dress-goods and broad-cloths, and my exposure and flight is the consequence of my own folly. While in the village of St. Catharines, I took a young girl out to ride, after she had engaged to accompany another young fellow, which of course offended him; and he being too well posted up on my affairs, went directly to the custom house officer and informed against me. I was sitting in the parlor, perfectly at ease, when a young man, a relative of the young lady in question, burst into the room, shouting, 'Fly! fly! for your life! The officers are upon you!' And I did fly; with barely time to reach the woods, for as I sprang through the back door, the officers entered through the front door. My horses were my first consideration; they had been raised by my father, and should I lose them, I should never dare to meet him again. In my hasty flight, I engaged the young man to conceal them till night, and then to drive them to a certain place where I would meet him. This he did, and I kept on my flight until I came to the house of a friend, where I halted to make inquiries. The gentleman had just come from London, and had seen handbills at every conspicuous place, describing me and my horses. I asked him what I should do? He said, 'you are not safe a moment; there is no hope but in flight; avoid the main road, and get to the colony if you can; if you succeed, go to A. Steward; he is an upright man and will never betray you for money,' And here I am: if I am arrested, six months imprisonment, three hundred dollars fine, and the forfeiture of my father's valuable and favorite horses, will be my portion. I have had no regular meal for the last three days, and my head aches violently."

We gave him some refreshment, and conducted him to a room, assuring him that he should have it to himself. All remained quiet until midnight, when a man knocked cautiously at our door. I opened it myself, and a gentleman, looking carefully about the place, inquired,

"Are you full?"

"No," said I.

"Have you any travelers here to night?"

"Yes."

"How many?"

"Two."

"Where are they?"

"In this room; walk in, sir."

He took the light from my hand, and stepping lightly up to a bed, where two travelers were quietly sleeping, he closely examined their faces. He soon returned the light, and without further inquiry retired from the house. When his companions came up, I distinctly heard him tell them that the smuggler was not there.

"You may be mistaken," said the other, "and we must search the barn for his horses."

This they did thoroughly, after procuring a lantern; but without finding any thing to reward their diligent search; and they finally drove off.

When they had gone, Cannouse groaned most bitterly, and trembled from head to foot at the thought of his narrow escape. The next day an officer rode up to where the children were playing, with a handbill which he read, and inquired if they had seen a person bearing that description, pass _that day?_ They answered negatively, and he rode on. The poor frightened Cannouse stayed with us a week; and nearly every day during the time, the house and barn were searched for him. The children kept watch, and when they saw any one coming they would let him know, in time to take himself and horses into a thicket near by. When he thought pursuit was over, he started to leave; but when, in a half hour after, a _posse_ of men drove up to my door, flourishing their handbills, I thought it all over with Cannouse. I told them that he was not there; but they chose to have another search, and when they found nothing, the officer sprang into his carriage, exclaiming, "come on, boys; we'll soon have him now; we have tracked him here, and he can't be far off."

Cannouse had left us, feeling quite secure; but he had traveled but a short distance, when he observed a horse shoe loose, and to get it fastened he drove down to a blacksmith's shop, which happened to stand at the foot of a hill; and between it and the highway there had been left standing a clump of trees which nearly hid it from view. While there, getting his horse shod, the officers passed him unobserved, and he finally escaped.

Some time after, a gentleman called on us who had seen Cannouse in Michigan, where he was doing well. He had succeeded in reaching Detroit, from whence he passed safely to his home; but probably learned a lesson not to be forgotten. He was a talented young man--one who would have felt deeply the disgrace of imprisonment,--and it was indeed a pleasure to me to do what I could, to effect his release from an unenviable position. I would never have betrayed him; but happily I was not asked directly for him, until he was gone from my house and protection.

CHAPTER XXIII.

NARRATIVE OF TWO FUGITIVES FROM VIRGINIA.

The settlers in Wilberforce, were in general, industrious and thrifty farmers: they cleared their land, sowed grain, planted orchards, raised cattle, and in short, showed to the world that they were in no way inferior to the white population, when given an equal chance with them. In proof of this let me say, that it was uniformly the practice of persons traveling from London to Goderich, to remain in our settlement over night, in preference to going on to find entertainment among their own class of people. And we believe that the whites are bound to admit, that the experiment of the Wilberforce colony proves that the colored man can not only take care of himself, but is capable of improvement; as industrious and intelligent as themselves, when the yoke is taken from off their necks, and a chance given them to exercise their abilities. True, many of them had just escaped from cruel task-masters; ignorant of almost every thing but the lash,--but the air of freedom so invigorated and put new life into their weary bodies, that they soon became intelligent and thrifty.

Among the settlers might be gathered many a thrilling narrative, of suffering and hair-breadth escapes from the slave-land,--one of which I will tell as 'twas told to me.

In a small rude cabin, belonging to one of the large plantations in Virginia, sat at a late hour of the night, an afflicted slave-man and his devoted wife, sad and weeping. At length the husband repeated what he before had been saying:

"I tell you, wife, we must flee from this place, without delay. Oh, I cannot endure the idea of seeing you sold for the Southern market, to say nothing of myself; and we shall most likely be separated, which I can't bear! Oh, Rosa, the thought distracts me,--I can't bear it!"

"Are you sure," said Rosa, "that master thinks of such a frightful doom for us?"

"Oh yes, I know it; I heard master to-day making a bargain with the slave dealer that has been hanging about here so long; and when it was finished, I heard him reading over the list, and our names, wife, are the first on it."

"Oh, dear!" sobbed the wife, "we shall certainly be retaken and whipped to death; or else we shall starve in the wilderness! Oh, it is very hard to be compelled to leave all our friends and the old plantation where we were born!"

"Yes; it is both hard and unjust," said Joe, and an indignant frown contracted his brow,--"here is our birth-place, and here, for forty years have I toiled early and late to enrich my master; and you, my poor wife, a few years less; and now we are to be sold, separated, and all without a choice of our own. We must go, Rosa. If we die, let us die together!"

"It shall be as you say, Joe," she replied, "but it frightens me to think of the hardships of the way, and the danger of being recaptured."

"Courage, wife: no fate can be worse than the one designed for us; and we have no time to lose. Tomorrow night, then, we must make the first effort to gain our liberty, and leave all that is dear to us except each other!" And they retired to rest, but not to sleep.

The following night was very dark; and as soon as all was quiet on the plantation, they stole out of their cabin and stealthily crept over the ground until they reached the highway; and then, guided only by the north star, they made their way to the nearest woods. So fearful had they been of being suspected, that they took no provision of any kind with them. All night they plunged forward through the tangled thicket and under-brush, surrounded by thick darkness, glancing now and then upward to their only light,

"Star of the North! though night winds drift the fleecy drapery of the sky,

Between thy lamp and thee, I lift, yea, lift with hope my sleepless eye."

When day dawned they threw their weary bodies on the ground, famished and thirsty, and waited for the darkness to again conceal them while they pursued their journey. The second day of their flight, the pain of hunger became almost beyond endurance. They found a few roots which relieved them a little; but frequently they lost their way, and becoming bewildered, knew not which way to go; they pushed on, however, determined to keep as far from their pursuers as possible. Their shoes were soon worn out; but bare-footed, bare-headed, and famishing with hunger, they pressed forward, until the fourth day, when they found themselves too weak to proceed farther. Hope, the anchor of the soul, had failed them! They were starving in a dense forest! No track or path could they find, and even had they seen a human being, they would have been more terrified than at the sight of a wild beast!

Poor Rosa, could go no farther--her strength was all gone--and as her emaciated husband laid her on the cold earth, he exclaimed, "Oh, dear God! _must_ we, after all our efforts, starve in this dark wilderness! Beside his fainting wife, he finally stretched himself, sheltered only by a few bushes, and tried to compose himself to die! but resting a few moments revived him, and he aroused himself, to make one more effort for life! Stay you here, wife, and I will try once more to find the highway; it cannot be far from here; and if I am taken, I will submit to my fate without a struggle; we can but die." So saying, he left her, and began to reconnoitre the country around them. Much sooner than he expected he emerged from the wood, and not far distant he saw a house in the direction from whence he came; being, however, as most of the slaves are, superstitious, he thought it would be a bad omen to turn backward, and so continued to look about him. It seemed, he said, that some unseen power held him, for though starving as he was, he could not take a step in that direction; and at last as he turned around, to his great joy, he saw another dwelling a little way off, and toward that he hastened his now lightened footsteps. With a palpitating heart, he approached the door and knocked cautiously. The man of the house opened it, and as soon as he saw him, he said, "You are a fugitive slave, but be not alarmed, come in; no harm shall befall you here; I shall not inquire from whence you came; it is enough for me to know that you are a human being in distress; consider me your friend, and let me know your wants."

"Bread! Oh, for a morsel of bread!" said the famished creature, while his hitherto wild and sunken eyes, began to distil grateful tears. The "good Samaritan" stepped to another apartment and brought him a piece of bread, which he expected to see him devour at once, but instead, he looked at it wistfully, literally devouring it with his eyes; turned it over and over, and at last stammered out, "my good master, without a piece of bread for my poor starving wife, I can never swallow this, tempting as it is."

"Poor man," said his benefactor, "can it be that you have a wife with you, wretched as yourself?" He brought out a loaf of bread, some cheese and meat, and while the fugitive was preparing to return, the kind gentleman said, "I am glad you came to me; had you called at the house you first saw, you would have been betrayed, and immediately arrested. You must remember," he continued, "that you are young and valuable slaves, and that your master will make every effort in his power to find you, especially since he has made a sale of you. To-day and to-night, remain in the woods, and the next morning you may come to me, if all is quiet; should I see danger approaching you, I will warn you of it by the crack my rifle. Go now, to your poor wife, and listen for the signal of danger; if you hear none, come to me at the appointed time." He returned, and after feeding his helpless Rosa, she revived, and soon felt quite comfortable and grateful.

When the morning came for them to leave their retreat, they listened intently, but hearing nothing, Joe started for the residence of his friend. He had been gone but a short time, when his wife, who lay in the bushes, thought she heard the tramp of horses,--she crept nearer the highway, and peeping through the bush--Oh, horror! what was her consternation and sickening fear, to find herself gazing upon the well-known features of her old master, and two of his neighbors, all armed to the teeth! Her heart seemed to stand still, and the blood to chill in her veins. Had she been discovered she would have been an easy prey, for she declared that she could not move a step. In the meantime her husband had got about half way to the residence of his preserver, when his quick ear detected the sound made by the feet of horses, and as he stopped to listen more intently, the sharp crack of a rifle sent him bounding back to his concealment in the forest.

The party of horsemen rode on to the dwelling of the kind hearted gentleman, and inquired whether he had seen any fugitive slaves pass that way.

"I saw," said he, "a man and woman passing rapidly along the road, but do not know whether they were fugitives, as I did not see their faces." The human blood-hound, thanked the gentleman for the information, and immediately set out in pursuit; but, just as the informant had intended, in a direction _opposite_ to that the slaves had taken. That night, Joe and Rosa visited the house of their benefactor, where they were supplied with clothing and as much food as they could carry; and next day they went on their way rejoicing. They settled in Cincinnati, where they lived happily, until the mob drove them with others, to the Wilberforce settlement, where they are in no danger of the auction block, or of a Southern market; and are as much devoted to each other as ever.

CHAPTER XXIV.

PLEASANT RE-UNION OF OLD AND TRIED FRIENDS.

It is well known to those who have assisted in clearing land in a new country, that bears, who are not Jews, are very troublesome, and levy a heavy tax on the settlers, to supply themselves with pork-their favorite food. One old bear in particular, had for a long time annoyed the colonists, by robbing their hog-stys almost every night. We failed in all our plans to destroy his life, until a woman saw him one day, walking at ease through the settlement. A half dozen of us gave chase immediately, and came up with him after traveling two miles. So anxious was I to kill him, that I fired at first sight and missed him, which gave us another two miles chase. When, however, we came up, he was seated on a branch of a tree, leisurely surveying us and the dogs, with great complacency. The contents of my rifle brought him to the ground, and stirred his blood for battle. One blow from his powerful paw, sent my fine greyhound some yards distant, sprawling upon the ground, and when he renewed the attack, Bruin met him with extended jaws, taking and munching his head in his mouth. My rifle was now reloaded, and the second shot killed him on the spot. We tied his legs together, and lifting him on a pole, marched in triumph into the settlement, where guns were discharged and cheers given, in approbation of our success.

One winter's evening we had drawn closely around the blazing fire, for the air was piercing cold without, and the snow four feet deep on a level. Now and then, a traveler might be seen on snow-shoes; but though our cabin was situated on the king's highway, we seldom saw company on such a night as this. While the wind whistled, and the snow drifted about our dwelling, we piled the wood higher in our ample fire-place, and seated ourselves again, to resume the conversation, when I was startled by a loud and furious knocking at the door. I opened it to what I supposed to be three Indians. Their costume was that of the red man; but the voice of him who addressed me was not that of an Indian. "Can you keep three poor devils here to-night?" said he, and when I made farther inquiry, he repeated the same question; "we can sleep," he continued, "on the soft side of a board; only give us poor devils a shelter."

I told him we were not accustomed to turn away any one on such a night; that they were welcome to come in; and they were soon seated around our large and cheerful fire.

They had laid aside their snow-shoes and knapsacks, and the heat of the fire soon made their blankets uncomfortable; but as one of them made a move to throw it off, another was heard to whisper, "wait a little; we are among strangers, you know; so do not make a display of yourself." The fellow drew his blanket about him; but we had heard and seen enough to awaken curiosity, if not suspicion. In passing out of the room soon after, I heard one of these pretended Indians say to his companion, "I know these folks are from the States, for I smell coffee." When they finally sat down to table, and saw silver upon it, they cast surprised and knowing glances at each other, all of which we closely observed, and were convinced, that they were not red men of the forest, but belonged to that race who had so long looked haughtily down upon the colored people; that the least exhibition of comfort, or show of refinement astonished them beyond measure.

In the meantime, my wife had whispered to me that she was sure that the principal speaker was no other than the aristocratic Mr. G----, of Canandaigua. I could not believe it; I could not recognize in that savage costume, one who had been bred in affluence, and "the star" of genteel society. But my wife soon developed the affair to our mutual satisfaction: G----, on taking from her a cup of coffee, remarked, "this looks good; and I have had no good coffee since I left my mother's house."

"Does your mother still reside in C----?" asked Mrs. Steward.

"My mother! my mother! what do you know of my mother!" said he, looking sharply at her; but observing that they were recognized, they began to laugh, and we had a hearty congratulation all round; while G----, starting-up from table, exclaimed,

"Come, boys, off with this disguise; we are among friends now."

Our Indian guests, now appeared in costume more like "Broadway dandies," than savages. Dressed in the finest cloth, with gold chains and repeaters; and all that constituted the toilet of a gentleman. After tea they requested to dry some costly furs, which they took from their knapsacks and hung around the fire. The following day they took their leave, with many apologies and explanations, regarding their appearance and conduct. They were in the wilderness, they said, trading for very valuable furs; they had money, jewelry and rich goods, which they had taken that method to conceal.

During all this time, there had been another visitor in the house, who was sitting in a corner, absorbed in writing. Our mock Indians had noticed him, and not knowing who he was, expressed a determination "to quiz that deaf old devil," after supper. We all seated ourselves around the fire, and our Canandaigua friends, though no longer savages, had not forgotten the silent man in the corner; they began to question him, and he aroused himself for conversation; nor was it long before they forgot their design to quiz him, and found themselves charmed listeners to the brilliant conversation, of that world-renowned champion of humanity, Benjamin Lundy, for he it was.

On this particular evening, he gave us a sketch of his journey to Hayti; to accompany there and settle some emancipated slaves; which I thought very interesting, and as I have never seen it in print I will here relate it, as near as I can, in his own words:

In the State of Maryland, there lived a slaveholder the proprietor of some sixty slaves, and being somewhat advanced in years, he determined to free them, in accordance with the laws of that State, which required that they be sent out of it.

He had thought the matter over, but being undecided where to send them, he sent for Mr. Lundy to assist him in his proposed plan; who was only too glad to comply with a request calculated to carry out his own plans of philanthropy and equal rights.

When he had listened to the suggestions and expressed desires of the planter, he offered his arguments in favor of the West India Islands; and it was decided to send them to Hayti, as their future place of residence.

Six weeks were allowed for preparations; then Mr. Lundy was to return and take charge of them on the voyage, and see them settled in their new homes.

When the appointed time arrived, Mr. Lundy was there to accompany them on board a vessel bound for Hayti; on which was furnished as comfortable quarters, as the kindness of their conscientious master and his own benevolent heart could suggest. When all was ready, the Christian master came on board, to take leave of those faithful servants,--many of whom had served him from their childhood, and all of whom he had bound to his heart by kindness and Christian benevolence. It was a sad parting; not because the slaves did not love liberty, but because they appreciated their master's kind forbearance, and solicitude for their future

welfare. He had ever been a humane and indulgent master; one who lightened the burthen of the poor slave, all in his power. A moment's reflection will show, that it is invariably this conscientious kind of slaveholders, who are induced to emancipate their slaves; and not the avaricious, cruel tyrant, who neither fears God nor regards his fellow man.

The master of the slaves had kindly informed them of his intentions,--of the probable length of the voyage, and the unavoidable sickness they would experience, &c.; but now, they were gazing up into his kind face for the last time, as he knelt in prayer, commending that numerous flock--raised on his own plantation--to the care and protection of Almighty God, beseeching Him to protect them in the storm and dangers of the ocean; to guide them through this life, and save them in the world to come; until the sobs and cries of the poor slaves drowned his utterance. He at length took his final leave of them, and of Mr. Lundy; and the ship sailed immediately. They, however, met storms and adverse winds, which detained them; and then the poor, ignorant slaves began to believe what they had before suspected: that this was only some wicked plan of Mr. Lundy's, laid to entice them away from a kind master, and to plunge them into some dreadful degradation and suffering. "Master" had not told them of the adverse winds, and they were certain that some mischief was intended; they grew sullen and disobedient; and notwithstanding the kindness of Mr. Lundy, they murmured and complained, until his kind heart sank within him; still he pursued the even tenor of his way, trusting in God for deliverance. He watched over them in sickness, and administered to all their wants; but his tender solicitude for their health and comfort, only excited suspicion, and increased their ungrateful ill humor.

One pleasant evening, Mr. Lundy paced the deck in deep thought. He was sad, and well nigh hopeless. He had seen enough in the fierce look and sullen scowl; and had heard enough of the bitterness, and threatening anger of the negroes, to know that a storm was gathering, which must soon burst in all its wild fury over his devoted head. He was a small, feeble man, compared with those who watched his every movement, and gnashed their teeth upon him so fiercely. None but the Almighty could save him now; and to Him who "rides upon the wings of the wind, and maketh the clouds His chariot," he drew near in fervent prayer; after which he retired in peace and confidence to his berth. During the night, a fine breeze sprang up; and when he went on deck the next morning, they were in sight of the luxuriant shore of Hayti! The officers of the island boarded the ship; but their language was unintelligible to the negroes, who still looked daggers at every one who spoke. They landed; but the fearful, and ungrateful slaves continued sullen and forbidding. Mr. Lundy left them, however, and went into the country, where he selected their future residence; and made every preparation for their comfort and convenience in his power; saw them conveyed to their neat, pleasant homes, and all happily settled. This work was accomplished; and he merely called to bid adieu to his ungrateful charge, when he found that one of the slaves had been appointed to speak to him, in behalf of the whole number, and confess how deeply they had wronged him. While they were conversing, the others gathered around, with tears and prayers for forgiveness; and finally fell at his feet, imploring pardon for themselves, and blessings on the kind, patient and humane Benjamin Lundy. He hurried from the affecting scene, and soon after returned to America.

Thus that cold evening passed more pleasantly away in our rude cabin; and our Canandaigua gentlemen, after an agreeable acquaintance, and pleasant chat with Mr. Lundy, retired for the night--not like savages, but like gentlemen as they were; and I doubt not, with a more exalted opinion of "the deaf old devil in the corner"

CHAPTER XXV.

PRIVATE LOSSES AND PRIVATE DIFFICULTIES.

Soon after settling in Wilberforce, I found that the rumor I had heard in the States, concerning the refusal to sell land to colored persons, was literally correct, and my farm being too small to yield a support for my family, and knowing it would be useless to apply for more land, I engaged to carry packages for different merchants in the adjoining villages, as well as to and from the settlement. Possessing a pair of excellent horses and a good wagon, I found it a profitable business, and the only one I could well do, to eke out the proceeds of my farm, and meet my expenses.

One day as I was returning from the village, one of my horses was taken suddenly ill. I took him to a tavern near by, and as I could discover no cause for his illness, I concluded to leave him a few days, supposing rest would soon restore him. I accordingly hired another horse, and returned to the colony. In a day or two after, I collected my packages as usual, and started on my route, designing to leave the hired horse and take my own; but when I arrived at the tavern, I found some Indians engaged in taking off the hide and shoes of my poor, dead horse. This was indeed, a great loss to me; but I consoled myself with the thought that I had one good horse left, yet he would hardly be sufficient to accomplish alone, the labor I had engaged to perform; nor had I the means to spare, to purchase another. I therefore hired one, and commenced business again, with the determination to make up my loss by

renewed diligence and perseverance.

I started in good spirits; but had proceeded but a few miles, when my remaining horse, which I had supposed perfectly sound, reeled and fell in the harness! And before I could relieve him of it, my noble animal and faithful servant, had breathed his last! Without a struggle or a movement he lay lifeless on the cold earth. I was sad. I deplored the loss of my good, and valuable team; but more the mystery and suspicion that hung over the event. I returned home and sat down to devise some plan of procedure. What could I do? Half the means of our support had been suddenly and mysteriously snatched from us. What could I do next? While thus ruminating, I arose to answer a summons at the door, and who should enter but Mr. B. Paul, a brother to our foreign agent, who had so long absented himself from our house, that I was indeed surprised to see him at this time. He, however, seated himself, with great apparent concern for my recent loss, which he soon made the subject of conversation and the object of his visit.

"There has been," said he, "a great deal of unpleasant feeling, and injudicious speaking on both sides, for which I am heartily sorry. The colony is too weak to sustain a division of feelings; and now, that your recent losses have left you in a far less favorable condition to sustain yourself and family, I have called to make a settlement of our former difficulties, and to offer you two hundred and fifty dollars out of the collections for the colony."

I saw through the plan at once, and considered it only a bribe, to prevent my exposing the iniquity of others. Should I consent to take a part of the ill-gotten spoils, with what confidence could I attempt to stay the hand of the spoiler. I wanted money very much, it is true; but after a moment's reflection, not enough to sanction the manner in which it had been obtained; and though I confess, the offer presented to me a strong temptation, I am thankful that I was enabled to resist it. I refused to accept the money; and after sending away the tempter and his offered gain, I felt my heart lighter, and my conscience more peaceful than is often the lot of sinful, erring man in this world of trial and conflict; and yet I could but feel that the mystery in which the death of my horses was involved, was partially at least, explained.

CHAPTER XXVI.

INCIDENTS AND PECULIARITIES OF THE INDIANS.

During our residence in Canada, we were often visited by the Indians, which gave us an opportunity to learn their character, habits and disposition; and some incidents illustrative of the peculiarities of that abused people, I will here mention.

I recollect one bitter cold night, about eleven o'clock, I happened to awake, and looking out toward the fire, I was surprised to see standing there, erect and quiet, a tall, brawny Indian, wrapped in his blanket; his long hunting knife and tomahawk dangling from his belt; and his rifle in his hand. Had he been in his own wigwam, he could not have looked about him with more satisfaction and independence. I instantly sprang to my feet, and demanded his errand.

"Me lost in the woods, and me come to stay all night," was his grave reply.

"Then," said I, "give me your weapons, and I will make no objection."

He disarmed himself, and gave his weapons to me, with an air of haughty disdain for my fears. I put them in a place of safety and then prepared his bed, which was nothing more than the floor, where they choose to sleep, with their head to the fire. My offer of anything different from this he proudly resented as an insult to his powers of endurance, and would say, "beds for pale faces and women; hard board for Indians." He threw himself down, drew his blanket about him, and was soon sleeping soundly. As soon as the day began to dawn, he was up, called for his arms, and after thanking me in the brief Indian style of politeness, departed for the forest. He had found our doors all fastened, save a low back door, through which he entered, passing through a back room so full of miscellaneous articles, that it was difficult to go through it in the day time without upsetting something; but the Indian understood all this, he made no noise, nor would he have spoken at all, had I not awakened; and yet, he would have scorned to injure any one beneath the roof that gave him shelter, unless he had been intoxicated.

One sabbath afternoon, one of my children was sitting in the door, when a tall, emaciated Indian came up and said, "Will my little lady please to give me a drink of water?" While she went for it, I invited him to a seat within. There was something dignified and commanding in his appearance, and something in his voice and countenance, that won my confidence and respect at once. He remained in the place some time, and I learned his history.

In his younger days he had been a great warrior; and even now, when recounting, as he often did, the scenes of the battle field, his eye would burn with savage fire, lighting up his whole countenance with the fiercest kind of bravery, and often with a hideous yell that would startle our very souls, he would burst from the room and bound over the fields and forest, with the fleetness of a deer--making the woods ring with his frightful war-cry, until the blood seemed ready to curdle in our veins. He had also been one of the famous Tecumseh's braves; and had stood by him when he fell on the fifth of October, 1813. This old brave, whenever he called the name of Tecumseh, bowed his head reverently; and would often try to tell us how very deeply they mourned when it could no longer be doubted that the brave heart of Tecumseh, brother of the celebrated Wabash prophet, had ceased to beat.

"Had an arrow pierced the sun and brought it to my feet," said the old warrior, "I could not have been more astounded than at the fall of Tecumseh." Then he told us that once, after a great and victorious battle, Tecumseh, in his war paint and feathers, stood in the midst of his braves, when a little pale faced girl made her way weeping to him and said, "My mother is very ill, and your men are abusing her, and refuse to go away." "Never," said the Indian, "did I see a frown so terrible on the face of Tecumseh, as at that moment; when he with one hand clutched his tomahawk, and with the other led the little girl to the scene of riot. He approached the unruly savages with uplifted tomahawk, its edge glittering like silver, and with one shout of 'begone!' they scattered as though a thunderbolt had fallen in their midst."

But the old warrior at Wilberforce fought no more battles, except in imagination those of the past. After peace was declared he bought a valuable piece of land, with the intention of spending the remainder of his life more quietly; but unfortunately there lived not far from him a man who had once been the possessor of that farm, and had lost it in some way, and was now in reduced circumstances.

He was both envious and vicious; and because he could not himself buy the land, he was determined that the old Indian should not have it. After having tried many ways to get it from him, he finally complained of him, for fighting for the British and against the country where he now resided. This was successful; he was arrested and thrown into prison, and without a trial, removed from one prison to another, until he, with several others, was sent South to be tried as traitors. While on the way, the keeper of this Indian wished to call on his mother, who lived in a little cottage by the roadside, to bid her farewell. She was an aged woman, and when her son left her to join his companions, she followed him to the door weeping, wringing her hands in great distress, and imploring the widow's God to protect her only son. She had had four; all of whom went forth, with an American mother's blessing, to fight in defence of their country; and this one alone, returned alive from the field of battle. Now as he took his final departure for the South, she clasped her hands, raised her tearful eyes to heaven, and while large drops rolled over her wrinkled cheeks, she cried, "Oh, God, protect my only one, and return him to me in safety, ere I die." This scene, the imprisoned, and as some supposed, heartless Indian, watched with interest; no part of it escaped his attention; but they passed on, and safely reached Detroit. The prisoners were conducted to a hotel and secured for the night; our Indian hero being consigned to an attic, which they supposed a safe place for him. There happened to be on that night, a company of showmen stopping at that hotel, and exhibiting wax-work; among the rest, was a figure of General Brock, who fell at Queenston Heights, and a costly cloak of fur, worn by the General previous to his death. Nothing of this escaped the eagle-eye and quick ear of the Indian. When all was quiet in the hotel, he commenced operations, for he had made up his mind to leave, which with the red man is paramount to an accomplishment of his design. He found no great difficulty in removing the window of his lofty apartment, out of which he clambered, and with the agility of a squirrel and the caution of a cat, he sprang for the conductor and on it he slid to the ground. He was now free to go where he pleased; but he had heard something about the cloak of Gen. Brock; he knew too, that the friends of the General had offered fifty guineas for it, and now he would just convey it to them.

With the sagacity of his race, he surveyed the hotel, and determined the exact location of the show-room. Stealthily and noiselessly, he entered it; found the cloak--took it and departed, chuckling at his good fortune. As he was creeping out of the apartment with his booty, a thought struck him, which not only arrested his footsteps, but nearly paralized his whole being. Would not his keeper be made to answer, and perhaps to suffer for his escape and theft? Of course he would. "Then in the darkness I saw again," said the old brave, "that old pale-faced mother, weeping for the loss of her only son," when he immediately returned the cloak to its place, and with far more difficulty than in his descent, he succeeded in reaching his attic prison, where he laid himself down, muttering to himself, "not yet,--poor old pale-face got but one."

They took him to Virginia, where, instead of a trial, they gave him about the same liberty they do their slaves. He staid one winter; but when the spring opened, the fire of the red man took possession of him, and when sent to the forest to chop wood, he took a bee-line for his former residence. But what was he to do for food? With a rifle, he could live happily in the woods, but he had none; so after considering the matter, he said to himself, "Me _must_ get a rifle," and instantly started for the highway. The first cabin he

saw, he entered in great apparent excitement, and told the woman of the house, that he had seen a "big deer in the woods, and wanted a rifle to shoot it. When you hear my gun," he said, "then you come and get big deer." She gave him her husband's excellent rifle and a few bullets; he looked at them, and said he must have more, for "it was a big deer;" so she gave him the bullet-mould and a piece of lead, with which he departed, after repeating his former injunction, to come when she heard the rifle; but, said he, "she no hear it yet."

He at length arrived at his own farm, from which he had been so cruelly driven, and concealed himself behind a log in sight of his own house, to watch the inmates. He soon learned that it was occupied by the man who had persecuted him in order to obtain it, his wife and one child. All day until midnight, he watched them from his hiding place, then assuming all the savage ferocity of his nature, and giving himself the most frightful appearance possible, he entered the house, and noiselessly passed to their sleeping room, where he placed himself before them with a long knife in his hand. Having assumed this frightful attitude, he commanded them in a voice of thunder, to get up and give him some supper. They were awake now. Oh, horror! what a sight for a guilty man, and a timid woman! "Me come to kill you!" said the Indian, as he watched their blanched cheeks and quivering lips. They tottered about on their trembling limbs to get everything he asked for, imploring him for God's sake to take all, but spare their lives. "Me will have scalps," he answered fiercely; but when he had eaten all he desired, he adjusted his blanket, and putting on a savage look, he remarked as if to himself, "Me go now get my men and kill him, kill he wife, and kill he baby!" and left the house for his post of observation.

The frightened inmates lost no time, but hastily collecting some provisions, fled to the frontier, and were never heard of afterwards.

The Indian immediately took possession of his own and quite an addition left by the former tenants.

While the kind-hearted old Indian repeated to me the story of his wrongs, it reminded me of the injustice practised on myself, and the colored race generally. Does a colored man by hard labor and patient industry, acquire a good location, a fine farm, and comfortable dwelling, he is almost sure to be looked upon by the white man, as an usurper of _his_ rights and territory; a robber of what he himself should possess, and too often does wrong the colored man out of,--yet, I am happy to acknowledge many honorable exceptions.

I have often wondered, when looking at the remnant of that once powerful race, whether the black man would become extinct and his race die out, as have the red men of the forest; whether they would wither in the presence of the enterprising Anglo-Saxon as have the natives of this country. But now I have no such wondering inquiries to make; being persuaded that the colored man has yet a prominent part to act in this highly-favored Republic,--of what description the future must determine.

CHAPTER XXVII.

OUR DIFFICULTIES WITH ISRAEL LEWIS.

Being under the necessity of referring again to the difficulties existing in the Wilberforce colony, I shall here introduce a circular, published in New York city, which will give the reader an understanding of the real cause of our embarrassments, and the character of our agent, Israel Lewis.

CIRCULAR

New York, May 9th, 1836.

The committee of colored citizens of the city of New York, as servants of the public, sincerely regret the necessity of bringing the within subject before the public. Their duty to God, to society, and to themselves, only actuates them in this matter.

The fact that many individuals in different sections of the country, have long suspected the integrity of Israel Lewis, but possessing no authentic documentary evidence, they have been prevented from making an effort, to counteract his too successful attempts and those of his agents, in the collection of funds from the public, has induced us to transmit this circular.

THEODORE S. WRIGHT, PETER OGDEN, THOMAS DOWNING, GEORGE POTTS, CHARLES B. RAY, DAVID RUGGLES, JOHN STANS, WILLIAM P. JOHNSON, WILLIAM HAMILTON, SAMUEL E. CORNISH.

* * * * *

ISRAEL LEWIS.

Wilberforce, U.C., March 28th, 1836.

The board of managers of the Wilberforce settlement, met and passed unanimously the following resolutions--Present, Austin Steward, Philip Harris, Peter Butler, William Bell, John Whitehead, Samuel Peters.

Resolved, 1st. That we deeply regret the manner in which our friends in the States have been imposed upon by Israel Lewis; and that we hereby inform them, as a board of managers or otherwise, that we have received less than one hundred dollars of all the money borrowed and collected in the States.

Resolved, 2d. That although we have not received one hundred dollars from said Lewis, yet, when we shall have received the funds collected by our agent, the Rev. Nathan Paul, in England, we will refund as far as our abilities will allow and our friends may require, the money contributed for our supposed benefit, by them in the States.

Resolved, 3d. That we tender our sincere thanks to our beloved friends, Arthur Tappan and others, who have taken such deep interest in the welfare of our little colony.

Resolved, 4th. That the foregoing resolutions be signed by the whole board, and sent to the States to be published in the _New York Observer_ and other papers.

AUSTIN STEWARD, _President_, PETER BUTLER, _Treasurer_, JOHN HALMES, _Secretary_.

PHILIP HARRIS, } WILLIAM BELL, } JOHN WHITEHEAD, } _Managers._ SAMUEL PETERS, }

* * * * *

New York, April 25th, 1836.

At a public meeting of the colored citizens of New York city, held in Phoenix Hall, Thomas L. Jennings in the Chair, and Charles B. Ray, Secretary, the following resolutions were passed unanimously:

Resolved, That the thanks of this meeting be tendered to the Rev. Samuel E. Cornish, for the able and satisfactory report of his mission to Upper Canada, especially to the Wilberforce settlement.

Resolved, That this meeting deem it their imperative duty, to announce to the public, that in view of facts before them, Israel Lewis [1] has abused their confidence, wasted their benevolence, and forfeited all claim to their countenance and respect.

Resolved, That a committee of ten, be appointed to give publicity to the foregoing resolutions; also, to the communication from the managers of the Wilberforce settlement, as they may deem necessary in the case.

THOMAS L. JENNINGS, _Chairman_, CHARLES B. RAY, _Secretary_.

[Footnote 1: It necessarily follows that the public should withhold their money from his subordinate agents.]

It will now appear that I was not the only unfortunate individual who had difficulty with Mr. Lewis. Mr. Arthur Tappan made known through the press, about this time, that Israel Lewis was not a man to be fully relied upon in his statements regarding the Wilberforce colony; and also, if money was placed in his hands for the benefit of the sick and destitute among the settlers, it would be doubtful whether it was faithfully applied according to the wishes of the donors.

For this plain statement of facts, Mr. Lewis commenced a suit against Mr. Tappan, for defamation of character; laying the damages at the round sum of ten thousand dollars. It appeared that Lewis valued his reputation highly now that he had elevated himself sufficiently to commence a suit against one of the best and most respectable gentlemen in New York city; a whole souled abolitionist withal; one who had suffered his name to be cast out as evil, on account of his devotion to the colored man's cause--both of the enslaved and free; one who has, moreover, seen his own dwelling entered by an infuriated and pro-slavery mob; his expensive furniture thrown into the street as fuel for the torch of the black man's foe; and, amid the crackling flame which consumed it, to hear the vile vociferations of his base persecutors, whose only accusation was his defence of the colored man. This noble hearted, Christian philanthropist, who took "joyfully the spoiling of his goods" for the cause of the oppressed, was the chosen victim of Lewis' wrath and violent vituperation; and that too, where he was well known as a most honorable, humane gentleman; and all

for naming facts which were quite generally known already.

Lewis returned to Wilberforce, flushed and swaggering with the idea of making his fortune in this speculation of a law-suit against Mr. Tappan; and to remove all obstacles, he sent a man to me, to say that if I would publish nothing, and would abandon the interests of the colonists, he would give me a handsome sum of money. I soon gave him to understand that he had applied to the wrong person for anything of that kind; and he then laid a plan to accomplish by fraud and perjury, what he had failed to do by bribery.

I have before mentioned the fact of my having taken up a note of twenty-five dollars for Mr. Lewis, on condition that he would soon refund the money. I did it as a favor, and kept the note in my possession, until about a year afterward, when I sued him to recover my just due on the note. We had then began to differ in our public business, which led to other differences in our transaction of both public and private matters relating to the colony. He of course gave bail for his appearance at court, and it ran along for some time until he found he could not bribe me to enter into his interests, and then for the first time, he declared that I had stolen the note! And finally succeeded in getting me indicted before the grand jury!

In this I suppose Lewis and his confederates had two objects: first, to get rid of me; secondly, that they might have a chance to account for my continued hostility, by saying that it arose in consequence of a private quarrel, and not for any true interest I had in their collecting money deceptively.

Lewis appeared so bent on my destruction, that he forgot it was in my power to show how I came by the note. The Court of King's Bench met, but in consequence of the cholera, was adjourned, and of course, the case must lie over until another year.

When the time for the trial drew near, I was, in the midst of my preparations to attend it, counseled and advised by different persons to flee from the country, which I had labored so hard and so conscientiously to benefit, and received in return nothing but detraction and slander. But conscious of my innocence, I declared I would not leave; I knew I had committed no crime; I had violated no law of the land,--and I would do nothing to imply guilt. He who hath formed the heart, knoweth its intent and purpose, and to Him I felt willing to commit my cause. True, the court might convict, imprison, and transport me away from my helpless family of five small children; if so, I was determined they should punish an innocent man. Nevertheless, it was a dark time; I was not only saddened and perplexed, but my spirit was grieved, and I felt like one "wounded in the house of his friends,"--ready to cry out, "had it been an enemy I could have borne it," but to be arraigned, for the _first_ time in my life, as a _criminal_, by one of the very people I had spent my substance to benefit, was extremely trying. Guiltless as I knew myself to be, still, I was aware that many incidents had transpired, which my enemies could and would construe to my disadvantage; moreover, Lewis had money, which he would freely distribute to gain his point right or wrong, and to get me out of his way.

In due time the trial came on, and I was to be tried for _theft_! Lewis had reported all through the settlement that on a certain time I had called at his house, and from a bundle of papers which his wife showed me, I had purloined the note, which had caused me so much trouble. To prove this it was necessary to get his wife to corroborate the statement. This was not an easy matter. Mrs. Lewis, indignant and distressed by her husband's unkindness, had left him and taken up her abode in the family of a hospitable Englishman. After Lewis had been sent out as an agent for the colony, finding himself possessed of sufficient funds to cut a swell, he associated and was made a great deal of, by both ladies and gentlemen in high stations of life; the consequence of which was, he looked now with disdain upon his faithful, but illiterate wife, who like himself had been born a slave, and bred on a Southern plantation; and who had with him escaped from the cruel task-master, enduring with him the hardships and dangers of the flying fugitive.

Now her assistance was necessary to carry forward his plans, and he endeavored in various ways to induce her to return, but in vain. When he sent messengers to inform her how sorry he felt for his past abuse, she said she feared it was only some wicked plot to entice her away from the peaceable home she had found. Lewis saw that he must devise some other method to obtain her evidence. He therefore called on the brother of the Englishman in whose family Mrs. Lewis was, and in a threatening manner told him that he understood his brother was harboring his wife, and that he intended to make him pay dear for it. The brother, to save trouble, said he would assist him to get his wife, and that night conducted Lewis to her residence. No better proof can be given that Mrs. Lewis possessed the true heart of a woman, than that the moment her husband made humble concessions, and promised to love and protect her henceforth, she forgave him all his past infidelity and neglect, and looked with hope to a brighter future. In return Lewis presented her with a note, telling her to take it to a certain person and present it, and he would give her twenty dollars on it. This would, he doubtless thought, leave her in his power.

As Mrs. Lewis could not read, the unsuspecting wife presented the paper all in good faith. The gentleman looked at her sharply, suspiciously,--and then asked her, if she was not aware that she was presenting him a paper completely worthless! The poor woman was mortified and astonished; and instead of returning to her husband, fled to Wilberforce, and called at our house. Knowing how disastrous to me would be her false statement, and ignorant of her state of mind, I asked her if she had come to assist Mr. Lewis by swearing against me. I saw at once, that she had not yet been informed of her husband's design.

"Swear against you, Mr. Steward!" said she. "I know nothing to swear that would injure you; I have always known you as an honest, upright man, and you need not fear my turning against an innocent person, for the benefit of one I know to be guilty. Nor would I have left my place, had I known what I now do." So all help and fear was ended in that quarter.

When at length the appointed morning arrived, I arose early, but with a saddened heart. I looked upon my wife and helpless family, reflecting that possibly this might be the last time we should all assemble around the breakfast table in our hitherto quiet home, and I could scarcely refrain from weeping. I, however, took my leave, and a lad with me, to bring back a message of the result, if the court found sufficient cause to detain me for trial. But when I found that I must be tried, I felt too unhappy to make others so, and kept out of the lad's way. He returned without a message; and I took my seat in the prisoner's box. I had just taken a letter out of the post office, from Rochester, containing recommendations and attestations from the first men in the city, of my good character, which relieved my feelings somewhat: nevertheless, my heart was heavy, and especially when, soon after I took my seat, a trap-door was opened and a murderer was brought up and seated by my side!

Chief Justice Robinson, made his appearance in great pomp--dressed in the English court style-then the crier, in a shrill voice, announced the opening of the court, and finished by exclaiming, "God save the King!" His lordship then called the attention of the jury to the law of the land; particularly to that portion relating to their present duty; and the grand jury presented me to the court, for feloniously taking a certain promissory note from the house of Israel Lewis. The King's Attorney had but one witness, and that was Lewis. He was called to the stand, permitted to relate his story, and retire without any cross-examination on the part of my Attorney; but that gentleman called up three respectable white men, all of whom swore that they would not believe Israel Lewis under oath! Then submitted the case to the jury without remark or comment, and the jury, without leaving their seats, brought in a verdict of "NOT GUILTY." Thus ended my first and last trial for theft! Oh, how my very soul revolted at the thought of being thus accused; but now that I stood justified before God and my fellow-men, I felt relieved and grateful; nor could I feel anything but pity for Lewis, who, like Hainan, had been so industriously engaged in erecting "a gallows fifty cubits high" for me, but found himself dangling upon it He raved like a madman, clutched the arm of the Judge and demanded a new trial, but he shook him off with contempt and indignation, as though he had been a viper. In his wild fury and reckless determination to destroy my character, he had cast a foul stain upon his own, never to be effaced. I had felt bound to preserve my reputation when unjustly assailed, but it had been to me a painful necessity to throw a fellow-being into the unenviable and disgraceful attitude in which Lewis now stood; and yet, he would not, and did not yield the point, notwithstanding his ignominious defeat.

He very soon began to gather his forces for another attack upon me, and followed the same direction for his accusation,--the land purchase.

The reader will recollect without further repetition, that as I could purchase no land of the Canada Company, because of their indignation against Lewis, I was glad to accept of the contract he had made with Mr. Ingersoll, for lot number four in the colony; that I paid the sum demanded, and took his assignment on the back of the contract, and as we then were on good terms, it never occurred to me that a witness was necessary to attest to the transaction. But after his failure to prove me a thief; his next effort was to convict me of forgery! It will be remembered that Lewis after selling out to me, returned the contract to Mr. Ingersoll, and that I had lost by the means, the land, and at least five hundred dollars' worth of improvements. Then I brought a suit against Lewis, to recover the money I had paid him for the contract; and then it was that he asserted and attempted to prove, that I had forged the assignment, and therefore, had no just claim on him for the amount paid. But in this, as in the other case, he met a defeat and made an entire failure. I recovered all that I claimed, which, was only my just due. One would suppose that after so many unsuccessful attempts to ruin me, he would have left me alone,--but not so with Lewis: he had the ambition of a Bonaparte; and doubtless had he possessed the advantages of an education, instead of having been born and bred a slave, he might, like an Alexander or Napoleon, have astonished the world with his deeds of daring. I am, however, no admirer of what the world call "great men,"--one humble, self-sacrificing Christian, like Benjamin Lundy, has far greater claim on my respect and reverence.

Lewis, failing in his second attack, backed up as he had been in all his wicked course, by a friend wearing the sacred garb of a minister of the gospel, cooled off, and it became evident to all, that he was meditating some different mode of warfare. To this

concealed confederate, I must attach great blame, on account of the influence his station and superior learning gave him, not only over Mr. Lewis, but the colonists generally, and which should have been exerted for the good of all, in truth and honesty.

CHAPTER XXVIII.

DESPERATION OF A FUGITIVE SLAVE.

We had as yet received no funds from our foreign agent, N. Paul, and the board of managers had resolved to send a man after him. An Englishman and a white man named Nell, would gladly undertake the mission, leaving his wife and five children among the settlers. Again was I under the necessity of returning to New York, to obtain the funds required to send out Mr. Nell after our agent in England.

The night before I left home, I had a singular dream which I will briefly relate. I dreamed of journeying on a boat to Albany, and of stopping at a house to take tea. Several persons, I thought, were at the table, and as a cup of tea was handed me, I saw a woman slyly drop something into it. I, however, drank the tea, and dreamed that it made me very sick.

I found it difficult to drive from my mind the unpleasant impression this dream had made upon it, but finally succeeded in doing so, attributing it to the many and malicious threatenings which had been made by Lewis and his associates. They had boldly asserted, that "if I went to the States, I would never return alive," and several other threats equally malignant. I, however, started with Mr. Nell for Rochester, where we made an effort to raise money to aid in defraying the expenses of the voyage, and succeeded in collecting about a hundred dollars. From thence we passed on to Albany, where we fell in company with a number of Mr. Paul's friends, who appeared to be terribly indignant, and accused me of coming there to expose their friends,--Paul and Lewis. We had some warm words and unpleasant conversation, after which they left me very unceremoniously, and appeared to be very angry. A short time after, one of them returned, and in the most friendly manner invited me to his house to tea. I was glad of an opportunity to show that I harbored no unpleasant feelings toward them, and immediately accompanied him home. The moment that we were all seated at the table, an unpleasant suspicion flashed through, my mind. The table, the company--all seemed familiar to me, and connected with some unpleasant occurrence which I could not then recall. But when the lady of the house poured out a cup of tea, and another was about to pass it, I heard her whisper, "I intended that for Mr. Steward," my dream for the first time, flashed through my mind, with all the vivid distinctness of a real incident. I endeavored to drive it from my thoughts, and did so. Pshaw! I said to myself; I will not be suspicious nor whimsical, and I swallowed the tea; then took my leave for the steamboat, on our way to New York city.

When we had passed a few miles out of Albany, the boat hove to, and there came on board four men--one of the number a colored man. The white men repaired to their state-rooms, leaving the colored man on deck, after the boat had returned to the channel. He attracted my attention, by his dejected appearance and apparent hopeless despair. He was, I judged, about forty years of age; his clothing coarse and very ragged; and the most friendless, sorrowful looking being I ever saw. He spake to no one, but silently paced the deck; his breast heaving with inaudible sighs; his brow contracted with a most terrible frown; his eyes dreamily fastened on the floor, and he appeared to be considering on some hopeless undertaking, I watched him attentively, as I walked to and fro on the same deck, and could clearly discover that some fearful conflict was taking place in his mind; but as I afterwards repassed him he looked up with a happy, patient smile, that lighted up his whole countenance, which seemed to say plainly, I see a way of escape, and have decided on my course of action. His whole appearance was changed; his heart that before had beat so wildly was quiet now as the broad bosom of the Hudson, and he gazed alter me with a look of calm deliberation, indicative of a settled, but desperate purpose. I walked hastily forward and turned around, when, Oh, my God! what a sight was there! Holding still the dripping knife, with which he had cut his throat! and while his life-blood oozed from the gaping wound and flowed over his tattered garments to the deck, the same exultant smile beamed on his ghastly features!

[Illustration: "I walked hastily forward and turned around, when, Oh, my God! what a sight was there! He still held the dripping knife, with which he had cut his throat."]

The history of the poor, dejected creature was now revealed: he had escaped from his cruel task-master in Maryland; but in the midst of his security and delightful enjoyment, he had been overtaken by the human blood-hound, and returned to his avaricious and tyrannical master, now conducting him back to a life of Slavery, to which he rightly thought death was far preferable.

The horrors of slave life, which he had so long endured, arose in all their hideous deformity in his mind, hence the conflict of feeling which I had observed,--and hence the change in his whole appearance, when he had resolved to endure a momentary pain, and escape a life-long scene of unrequited toil and degradation.

There happened to be on the boat at the time, several companies of citizen soldiers, who, shocked by the awful spectacle, expressed their decided abhorrence of the institution of Slavery, declaring that it was not for such peculiar villainy, that their fathers fought and bled on the battle field. So determined were they in their indignation; so loudly demanded they a cessation of such occurrences on board our boats, and the soil of a free State, that the slaveholders became greatly alarmed, and with all possible dispatch they hurriedly dragged the poor bleeding slave into a closet, and securely locked the door; nor have I ever been able to learn his final doom. Whether the kindly messenger of death released him from the clutches of the man-stealer, or whether he recovered to serve his brutal master, I have never been informed.

After this exciting scene had passed, I began to realize that I was feeling quite ill; an unusual load seemed to oppress my stomach, and by the time we had reached New York city, I was exceedingly distressed. I hastened to a boarding house, kept by a colored woman, who did everything in her power to relieve me; but I grew worse until I thought in reality, I must die. The lady supposed I was dying of cholera, sent to Brooklyn after Mr. Nell; but having previously administered an emetic, I began to feel better; and when I had finally emptied my stomach of its contents, _tea and all_, by vomiting, I felt into a profound sleep, from which I awoke greatly relieved. The kindness of that lady I shall not soon forget. She had a house full of boarders, who would have fled instantly, had they known that, as she supposed, I was suffering from cholera; and instead of sending me to the hospital, as she might have done, she kept all quiet until it was over, doing all she could for my relief and comfort; yet, it was a scene of distress which I hope may never be repeated.

On the following morning, I saw in the city papers, "A Card," inserted by the owner of the poor slave on board the steamboat, informing the public that he was returning South with a fugitive slave, who, when arrested, evinced great willingness to return; who had confessed also, that he had done very wrong in leaving his master, for which he was sorry,--but he supposed that the abolitionists had been tampering with him. That was all! Not a word about his attempt to take his life! Oh no, he merely wished to allay the excitement, that the horrid deed had produced on the minds of those present.

I was indignant at the publication of such a deliberate falsehood, and immediately wrote and published that I too was on board the same boat with the fugitive; that I had witnessed an exhibition of his willingness to return to Slavery, by seeing him cut his throat, and lay on the deck wallowing in his blood; that the scene had so excited the sympathies of the soldiers present, that his owner had been obliged to hurry him out of their sight, &c.

When this statement appeared in the newspapers, it so exasperated the friends of the slaveholder, that I was advised to flee from the city, lest I might be visited with personal violence; but I assured my advisers that it was only the wicked who "flee when no man pursueth, but the righteous are bold as a lion." I therefore commenced the business that brought me to that city. Messrs. Bloss, Nell, and myself, made an effort, and raised between three and four hundred dollars for the purpose of sending Mr. Nell after Rev. N. Paul.

Most of the funds collected, we gave to Mr. Nell, who sailed from New York, and arrived safely in England, just as N. Paul was boarding a vessel to return to New York.

Had Mr. Nell acted honorably, or in accordance with his instructions, he would have returned with the agent; but he remained in England, and for aught I know is there yet. He was sent expressly after Mr. Paul, and when he left that kingdom, Nell's mission was ended. He proved himself less worthy of confidence than the agent, for he _did_ return when sent for, and he did account for the money he had collected, though he retained it all; but Mr. Nell accounted for nothing of the kind; and if he has ever returned, I have not seen him. Mr. N. Paul arrived in New York in the fall of 1834, and remained there through the winter, to the great disappointment and vexation of the colonists. I wrote him concerning our condition and wants, hoping it would induce him to visit us immediately; but he had married while in England, an English lady, who had accompanied aim to New York, where they were now living; nor did he appear to be in any haste about giving an account of himself to the board of managers who had employed him.

CHAPTER XXIX.

A NARROW ESCAPE FROM MY ENEMIES.

During my absence in New York city, Lewis and his confederates were prophesying that I would never trouble them more, and shaking their heads quite ominously at the happy riddance. One day, our hired man entered the house and inquired of my wife, when I was expected home. She told him she did not know, having received no intelligence from me. He assured her that a letter had been received by some one in the colony; that he had seen it, and had heard Mr. Lewis speak of conveying it to her,--but as it

did not come, she gave it up, supposing some mistake had been made. I had, however, written, naming the time when she might expect me; but no letter of mine reached her, during my long absence, for which she could not account. A short time before that specified for my return, a woman, whose husband was an associate of Mr. Lewis, came to my house, and urged my wife "to leave word at the village of London, to have Mr. Steward detained there, should he arrive toward evening, and by no means allow him to start for the colony after dark." My family had so often been alarmed by such warnings, and had so frequently been annoyed by the violent threatenings of Lewis, that they ceased to regard them, and paid little attention, to this one.

I arrived at London on the day I had appointed for my return, but was detained there until a late hour; feeling anxious, however, to get home that night, supposing that I was expected,--I therefore hired a horse to ride the remaining fifteen miles to the settlement.

The road from London to Wilberforce led through a swamp, known as "McConnell's Dismal Swamp," and it was indeed, one of the most dreary places in all that section of country. I am certain that a hundred men might conceal themselves within a rod of the highway, without being discovered.

The horse I had engaged, was a high spirited animal, and to that fact, I doubtless owe my life. The moon shone brightly, and nothing broke the stillness of the night, as I rode onward, but the clatter of my horse's hoofs, and an occasional "bow-wow" of some faithful watch-dog.

When I reached the swamp and entered its darkened recesses, the gloom and stillness was indeed fearful; my horse started at every rustling leaf or crackling brush, until I attempted to pass a dense thicket, when I was started by the sharp crack of a rifle, and a bullet whizzed past me, close to my ear! The frightened horse reared and plunged, and then springing as if for life, he shot off like an arrow, amid the explosion of fire arms discharged at me as I rode away. I lost my balance at first, and came near falling, but recovering it I grasped the rein tightly, while my fiery steed flew over the ground with lightning speed; nor did I succeed in controlling him until he had run two miles, which brought me to my own door.

I found my family well, and very grateful that I had arrived safely after so fearful an encounter.

When morning came I sent a person out to inquire whether any of the settlers were out the night previous, and the report was, "Israel Lewis and two other men were out all night; that they had been seen near the Dismal Swamp;" moreover, Lewis was seen to come in that morning with his boots covered with swamp mud,--these the Rev. Mr. Paul's boys cleaned for him, all of which was evidence that he it was, who had way-laid me with criminal intent.

I afterwards learned, that those three men left the settlement at dusk, for the swamp; that they stationed themselves one rod apart, all on one side of the road, each man with a loaded rifle,--the poorest marksman was to fire first, and if he did not bring me down, probably the second would; but Lewis being the best shot of the three, was to reserve his fire until the last, which they supposed I could not escape. It was quite dark in the thicket, and my spirited horse plunged in every direction so furiously, that they could take no aim at me, until he had started to run, when we were soon beyond their reach.

We had already had so much difficulty in our little colony that we were getting heartily sick of it. I was well aware that Lewis was thirsting for revenge; that he wished to do me a great wrong; and yet I was thankful on his account, as well as on my own, that he had been prevented from imbruing his hands in the blood of a fellow being.

Had he succeeded in taking my life, as he undoubtedly intended to do, he would have been arrested immediately, and most likely punished as a murderer. He had boldly threatened my life, and the colonists were expecting something of the kind to take place. Had I not arrived at the colony, it was known at London that I had started for the settlement that night, and an immediate search would have been instituted; nor could the wicked deed have brought the least peace to the mind of Lewis or his companions,

"No peace of mind does that man know, Who bears a guilty breast; His conscience drives him to and fro, And never lets him rest."

CHAPTER XXX.

DEATH OF B. PAUL, AND RETURN OF HIS BROTHER.

The bold and wicked attempt to take my life, recorded in the preceding chapter, aroused a feeling of indignation in the community against Lewis, and completely destroyed the little influence he had left; moreover, he had now been so extensively published as an impostor, that he could collect no more money on the false pretense of raising it for the benefit of the colony. As soon as his money was gone and his influence destroyed, --many who had been his firmest friends, turned against him, and among this class was the

Rev. Benjamin Paul. He had ever professed the greatest friendship for, and interest in the success of Mr. Lewis. Heretofore, whenever he went to the States he was commissioned by that gentleman's family, to purchase a long list of expensive articles, which the poor colonists were seldom able to buy; and he generally returned to them richly laden with goods, purchased with, money given to the poor, sick, and destitute in the colony.

Mr. B. Paul had ever been a very proud man, but not a very healthy one. He was inclined to pulmonary diseases; but had kept up pretty well, until Lewis was effectually put down, and his own character involved in many of his notorious proceedings, together with the disappointment occasioned by his brother remaining so long in England, when his health failed, and he sank rapidly under accumulating disasters, to the grave.

The Welshmen had partially engaged him to preach for them the ensuing year, but something they had heard of him changed their minds, and they were about appointing a meeting to investigate his conduct, when they were informed of his illness, and concluded to let it pass. His son, with whom he lived, became deranged, and his oldest daughter on whom he was greatly dependent, had been dismissed from school, where she had been for some time engaged in teaching. All these unpleasant circumstances in his sickly state weighed heavily upon his proud heart; and he not only declined in health, but sank into a state of melancholy and remorse for his past course of living. As he lay pining and murmuring on his death bed, I could but reflect how different the scene from that of an apostle of the Lord Jesus Christ, who could exclaim, when about to be offered, "I have fought a good fight, I have finished my course, I have kept the faith; henceforth there is laid up for me a crown of righteousness."

I called to see him as he lay writhing in agony, his sunken eyes gleaming wildly, rolling and tossing from side to side, while great drops of perspiration stood upon his forehead, continually lamenting his misspent time, and the life he had led! He took my hand in his cold, bony fingers, thanking me that I did not so despise him, that I could not come to see him in his sorrow and affliction. Generally, however, when he raved and talked of his wicked life, his family excluded all persons from his room except his attendants.

Pride, which had ever been his besetting sin, displayed itself in his conduct to the last, for he had a lengthy will made, dispensing some sixteen hundred dollars to different individuals, when he must have known that his whole possessions would not amount to half that sum. As I looked upon him I could but reflect on the mysterious ways of Providence. Before me lay a man, who had for years arrayed himself against me, using all his influence as a man and a minister to injure me, by setting Lewis forward in his wickedness; his family living in extravagance and a style far beyond their means, while mine had labored hard and were sometimes destitute, often harassed and perplexed on every side by himself and party. And for what? Because I would not join hands with iniquity, and deeds of darkness. Notwithstanding the contrast, when I heard his bitter lamentations and self-reproaches, I could lift my heart to God, in gratitude for His protecting goodness, which had preserved me an _honest man_. I had often erred no doubt, but it had never been designedly; and never did I value a good conscience more than when standing by the death-bed of Benjamin Paul, who now had passed the Jordan of death; and it is enough to know that his future, whether of joy or woe, will be meted out to him, by a merciful and just God,--nevertheless, his last moments on earth were such as ought to arouse every professed Christian, to redoubled diligence in watchfulness and prayer, lest they fall into temptation,-- lest they determine to become rich, and thereby fall into diverse and hurtful lusts, and pierce themselves through with many sorrows.

Soon after the event above narrated, a law was passed in the Province, allowing each township to elect three commissioners, whose duty it should be, to transact the public business pertaining to the township. Each township should also elect one township clerk, whose business it should be, to hold and keep all moneys, books, and papers belonging to said town; with power to administer oaths, and in fact, he, with the commissioners, were to constitute a board, possessing all the power of a court, in relation to township business.

In our colony, located in the township of Bidulph, the colored people were a large majority of the inhabitants, which gave us the power to elect commissioners from our own settlement, and therefore, three black men where duly chosen, who entered on the duties of their office, while your humble servant, A. Steward, was elected township clerk, with all the responsibility of the office resting upon him and the same power given him as though he had been born in Her Britannic Majesty's dominion, with a face as white as the driven snow. I felt the responsibility of my office, but not more deeply than I did this assurance of entire confidence, and respect shown me by my townsmen, after all the cruel persecutions I had met; after all the accusations of theft, forgery, &c., that vicious person could bring against me.

The Rev. Nathaniel Paul, with his lady, arrived at Wilberforce in the spring of 1835, to the great joy of the colonists, to find that his brother had gone the way of all the earth, and his remains quietly resting on his own premises, where his afflicted family still resided.

In the colony there was a great deal of excitement regarding the course our agent would pursue, and all waited with anxious expectancy to see him enrich the treasury with his long-promised collections.

We had agreed, on sending him forth as an agent for the colony, to give him fifty dollars per month for his services, besides bearing his expenses.

The reverend gentleman, charged, on his return to the colony, the sum specified, for four years, three months and twenty days. We spent several days in auditing his account, with increased fearful forebodings. We found his receipts to be, in the United Kingdoms of Great Britain, one thousand six hundred and eighty-three pounds, nineteen shillings; or, eight thousand and fifteen dollars, eighty cents. His expenditures amounted to one thousand four hundred and three pounds, nineteen shillings; or, seven thousand and nineteen dollars, eighty cents. Then his wages for over four years, at fifty dollars per month, left a balance against the board of several hundred dollars, which we had no funds to cancel, inasmuch as the reverend gentleman had paid us nothing of all he had collected in Europe, nor even paid a farthing toward liquidating the debts incurred for his outfit and expenses.

There was also in Mr. Paul's charge against the board of managers, an item of two hundred dollars, which he had paid to Wm. Loyd Garrison, while that gentleman was also in England; but by whose authority he had paid or given it, it was hard to determine. We gave him no orders to make donations of any kind. To take the liberty to do so, and then to charge it to our poor and suffering colony, seemed hard to bear; still we allowed the charge. Had we, in our straitened and almost destitute circumstances, made a donation of that, to us, large sum of money to Mr. Garrison or any body else, certainly _we_ should, at least, have had the credit of it; and as Mr. Garrison had made no acknowledgment of the receipt, I wrote him on the subject, and his answer will be found, heading our correspondence, in this volume.

Not a dollar did the treasurer ever receive of the Rev. N. Paul, unless we call the donations he had made without our permission, a payment. He did, it is true, award to the board, the sum of two hundred dollars, paid by him to Mr. Garrison, and fifty dollars more given by himself to Mr. Nell, on his departure from England. Not a farthing could we get of him; and in short, as far as the monied interest of the colony was concerned, his mission proved an entire failure. How much good the reverend gentleman may have done in spreading anti-slavery truth, during his stay in Europe, is not for me to say. The English, at that time held slaves; and report speaks well of his labors and endeavors to open the eyes of that nation to the sin of slavery and the injustice of the colonization scheme. It is said that he continually addressed crowded and deeply interested audiences, and that many after hearing him, firmly resolved to exert themselves, until every chain was broken and every bondman freed beneath the waving banner of the British Lion. Perhaps his arduous labors assisted in freeing the West India islands of the hateful curse of Slavery; if so, we shall not so much, regret the losses and severe trials, it was ours to bear at that time.

The indignant and disappointed colonists, however, took no such view of his mission; and knowing as they did, that he had paid not a cent of cash into the treasury, nor liquidated one debt incurred on his account, they became excited well nigh to fury,--so much so, that at one time we found it nearly impossible to restrain them from having recourse to Lynch law. They thought that the reverend gentleman must have large sums of money at his command somewhere--judging from his appearance and mode of living, and that a little wholesome punishment administered to his reverence, by grave Judge Lynch, enthroned upon a "cotton bale," might possibly bring him to terms, and induce him to disgorge some of his ill-gotten wealth, which he so freely lavished upon himself, and was withholding from those to whose wants it had been kindly contributed.

Just, as was their dissatisfaction, I was satisfied by the examination of his accounts, that he had spent nearly all of the money collected for us; his expenses had been considerable; beside, he had fallen in love, during his stay in England, with a white woman, and I suppose it must have required both time and money to woo and win so fine and fair an English lady, said also to possess quite a little sum of money, that is, several thousand dollars, all of which our poor, little suffering colony must pay for,--the reverend gentleman's statement to the contrary notwithstanding.

We succeeded at last, after a tedious effort, in satisfying the minds of the settlers to the extent, that a violent outbreak was no longer to be feared or dreaded. When all was quiet in the colony, I ventured to make my first call on the wife of N. Paul, who was then stopping with the widow of the late Rev. B. Paul, residing some three miles from us.

The houses of the colonists were generally built of logs, hewn on both sides, the spaces chinked with mortar, and the roof constructed of boards. The lower part was generally left in one large room, and when another apartment was desired, it was made by drawing a curtain across it. When we arrived at the residence of Mrs. Paul, we were immediately ushered into the presence of Mrs. Nathaniel Paul, whom we found in an inner apartment, made by drawn curtains, carpeted in an expensive style, where she was seated like a queen in state,--with a veil floating from her head to the floor; a gold chain encircling her neck, and attached to a gold watch in her girdle; her fingers and person sparkling with costly jewelry. Her manners were stiff and formal nor was she handsome, but a tolerably fair looking woman, of about thirty years of age: and this was the wife of our agent for the poor Wilberforce colony!

N. Paul had now settled his business with the colonists, and being about to leave for the States, we appealed to his honor as a man and a Christian, to call at Rochester and pay the seven hundred dollar bank debt, for which he was justly and legally holden, and relieve honorably, those kind gentlemen who had raised the money for him. He well knew the condition of our friend E. Peck, and that the names of some of our colored friends were also attached to the note; all of whom were relying implicitly on his or our honor to pay the obligation. That we had no funds in the treasury he was well aware; also, that all were deeply concerned about that debt. All this he knew; and in answer to our earnest and repeated injunction, he promised most faithfully and solemnly that he would call at Rochester, and take up the note. On those conditions he was allowed to leave the colony, and when parting with me, no more to meet in this life, his last assurance was, that he would cancel that obligation. What then could we think of his word, when we learned soon after that he passed Rochester, without calling, direct to Albany; nor did he ever return, or make any explanation of his conduct; nor give any reason why his promise was not redeemed and the money paid.

He preached in Albany until his health failed, then he was obliged to live the best way he could, and at last to depend on charity.

His disease was dropsy, from which he suffered deeply, being unable to lie down for some time previous to his death. I have been told that his domestic life was far from a peaceable or happy one, and that in poverty, sorrow and affliction, he lingered on a long time, till death at last closed the scene.

CHAPTER XXXI.

MY FAMILY RETURN TO ROCHESTER.

I was now seriously meditating a return to Rochester. My purpose in going to Canada, has already been made known to the reader, as well as some of the disappointments I met, and some of the trials and difficulties I had to encounter.

Now, after laboring, and suffering persecution for about five years, my way was comparatively clear; still I wished to leave the Province and return to the States, in which prospect my family greatly rejoiced. Doubtless most persons in the position I then occupied, would have chosen to remain; but for several reasons, I did not.

Notwithstanding I had been during my youth, a poor, friendless, and illiterate slave, I had, through the mercy of God and the kindness of friends, not only obtained my freedom, but I had by the industry and perseverance of a few years, acquired a tolerable English education, established a profitable business, built for myself a good and extensive business reputation, and had laid the foundation for increasing wealth and entire independence.

Indeed, so far as a competency is concerned, I possessed that when I left Rochester. My house and land was paid for; my store also, and the goods it contained were free from debt; beside, I had several hundred dollars in the bank for future use,--nor do I boast, when I say that the comfort and happiness of myself and family, required no further exertion on my part to better our worldly condition. We were living in one of the best countries on the earth, surrounded by friends,--good and intelligent society, and some of the noblest specimens of Christian philanthropy in the world. My wife and children, had not only been accustomed to the comforts, if not the luxuries of life, but also to associate with persons of refinement and cultivation; and although they had willingly accompanied me to Canada, where they had experienced little less than care, labor and sorrow, it cannot be thought very strange that they should desire to return. We were colored people to be sure, and were too often made to feel the weight of that cruel prejudice, which small minds with a perverted education, know so well how to heap upon the best endeavors of our oppressed race. Yet truth and justice to my friends, compel me to say, that after a short acquaintance, I have usually been treated with all that kindness and confidence, which should exist between man and man.

At my house of entertainment in Canada, it was not uncommon for gentlemen of my former acquaintances, to stop for a friendly chat; merchants, journeying through our settlement, after goods, would frequently call, with their money, watches, and other valuables, carefully concealed about their persons; but when they learned our name, and had become acquainted a little, they would not only freely expose their wealth, but often place all their money and valuables in my hands, for safe keeping; nor was their confidence ever misplaced to my knowledge.

Another thing: when I went to Wilberforce, I supposed that the colonists would purchase the whole township of Bidulph, and pay for it, which might have been done, had they been fortunate enough to put forward better men. Then when we had a sufficient number of inhabitants, we could have sent a member to Parliament, one of our own race, to represent the interests of our colony. In all this we were disappointed. The Canada Company, in their unjust judgment of a whole people, by one dishonest man, had stopped the sale of lands to colored persons, which of course, put an end to the emigration of respectable and intelligent colored men to that place; nor was there any prospect of a favorable change. Moreover, the persecutions which gave rise to the colony, had in a great measure ceased; anti-slavery truth was taking effect on the minds of the people, and God was raising up many a friend for the poor slave, to plead with eloquent speech and tears, the cause of the dumb and down-trodden.

These, with other considerations, influenced me in my decision to leave Canada. As soon, however, as my intentions were made known, I was importuned on all sides, by persons both in and out of the settlement, to remain awhile longer, at least. This will be seen by a reference to the appendix.

After due deliberation, I concluded to send my family to the States, and remain myself, until my year should terminate, for which I had been elected township clerk. In accordance with this determination, I made preparation to take my family to Port Stanley, forty miles distant. But what a contrast was there between our leaving Rochester, five years before, and our removing from the colony! Then, we had five two-horse wagon loads of goods and furniture, and seven in family; now, our possessions were only a few articles, in _a one-horse wagon_, with an addition of two members to our household! The settlers collected about us, to take an affectionate leave of my wife and children; but tears and sobs, prevented an utterance of more than a "God bless you," and a few like expressions. The scene was indeed an affecting one: all the weary days of our labor; all the trials and difficulties we had passed; all the sweet communion we had enjoyed in our religious and social meetings; all the acts of neighborly kindness, seemed now to be indelibly impressed on every memory, and we felt that a mutual regard and friendship had bound us closer to each other, in the endearing bonds of Christian brotherhood-- bonds not to be broken by the adverse scenes incident to frail human life.

Arrived at Port Stanley, we were kindly entertained by a Mr. White, a fugitive slave from Virginia, who owned a snug little farm on the bank of Kettle Creek, and who appeared to be in a good and prosperous condition. Being detained there, waiting for a boat, on which I was anxious to see my family comfortably situated before I left them, I was aroused at an early hour on the second morning of our stay, by a loud rapping at the door; and hearing myself inquired for, I dressed myself immediately, and followed Mr. White into the sitting room, where I saw two strange men, armed with bludgeons! I soon learned, however, that one of them was the under-sheriff, who had come to arrest me for a debt of about forty dollars, and the other armed man had come to assist him, I assured them I was ready to accompany them back to London, which I was obliged to do, a prisoner, leaving my family among comparative strangers. The debt had become due to a man who had worked for us in the building of a saw-mill. I arranged the matter without going to jail, but before I could return to Port Stanley, my family, kindly assisted by Mr. White, had departed for Buffalo. The weather was cold and the lake very rough, but they safely arrived in Rochester, after a journey of three days. During their passage up the lake my oldest daughter took a severe cold, from which she never recovered.

I returned to the colony to attend to the duties of my office, and to close my business with the colony, preparatory to joining my family, who were now settled in Rochester, but in very different circumstances from those in which they had left it. I had deposited quite a sum of money in the Rochester Bank; but our continual expenditures at Wilberforce, in my journeyings for the benefit of the colony, and in the transacting of business pertaining to its interests, had left not one dollar for the support of my family, or to give me another start in business. Nevertheless, I felt willing to submit the case to Him who had known the purity of my intentions, and who had hitherto "led me through scenes dark and drear," believing he would not forsake me now, in this time of need.

Consoling myself with these reflections, I renewed my endeavors to do my best, leaving the event with my God.

CHAPTER XXXII.

THE LAND AGENT AND THE SQUATTER.

I have named, I believe, that all the colored people, who purchased lands of Lewis, could get no deed nor any remuneration for their improvements. This they thought hard and unfair. Some had built a house and barn, cleared land, &c.; but when they wished to pay for their farms, they could get no deed, and were obliged to lose all their labor.

This raised such a general complaint against the land agents, that they finally agreed to pay the squatters for their improvements, if they would leave their farms. An opportunity was soon offered to test their sincerity in this agreement. A shrewd fellow, who had been many years a sailor, named William Smith, had made valuable improvements on land, for which he could get no deed, and then he wished to leave it. His wife, also, died about this time, leaving him with eight children, which determined him to leave the colony, and after providing homes for his children, to return to his former occupation on the high seas; but he also determined not to leave without receiving the pay which the agents had agreed to give for his improvements.

"Oh yes," said they, in answer to his repeated solicitations, "you shall be paid, certainly, certainly; you shall be paid every farthing." But when the appointed day came for the pompous land agents to ride through the settlement, you might see Smith station himself at first one and then another conspicuous place on the road, hoping they would have the magnanimity to stop and pay him, especially, as he had informed them of his destitute and almost desperate condition, with eight young children to maintain, and no means to do so, after giving up to them the farm. Before them as usual rode their body servant, of whom Smith would inquire at what hour the agents might be expected. And most blandly would he be informed of some particular hour, when perhaps, within the next ten minutes, the lordly agent would fly past him, on their foaming steeds, with the speed of a "lightning train." This course they repeated again and again. One day, when all of the land agents rode through the settlement in this manner, Smith followed them on foot over fifty miles. He at last intercepted them, and they promised with the coolest indifference, that on a certain day, not far distant, they would certainly pay him all he claimed, if he would meet them at a certain hotel in London. To this he agreed; and the poor fellow returned to the colony almost exhausted.

His funds were nearly all spent, and he wished to take his children to New York; yet his only hope was in the integrity and honor of the land agents.

On the day appointed, he was at London long before the hour to meet, had arrived. He entered the village with a determined air, and saw the agents just riding up to a hotel,--but not the one they had told him to call at. He, however, waited for no invitation, but entered the hotel and inquired of the servant for his master. He said his master was not there!

"I know he is," said Smith, "and I want to see him."

The servant withdrew, but soon returned to say that his master was engaged and could not see him that day. Smith followed the servant into the hall, calling out to him in the most boisterous manner, demanding to be told the reason _why_ he could not see his master. The noise which Smith purposely made, soon brought into the hall one of the agents, a Mr. Longworth, a short, fat man,--weighing in the neighborhood of three hundred pounds! When he saw Smith, he strutted about, assuring him that this disgraceful uproar was quite uncalled for, and finally putting on a severe look, told him that he could not have anything for his improvements; of course not,-- he really could not expect; certainly not, &c. Smith plainly assured the agent that his "blarney" would avail him nothing; he had come by their own appointment to get his pay, and that he certainly should _have_--if not in the way they themselves agreed upon, he would choose his own method of getting it! Thus saying, he stepped back, threw down his woolly head, and goat fashion, let drive into the fat Englishman's "bread basket!" He sprawled about and soon recovered his standing, but continued to scream and halloo with rage and mortification, more than with pain, until he had brought to the spot landlord, boarders, and servants, to witness the affray; but Smith, nothing daunted, administered two or three more effectual butts with his hard head into the lordly agent, when the subdued and now silent English gentleman, drew from his pocket book, and carefully counted out, every dollar Smith had at first demanded. Smith accepted it pleasantly, thanked him and withdrew, amid the shouts and jeers of the spectators, which the agent was more willing to avoid than he. That was the way the land agent paid the squatter.

It seemed, however, a little too bad, to make a fine English gentleman, feel as "flat" as Longworth appeared to feel; yet it was undoubtedly the only method by which Smith could recover a farthing. The agents, it was supposed, did not design to pay for any improvements; indeed, some very hard and unjust incidents occurred in connection with, that matter, and probably Smith was about the only one, who ever received the full value of his claim.

There was committed about this time, a most shocking murder, in the London district. A farmer who had a respectable family, consisting of a wife and several children, became so addicted to the use of spirituous liquors, that he neglected both his family and farm so much, that his friends felt called upon to request the distiller, who was his near neighbor, to furnish him with no more

intoxicating drink. This, so exasperated the poor, ruined and besotted wretch, that he raved like a madman--such as he undoubtedly was--crazed and infuriated, by the contents of the poisoned cup of liquid damnation, held to his lips by a neighboring distiller; a fellow-being, who for the consideration of a few shillings, could see his neighbor made a brute and his family left in destitution and sorrow. Perhaps, however, he did not anticipate a termination so fearful; yet that is but a poor excuse for one who lives by the sale of rum. When a rumseller gives that to a man, which he knows will "steal away his brains," and make him a maniac, how can he anticipate his future conduct? And who is responsible? Ah, who?

When Severin found he could get no more intoxicating beverage, he in his demoniacal rage, conceived the idea of despatching his whole family, and set about his purpose by first snatching the young babe and casting it into the fire! When the poor wife and mother came shrieking to the rescue of her darling infant, he with one furious blow, laid her a bleeding corpse at his feet! Two other young children he next murdered, and left them mingling their blood with that of their mother's, while he ran furiously after the two older ones, who were endeavoring to escape to a neighbor's for assistance; and overtaking, killed them both! When the miserable wretch had completed his hellish design, he started for his nearest neighbor, named Smith, and told him that there was a black and a white man at his house, murdering his family, requesting him to go to their assistance. Mrs. Smith, believing that Severin designed to murder her husband, insisted on his calling his young men to assist him, which he did; and on arriving at the scene of slaughter, a most horrid spectacle was before them: five dead bodies weltering in blood, aside from that of the innocent babe, whose little form lay roasted and charred, on the fatal and bloody hearthstone of the drunkard! Victims all, of an intoxicated husband and father! When the guilty man saw the mangled remains of his household, he only increased his depravity by trying to make others responsible for the wicked deed,--exclaiming in feigned anguish, "my dear wife! my poor children! I was afraid they would murder you! Oh, my lost family!" &c. Community was soon alarmed; Severin, arrested, tried, convicted, and sentenced to suffer the extreme penalty of the law.

It is sufficient for us to say, that the evidence was clear and conclusive, that he was the only murderer of his family; nor was it doubted that Mrs. Smith's suspicion was correct; yet, with all the array of positive testimony brought against him, he denied the commission of the crime to the last moment of his life! When brought out for execution, he was placed under the gallows, and the rope with its fatal noose adjusted around his neck, when one of the attorneys arose, and with great solemnity, addressed him, in the most impressive manner: "We have done," said he, "all in our power to save your life; but you are justly condemned, and in a few minutes more, will enter the presence of the All-seeing eye of Jehovah; now let me beseech you, in the name of God, to tell the truth, before you die." Severin declared himself innocent of the crime, for which he was about to suffer; but was consoled, he said, with the belief that he should, in a few short moments, meet in blissful re-union his dear, murdered wife and children in heaven, to part no more!

Prayers were read; and during the reading of the Lord's prayer, at the words "Thy will be done," the hardened wretch was launched into eternity.

No room was left to doubt the fact, that Severin with his own hand destroyed the life of his unhappy and abused wife, and also that of his helpless family. Yet in one sense, may we say with the murderer, it was not he who committed the awful and inhuman deed, but boldly and truthfully charge it to man's bitterest foe--Rum! What but the maddening effects of spirituous liquors, could so demoralize, so demonize a man, as to convert the once loving husband and proud father, into a reckless fiend, a heartless savage? Oh, Rum! earth contains not another so fell a foe!

Should any who may read these humble pages, find an effectual warning in the unhappy end of Severin, one which shall induce them to pause in their course, or at once and forever abandon the use of alcoholic drinks, I shall gratefully feel that I have not written this incident in vain.

Before I left Wilberforce, the Rev. S.E. Cornish, made a visit, and preached the Word of Life to the colony, greatly to the satisfaction and comfort of the settlers. After distributing liberally of his abundance, to his poor brethren, he departed for the States, attended by the prayers and blessings of the Wilberforce colonists.

CHAPTER XXXIII.

CHARACTER AND DEATH OF I. LEWIS.

I have spoken in the preceding chapter, of a visit from the Rev. S.E. Cornish, to the colony. He had previously written me, concerning the object of his proposed visit, which was to obtain the depositions of the board of managers, relative to all the money

received through their agents for the colony. He was sent to Canada then, and once afterwards, for and at the expense of A. Tappan, on business pertaining to the law-suit instituted by I. Lewis against that gentleman, for defamation of character. The depositions taken in the colony, with the expense of twice sending an agent to Canada, must have made a round sum for that kind gentleman to pay, merely for telling a truth already known!

Mr. Cornish had also been informed of my intention to leave the colony, and that my family were already gone. He, knowing something concerning the state of things, urged me to remain at least, until his arrival, as will be seen by a reference to his letter in the appendix.

As I look back on those scenes of labor and trial, I find cause for deep humiliation and gratitude to God, for His goodness and gracious protection, over my frail life, through unseen dangers of various kinds, and for his continued favors and unmerited blessings. Many of my fellow men have fallen in death's cold embrace since that time, while my health and life has been mercifully preserved.

Three of the leading characters of the Wilberforce colony are now dead. Rev. Benjamin Paul, lies in the silent grave-yard in Wilberforce, C.W. His brother, Rev. Nathaniel Paul, also sleeps the dreamless sleep of death, and his dust rests in the beautiful cemetery in Albany, N.Y.

Israel Lewis has also finished his earthly career after robbing the poor of their just dues, and persecuting those who endeavored to defend them; after living in extravagance--"faring sumptuously every day,"--he became reduced in circumstances; despised and dishonored, his proud spirit was at last broken. His health gave way; when at length, unattended and alone, he found his way to a hospital in Montreal, where he soon after died, leaving not enough of all his gains to afford him a decent burial!

Oh, what a reward "for all his labor under the sun!" His fame, his wealth, and his law-suits, all have perished with his memory. Poor man!

Israel Lewis was born a slave, raised on a Southern plantation, and subjected to all the cruelties and deprivations of a bondman. His natural abilities were above mediocrity, but having never had the advantages of an education, or the privileges of a society calculated to cultivate and refine his natural aspiring intellect, and to direct his indomitable will in the acquirement of the more imperishable graces of the human heart, he had come to manhood with a determined, selfish disposition, to accomplish whatever gratified his vanity or administered to the wants of his animal nature.

And may we not, with propriety here inquire, whether our common Father, who has declared himself to be "no respecter of persons," has endowed men with enlarged capacities for the attainment of that knowledge and wisdom, so requisite to the elevation of character,--for the express purpose of seeing them made beasts of burden, and their superior faculties prostituted by the sensuality imposed by Slavery, and to be sold as chattels, with impunity? I tell you, nay. The day when Almighty God will avenge the work of his own hands, hasteth greatly! Were it not so, we might rejoice in the ignorance of the poor slaves, and pray that none of them may ever be endowed with a superior intellect to that of the brutes they are made to resemble. Then would the proud spirit no longer chafe, and manhood writhe in the unbroken chain; but, like the ox to the yoke or the horse to the harness, they might submit, without a conscious violation of their dearest and God given rights. But we were speaking of Israel Lewis.

A natural energy and strength of character, he had inherited; a malicious, selfish, and consequently a deceptive disposition, his life as a slave had undoubtedly bestowed upon him. Intellect must have scope, and when nothing is left within its grasp but vice, can we wonder that the slave possessing the most talent, should generally prove the greatest villain.

Uneducated as was Lewis, his quick perception, his ungoverned passions, and his native independence, not only made him a dangerous slave, but an unfaithful and overbearing companion. He, however, took a wife--a slave like himself,--whose devotedness and good sense, cannot be made manifest, more than in her willingness to leave all that was dear to her on earth, and flee from their birth-place, she knew not whither; but confiding in the professed love and protection of her husband, she cheerfully followed him to the dense forest, in search of that freedom, denied them in their native country,--submitting herself gladly to all the hardships and fearful anxieties of a fugitive slave. What to her were horsemen, armed with dirk and rifle! What though the trained and inhuman blood-hound bayed upon their track! Was not he who had sworn a life-long allegiance to her by her side! Should he be killed or retaken, what could she desire, but to be his companion still! Slavery even, bitter as was the cup, might contain for her _one sweet drop_, while connubial love lighted up their rude cabin, and sweetened their daily toil; but the additional anticipation of LIBERTY, to their domestic happiness--oh blessed hope! How it quickened their weary footsteps, and, with fixed eyes upon the star

of the North, they pressed forward through every difficulty, until they finally reached Cincinnati, O. There they lived quietly, and with others, suffered the terrors of the mob, where also he was chosen agent, to seek a more safe and quiet home for his afflicted and outcast countrymen. The office was accepted, and Lewis became the founder of the Wilberforce colony.

The personal appearance of Israel Lewis was prepossessing; his manner and address easy and commanding. To those unacquainted with his private life, his ungoverned passions, and his unprincipled, revengeful disposition, he could appear the gentleman, the philanthropist, and the Christian.

His education was limited; yet he had managed to gather a sufficient knowledge of the sciences to enable him to read and write, together with quite a fund of general information; and then his shrewdness and tact accomplished all the rest. To strangers he could appear a ripe scholar, if left unquestioned. He was a good speaker, and once spake with eloquence and marked effect before the Legislature, assembled in the Senate Chamber, at Albany, N.Y.

Had the childhood of Mr. Lewis been passed under more favorable auspices; had his intellectual faculties been so cultivated as to predominate over his animal propensities, and his towering aspirations directed toward the accomplishment of acts, lofty in their benevolence, noble in their sacrifice, high in their honorable purpose, and great in their purity; I can but believe that his powerful intellect would have achieved the fame of a Lundy, or would have bequeathed to his brethren a memory like that of a Clarkson. Instead, we have found him devoting his energies to the gratification of his avarice, pride, and ambition--characteristics directly opposed to the deportment of the humble Christian, and such as our Heavenly Father has never promised to prosper. How truly has "the wise man" said, "He that is greedy of gain troubleth his own house; but he that hateth gifts shall live." How strikingly has this passage been verified in the course of Lewis! For a few paltry sums of gain, could he consent, not alone to rob the poor, for whom it was kindly given as unto the Lord, but to turn scornfully away from that poor, illiterate, and humble slave wife, whom he had, in their mutual adversity, vowed to cherish in _prosperity_ as well as in all other circumstances through life. That wife, who had borne with him the sorrows of Slavery--the humble choice of a bondman! She, who fled with him anticipating additional happiness in a life of freedom! Poor woman! Disappointment is of an earthly growth, yet God is merciful; notwithstanding we have the same authority as above, for saying that "Every one that is proud in heart is an abomination to the Lord: though hand join in hand, he shall not be unpunished."

In the hands of a righteous Judge we leave him, who, for the wealth that perisheth,--who, for worldly honor and selfish gratification, could barter his honesty and integrity, as "Esau, who sold his birth-right for a mess of pottage."

To me the lesson is an impressive one, and I am thinking it would be well for us all to examine the foundation on which we stand. If based upon the solid and broad foundation of christianity, doing to others in all things as we would they should do to us, sacrificing on all occasions our own ease, and worldly honor, for the benefit of our fellow-men, and the good of our country, then indeed, we need fear no evil; if the winds of adversity howl about our dwelling, we shall find it will stand, being founded on a ROCK. But if we build upon "the sands" of fame or self-aggrandizement, and, like the towering oak, lift our insignificant heads in proud defiance of the coming storm, we may expect that our superstruction will fall! "And great will be the fall of it!"

CHAPTER XXXIV.

MY RETURN TO ROCHESTER.

Having closed my business in Wilberforce, I prepared to leave on the expiration of my term of office as township clerk, which was now near at hand. Notwithstanding, I ever felt a sensation of relief and pleasure, when I thought of returning to my old home and friends in the States, yet as often as I look abroad over the settlement and remember all my glowing hopes,--all my delightful anticipations of a prosperous future for those poor, struggling colonists; when I recollected with what zeal and honest purpose, with what sincerity and sacrifice I had prosecuted my labor among them,--a dark shadow of disappointment would flit across my mind, however welcome it might be. That I had firm and tried friends in the colony, I had never the least reason to doubt, not to suppose their number less after a five years residence with them; but our expectations had not been realized. Our hope of settling a township, to be represented in Parliament by one of our own people, was now forever blasted. I remembered too, that many of the colonists had been unjustly incited against my course; but in the retrospect my heart did not condemn me. Errors many, no doubt I had committed; but I was grateful, when reviewing the whole ground, for a conscience void of offence toward God and man; and I finally took my leave of all, craving the choicest blessings of Heaven to rest upon that infant colony and its interests.

On the nineteenth day of January, 1837, I left Wilberforce, passing through Brantford, Hamilton, Queenston, Lewiston, and from thence to Rochester. During my journey, I could not avoid feeling sad and despondent, as my mind incessantly returned to the review of my mission, upon which I could look with no other decision than that of an entire failure. I had spent my time, wasted my substance for naught, and was now returning to my dependant family,--that, with myself, had been stripped of nearly every means of comfort and support.

What would my Rochester friends think of my conduct? Notwithstanding all my despondency and evil foreboding at that time, I am now well satisfied that my labor was not all in vain, but that some good did result from it.

As I drew near the city, a gloom like thick darkness overshadowed me: I thought of the unfavorable transactions which had occurred between the directors of the colony and my friends in Rochester, and fell to wondering how they would receive me.

On the twenty-third of January, 1837, I finally re-entered the city penniless; but as I soon found, not so friendless as my fears would have it. Among, the first to welcome me back to my old home, was that friend of "blessed memory," Everard Peck, who had been apprised of some of the losses I had met and the trials I had passed through. This gentleman was also one of the first to propose to be one of five men, who should loan me one hundred dollars each, for five years. Through the disinterested kindness of this worthy gentleman, I was in a few days after my arrival, well established in a store of provisions and groceries. The five kind gentlemen, to whom I was so deeply indebted for the loan, were: Everard Peck, George A. Avery, Samuel D. Porter, Levi W. Sibley, and Griffith, Brother & Co.

This noble act of generosity and kindness, on the part of my friends, to furnish me with the means to commence business, especially when their prospect was anything but flattering, regarding my ever being able to refund their well-timed and gracious liberality,--affected me more deeply than all the censure and persecution I had elsewhere received. Their frown and displeasure, I was better prepared to meet than this considerate act of Christian sympathy, which I am not ashamed to say melted me to tears, and I resolved to show my appreciation of their kindness by an industry and diligence in business hitherto unsurpassed.

E. Bardwell, then a merchant on Exchange Street, next laid me under a lasting obligation by offering to sell me goods on credit; others proffered assistance by promising their continual patronage, which was to me the same as cash,--and soon the store I had opened on Main Street, was doing an extensive business. My profits were small to be sure, and I had a heavy rent to pay for my store and dwelling, yet I was making a comfortable living for my family, and laying by something to reimburse the kind friends who had helped me in the time of need, when I found that the health of my family required more of my time and assistance than ever before. My oldest daughter, who, I have before mentioned, having taken a violent cold on Lake Erie, was now confined to her bed. All that could be done to save the life of a darling child--our first born--was done; and if we sometimes went beyond our means, it was a satisfaction to us to see her enjoy some of the comforts of life of which my mission to Canada had deprived her. One physician after another was employed to stay the approach of the destroyer: some said they could cure her, if paid in advance; to all of which I cheerfully acceded, but only to see our beloved sink lower, and patiently pine away.

No one but a parent who has watched the rapid decline of a darling child, and marked with a bursting heart the approaching footsteps of the spoiler, can imagine how powerless we felt at that time. The wealth of the Indias, had we possessed it, would have been freely given, although it would have been unavailing, to shield that loved and gentle form from pain, and we were obliged to look hopelessly on, while our little patient, suffering daughter sank lower and lower every day. In vain were our parental arms outstretched for her protection; from death we could not save her. She had long since ceased to glide about the house, and soothe with her silvery tones all the childish fears of the little ones. Helpless she now lay, burning with fever, and wasting from our sight, "till soft as the dew on the twilight descending," the cold damps of death gathered on her youthful brow. One pleasant morning after passing a restless night, I observed her to gaze earnestly upward, and a moment after I called her name but received no answer.

"Her languishing head was at rest; Its thinkings and achings were o'er; Her quiet, immoveable breast, Was heaved by affliction no more."

On the fifteenth day of April, 1837, she sweetly fell asleep, aged eleven years. Sorrowfully we followed her remains to Mount Hope, where we laid her down to rest until the resurrection morning. Death had now made its first inroad in our family circle, and since then we have laid two other loved ones by her side. We sorrowed, but not without hope.

My business continued to prosper, and I concluded to buy a small variety store, containing some three or four hundred dollars worth of goods on the corner of Main and North Streets, formerly owned by Mr. Snow, but, having two stores on my hands, I did not

make much by the trade.

The first summer after I returned to Rochester, the friends of temperance made a fine celebration, and gave me the privilege of providing the dinner.

I considered it not only a privilege, but an honor, and felt very grateful to the committee who conferred the favor upon me.

The celebration came off on the Fourth of July, and was indeed a splendid affair. The multitude were addressed on the public square, by some of the best speakers in the country. I laid in a large quantity of provisions of every available kind, built a bower, hired waiters, and prepared seats for five hundred to dine; but when the oration was over, and the multitude came to the table, I found that as many more seats were wanted. We, however, accommodated as many as we could, at one dollar each, and all passed off well, to the great satisfaction of all concerned.

When all was over, and the friends learned that I had on hand a large amount of cooked provision, they continued their kindness by purchasing it, thus preventing any loss on my part.

My store on the corner of Main and North Streets, was at the head of the market, and I was enabled to supply both of my stores with country produce on the best possible terms. I kept two clerks at each store, and all seemed prosperous for a time, when from some cause, which I could never understand, my business began to fail. My family had ever lived prudently, and I knew that was not the cause. I thought to better my circumstances by taking a store in the Rochester House, but that proved to be a bad stand for my business, and after one year, I removed to Buffalo Street, opposite the Court House. I ought to say, that as soon as I found that my income was getting less than my expenses, I went to the gentlemen who had loaned me the five hundred dollars, and showed them the true state of my affairs, and they kindly agreed to take fifty per cent., which I paid them.

After locating on Buffalo Street, I took in a partner, named John Lee, a young man, active and industrious, who paid into the firm three hundred dollars, with which we bought goods. With what I had on hand, this raised the joint stock to about a thousand dollars, on which we were making frequent additions, and on which we had an insurance of six hundred dollars. Our business was now more prosperous than at any previous time, and we began to look up with hope and confidence in our final success. One night I returned to my home as usual, leaving Lee in the store. About twelve o'clock, Mr. Morris awoke me with a few loud raps, and the announcement that my store was on fire and a part of my goods in the street! I hastened to the place, where I found, as he had said, what was saved from the fire piled up in the street and the fire extinguished. The building was greatly damaged and the goods they rescued were nearly ruined. Now we were thrown out of business, and the firm was dissolved. With the assistance of W.S. Bishop, a lawyer, we made out the amount of damage, which was readily paid by the agent for the insurance company.

When the Fourth of July came round again, the temperance men resolved on having another demonstration, and as before, I was requested to supply the dinner, which I did, after the same manner as the year previous.

Having been thrown out of business by the fire, I began to examine my pecuniary matters, and found that I was some three or four hundred dollars in debt, which I had no means of paying. True, I had met with a great misfortune, but I felt that to be an honest man I must meet all obligations, whether legally bound to do so or not; yet it was beyond my power at that time, and I finally concluded to leave the city, and try to better my condition by some other business, or at least to clear myself from debt.

CHAPTER XXXV.

BISHOP BROWN--DEATH OF MY DAUGHTER.

I removed with my family to the village of Canandaigua, where I commenced teaching a school for colored children, assisted by my daughter. The school was sustained partly by the liberality of the citizens of the village, and partly by donations from abroad. It was continued two years, and the children made rapid progress while they were under our tuition.

Soon after I left Rochester, I visited New York city, and while there, I joined "The African Methodist Episcopal Conference." Bishop Brown, of Philadelphia, presided over the deliberations of that body, and appeared to be a man of deep piety, as well as apt in business, and was a native of one of the Carolinas. I found a pleasing acquaintance also, with Bishop Walters of Baltimore, Md. He was small in stature; but a powerful speaker, and discharged every duty with "an eye single to the glory of God." He has now gone to give an account of his stewardship, and I pray that "his mantle may fall" upon one as capable of leading our people as he. The conference consisted of some sixty or seventy ministers of the gospel, with these two Bishops at their head. The conference

continued its session ten days. When it was closed, Bishop Brown, with several others, started on a visit to the West. They called at Rochester, and then passed over to Canada, where a conference was to be holden. We arrived, after a pleasant journey, at Hamilton, where the English government have a regiment of black soldiers stationed. It was common, in passing through the streets of Hamilton, to meet every few rods, a colored man in uniform, with a sword at his side, marching about in all the military pomp allowed only to white men in this _free republic_.

All being in readiness, Bishop Brown opened the conference under the authority of Her Britannic Majesty, with great solemnity, which seemed to be felt by the whole assembly. This meeting appeared to me far more interesting than the one we had attended in New York city. The colored people were much more numerous in Hamilton, and in far better circumstances than in New York. It is a hard case to be poor in any large city, but to be both poor and black, as was the condition of the majority of our friends in New York, was indeed a terrible calamity. Every class, no matter how worthless they might be, would be allowed to rent a house in preference to a colored man. The consequence was, our people were crowded back into the most unhealthy alleys, in old dilapidated tenements unfit for human beings to dwell in, and such as could not be disposed of to any other class of people. I am happy to say, however, that a favorable change has taken place in New York, since the time of which I am speaking. Capitalists have noted the good reputation of the colored people as tenants, and have of late erected good dwellings for their accommodation. In Hamilton there was none of that wretchedness and squalid poverty, nor any of that drunken rowdyism so common in Eastern cities, perceivable among the colored people.

Our conference was largely attended by all classes, both black and white, --many of the latter invited the Bishop with his associates to their dwellings to dine, indeed we seldom took a meal at our lodgings, so constantly were we solicited by friends to accompany them home.

We also found many fugitive slaves in that city, many of whom were intelligent mechanics. Some of them took us about the place, showing us the different buildings they were engaged in erecting; quite a number were employed in building a church which appeared to be done in a workman-like manner.

In the meantime our meeting was progressing in a very interesting manner, and when the closing services were commenced, the house was filled to overflowing; still many could not be accommodated. The preaching was solemn and impressive, and it really seemed to me that the glory of God filled the house in which we worshipped; saints rejoiced and shouted "glory to God, in the highest," while sinners trembled and cried out, "what must we do to be saved from the wrath to come." There were several hopeful conversions during the session of conference; and after its close we spent one day in making social calls, and viewing the city and its surroundings.

Burlington Bay makes an excellent harbor for shipping, while Burlington Heights loom up on the north in all their wild and terrific grandeur. Near the bay resides Mr. McNab, so notorious in the history of the Canadian revolution. We went in a large company to look at his beautiful grounds and residence, over which we were politely conducted by his amiable lady.

It was indeed a lordly mansion, with its surroundings laid out in the English style of princely magnificence.

On our return to the city at evening, we were invited to attend a grand soiree, got up in honor of the Bishop's first visit to that place. Several families of colored people combined to provide the splendid entertainment, while one lady presided at the board. She was very beautiful and very dark; but a complete model of grace and elegance, conversing with perfect ease and intelligence with all, both black and white ministers, who surrounded the festive board, as well as our Irish friends, not a few of whom were present. One honest son of the Emerald Isle entered, and not understanding the matter, inquired of his brother "Pat," in rather a loud whisper, "What's all them nagurs setting to that table for?" He, however, soon satisfied himself, and all passed off quietly and in excellent order. At a late hour the company, after a benediction, withdrew and dispersed.

We left Hamilton the following morning, feeling grateful and pleased with our meeting and visit.

It was a beautiful morning; the lake was still, no sound was heard but the rushing waves, as our boat moved on through its placid waters, toward our destination, then called Fort George, now Niagara, where we took stage for the Falls.

At that place of resort, we stopped to view the stupendous work of Almighty God, and listen to the ceaseless thundering of the cataract. How tame appear the works of art, and how insignificant the bearing of proud, puny man, compared with the awful grandeur of that natural curiosity. Yet there, the rich from all parts of the world, do congregate! There you will find the idle, swaggering slaveholder, blustering about in lordly style; boasting of his wealth; betting and gambling; ready to fight, if his slightest

wish is not granted, and lavishing his cash on all who have the least claim upon him. Ah, well can he afford to be liberal,--well can he afford to spend thousands yearly at our Northern watering places; he has plenty of human chattels at home, toiling year after year for his benefit. The little hoe-cake he gives them, takes but a mill of the wealth with which they fill his purse; and should his extravagance lighten it somewhat, he has only to order his brutal overseer to sell--soul and body --some poor creature; perchance a husband, or a wife, or a child, and forward to him the proceeds of the sale. While the wretched slave marches South with a gang, under the lash, he lavishes his funds in extravagant living,--funds gathered from the tears and blood of a helpless human being. Have you, dear reader, ever watched the slaveholder at such places as I have, gliding through the shady groves, or riding in his splendid carriage, dressed in the richest attire, and with no wish ungratified that gold can purchase; and have you ever been guilty of envying him, or of wishing yourself in his condition? If so, think of the curse which rests on him who grinds the face of the poor. Think of his doom in the day of final retribution, when he shall receive at the bar of a righteous Judge, "according to the deeds done in the body," and not according to his wealth and power. Think you, that the prayers, cries, and pleadings of the down-trodden slave that for years have been ascending to the throne of a just God, will never be avenged? Yea, verily, the day of reckoning hastens on apace, and though, "He bear long with them; He will surely avenge them of their adversaries; and that speedily!"

As we pursued our journey to Buffalo, we passed Grand Island, from whence Mordecai Emanuel Noah, some years ago issued a proclamation, calling on the Jews to come and build on that island the "City of Refuge," but which I believe was not responded to, as I saw it remained in its native wildness. He had also a monument erected there at the time, which might be seen from the highway and canal, consisting of a white marble slab, six feet in height, with a suitable inscription upon it, to direct the poor Jew to the City of Refuge.

It was quite conspicuous, but not so magnificent as Gen. Brock's at Queenston Heights.

Arrived at Buffalo, we held several meetings which were very interesting. The colored people were then numerous in that city, and owned one of the largest churches in Western New York. We found a large and prosperous society under the superintendence of Elder Weir, who was a good and talented man, setting a godly example for his flock to imitate. At Buffalo I parted with my pleasant and instructive traveling companion, Bishop Brown, never to meet again on the shores of time. Soon after that pleasant journey he died, and passed from his labor to reward.

Buffalo was then, as now a great place for business. Vessels from all parts of the country crowded the docks, and I then thought that it must in time become one of the largest cities in the Union. After a pleasant visit with our people there, I returned to my home in Canandaigua, where I now began to feel quite settled.

I had been requested to act as agent for the "Anti-Slavery Standard," with which I complied, and leaving my daughter to teach the school, I spent the most of my time in traveling through the country to advance the interests of that paper.

When I returned from Buffalo, she was complaining of poor health, nor was it long before we saw that she was rapidly declining.

This beloved daughter, I had spared no pains nor money to educate and qualify for teaching. I had encountered all the trials and difficulties that every colored man meets, in his exertions to educate his family. I had experienced enough to make me fear that I should not always be able to get my children, into good schools, and therefore determined at whatever cost, to educate this child thoroughly, that she might be able, not only to provide for her own wants, but to teach her younger brothers and sisters, should they be deprived of the advantages of a good school. Well had she rewarded my labor; well had she realized all my fondest hopes and expectations,--but alas! for human foresight and worldly wisdom! The accomplishments and qualifications of a teacher were attained; and proudly we looked for the achievement of our long-contemplated design. How hard to believe that the fell destroyer was upon her track! Her education had qualified her for teaching the sciences; but now I saw, that her faith in the religion of the blessed Christ, was assisting her to teach her own heart a lesson of patience, and quiet submission to the will of Him who holds the issues of life,--and Oh, how difficult for us to learn the solemn lesson, that her wasting form, her gradual sinking away, was hourly setting before us.

Slowly her strength failed; she, however, saw our sorrowful anxiety, and would try to relieve it with a cheerful appearance. One day perhaps she would be able to walk about, which would revive our wavering hope; the next she was prostrate and suffering; then hope died and we were sad! All the spring time she languished; the summer came, the roses bloomed, and the grain began to ripen, but she was wasting away. The orchard yielded its golden harvest; the birds sang merrily on the trees, but a dark shadow had fallen on our hearthstone, and a gloom, like the pall of death, rested on our household. Her place at table was already vacant; no longer she called the little ones about her to hear them repeat their tasks,--all of which admonished us, that soon the bed where

we could now see her, would be vacated; and we should no longer witness her patient smile, and know that she was still with us. The pastor of the Baptist church often called to pray with, and for, the quiet sufferer, which she appreciated very highly, for she was a Christian in every sense of the word.

On the thirtieth day of August, at about eleven o'clock, A.M., without a struggle or a groan, her spirit returned to God who gave it. "Sweetly as babes sleep," she sank into the embrace of death. Happily, triumphantly, had she seen the grim messenger approach; but she knew whom she had believed, and that He was able to keep that which she had committed to Him, unto the resurrection of the just.

She had previously made a confession of her faith in Christ, and had been buried with Him in baptism. A few days after her demise, a long, sad train wound its way to the village church yard, where we deposited the remains of our beloved,--Patience Jane Steward, in the eighteenth year of her age; and then returned to our desolate house, to realize that she had left a world of pain and sorrow, where the fairest rose conceals a thorn, the sweetest cup a bitter drop, for a home where the flowers would never fade, and where pain, sorrow and death will never come. We all felt the solemn and impressive warning, "Be ye also ready, for in such an hour as ye think not, the Son of Man cometh."

As often as I recalled her triumphant, peaceful death, her firm reliance on God, and sweet submission to His will, I could not forbear contrasting her departure with that of Mrs. Helm, whose death I have elsewhere described; and could fervently pray, that I might live the life of the righteous, that my last end might be like hers.

"Behold the Western evening light, It melts in deep'ning gloom; So calmly Christians sink away, Descending to the tomb.

The winds breathe low, the withering leaf Scarce whispers from the tree,-- So gently flows the parting breath, When good folks cease to be.

How beautiful on all the hills, The crimson light is shed; 'Tis like the peace the Christian gives, To mourners round his bed.

How mildly on the wandering cloud, The sunset beam is cast,-- 'Tis like the mem'ry left behind, When loved ones breathe their last.

And now above the dews of night, The yellow star appears; So faith springs in the breast of those, Whose eyes are bathed in tears.

But soon the morning's happier light, Its glory shall restore; And eyelids that are sealed in death, Shall wake to close no more."

CHAPTER XXXVI.

CELEBRATION OF THE FIRST OF AUGUST.

The anti-slavery friends in Canandaigua, had resolved to celebrate the anniversary of the West India emancipation, in suitable manner in that village, for which funds had been unsparingly collected, to defray the expenses of the coming demonstration. The first of August, 1847, fell on Sunday, and our people concluded to devote that day to religious meetings, and the second to their proposed celebration.

Frederick Douglass and Mr. Van Loon, from Poughkeepsie, addressed the people on the Sabbath; and also, on the same evening, a large concourse at the Court House. The day following, there were not less than ten thousand people assembled on the beautiful grounds, belonging to the village Academy-attentive listeners all to the eloquent speeches delivered, and interested spectators of the imposing exercises.

When the vast multitude had convened, the exercises were commenced by the Rev. S.R. Ward, who addressed the throne of grace, after which, Mr. Frederick Douglass delivered an oration, in a style of eloquence which only Mr. Douglass himself can equal, followed by a song from the Geneva choir, and music by Barring's band. Rev. H.H. Garnet, editor of "The National Watchman," next spake, and with marked effect, followed by Messrs. Ward and Douglass; after which, the assemblage formed a procession, and marching to the Canandaigua Hotel, partook of a sumptuous dinner, provided by the proprietor of that house. At six P.M., they again assembled on the square, and were most eloquently addressed by both Ward and Garnet; at the close, they repaired to the ladies' fair, where they found everything in a condition which spake well for the enterprise and industry of our colored sisters. Their articles for sale, were of a choice and considerate selection, and such as sold rapidly and at fair prices. When all was pleasantly over, the ladies contributed twenty dollars toward paying the speakers present.

A most beautiful ode was composed by a warm and generous friend of the cause, which was sung in the grove, in a spirit which produced a thrilling interest. Gladly would I give the reader the whole composition, but its length makes it objectionable for this place, but should they happen to hear a soul-stirring and sublime ode, commencing with,

"Hail! to this day returning; Let all to Heaven aspire," &c.,

they may know it is the one to which I refer.

It was indeed, a glorious day for the colored population generally; and many were the indications of a diminution of that prejudice so prevalent everywhere. Some, who had supposed the colored man so inferior to themselves as to be incapable of making an interesting speech, were convinced of their error, after hearing Messrs. Douglass, Ward and Garnet. Mr. Van Loon was a white clergyman, but a brother indeed; his soul illumined by the pure light of the gospel of peace; his heart full of sympathy for the oppressed; his tongue pleading eloquently for equal rights; and his hands busily engaged in breaking every yoke, resting on the necks of poor humanity. So vigorously, so zealously did he unfold the horrors of the slave system; so truthfully and faithfully did he expose the treachery of northern politicians, and so pathetically did he appeal to the humanity of every professed Christian to speak out boldly for the dumb; to shield, by the holy principles of their religion, the poor, bound, illiterate slave, from Southern cruelty and bondage,--that some of our aristocratic citizens, some of our white savans, repaid his truthful eloquence, by visiting upon him the bitterest maledictions. From the negro, said they, we will accept these statements as true,--from him, they are pertinent and forcible; but when such unpalatable truths are uttered by a white clergyman, we cannot abide, nor will we listen to them!

Let consistency blush, and justice hang down its head! Is not truth the same, whether proclaimed by black or white,--bond or free? Is a falsehood to be pardoned because uttered by a negro? If indeed, as was admitted, the sentiments expressed by our eloquent colored speakers, were _true_, could they be false, when enforced by our intellectual friend, Van Loon? Certainly not; nor would the case have been so decided by these Solons, in any other case: or where the prejudice against color had not warped and blinded their otherwise good judgments. Our speaker, however, performed his duty faithfully, and with great satisfaction to the colored people and their true friends present.

The remains of this fearless champion of liberty; this humble disciple of the despised Nazarene, now sleeps in death, beside the placid waters of the Hudson, while his cherished memory lives in the affections of thousands, who "are ready to perish," and is honored by the pure in heart, wherever his name has been known throughout the land. In the day of final reckoning, think you, he will regret having plead the cause of the bondman? Ah, no; nor can we doubt that to him will be rendered the welcome plaudits: "Well done, good and faithful servant; enter thou into the joy of thy Lord. Thou hast been faithful over a few things; I will make thee a ruler over many things." What then are the few light afflictions endured in this life, when compared with "an eternal weight of glory," awarded to the faithful in that which is to come?

Pleasant, happy, and beneficial, as had been the reunion of old and tried friends, to celebrate a glorious event, yet, like all earthly enjoyments, it was brought to a termination, reluctant as were the friends to separate. Since that day, many have been the demonstrations of grateful joy and gladness on the glorious anniversary of the emancipation of slaves on the West India Islands; and yet, in this boasted "land of the free, and home of the brave;" this famous and declared _free_ Republic,--the American slave still clanks his heavy chain, and wears the galling yoke of the bondman!

CHAPTER XXXVII.

CONCLUSION.

For several years past, anti-slavery truth has been spreading, and in proportion as light has shone upon the "peculiar institution," exposing to the world its crimes and blood,--enstamping upon its frontlet, "THE SUM OF ALL VILLAINIES,"--has the wrath of the impious slaveholder been kindled, and his arm outstretched to strengthen the chain, and press closer the yoke upon the helpless slave, proving conclusively that he loves darkness because his deeds are evil. Nor is this all; he and his apologists will insolently tell you, that _you_ are the guilty ones who have tightened the bonds of the slave, increased his hardships, and blighted his prospect of freedom, by your mistaken kindness, in showing the slaveholder the enormity of his sin! Can this be so? Have we any direct influence over his human chattels? None. Then who is it that rivets the chain and increases the already heavy burden of the crushed slave, but he who has the power to do with him as he wills? He it is, who has been thrust, unwillingly perhaps, into sufficient light to show him his moral corruption, and the character of the sin he is daily committing; he it is, whose avarice and idleness induces to hold fast that which is to him a source of wealth,-- and by no means to allow the same light to fall in upon the

darkened intellect of his slave property, lest his riches "take to themselves wings;" or, as may be more properly said, _take to themselves legs and run away_.

What stronger proof can we ask in favor of our position, than the intolerant spirit of the South? If the system and practice of Slavery is a righteous one, instituted by an All-wise God, certainly no human power-- especially one so impotent and futile as the abolition power is said to be --can ever overthrow it. Why then are the mails so closely examined, and fines imposed on prohibited anti-slavery documents? Is it beyond their power to confute the arguments adduced, or are they fearful that a ray of Northern light may fall on the mind of some listening slave, and direct him to the depot of an under-ground railroad? Judge ye!

What but this same fearful and intolerant spirit,--this over-bearing, boasting spirit, was it, that cowardly attacked a Christian Senator, while seated unsuspectingly at his desk, and felled him to the floor, bleeding and senseless? Was not the villainous blow which fell upon the honored head of CHARLES SUMNER, dealt by the infamous Brooks of South Carolina, aimed at the free speech of the entire North? Was it, think you, a personal enmity that the cowardly scoundrel had toward our worthy Northern Senator, which induced the attack? No, no. Brooks spake for the South, and boldly has it responded--Amen!

It has said through its representatives, that you Northerners are becoming too bold in speaking of our sin, and we will use brute force to repel it-- an argument with which we are familiar. You have told us that we ought not to hold slaves, nor extend slave territory, which will in a measure destroy our slave market, and prove injurious to our slave-breeding population. You have told us we have no right to usurp Kansas,--no right to murder "Free State men," and no right to sustain there, a set of "ruffians" to make Kansas a slave State. You have told us, that we have no right to live on the unrequited toil of our slaves; nor to sell them to the highest bidder; nor spend the proceeds of the sale in idle extravagance. Now know, all ye Northerners, by this cowardly blow on the devoted head of your honored and respected Senator, that we shall no longer permit you to tell us such unpalatable truths, nor allow you the privilege of free speech! We have too long held the balance of power in the government to yield it now; and we give you to know, that whatever we ask of this government, we expect to obtain; nor will we hear any of your objections. When we desire you to turn blood-hound, and hunt for us our fugitive slaves, we expect you to do it, and to see them returned to their masters, without a murmur on your part. Should you object or dare refuse, we shall certainly _cane somebody_, or else do what we have threatened for the last quarter of a century,--"DISSOLVE THE UNION!" Bah!

My house has ever been open to the fugitive slaves; but more particularly when I resided in Rochester, did I have occasion to see and feel the distresses of that class of persons; and it appears to me, that the heart must be of adamant, that can turn coldly away from the pleadings of the poor, frightened, flying fugitive from Southern bondage.

For many years past, I have been a close and interested observer of my race, both free and enslaved. I have observed with great pleasure, the gradual improvement in intelligence and condition of the free colored people of the North. In proportion as prejudice has diminished, they have gradually advanced; nor can I believe that there is any other great impediment in the way to a higher state of improvement. That prejudice against color is not destroyed, we very well know. Its effects may be seen in our down-cast, discouraged, and groveling countrymen, if no where else. Notwithstanding the late diminution, it exists in many of our hotels: some of them would as soon admit the dog from his kennel, at table, as the colored man; nevertheless, he is sought as a waiter; allowed to prepare their choicest dishes, and permitted to serve the white man, who would sneer and scorn to eat beside him. Prejudice is found also, in many of our schools,--even in those to which colored children are admitted; there is so much distinction made by prejudice, that the poor, timid colored children might about as well stay at home, as go to a school where they feel that they are looked upon as inferior, however much they may try to excel.

Nor is that hateful prejudice--so injurious to the soul, and all the best interests of the negro--excluded from the professed church of Christ. Oh, no; we often find it in the house of worship, in all its cruel rigor. Where people assemble to worship a pure and holy God, who can look upon no sin with allowance--the creator of all, both white and black,--and where people professing to walk in the footsteps of the meek and quiet Jesus, who has taught us to esteem others better than ourselves; we often see the lip of some professed saint, curled in scorn at a dusky face, or a scowl of disapprobation if a colored person sits elsewhere than by the door or on the stairs. How long, O Lord, must these things be!

Of my enslaved brethren, nothing so gratifies me, as to hear of their escape from bondage; and since the passage of that iniquitous "Fugitive Slave Bill," I have watched with renewed interest the movements of the fugitives, not only from Slavery direct, but those who have been compelled to flee from the nominally free States, and ask the protection of a monarchial government, to save them from their owners in a land of boasted liberty!

The knowledge I have of the colored men in Canada, their strength and condition, would cause me to tremble for these United States, should a war ever ensue between the English and American governments, which I pray may never occur. These fugitives may be thought to be a class of poor, thriftless, illiterate creatures, like the Southern slaves, but it is not so. They are no longer slaves; many of whom have been many years free men, and a large number were never slaves. They are a hardy, robust class of men; very many of them, men of superior intellect; and men who feel deeply the wrongs they have endured. Driven as they have been from their native land; unprotected by the government under which they were born, and would gladly have died,--they would in all probability, in case of a rupture, take up arms in defense of the government which has protected them and the country of their adoption. England could this day, very readily collect a regiment of stalwart colored men, who, having felt the oppression of our laws, would fight with a will not inferior to that which actuated our revolutionary forefathers.

And what inducement, I ask, have colored men to defend with their lives the United States in any case; and what is there to incite them to deeds of bravery?

Wherever men are called upon to take up arms in defense of a country, there is always a consciousness of approaching wrong and oppression, which arouses their patriotism and incites to deeds of daring. They look abroad over fields of their own cultivation; they behold too, churches, schools, and various institutions, provided by their labor, for generations yet to come; they see their homes, their cherished hearthstone, about to be desecrated, and their wives and little ones, with their aged sires, exposed to the oppression of a ruthless foe. Then, with what cheerful and thrilling enthusiasm, steps forward the husband, the father, the brother, and bares his bosom to the sword,--his head to the storm of the battle-field, in defence of his country's freedom, and the God-given rights of himself and family! But what sees the oppressed negro? He sees a proud and haughty nation, whose Congressmen yearly meet to plot his ruin and perpetuate his bondage! He beholds, it is true, a few Christ-like champions, who rise up with bleeding hearts to defend his cause; but while his eye kindles with grateful emotion, he sees the bludgeon of the South-- already reeking in the blood of freemen--raised and ready to fall with murderous intent upon the head of any one, who, like the illustrious Sumner, dare open his mouth in defence of Freedom, or speak of the wrongs of the poor negro, and the sins of the Southern autocrat!

What inducement then, has the slave to shoulder his musket, when the American drum beats the call, "To Arms! To Arms!" Does he not remember that the wife of his bosom; the children,--"bone of his bone, and flesh of his flesh,"--and the rude hearth-stone they for a time are allowed to surround, belong not to himself, but to the tyrannical master, who claims dominion over all he possesses. As his property then, let the slave owner go forth in defence of his own, and lay down his life if he please; but the poor slave has no home, no family to protect; no country to defend; nor does he care to assist in sustaining a government that instead of offering him protection, drives him from the soil which has been cultivated by his own labor,--to beg at the hand of England's Queen, "life, liberty, and the pursuit of happiness."

Humiliating as it is for an American citizen to name these things, they are nevertheless true; and I would to God that America would arise in her native majesty, and divest herself of the foul stain, which Slavery has cast upon her otherwise pure drapery! Then would she be no longer a hissing and by-word among the nations; but indeed what she professes to be, "the land of the free, and the home of the brave;" an asylum for the oppressed of every clime.

But should the monarchial government of England call for the services of the colored man, freely would his heart's blood be poured out in her defence,--not because he has a particular preference for that form of government; not because he has ceased to love his native country,--but because she has acknowledged his manhood, and given him a home to defend. Beneath the floating banner of the British Lion, he finds inducements to lay down his life, if need be, in defence of his own broad acres, his family and fireside,--all of which were denied him under the Stars and Stripes of his fatherland. But a short time ago, the colored men of Cincinnati, O., were promptly denied the privilege they had solicited, to join with other citizens, in celebrating the anniversary of WASHINGTON'S Birth Day! Oh, no; there must be no colored man in the company, met to honor him who still lives in the heart of every American citizen,--"the father of his country,"--and yet, who scorned not to sleep beside his faithful negro! Nor did the nephew of the illustrious General, despise the command of the black regiment, which Gen. Jackson so proudly commended for their bravery, and bestowed upon it his personal thanks, for their services on the field of battle.

Do the Northern or Free States of the Union think to clear their skirts of the abomination of Slavery, by saying that they own no slaves? Very true. But is the poor, flying fugitive from the house of bondage, safe one moment within your borders? Will he be welcomed to your homes, your tables, your firesides? Will your clergymen bid you clothe and feed him, or give him a cup of cold water, in the name of a disciple of that holy Christ, who has said,--"inasmuch as ye have done it unto one of the least of these little ones, ye have done it unto me?"--Or will your own miserable Fugitive Slave Law, close the mouth of your clergy; crush down the

rising benevolence of your heart; and convert you into a human blood-hound, to hunt down the panting fugitive, and return him to the hell of Slavery? Oh, my God!--the fact is too horrible to acknowledge, and yet it is a stubborn one. Not on one foot of land under the broad folds of Columbia's banner, can the slave say, "I am free!" Hungry, naked, and forlorn, he must flee onward; nor stop short of the outstretched arms of an English Queen. Yet, thanks be to our Heavenly Father, that all have not bowed the knee to the Southern autocrat or slave power. A few noble souls, thank God, remain, who, in defiance of iniquitous laws, throw open wide their doors to the trembling, fleeing bondman, whose purses are freely emptied to supply his wants, and help him on in his flight to the British dominion. But can these out-gushings of a benevolent heart--the purest impulses of a noble nature--be permitted to flow out spontaneously, in open daylight? Alas, no! You must be quiet; make no noise, lest an United States' Marshal wrest from you the object of your Christian sympathy, and impose on you a heavy fine, for your daring to do to another as you would he should do to you.

Is not the necessity of an "_under ground railroad_," a disgrace to the laws of any country? Certainly it is; yet I thank God, that it does afford a means of escape to many, and I pray that the blessings of Heaven may ever rest upon those who willingly superintend its interests. Oh, my country! When will thy laws, just and equal, supersede this humiliating necessity!

Is my reader about to throw the blame of our nation's wrong on England, and accuse her of first tolerating Slavery? We admit it; but did she not repent of the evil she had done, and speedily break every yoke, and let the oppressed go free? Certainly; no slave now breathes in England's atmosphere. But, say you, her white poor are slaves to the aristocracy, from which sentiment I beg leave to differ. Oppressed they may be, and doubtless are, as the poor are apt to be in any and every country; but they are not sold in the market, to the highest bidder, like beasts of burden, as are the American slaves. No Englishman, however poor, destitute, or degraded he may be, but owns himself, his wife and children; nor does he fear that they be sold and torn from his embrace, while he is laboring for their support. Poverty, my friend, does not comprise the bitterness of Slavery, no more than "one swallow makes a summer,"--nor does it consist solely in ignorance and degradation. Its bitterness arises from a consciousness of wrong; a sense of the violation of every right God has given to man, and the uncertainty of his future, over which he has no control.

If the American people flatter themselves with the idea of getting rid of the hated negro race, by colonizing them on the sickly soil of Liberia, or any other country, they will surely find themselves mistaken. They are Americans; allied to this country by birth and by misfortune; and here will they remain,--not always as now, oppressed and degraded,--for all who have any interest in the matter, well know that the free colored people, are rapidly advancing in intelligence, and improving their condition in every respect. Men of learning and genius, are now found among those with fleecy locks, and good mechanics with dusky complexion.

This marked improvement in the condition and rapid advancement in intelligence among our people, seems to have alarmed the colonizationists, and made them fearful that those very down-trodden slaves, who have for years labored for nought; whose blood and tears have fertilized the Southern soil, may, perchance, become their equals in intelligence, and take vengeance on their oppressors for the wrongs done them; and lest they should do so, they would gladly remove them to some far-off country.

Yet here, in North America, will the colored race remain, and ere long in my opinion, become a great people, equal with the proud Anglo-Saxon in all things. The African has once been a powerful nation, before Christian Englishmen invaded her coasts with rum, and incited her chiefs to war, by purchasing with gaudy, but worthless trinkets, her conquered captives; and we have every reason to believe, that though her glory as a nation has departed, that her sons will yet be acknowledged free men by the white population of this country.

There have been black generals in the world before Napoleon was born, and there may be again; and to-day, notwithstanding all the prejudice against color, that everywhere exists in this guilty nation, there are men of talent among us, inferior to none on the earth; nor are their numbers few, though rapidly increasing.

Well may the South arouse herself, form societies, replenish its treasury with a tax imposed on the free colored people, to defray the expense of sending manumitted slaves to Liberia!

Listen a moment to the cant of the colonizationist. Hear him talk of the duty he owes to Africa, and how happy, how intelligent, how prosperous everything is in Liberia. But when that delightful country asks to be taken into fellowship with the United States, and to have her independence recognized--ah, then he lifts his hands in horror and begs to be excused from so close a relation.

This is all cant, in my humble opinion; and when I see men so anxious to send the negro out of their sight, I feel quite certain that they are conscious of having deeply wronged him, and think to remove him, to atone for their guilty consciences. Would they refuse

to acknowledge the independence of Liberia, if their interest in the colored people was genuine, especially when several other nations had done so? Oh, no. But that is not "_the rub_." How could one of our lordly nabobs of the South, sit in Congress with perhaps one of his own manumitted slaves as a representative from Liberia or Hayti! He would die of mortification. Very well then; but let him talk no more of sending colored men to that country to make them free men.

The colored people generally, I am happy to say, have a right conception of the colonization plan, and will never be induced to go to Africa, unless they go as missionaries to the heathen tribes, who certainly should have the gospel preached to them. Some, from a sense of duty, may go as teachers,--which is all well enough,--but certain it is, that no amount of prejudice or abuse, will ever induce the colored race to leave this country. Long have they been oppressed; but they are rising-coming up to an elevated standard, and are fast gathering strength and courage, for the great and coming conflict with their haughty oppressors.

That there must be ere long, a sharp contest between the friends of Freedom and the Southern oligarchy, I can no longer doubt.

When our worthy ministers of the gospel, are sent back to us from the South, clothed with a coat of tar and feathers; when our best and most sacrificing philanthropists are thrown into Southern dungeons; when our laboring men are shot down by haughty and idle Southern aristocrats, in the hotels of their employers, and under the very eye of Congress; when the press is muzzled, and every editor, who has the manliness to speak in defence of Freedom, and the wickedness of the slaveholder, is caned or otherwise insulted by some insignificant Southern bully; and when at last, our Mr. SUMNER is attacked from behind, by a Southern, cowardly scoundrel, and felled senseless on the floor of the Senate chamber, for his defence of Liberty,--then, indeed, may Northern men look about them! Well may they be aroused by the insolence and tyranny of the South!

And for what _is_ all this? Do not our Southern men know, that if light and truth are permitted to reach the minds of the people, that Kansas will be lost to them as slave territory, wherein the Southern slave-breeder can dispose of his own flesh to the highest bidder! Hear them talk as they do, in their pious moments, with upturned faces, in solemn mockery, of returning the negro to his _native_ Africa! How many pure Africans, think you, can be found in the whole slave population of the South, to say nothing of their nativity? Native Africa, indeed! Who does not know, that in three-fourths of the colored race, there runs the blood of the white master,--the breeder of his own chattels! Think you, that a righteous God will fail to judge a nation for such flagrant sins? Nay, verily. If the All-wise God, who has created of one blood all nations of the earth, has designed their blood to commingle until that of the African is absorbed in that of the European,--then is it right, and amalgamation of all the different races should be universally practiced and approved. If it be right for the Southern slaveholder, to cruelly enforce the mixture of the races, to gratify his lust, and swell the enormity of his gains, certainly it cannot be wrong to amalgamate from choice and affection. Let us ask then, why did our Omnipotent Creator make the marked distinction? Certainly not for the purpose that one race might enslave and triumph over another; but evidently, that each in his own proper sphere might glorify God, to whom their respective bodies and spirits belong. Why, indeed, was the black man created, if not to fulfil his destiny _as a negro_, to the glory of God?

Suffer me then to exhort you, my countrymen, to cease looking to the white man for example and imitation. Stand boldly up in your own national characteristics, and show by your perseverance and industry, your honor and purity, that you are men, colored men, but of no inferior quality. The greatest lack I see among you, is unity of action, pardonable, to be sure, in the eyes of those who have seen your oppression and limited advantages; but now that many of you have resolved to gain your rights or die in the struggle, let me entreat you to band yourselves together in one indissoluble bond of brotherhood, to stand shoulder to shoulder in the coming conflict, and let every blow of yours tell for Freedom and the elevation of your race throughout the land. Speak boldly out, for the dumb and enslaved of your unfortunate countrymen, regardless of the frowns and sneers of the haughty tyrants, who may dare lift their puny arm, to frustrate the design of the Almighty, in preserving you an unmixed and powerful race on the earth.

While I would not that you depend on any human agency, save your own unyielding exertion, in the elevation of our race; still, I would not have you unmindful of, nor ungrateful for, the noble exertions of those kind white friends, who have plead the cause of the bondman, and have done all in their power to aid you, for which, may the God of the oppressed abundantly bless them.

Let your attention be given to the careful training and education of the rising generation, that they may be useful, and justly command the respect of their fellow-men. Labor for a competency, but give not your whole attention to amassing the wealth that perishes; but seek to lay up for yourselves "treasures where moth doth not corrupt, nor thieves break through and steal."

Suppose not, my brethren, that your task is a light one, or one that can be performed without years of patient toil and unyielding perseverance. Our oppressors are not very ready to credit our exertion,--too often forgetting the effects of our long degradation, and vainly expecting to see us arise at once, to the highest standard of elevation, able to cope successfully with those who have

known no such discouragements or disadvantages, as has been our lot to bear.

These and many other obstacles must be bravely met, and assiduously removed,--remembering that Slavery has robbed some of us, and prejudice many others, of that perseverance so necessary to the accomplishment of any enterprize; but in the elevation of ourselves and race, let us never falter and grow weary, until we have reached the elevated station God designed us to occupy, and have fitted the rising generation to fill and improve it after our earthly course is finished and we leave to them the stage of action.

Allow me, however, to entreat, that no success which may attend your determined efforts; no position which you may attain,--may ever so occupy your mind, as to cause you to forget for one moment, the afflictions of your countrymen, or to cease to remember the groaning millions in bonds, until every slave shall triumphantly chant the song of deliverance from Slavery's dark prison house.

Bear with me, my dear brethren, while I claim a friend's license, to say, that I would not that you place implicit confidence in any of the political organizations of the present time; but remember that the majority of those parties are diligently laboring for their own interest. Look you then to yours; are you less capable of securing your rights than they? Never was there a time when indolence and supineness among us, would be so unpardonable as now, nor when so much depended on our active and judicious exertions.

Let us not forget, that in the past, we could and did truthfully complain, that we had no helper,--bound and crushed beneath an overwhelming weight of prejudice and ignorance, we lay helpless at the feet of our political spoilers. A favorable change has since been effected in the public sentiment; and now that we see thousands who are willing to aid us, and as many more who will not hinder our labor,--shall we fold our hands in idleness?--or shall we renew our energies, in the cause of freedom and of our own advancement? Although we may not implicitly rely upon the political exertion of others, let us not fear to co-operate with the friends of liberty everywhere, as far as a good conscience will permit, and our limited privileges will allow, by our determined zeal for the right, make our influence felt in the nation. See what wrong and oppression our white brethren have met in Kansas, from the slave power; and let their noble deeds of patriotism; their liberal sacrifices for freedom, be not only our example, but an incentive to do our duty. Have they more at stake in that mighty struggle than we, that they should leave their homes of refinement and comfort, take their lives in their hands and bravely contend for their rights, surrounded by scenes of blood and carnage? Certainly not. No people on the earth can have greater incentives to arouse them to action, than the colored people of this country now have; I trust therefore, that our future independence and prosperity, will suffer nothing from the inactivity of our race.

Some may entertain the belief that the African slave trade is entirely abandoned. I think not. Often are seen strange, suspicious looking vessels, lying along the African coast, for no other purpose than that of kidnapping the poor, ignorant natives. Stealthily the slave-trader lands his wicked crew, in the vicinity of some negro village or cluster of huts, and when a favorable opportunity occurs, he and his men rush upon the frightened African, burn their huts, and amid the shrieks of the captives, and the groans of the helpless and aged, who have been trampled down in their rude haste to secure the young and able-bodied natives, bear them to the vessel, where they are stowed away in the hold of the ship, which bears them to Christian (?) America, where they are sold as slaves.

Some years ago, a woman engaged in washing clothes, near the sea coast, had a lad with her to take care of her two younger children--one a young babe--while she was at work. They wandered away a short distance, and while amusing themselves under some bushes, four men, to them strange looking creatures, with white faces, surrounded them; and when the lad attempted to run away, they threw the infant he held in his arms, on the ground, and seizing the other two children, bore them screaming with fear, to the ship. Frantic and inconsolable, they were borne to the American slave market, where they were sold to a Virginia planter, for whom they labored sorrowfully and in tears, until old age deprived them of farther exertion, when they were turned out, like an old horse, to die; and did die destitute and uncared for, in their aged infirmity, after a long life of unrequited toil. That lad, stolen from Africa's coast, was my grand-father.

It is not, however, necessary for us to look beyond our own country, to find all the horrors of the slave traffic! A tour through the Southern States will prove sufficient to satisfy any one of that fact; nor will they travel over one of them, before--if they have a heart of flesh--they will feel oppressed by the cruel outrage, daily inflicted on their fellow-beings. The tourist need not turn aside to seek evidences: he will very readily observe the red flag of the auctioneer floating over the slave pen, on which he may read in large letters, waving in the pure air of heaven, "SLAVES, HORSES, AND OTHER CATTLE, _in lots to suit purchasers!_" He may halt a moment, and look at the multitude, collecting under the folds of that infamous banner, where will be found a few gentlemanly appearing slave holding planters, superbly mounted, and perhaps with their servants in waiting; but the larger number he will find to be drunken, coarse, brutal looking men, swaggering about in the capacity of slave-traders.

Let him enter the low, dingy, filthy building, occupied by human merchandize, and he will there behold husbands and wives, parents and children, about to be sold, and perhaps separated forever! See the trader, as he examines with inhuman indifference the bones and sinews, the teeth and joints of the _articles_ on hand, even of females, and hear him make inquiries concerning her capabilities, that would make a savage blush! And see the miserable woman lift her red and swollen eyes to the face of the heartless trader, and the next moment cast a despairing glance over the motley crowd, in search of a compassionate look--a pitying eye. Should she see one countenance wearing a kind, humane expression, it will most likely bring her frantically to his feet, where, kneeling, with uplifted hands, she pleads: "Oh, Massa, do buy me! Do buy me and little Sam! He be all of the chil'ens I got left! O, Lord! O, Lord! Do, Massa, buy me, and this one baby! Oh, do Massa!" But the weight of the cow-hide drives her to the auction block, where in mock solemnity she is represented as "an article of excellent breed, a good cook, a good seamstress, and withal a good Christian, a ra'al genewine lamb of the flock!"--and then she is struck off to the highest bidder, who declares that he "won't have the young'un any how, 'cause he's gwine to drive her down to Lousianny."

He may see, too, the wild, despairing look of some frightened young slave girl, passing under the lustful gaze of some lordly libertine, who declares himself "in search of a fancy article for his own use!"

One after another is taken from the block, until all are disposed of, amid the agonized wail of heartbroken wives and mothers, husbands and fathers, and the piercing screams of helpless children, torn from a parent's embrace, to be consigned to the care of strangers.

Nor need I inform our traveler of the inhuman method generally approved, in hunting with trained blood-hounds, kept and advertised for the purpose of recapturing any poor slave who may attempt to escape from this cruel bondage. He may perchance, come across the mangled and lifeless body of some fugitive, which has just been run down and torn in pieces by the dogs of the hunter! Should he stop a few moments, he will soon see a hole dug in the ground, and the remains of the slave pitched into it, covered sufficiently to hide the unsightly mass from view, and there will be an end of the whole matter! "Shall I not visit for these things? saith the Lord; and shall not my soul be avenged on such a nation as this?"

In giving to the public this unvarnished, but truthful narrative, of some of the occurrences of my humble and uneventful life, I have not been influenced by a vain desire for notoriety, but by a willingness to gratify a just and honorable request, repeatedly made by numerous and respected friends, to learn the truth concerning my connection with the Wilberforce colony; the events which there transpired during my stay, and the cause of my losing a hard-earned property. Regarding the affairs of the colony, I have, therefore, endeavored to be particular,--believing that duty to myself and brethren, required me to give them the within information; but nothing have I set down in malice. Much more might have been said relative to some of the leading characters in that settlement, had I not been fearful of its assuming the character of a personal enmity or retaliation. He who knows and will judge the actions of men, will bear me witness, that I have cherished no such feelings toward any of those who then lived, but now sleep in death.

In justification, however, of my statements regarding the character of Mr. Lewis, I will call the attention of the reader to some of the many letters received from good and eminent men, to show that I was not alone in the low estimate of his virtues. Gladly I leave that unpleasant subject, hoping that nothing in our past history will serve to becloud the bright future beginning to dawn on the prospects of our disfranchised and oppressed countrymen.

CORRESPONDENCE.

LETTER FROM A. STEWARD TO WM. L. GARRISON.

MR. GARRISON,

Dear Sir:--In a recent examination of the business transactions between the Board of Managers of the Wilberforce Colony, and their agent Rev. N. Paul, I find a charge made by him, and allowed by the board, of the sum of two hundred dollars, which he paid to yourself. Finding no receipt or acknowledgment from you, I write to ask you to favor me with one, or an explanation of the facts in the case, either of which will greatly oblige me, as I design to make it public. Truly Yours, &c.,

A. STEWARD.

Canandaigua, N.Y., May, 1856.

* * * * *

MR. GARRISON'S REPLY TO A. STEWARD.

DEAR SIR:

You state that Rev. N. Paul, as agent for the Wilberforce Settlement, U.C., in rendering his accounts on his return from England, charged the Board of Managers with the sum of two hundred dollars, paid by him to me while in England; that said sum was allowed by the board; adding that you do not recollect of my acknowledging or giving credit to the Settlement for it.

In reply, I can only assure you that there must be a mistake in regard to this item. I borrowed no money, nor had I any occasion to ask a loan of my friend Paul, my expenses being defrayed by funds contributed by friends in this country; nor could I with propriety receive, nor he give me any part of the money contributed for the benefit of the Wilberforce Settlement; hence, a loan or gift from him, could have been nothing more than a personal matter between ourselves. Moreover, had he at that time or any other, given me in good faith the sum named as belonging to the Settlement, (believing that as we were laboring together, for the interest of one common cause, the board would not hesitate to allow it,) he would certainly have demanded a receipt, which it would have pleased me to give, of course, that he might satisfy the board that their liberality had been disbursed according to their wishes, or his judgment. But receiving no money from your agent, will be a sufficient reason for not acknowledging it, or giving due credit to the Settlement.

I can account for this charge on his part, in no way, except that as he was with me a part of the time I was in London, and we traveled together a part of the time, during which, he ably and effectively assisted me in exposing that most iniquitous combination, "The American Colonization Society,"--he charged to me, (that is, to my mission) sundry items of expense which he undoubtedly believed justly incurred by his helping me to open the eyes of British philanthropists to the real design of that society; and I shall ever remember with gratitude, his heartiness and zeal in the cause and in my behalf. I owe much to the success that so signally crowned my mission, to his presence, testimony, and eloquent denunciation of the colonization scheme. I, however, received no money from him, and can but think that the above explanation was the occasion of his making the charge, and which I trust will leave on his memory, no intentional [final word missing from text].

* * * * *

FROM MR. BAKER TO A. STEWARD.

MR. A. STEWARD,

Dear Sir:--Israel Lewis, the former agent of your Settlement, last spring represented to me the suffering condition of your poor, and requested that I should forward some goods, for which I should be paid; I did so, and sent goods to the amount of one hundred thirty-six dollars and ninety-eight cents. The goods were sold at cost.

I am also endorsed on a note for two hundred thirteen dollars and ten cents, which falls due 24th of this month, and which I shall have to pay. This note was given by Lewis for the purpose of raising money to fit out Mr. Paul, on his mission to England. I was promised that the money should be here to meet it.

I have heard nothing from Lewis or this business since, and as I understand you are the agent, I must look to you to make provision to meet the note, and pay for the goods. Good faith requires that all contracts by your agency be fulfilled.

Yours, Respectfully,

CORNAL BAKER.

New York City, Dec., 1833.

* * * * *

FROM MR. L.A. SPALDING TO A. STEWARD

DEAR FRIEND:

In August last, Israel Lewis, accompanied by Rev. Nathaniel Paul called upon me and exhibited a power of attorney, signed by you as president of the trustees of the colony, authorizing Lewis to take loans, &c., for the benefit of the colony.

Feeling a deep interest in the progress of the colony, I agreed to become security with E. Peck, at the Bank of Rochester, for the payment of seven hundred dollars, which soon was raised by Lewis on the note, for the benefit of the colony. I was in hopes to have seen you. E. Peck and myself, both are willing to aid you in your noble enterprise,--and may others feel the same disposition. But as we have families and friends, who look to us for support and protection, it is proper that we should have your personal pledge to save us from embarrassment.

We know your character _well_, and we have also great confidence in Israel Lewis, and the others engaged with you,--but none of them are so thoroughly known to us as yourself.

Our asking for your personal pledge, does not arise from any fears that the note will not be paid; but as it was signed to aid you, we think it proper that you should respond by guaranteeing that we shall not be injured.

I accordingly copy the note in question, and write a guarantee which I wish you to sign and hand to my brother.

I feel much anxiety in regard to your progress; in your forming schools; religious and temperance societies; and in your taking every measure to elevate the unfortunate colored man who may go to your colony for protection and improvement.

Very Respectfully Yours,

LYMAN A. SPALDING.

AUSTIN STEWARD.

Lockport, N.Y. 1831.

* * * * *

FROM THE CONVENTIONAL BOARD, PHILADELPHIA, PA., TO A. STEWARD.

MR. AUSTIN STEWARD, Wilberforce, U.C.,

Esteemed Friend:--I am charged by the conventional board, to inform you that at the last session of the general convention, you was duly elected their _General Corresponding Agent_, for the Wilberforce Settlement and parts adjacent. Respectfully and in an official capacity, would I ask you to accept the appointment.

And in pursuance of the said appointment, the board would be happy to have at least a monthly correspondence from you, on all such matters as may, in your opinion, be thought conducive to the prosperity of the settlement, the elevation and future happiness of the free people of color.

In particular, we would wish you to give as accurate an account as possible, of the number of settlers; the number of acres as purchased; at what price; what number are improved and under culture; what number of houses or tenements are in the Settlement, &c., &c.

What are your present prospects in regard to crops; your political advantages or disadvantages.

We would also respectfully ask you to inform us, what number of settlers might emigrate there each year, without injuring the Settlement. Also, what kind of machines you most need; also, what are the terms for which laborers are contracted for and how paid.

The board have been thus particular, because they rely with full confidence on your _patriotism_ and capability, which have been unanimously assigned to you.

You will perceive our object is, to contribute, as far as lays in our power, pecuniary_ aid, and assist in securing you such _agricultural_ and _mechanical_ emigrants as, in your opinion, the Settlement may need; and in all our recommendations to you, we shall endeavor to have an eye to character, knowing full well that by that alone you must _stand_ or _fall_.

We have been informed here by a letter (purporting to be written by a Mr. Stover), that the Canada Company actually refuses to sell land to colored persons; and that they are anxious to buy out the colored settlers at Wilberforce.

Be pleased to inform me if that be a fact, with its particulars; and if there be any disadvantages in purchasing land by colored emigrants.

The board would be happy to know if you have had any news from your agent in England. If any, what are his prospects?

You will please be particular and candid in stating your wants (as well as disadvantages) to us, as we will do our utmost to satisfy them, as well as promote the happiness of the settlers, and the prosperity of the Settlement.

Be pleased to answer as soon as possible, for we as brothers in common, feel deeply interested.

With sentiments of sincere friendship,

I remain, yours,

JUNIUS C. MORRELL.

A true copy from the record.

* * * * *

RESOLUTIONS PASSED BY THE BOARD OF MANAGERS OF THE WILBERFORCE COLONY.

At a meeting of the Board of Managers, held September 30th, 1831, to call the Agents to an account:

Resolved, That the Report of N. Paul be accepted, and unanimously agreed to.

At a meeting of the Board of Directors, all the members present, March 18th, 1832:

Resolved, That we disapprove of the conduct of Israel Lewis, in his being absent so long, and also his not communicating with the Board of Directors, and not informing them from time to time, how he is prosecuting his agency.

Resolved, That the chairman of this board be instructed to write to said Lewis, to return home, and lay before this board his doings.

At a meeting of the Board, held April 1st, 1832, all the members and Israel Lewis present with them, he made the following Report, and resigned his office as agent, which was accepted:

Lewis said that seven hundred dollars was all that he had collected. That he paid one hundred and fifty dollars for board in New York, thirty-five dollars for clothes, and two hundred dollars to N. Paul, as an out-fit for England.

* * * * *

CIRCULAR.

THE BOARD OF MANAGERS FOR THE COLONY,

To the Christians and Philanthropists in the United States:

We, the undersigned inhabitants and Board of Managers for the Colony of Wilberforce, beg leave to state that the frost cut off the crops in this part of the country last year, and some of the colonists are in great need of assistance. And we flatter ourselves that when the peculiar circumstances of this infant Settlement are duly considered, this appeal, to a generous and discriminating public, will not be made in vain.

The board are sensible from the cause above stated, that the inhabitants of Wilberforce will be _compelled_ to ask _aid_ from the friends of humanity in the States, or they must _suffer_.

Under these circumstances they commissioned the Rev. James Sharp, as their agent, and sent him to the States; but owing to the opposition of Israel Lewis,--who had been formerly employed as agent, but was removed from the agency--his labors were almost wholly lost to the board.

We would simply say, that Lewis was acting for a _certain_ company here; but we have made inquiries, and find but _one man_ in Wilberforce that belongs to said company, and he is an old man, in his dotage. That man is _Simon Wyatt_. We might say _more_, but we think there has been enough written to satisfy the public.

In consequence of the unfaithfulness of Israel Lewis, and the numerous agents that may be looking around the country after him, the board have come to the conclusion to dispense with a traveling agent for the present.

And we would humbly request Lyman A. Spalding, Esq., of Lockport; E. Peck, Esq., of Rochester; Rev. Dr. Budd, of Auburn; Charles Davis, Esq., of Ludlowville, Tompkins County, N.Y.; Arthur Tappan, Esq., city of New York; to act as receivers for the Colony. The above named gentlemen, will see that the funds which they may receive, be faithfully applied according to the wishes of the donors.

All money placed in each of the banks at Rochester and a duplicate sent on to the Colony, may be cashed here without any discount.

To Christians we appeal: by the brotherhood of Christ, and by their own hopes of being united in him, to extend to us the means of obtaining bread; give us, in the name of Jesus, of your abundance; give us, as God has blessed you, for the poor among us want bread and clothing.

It is to be hoped that every clergyman in the States, will lay this circular before their respective congregations, and give every person an opportunity to throw in their mite into the treasury of the Lord!

AUSTIN STEWARD, _Pres't_ JOSEPH TAYLOR, _Sec'y._ PHILIP HARRIS,

JOHN WHITEHEAD, PETER BUTLER, SAMUEL PETERSON, WILLIAM BROWN.

* * * * *

FROM REV. J. BUDD TO A. STEWARD AND OTHERS.

MESSRS. PAUL AND STEWARD:

I have ever taken a great degree of interest in the welfare of your colony, and have in various ways, brought it before the public.

It has pained me deeply to learn that there are divisions among you. The whole deportment and manner of Lewis, who has been here, has evidently impressed the public in his favor. Although I do not wish to take ground as his advocate, to the extinction of others, I am not inclined to think him dishonest from the testimony now before me.

But, apart from him, my present impression is that the most effectual way for you to promote the cause of the Colony, is not, at this stage of the business, to appear before the public in a hostile attitude to Lewis.

I know some excellent and prominent gentlemen in this quarter, who think he is unkindly treated; at any rate, while the investigation, lately commenced at Albany, is going on, it appears to me not wise in you to put forth any further publication reflecting upon Lewis. He may have acted imprudently; but he has excited himself very much, and should the idea prevail that you and he are in a state of collision, it would be very bad for you.

I consider your Colony as a very important matter, and will do all in my power to promote your welfare, but it is very material not to prejudice the public against you.

Before I move in the matter, I wish to know the real state of the matter between Lewis and the Colony. As soon as I can know that he has defrauded you and deceived the public, I will not hesitate to give my views on the subject, and put forth any efforts in my power for your advancement.

There should no sectarian or party feeling be allowed to creep into your institution.

I thank you for naming me as a receiver for your Colony, and should anything come to me, I shall hand it over to James S. Seymour, Esq., Cashier of the Bank of Auburn, who should have been named instead of me. I hope you will put his name in my place, or at any rate, name him with me, for he has been from the first, much interested in your behalf.

If you will allow me, I will briefly say, that my opinion is, your best way to relieve your immediate wants, would be to issue a brief circular, stating the failure of your crops, your newness of settlement, &c., &c.; and call upon the public for help, without naming Lewis or alluding to your difficulty with him; let your papers be properly authorized, and say that the agent you employ is not engaged in getting funds to pay for land, found schools, &c., but to get _immediate_ provisions for the Colony.

If you will send an agent here and prepare your circular in this way--let it be short--and I will print it and give copies of it to him for circulation, free of charge.

With many prayers for the prosperity of your Colony,

I am your Friend,

JOHN BUDD.

Auburn, N.Y., May, 1833.

* * * * *

REPLY TO J. BUDD BY A. STEWARD.

To THE REV. J. BUDD,

Sir:--We feel under renewed obligation to you, for you friendly advice; but we have already sent out several copies of our circular to different places, and probably some of them have been printed before this time.

We have no object in view, but truth, justice,--the greatest good of the Settlement, and of our brethren in general. Israel Lewis has, however, collected large sums of money, for our relief, of which we have not had the benefit. Nearly two years ago, he was appointed agent for the Colony, to collect funds to build a meeting-house, to endow schools, &c. In less than one year he received more than two thousand dollars, which he squandered; and we have neither _meeting-house_ nor _schools_, nor never _will have_, so long as the money goes into the hands of Lewis. All that we would have forgiven him gladly, if he would consent to be _still_ and not _usurp_ the agency _against_ the wishes of the people.

Sir, is it not expected that he would appear well; as you say, that "the whole deportment and manner of Lewis, who has been in this place, evidently have impressed the people in his favor,"--while collecting money with the eye of the public upon him. But follow him home into another kingdom, and there see the man in his true character; stripped of his borrowed plumage,--and we will guarantee that you would agree with us, in believing that he _is_ an _arch hypocrite_.

We should be sorry to prejudice the public against our Settlement, more especially when we are actuated by the purest motives,--that of preventing the Christian public from being imposed upon, by drawing large sums from them for us, as they suppose, when in _truth_ such sums _never_ reach us at all.

Sir, we know that you are actuated by the purest motives, but you are deceived in the character of the man, (Lewis). When I was living in the States and only saw him there, collecting money for the poor, I thought him honest as you now do; but two or three years' residence in Wilberforce Colony, has abundantly satisfied me that his object is to get money, that he may live in a princely style, and not for the benefit of the poor as he pretends.

Such are the true facts in the case. We should be glad to have the name of James S. Seymour, Esq., added to the list, and any other prominent citizen you may think would help the cause.

In regard to the investigation at Albany, we do not see how the public are to arrive at the facts in the case from any statement Lewis may make; for all his statements that I have seen in print, are positively void of truth, in the most essential part, so that they are of little or no importance at all unless substantiated by other testimony.

The circular contains no testimony that has not been heretofore laid before the public. Mr. Benjamin Paul recently wrote a letter to the editors of "The Baptist Register," in which he stated that Lewis had fed and clothed the colonists like a father, which is not true; and so sensible was Paul of the fact, that when the letter reached here, together with the surprise it created wherever Lewis was known, that Paul cheerfully contradicted it, confessed that he was mistaken, and thus made it known to the public.

We certainly have no sectional feelings in the matter, though Lewis has labored hard to impress the public with a contrary belief; and he has even brought false charges of the basest kind against our more respectable citizens, all to draw the attention of the public from the true facts in the case.

It is a general time of health here in the Colony. The season is very favorable; our crops look well, and with the blessings of God we shall raise enough to supply our wants this year.

Yours, with due respect,

In behalf of the Colonists,

A. STEWARD.

Wilberforce, June, 1833.

* * * * *

FROM A. STEWARD TO G. BANKS AND OTHERS.

MESSRS. BANKS, WILBER, BROCKENBERG & HARRIS:

I have received a communication through your corresponding secretary, Mr. James C. Brown, and I hasten to answer it. The last communication I have received from Mr. N. Paul, was in December, 1833, at which time he was vigorously prosecuting his mission, as will more fully appear by the annexed copy of said letter, which I cheerfully send you. His return is expected daily.

[Copy OF N. PAUL'S LETTER.]

MY DEAR BROTHER STEWARD:

When I last addressed you, I informed you that I expected to leave this country before a return letter from you could be expected. I therefore stated, if I remember correctly, that you need not write.

I now find that I shall be detained much longer than I then calculated; and this detention is owing to the Slavery question. The friends of the cause, advised me to forego my object, until that question was settled; and then they would turn their attention to my cause, and render me what assistance they could.

All their united strength was needed now, while that question was pending. But thanks be to God, that is now settled. On the first day of August next, will be the proudest day that ever Britain knew; for from that time henceforth, there will not remain a single slave throughout His Majesty's dominions.

The friends of the cause are now turning their attention to Slavery in the United States, and are about to form a society for the abolition of Slavery throughout the world. They all think highly of our Settlement, and will give it their cordial support.

The leading abolitionists have given me letters of recommendation throughout the Kingdom, and have appointed one of their most effective men to travel with me,--his name is John Scoble, a very ready, intelligent, earnest, and an eloquent speaker. I think I can do more now in one month, than I could in three before the question was settled in regard to their own slaves.

You will at once see that although the people concluded my object to be an important one, yet, they generally thought that they ought to lend all their aid in removing the stain from their own land first This stain is now effectually effaced, and my meetings are exceedingly crowded. I addressed an audience at Norwich of from three to four thousand persons, week before last, when about five hundred dollars was collected. So you see I am getting on. I start, the Lord willing, next week for Scotland, and shall spend the winter there and in the North of England. In the spring I shall return and take passage for Canada. I doubt not, that you are anxiously looking for my return; yet, you cannot want to see me more than I want to return; but I tell you now as I have told you before, that I shall not return until I have done all that can be done by my labor.

Yours,

N. PAUL.

SIRS:

The above copy will give you all the recent information we have received concerning the mission of our foreign agent.

Please accept my kindest regards, with my acknowledgments of your distinguished consideration, while I remain,

Yours truly,

AUSTIN STEWARD.

Wilberforce, U.C.

* * * * *

FROM A. STEWARD TO MR. NELL.

DEAR SIR:

We are glad to acknowledge your favor of October last, and to hear of your safe arrival in England, your health and fair prospects.

Since my removal to Wilberforce, I have opened a school, which Mrs. Steward has engaged to teach for one year; while I shall probably devote my time to traveling through the States, for the benefit of the Colony, which is indeed poor, and in want of some assistance; and yet, not a dollar have we in the treasury to help them with.

Mr. Paul has not returned, though we are daily expecting him. Our friends in New York, still have confidence in his pledge to do right; and we are anxiously expecting its fulfilment.

Your wife, Mrs. Nell, and the children are well, and we are still doing all in our power for their comfort; but my means, in consequence of having been so much abroad the past season, are limited; by which you will see, my dear Sir, the necessity of remitting funds to me, that I may make your family more comfortable in all things, without distressing my own.

The settlers are well, and are looking with hopeful expectancy for you to do something handsome for them, in which I do hope they may not be disappointed. Lewis is still in New York. We have appointed another agent, named Scott, but who is doing nothing for the Colony now.

May the blessings of God rest upon you, and your endeavors; your good deportment put to silence your enemies; may they who foresee that you will cheat the poor colored children, be sadly mistaken, and your good deeds finally enrol your name on the proud list of philanthropists, headed by a Wilberforce and a Clarkson.

Yours, in great haste,

AUSTIN STEWARD.

Wilberforce, Dec., 1835.

* * * * *

FROM L.A. SPALDING TO A. STEWARD AND OTHERS.

DEAR FRIENDS:

I have received a letter from Israel Lewis, New York, requesting me to forward fifty dollars to the treasurer of the Wilberforce Colony, which I will do at the first convenience. I sent fifty dollars some time since, which I presume was received.

I have also received a letter from B. Lundy, who speaks very flatteringly of the Settlement; but gives me some information relating to Lewis, which will injure you, unless you act wisely.

Now I suggest for your consideration, whether it would not be best to keep perfectly quiet relative to him, until after he returns and settles with the directors. If he cannot then satisfy you, he will no doubt surrender up his documents and agency like a man, and leave you to appoint another.

By all means you must agree among yourselves, not suffering any difference of opinion to become public. Your enemies will seize upon this, and injure your prospects; besides, you gain nothing by it. Your friends too, could then say that you acted imprudently. I hope to have a good account of the settlement of your difficulties if any should exist.

Respectfully your Friend,

LYMAN A. SPALDING.

AUSTIN STEWARD & BENJ. PAUL.

Lockport, N.Y., 2d Mo., 4th, 1832.

* * * * *

FROM REV. S.E. CORNISH TO A. STEWARD.

DEAR STEWARD:

I have this day received your letter, and God willing, I will be with you in the course of ten or twelve days. Please to keep your people together, until I come. I will see that they be not oppressed by that notorious Israel Lewis. I believe him to be one of the worst men living, whose deeds will yet come to light. Do stay in the Colony and keep all things as they are until I come.

Yours, with high esteem,

SAMUEL E. CORNISH.

P.S.--I am glad that Mrs. Steward is in Rochester; your Colony is by no means suited to her talents and refined mind. She never could be happy there. My love to all the Colonists; I will do every thing for them in my power. S.E.C.

* * * * *

FROM B. LUNDY TO A. STEWARD AND OTHERS.

ESTEEMED FRIENDS:

Again I take this method of communicating some private information to my personal friends, relative to my proceedings in Mexico. My last visit to that country, (like the one preceding), having been prolonged far beyond the time which I had anticipated, I feel it incumbent on me to explain the causes thereof especially to such as take an interest in the enterprize in which I have engaged, and those who have kindly assisted me with, means to defray the expenses of my journey, &c.

Soon after the date of my last printed letter, which was issued from this place, I went to New Orleans, with the intention of taking a passage by sea, to some port in Mexico; but after waiting in that city about two weeks, and finding no opportunity to obtain one, I proceeded up the Red River, and journeyed through Texas again by land. My health continued very good for some length of time; but when I reached the middle part of the Texas country, it was my misfortune to come again in contact with the direful "cholera," and again I was the subject of its virulent attacks. My detention was great, and affliction severe; though I finally expelled the disorder as I had done before. My sufferings were somewhat aggravated in several instances, by the fearful prejudices of the people among whom I traveled. I was very anxious to get through my journey, and often assayed to travel before I was in fact well enough. The consequence was, that I frequently took relapses, and sometimes had to lie out under trees, even in time of rain, within sight of houses, the people being unwilling to give me shelter therein, fearing that my disorder was contagious.

At length I reached the Mexican town of San Antonio de Bexar, and there I tarried, until I had got pretty well rid of the cholera. I then pursued my journey to Monclova, the seat of government for the State of Coahuila and Texas, in company with several Mexican gentlemen and foreigners. Previous to this time, I had traveled several hundred miles entirely alone, and generally encamped in the woods or plains at night. On my arrival at Monclova, I was doomed to encounter "misfortune" of a very different character. Here I found that the Englishman, (mentioned in my other letter), with whom I had contracted to petition for two grants of land, _had totally failed in his application_. The petition had been laid before the Governor, and he was about issuing the grants, when he received a _decree_ from the Legislature--which was then in session--forbidding him to grant any more land, under any pretext. This measure was taken to prevent the great land speculators from carrying on their swindling operations in Texas. An act was soon after passed by that body, repealing all their Colonization laws; and thus every hope that I had so fondly entertained, and each fair prospect, seemingly so near its realization, _was instantly blasted and utterly destroyed_! If ever the fortitude of man was tried, mine was then. If ever stoic philosophy might be successfully called to the aid of human courage, I felt the necessity of invoking it upon that occasion. Nearly two years of toil, privation and peril, have been wasted. My sufferings had been great, though my spirit soared on the bouyancy of hope. Now the fair superstructure of an important enterprise, whose ideal magnitude had employed my mind, to the exclusion of many hardships endured, suddenly vanished from my sight, and left before me a hideous and gloomy void with no other encouragement than total disappointment, conscious poverty and remediless despair! What _should_ I then have done? My health was restored, but my detention and consequent expenses had been so great that my funds were nearly exhausted. I came to the country for an important purpose; and I reasoned with myself thus; although my way is closed in this State, cannot something be done _elsewhere_? I will not boast of the stoutest heart among men, but mine _must not quail_. Something further _must_ be

done if possible, and I will try.

In the course of my travels, I had seen a part of the adjoining State of Tamaulipas, and had been informed that the colonization laws thereof were liberal. I was even aware that some parts of it are more suitable for the culture of the sugar cane, than any tract I could have obtained in Coahuila and Texas. And upon a little reflection, I determined to make further investigations in Tamaulipas, and had been informed of the State. As soon as my horse was a little rested, I set out, _alone_, on a journey of between four and five hundred miles, part of the way through an awfully mountainous region, and much of it an uninhabited wilderness. I encamped out almost every night, during the whole journey; very seldom near any human habitation. I had no fire-arms nor anything to defend myself against the ferocious beasts of the forest, which I had evidence to convince me were frequently numerous, and not far distant. In two weeks I reached the city of Matamoras, in the State of Tamaulipas, quite destitute of funds, after parting with almost every disposable article belonging to my wardrobe, &c. The people of this place being all perfect strangers to me, I did not for a while unfold to them the real object of my visit; but instead thereof, I opened a shop, and commenced working at my old trade-- the saddling business. I soon got as much work as I could do--supported myself, replenished my pocket, made some acquaintance with a number of people, and obtained more information respecting the Colonization laws of the State. A few weeks elapsed, while I was employed in this way. I then mounted my horse again, and proceeded to the capital of the State; and after negotiating for some time with the Governor and Council of the State, I succeeded in obtaining a grant of land, upon advantageous terms. I then performed another journey of almost two hundred and fifty miles, "alone," to Matamoras again; and soon thereafter embarked for the United States.

My friends will thus perceive that I have not been idle; though much time has been occupied in my last expedition. I shall not attempt to excite their sympathy by exhibiting the twentieth part of what I have suffered. I do not even like to look back upon some of the scenes through which I have passed. But thanks to a kind and all-sustaining Providence, complete success has at last crowned my exertions. I strove hard to command it; and I leave it to others to say whether I have _deserved_ it or not.

The terms upon which I have obtained my grant of land will be noticed in a public address, which I shall forward with this letter.

Since my arrival in this place, I have been confined by sickness; but am now convalescent, and shall visit my friends to the eastward, as soon as circumstances will permit. I cannot close this communication without an expression of my sincere thanks to those kind friends who rendered me assistance in defraying the expenses of my last Mexican tour. Their favors will be most gratefully remembered, and I shall feel myself under additional obligations to labor for the melioration of the condition of the poor and suffering _slave_.

In the next number of the "Genius of Universal Emancipation," I shall insert the names of those who contributed to aid me in the prosecution of my enterprise; and correct information relative to all proceedings therein, will be given in the pages of that work, as the business connected with it progresses.

I am, most respectfully, your Friend,

B. LUNDY.

N. & B. PAUL, AUSTIN STEWARD, REV. J. SHARP.

Nashville, 5th Mo., 1835.

THE END.

HARRIET BEECHER STOWE

UNCLE TOM'S CABIN

CHAPTER I

UNCLE TOM AND LITTLE HARRY ARE SOLD

Very many years ago, instead of having servants to wait upon them and work for them, people used to have slaves. These slaves were paid no wages. Their masters gave them only food and clothes in return for their work.

When any one wanted servants he went to market to buy them, just as nowadays we buy horses and cows, or even tables and chairs.

If the poor slaves were bought by kind people they would be quite happy. Then they would work willingly for their masters and mistresses, and even love them. But very often cruel people bought slaves. These cruel people used to beat them and be unkind to them in many other ways.

It was very wicked to buy and sell human beings as if they were cattle. Yet Christian people did it, and many who were good and kind otherwise thought there was no wrong in being cruel to their poor slaves. 'They are only black people,' they said to themselves. 'Black people do not feel things as we do.' That was not kind, as black people suffer pain just in the same way as white people do.

One of the saddest things for the poor slaves was that they could never long be a happy family all together--father, mother, and little brothers and sisters--because at any time the master might sell the father or the mother or one of the children to some one else. When this happened those who were left behind were very sad indeed--more sad than if their dear one had died.

Uncle Tom was a slave. He was a very faithful and honest servant, and his master, Mr. Shelby, was kind to him. Uncle Tom's wife was called Aunt Chloe. She was Mr. Shelby's head cook, and a very good one too, she was. Nobody in all the country round could make such delicious pies and cakes as Aunt Chloe.

Uncle Tom and Aunt Chloe lived together in a pretty little cottage built of wood, quite close to Mr. Shelby's big house.

The little cottage was covered with climbing roses, and the garden was full of beautiful bright flowers and lovely fruit trees.

Uncle Tom and Aunt Chloe lived happily for many years in their little cottage, or cabin, as it was called. All day Uncle Tom used to work in the fields, while Aunt Chloe was busy in the kitchen at Mr. Shelby's house. When evening came they both went home to their cottage and their children, and were merry together.

Mr. Shelby was a good man, and kind to his slaves, but he was not very careful of his money. When he had spent all he had, he did not know what to do to get more. At last he borrowed money from a man called Haley, hoping to be able to pay it back again some day.

But that day never came. Haley grew impatient, and said, 'If you don't pay what you owe me, I will take your house and lands, and sell them to pay myself back all the money I have lent to you.'

So Mr. Shelby sold everything he could spare and gathered money together in every way he could think of, but still there was not enough.

Then Haley said, 'Give me that slave of yours called Tom--he is worth a lot of money.'

But Mr. Shelby knew that Haley was not a nice man. He knew he did not want Tom for a servant, but only wanted to sell him again, to make more money. So Mr. Shelby said, 'No, I can't do that. I never mean to sell any of my slaves, least of all Tom. He has been with me since he was a little boy.'

'Oh very well,' said Haley, 'I shall sell your house and lands, as I said I should.'

Mr. Shelby could not bear to think of that, so he agreed to let Haley have Tom. He made him promise, however, not to sell Tom again except to a kind master.

'Very well,' said Haley, 'but Tom isn't enough. I must have another slave.'

Just at this moment a little boy came dancing into the room where Mr. Shelby and Haley were talking.

He was a pretty, merry little fellow, the son of a slave called Eliza, who was Mrs. Shelby's maid.

'There now,' said Haley, 'give me that little chap, as well as Tom, and we will say no more about the money you owe me.'

'I can't,' said Mr. Shelby. 'My wife is very fond of Eliza, and would never hear of having Harry sold.'

'Oh, very well,' said Haley once more, 'I must just sell your house.'

So again Mr. Shelby gave in, and Haley went away with the promise that next morning Uncle Tom and little Harry should be given to him, to be his slaves.

CHAPTER II

ELIZA RUNS AWAY WITH LITTLE HARRY

Mr. Shelby was very unhappy because of what he had done. He knew his wife would be very unhappy too, and he did not know how to tell her.

He had to do it that night, however, before she went to bed.

Mrs. Shelby could hardly believe it. 'Oh, you do not mean this,' she said. 'You must not sell our good Tom and dear little Harry. Do anything rather than that. It is a wicked, wicked thing to do.

'There is nothing else I can do,' said Mr. Shelby. 'I have sold everything I can think of, and at any rate now that Haley has set his heart on having Tom and Harry, he would not take anything or anybody instead.'

Mrs. Shelby cried very much about it, but at last, though she was very, very unhappy she fell asleep.

But some one whom Mr. and Mrs. Shelby never thought of was listening to this talk.

Eliza was sitting in the next room. The door was not quite closed, so she could not help hearing what was said. As she listened she grew pale and cold and a terrible look of pain came into her face.

Eliza had had three dear little children, but two of them had died when they were tiny babies. She loved and cared for Harry all the more because she had lost the others. Now he was to be taken from her and sold to cruel men, and she would never see him again. She felt she could not bear it.

Eliza's husband was called George, and was a slave too. He did not belong to Mr. Shelby, but to another man, who had a farm quite near. George and Eliza could not live together as a husband and wife generally do. Indeed, they hardly ever saw each other. George's master was a cruel man, and would not let him come to see his wife. He was so cruel, and beat George so dreadfully, that

the poor slave made up his mind to run away. He had come that very day to tell Eliza what he meant to do.

As soon as Mr. and Mrs. Shelby stopped talking, Eliza crept away to her own room, where little Harry was sleeping. There he lay with his pretty curls around his face. His rosy mouth was half open, his fat little hands thrown out over the bed-clothes, and a smile like a sunbeam upon his face.

'My baby, my sweet-one,' said Eliza, 'they have sold you. But mother will save you yet!'

She did not cry. She was too sad and sorrowful for that. Taking a piece of paper and a pencil, she wrote quickly.

[Illustration]

'Oh, missis! dear missis! don't think me ungrateful--don't think hard of me, anyway! I heard all you and master said to-night. I am going to try to save my boy--you will not blame me I God bless and reward you for all your kindness!'

Eliza was going to run away.

She gathered a few of Harry's clothes into a bundle, put on her hat and jacket, and went to wake him.

Poor Harry was rather frightened at being waked in the middle of the night, and at seeing his mother bending over him, with her hat and jacket on.

'What is the matter, mother?' he said beginning to cry.

[Illustration]

'Hush,' she said, 'Harry mustn't cry or speak aloud, or they will hear us. A wicked man was coming to take little Harry away from his mother, and carry him 'way off in the dark. But mother won't let him. She's going to put on her little boy's cap and coat, and run off with him, so the ugly man can't catch him.'

Harry stopped crying at once, and was good and quiet as a little mouse, while his mother dressed him. When he was ready, she lifted him in her arms, and crept softly out of the house.

It was a beautiful, clear, starlight night, but very cold, for it was winter-time. Eliza ran quickly to Uncle Tom's cottage, and tapped on the window.

Aunt Chloe was not asleep, so she jumped up at once, and opened the door. She was very much astonished to see Eliza standing there with Harry in her arms. Uncle Tom followed her to the door, and was very much astonished too.

'I'm running away, Uncle Tom and Aunt Chloe--carrying off my child,' said Eliza. 'Master sold him.'

'Sold him?' they both echoed, lifting up their hands in dismay.

'Yes, sold him,' said Eliza. 'I heard master tell missis that he had sold my Harry, and you, Uncle Tom. The man is coming to take you away to-morrow.'

At first Tom could hardly believe what he heard. Then he sank down, and buried his face in his hands.

'The good Lord have pity on us!' said Aunt Chloe. 'What has Tom done that master should sell him?'

[Illustration]

'He hasn't done anything--it isn't for that. Master don't want to sell; but he owes this man money. If he doesn't pay him it will end in his having to sell the house and all the slaves. Master said he was sorry. But missis she talked like an angel. I'm a wicked girl to leave her so, but I can't help it. It must be right; but if it an't right, the good Lord will forgive me, for I can't help doing it.

'Tom,' said Aunt Chloe, 'why don't you go too? There's time.'

Tom slowly raised his head and looked sorrowfully at her.

'No, no,' he said. 'Let Eliza go. It is right that she should try to save her boy. Mas'r has always trusted me, and I can't leave him like that. It is better for me to go alone than for the whole place to be sold. Mas'r isn't to blame, Chloe. He will take care of you and the

poor--'

Tom could say no more. Big man though he was, he burst into tears, at the thought of leaving his wife and dear little children, never to see them any more.

'Aunt Chloe,' said Eliza, in a minute or two, 'I must go. I saw my husband to-day. He told me he meant to run away soon, because his master is so cruel to him. Try to send him a message from me. Tell him I have run away to save our boy. Tell him to come after me if he can. Good-bye, good-bye. God bless you!'

Then Eliza went out again into the dark night with her little boy in her arms, and Aunt Chloe shut the door softly behind her.

CHAPTER III

THE MORNING AFTER

Next morning, when it was discovered that Eliza had run away with her little boy, there was great excitement and confusion all over the house.

Mrs. Shelby was very glad. 'Thank God!' she said. 'I hope Eliza will get right away. I could not bear to think of Harry being sold to that cruel man.'

Mr. Shelby was angry. 'Haley knew I didn't want to sell the child,' he said. 'He will blame me for this.'

One person only was quite silent, and that was Aunt Chloe. She went on, making the breakfast as if she heard and saw nothing of the excitement round her.

All the little black boys belonging to the house thought it was fine fun. Very soon, about a dozen young imps were roosting, like so many crows, on the railings, waiting for Haley to come. They wanted to see how angry he would be, when he heard the news.

And he was dreadfully angry. The little nigger boys thought it was grand. They shouted and laughed and made faces at him to their hearts' content.

At last Haley became so angry, that Mr. Shelby offered to give him two men to help him to find Eliza.

But these two men, Sam and Andy, knew quite well that Mrs. Shelby did not want Eliza to be caught, so they put off as much time as they could.

They let loose their horses and Haley's too. Then they frightened and chased them, till they raced like mad things all over the great lawns which surrounded the house.

Whenever it seemed likely that a horse would be caught, Sam ran up, waving his hat and shouting wildly, 'Now for it! Cotch him! Cotch him!' This frightened the horses so much that they galloped off faster than before.

Haley rushed up and down, shouting and using dreadful, naughty words, and stamping with rage all the time.

At last, about twelve o'clock, Sam came riding up with Haley's horse. 'He's cotched,' he said, seemingly very proud of himself. 'I cotched him!'

Of course, now it was too late to start before dinner. Besides, the horses were so tired with all their running about, that they had to have a rest.

When at last they did start, Sam led them by a wrong road. So the sun was almost setting before they arrived at the village where Haley hoped to find Eliza.

CHAPTER IV

THE CHASE

When Eliza left Uncle Tom's cabin, she felt very sad and lonely. She knew she was leaving all the friends she had ever had behind her.

At first Harry was frightened. Soon he grew sleepy. 'Mother, I don't need to keep awake, do I?' he said.

'No, my darling, sleep, if you want to.'

'But, mother, if I do get asleep, you won't let the bad man take me?'

'No!'

'You're sure, an't you, mother?'

'Yes, sure.'

[Illustration]

Harry dropped his little weary head upon her shoulder, and was soon fast asleep.

Eliza walked on and on, never resting, all through the night. When the sun rose, she was many miles away from her old home. Still she walked on, only stopping, in the middle of the day, to buy a little dinner for herself and Harry at a farm-house.

At last, when it was nearly dark, she arrived at a village, on the banks of the river Ohio. If she could only get across that river, Eliza felt she would be safe.

She went to a little inn on the bank, where a kind-looking woman was busy cooking supper.

'Is there a boat that takes people across the river now?' she asked.

'No, indeed,' replied the woman. 'The boats has stopped running. It isn't safe, there be too many blocks of ice floating about.'

Eliza looked so sad and disappointed when she heard this, that the good woman was sorry for her. Harry too was so tired, that he began to cry.

[Illustration]

'Here, take him into this room,' said the woman, opening the door into a small bed-room.

Eliza laid her tired little boy upon the bed, and he soon fell fast asleep. But for her there was no rest. She stood at the window, watching the river with its great floating blocks of ice, wondering how she could cross it.

As she stood there she heard a shout. Looking up she saw Sam. She drew back just in time, for Haley and Andy were riding only a yard or two behind him.

It was a dreadful moment for Eliza. Her room opened by a side door to the river. She seized her child and sprang down the steps towards it.

Haley caught sight of her as she disappeared down the bank. Throwing himself from his horse, and calling loudly to Sam and Andy, he was after her in a moment.

In that terrible moment her feet scarcely seemed to touch the ground. The next, she was at the water's edge.

On they came behind her. With one wild cry and flying leap, she jumped right over the water by the shore, on to the raft of ice beyond. It was a desperate leap. Haley, Sam, and Andy cried out, and lifted up their hands in astonishment.

The great piece of ice pitched and creaked as her weight came upon it. But she stayed there not a moment. With wild cries she leaped to another and still another--stumbling--leaping--slipping--springing up again!

Her shoes were gone, her stockings cut from her feet by the sharp edges of the ice. Blood marked every step. But she knew nothing, felt nothing, till dimly, as in a dream, she saw the Ohio side, and a man helping her up the bank.

'Yer a brave gal, now, whoever ye are!' said the man.

'Oh, save me--do save me--do hide me,' she cried.

'Why, what's the matter?' asked the man.

'My child! this boy--mas'r sold him. There's his new mas'r,' she said, pointing to the other shore. 'Oh, save me.'

'Yer a right brave gal,' said the man. 'Go there,' pointing to a big white house close by. 'They are kind folks; they'll help you.'

'Oh, thank you, thank you,' said Eliza, as she walked quickly away. The man stood and looked after her wonderingly.

On the other side of the river Haley was standing perfectly amazed at the scene. When Eliza disappeared over the bank he turned and looked at Sam and Andy, with terrible anger in his eyes.

But Sam and Andy were glad, oh, so glad, that Eliza had escaped. They were so glad that they laughed till the tears rolled down their cheeks.

'I'll make ye laugh,' said Haley, laying about their heads with his riding whip.

They ducked their heads, ran shouting up the bank, and were on their horses before he could reach them.

'Good evening, mas'r,' said Sam. 'I berry much 'spect missis be anxious 'bout us. Mas'r Haley won't want us no longer.' Then off they went as fast as their horses could gallop.

It was late at night before they reached home again, but Mrs. Shelby was waiting for them. As soon as she heard the horses galloping up she ran out to the balcony.

'Is that you, Sam?' she called. 'Where are they?'

'Mas'r Haley's a-restin' at the tavern. He's dreffful fatigued, missis.'

'And Eliza, Sam?'

'Come up here, Sam,' called Mr. Shelby, who had followed his wife, 'and tell your mistress what she wants to know.'

So Sam went up and told the wonderful story of how Eliza had crossed the river on the floating ice. Mr. and Mrs. Shelby found it hard to believe that such a thing was possible.

Mrs. Shelby was very, very glad that Eliza had escaped. She told Aunt Chloe to give Sam and Andy a specially good supper. Then they went to bed quite pleased with their day's work.

CHAPTER V

ELIZA FINDS A REFUGE

A lady and gentleman were sitting talking happily together in the drawing-room of the white house to which Eliza had gone. Suddenly their old black man-of-all-work put his head in at the door and said, 'Will missis come into the kitchen?'

The lady went. Presently she called to her husband, 'I do wish you would come here a moment.'

He rose and went into the kitchen.

There lay Eliza on two kitchen chairs. Her poor feet were all cut and bleeding, and she had fainted quite away. The master of the house drew his breath short, and stood silent.

[Illustration]

His wife and the cook were trying to bring Eliza round. The old man had Harry on his knee, and was busy pulling off his shoes and stockings, to warm the little cold feet.

'Poor creature,' said the lady.

Suddenly Eliza opened her eyes. A dreadful look of pain came into her face. She sprang up saying, 'Oh, my Harry, have they got him?'

As soon as he heard her voice, Harry jumped from the old man's knee, and running to her side, put up his arms.

'Oh, he's here! he's here,' she said, kissing him. 'Oh, ma'am,' she went, on turning wildly to the lady of the house, 'do protect us, don't let them get him.'

'Nobody shall hurt you here, poor woman,' said the lady. 'You are safe; don't be afraid.'

'God bless you,' said Eliza, covering her face and sobbing, while Harry, seeing her crying, tried to get into her lap to comfort her.

'You needn't be afraid of anything; we are friends here, poor woman. Tell me where you come from and what you want,' said the lady.

'I came from the other side of the river,' said Eliza.

'When?' said the gentleman, very much astonished.

'To-night.'

'How did you come?'

'I crossed on the ice.'

'Crossed on the ice!' exclaimed every one.

'Yes,' said Eliza slowly, 'I did. God helped me, and I crossed on the ice. They were close behind me--right behind, and there was no other way.'

'Law, missis,' said the old servant, 'the ice is all in broken up blocks, a-swinging up and down in the water.'

'I know it is. I know it,' said Eliza wildly. 'But I did it. I would'nt have thought I could--I didn't think I could get over, but I didn't care. I could but die if I didn't. And God helped me.'

'Were you a slave?' said the gentleman.

'Yes, sir.'

'Was your master unkind to you?'

'No, sir.'

'Was your mistress unkind to you?'

'No, sir--no. My mistress was always good to me.'

'What could make you leave a good home, then, and run away, and go through such danger?'

'They wanted to take my boy away from me--to sell him--to sell him down south, ma'am. To go all alone--a baby that had never been away from his mother in his life. I couldn't bear it. I took him, and ran away in the night. They chased me, they were coming down close behind me, and I heard 'em. I jumped right on to the ice. How I got across I don't know. The first I knew, a man was helping me up the bank.'

It was such a sad story, that the tears came into the eyes of everyone who heard her tell it.

[Illustration]

'Where do you mean to go to, poor woman?' asked the lady.

'To Canada, if I only knew where that was. Is it very far off, is Canada'? said Eliza, looking up in a simple, trusting way, to the kind lady's face.

'Poor woman,' said she again.

'Is it a great way off?' asked Eliza.

'Yes,' said the lady of the house sadly, 'it is far away. But we will try to help you to get there.' Eliza wanted to go to Canada, because it belonged to the British. They did not allow any one to be made a slave there. George, too, was going to try to reach

Canada.

'Wife,' said the gentleman, when they had gone back again into their own sitting-room, 'we must get that poor woman away to-night. She is not safe here. I know some good people, far in the country, who will take care of her.'

So this kind gentleman got the carriage ready, and drove Eliza and her boy a long, long way, through the dark night, to a cottage far in the country. There he left her with a good man and his wife, who promised to be kind to her, and help her to go to Canada. He gave some money to the good man too, and told him to use it for Eliza.

CHAPTER VI

UNCLE TOM SAYS GOOD-BYE

The day after the hunt for Eliza was a very sad one in Uncle Tom's cabin. It was the day on which Haley was going to take Uncle Tom away.

Aunt Chloe had been up very early. She had washed and ironed all Tom's clothes, and packed his trunk neatly. Now she was cooking the breakfast,--the last breakfast she would ever cook for her dear husband. Her eyes were quite red and swollen with crying, and the tears kept running down her cheeks all the time.

'It's the last time,' said Tom sadly.

Aunt Chloe could not answer. She sat down, buried her face in her hands, and sobbed aloud.

'S'pose we must be resigned. But, O Lord, how can I? If I knew anything where you was goin', or how they'd treat you! Missis says she'll try and buy you back again in a year or two. But, Lor', nobody never comes back that goes down there.'

'There'll be the same God there, Chloe, that there is here.'

'Well,' said Aunt Chloe, 's'pose dere will. But the Lord lets drefful things happen sometimes. I don't seem to get no comfort dat way.'

'Let's think on our mercies,' said Tom, in a shaking voice.

'Mercies!' said Aunt Chloe, 'don't see any mercies in 't. It isn't right! it isn't right it should be so! Mas'r never ought to have left it so that ye could be took for his debts. Mebbe he can't help himself now, but I feel it's wrong. Nothing can beat that out of me. Such a faithful crittur as ye've been, reckonin' on him more than your own wife and chil'en.'

'Chloe! now, if ye love me, you won't talk so, when it is perhaps jest the last time we'll ever have together,' said Tom.

'Wall, anyway, there's wrong about it somewhere,' said Aunt Chloe, 'I can't jest make out where 'tis. But there is wrong somewhere, I'm sure of that.'

Neither Tom nor Chloe could eat any breakfast; their hearts were too full of sorrow. But the little children, who hardly understood what was happening, enjoyed theirs. It was not often that they had such a fine one as Chloe had cooked for Tom's last morning at home.

[Illustration]

Breakfast was just finished, when Mrs. Shelby came. Chloe was not very pleased to see her. She was angry, and blamed her for letting Tom be sold.

But Mrs. Shelby did not seem to see Aunt Chloe's angry looks. 'Tom,' she said, turning to him, 'I come to--' she could say no more, she was crying so bitterly.

Then all Aunt Chloe's anger faded away.

'Lor', now missis, don't-don't,' she said. She too burst out crying again, and for a few minutes they all sobbed together.

'Tom,' said Mrs. Shelby at last, 'I can't do anything for you now. But I promise you, most solemnly, to save as much, money as I can. As soon as I have enough, I will buy you back again.'

Just then Haley arrived. Tom said a last sad good-bye to his wife and children, and got into the cart, which Haley had brought with him.

As soon as Tom was seated in the cart, Haley took a heavy chain, and fastened it round his ankles. Poor Tom had done nothing wrong, yet he was treated worse than a thief, just because he was a slave.

'You don't need to do that,' said Mrs. Shelby, 'Tom won't run away.'

'Don't know so much about that, ma'am; I've lost one already. I can't afford to run any more risks,' replied Haley.

'Please give my love to Mas'r George,' said Tom, looking round sadly. 'Tell him how sorry I am he is not at home to say good-bye.'

Master George was Mr. and Mrs. Shelby's son. He was very fond of Tom, and was teaching him to write. He often used to come and have tea in Uncle Tom's little cottage. Aunt Chloe used to make her very nicest cakes when Mas'r George came to tea. But he was not at home now, and did not know that Tom had been sold.

Haley whipped up the horse, and, with a last sad look at the old place, Tom was whirled away to a town called Washington.

CHAPTER VII

UNCLE TOM MEETS EVA

Haley stayed in Washington several days. He went to market each day and bought more slaves. He put heavy chains on their hands and feet, and sent them to prison along with Tom.

When he had bought all the slaves he wanted, and was ready to go, he drove them before him, like a herd of cattle, on to a boat which was going south.

It was a beautiful boat. The deck was gay with lovely ladies and fine gentlemen walking about enjoying the bright spring sunshine.

Down on the lower deck, in the dark, among the luggage, were crowded Tom and the other poor slaves.

Some of the ladies and gentlemen on board were very sorry for the poor niggers, and pitied them. Others never thought about them at all, or if they did, thought it was quite just and proper that they should be treated badly. 'They are only slaves,' they said.

Among the passengers was a pretty little girl, about six years old. She had beautiful golden hair, and big blue eyes. She ran about here, there, and everywhere, dancing and laughing like a little fairy. There were other children on board, but not one so pretty or so merry as she. She was always dressed in white, and Tom thought she looked like a little angel, as she danced and ran about.

Often and often she would come and walk sadly around the place where the poor slaves sat in their chains. She would look pityingly at them, and then go slowly away. Once or twice she came with her dress full of sweets, nuts, and oranges, and gave them all some.

Tom watched the little lady, and tried to make friends with her. His pockets were full of all kinds of things, with which he used to amuse his old master's children.

He could make whistles of every sort and size, cut baskets out of cherry-stones, faces out of nut-shells, jumping figures out of bits of wood. He brought these out one by one, and though the little girl was shy at first, they soon grew to be great friends.

'What is missy's name?' said Tom one day.

'Evangeline St. Clare,' said the little girl; 'though papa and everybody else call me Eva. Now, what's your name?'

'My name's Tom. The little chil'en at my old home used to call me Uncle Tom.'

'Then I mean to call you Uncle Tom, because, you see, I like you,' said Eva. 'So, Uncle Tom, where are you going?'

'I don't know, Miss Eva.'

'Don't know?' said Eva.

'No. I'm going to be sold to somebody. I don't know who.'

'My papa can buy you, said Eva quickly. 'If he buys you you will have good times. I mean to ask him to, this very day.'

'Thank you, my little lady,' said Tom.

Just at this moment, the boat stopped at a small landing-place to take in some wood. Eva heard her father's voice, and ran away to speak to him.

Tom too rose and walked to the side. He was allowed to go about now without chains. He was so good and gentle, that even a man like Haley could not help seeing that it could do no harm to let him go free.

Tom helped the sailors to carry the wood on the boat. He was so big and strong that they were very glad to have his help.

[Illustration]

Eva and her father were standing by the railings as the boat once more began to move. It had hardly left the landing-stage when, some how or other, Eva lost her balance. She fell right over the side of the boat into the water.

Tom was standing just under her, on the lower deck, as she fell. In one moment he sprang after her. The next he had caught her his arms, and was swimming with her to the boat-side, where eager hands were held out to take her.

The whole boat was in confusion. Every one ran to help Eva, while the poor slave went back to his place, unnoticed and uncared for.

But Mr. St. Clare did not forget.

The next day Tom sat on the lower deck, with folded arms, anxiously watching him as he talked to Haley.

Eva's father was a very handsome man. He was like Eva, with the same beautiful blue eyes and golden-brown hair. He was very fond of fun and laughter, and though he had quite made up his mind to buy Tom, he was now teasing Haley, and pretending to think that he was asking too much money for him.

[Illustration]

'Papa do buy him, it's no matter what you pay', whispered Eva softly, putting her arms around her father's neck. 'You have money enough, I know. I want him.'

'What for, pussy? Are you going to use him for a rattle-box, or a rocking-horse, or what?'

'I want to make him happy.'

Mr. St. Clare laughed; but after making a few more jokes about it, he gave Haley the money he asked for, and Tom had a new master.

'Come, Eva,' said Mr. St. Clare, and, taking her hand, went across the boat to Tom.

'Look up, Tom,' he said to him, 'and see how you like your new master.'

Tom looked up. Mr. St. Clare had such a gay, young, handsome face, that Tom could not help feeling glad. Grateful tears rushed to his eyes as he said, 'God bless you, mas'r.'

'Can you drive horses, Tom?'

'I've been allays used to horses,' said Tom.

'Well, I think I'll make you a coachman. But you must not get drunk.'

Tom looked surprised and a little hurt.

'I never drink', mas'r,' he said.

'Never mind, my boy,' said Mr. St. Clare, seeing him look so grave; 'I don't doubt you mean to do well.'

'I certainly do, mas'r,' said Tom.

'And you shall have good times,' said Eva. 'Papa is very good to everybody, only he always will laugh at them.'

'Papa is much obliged to you,' said Mr. St. Clare laughing, as he walked away.

CHAPTER VIII

ELIZA AMONG THE QUAKERS

While Uncle Tom was sailing South, down the wide river, to his new master's home, Eliza with her boy was travelling north to Canada.

Kind people helped her all the way. She passed from friend to friend, till she arrived safely at a village where the people were Quakers.

The Quakers were gentle, quiet people. They all dressed alike in plain grey clothes, and the women wore big, white muslin caps. Because they thought it was wicked to have slaves, they helped those who ran away from their cruel masters. Often they were punished for doing this, but still they went on helping the poor slaves. For though the laws said it was wrong, they felt quite sure that it was really right to do so.

The kind Quaker women grew to be very fond of Eliza, and would have been glad if she would have stayed with them.

But Eliza said, 'No, I must go on; I dare not stop. I can't sleep at night: I can't rest. Last night I dreamed I saw that man come into the yard.'

'Poor child,' said Rachel, the kind Quaker woman to whom she was speaking, 'poor child, thee mustn't feel so. No slave that has run away has ever been stolen from our village. It is safe here.'

While they were talking, Simeon, Rachel's husband, came to the door and called, 'Wife, I want to speak to thee a minute.'

Rachel went out to him. 'Eliza's husband is here,' he said.

'Art thee sure?' asked Rachel, her face bright with joy.

'Yes, quite certain; he will be here soon. Will thee tell her?'

Rachel went back into the kitchen, where Eliza was sewing, and, opening the door of a small bedroom, said gently, 'Come in here with me, my daughter; I have news to tell thee.'

Eliza rose trembling, she was so afraid it was bad news.

'No, no! never fear thee. It's good news, Eliza,' said Simeon,

Rachel shut the door, and drew Eliza towards her. 'The Lord has been very good to thee,' she said gently. 'Thy husband hath escaped, and will be here to-night.'

'To-night!' repeated Eliza, 'to-night!'

Then it seemed as if the room and everything in it swam round her, and she fell into Rachel's arms.

Very gently Rachel laid her down on the bed. Eliza slept as she had not slept since the dreadful night when she had taken her boy and run away through the cold, dark night.

She dreamed of a beautiful country--a land, it seemed to her, of rest--green shores, pleasant islands, and lovely glittering water. There in a house, which kind voices told her was her home, she saw Harry playing happily. She heard her husband's footstep. She felt him coming nearer. His arms were around her, his tears falling upon her face, and she awoke.

It was no dream. The sun had set, the candles were lit. Harry was sleeping by her side, and George, her husband, was holding her in his arms.

CHAPTER IX

UNCLE TOM'S NEW HOME

Uncle Tom soon settled down in his new home. He was as happy as he could be, so far away from his wife and dear little children. He had a kind master.

Mrs. St. Clare, however, was not nearly so nice as her husband. She was cruel, and would often have beaten her poor slaves, but Mr. St. Clare would not allow it.

She always pretended that she was very ill, and spent most of her time lying on a sofa, or driving about in her comfortable carriage.

Mrs. St. Clare said she really was too ill to look after the house, so everything was left to the slaves. Soon things began to be very uncomfortable, and even good-natured Mr. St. Clare could stand it no longer.

He went to his cousin, Miss Ophelia St. Clare, and begged her to come and keep house for him, and to look after Eva. It was on the journey back with her that the accident to Eva happened, which ended in his buying Tom.

Miss Ophelia was a very prim and precise person, not at all like the St. Clares. In her home people did not have slaves. Though her cousin had a great many, and was kind to them, she could not help seeing that it was a very wicked thing to buy and sell men and women as if they were cattle. She was very, very sorry for the poor slaves, and would have liked to free them all. Yet she did not love them. She could not bear even to have them near her, nor to touch them, just because they were black.

[Illustration]

It made her quite ill to see Eva kissing and hugging the black slave women when she came home.

'Well, I couldn't do that,' she said.

'Why not?' said Mr. St. Clare, who was looking on.

'Well, I want to be kind to every one. I wouldn't have anybody hurt. But, as to kissing niggers--' she gave a little shudder. 'How can she?'

Presently a gay laugh sounded from the court. Mr. St. Clare stepped out to see what was happening.

'What is it?' said Miss Ophelia, following him.

There sat Tom on a little mossy seat in the court. Every one of his buttonholes was stuck full of flowers. Eva, laughing gaily, was hanging a wreath of roses round his neck. Then, still laughing, she perched on his knee like a little sparrow.

'Oh, Tom, you look so funny!'

Tom had a sober smile on his face. He seemed in his own quiet way to be enjoying the fun quite as much as his little mistress. When he lifted his eyes and saw his master he looked as if he were afraid he might be scolded. But Mr. St. Clare only smiled.

'How can you let her do that?' said Miss Ophelia.

'Why not?' said Mr. St. Clare.

'Why? I don't know. It seems dreadful to me.'

'You would think it was quite right and natural if you saw Eva playing with a large dog, even if he was black. But a fellow-creature that can think, and reason, and feel, and is immortal, you shudder at. I know how you north-country people feel about it. You loathe the blacks as you would a toad or a snake. Yet you pity them, and are angry because they are often ill-treated.'

'Well, cousin,' said Miss Ophelia thoughtfully, 'I daresay you are right. I suppose I must try to get over my feeling.'

CHAPTER X

UNCLE TOM'S LETTER

Uncle Tom felt that he was indeed very fortunate to have found such a kind master and so good a home. He had nice clothes, plenty of food, and a comfortable room to sleep in. He had no hard, disagreeable work to do. His chief duties were to drive Mrs. St. Clare's carriage when she wanted to go out, and to attend on Eva when she wanted him. He soon grew to love his little mistress very, very much indeed.

Mr. St. Clare too began to find Tom very useful. He was dreadfully careless about money, and his chief servant was just as careless as his master. So between them a great deal was not only spent but wasted.

Mr. Shelby had trusted Tom in everything, and Tom had always been careful of his master's money--as careful as if it had been his own. Waste seemed dreadful to him, and he tried to do something to stop it now.

Mr. St. Clare was not long in finding out how clever Tom was, and soon trusted him as thoroughly as Mr. Shelby had done.

But in spite of all his good fortune, Tom used to long very much to go home to see his dear ones again. He had plenty of spare time, and whenever he had nothing to do he would pull his Bible out of his pocket and try to find comfort in reading it.

[Illustration]

But as time went on, Uncle Tom longed more and more for his home. At last one day he had a grand idea. He would write a letter.

Before Uncle Tom was sold, George Shelby had been teaching him to write so he thought he could manage a letter.

He begged a sheet of writing-paper from Eva, and going to his room began to make a rough copy on his slate.

It was very difficult. Poor Uncle Tom found that he had quite forgotten how to make some of the letters. Of those he did remember, he was not quite sure which he ought to use. Yes, it was a very difficult thing indeed.

While he was working away, breathing very hard over it, Eva came behind him, and peeped over his shoulder.

'Oh, Uncle Tom! what funny things you are making there!'

Eva put her little golden head close to Uncle Tom's black one, and the two began a grave and anxious talk over the letter. They were both very earnest, and both very ignorant. But after a great deal of consulting over every word, the writing began, they really thought, to look quite like a proper letter.

'Yes, Uncle Tom, it begins to look beautiful,' said Eva, gazing on it with delight. 'How pleased your wife will be, and the poor little children! Oh, it is a shame that you ever had to go away from them! I mean to ask papa to let you go back, some day.'

'Missis said that she would send down money for me, as soon as they could get it together,' said Tom. 'Young Mas'r George, he said he'd come for me. He gave me this dollar as a sign,' and Tom drew the precious dollar from under his coat.

'Oh, he is sure to come, then,' said Eva, 'I am so glad.'

'I wanted to send a letter, you see, to let 'em know where I was, and tell poor Chloe that I was well off, 'cause she felt so dreadful, poor soul.'

'I say, Tom,' said Mr. St. Clare, coming in at the door at this minute.

Tom and Eva both started.

'What's this?' Mr. St. Clare went on, coming up and looking at the slate.

'Oh, it's Tom's letter. I'm helping him to write it,' said Eva. 'Isn't it nice?'

'I wouldn't discourage either of you,' said her father; 'but I rather think, Tom, you had better let me write your letter for you. I'll do it when I come home from my ride.'

'It is very important that he should write,' said Eva, 'because his mistress is going to send money to buy him back again, you know, papa. He told me they had said so.'

Mr. St. Clare thought in his heart that very likely this meant nothing. He thought it was only one of these things which good-natured people said to their slaves to comfort them when they were taken away from their dear ones to be sold. He did not really believe

Mrs. Shelby meant to buy Tom back again. However, he did not say so out loud, but just told Tom to get the horses ready for a ride.

That evening the letter was written, and Uncle Tom carried it joyfully to the post-office.

CHAPTER XII

GEORGE FIGHTS FOR FREEDOM

The day after George and Eliza met each other once more at the end of so many sad months of parting, was a very happy one in the Quaker house.

The two had much to say to each other. George had to tell how he had escaped from his cruel master, and how he had followed Eliza all the way and at last found her. Then there were plans to make for going on towards Canada. It was arranged that they should start that night at ten o'clock. 'The pursuers are hard after thee, we must not delay,' said Simeon.

Rachel was happy and busy, packing up food and clothes for them to take on the journey.

Late in the afternoon another Quaker, called Phineas, came with the dreadful news that the wicked men, whom Haley had sent to catch Eliza, were only a few miles away.

So George and Eliza decided to start as soon as it was dark. A little while after supper a large covered waggon drew up before the door. They got in and the waggon drove off.

On and on, all through the dark night they drove. About three o'clock, George heard the click of a horse's hoof coming behind them.

'That's Simeon,' said Phineas, who was driving, as he pulled up the horses to listen.

'Halloa, there, Simeon,' he shouted, 'what news? Are they coming?'

'Yes, right on behind, eight or ten of them.'

'Oh! what shall we do?' groaned Eliza.

But Phineas knew the road well. He lashed the horses till they flew along, the waggon rattling and jumping over the hard road behind them.

[Illustration]

On they went till they came to a place where the rocks rose straight up from the road like a wall. It seemed impossible for any one to climb up there. But Phineas knew a way.

He stopped the horses. 'Here, Simeon,' he said, 'take the waggon, and drive on as fast as thou canst, and bring back help. Now follow me,' he said to the others, 'quick, for your lives. Run now, if you you ever did run.'

Quicker than we can say it, they were following him up a tiny narrow path to the top of the rocks, and Simeon was galloping the horses with the empty waggon along the road.

'We are pretty safe here,' said Phineas, when they had reached the top. 'Only one person can come up that path at a time. If any one tries it, shoot him.'

The men who were chasing them had now arrived at the foot of of the rocks. They were led by a big man called Tom Loker, and another mean-looking little man, whom Haley had sent.

After some hunting about, they found the path, and, headed by Tom Loker, began to climb up.

'Come up if you like,' George called out, 'but if you do we will shoot you.'

For answer, the little man took aim at George, and fired.

Eliza screamed, but the shot did not hurt him. It passed close to his hair, nearly touched her cheek, and, struck a tree behind.

Tom Loker came on. George waited until he was near enough, then he fired. The shot hit him in the side. But, though wounded, he would not go back. With a yell like that of a mad bull he came leaping on, and sprang right in among them.

Quakers are not allowed to use guns and pistols, so Phineas had been standing back while George shot. Now he sprang forward. As Tom Loker landed in the middle of them, he gave him a great push, saying, 'Friend, thee isn't wanted here.'

Down fell Tom Loker, down, down the steep side of the rock. He crashed and crackled among trees, bushes, logs, loose stones, till he lay bruised and groaning far below. The fall might have killed him, had it not been broken by his clothes catching on the branches of a large tree.

Cruel people are, very often, cowardly too. When the men saw their leader first wounded, and then thrown down, they all ran away.

Mounting their horses, they rode off as fast as they could, leaving Tom Loker lying on the ground wounded and groaning with pain.

As soon as Phineas and the others saw that the wicked men had really ridden away, they climbed down, meaning to walk along the road till they met Simeon.

They had just reached the bottom, when they saw him coming back with the waggon and two other men.

'Now we are safe,' cried Phineas joyfully.

'Well, do stop then,' said Eliza, 'and do something for that poor man. He is groaning dreadfully.'

'It would be no more than Christian,' said George. 'Let us take him with us.'

They lifted the wounded man gently, as if he had been a friend instead of a cruel enemy, and laid him in the waggon. Then they all set out once more.

[Illustration]

A drive of about an hour brought them to a neat farm-house. There the tired travellers were kindly received and given a good breakfast.

Tom Loker was put into a comfortable bed, far cleaner and softer than any he had ever slept in before. George and Eliza walked about the garden hand-in-hand, feeling happy together, and almost safe. They were so near Canada now.

CHAPTER XIII

AUNT DINAH

Miss Ophelia found that it was no easy matter to bring anything like order into the St. Clare household. The slaves had been left to themselves so long, and had grown so untidy, that they were not at all pleased with Miss Feely, as they called her, for trying to make them be tidy. However, she had quite made up her mind that order there must be. She got up at four o'clock in the morning, much to the surprise of the housemaids. All day long she was busy dusting and tidying, till Mrs. St. Clare said it made her tired to see cousin Ophelia so busy.

CHAPTER XIV

TOPSY

One morning, while Miss Ophelia was busy, as usual, she heard Mr. St. Clare calling her from the foot of the stairs.

'Come down here, cousin. I have something to show you.'

'What is it?' said Miss Ophelia, coming down with her sewing in her hand.

'I have bought something for you. See here,' he said, pulling forward a little negro girl of about eight or nine years old.

She was quite black. Her round, shining eyes glittered like glass beads. Her wooly hair was plaited into little tails which stuck out in all directions. Her clothes were dirty and ragged. Miss Ophelia thought she had never seen such a dreadful little girl in all her life.

'Cousin, what in the world have you brought that thing here for?' she asked, in dismay.

'For you to teach, to be sure, and train in the way she should go,' said Mr. St. Clare, laughing. 'Topsy,' he went on, 'this is your new mistress. See, now, that you behave yourself.'

'Yes, mas'r,' said Topsy gravely, but her eyes had a wicked twinkle in them.

'You're going to be good, Topsy, you understand?' said Mr. St. Clare.

'Oh yes, mas'r' said Topsy again, meekly folding her hands, but with another twinkle in her eyes.

'Now cousin, what is this for? Your house is full of these little plagues as it is. I get up in the morning and find one asleep behind the door; see one black head poking out from under the table; another lying on the mat. They tumble over the kitchen floor, so that a body can't put their foot down without treading on them. What on earth did you want to bring this one for?'

'For you to teach, didn't I tell you?'

'I don't want her, I'm sure. I have more to do with them now than I want.'

'Well the fact is, cousin,' said Mr. St. Clare, drawing her aside, 'she belonged to some people who were dreadfully cruel and beat her. I couldn't bear to hear her screaming every day, so I bought her. I will give her to you. Do try and make something of her.'

'Well, I'll do what I can,' said Miss Ophelia. 'She is fearfully dirty, and half naked.'

'Well, take her downstairs, and tell somebody to clean her up, and give her some decent clothes.'

Getting Topsy clean was a very long business. But at last it was done.

Then, sitting down before her, Miss Ophelia began to question her.

'How old are you, Topsy?'

'Dunno, missis,' said she, grinning like an ugly little black doll.

'Don't know how old you are! Did nobody ever tell you? Who was your mother?'

'Never had none,' said Topsy, with another grin.

'Never had any mother! What do you mean? Where were you born?'

'Never was born.'

'You mustn't answer me like that, child,' said Miss Ophelia sternly. 'I am not playing with you. Tell me where you were born, and who your father and mother were.'

'Never was born,' said Topsy again very decidedly. 'Never had no father, nor mother, nor nothin!'

Miss Ophelia hardly knew what to make of her. 'How long have you lived with your master and mistress, then?' she asked.

'Dunno, missis.'

'Is it a year, or more, or less?'

'Dunno, missis.'

'Have you ever heard anything about God, Topsy?' asked Miss Ophelia next.

Topsy looked puzzled, but kept on grinning.

'Do you know who made you?'

'Nobody as I knows on,' replied Topsy, with a laugh. 'Spect I grow'd. Don't think nobody ever made me.'

[Illustration]

'Do you know how to sew?' asked Miss Ophelia, quite shocked.

'No, missis.'

'What can you do? What did you do for your master and mistress?'

'Fetch water, and wash dishes, and clean knives, and wait on folks.'

'Well, now, Topsy, I'm going to show you just how my bed is to be made. I am very particular about my bed. You must learn exactly how to do it.'

'Yes, missis,' said Topsy, with a deep sigh and a face of woeful earnestness.

'Now, Topsy, look here. This is the hem of the sheet. This is the right side of the sheet. This is the wrong. Will you remember?'

'Yes, missis,' said Topsy with another sigh.

'Well, now, the under-sheet you must bring over the bolster--so, and tuck it right down under the mattress nice and smooth--so. Do you see?'

'Yes, missis.'

'But the upper sheet,' said Miss Ophelia, 'must be brought down in this way, and tucked under, firm and smooth, at the foot--so, the narrow hem at the foot.'

'Yes, missis,' said Topsy as before. But while Miss Ophelia was bending over the bed she had quickly seized a pair of gloves and a ribbon, which were lying on the dressing-table, and slipped them up her sleeves. When Miss Ophelia looked up again, the naughty little girl was standing with meekly-folded hand as before.

'Now, Topsy, let me see you do this,' said Miss Ophelia, pulling the clothes off again and seating herself.

Topsy, looking very earnest, did it all just as she had been shown. She did it so quickly and well that Miss Ophelia was very pleased. But, alas! as she was finishing, an end of ribbon came dangling out of her sleeve.

'What is this?' said Miss Ophelia, seizing it. 'You naughty, wicked child--you have been stealing this.'

The ribbon was pulled out of Topsy's own sleeve. Yet she did not seem a bit ashamed. She only looked at it with an air of surprise and innocence.

'Why, that's Miss Feely's ribbon, an't it? How could it a got into my sleeve?'

'Topsy, you naughty girl, don't tell me a lie. You stole that ribbon,'

'Missis, I declare I didn't. Never seed it till dis blessed minnit.'

'Topsy,' said Miss Ophelia, 'don't you know it is wicked to tell lies?'

'I never tells no lies, Miss Feely,' said Topsy. 'It's jist the truth I've been, tellin' now. It an't nothin' else.'

[Illustration]

'Topsy, I shall have to whip you, if you tell lies so.'

'Laws, missis, if you whip's all day, couldn't say no other way,' said Topsy, beginning to cry. 'I never seed dat ribbon. It must a caught in my sleeve. Miss Feely must'a left it on the bed, and it got caught in the clothes, and so got in my sleeve.'

Miss Ophelia was so angry at such a barefaced lie that she caught Topsy and shook her. 'Don't tell me that again,' she said.

The shake brought the gloves on the floor from the other sleeve.

'There,' said Miss Ophelia, 'will you tell me now you didn't steal the ribbon?'

Topsy now confessed to stealing the gloves. But she, still said she had not taken the ribbon.

'Now, Topsy', said Miss Ophelia kindly, 'if you will confess all about it I won't whip you this time.'

So Topsy confessed to having stolen both the ribbon and the gloves. She said she was very, very sorry, and would never do it again.

'Well, now, tell me,' said Miss Ophelia, 'have you taken anything else since you have been in the house? If you confess I won't whip you.'

'Laws, missis, I took Miss Eva's red thing she wears on her neck.'

'You did, you naughty child! Well, what else?'

'I took Rosa's ear-rings--them red ones.'

'Go and bring them to me this minute--both of them.'

'Laws, missis, I can't--they's burnt up.'

'Burnt up? What a story! Go and get them, or I shall whip you.'

Topsy began to cry and groan, and declare that she could not. 'They's burnt up, they is.'

'What did you burn them up for?' asked Miss Ophelia.

'Cause I's wicked, I is. I's mighty wicked, anyhow. I can't help it.'

Just at this minute Eva came into the room wearing her coral necklace.

'Why, Eva, where did you get your necklace?' said Miss Ophelia.

'Get it? Why, I have had it on all day,' answered Eva, rather surprised. 'And what is funny, aunty, I had it on all night too. I forgot to take it off when I went to bed.'

Miss Ophelia looked perfectly astonished. She was more astonished still when, next minute, Rosa, who was one of the housemaids, came in with a basket of clean clothes, wearing her coral ear-rings as usual.

I'm sure I don't know what to do with such a child,' she said, in despair. 'What in the world made you tell me you took those things, Topsy?'

'Why, missis said I must 'fess. I couldn't think of nothing else to 'fess,' said Topsy, wiping her eyes.

'But of course, I didn't want you to confess things you didn't do,' said Miss Ophelia. 'That is telling a lie just as much as the other.'

'Laws, now, is it?' said Topsy, looking surprised and innocent.

'Poor Topsy,' said Eva, 'why need you steal? You are going to be taken good care of now. I am sure I would rather give you anything of mine than have you steal it.'

Topsy had never been spoken to so kindly and gently in all her life. For a minute she looked as if she were going to cry. The next she was grinning as usual in her ugly way.

What was to be done with Topsy? Miss Ophelia was quite puzzled. She shut her up in a dark room till she could think about it.

'I don't see,' she said to Mr. St. Clare, 'how I am going to manage that child without whipping her.'

'Well, whip her, then.'

'I never heard of bringing up children without it,' said Miss Ophelia.

'Oh, well, do as you think best. Only, I have seen this child beaten with a poker, knocked down with the shovel or tongs, or anything that came handy. So I don't think your beatings will have much effect.'

'What is to be done with her, then?' said Miss Ophelia. 'I never saw such a child as this.'

But Mr. St. Clare could not answer her question. So Miss Ophelia had to go on, as best she could, trying to make Topsy a good girl.

She taught her to read and to sew. Topsy liked reading, and learned her letters like magic. But she could not bear sewing. So she broke her needles or threw them away. She tangled, broke, and dirtied her cotton and hid her reels. Miss Ophelia felt sure all these things could not be accidents. Yet she could never catch Topsy doing them.

In a very few days Topsy had learned how to do Miss Ophelia's room perfectly, for she was very quick and clever. But if Miss Ophelia ever left her to do it by herself there was sure to be dreadful confusion.

Instead of making the bed, she would amuse herself with pulling off the pillow-cases. Then she would butt her woolly head among the pillows, until it was covered with feathers sticking out in all directions. She would climb the bedpost, and hang head downwards from the top; wave the sheets and covers all over the room; dress the bolster up in Miss Ophelia's nightgown and act scenes with it, singing, whistling, and making faces at herself in the looking-glass all the time.

'Topsy,' Miss Ophelia would say, when her patience was at an end, 'what makes you behave so badly?'

'Dunno, missis--I'spects' cause I's so wicked.'

'I don't know what I shall do with you, Topsy.'

'Laws, missis, you must whip me. My old missis always did. I an't used to workin' unless I gets whipped.'

So Miss Ophelia tried it. Topsy would scream and groan and implore. But half an hour later she would be sitting among the other little niggers belonging to the house, laughing about it. 'Miss Feely whip!' she would say, 'she can't do it nohow.'

'Law, you niggers,' she would go on, 'does you know you's all sinners? Well, you is; everybody is. White folks is sinners too--Miss Feely says so. But I 'spects niggers is the biggest ones. But ye an't any of ye up to me. I's so awful wicked, there can't nobody do nothin' with me. I 'spects I's the wickedest crittur in the world.' Then she would turn a somersault, and come up bright and smiling, evidently quite pleased with herself.

CHAPTER XV

EVA AND TOPSY

Two or three years passed. Uncle Tom was still with Mr. St. Clare, far away from his home. He was not really unhappy. But always in his heart was the aching longing to see his dear ones again.

Now he began to have a new sorrow. He loved his little mistress Eva very tenderly, and she was ill.

He saw that she was growing white and thin. She no longer ran and played in the garden for hours together as she used to do. She was always tired now.

Miss Ophelia noticed it too, and tried to make Mr. St. Clare see it. But he would not. He loved his little Eva so much, that he did not want to believe that anything could be the matter with her.

Mrs. St. Clare never thought that any one, except herself, could be ill. So Eva grew daily thinner and weaker, and Uncle Tom and Aunt Ophelia more and more sad and anxious.

But at last she became so unwell, that even Mr. St. Clare had to own that something was wrong, and the doctor was sent for.

In a week or two she was very much better. Once more she ran about playing and laughing, and her father was delighted. Only Miss Ophelia and the doctor sighed and shook their heads. And little Eva herself knew; but she was not troubled. She knew she was going to God.

'Papa' she said one day, 'there are some things I want to say to you. I want to say them now while I am able.'

She seated herself on his knee, and laid her head on his shoulder.

'It is all no use, papa, to keep it to myself any longer. The time is coming when I am going to leave you. I am going, never to come back', and Eva sobbed.

'Eva, darling, don't say such things; you are better you know.'

'No, papa, I am not any better. I know it quite well, and I am going soon.'

'And I want to go,' she went on, 'only I don't want to leave you--it almost breaks my heart.'

'Don't, Eva, don't talk so. What makes you so sad?'

'I feel sad for our poor people. I wish, papa, they were all free. Isn't there any way to have all slaves made free?'

'That is a difficult question, dearest. There is no doubt that this way is a very bad one. A great many people think so. I do myself. I wish there was not a slave in the land. But then, I don't know what is to be done about it.'

'Papa, you are such a good man, and so noble and kind. Couldn't you go all around and try and persuade people to do right about this? When I am dead, papa, then you will think of me, and do it for my sake.'

'When you are dead, Eva! Oh, child, don't talk to me so.'

'Promise me at least, father, that Tom shall have his freedom, as soon as I am gone.'

'Yes, dear, I will do anything you wish. Only don't talk so.'

Miss Ophelia and Eva had been to church together. Miss Ophelia had gone to her room to take off her bonnet, while Eva talked to her father.

Suddenly Mr. St. Clare and his little girl heard a great noise coming from Miss Ophelia's room. A minute later she appeared, dragging Topsy behind her.

'Come out here' she was saying. 'I will tell your master.'

'What is the matter now?' asked Mr. St. Clare.

'The matter is that I cannot be plagued with this child any longer' said Miss Ophelia. 'It is past all bearing. Here, I locked her up, and gave her a hymn to learn. What does she do, but spy out where I put my key. She has gone to my wardrobe, taken a bonnet-trimming, and cut it all to pieces to make dolls' jackets! I never saw anything like it in my life.'

[Illustration]

'I don't know what to do' she went on; 'I have taught and taught. I have talked till I'm tired. I've whipped her. I've punished her in every way I can think of, and still she is as naughty as she was at first.'

'Come here, Topsy, you monkey,' said Mr. St. Clare.

Topsy came, her hard, round eyes glittering and blinking, half in fear, half in mischief.

'What makes you behave so?' said Mr. St. Clare, who could not help being amused at her funny expression.

'Spects it's my wicked heart; Miss Feely says so.'

'Don't you see how much Miss Ophelia has done for you? She says she has done everything she can think of.'

'Lor', yes, mas'r! Old missis used to say so, too. She whipped me a heap harder, and used to pull my hair and knock my head agin the door. But it didn't do me no good. I 'spect if they is to pull every hair out o' my head it wouldn't do no good neither. I's so wicked. Laws! I's nothin' but a nigger noways.'

'I shall have to give her up,' said Miss Ophelia. 'I can't have that trouble any longer.'

Eva had stood silent, listening. Now she took Topsy by the hand, and led her into a little room close by.

'What makes you so naughty, Topsy?' she said, with tears in her eyes. 'Why don't you try to be good? Don't you love anybody, Topsy?'

'Dunno nothin' 'bout love. I love candy, that's all.'

'But you love your father and mother?'

'Never had none, ye know. I telled ye that, Miss Eva.'

'Oh, I forgot,' said Eva sadly. 'But hadn't you any brother, or sister or aunt, or--'

'No, none on 'em. Never had nothin' nor nobody.'

'But, Topsy, if you would only try to be good you might--'

'Couldn't never be nothin' but a nigger, if I was ever so good,' said Topsy. 'If I could be skinned, and come white, I'd try then.'

'But people can love you, if you are black, Topsy. Miss Ophelia would love you if you were good.'

Topsy laughed scornfully.

'Don't you think so?' said Eva.

'No. She can't bear me, 'cause I'm a nigger. She'd as soon have a toad touch her. There can't nobody love niggers, and niggers can't do nothin'. I don't care,' and Topsy began whistling to show that she didn't.

'Oh, Topsy! I love you,' said Eva, laying her little, thin hand on Topsy's shoulder. 'I love you, because you haven't had any mother, or father, or friends; because you have been a poor, ill-used child. I love you, and I want you to be good. It makes me sorry to have you so naughty. I wish you would try to be good for my sake, because I'm going to die soon. I shan't be here very long.'

Topsy's round, bright eyes grew suddenly dim with tears. She did believe at last that it was possible for some one to love her. She laid her head down between her knees and wept and sobbed.

'Poor Topsy,' said Eva gently.

[Illustration]

'Oh, Miss Eva, dear Miss Eva,' cried the poor little black child, 'I will try, I will try. I never did care nothin' about it before.'

CHAPTER XVI

EVA'S LAST GOOD-BYE

It soon became quite plain to everybody that Eva was very ill indeed. She never ran about and played now, but spent most of the day lying on the sofa in her own pretty room.

Every one loved her, and tried to do things for her. Even naughty little Topsy used to bring her flowers, and try to be good for her sake.

Uncle Tom was a great deal in Eva's room. She used to get very restless, and then she liked to be carried about. He was so big and strong that he could do it very easily. He would walk about with her under the orange-trees in the garden, or sitting down on some of their old seats, would sing their favorite hymns.

He loved to do it, and could not bear to be long away from his little mistress. He gave up sleeping in his bed, and lay all night on the mat outside her door.

One day Eva made her aunt cut off a lot of her beautiful hair. Then she called all the slaves together, said good-bye to them, and gave them each a curl of her hair as a keepsake. They all cried very much, and said they would never forget her, and would try to be good for her sake.

A few nights later Miss Ophelia came quickly to Tom, as he lay on the mat outside Eva's door. 'Go, Tom,' she said, 'go as fast as you can for the doctor.'

Tom ran. But in the morning little Eva lay on her bed, cold and white, with closed eyes and folded hands.

She had gone to God.

Mr. St. Clare was very, very unhappy for a long time after Eva died. He had loved her so much, that now his life seemed quite empty without her.

He did not forget his promise to her about Tom. He went to his lawyer, and told him to begin writing out the papers that would make Tom free. It took some time to make a slave free.

'Well, Tom,' said Mr. St. Clare the day after he had spoken to his Lawyer, 'I'm going to make a free man of you. So have your trunk packed and get ready to set out for home.'

Joy shone in Uncle Tom's face. 'Bless the Lord,' he said, raising his hands to heaven.

Mr. St. Clare felt rather hurt. He did not like Tom to be so glad to leave him.

'You haven't had such a very bad time here that you need be in such rapture, Tom,' he said.

'No, no, mas'r! tan't that. It's bein' a free man! That's what I'm joyin' for.'

'Why, Tom, don't you think that you are really better off as you are?'

'No, indeed, Mas'r St. Clare,' said Tom, very decidedly; 'no, indeed.'

'But, Tom, you couldn't possibly have earned by your work such clothes and such nice, comfortable rooms and good food as I have given you.'

'I knows all that, Mas'r St. Clare. Mas'r has been too good. But, mas'r, I'd rather have poor clothes, poor house, poor everything, and have 'em mine than have the best, and have 'em any man's else. I had so, mas'r. I thinks it's nature, mas'r.'

'I suppose so, Tom. You will be going off and leaving me, in a month or two,' he said, rather discontentedly. 'Though why you shouldn't, I don't know,' he added, in a gayer voice.

[Illustration]

'Not while mas'r is in trouble,' said Tom. 'I'll stay with mas'r as long as he wants me--so as I can be of any use.'

'Not while I am in trouble, Tom?' said Mr. St. Clare, looking sadly out of the window. 'And when will my trouble be over?' Then half-smiling he turned from the window, and laid his hand on Tom's shoulder. 'Ah, Tom, you soft, silly boy,' he said. 'I won't keep you. Go home to your wife and children, and give them all my love.'

'Cousin,' said Miss Ophelia, coming into the room, 'I want to speak to you about Topsy.'

'What has she been doing now?'

[Illustration]

'Nothing; she is a much better girl than she used to be. But I want to ask you, whose is she--yours or mine?'

'Why yours, of course; I gave her to you,' said Mr. St. Clare.

'But not by law. There is no use my trying to make this child a Christian, unless I can be quite sure that she will not be sold as a slave again. If you are really willing I should have her, I want you to give me a paper saying she is mine.'

'But you think it is wicked to keep slaves. Now you want to have one of your own. Oh! shocking, cousin,' said Mr. St. Clare, who loved to tease.

'Nonsense! I only want to have her, so that I can set her free.'

'Very well,' said Mr. St. Clare, 'I will write the paper for you.' Then he sat down and began to read.

'But I want it done now,' said Miss Ophelia.

'Why are you in such a hurry?'

'Because now is the only time there ever is to do a thing in,' said Miss Ophelia. 'want to make sure of it. You may die or lose all your money. Then Topsy would be taken away and sold, in spite of anything I could say.'

Mr. St. Clare hated being made to do things when he didn't want to. However, after teasing his cousin a little more, he wrote out the paper, and Topsy belonged to Miss Ophelia. That evening Mr. St. Clare went out for a ride.

Tom saw him go, and asked if he should come too. 'No, my boy,' said Mr. St. Clare, 'I shall be back in an hour.'

Tom sat down on the verandah to wait till his master came home. While he waited, he fell asleep.

Presently he was awakened by loud knocking, and the sound of voices at the gate.

He ran to open it.

Several men were there carrying a load. It was Mr. St. Clare. He had been hurt in an accident, and was dying.

Very gently they laid him on a sofa. Nothing could be done. In a short time he had gone to join his little Eva.

CHAPTER XVII

UNCLE TOM'S NEW MASTER

There had been great grief in the house when Eva died. Now there was not only sorrow, but gloom and fear.

The kind master was dead, and the poor slaves asked themselves in despair what would happen to them now.

They were not long left in doubt. One morning Mrs. St. Clare told them that they were all to be sold. She was going back to her father's house to live, and would not want them any more.

Poor Uncle Tom! The news was a dreadful blow to him. For a few days he had been so happy in the thought of going home. Once more, after all these years, he thought he would see his dear wife and little children. Now, at one stroke, he had lost both his kind master and his hope of freedom.

Instead of going home, he was to be sent farther away than ever from his dear ones. He could not bear it. He tried to say, "Thy will be done", but bitter tears almost choked the words.

He had one hope left. He would ask Miss Ophelia to speak to Mrs. St. Clare for him.

'Mas'r St. Clare promised me my freedom, Miss Feely,' he said. 'He told me that he had begun to take it out for me. And now, perhaps, if you would be good enough to speak about it to missis, she would feel like going on with it. Seeing it was Mas'r St. Clare's wish, she might.'

'I'll speak for you, Tom, and do my best,' said Miss Ophelia. 'I haven't much hope, but I will try.'

So Miss Ophelia asked Mrs. St. Clare to set Tom free.

'Indeed, I shall do no such thing,' she replied. 'Tom is worth more than any of the other slaves. I couldn't afford to lose so much money. Besides, what does he want with his freedom? He is a great deal better off as he is.'

'But he does want it very much,' replied Miss Ophelia. 'And his master promised it to him.'

'I dare say he does want it,' replied Mrs. St. Clare. 'They all want it. Just because they are a discontented set, always wanting what they haven't got.'

'But Tom is so good and gentle, and such a splendid worker. If you sell him there is the chance of his getting a bad master.'

'Oh, I have no fear about that. Most masters are good, in spite of all the talk people make about it,' replied Mrs. St. Clare.

'Well', said Miss Ophelia at last, 'I know it was one of the last wishes of your husband that Tom should have his freedom. He promised dear little Eva that he should have it. I think you ought to do it.'

Then Mrs. St. Clare began to cry, and say every one was unkind to her, and Miss Ophelia saw it was no use saying anything more. There was only one other thing she could do. She wrote to Mrs. Shelby, telling her that poor Uncle Tom was going to be sold again. She asked her to send money to buy him back, as soon as possible.

The next day, Uncle Tom and the other slaves belonging to Mr. St. Clare were sent to market to be sold.

As Uncle Tom stood in the market-place, waiting for some one to buy him, he looked anxiously round. In the crowd of faces, he was trying to find one kind, handsome one, like Mr. St. Clare's. But there was none.

Presently a short, broad man, with a coarse, ugly face and dirty hands, came up to Tom. He looked him all over, pulled his mouth open and looked at his teeth, pinched his arms, made him walk and jump, and indeed treated him as he would a horse or cow he had wished to buy.

Tom knew from the way this man looked and spoke, that he must be bad and cruel. He prayed in his heart that this might not be his new master. But it was. His name was Legree. He bought Uncle Tom, several other men slaves, and two women. One of the women was a pretty young girl, who had never been away from her mother before, and who was very much afraid of her new master. The other was an old woman. The two women were chained together. The men, Uncle Tom among them, had heavy chains put on both hands and feet. Then Legree drove them all on to a boat which was going up the river to his plantation.

It was a sad journey. This time there was no pretty Eva, nor kind-hearted Mr. St. Clare, to bring any happiness to the poor slaves.

One of the first things Legree did was to take away all Tom's nice clothes which Mr. St. Clare had given him.

He made him put on his oldest clothes, then he sold all the others to the sailors.

Legree made his slaves unhappy in every way he could think of. Then he would come up to them and say, 'Come, come, I don't allow any sulky looks. Be cheerful, now, or--' and he would crack his whip in a way to make them tremble.

At last the weary journey was over. Legree and his slaves landed. His house was a long way from the river. The men slaves walked, while Legree and the two women drove in a cart.

Mile after mile they trudged along, over the rough road through wild and dreary country, till, hungry, thirsty, and tired, they arrived at the farm, or plantation as it was called.

Legree was not a gentleman like Mr. Shelby or Mr. St. Clare. He was a very rough kind of farmer. On his farm he grew cotton. The cotton had to be gathered and tied into bundles. Then he sold it to people who made it into calico, muslin, and other things, which we need to use and wear. Gathering cotton is very hard work.

The house Legree lived in had once been a very fine one, and had belonged to a rich gentleman. Now, it was old, neglected, and almost in ruins.

The house was bad enough, but the cabins where the slaves lived were far worse. They were roughly built of wood. The wind and the rain came through the chinks between the planks. There were no windows. The floors were nothing but the bare earth. There was no furniture of any kind in them, only heaps of dirty straw to sleep upon.

Uncle Tom felt more unhappy than ever. He had hoped at least to have a little room which he could keep clean and tidy. But this hole he did not even have to himself. He had to share it with five or six others.

Now began the saddest time of Uncle Tom's life. Every morning very early the slaves were driven out into the fields like cattle. All day long they worked hard. The burning sun blazed down upon them, making them hot and tired. Legree and his two chief slaves, called Quimbo and Sambo, marched about all the time with whips in their hands. At night they drove the slaves back again to their miserable huts.

But before they could rest, they had to grind and cook the corn for their supper. When at last they did go to sleep, they had to lie on the heaps of dirty straw instead of in comfortable beds.

CHAPTER XVIII

GEORGE AND ELIZA FIND FREEDOM

Tom Loker lay tossing and tumbling in his clean, comfortable bed at the Quaker farmhouse. A pretty, old Quaker lady, with white hair and a kind face, was nursing him. Tom Loker did not like being ill and having to lie in bed. He threw the clothes about, grumbling and using naughty words all the tune.

'I must ask thee, Thomas Loker, not to use such language,' said the nice lady, as she smoothed his sheets, and made his bed comfortable again for him.

'Well, I won't, granny, if I can help it,' he replied; 'but it is enough to make a fellow swear, it is so awfully hot.' He gave another great lunge, and made the sheets and blankets all untidy again.

'I suppose that fellow George and the girl Eliza are here,' he said, in a sulky voice, after a few minutes' silence.

'Yes, they are,' said the old lady.

'They had better get away across the lake,' said Tom Loker, 'the quicker the better.'

'Very likely they will do so,' said the old lady, calmly going on with her knitting.

'But, listen,' said Tom Loker, getting excited, 'there are people who are watching the boats for us. I don't care if I tell now. I hope they will get away, just to spite the others for going and leaving me as they did--the mean puppies, the--'

'Thomas Loker!' said the old lady.

'I tell you, granny, if you bottle a fellow up too tight he'll split,' said Tom Loker. 'But about Eliza--tell them to dress her up some way so as to alter her. We have sent a description of what she looks like to the town where the boats start from. She will be caught yet if she doesn't dress up differently.'

'I thank thee, Thomas Loker,' replied the old lady with her usual calmness. 'We will attend to that. Thank thee.' Then she went to tell George and Eliza what Tom Loker had said.

They were indeed very grateful to him, and very glad that they had not left him, as his own friends had done, to die by the roadside.

So next day Eliza cut off all her beautiful black hair, and dressed herself like a boy.

'Don't I make a pretty young fellow?' she said to George, laughing and blushing at the same time.

'You always will be pretty,' said George gravely, 'do what you will.'

'What makes you so sober?' asked Eliza, kneeling on one knee, and laying her hand on his. 'We are within twenty-four hours of Canada, they say. Only a day and a night on the lake, and then--oh, then!'

'O Eliza,' said George, holding her fast, 'that is just it. To be so near liberty, to be almost in sight of it--and then if we lost it. O Eliza, I should die.'

'Don't fear,' said Eliza hopefully. 'The good Lord would not have brought us so far if He didn't mean to save us. I seem to feel him with us, George.'

So George kissed his wife and took heart again. Then the kind old lady brought Harry in dressed as a little girl. And a very pretty girl he made too. They called him 'Harriet,' as it was so like Harry it was easy to remember.

Harry did not know his mamma, dressed as she was, and clung to the kind lady, feeling rather afraid of the strange young man. That was just as well, as he was too young to understand what this dressing-up and pretending meant, and he might have spoiled it all by calling the nice-looking young man 'Mamma.' So the kind lady was going with them, pretending to be the little girl's aunt.

When everything was ready they got into a cab, and drove to the wharf. The two young men, as they seemed to be, got out, Eliza helping the kind lady and little girl, while George saw to the luggage.

As he was standing at the office, taking the tickets, George overheard two men talking by his side.

'I've watched every one that came on board,' said one, 'and I know they are not on this boat.'

'You would scarcely know the woman from a white one,' said the other. 'The man is very fair too. He has an H burned into the palm of his hand.'

The hand with which George was taking the tickets and change trembled a little, but he turned calmly round, looked straight at the speaker, and then walked slowly away to where Eliza was waiting for him.

It was a terribly anxious time, but at last the bell rang, the boat began to move, and George and Eliza drew long sighs of relief as they saw the shore getting farther and farther away.

It was a lovely day. The blue waves of Lake Erie danced, rippling and sparkling, in the sunlight. Hour after hour the boat steamed on.

Night came; and in the morning, clear and beautiful before them, rose the shores of Canada.

George and his wife stood arm in arm as the boat came near the little town, where they were going to land. His breath came thick and short; a mist gathered before his eyes; he silently pressed the little hand that lay trembling on his arm.

The bell rang--the boat stopped.

[Illustration]

Scarcely seeing what he did, George looked out his luggage, and gathered his little party.

They were landed on the shore, and stood still till the boat had started again.

Then with tears of joy, the husband and wife, with their wondering little boy in their arms, knelt down and lifted up their hearts to God. They were free.

CHAPTER XIX

UNCLE TOM FINDS FREEDOM

The letter which Miss Ophelia wrote to Mrs. Shelby, telling her that Tom was to be sold again, was delayed a long time in the post. When at last it did arrive, Mr. Shelby was very ill, and though Mrs. Shelby felt dreadfully sorry about Uncle Tom, she could do nothing, as her husband was so ill. Soon Mr. Shelby died. Mrs. Shelby was very sad, but in her sorrow she did not forget her promise to Aunt Chloe and Uncle Tom. As soon as she could, she sold some land, and George Shelby, taking the money with him, went off to try to find Uncle Tom and buy him back again.

But by the time George Shelby, came to the place where Mr. St. Clare used to live, Uncle Tom had been sold to Legree, and no one knew where he had gone.

At last, after searching about for months, George Shelby found out where Uncle Tom was, and followed him.

Two days after Legree had been so cruel, George Shelby drove up the avenue and stopped at the door of the old house.

'I hear,' he said to Legree, 'that you bought a slave named Tom. He used to belong to my father. I have come to buy him back again.'

Legree's face grew black with anger. 'Yes, I did buy such a fellow,' he growled in rage. 'And a bad bargain it was, too! The most rebellious, saucy, impudent dog! Set up my niggers to run away. He owned to it, and, when I bid him tell me where they were, he said he knew, but wouldn't tell. He stuck to it, too, though I gave him the very worst beating I ever gave a nigger yet. I believe he is trying to die. I shouldn't wonder if he did.'

'Where is he?' said George. 'Let me see him.' His cheeks were crimson, and his eye flashed fire at the thought that Legree had dared to treat dear Uncle Tom so badly.

'He is in that shed,' said a little fellow who was holding George Shelby's horse.

George, without saying another word, hurried to the place to which the little boy pointed.

As he entered the shed, his head felt giddy and his heart sick.

Uncle Tom lay on a heap of straw on the floor, still and quiet.

'Oh, dear Uncle Tom,' cried George as he knelt beside him, 'dear Uncle Tom, do wake--do speak once more. Here's Mas'r George--your own little Mas'r George. Don't you know me?'

'Mas'r George!' said Tom, opening his eyes, and speaking in a feeble voice. 'Mas'r George? it is--it is. It's all I wanted. They haven't forgot me. It warms my soul; it does my old heart good. Now I shall die content.'

'You shan't die! you mustn't die, nor think of it. I've come to buy you and take you home,' said George, and the tears came into his eyes as he bent over poor Uncle Tom.

'Oh, Mas'r George, ye're too late. The Lord has bought me, and is going to take me home.'

[Illustration]

'Oh, don't. It breaks my heart to think of what you've suffered--lying in this old shed, too.'

'You mustn't, now, tell Chloe, poor soul, how ye found me,' said Tom, taking George by the hand. 'It would seem so dreadful to her. Only tell her ye found me going into glory, and that I couldn't stay for no one. And oh, the poor chil'en, and the baby--my old heart's been most broke for them. Tell them to follow me. Give my love to mas'r, and dear, good missis, and everybody in the place. I love them all.'

He closed his eyes, and with a smile he fell asleep. Uncle Tom too was free.

Beyond the gates of Legree's farm, George had noticed a dry, sandy knoll, shaded by a few trees. There he made Uncle Tom's grave. No stone marks his last resting-place. He needs none. God knows where he lies.

Kneeling there George bent his head, in shame and sorrow. 'Here me, dear God,' he said, 'from this day, I will do what one man can to drive out the curse of slavery from this land.'

CHAPTER XX

GEORGE SHELBY FREES HIS SLAVES

George Shelby wrote a little note to his mother, telling her that he was coming home. He tried to write about Uncle Tom, but he could not; tears blinded him, and sobs choked him.

On the day he was expected every one was in a state of bustle and excitement. Aunt Chloe in a new print dress, and clean white apron walked round the supper-table, making sure that everything was right. Her black face shone with joy at the thought of seeing Uncle Tom again.

'I'm thinking my old man won't know the boys and the baby,' she said.

Mrs. Shelby sighed. Ever since the letter had come from George she had had a very sad heart. She felt sure something must be wrong.

'He won't know the baby, my old man won't,' said Chloe again, 'Why, it's five years since they took him.'

Just then the sound of wheels was heard.

'It's Mas'r George,' cried Aunt Chloe, running to the window in great excitement.

Mrs. Shelby ran to the door. As George met her he put his arms round her, and kissed her tenderly.

Aunt Chloe stood behind anxiously looking out into the darkness.

'Oh, poor Aunt Chloe,' said George, gently taking her hard, black hand between both his own. 'I'd have given all my fortune to have brought Uncle Tom home with me; but he has gone to a better country.' Mrs. Shelby cried out as if she had been hurt, but Aunt Chloe did not make a sound.

In silence they went into the supper-room.

[Illustration:]

'There,' said Aunt Chloe, holding out her trembling hands to her mistress, 'it's just as I knew it would be. He's been sold and murdered on dem old plantations.'

Then she turned and walked proudly out of the room. Mrs. Shelby followed her softly, took one of her hands, drew her down into a chair, and sat down beside her.

'My poor, good Chloe,' she said gently.

Chloe leaned her head on her mistress's shoulder, and sobbed out, 'Oh, missis, 'scuse me, my heart's broke--dat's all.'

'I know it is,' said Mrs. Shelby, as her tears fell fast, 'and I cannot heal it.'

There was silence for a little as they wept together. Then George sat down beside Aunt Chloe, and took her hand. He talked gently to her, telling her of Uncle Tom's last loving messages. So she was comforted a little.

One morning, about a month after this, George Shelby called all his servants together, telling them he had something to say to them.

They wondered what it could be, and were very much surprised when he appeared, carrying a bundle of papers in his hand.

They were still more astonished when he gave a paper to each one, and told them all that they were free.

With sobs and tears and shouts they pressed round him, thanking and blessing him. But some of them came with anxious faces, begging him to take their free papers back again, and not to send them away.

'We don't want to be any freer than we are,' they said. 'We have always had all we wanted.'

'We don't want to leave the old place, and young mas'r and Missis, and the rest.'

[Illustration]

'My good friends,' said George, when he could get silence, 'there will be no need for you to leave me. We want quite as many servants as we did before. But now you are free men and free women. I shall pay you wages for your work, and if I die, or get into debt, you can't be taken away to be sold. That is all the difference. I want you all to stay with me, for I want to teach you how to live as free men and women ought.'

'One thing more,' added George, when the cheering and rejoicing had died away a little. 'You all remember our good old Uncle Tom. You have heard how he died, and how he sent his love to you all. It was on his grave, my friends, that I made up my mind, with God's help, never to own another slave, if it were possible to free him. I resolved that nobody, through my fault, should ever run the risk of being parted from his dear ones, and of dying far from them, as he died.

'So, when you rejoice in your freedom, remember that you owe it to dear old Uncle Tom, and pay it back in kindness to his wife and children. Think of your freedom every time you see Uncle Tom's Cabin; and let it help you to try to live as he did, and be as honest and faithful and Christian as he was.'

THE END.

CHAPTER IV. OF WHAT SORT OF PROOF THE PRINCIPLE OF UTILITY IS SUSCEPTIBLE

CHAPTER V. OF THE CONNEXION BETWEEN JUSTICE AND UTILITY

UTILITARIANISM.

CHAPTER I.

GENERAL REMARKS.

There are few circumstances among those which make up the present condition of human knowledge, more unlike what might have been expected, or more significant of the backward state in which speculation on the most important subjects still lingers, than the little progress which has been made in the decision of the controversy respecting the criterion of right and wrong. From the dawn of philosophy, the question concerning the _summum bonum_, or, what is the same thing, concerning the foundation of morality, has been accounted the main problem in speculative thought, has occupied the most gifted intellects, and divided them into sects and schools, carrying on a vigorous warfare against one another. And after more than two thousand years the same discussions continue, philosophers are still ranged under the same contending banners, and neither thinkers nor mankind at large seem nearer to being unanimous on the subject, than when the youth Socrates listened to the old Protagoras, and asserted (if Plato's dialogue be grounded on a real conversation) the theory of utilitarianism against the popular morality of the so-called sophist.

It is true that similar confusion and uncertainty, and in some cases similar discordance, exist respecting the first principles of all the sciences, not excepting that which is deemed the most certain of them, mathematics; without much impairing, generally indeed without impairing at all, the trustworthiness of the conclusions of those sciences. An apparent anomaly, the explanation of which is, that the detailed doctrines of a science are not usually deduced from, nor depend for their evidence upon, what are called its first principles. Were it not so, there would be no science more precarious, or whose conclusions were more insufficiently made out, than algebra; which derives none of its certainty from what are commonly taught to learners as its elements, since these, as laid

down by some of its most eminent teachers, are as full of fictions as English law, and of mysteries as theology. The truths which are ultimately accepted as the first principles of a science, are really the last results of metaphysical analysis, practised on the elementary notions with which the science is conversant; and their relation to the science is not that of foundations to an edifice, but of roots to a tree, which may perform their office equally well though they be never dug down to and exposed to light. But though in science the particular truths precede the general theory, the contrary might be expected to be the case with a practical art, such as morals or legislation. All action is for the sake of some end, and rules of action, it seems natural to suppose, must take their whole character and colour from the end to which they are subservient. When we engage in a pursuit, a clear and precise conception of what we are pursuing would seem to be the first thing we need, instead of the last we are to look forward to. A test of right and wrong must be the means, one would think, of ascertaining what is right or wrong, and not a consequence of having already ascertained it.

The difficulty is not avoided by having recourse to the popular theory of a natural faculty, a sense or instinct, informing us of right and wrong. For--besides that the existence of such a moral instinct is itself one of the matters in dispute--those believers in it who have any pretensions to philosophy, have been obliged to abandon the idea that it discerns what is right or wrong in the particular case in hand, as our other senses discern the sight or sound actually present. Our moral faculty, according to all those of its interpreters who are entitled to the name of thinkers, supplies us only with the general principles of moral judgments; it is a branch of our reason, not of our sensitive faculty; and must be looked to for the abstract doctrines of morality, not for perception of it in the concrete. The intuitive, no less than what may be termed the inductive, school of ethics, insists on the necessity of general laws. They both agree that the morality of an individual action is not a question of direct perception, but of the application of a law to an individual case. They recognise also, to a great extent, the same moral laws; but differ as to their evidence, and the source from which they derive their authority. According to the one opinion, the principles of morals are evident _à priori_, requiring nothing to command assent, except that the meaning of the terms be understood. According to the other doctrine, right and wrong, as well as truth and falsehood, are questions of observation and experience. But both hold equally that morality must be deduced from principles; and the intuitive school affirm as strongly as the inductive, that there is a science of morals. Yet they seldom attempt to make out a list of the _à priori_ principles which are to serve as the premises of the science; still more rarely do they make any effort to reduce those various principles to one first principle, or common ground of obligation. They either assume the ordinary precepts of morals as of _à priori_ authority, or they lay down as the common groundwork of those maxims, some generality much less obviously authoritative than the maxims themselves, and which has never succeeded in gaining popular acceptance. Yet to support their pretensions there ought either to be some one fundamental principle or law, at the root of all morality, or if there be several, there should be a determinate order of precedence among them; and the one principle, or the rule for deciding between the various principles when they conflict, ought to be self-evident.

To inquire how far the bad effects of this deficiency have been mitigated in practice, or to what extent the moral beliefs of mankind have been vitiated or made uncertain by the absence of any distinct recognition of an ultimate standard, would imply a complete survey and criticism of past and present ethical doctrine. It would, however, be easy to show that whatever steadiness or consistency these moral beliefs have attained, has been mainly due to the tacit influence of a standard not recognised. Although the non-existence of an acknowledged first principle has made ethics not so much a guide as a consecration of men's actual sentiments, still, as men's sentiments, both of favour and of aversion, are greatly influenced by what they suppose to be the effects of things upon their happiness, the principle of utility, or as Bentham latterly called it, the greatest happiness principle, has had a large share in forming the moral doctrines even of those who most scornfully reject its authority. Nor is there any school of thought which refuses to admit that the influence of actions on happiness is a most material and even predominant consideration in many of the details of morals, however unwilling to acknowledge it as the fundamental principle of morality, and the source of moral obligation. I might go much further, and say that to all those _à priori_ moralists who deem it necessary to argue at all, utilitarian arguments are indispensable. It is not my present purpose to criticise these thinkers; but I cannot help referring, for illustration, to a systematic treatise by one of the most illustrious of them, the _Metaphysics of Ethics_, by Kant. This remarkable man, whose system of thought will long remain one of the landmarks in the history of philosophical speculation, does, in the treatise in question, lay down an universal first principle as the origin and ground of moral obligation; it is this:--'So act, that the rule on which thou actest would admit of being adopted as a law by all rational beings.' But when he begins to deduce from this precept any of the actual duties of morality, he fails, almost grotesquely, to show that there would be any contradiction, any logical (not to say physical) impossibility, in the adoption by all rational beings of the most outrageously immoral rules of conduct. All he shows is that the _consequences_ of their universal adoption would be such as no one would choose to incur.

On the present occasion, I shall, without further discussion of the other theories, attempt to contribute something towards the understanding and appreciation of the Utilitarian or Happiness theory, and towards such proof as it is susceptible of. It is evident that this cannot be proof in the ordinary and popular meaning of the term. Questions of ultimate ends are not amenable to direct proof. Whatever can be proved to be good, must be so by being shown to be a means to something admitted to be good without proof. The medical art is proved to be good, by its conducing to health; but how is it possible to prove that health is good? The art of music is good, for the reason, among others, that it produces pleasure; but what proof is it possible to give that pleasure is good? If, then, it is asserted that there is a comprehensive formula, including all things which are in themselves good, and that whatever else is good, is not so as an end, but as a mean, the formula may be accepted or rejected, but is not a subject of what is commonly understood by proof. We are not, however, to infer that its acceptance or rejection must depend on blind impulse, or arbitrary choice. There is a larger meaning of the word proof, in which this question is as amenable to it as any other of the disputed questions of philosophy. The subject is within the cognizance of the rational faculty; and neither does that faculty deal with it solely in the way of intuition. Considerations may be presented capable of determining the intellect either to give or withhold its assent to the doctrine; and this is equivalent to proof.

We shall examine presently of what nature are these considerations; in what manner they apply to the case, and what rational grounds, therefore, can be given for accepting or rejecting the utilitarian formula. But it is a preliminary condition of rational acceptance or rejection, that the formula should be correctly understood. I believe that the very imperfect notion ordinarily formed of its meaning, is the chief obstacle which impedes its reception; and that could it be cleared, even from only the grosser misconceptions, the question would be greatly simplified, and a large proportion of its difficulties removed. Before, therefore, I attempt to enter into the philosophical grounds which can be given for assenting to the utilitarian standard, I shall offer some illustrations of the doctrine itself; with the view of showing more clearly what it is, distinguishing it from what it is not, and disposing of such of the practical objections to it as either originate in, or are closely connected with, mistaken interpretations of its meaning. Having thus prepared the ground, I shall afterwards endeavour to throw such light as I can upon the question, considered as one of philosophical theory.

CHAPTER II.

WHAT UTILITARIANISM IS.

A passing remark is all that needs be given to the ignorant blunder of supposing that those who stand up for utility as the test of right and wrong, use the term in that restricted and merely colloquial sense in which utility is opposed to pleasure. An apology is due to the philosophical opponents of utilitarianism, for even the momentary appearance of confounding them with any one capable of so absurd a misconception; which is the more extraordinary, inasmuch as the contrary accusation, of referring everything to pleasure, and that too in its grossest form, is another of the common charges against utilitarianism: and, as has been pointedly remarked by an able writer, the same sort of persons, and often the very same persons, denounce the theory "as impracticably dry when the word utility precedes the word pleasure, and as too practicably voluptuous when the word pleasure precedes the word utility." Those who know anything about the matter are aware that every writer, from Epicurus to Bentham, who maintained the theory of utility, meant by it, not something to be contradistinguished from pleasure, but pleasure itself, together with exemption from pain; and instead of opposing the useful to the agreeable or the ornamental, have always declared that the useful means these, among other things. Yet the common herd, including the herd of writers, not only in newspapers and periodicals, but in books of weight and pretension, are perpetually falling into this shallow mistake. Having caught up the word utilitarian, while knowing nothing whatever about it but its sound, they habitually express by it the rejection, or the neglect, of pleasure in some of its forms; of beauty, of ornament, or of amusement. Nor is the term thus ignorantly misapplied solely in disparagement, but occasionally in compliment; as though it implied superiority to frivolity and the mere pleasures of the moment. And this perverted use is the only one in which the word is popularly known, and the one from which the new generation are acquiring their sole notion of its meaning. Those who introduced the word, but who had for many years discontinued it as a distinctive appellation, may well feel themselves called upon to resume it, if by doing so they can hope to contribute anything towards rescuing it from this utter degradation.[A]

The creed which accepts as the foundation of morals, Utility, or the Greatest Happiness Principle, holds that actions are right in proportion as they tend to promote happiness, wrong as they tend to produce the reverse of happiness. By happiness is intended pleasure, and the absence of pain; by unhappiness, pain, and the privation of pleasure. To give a clear view of the moral standard set up by the theory, much more requires to be said; in particular, what things it includes in the ideas of pain and pleasure; and to

what extent this is left an open question. But these supplementary explanations do not affect the theory of life on which this theory of morality is grounded--namely, that pleasure, and freedom from pain, are the only things desirable as ends; and that all desirable things (which are as numerous in the utilitarian as in any other scheme) are desirable either for the pleasure inherent in themselves, or as means to the promotion of pleasure and the prevention of pain.

Now, such a theory of life excites in many minds, and among them in some of the most estimable in feeling and purpose, inveterate dislike. To suppose that life has (as they express it) no higher end than pleasure--no better and nobler object of desire and pursuit--they designate as utterly mean and grovelling; as a doctrine worthy only of swine, to whom the followers of Epicurus were, at a very early period, contemptuously likened; and modern holders of the doctrine are occasionally made the subject of equally polite comparisons by its German, French, and English assailants.

When thus attacked, the Epicureans have always answered, that it is not they, but their accusers, who represent human nature in a degrading light; since the accusation supposes human beings to be capable of no pleasures except those of which swine are capable. If this supposition were true, the charge could not be gainsaid, but would then be no longer an imputation; for if the sources of pleasure were precisely the same to human beings and to swine, the rule of life which is good enough for the one would be good enough for the other. The comparison of the Epicurean life to that of beasts is felt as degrading, precisely because a beast's pleasures do not satisfy a human being's conceptions of happiness. Human beings have faculties more elevated than the animal appetites, and when once made conscious of them, do not regard anything as happiness which does not include their gratification. I do not, indeed, consider the Epicureans to have been by any means faultless in drawing out their scheme of consequences from the utilitarian principle. To do this in any sufficient manner, many Stoic, as well as Christian elements require to be included. But there is no known Epicurean theory of life which does not assign to the pleasures of the intellect; of the feelings and imagination, and of the moral sentiments, a much higher value as pleasures than to those of mere sensation. It must be admitted, however, that utilitarian writers in general have placed the superiority of mental over bodily pleasures chiefly in the greater permanency, safety, uncostliness, &c., of the former--that is, in their circumstantial advantages rather than in their intrinsic nature. And on all these points utilitarians have fully proved their case; but they might have taken the other, and, as it may be called, higher ground, with entire consistency. It is quite compatible with the principle of utility to recognise the fact, that some _kinds_ of pleasure are more desirable and more valuable than others. It would be absurd that while, in estimating all other things, quality is considered as well as quantity, the estimation of pleasures should be supposed to depend on quantity alone.

If I am asked, what I mean by difference of quality in pleasures, or what makes one pleasure more valuable than another, merely as a pleasure, except its being greater in amount, there is but one possible answer. Of two pleasures, if there be one to which all or almost all who have experience of both give a decided preference, irrespective of any feeling of moral obligation to prefer it, that is the more desirable pleasure. If one of the two is, by those who are competently acquainted with both, placed so far above the other that they prefer it, even though knowing it to be attended with a greater amount of discontent, and would not resign it for any quantity of the other pleasure which their nature is capable of, we are justified in ascribing to the preferred enjoyment a superiority in quality, so far outweighing quantity as to render it, in comparison, of small account.

Now it is an unquestionable fact that those who are equally acquainted with, and equally capable of appreciating and enjoying, both, do give a most marked preference to the manner of existence which employs their higher faculties. Few human creatures would consent to be changed into any of the lower animals, for a promise of the fullest allowance of a beast's pleasures; no intelligent human being would consent to be a fool, no instructed person would be an ignoramus, no person of feeling and conscience would be selfish and base, even though they should be persuaded that the fool, the dunce, or the rascal is better satisfied with his lot than they are with theirs. They would not resign what they possess more than he, for the most complete satisfaction of all the desires which they have in common with him. If they ever fancy they would, it is only in cases of unhappiness so extreme, that to escape from it they would exchange their lot for almost any other, however undesirable in their own eyes. A being of higher faculties requires more to make him happy, is capable probably of more acute suffering, and is certainly accessible to it at more points, than one of an inferior type; but in spite of these liabilities, he can never really wish to sink into what he feels to be a lower grade of existence. We may give what explanation we please of this unwillingness; we may attribute it to pride, a name which is given indiscriminately to some of the most and to some of the least estimable feelings of which mankind are capable; we may refer it to the love of liberty and personal independence, an appeal to which was with the Stoics one of the most effective means for the inculcation of it; to the love of power, or to the love of excitement, both of which do really enter into and contribute to it: but its most appropriate appellation is a sense of dignity, which all human beings possess in one form or other, and in some, though by no means in exact, proportion to their higher faculties, and which is so essential a part of the happiness of those in whom

it is strong, that nothing which conflicts with it could be, otherwise than momentarily, an object of desire to them. Whoever supposes that this preference takes place at a sacrifice of happiness-that the superior being, in anything like equal circumstances, is not happier than the inferior-confounds the two very different ideas, of happiness, and content. It is indisputable that the being whose capacities of enjoyment are low, has the greatest chance of having them fully satisfied; and a highly-endowed being will always feel that any happiness which he can look for, as the world is constituted, is imperfect. But he can learn to bear its imperfections, if they are at all bearable; and they will not make him envy the being who is indeed unconscious of the imperfections, but only because he feels not at all the good which those imperfections qualify. It is better to be a human being dissatisfied than a pig satisfied; better to be Socrates dissatisfied than a fool satisfied. And if the fool, or the pig, is of a different opinion, it is because they only know their own side of the question. The other party to the comparison knows both sides.

It may be objected, that many who are capable of the higher pleasures, occasionally, under the influence of temptation, postpone them to the lower. But this is quite compatible with a full appreciation of the intrinsic superiority of the higher. Men often, from infirmity of character, make their election for the nearer good, though they know it to be the less valuable; and this no less when the choice is between two bodily pleasures, than when it is between bodily and mental. They pursue sensual indulgences to the injury of health, though perfectly aware that health is the greater good. It may be further objected, that many who begin with youthful enthusiasm for everything noble, as they advance in years sink into indolence and selfishness. But I do not believe that those who undergo this very common change, voluntarily choose the lower description of pleasures in preference to the higher. I believe that before they devote themselves exclusively to the one, they have already become incapable of the other. Capacity for the nobler feelings is in most natures a very tender plant, easily killed, not only by hostile influences, but by mere want of sustenance; and in the majority of young persons it speedily dies away if the occupations to which their position in life has devoted them, and the society into which it has thrown them, are not favourable to keeping that higher capacity in exercise. Men lose their high aspirations as they lose their intellectual tastes, because they have not time or opportunity for indulging them; and they addict themselves to inferior pleasures, not because they deliberately prefer them, but because they are either the only ones to which they have access, or the only ones which they are any longer capable of enjoying. It may be questioned whether any one who has remained equally susceptible to both classes of pleasures, ever knowingly and calmly preferred the lower; though many, in all ages, have broken down in an ineffectual attempt to combine both.

From this verdict of the only competent judges, I apprehend there can be no appeal. On a question which is the best worth having of two pleasures, or which of two modes of existence is the most grateful to the feelings, apart from its moral attributes and from its consequences, the judgment of those who are qualified by knowledge of both, or, if they differ, that of the majority among them, must be admitted as final. And there needs be the less hesitation to accept this judgment respecting the quality of pleasures, since there is no other tribunal to be referred to even on the question of quantity. What means are there of determining which is the acutest of two pains, or the intensest of two pleasurable sensations, except the general suffrage of those who are familiar with both? Neither pains nor pleasures are homogeneous, and pain is always heterogeneous with pleasure. What is there to decide whether a particular pleasure is worth purchasing at the cost of a particular pain, except the feelings and judgment of the experienced? When, therefore, those feelings and judgment declare the pleasures derived from the higher faculties to be preferable _in kind_, apart from the question of intensity, to those of which the animal nature, disjoined from the higher faculties, is susceptible, they are entitled on this subject to the same regard.

I have dwelt on this point, as being a necessary part of a perfectly just conception of Utility or Happiness, considered as the directive rule of human conduct. But it is by no means an indispensable condition to the acceptance of the utilitarian standard; for that standard is not the agent's own greatest happiness, but the greatest amount of happiness altogether; and if it may possibly be doubted whether a noble character is always the happier for its nobleness, there can be no doubt that it makes other people happier, and that the world in general is immensely a gainer by it. Utilitarianism, therefore, could only attain its end by the general cultivation of nobleness of character, even if each individual were only benefited by the nobleness of others, and his own, so far as happiness is concerned, were a sheer deduction from the benefit. But the bare enunciation of such an absurdity as this last, renders refutation superfluous.

According to the Greatest Happiness Principle, as above explained, the ultimate end, with reference to and for the sake of which all other things are desirable (whether we are considering our own good or that of other people), is an existence exempt as far as possible from pain, and as rich as possible in enjoyments, both in point of quantity and quality; the test of quality, and the rule for measuring it against quantity, being the preference felt by those who, in their opportunities of experience, to which must be added their habits of self-consciousness and self-observation, are best furnished with the means of comparison. This, being, according to

the utilitarian opinion, the end of human action, is necessarily also the standard of morality; which may accordingly be defined, the rules and precepts for human conduct, by the observance of which an existence such as has been described might be, to the greatest extent possible, secured to all mankind; and not to them only, but, so far as the nature of things admits, to the whole sentient creation.

Against this doctrine, however, arises another class of objectors, who say that happiness, in any form, cannot be the rational purpose of human life and action; because, in the first place, it is unattainable: and they contemptuously ask, What right hast thou to be happy? a question which Mr. Carlyle clenches by the addition, What right, a short time ago, hadst thou even _to be_? Next, they say, that men can do _without_ happiness; that all noble human beings have felt this, and could not have become noble but by learning the lesson of Entsagen, or renunciation; which lesson, thoroughly learnt and submitted to, they affirm to be the beginning and necessary condition of all virtue.

The first of these objections would go to the root of the matter were it well founded; for if no happiness is to be had at all by human beings, the attainment of it cannot be the end of morality, or of any rational conduct. Though, even in that case, something might still be said for the utilitarian theory; since utility includes not solely the pursuit of happiness, but the prevention or mitigation of unhappiness; and if the former aim be chimerical, there will be all the greater scope and more imperative need for the latter, so long at least as mankind think fit to live, and do not take refuge in the simultaneous act of suicide recommended under certain conditions by Novalis. When, however, it is thus positively asserted to be impossible that human life should be happy, the assertion, if not something like a verbal quibble, is at least an exaggeration. If by happiness be meant a continuity of highly pleasurable excitement, it is evident enough that this is impossible. A state of exalted pleasure lasts only moments, or in some cases, and with some intermissions, hours or days, and is the occasional brilliant flash of enjoyment, not its permanent and steady flame. Of this the philosophers who have taught that happiness is the end of life were as fully aware as those who taunt them. The happiness which they meant was not a life of rapture, but moments of such, in an existence made up of few and transitory pains, many and various pleasures, with a decided predominance of the active over the passive, and having as the foundation of the whole, not to expect more from life than it is capable of bestowing. A life thus composed, to those who have been fortunate enough to obtain it, has always appeared worthy of the name of happiness. And such an existence is even now the lot of many, during some considerable portion of their lives. The present wretched education, and wretched social arrangements, are the only real hindrance to its being attainable by almost all.

The objectors perhaps may doubt whether human beings, if taught to consider happiness as the end of life, would be satisfied with such a moderate share of it. But great numbers of mankind have been satisfied with much less. The main constituents of a satisfied life appear to be two, either of which by itself is often found sufficient for the purpose: tranquillity, and excitement. With much tranquillity, many find that they can be content with very little pleasure: with much excitement, many can reconcile themselves to a considerable quantity of pain. There is assuredly no inherent impossibility in enabling even the mass of mankind to unite both; since the two are so far from being incompatible that they are in natural alliance, the prolongation of either being a preparation for, and exciting a wish for, the other. It is only those in whom indolence amounts to a vice, that do not desire excitement after an interval of repose; it is only those in whom the need of excitement is a disease, that feel the tranquillity which follows excitement dull and insipid, instead of pleasurable in direct proportion to the excitement which preceded it. When people who are tolerably fortunate in their outward lot do not find in life sufficient enjoyment to make it valuable to them, the cause generally is, caring for nobody but themselves. To those who have neither public nor private affections, the excitements of life are much curtailed, and in any case dwindle in value as the time approaches when all selfish interests must be terminated by death: while those who leave after them objects of personal affection, and especially those who have also cultivated a fellow-feeling with the collective interests of mankind, retain as lively an interest in life on the eve of death as in the vigour of youth and health. Next to selfishness, the principal cause which makes life unsatisfactory, is want of mental cultivation. A cultivated mind--I do not mean that of a philosopher, but any mind to which the fountains of knowledge have been opened, and which has been taught, in any tolerable degree, to exercise its faculties--finds sources of inexhaustible interest in all that surrounds it; in the objects of nature, the achievements of art, the imaginations of poetry, the incidents of history, the ways of mankind past and present, and their prospects in the future. It is possible, indeed, to become indifferent to all this, and that too without having exhausted a thousandth part of it; but only when one has had from the beginning no moral or human interest in these things, and has sought in them only the gratification of curiosity.

Now there is absolutely no reason in the nature of things why an amount of mental culture sufficient to give an intelligent interest in these objects of contemplation, should not be the inheritance of every one born in a civilized country. As little is there an inherent necessity that any human being should be a selfish egotist, devoid of every feeling or care but those which centre in his own

miserable individuality. Something far superior to this is sufficiently common even now, to give ample earnest of what the human species may be made. Genuine private affections, and a sincere interest in the public good, are possible, though in unequal degrees, to every rightly brought-up human being. In a world in which there is so much to interest, so much to enjoy, and so much also to correct and improve, every one who has this moderate amount of moral and intellectual requisites is capable of an existence which may be called enviable; and unless such a person, through bad laws, or subjection to the will of others, is denied the liberty to use the sources of happiness within his reach, he will not fail to find this enviable existence, if he escape the positive evils of life, the great sources of physical and mental suffering--such as indigence, disease, and the unkindness, worthlessness, or premature loss of objects of affection. The main stress of the problem lies, therefore, in the contest with these calamities, from which it is a rare good fortune entirely to escape; which, as things now are, cannot be obviated, and often cannot be in any material degree mitigated. Yet no one whose opinion deserves a moment's consideration can doubt that most of the great positive evils of the world are in themselves removable, and will, if human affairs continue to improve, be in the end reduced within narrow limits. Poverty, in any sense implying suffering, may be completely extinguished by the wisdom of society, combined with the good sense and providence of individuals. Even that most intractable of enemies, disease, may be indefinitely reduced in dimensions by good physical and moral education, and proper control of noxious influences; while the progress of science holds out a promise for the future of still more direct conquests over this detestable foe. And every advance in that direction relieves us from some, not only of the chances which cut short our own lives, but, what concerns us still more, which deprive us of those in whom our happiness is wrapt up. As for vicissitudes of fortune, and other disappointments connected with worldly circumstances, these are principally the effect either of gross imprudence, of ill-regulated desires, or of bad or imperfect social institutions. All the grand sources, in short, of human suffering are in a great degree, many of them almost entirely, conquerable by human care and effort; and though their removal is grievously slow--though a long succession of generations will perish in the breach before the conquest is completed, and this world becomes all that, if will and knowledge were not wanting, it might easily be made--yet every mind sufficiently intelligent and generous to bear a part, however small and unconspicuous, in the endeavour, will draw a noble enjoyment from the contest itself, which he would not for any bribe in the form of selfish indulgence consent to be without.

And this leads to the true estimation of what is said by the objectors concerning the possibility, and the obligation, of learning to do without happiness. Unquestionably it is possible to do without happiness; it is done involuntarily by nineteen-twentieths of mankind, even in those parts of our present world which are least deep in barbarism; and it often has to be done voluntarily by the hero or the martyr, for the sake of something which he prizes more than his individual happiness. But this something, what is it, unless the happiness of others, or some of the requisites of happiness? It is noble to be capable of resigning entirely one's own portion of happiness, or chances of it: but, after all, this self-sacrifice must be for some end; it is not its own end; and if we are told that its end is not happiness, but virtue, which is better than happiness, I ask, would the sacrifice be made if the hero or martyr did not believe that it would earn for others immunity from similar sacrifices? Would it be made, if he thought that his renunciation of happiness for himself would produce no fruit for any of his fellow creatures, but to make their lot like his, and place them also in the condition of persons who have renounced happiness? All honour to those who can abnegate for themselves the personal enjoyment of life, when by such renunciation they contribute worthily to increase the amount of happiness in the world; but he who does it, or professes to do it, for any other purpose, is no more deserving of admiration than the ascetic mounted on his pillar. He may be an inspiriting proof of what men _can_ do, but assuredly not an example of what they _should_.

Though it is only in a very imperfect state of the world's arrangements that any one can best serve the happiness of others by the absolute sacrifice of his own, yet so long as the world is in that imperfect state, I fully acknowledge that the readiness to make such a sacrifice is the highest virtue which can be found in man. I will add, that in this condition of the world, paradoxical as the assertion may be, the conscious ability to do without happiness gives the best prospect of realizing such happiness as is attainable. For nothing except that consciousness can raise a person above the chances of life, by making him feel that, let fate and fortune do their worst, they have not power to subdue him: which, once felt, frees him from excess of anxiety concerning the evils of life, and enables him, like many a Stoic in the worst times of the Roman Empire, to cultivate in tranquillity the sources of satisfaction accessible to him, without concerning himself about the uncertainty of their duration, any more than about their inevitable end.

Meanwhile, let utilitarians never cease to claim the morality of self-devotion as a possession which belongs by as good a right to them, as either to the Stoic or to the Transcendentalist. The utilitarian morality does recognise in human beings the power of sacrificing their own greatest good for the good of others. It only refuses to admit that the sacrifice is itself a good. A sacrifice which does not increase, or tend to increase, the sum total of happiness, it considers as wasted. The only self-renunciation which it applauds, is devotion to the happiness, or to some of the means of happiness, of others; either of mankind collectively, or of individuals within the limits imposed by the collective interests of mankind.

I must again repeat, what the assailants of utilitarianism seldom have the justice to acknowledge, that the happiness which forms the utilitarian standard of what is right in conduct, is not the agent's own happiness, but that of all concerned. As between his own happiness and that of others, utilitarianism requires him to be as strictly impartial as a disinterested and benevolent spectator. In the golden rule of Jesus of Nazareth, we read the complete spirit of the ethics of utility. To do as one would be done by, and to love one's neighbour as oneself, constitute the ideal perfection of utilitarian morality. As the means of making the nearest approach to this ideal, utility would enjoin, first, that laws and social arrangements should place the happiness, or (as speaking practically it may be called) the interest, of every individual, as nearly as possible in harmony with the interest of the whole; and secondly, that education and opinion, which have so vast a power over human character, should so use that power as to establish in the mind of every individual an indissoluble association between his own happiness and the good of the whole; especially between his own happiness and the practice of such modes of conduct, negative and positive, as regard for the universal happiness prescribes: so that not only he may be unable to conceive the possibility of happiness to himself, consistently with conduct opposed to the general good, but also that a direct impulse to promote the general good may be in every individual one of the habitual motives of action, and the sentiments connected therewith may fill a large and prominent place in every human being's sentient existence. If the impugners of the utilitarian morality represented it to their own minds in this its true character, I know not what recommendation possessed by any other morality they could possibly affirm to be wanting to it: what more beautiful or more exalted developments of human nature any other ethical system can be supposed to foster, or what springs of action, not accessible to the utilitarian, such systems rely on for giving effect to their mandates.

The objectors to utilitarianism cannot always be charged with representing it in a discreditable light. On the contrary, those among them who entertain anything like a just idea of its disinterested character, sometimes find fault with its standard as being too high for humanity. They say it is exacting too much to require that people shall always act from the inducement of promoting the general interests of society. But this is to mistake the very meaning of a standard of morals, and to confound the rule of action with the motive of it. It is the business of ethics to tell us what are our duties, or by what test we may know them; but no system of ethics requires that the sole motive of all we do shall be a feeling of duty; on the contrary, ninety-nine hundredths of all our actions are done from other motives, and rightly so done, if the rule of duty does not condemn them. It is the more unjust to utilitarianism that this particular misapprehension should be made a ground of objection to it, inasmuch as utilitarian moralists have gone beyond almost all others in affirming that the motive has nothing to do with the morality of the action, though much with the worth of the agent. He who saves a fellow creature from drowning does what is morally right, whether his motive be duty, or the hope of being paid for his trouble: he who betrays the friend that trusts him, is guilty of a crime, even if his object be to serve another friend to whom he is under greater obligations.[B] But to speak only of actions done from the motive of duty, and in direct obedience to principle: it is a misapprehension of the utilitarian mode of thought, to conceive it as implying that people should fix their minds upon so wide a generality as the world, or society at large. The great majority of good actions are intended, not for the benefit of the world, but for that of individuals, of which the good of the world is made up; and the thoughts of the most virtuous man need not on these occasions travel beyond the particular persons concerned, except so far as is necessary to assure himself that in benefiting them he is not violating the rights--that is, the legitimate and authorized expectations--of any one else. The multiplication of happiness is, according to the utilitarian ethics, the object of virtue: the occasions on which any person (except one in a thousand) has it in his power to do this on an extended scale, in other words, to be a public benefactor, are but exceptional; and on these occasions alone is he called on to consider public utility; in every other case, private utility, the interest or happiness of some few persons, is all he has to attend to. Those alone the influence of whose actions extends to society in general, need concern themselves habitually about so large an object. In the case of abstinences indeed--of things which people forbear to do, from moral considerations, though the consequences in the particular case might be beneficial--it would be unworthy of an intelligent agent not to be consciously aware that the action is of a class which, if practised generally, would be generally injurious, and that this is the ground of the obligation to abstain from it. The amount of regard for the public interest implied in this recognition, is no greater than is demanded by every system of morals; for they all enjoin to abstain from whatever is manifestly pernicious to society.

The same considerations dispose of another reproach against the doctrine of utility, founded on a still grosser misconception of the purpose of a standard of morality, and of the very meaning of the words right and wrong. It is often affirmed that utilitarianism renders men cold and unsympathizing; that it chills their moral feelings towards individuals; that it makes them regard only the dry and hard consideration of the consequences of actions, not taking into their moral estimate the qualities from which those actions emanate. If the assertion means that they do not allow their judgment respecting the rightness or wrongness of an action to be influenced by their opinion of the qualities of the person who does it, this is a complaint not against utilitarianism, but against having any standard of morality at all; for certainly no known ethical standard decides an action to be good or bad because it is done by a

good or a bad man, still less because done by an amiable, a brave, or a benevolent man or the contrary. These considerations are relevant, not to the estimation of actions, but of persons; and there is nothing in the utilitarian theory inconsistent with the fact that there are other things which interest us in persons besides the rightness and wrongness of their actions. The Stoics, indeed, with the paradoxical misuse of language which was part of their system, and by which they strove to raise themselves above all concern about anything but virtue, were fond of saying that he who has that has everything; that he, and only he, is rich, is beautiful, is a king. But no claim of this description is made for the virtuous man by the utilitarian doctrine. Utilitarians are quite aware that there are other desirable possessions and qualities besides virtue, and are perfectly willing to allow to all of them their full worth. They are also aware that a right action does not necessarily indicate a virtuous character, and that actions which are blameable often proceed from qualities entitled to praise. When this is apparent in any particular case, it modifies their estimation, not certainly of the act, but of the agent. I grant that they are, notwithstanding, of opinion, that in the long run the best proof of a good character is good actions; and resolutely refuse to consider any mental disposition as good, of which the predominant tendency is to produce bad conduct. This makes them unpopular with many people; but it is an unpopularity which they must share with every one who regards the distinction between right and wrong in a serious light; and the reproach is not one which a conscientious utilitarian need be anxious to repel.

If no more be meant by the objection than that many utilitarians look on the morality of actions, as measured by the utilitarian standard, with too exclusive a regard, and do not lay sufficient stress upon the other beauties of character which go towards making a human being loveable or admirable, this may be admitted. Utilitarians who have cultivated their moral feelings, but not their sympathies nor their artistic perceptions, do fall into this mistake; and so do all other moralists under the same conditions. What can be said in excuse for other moralists is equally available for them, namely, that if there is to be any error, it is better that it should be on that side. As a matter of fact, we may affirm that among utilitarians as among adherents of other systems, there is every imaginable degree of rigidity and of laxity in the application of their standard: some are even puritanically rigorous, while others are as indulgent as can possibly be desired by sinner or by sentimentalist. But on the whole, a doctrine which brings prominently forward the interest that mankind have in the repression and prevention of conduct which violates the moral law, is likely to be inferior to no other in turning the sanctions of opinion against such violations. It is true, the question, What does violate the moral law? is one on which those who recognise different standards of morality are likely now and then to differ. But difference of opinion on moral questions was not first introduced into the world by utilitarianism, while that doctrine does supply, if not always an easy, at all events a tangible and intelligible mode of deciding such differences.

* * * * *

It may not be superfluous to notice a few more of the common misapprehensions of utilitarian ethics, even those which are so obvious and gross that it might appear impossible for any person of candour and intelligence to fall into them: since persons, even of considerable mental endowments, often give themselves so little trouble to understand the bearings of any opinion against which they entertain a prejudice, and men are in general so little conscious of this voluntary ignorance as a defect, that the vulgarest misunderstandings of ethical doctrines are continually met with in the deliberate writings of persons of the greatest pretensions both to high principle and to philosophy. We not uncommonly hear the doctrine of utility inveighed against as a _godless_ doctrine. If it be necessary to say anything at all against so mere an assumption, we may say that the question depends upon what idea we have formed of the moral character of the Deity. If it be a true belief that God desires, above all things, the happiness of his creatures, and that this was his purpose in their creation, utility is not only not a godless doctrine, but more profoundly religious than any other. If it be meant that utilitarianism does not recognise the revealed will of God as the supreme law of morals, I answer, that an utilitarian who believes in the perfect goodness and wisdom of God, necessarily believes that whatever God has thought fit to reveal on the subject of morals, must fulfil the requirements of utility in a supreme degree. But others besides utilitarians have been of opinion that the Christian revelation was intended, and is fitted, to inform the hearts and minds of mankind with a spirit which should enable them to find for themselves what is right, and incline them to do it when found, rather than to tell them, except in a very general way, what it is: and that we need a doctrine of ethics, carefully followed out, to _interpret_ to us the will of God. Whether this opinion is correct or not, it is superfluous here to discuss; since whatever aid religion, either natural or revealed, can afford to ethical investigation, is as open to the utilitarian moralist as to any other. He can use it as the testimony of God to the usefulness or hurtfulness of any given course of action, by as good a right as others can use it for the indication of a transcendental law, having no connexion with usefulness or with happiness.

Again, Utility is often summarily stigmatized as an immoral doctrine by giving it the name of Expediency, and taking advantage of the popular use of that term to contrast it with Principle. But the Expedient, in the sense in which it is opposed to the Right,

generally means that which is expedient for the particular interest of the agent himself: as when a minister sacrifices the interest of his country to keep himself in place. When it means anything better than this, it means that which is expedient for some immediate object, some temporary purpose, but which violates a rule whose observance is expedient in a much higher degree. The Expedient, in this sense, instead of being the same thing with the useful, is a branch of the hurtful. Thus, it would often be expedient, for the purpose of getting over some momentary embarrassment, or attaining some object immediately useful to ourselves or others, to tell a lie. But inasmuch as the cultivation in ourselves of a sensitive feeling on the subject of veracity, is one of the most useful, and the enfeeblement of that feeling one of the most hurtful, things to which our conduct can be instrumental; and inasmuch as any, even unintentional, deviation from truth, does that much towards weakening the trustworthiness of human assertion, which is not only the principal support of all present social well-being, but the insufficiency of which does more than any one thing that can be named to keep back civilisation, virtue, everything on which human happiness on the largest scale depends; we feel that the violation, for a present advantage, of a rule of such transcendent expediency, is not expedient, and that he who, for the sake of a convenience to himself or to some other individual, does what depends on him to deprive mankind of the good, and inflict upon them the evil, involved in the greater or less reliance which they can place in each other's word, acts the part of one of their worst enemies. Yet that even this rule, sacred as it is, admits of possible exceptions, is acknowledged by all moralists; the chief of which is when the withholding of some fact (as of information from a male-factor, or of bad news from a person dangerously ill) would preserve some one (especially a person other than oneself) from great and unmerited evil, and when the withholding can only be effected by denial. But in order that the exception may not extend itself beyond the need, and may have the least possible effect in weakening reliance on veracity, it ought to be recognized, and, if possible, its limits defined; and if the principle of utility is good for anything, it must be good for weighing these conflicting utilities against one another, and marking out the region within which one or the other preponderates.

Again, defenders of utility often find themselves called upon to reply to such objections as this--that there is not time, previous to action, for calculating and weighing the effects of any line of conduct on the general happiness. This is exactly as if any one were to say that it is impossible to guide our conduct by Christianity, because there is not time, on every occasion on which anything has to be done, to read through the Old and New Testaments. The answer to the objection is, that there has been ample time, namely, the whole past duration of the human species. During all that time mankind have been learning by experience the tendencies of actions; on which experience all the prudence, as well as all the morality of life, is dependent. People talk as if the commencement of this course of experience had hitherto been put off, and as if, at the moment when some man feels tempted to meddle with the property or life of another, he had to begin considering for the first time whether murder and theft are injurious to human happiness. Even then I do not think that he would find the question very puzzling; but, at all events, the matter is now done to his hand. It is truly a whimsical supposition, that if mankind were agreed in considering utility to be the test of morality, they would remain without any agreement as to what is useful, and would take no measures for having their notions on the subject taught to the young, and enforced by law and opinion. There is no difficulty in proving any ethical standard whatever to work ill, if we suppose universal idiocy to be conjoined with it, but on any hypothesis short of that, mankind must by this time have acquired positive beliefs as to the effects of some actions on their happiness; and the beliefs which have thus come down are the rules of morality for the multitude, and for the philosopher until he has succeeded in finding better. That philosophers might easily do this, even now, on many subjects; that the received code of ethics is by no means of divine right; and that mankind have still much to learn as to the effects of actions on the general happiness, I admit, or rather, earnestly maintain. The corollaries from the principle of utility, like the precepts of every practical art, admit of indefinite improvement, and, in a progressive state of the human mind, their improvement is perpetually going on. But to consider the rules of morality as improvable, is one thing; to pass over the intermediate generalizations entirely, and endeavour to test each individual action directly by the first principle, is another. It is a strange notion that the acknowledgment of a first principle is inconsistent with the admission of secondary ones. To inform a traveller respecting the place of his ultimate destination, is not to forbid the use of landmarks and direction-posts on the way. The proposition that happiness is the end and aim of morality, does not mean that no road ought to be laid down to that goal, or that persons going thither should not be advised to take one direction rather than another. Men really ought to leave off talking a kind of nonsense on this subject, which they would neither talk nor listen to on other matters of practical concernment. Nobody argues that the art of navigation is not founded on astronomy, because sailors cannot wait to calculate the Nautical Almanack. Being rational creatures, they go to sea with it ready calculated; and all rational creatures go out upon the sea of life with their minds made up on the common questions of right and wrong, as well as on many of the far more difficult questions of wise and foolish. And this, as long as foresight is a human quality, it is to be presumed they will continue to do. Whatever we adopt as the fundamental principle of morality, we require subordinate principles to apply it by: the impossibility of doing without them, being common to all systems, can afford no argument against any one in particular: but gravely to argue as if no such secondary principles could be had, and as if mankind had remained

till now, and always must remain, without drawing any general conclusions from the experience of human life, is as high a pitch, I think, as absurdity has ever reached in philosophical controversy.

The remainder of the stock arguments against utilitarianism mostly consist in laying to its charge the common infirmities of human nature, and the general difficulties which embarrass conscientious persons in shaping their course through life. We are told that an utilitarian will be apt to make his own particular case an exception to moral rules, and, when under temptation, will see an utility in the breach of a rule, greater than he will see in its observance. But is utility the only creed which is able to furnish us with excuses for evil doing, and means of cheating our own conscience? They are afforded in abundance by all doctrines which recognise as a fact in morals the existence of conflicting considerations; which all doctrines do, that have been believed by sane persons. It is not the fault of any creed, but of the complicated nature of human affairs, that rules of conduct cannot be so framed as to require no exceptions, and that hardly any kind of action can safely be laid down as either always obligatory or always condemnable. There is no ethical creed which does not temper the rigidity of its laws, by giving a certain latitude, under the moral responsibility of the agent, for accommodation to peculiarities of circumstances; and under every creed, at the opening thus made, self-deception and dishonest casuistry get in. There exists no moral system under which there do not arise unequivocal cases of conflicting obligation. These are the real difficulties, the knotty points both in the theory of ethics, and in the conscientious guidance of personal conduct. They are overcome practically with greater or with less success according to the intellect and virtue of the individual; but it can hardly be pretended that any one will be the less qualified for dealing with them, from possessing an ultimate standard to which conflicting rights and duties can be referred. If utility is the ultimate source of moral obligations, utility may be invoked to decide between them when their demands are incompatible. Though the application of the standard may be difficult, it is better than none at all: while in other systems, the moral laws all claiming independent authority, there is no common umpire entitled to interfere between them; their claims to precedence one over another rest on little better than sophistry, and unless determined, as they generally are, by the unacknowledged influence of considerations of utility, afford a free scope for the action of personal desires and partialities. We must remember that only in these cases of conflict between secondary principles is it requisite that first principles should be appealed to. There is no case of moral obligation in which some secondary principle is not involved; and if only one, there can seldom be any real doubt which one it is, in the mind of any person by whom the principle itself is recognized.

FOOTNOTES:

[Footnote A: The author of this essay has reason for believing himself to be the first person who brought the word utilitarian into use. He did not invent it, but adopted it from a passing expression in Mr. Galt's _Annals of the Parish_. After using it as a designation for several years, he and others abandoned it from a growing dislike to anything resembling a badge or watchword of sectarian distinction. But as a name for one single opinion, not a set of opinions--to denote the recognition of utility as a standard, not any particular way of applying it--the term supplies a want in the language, and offers, in many cases, a convenient mode of avoiding tiresome circumlocution.]

[Footnote B: An opponent, whose intellectual and moral fairness it is a pleasure to acknowledge (the Rev. J. Llewellyn Davis), has objected to this passage, saying, "Surely the rightness or wrongness of saving a man from drowning does depend very much upon the motive with which it is done. Suppose that a tyrant, when his enemy jumped into the sea to escape from him, saved him from drowning simply in order that he might inflict upon him more exquisite tortures, would it tend to clearness to speak of that rescue as 'a morally right action?' Or suppose again, according to one of the stock illustrations of ethical inquiries, that a man betrayed a trust received from a friend, because the discharge of it would fatally injure that friend himself or some one belonging to him, would utilitarianism compel one to call the betrayal 'a crime' as much as if it had been done from the meanest motive?"

I submit, that he who saves another from drowning in order to kill him by torture afterwards, does not differ only in motive from him who does the same thing from duty or benevolence; the act itself is different. The rescue of the man is, in the case supposed, only the necessary first step of an act far more atrocious than leaving him to drown would have been. Had Mr. Davis said, "The rightness or wrongness of saving a man from drowning does depend very much"--not upon the motive, but--"upon the _intention_" no utilitarian would have differed from him. Mr. Davis, by an oversight too common not to be quite venial, has in this case confounded the very different ideas of Motive and Intention. There is no point which utilitarian thinkers (and Bentham pre-eminently) have taken more pains to illustrate than this. The morality of the action depends entirely upon the intention--that is, upon what the agent _wills to do_. But the motive, that is, the feeling which makes him will so to do, when it makes no difference in the act, makes none in the morality: though it makes a great difference in our moral estimation of the agent, especially if it indicates a good or a bad habitual _disposition_--a bent of character from which useful, or from which hurtful actions are likely to arise.]

CHAPTER III.

OF THE ULTIMATE SANCTION OF THE PRINCIPLE OF UTILITY.

The question is often asked, and properly so, in regard to any supposed moral standard--What is its sanction? what are the motives to obey it? or more specifically, what is the source of its obligation? whence does it derive its binding force? It is a necessary part of moral philosophy to provide the answer to this question; which, though frequently assuming the shape of an objection to the utilitarian morality, as if it had some special applicability to that above others, really arises in regard to all standards. It arises, in fact, whenever a person is called on to adopt a standard or refer morality to any basis on which he has not been accustomed to rest it. For the customary morality, that which education and opinion have consecrated, is the only one which presents itself to the mind with the feeling of being _in itself_ obligatory; and when a person is asked to believe that this morality _derives_ its obligation from some general principle round which custom has not thrown the same halo, the assertion is to him a paradox; the supposed corollaries seem to have a more binding force than the original theorem; the superstructure seems to stand better without, than with, what is represented as its foundation. He says to himself, I feel that I am bound not to rob or murder, betray or deceive; but why am I bound to promote the general happiness? If my own happiness lies in something else, why may I not give that the preference?

If the view adopted by the utilitarian philosophy of the nature of the moral sense be correct, this difficulty will always present itself, until the influences which form moral character have taken the same hold of the principle which they have taken of some of the consequences--until, by the improvement of education, the feeling of unity with our fellow creatures shall be (what it cannot be doubted that Christ intended it to be) as deeply rooted in our character, and to our own consciousness as completely a part of our nature, as the horror of crime is in an ordinarily well-brought-up young person. In the mean time, however, the difficulty has no peculiar application to the doctrine of utility, but is inherent in every attempt to analyse morality and reduce it to principles; which, unless the principle is already in men's minds invested with as much sacredness as any of its applications, always seems to divest them of a part of their sanctity.

The principle of utility either has, or there is no reason why it might not have, all the sanctions which belong to any other system of morals. Those sanctions are either external or internal. Of the external sanctions it is not necessary to speak at any length. They are, the hope of favour and the fear of displeasure from our fellow creatures or from the Ruler of the Universe, along with whatever we may have of sympathy or affection for them or of love and awe of Him, inclining us to do His will independently of selfish consequences. There is evidently no reason why all these motives for observance should not attach themselves to the utilitarian morality, as completely and as powerfully as to any other. Indeed, those of them which refer to our fellow creatures are sure to do so, in proportion to the amount of general intelligence; for whether there be any other ground of moral obligation than the general happiness or not, men do desire happiness; and however imperfect may be their own practice, they desire and commend all conduct in others towards themselves, by which they think their happiness is promoted. With regard to the religious motive, if men believe, as most profess to do, in the goodness of God, those who think that conduciveness to the general happiness is the essence, or even only the criterion, of good, must necessarily believe that it is also that which God approves. The whole force therefore of external reward and punishment, whether physical or moral, and whether proceeding from God or from our fellow men, together with all that the capacities of human nature admit, of disinterested devotion to either, become available to enforce the utilitarian morality, in proportion as that morality is recognized; and the more powerfully, the more the appliances of education and general cultivation are bent to the purpose.

So far as to external sanctions. The internal sanction of duty, whatever our standard of duty may be, is one and the same--a feeling in our own mind; a pain, more or less intense, attendant on violation of duty, which in properly cultivated moral natures rises, in the more serious cases, into shrinking from it as an impossibility. This feeling, when disinterested, and connecting itself with the pure idea of duty, and not with some particular form of it, or with any of the merely accessory circumstances, is the essence of Conscience; though in that complex phenomenon as it actually exists, the simple fact is in general all encrusted over with collateral associations, derived from sympathy, from love, and still more from fear; from all the forms of religious feeling; from the recollections of childhood and of all our past life; from self-esteem, desire of the esteem of others, and occasionally even self-abasement. This extreme complication is, I apprehend, the origin of the sort of mystical character which, by a tendency of the human mind of which there are many other examples, is apt to be attributed to the idea of moral obligation, and which leads people to believe that the idea cannot possibly attach itself to any other objects than those which, by a supposed mysterious law, are found in our present experience to excite it. Its binding force, however, consists in the existence of a mass of feeling which must be

broken through in order to do what violates our standard of right, and which, if we do nevertheless violate that standard, will probably have to be encountered afterwards in the form of remorse. Whatever theory we have of the nature or origin of conscience, this is what essentially constitutes it.

The ultimate sanction, therefore, of all morality (external motives apart) being a subjective feeling in our own minds, I see nothing embarrassing to those whose standard is utility, in the question, what is the sanction of that particular standard? We may answer, the same as of all other moral standards--the conscientious feelings of mankind. Undoubtedly this sanction has no binding efficacy on those who do not possess the feelings it appeals to; but neither will these persons be more obedient to any other moral principle than to the utilitarian one. On them morality of any kind has no hold but through the external sanctions. Meanwhile the feelings exist, a feet in human nature, the reality of which, and the great power with which they are capable of acting on those in whom they have been duly cultivated, are proved by experience. No reason has ever been shown why they may not be cultivated to as great intensity in connection with the utilitarian, as with any other rule of morals.

There is, I am aware, a disposition to believe that a person who sees in moral obligation a transcendental fact, an objective reality belonging to the province of "Things in themselves," is likely to be more obedient to it than one who believes it to be entirely subjective, having its seat in human consciousness only. But whatever a person's opinion may be on this point of Ontology, the force he is really urged by is his own subjective feeling, and is exactly measured by its strength. No one's belief that Duty is an objective reality is stronger than the belief that God is so; yet the belief in God, apart from the expectation of actual reward and punishment, only operates on conduct through, and in proportion to, the subjective religious feeling. The sanction, so far as it is disinterested, is always in the mind itself; and the notion, therefore, of the transcendental moralists must be, that this sanction will not exist _in_ the mind unless it is believed to have its root out of the mind; and that if a person is able to say to himself, That which is restraining me, and which is called my conscience, is only a feeling in my own mind, he may possibly draw the conclusion that when the feeling ceases the obligation ceases, and that if he find the feeling inconvenient, he may disregard it, and endeavour to get rid of it. But is this danger confined to the utilitarian morality? Does the belief that moral obligation has its seat outside the mind make the feeling of it too strong to be got rid of? The fact is so far otherwise, that all moralists admit and lament the ease with which, in the generality of minds, conscience can be silenced or stifled. The question, Need I obey my conscience? is quite as often put to themselves by persons who never heard of the principle of utility, as by its adherents. Those whose conscientious feelings are so weak as to allow of their asking this question, if they answer it affirmatively, will not do so because they believe in the transcendental theory, but because of the external sanctions.

It is not necessary, for the present purpose, to decide whether the feeling of duty is innate or implanted. Assuming it to be innate, it is an open question to what objects it naturally attaches itself; for the philosophic supporters of that theory are now agreed that the intuitive perception is of principles of morality, and not of the details. If there be anything innate in the matter, I see no reason why the feeling which is innate should not be that of regard to the pleasures and pains of others. If there is any principle of morals which is intuitively obligatory, I should say it must be that. If so, the intuitive ethics would coincide with the utilitarian, and there would be no further quarrel between them. Even as it is, the intuitive moralists, though they believe that there are other intuitive moral obligations, do already believe this to be one; for they unanimously hold that a large portion of morality turns upon the consideration due to the interests of our fellow creatures. Therefore, if the belief in the transcendental origin of moral obligation gives any additional efficacy to the internal sanction, it appears to me that the utilitarian principle has already the benefit of it.

On the other hand, if, as is my own belief, the moral feelings are not innate, but acquired, they are not for that reason the less natural. It is natural to man to speak, to reason, to build cities, to cultivate the ground, though these are acquired faculties. The moral feelings are not indeed a part of our nature, in the sense of being in any perceptible degree present in all of us; but this, unhappily, is a fact admitted by those who believe the most strenuously in their transcendental origin. Like the other acquired capacities above referred to, the moral faculty, if not a part of our nature, is a natural outgrowth from it; capable, like them, in a certain small degree, of springing up spontaneously; and susceptible of being brought by cultivation to a high degree of development. Unhappily it is also susceptible, by a sufficient use of the external sanctions and of the force of early impressions, of being cultivated in almost any direction: so that there is hardly anything so absurd or so mischievous that it may not, by means of these influences, be made to act on the human mind with all the authority of conscience. To doubt that the same potency might be given by the same means to the principle of utility, even if it had no foundation in human nature, would be flying in the face of all experience.

But moral associations which are wholly of artificial creation, when intellectual culture goes on, yield by degrees to the dissolving force of analysis: and if the feeling of duty, when associated with utility, would appear equally arbitrary; if there were no leading

department of our nature, no powerful class of sentiments, with which that association would harmonize, which would make us feel it congenial, and incline us not only to foster it in others (for which we have abundant interested motives), but also to cherish it in ourselves; if there were not, in short, a natural basis of sentiment for utilitarian morality, it might well happen that this association also, even after it had been implanted by education, might be analysed away.

But there is this basis of powerful natural sentiment; and this it is which, when once the general happiness is recognized as the ethical standard, will constitute the strength of the utilitarian morality. This firm foundation is that of the social feelings of mankind; the desire to be in unity with our fellow creatures, which is already a powerful principle in human nature, and happily one of those which tend to become stronger, even without express inculcation, from the influences of advancing civilization. The social state is at once so natural, so necessary, and so habitual to man, that, except in some unusual circumstances or by an effort of voluntary abstraction, he never conceives himself otherwise than as a member of a body; and this association is riveted more and more, as mankind are further removed from the state of savage independence. Any condition, therefore, which is essential to a state of society, becomes more and more an inseparable part of every person's conception of the state of things which he is born into, and which is the destiny of a human being. Now, society between human beings, except in the relation of master and slave, is manifestly impossible on any other footing than that the interests of all are to be consulted. Society between equals can only exist on the understanding that the interests of all are to be regarded equally. And since in all states of civilization, every person, except an absolute monarch, has equals, every one is obliged to live on these terms with somebody; and in every age some advance is made towards a state in which it will be impossible to live permanently on other terms with anybody. In this way people grow up unable to conceive as possible to them a state of total disregard of other people's interests. They are under a necessity of conceiving themselves as at least abstaining from all the grosser injuries, and (if only for their own protection.) living in a state of constant protest against them. They are also familiar with the fact of co-operating with others, and proposing to themselves a collective, not an individual, interest, as the aim (at least for the time being) of their actions. So long as they are co-operating, their ends are identified with those of others; there is at least a temporary feeling that the interests of others are their own interests. Not only does all strengthening of social ties, and all healthy growth of society, give to each individual a stronger personal interest in practically consulting the welfare of others; it also leads him to identify his feelings more and more with their good, or at least with an ever greater degree of practical consideration for it. He comes, as though instinctively, to be conscious of himself as a being who _of course_ pays regard to others. The good of others becomes to him a thing naturally and necessarily to be attended to, like any of the physical conditions of our existence. Now, whatever amount of this feeling a person has, he is urged by the strongest motives both of interest and of sympathy to demonstrate it, and to the utmost of his power encourage it in others; and even if he has none of it himself, he is as greatly interested as any one else that others should have it. Consequently, the smallest germs of the feeling are laid hold of and nourished by the contagion of sympathy and the influences of education; and a complete web of corroborative association is woven round it, by the powerful agency of the external sanctions. This mode of conceiving ourselves and human life, as civilization goes on, is felt to be more and more natural. Every step in political improvement renders it more so, by removing the sources of opposition of interest, and levelling those inequalities of legal privilege between individuals or classes, owing to which there are large portions of mankind whose happiness it is still practicable to disregard. In an improving state of the human mind, the influences are constantly on the increase, which tend to generate in each individual a feeling of unity with all the rest; which feeling, if perfect, would make him never think of, or desire, any beneficial condition for himself, in the benefits of which they are not included. If we now suppose this feeling of unity to be taught as a religion, and the whole force of education, of institutions, and of opinion, directed, as it once was in the case of religion, to make every person grow up from infancy surrounded on all sides both by the profession and by the practice of it, I think that no one, who can realize this conception, will feel any misgiving about the sufficiency of the ultimate sanction for the Happiness morality. To any ethical student who finds the realization difficult, I recommend, as a means of facilitating it, the second of M. Comte's two principal works, the _Système de Politique Positive_. I entertain the strongest objections to the system of politics and morals set forth in that treatise; but I think it has superabundantly shown the possibility of giving to the service of humanity, even without the aid of belief in a Providence, both the physical power and the social efficacy of a religion; making it take hold of human life, and colour all thought, feeling, and action, in a manner of which the greatest ascendency ever exercised by any religion may be but a type and foretaste; and of which the danger is, not that it should be insufficient, but that it should be so excessive as to interfere unduly with human freedom and individuality.

Neither is it necessary to the feeling which constitutes the binding force of the utilitarian morality on those who recognize it, to wait for those social influences which would make its obligation felt by mankind at large. In the comparatively early state of human advancement in which we now live, a person cannot indeed feel that entireness of sympathy with all others, which would make any real discordance in the general direction of their conduct in life impossible; but already a person in whom the social feeling is at all

developed, cannot bring himself to think of the rest of his fellow creatures as struggling rivals with him for the means of happiness, whom he must desire to see defeated in their object in order that he may succeed in his. The deeply-rooted conception which every individual even now has of himself as a social being, tends to make him feel it one of his natural wants that there should be harmony between his feelings and aims and those of his fellow creatures. If differences of opinion and of mental culture make it impossible for him to share many of their actual feelings-perhaps make him denounce and defy those feelings-he still needs to be conscious that his real aim and theirs do not conflict; that he is not opposing himself to what they really wish for, namely, their own good, but is, on the contrary, promoting it. This feeling in most individuals is much inferior in strength to their selfish feelings, and is often wanting altogether. But to those who have it, it possesses all the characters of a natural feeling. It does not present itself to their minds as a superstition of education, or a law despotically imposed by the power of society, but as an attribute which it would not be well for them to be without. This conviction is the ultimate sanction of the greatest-happiness morality. This it is which makes any mind, of well-developed feelings, work with, and not against, the outward motives to care for others, afforded by what I have called the external sanctions; and when those sanctions are wanting, or act in an opposite direction, constitutes in itself a powerful internal binding force, in proportion to the sensitiveness and thoughtfulness of the character; since few but those whose mind is a moral blank, could bear to lay out their course of life on the plan of paying no regard to others except so far as their own private interest compels.

CHAPTER IV.

OF WHAT SORT OF PROOF THE PRINCIPLE OF UTILITY IS SUSCEPTIBLE.

It has already been remarked, that questions of ultimate ends do not admit of proof, in the ordinary acceptation of the term. To be incapable of proof by reasoning is common to all first principles; to the first premises of our knowledge, as well as to those of our conduct. But the former, being matters of fact, may be the subject of a direct appeal to the faculties which judge of fact--namely, our senses, and our internal consciousness. Can an appeal be made to the same faculties on questions of practical ends? Or by what other faculty is cognizance taken of them?

Questions about ends are, in other words, questions what things are desirable. The utilitarian doctrine is, that happiness is desirable, and the only thing desirable, as an end; all other things being only desirable as means to that end. What ought to be required of this doctrine--what conditions is it requisite that the doctrine should fulfil--to make good its claim to be believed?

The only proof capable of being given that an object is visible, is that people actually see it. The only proof that a sound is audible, is that people hear it: and so of the other sources of our experience. In like manner, I apprehend, the sole evidence it is possible to produce that anything is desirable, is that people do actually desire it. If the end which the utilitarian doctrine proposes to itself were not, in theory and in practice, acknowledged to be an end, nothing could ever convince any person that it was so. No reason can be given why the general happiness is desirable, except that each person, so far as he believes it to be attainable, desires his own happiness. This, however, being a fact, we have not only all the proof which the case admits of, but all which it is possible to require, that happiness is a good: that each person's happiness is a good to that person, and the general happiness, therefore, a good to the aggregate of all persons. Happiness has made out its title as _one_ of the ends of conduct, and consequently one of the criteria of morality.

But it has not, by this alone, proved itself to be the sole criterion. To do that, it would seem, by the same rule, necessary to show, not only that people desire happiness, but that they never desire anything else. Now it is palpable that they do desire things which, in common language, are decidedly distinguished from happiness. They desire, for example, virtue, and the absence of vice, no less really than pleasure and the absence of pain. The desire of virtue is not as universal, but it is as authentic a fact, as the desire of happiness. And hence the opponents of the utilitarian standard deem that they have a right to infer that there are other ends of human action besides happiness, and that happiness is not the standard of approbation and disapprobation.

But does the utilitarian doctrine deny that people desire virtue, or maintain that virtue is not a thing to be desired? The very reverse. It maintains not only that virtue is to be desired, but that it is to be desired disinterestedly, for itself. Whatever may be the opinion of utilitarian moralists as to the original conditions by which virtue is made virtue; however they may believe (as they do) that actions and dispositions are only virtuous because they promote another end than virtue; yet this being granted, and it having been decided, from considerations of this description, what _is_ virtuous, they not only place virtue at the very head of the things which are good as means to the ultimate end, but they also recognise as a psychological fact the possibility of its being, to the individual, a good in itself, without looking to any end beyond it; and hold, that the mind is not in a right state, not in a state conformable to

Utility, not in the state most conducive to the general happiness, unless it does love virtue in this manner--as a thing desirable in itself, even although, in the individual instance, it should not produce those other desirable consequences which it tends to produce, and on account of which it is held to be virtue. This opinion is not, in the smallest degree, a departure from the Happiness principle. The ingredients of happiness are very various, and each of them is desirable in itself, and not merely when considered as swelling an aggregate. The principle of utility does not mean that any given pleasure, as music, for instance, or any given exemption from pain, as for example health, are to be looked upon as means to a collective something termed happiness, and to be desired on that account. They are desired and desirable in and for themselves; besides being means, they are a part of the end. Virtue, according to the utilitarian doctrine, is not naturally and originally part of the end, but it is capable of becoming so; and in those who love it disinterestedly it has become so, and is desired and cherished, not as a means to happiness, but as a part of their happiness.

To illustrate this farther, we may remember that virtue is not the only thing, originally a means, and which if it were not a means to anything else, would be and remain indifferent, but which by association with what it is a means to, comes to be desired for itself, and that too with the utmost intensity. What, for example, shall we say of the love of money? There is nothing originally more desirable about money than about any heap of glittering pebbles. Its worth is solely that of the things which it will buy; the desires for other things than itself, which it is a means of gratifying. Yet the love of money is not only one of the strongest moving forces of human life, but money is, in many cases, desired in and for itself; the desire to possess it is often stronger than the desire to use it, and goes on increasing when all the desires which point to ends beyond it, to be compassed by it, are falling off. It may be then said truly, that money is desired not for the sake of an end, but as part of the end. From being a means to happiness, it has come to be itself a principal ingredient of the individual's conception of happiness. The same may be said of the majority of the great objects of human life--power, for example, or fame; except that to each of these there is a certain amount of immediate pleasure annexed, which has at least the semblance of being naturally inherent in them; a thing which cannot be said of money. Still, however, the strongest natural attraction, both of power and of fame, is the immense aid they give to the attainment of our other wishes; and it is the strong association thus generated between them and all our objects of desire, which gives to the direct desire of them the intensity it often assumes, so as in some characters to surpass in strength all other desires. In these cases the means have become a part of the end, and a more important part of it than any of the things which they are means to. What was once desired as an instrument for the attainment of happiness, has come to be desired for its own sake. In being desired for its own sake it is, however, desired as part of happiness. The person is made, or thinks he would be made, happy by its mere possession; and is made unhappy by failure to obtain it. The desire of it is not a different thing from the desire of happiness, any more than the love of music, or the desire of health. They are included in happiness. They are some of the elements of which the desire of happiness is made up. Happiness is not an abstract idea, but a concrete whole; and these are some of its parts. And the utilitarian standard sanctions and approves their being so. Life would be a poor thing, very ill provided with sources of happiness, if there were not this provision of nature, by which things originally indifferent, but conducive to, or otherwise associated with, the satisfaction of our primitive desires, become in themselves sources of pleasure more valuable than the primitive pleasures, both in permanency, in the space of human existence that they are capable of covering, and even in intensity. Virtue, according to the utilitarian conception, is a good of this description. There was no original desire of it, or motive to it, save its conduciveness to pleasure, and especially to protection from pain. But through the association thus formed, it may be felt a good in itself, and desired as such with as great intensity as any other good; and with this difference between it and the love of money, of power, or of fame, that all of these may, and often do, render the individual noxious to the other members of the society to which he belongs, whereas there is nothing which makes him so much a blessing to them as the cultivation of the disinterested, love of virtue. And consequently, the utilitarian standard, while it tolerates and approves those other acquired desires, up to the point beyond which they would be more injurious to the general happiness than promotive of it, enjoins and requires the cultivation of the love of virtue up to the greatest strength possible, as being above all things important to the general happiness.

It results from the preceding considerations, that there is in reality nothing desired except happiness. Whatever is desired otherwise than as a means to some end beyond itself, and ultimately to happiness, is desired as itself a part of happiness, and is not desired for itself until it has become so. Those who desire virtue for its own sake, desire it either because the consciousness of it is a pleasure, or because the consciousness of being without it is a pain, or for both reasons united; as in truth the pleasure and pain seldom exist separately, but almost always together, the same person feeling pleasure in the degree of virtue attained, and pain in not having attained more. If one of these gave him no pleasure, and the other no pain, he would not love or desire virtue, or would desire it only for the other benefits which it might produce to himself or to persons whom he cared for.

We have now, then, an answer to the question, of what sort of proof the principle of utility is susceptible. If the opinion which I have now stated is psychologically true--if human nature is so constituted as to desire nothing which is not either a part of happiness or a

means of happiness, we can have no other proof, and we require no other, that these are the only things desirable. If so, happiness is the sole end of human action, and the promotion of it the test by which to judge of all human conduct; from whence it necessarily follows that it must be the criterion of morality, since a part is included in the whole.

And now to decide whether this is really so; whether mankind do desire nothing for itself but that which is a pleasure to them, or of which the absence is a pain; we have evidently arrived at a question of fact and experience, dependent, like all similar questions, upon evidence. It can only be determined by practised self-consciousness and self-observation, assisted by observation of others. I believe that these sources of evidence, impartially consulted, will declare that desiring a thing and finding it pleasant, aversion to it and thinking of it as painful, are phenomena entirely inseparable, or rather two parts of the same phenomenon; in strictness of language, two different modes of naming the same psychological fact: that to think of an object as desirable (unless for the sake of its consequences), and to think of it as pleasant, are one and the same thing; and that to desire anything, except in proportion as the idea of it is pleasant, is a physical and metaphysical impossibility.

So obvious does this appear to me, that I expect it will hardly be disputed: and the objection made will be, not that desire can possibly be directed to anything ultimately except pleasure and exemption from pain, but that the will is a different thing from desire; that a person of confirmed virtue, or any other person whose purposes are fixed, carries out his purposes without any thought of the pleasure he has in contemplating them, or expects to derive from their fulfilment; and persists in acting on them, even though these pleasures are much diminished, by changes in his character or decay of his passive sensibilities, or are outweighed by the pains which the pursuit of the purposes may bring upon him. All this I fully admit, and have stated it elsewhere, as positively and emphatically as any one. Will, the active phenomenon, is a different thing from desire, the state of passive sensibility, and though originally an offshoot from it, may in time take root and detach itself from the parent stock; so much so, that in the case of an habitual purpose, instead of willing the thing because we desire it, we often desire it only because we will it. This, however, is but an instance of that familiar fact, the power of habit, and is nowise confined to the case of virtuous actions. Many indifferent things, which men originally did from a motive of some sort, they continue to do from habit. Sometimes this is done unconsciously, the consciousness coming only after the action: at other times with conscious volition, but volition which has become habitual, and is put into operation by the force of habit, in opposition perhaps to the deliberate preference, as often happens with those who have contracted habits of vicious or hurtful indulgence. Third and last comes the case in which the habitual act of will in the individual instance is not in contradiction to the general intention prevailing at other times, but in fulfilment of it; as in the case of the person of confirmed virtue, and of all who pursue deliberately and consistently any determinate end. The distinction between will and desire thus understood, is an authentic and highly important psychological fact; but the fact consists solely in this--that will, like all other parts of our constitution, is amenable to habit, and that we may will from habit what we no longer desire for itself, or desire only because we will it. It is not the less true that will, in the beginning, is entirely produced by desire; including in that term the repelling influence of pain as well as the attractive one of pleasure. Let us take into consideration, no longer the person who has a confirmed will to do right, but him in whom that virtuous will is still feeble, conquerable by temptation, and not to be fully relied on; by what means can it be strengthened? How can the will to be virtuous, where it does not exist in sufficient force, be implanted or awakened? Only by making the person _desire_ virtue--by making him think of it in a pleasurable light, or of its absence in a painful one. It is by associating the doing right with pleasure, or the doing wrong with pain, or by eliciting and impressing and bringing home to the person's experience the pleasure naturally involved in the one or the pain in the other, that it is possible to call forth that will to be virtuous, which, when confirmed, acts without any thought of either pleasure or pain. Will is the child of desire, and passes out of the dominion of its parent only to come under that of habit. That which is the result of habit affords no presumption of being intrinsically good; and there would be no reason for wishing that the purpose of virtue should become independent of pleasure and pain, were it not that the influence of the pleasurable and painful associations which prompt to virtue is not sufficiently to be depended on for unerring constancy of action until it has acquired the support of habit. Both in feeling and in conduct, habit is the only thing which imparts certainty; and it is because of the importance to others of being able to rely absolutely on one's feelings and conduct, and to oneself of being able to rely on one's own, that the will to do right ought to be cultivated into this habitual independence. In other words, this state of the will is a means to good, not intrinsically a good; and does not contradict the doctrine that nothing is a good to human beings but in so far as it is either itself pleasurable, or a means of attaining pleasure or averting pain.

But if this doctrine be true, the principle of utility is proved. Whether it is so or not, must now be left to the consideration of the thoughtful reader.

CHAPTER V.

ON THE CONNEXION BETWEEN JUSTICE AND UTILITY.

In all ages of speculation, one of the strongest obstacles to the reception of the doctrine that Utility or Happiness is the criterion of right and wrong, has been drawn from the idea of Justice, The powerful sentiment, and apparently clear perception, which that word recalls with a rapidity and certainty resembling an instinct, have seemed to the majority of thinkers to point to an inherent quality in things; to show that the Just must have an existence in Nature as something absolute-generically distinct from every variety of the Expedient, and, in idea, opposed to it, though (as is commonly acknowledged) never, in the long run, disjoined from it in fact.

In the case of this, as of our other moral sentiments, there is no necessary connexion between the question of its origin, and that of its binding force. That a feeling is bestowed on us by Nature, does not necessarily legitimate all its promptings. The feeling of justice might be a peculiar instinct, and might yet require, like our other instincts, to be controlled and enlightened by a higher reason. If we have intellectual instincts, leading us to judge in a particular way, as well as animal instincts that prompt us to act in a particular way, there is no necessity that the former should be more infallible in their sphere than the latter in theirs: it may as well happen that wrong judgments are occasionally suggested by those, as wrong actions by these. But though it is one thing to believe that we have natural feelings of justice, and another to acknowledge them as an ultimate criterion of conduct, these two opinions are very closely connected in point of fact. Mankind are always predisposed to believe that any subjective feeling, not otherwise accounted for, is a revelation of some objective reality. Our present object is to determine whether the reality, to which the feeling of justice corresponds, is one which needs any such special revelation; whether the justice or injustice of an action is a thing intrinsically peculiar, and distinct from all its other qualities, or only a combination of certain of those qualities, presented under a peculiar aspect. For the purpose of this inquiry, it is practically important to consider whether the feeling itself, of justice and injustice, is _sui generis_ like our sensations of colour and taste, or a derivative feeling, formed by a combination of others. And this it is the more essential to examine, as people are in general willing enough to allow, that objectively the dictates of justice coincide with a part of the field of General Expediency; but inasmuch as the subjective mental feeling of Justice is different from that which commonly attaches to simple expediency, and, except in extreme cases of the latter, is far more imperative in its demands, people find it difficult to see, in Justice, only a particular kind or branch of general utility, and think that its superior binding force requires a totally different origin.

To throw light upon this question, it is necessary to attempt to ascertain what is the distinguishing character of justice, or of injustice: what is the quality, or whether there is any quality, attributed in common to all modes of conduct designated as unjust (for justice, like many other moral attributes, is best defined by its opposite), and distinguishing them from such modes of conduct as are disapproved, but without having that particular epithet of disapprobation applied to them. If, in everything which men are accustomed to characterize as just or unjust, some one common attribute or collection of attributes is always present, we may judge whether this particular attribute or combination of attributes would be capable of gathering round it a sentiment of that peculiar character and intensity by virtue of the general laws of our emotional constitution, or whether the sentiment is inexplicable, and requires to be regarded as a special provision of Nature. If we find the former to be the case, we shall, in resolving this question, have resolved also the main problem: if the latter, we shall have to seek for some other mode of investigating it.

* * * * *

To find the common attributes of a variety of objects, it is necessary to begin, by surveying the objects themselves in the concrete. Let us therefore advert successively to the various modes of action, and arrangements of human affairs, which are classed, by universal or widely spread opinion, as Just or as Unjust. The things well known to excite the sentiments associated with those names, are of a very multifarious character. I shall pass them rapidly in review, without studying any particular arrangement.

In the first place, it is mostly considered unjust to deprive any one of his personal liberty, his property, or any other thing which belongs to him by law. Here, therefore, is one instance of the application of the terms just and unjust in a perfectly definite sense, namely, that it is just to respect, unjust to violate, the _legal rights_ of any one. But this judgment admits of several exceptions, arising from the other forms in which the notions of justice and injustice present themselves. For example, the person who suffers the deprivation may (as the phrase is) have _forfeited_ the rights which he is so deprived of: a case to which we shall return presently. But also,

Secondly; the legal rights of which he is deprived, may be rights which _ought_ not to have belonged to him; in other words, the law which confers on him these rights, may be a bad law. When it is so, or when (which is the same thing for our purpose) it is

supposed to be so, opinions will differ as to the justice or injustice of infringing it. Some maintain that no law, however bad, ought to be disobeyed by an individual citizen; that his opposition to it, if shown at all, should only be shown in endeavouring to get it altered by competent authority. This opinion (which condemns many of the most illustrious benefactors of mankind, and would often protect pernicious institutions against the only weapons which, in the state of things existing at the time, have any chance of succeeding against them) is defended, by those who hold it, on grounds of expediency; principally on that of the importance, to the common interest of mankind, of maintaining inviolate the sentiment of submission to law. Other persons, again, hold the directly contrary opinion, that any law, judged to be bad, may blamelessly be disobeyed, even though it be not judged to be unjust, but only inexpedient; while others would confine the licence of disobedience to the case of unjust laws: but again, some say, that all laws which are inexpedient are unjust; since every law imposes some restriction on the natural liberty of mankind, which restriction is an injustice, unless legitimated by tending to their good. Among these diversities of opinion, it seems to be universally admitted that there may be unjust laws, and that law, consequently, is not the ultimate criterion of justice, but may give to one person a benefit, or impose on another an evil, which justice condemns. When, however, a law is thought to be unjust, it seems always to be regarded as being so in the same way in which a breach of law is unjust, namely, by infringing somebody's right; which, as it cannot in this case be a legal right, receives a different appellation, and is called a moral right. We may say, therefore, that a second case of injustice consists in taking or withholding from any person that to which he has a _moral right_.

Thirdly, it is universally considered just that each person should obtain that (whether good or evil) which he _deserves_; and unjust that he should obtain a good, or be made to undergo an evil, which he does not deserve. This is, perhaps, the clearest and most emphatic form in which the idea of justice is conceived by the general mind. As it involves the notion of desert, the question arises, what constitutes desert? Speaking in a general way, a person is understood to deserve good if he does right, evil if he does wrong; and in a more particular sense, to deserve good from those to whom he does or has done good, and evil from those to whom he does or has done evil. The precept of returning good for evil has never been regarded as a case of the fulfilment of justice, but as one in which the claims of justice are waived, in obedience to other considerations.

Fourthly, it is confessedly unjust to _break faith_ with any one: to violate an engagement, either express or implied, or disappoint expectations raised by our own conduct, at least if we have raised those expectations knowingly and voluntarily. Like the other obligations of justice already spoken of, this one is not regarded as absolute, but as capable of being overruled by a stronger obligation of justice on the other side; or by such conduct on the part of the person concerned as is deemed to absolve us from our obligation to him, and to constitute a _forfeiture_ of the benefit which he has been led to expect.

Fifthly, it is, by universal admission, inconsistent with justice to be _partial_; to show favour or preference to one person over another, in matters to which favour and preference do not properly apply. Impartiality, however, does not seem to be regarded as a duty in itself, but rather as instrumental to some other duty; for it is admitted that favour and preference are not always censurable, and indeed the cases in which they are condemned are rather the exception than the rule. A person would be more likely to be blamed than applauded for giving his family or friends no superiority in good offices over strangers, when he could do so without violating any other duty; and no one thinks it unjust to seek one person in preference to another as a friend, connexion, or companion. Impartiality where rights are concerned is of course obligatory, but this is involved in the more general obligation of giving to every one his right. A tribunal, for example, must be impartial, because it is bound to award, without regard to any other consideration, a disputed object to the one of two parties who has the right to it. There are other cases in which impartiality means, being solely influenced by desert; as with those who, in the capacity of judges, preceptors, or parents, administer reward and punishment as such. There are cases, again, in which it means, being solely influenced by consideration for the public interest; as in making a selection among candidates for a Government employment. Impartiality, in short, as an obligation of justice, may be said to mean, being exclusively influenced by the considerations which it is supposed ought to influence the particular case in hand; and resisting the solicitation of any motives which prompt to conduct different from what those considerations would dictate.

Nearly allied to the idea of impartiality, is that of _equality_; which often enters as a component part both into the conception of justice and into the practice of it, and, in the eyes of many persons, constitutes its essence. But in this, still more than in any other case, the notion of justice varies in different persons, and always conforms in its variations to their notion of utility. Each person maintains that equality is the dictate of justice, except where he thinks that expediency requires inequality. The justice of giving equal protection to the rights of all, is maintained by those who support the most outrageous inequality in the rights themselves. Even in slave countries it is theoretically admitted that the rights of the slave, such as they are, ought to be as sacred as those of the master; and that a tribunal which fails to enforce them with equal strictness is wanting in justice; while, at the same time, institutions which leave to the slave scarcely any rights to enforce, are not deemed unjust, because they are not deemed

inexpedient. Those who think that utility requires distinctions of rank, do not consider it unjust that riches and social privileges should be unequally dispensed; but those who think this inequality inexpedient, think it unjust also. Whoever thinks that government is necessary, sees no injustice in as much inequality as is constituted by giving to the magistrate powers not granted to other people. Even among those who hold levelling doctrines, there are as many questions of justice as there are differences of opinion about expediency. Some Communists consider it unjust that the produce of the labour of the community should be shared on any other principle than that of exact equality; others think it just that those should receive most whose needs are greatest; while others hold that those who work harder, or who produce more, or whose services are more valuable to the community, may justly claim a larger quota in the division of the produce. And the sense of natural justice may be plausibly appealed to in behalf of every one of these opinions.

Among so many diverse applications of the term Justice, which yet is not regarded as ambiguous, it is a matter of some difficulty to seize the mental link which holds them together, and on which the moral sentiment adhering to the term essentially depends. Perhaps, in this embarrassment, some help may be derived from the history of the word, as indicated by its etymology.

In most, if not in all languages, the etymology of the word which corresponds to Just, points to an origin connected either with positive law, or with that which was in most cases the primitive form of law-authoritative custom. _Justum_ is a form of _jussum_, that which has been ordered. _Jus_ is of the same origin. _Dichanou_ comes from _dichae_, of which the principal meaning, at least in the historical ages of Greece, was a suit at law. Originally, indeed, it meant only the mode or _manner_ of doing things, but it early came to mean the _prescribed_ manner; that which the recognized authorities, patriarchal, judicial, or political, would enforce. _Recht_, from which came _right_ and _righteous_, is synonymous with law. The original meaning, indeed, of _recht_ did not point to law, but to physical straightness; as _wrong_ and its Latin equivalents meant twisted or tortuous; and from this it is argued that right did not originally mean law, but on the contrary law meant right. But however this may be, the fact that _recht_ and _droit_ became restricted in their meaning to positive law, although much which is not required by law is equally necessary to moral straightness or rectitude, is as significant of the original character of moral ideas as if the derivation had been the reverse way. The courts of justice, the administration of justice, are the courts and the administration of law. _La justice_, in French, is the established term for judicature. There can, I think, be no doubt that the _idée mère_, the primitive element, in the formation of the notion of justice, was conformity to law. It constituted the entire idea among the Hebrews, up to the birth of Christianity; as might be expected in the case of a people whose laws attempted to embrace all subjects on which precepts were required, and who believed those laws to be a direct emanation from the Supreme Being. But other nations, and in particular the Greeks and Romans, who knew that their laws had been made originally, and still continued to be made, by men, were not afraid to admit that those men might make bad laws; might do, by law, the same things, and from the same motives, which, if done by individuals without the sanction of law, would be called unjust. And hence the sentiment of injustice came to be attached, not to all violations of law, but only to violations of such laws as _ought_ to exist, including such as ought to exist but do not; and to laws themselves, if supposed to be contrary to what ought to be law. In this manner the idea of law and of its injunctions was still predominant in the notion of justice, even when the laws actually in force ceased to be accepted as the standard of it.

It is true that mankind consider the idea of justice and its obligations as applicable to many things which neither are, nor is it desired that they should be, regulated by law. Nobody desires that laws should interfere with the whole detail of private life; yet every one allows that in all daily conduct a person may and does show himself to be either just or unjust. But even here, the idea of the breach of what ought to be law, still lingers in a modified shape. It would always give us pleasure, and chime in with our feelings of fitness, that acts which we deem unjust should be punished, though we do not always think it expedient that this should be done by the tribunals. We forego that gratification on account of incidental inconveniences. We should be glad to see just conduct enforced and injustice repressed, even in the minutest details, if we were not, with reason, afraid of trusting the magistrate with so unlimited an amount of power over individuals. When we think that a person is bound in justice to do a thing, it is an ordinary form of language to say, that he ought to be compelled to do it. We should be gratified to see the obligation enforced by anybody who had the power. If we see that its enforcement by law would be inexpedient, we lament the impossibility, we consider the impunity given to injustice as an evil, and strive to make amends for it by bringing a strong expression of our own and the public disapprobation to bear upon the offender. Thus the idea of legal constraint is still the generating idea of the notion of justice, though undergoing several transformations before that notion, as it exists in an advanced state of society, becomes complete.

The above is, I think, a true account, as far as it goes, of the origin and progressive growth of the idea of justice. But we must observe, that it contains, as yet, nothing to distinguish that obligation from moral obligation in general. For the truth is, that the idea of penal sanction, which is the essence of law, enters not only into the conception of injustice, but into that of any kind of wrong. We

do not call anything wrong, unless we mean to imply that a person ought to be punished in some way or other for doing it; if not by law, by the opinion of his fellow creatures; if not by opinion, by the reproaches of his own conscience. This seems the real turning point of the distinction between morality and simple expediency. It is a part of the notion of Duty in every one of its forms, that a person may rightfully be compelled to fulfil it. Duty is a thing which may be _exacted_ from a person, as one exacts a debt. Unless we think that it might be exacted from him, we do not call it his duty. Reasons of prudence, or the interest of other people, may militate against actually exacting it; but the person himself, it is clearly understood, would not be entitled to complain. There are other things, on the contrary, which we wish that people should do, which we like or admire them for doing, perhaps dislike or despise them for not doing, but yet admit that they are not bound to do; it is not a case of moral obligation; we do not blame them, that is, we do not think that they are proper objects of punishment. How we come by these ideas of deserving and not deserving punishment, will appear, perhaps, in the sequel; but I think there is no doubt that this distinction lies at the bottom of the notions of right and wrong; that we call any conduct wrong, or employ instead, some other term of dislike or disparagement, according as we think that the person ought, or ought not, to be punished for it; and we say that it would be right to do so and so, or merely that it would be desirable or laudable, according as we would wish to see the person whom it concerns, compelled or only persuaded and exhorted, to act in that manner.[C]

This, therefore, being the characteristic difference which marks off, not justice, but morality in general, from the remaining provinces of Expediency and Worthiness; the character is still to be sought which distinguishes justice from other branches of morality. Now it is known that ethical writers divide moral duties into two classes, denoted by the ill-chosen expressions, duties of perfect and of imperfect obligation; the latter being those in which, though the act is obligatory, the particular occasions of performing it are left to our choice; as in the case of charity or beneficence, which we are indeed bound to practise, but not towards any definite person, nor at any prescribed time. In the more precise language of philosophic jurists, duties of perfect obligation are those duties in virtue of which a correlative right resides in some person or persons; duties of imperfect obligation are those moral obligations which do not give birth to any right. I think it will be found that this distinction exactly coincides with that which exists between justice and the other obligations of morality. In our survey of the various popular acceptations of justice, the term appeared generally to involve the idea of a personal right--a claim on the part of one or more individuals, like that which the law gives when it confers a proprietary or other legal right. Whether the injustice consists in depriving a person of a possession, or in breaking faith with him, or in treating him worse than he deserves, or worse than other people who have no greater claims, in each case the supposition implies two things--a wrong done, and some assignable person who is wronged. Injustice may also be done by treating a person better than others; but the wrong in this case is to his competitors, who are also assignable persons. It seems to me that this feature in the case--a right in some person, correlative to the moral obligation--constitutes the specific difference between justice, and generosity or beneficence. Justice implies something which it is not only right to do, and wrong not to do, but which some individual person can claim from us as his moral right. No one has a moral right to our generosity or beneficence, because we are not morally bound to practise those virtues towards any given individual. And it will be found, with respect to this as with respect to every correct definition, that the instances which seem to conflict with it are those which most confirm it. For if a moralist attempts, as some have done, to make out that mankind generally, though not any given individual, have a right to all the good we can do them, he at once, by that thesis, includes generosity and beneficence within the category of justice. He is obliged to say, that our utmost exertions are due to our fellow creatures, thus assimilating them to a debt; or that nothing less can be a sufficient _return_ for what society does for us, thus classing the case as one of gratitude; both of which are acknowledged cases of justice. Wherever there is a right, the case is one of justice, and not of the virtue of beneficence: and whoever does not place the distinction between justice and morality in general where we have now placed it, will be found to make no distinction between them at all, but to merge all morality in justice.

Having thus endeavoured to determine the distinctive elements which enter into the composition of the idea of justice, we are ready to enter on the inquiry, whether the feeling, which accompanies the idea, is attached to it by a special dispensation of nature, or whether it could have grown up, by any known laws, out of the idea itself; and in particular, whether it can have originated in considerations of general expediency.

I conceive that the sentiment itself does not arise from anything which would commonly, or correctly, be termed an idea of expediency; but that, though the sentiment does not, whatever is moral in it does.

We have seen that the two essential ingredients in the sentiment of justice are, the desire to punish a person who has done harm, and the knowledge or belief that there is some definite individual or individuals to whom harm has been done.

Now it appears to me, that the desire to punish a person who has done harm to some individual, is a spontaneous outgrowth from two sentiments, both in the highest degree natural, and which either are or resemble instincts; the impulse of self-defence, and the

feeling of sympathy.

It is natural to resent, and to repel or retaliate, any harm done or attempted against ourselves, or against those with whom we sympathize. The origin of this sentiment it is not necessary here to discuss. Whether it be an instinct or a result of intelligence, it is, we know, common to all animal nature; for every animal tries to hurt those who have hurt, or who it thinks are about to hurt, itself or its young. Human beings, on this point, only differ from other animals in two particulars. First, in being capable of sympathizing, not solely with their offspring, or, like some of the more noble animals, with some superior animal who is kind to them, but with all human, and even with all sentient beings. Secondly, in having a more developed intelligence, which gives a wider range to the whole of their sentiments, whether self-regarding or sympathetic. By virtue of his superior intelligence, even apart from his superior range of sympathy, a human being is capable of apprehending a community of interest between himself and the human society of which he forms a part, such that any conduct which threatens the security of the society generally, is threatening to his own, and calls forth his instinct (if instinct it be) of self-defence. The same superiority of intelligence, joined to the power of sympathizing with human beings generally, enables him to attach himself to the collective idea of his tribe, his country, or mankind, in such a manner that any act hurtful to them rouses his instinct of sympathy, and urges him to resistance.

The sentiment of justice, in that one of its elements which consists of the desire to punish, is thus, I conceive, the natural feeling of retaliation or vengeance, rendered by intellect and sympathy applicable to those injuries, that is, to those hurts, which wound us through, or in common with, society at large. This sentiment, in itself, has nothing moral in it; what is moral is, the exclusive subordination of it to the social sympathies, so as to wait on and obey their call. For the natural feeling tends to make us resent indiscriminately whatever any one does that is disagreeable to us; but when moralized by the social feeling, it only acts in the directions conformable to the general good; just persons resenting a hurt to society, though not otherwise a hurt to themselves, and not resenting a hurt to themselves, however painful, unless it be of the kind which society has a common interest with them in the repression of.

It is no objection against this doctrine to say, that when we feel our sentiment of justice outraged, we are not thinking of society at large, or of any collective interest, but only of the individual case. It is common enough certainly, though the reverse of commendable, to feel resentment merely because we have suffered pain; but a person whose resentment is really a moral feeling, that is, who considers whether an act is blameable before he allows himself to resent it--such a person, though he may not say expressly to himself that he is standing up for the interest of society, certainly does feel that he is asserting a rule which is for the benefit of others as well as for his own. If he is not feeling this--if he is regarding the act solely as it affects him individually--he is not consciously just; he is not concerning himself about the justice of his actions. This is admitted even by anti-utilitarian moralists. When Kant (as before remarked) propounds as the fundamental principle of morals, 'So act, that thy rule of conduct might be adopted as a law by all rational beings,' he virtually acknowledges that the interest of mankind collectively, or at least of mankind indiscriminately, must be in the mind of the agent when conscientiously deciding on the morality of the act. Otherwise he uses words without a meaning: for, that a rule even of utter selfishness could not _possibly_ be adopted by all rational beings--that there is any insuperable obstacle in the nature of things to its adoption--cannot be even plausibly maintained. To give any meaning to Kant's principle, the sense put upon it must be, that we ought to shape our conduct by a rule which all rational beings might adopt _with benefit to their collective interest_.

To recapitulate: the idea of justice supposes two things; a rule of conduct, and a sentiment which sanctions the rule. The first must be supposed common to all mankind, and intended for their good. The other (the sentiment) is a desire that punishment may be suffered by those who infringe the rule. There is involved, in addition, the conception of some definite person who suffers by the infringement; whose rights (to use the expression appropriated to the case) are violated by it. And the sentiment of justice appears to me to be, the animal desire to repel or retaliate a hurt or damage to oneself, or to those with whom one sympathizes, widened so as to include all persons, by the human capacity of enlarged sympathy, and the human conception of intelligent self-interest. From the latter elements, the feeling derives its morality; from the former, its peculiar impressiveness, and energy of self-assertion.

I have, throughout, treated the idea of a _right_ residing in the injured person, and violated by the injury, not as a separate element in the composition of the idea and sentiment, but as one of the forms in which the other two elements clothe themselves. These elements are, a hurt to some assignable person or persons on the one hand, and a demand for punishment on the other. An examination of our own minds, I think, will show, that these two things include all that we mean when we speak of violation of a right. When we call anything a person's right, we mean that he has a valid claim on society to protect him in the possession of it, either by the force of law, or by that of education and opinion. If he has what we consider a sufficient claim, on whatever account, to have something guaranteed to him by society, we say that he has a right to it. If we desire to prove that anything does not belong to

him by right, we think this done as soon as it is admitted that society ought not to take measures for securing it to him, but should leave it to chance, or to his own exertions. Thus, a person is said to have a right to what he can earn in fair professional competition; because society ought not to allow any other person to hinder him from endeavouring to earn in that manner as much as he can. But he has not a right to three hundred a-year, though he may happen to be earning it; because society is not called on to provide that he shall earn that sum. On the contrary, if he owns ten thousand pounds three per cent. stock, he _has_ a right to three hundred a-year; because society has come under an obligation to provide him with an income of that amount.

To have a right, then, is, I conceive, to have something which society ought to defend me in the possession of. If the objector goes on to ask why it ought, I can give him no other reason than general utility. If that expression does not seem to convey a sufficient feeling of the strength of the obligation, nor to account for the peculiar energy of the feeling, it is because there goes to the composition of the sentiment, not a rational only but also an animal element, the thirst for retaliation; and this thirst derives its intensity, as well as its moral justification, from the extraordinarily important and impressive kind of utility which is concerned. The interest involved is that of security, to every one's feelings the most vital of all interests. Nearly all other earthly benefits are needed by one person, not needed by another; and many of them can, if necessary, be cheerfully foregone, or replaced by something else; but security no human being can possibly do without; on it we depend for all our immunity from evil, and for the whole value of all and every good, beyond the passing moment; since nothing but the gratification of the instant could be of any worth to us, if we could be deprived of everything the next instant by whoever was momentarily stronger than ourselves. Now this most indispensable of all necessaries, after physical nutriment, cannot be had, unless the machinery for providing it is kept unintermittedly in active play. Our notion, therefore, of the claim we have on our fellow creatures to join in making safe for us the very groundwork of our existence, gathers feelings round it so much more intense than those concerned in any of the more common cases of utility, that the difference in degree (as is often the case in psychology) becomes a real difference in kind. The claim assumes that character of absoluteness, that apparent infinity, and incommensurability with all other considerations, which constitute the distinction between the feeling of right and wrong and that of ordinary expediency and inexpediency. The feelings concerned are so powerful, and we count so positively on finding a responsive feeling in others (all being alike interested), that _ought_ and _should_ grow into _must_, and recognized indispensability becomes a moral necessity, analogous to physical, and often not inferior to it in binding force.

If the preceding analysis, or something resembling it, be not the correct account of the notion of justice; if justice be totally independent of utility, and be a standard _per se_, which the mind can recognize by simple introspection of itself; it is hard to understand why that internal oracle is so ambiguous, and why so many things appear either just or unjust, according to the light in which they are regarded. We are continually informed that Utility is an uncertain standard, which every different person interprets differently, and that there is no safety but in the immutable, ineffaceable, and unmistakeable dictates of Justice, which carry their evidence in themselves, and are independent of the fluctuations of opinion. One would suppose from this that on questions of justice there could be no controversy; that if we take that for our rule, its application to any given case could leave us in as little doubt as a mathematical demonstration. So far is this from being the fact, that there is as much difference of opinion, and as fierce discussion, about what is just, as about what is useful to society. Not only have different nations and individuals different notions of justice, but, in the mind of one and the same individual, justice is not some one rule, principle, or maxim, but many, which do not always coincide in their dictates, and in choosing between which, he is guided either by some extraneous standard, or by his own personal predilections.

For instance, there are some who say, that it is unjust to punish any one for the sake of example to others; that punishment is just, only when intended for the good of the sufferer himself. Others maintain the extreme reverse, contending that to punish persons who have attained years of discretion, for their own benefit, is despotism and injustice, since if the matter at issue is solely their own good, no one has a right to control their own judgment of it; but that they may justly be punished to prevent evil to others, this being an exercise of the legitimate right of self-defence. Mr. Owen, again, affirms that it is unjust to punish at all; for the criminal did not make his own character; his education, and the circumstances which surround him, have made him a criminal, and for these he is not responsible. All these opinions are extremely plausible; and so long as the question is argued as one of justice simply, without going down to the principles which lie under justice and are the source of its authority, I am unable to see how any of these reasoners can be refuted. For, in truth, every one of the three builds upon rules of justice confessedly true. The first appeals to the acknowledged injustice of singling out an individual, and making him a sacrifice, without his consent, for other people's benefit. The second relies on the acknowledged justice of self-defence, and the admitted injustice of forcing one person to conform to another's notions of what constitutes his good. The Owenite invokes the admitted principle, that it is unjust to punish any one for what he cannot help. Each is triumphant so long as he is not compelled to take into consideration any other maxims of justice than the one

he has selected; but as soon as their several maxims are brought face to face, each disputant seems to have exactly as much to say for himself as the others. No one of them can carry out his own notion of justice without trampling upon another equally binding. These are difficulties; they have always been felt to be such; and many devices have been invented to turn rather than to overcome them. As a refuge from the last of the three, men imagined what they called the freedom of the will; fancying that they could not justify punishing a man whose will is in a thoroughly hateful state, unless it be supposed to have come into that state through no influence of anterior circumstances. To escape from the other difficulties, a favourite contrivance has been the fiction of a contract, whereby at some unknown period all the members of society engaged to obey the laws, and consented to be punished for any disobedience to them; thereby giving to their legislators the right, which it is assumed they would not otherwise have had, of punishing them, either for their own good or for that of society. This happy thought was considered to get rid of the whole difficulty, and to legitimate the infliction of punishment, in virtue of another received maxim of justice, _volenti non fit injuria_; that is not unjust which is done with the consent of the person who is supposed to be hurt by it. I need hardly remark, that even if the consent were not a mere fiction, this maxim is not superior in authority to the others which it is brought in to supersede. It is, on the contrary, an instructive specimen of the loose and irregular manner in which supposed principles of justice grow up. This particular one evidently came into use as a help to the coarse exigencies of courts of law, which are sometimes obliged to be content with very uncertain presumptions, on account of the greater evils which would often arise from any attempt on their part to cut finer. But even courts of law are not able to adhere consistently to the maxim, for they allow voluntary engagements to be set aside on the ground of fraud, and sometimes on that of mere mistake or misinformation.

Again, when the legitimacy of inflicting punishment is admitted, how many conflicting conceptions of justice come to light in discussing the proper apportionment of punishment to offences. No rule on this subject recommends itself so strongly to the primitive and spontaneous sentiment of justice, as the _lex talionis_, an eye for an eye and a tooth for a tooth. Though this principle of the Jewish and of the Mahomedan law has been generally abandoned in Europe as a practical maxim, there is, I suspect, in most minds, a secret hankering after it; and when retribution accidentally falls on an offender in that precise shape, the general feeling of satisfaction evinced, bears witness how natural is the sentiment to which this repayment in kind is acceptable. With many the test of justice in penal infliction is that the punishment should be proportioned to the offence; meaning that it should be exactly measured by the moral guilt of the culprit (whatever be their standard for measuring moral guilt): the consideration, what amount of punishment is necessary to deter from the offence, having nothing to do with the question of justice, in their estimation: while there are others to whom that consideration is all in all; who maintain that it is not just, at least for man, to inflict on a fellow creature, whatever may be his offences, any amount of suffering beyond the least that will suffice to prevent him from repeating, and others from imitating, his misconduct.

To take another example from a subject already once referred to. In a co-operative industrial association, is it just or not that talent or skill should give a title to superior remuneration? On the negative side of the question it is argued, that whoever does the best he can, deserves equally well, and ought not in justice to be put in a position of inferiority for no fault of his own; that superior abilities have already advantages more than enough, in the admiration they excite, the personal influence they command, and the internal sources of satisfaction attending them, without adding to these a superior share of the world's goods; and that society is bound in justice rather to make compensation to the less favoured, for this unmerited inequality of advantages, than to aggravate it. On the contrary side it is contended, that society receives more from the more efficient labourer; that his services being more useful, society owes him a larger return for them; that a greater share of the joint result is actually his work, and not to allow his claim to it is a kind of robbery; that if he is only to receive as much as others, he can only be justly required to produce as much, and to give a smaller amount of time and exertion, proportioned to his superior efficiency. Who shall decide between these appeals to conflicting principles of justice? Justice has in this case two sides to it, which it is impossible to bring into harmony, and the two disputants have chosen opposite sides; the one looks to what it is just that the individual should receive, the other to what it is just that the community should give. Each, from his own point of view, is unanswerable; and any choice between them, on grounds of justice, must be perfectly arbitrary. Social utility alone can decide the preference.

How many, again, and how irreconcileable, are the standards of justice to which reference is made in discussing the repartition of taxation. One opinion is, that payment to the State should be in numerical proportion to pecuniary means. Others think that justice dictates what they term graduated taxation; taking a higher percentage from those who have more to spare. In point of natural justice a strong case might be made for disregarding means altogether, and taking the same absolute sum (whenever it could be got) from every one: as the subscribers to a mess, or to a club, all pay the same sum for the same privileges, whether they can all equally afford it or not. Since the protection (it might be said) of law and government is afforded to, and is equally required by, all, there is no injustice in making all buy it at the same price. It is reckoned justice, not injustice, that a dealer should charge to all

customers the same price for the same article, not a price varying according to their means of payment. This doctrine, as applied to taxation, finds no advocates, because it conflicts strongly with men's feelings of humanity and perceptions of social expediency; but the principle of justice which it invokes is as true and as binding as those which can be appealed to against it. Accordingly, it exerts a tacit influence on the line of defence employed for other modes of assessing taxation. People feel obliged to argue that the State does more for the rich than for the poor, as a justification for its taking more from them: though this is in reality not true, for the rich would be far better able to protect themselves, in the absence of law or government, than the poor, and indeed would probably be successful in converting the poor into their slaves. Others, again, so far defer to the same conception of justice, as to maintain that all should pay an equal capitation tax for the protection of their persons (these being of equal value to all), and an unequal tax for the protection of their property, which is unequal. To this others reply, that the all of one man is as valuable to him as the all of another. From these confusions there is no other mode of extrication than the utilitarian.

* * * * *

Is, then, the difference between the Just and the Expedient a merely imaginary distinction? Have mankind been under a delusion in thinking that justice is a more sacred thing than policy, and that the latter ought only to be listened to after the former has been satisfied? By no means. The exposition we have given of the nature and origin of the sentiment, recognises a real distinction; and no one of those who profess the most sublime contempt for the consequences of actions as an element in their morality, attaches more importance to the distinction than I do. While I dispute the pretensions of any theory which sets up an imaginary standard of justice not grounded on utility, I account the justice which is grounded on utility to be the chief part, and incomparably the most sacred and binding part, of all morality. Justice is a name for certain classes of moral rules, which concern the essentials of human well-being more nearly, and are therefore of more absolute obligation, than any other rules for the guidance of life; and the notion which we have found to be of the essence of the idea of justice, that of a right residing in an individual, implies and testifies to this more binding obligation.

The moral rules which forbid mankind to hurt one another (in which we must never forget to include wrongful interference with each other's freedom) are more vital to human well-being than any maxims, however important, which only point out the best mode of managing some department of human affairs. They have also the peculiarity, that they are the main element in determining the whole of the social feelings of mankind. It is their observance which alone preserves peace among human beings: if obedience to them were not the rule, and disobedience the exception, every one would see in every one else a probable enemy, against whom he must be perpetually guarding himself. What is hardly less important, these are the precepts which mankind have the strongest and the most direct inducements for impressing upon one another. By merely giving to each other prudential instruction or exhortation, they may gain, or think they gain, nothing: in inculcating on each other the duty of positive beneficence they have an unmistakeable interest, but far less in degree: a person may possibly not need the benefits of others; but he always needs that they should not do him hurt. Thus the moralities which protect every individual from being harmed by others, either directly or by being hindered in his freedom of pursuing his own good, are at once those which he himself has most at heart, and those which he has the strongest interest in publishing and enforcing by word and deed. It is by a person's observance of these, that his fitness to exist as one of the fellowship of human beings, is tested and decided; for on that depends his being a nuisance or not to those with whom he is in contact. Now it is these moralities primarily, which compose the obligations of justice. The most marked cases of injustice, and those which give the tone to the feeling of repugnance which characterizes the sentiment, are acts of wrongful aggression, or wrongful exercise of power over some one; the next are those which consist in wrongfully withholding from him something which is his due; in both cases, inflicting on him a positive hurt, either in the form of direct suffering, or of the privation of some good which he had reasonable ground, either of a physical or of a social kind, for counting upon.

The same powerful motives which command the observance of these primary moralities, enjoin the punishment of those who violate them; and as the impulses of self-defence, of defence of others, and of vengeance, are all called forth against such persons, retribution, or evil for evil, becomes closely connected with the sentiment of justice, and is universally included in the idea. Good for good is also one of the dictates of justice; and this, though its social utility is evident, and though it carries with it a natural human feeling, has not at first sight that obvious connexion with hurt or injury, which, existing in the most elementary cases of just and unjust, is the source of the characteristic intensity of the sentiment. But the connexion, though less obvious, is not less real. He who accepts benefits, and denies a return of them when needed, inflicts a real hurt, by disappointing one of the most natural and reasonable of expectations, and one which he must at least tacitly have encouraged, otherwise the benefits would seldom have been conferred. The important rank, among human evils and wrongs, of the disappointment of expectation, is shown in the fact that it constitutes the principal criminality of two such highly immoral acts as a breach of friendship and a breach of promise. Few hurts

which human beings can sustain are greater, and none wound more, than when that on which they habitually and with full assurance relied, fails them in the hour of need; and few wrongs are greater than this mere withholding of good; none excite more resentment, either in the person suffering, or in a sympathizing spectator. The principle, therefore, of giving to each what they deserve, that is, good for good as well as evil for evil, is not only included within the idea of Justice as we have defined it, but is a proper object of that intensity of sentiment, which places the Just, in human estimation, above the simply Expedient.

Most of the maxims of justice current in the world, and commonly appealed to in its transactions, are simply instrumental to carrying into effect the principles of justice which we have now spoken of. That a person is only responsible for what he has done voluntarily, or could voluntarily have avoided; that it is unjust to condemn any person unheard; that the punishment ought to be proportioned to the offence, and the like, are maxims intended to prevent the just principle of evil for evil from being perverted to the infliction of evil without that justification. The greater part of these common maxims have come into use from the practice of courts of justice, which have been naturally led to a more complete recognition and elaboration than was likely to suggest itself to others, of the rules necessary to enable them to fulfil their double function, of inflicting punishment when due, and of awarding to each person his right.

That first of judicial virtues, impartiality, is an obligation of justice, partly for the reason last mentioned; as being a necessary condition of the fulfilment of the other obligations of justice. But this is not the only source of the exalted rank, among human obligations, of those maxims of equality and impartiality, which, both in popular estimation and in that of the most enlightened, are included among the precepts of justice. In one point of view, they may be considered as corollaries from the principles already laid down. If it is a duty to do to each according to his deserts, returning good for good as well as repressing evil by evil, it necessarily follows that we should treat all equally well (when no higher duty forbids) who have deserved equally well of us, and that society should treat all equally well who have deserved equally well of it, that is, who have deserved equally well absolutely. This is the highest abstract standard of social and distributive justice; towards which all institutions, and the efforts of all virtuous citizens, should be made in the utmost possible degree to converge. But this great moral duty rests upon a still deeper foundation, being a direct emanation from the first principle of morals, and not a mere logical corollary from secondary or derivative doctrines. It is involved in the very meaning of Utility, or the Greatest-Happiness Principle. That principle is a mere form of words without rational signification, unless one person's happiness, supposed equal in degree (with the proper allowance made for kind), is counted for exactly as much as another's. Those conditions being supplied, Bentham's dictum, 'everybody to count for one, nobody for more than one,' might be written under the principle of utility as an explanatory commentary.[D] The equal claim of everybody to happiness in the estimation of the moralist and the legislator, involves an equal claim to all the means of happiness, except in so far as the inevitable conditions of human life, and the general interest, in which that of every individual is included, set limits to the maxim; and those limits ought to be strictly construed. As every other maxim of justice, so this, is by no means applied or held applicable universally; on the contrary, as I have already remarked, it bends to every person's ideas of social expediency. But in whatever case it is deemed applicable at all, it is held to be the dictate of justice. All persons are deemed to have a _right_ to equality of treatment, except when some recognised social expediency requires the reverse. And hence all social inequalities which have ceased to be considered expedient, assume the character not of simple inexpediency, but of injustice, and appear so tyrannical, that people are apt to wonder how they ever could have been tolerated; forgetful that they themselves perhaps tolerate other inequalities under an equally mistaken notion of expediency, the correction of which would make that which they approve seem quite as monstrous as what they have at last learnt to condemn. The entire history of social improvement has been a series of transitions, by which one custom or institution after another, from being a supposed primary necessity of social existence, has passed into the rank of an universally stigmatized injustice and tyranny. So it has been with the distinctions of slaves and freemen, nobles and serfs, patricians and plebeians; and so it will be, and in part already is, with the aristocracies of colour, race, and sex.

It appears from what has been said, that justice is a name for certain moral requirements, which, regarded collectively, stand higher in the scale of social utility, and are therefore of more paramount obligation, than any others; though particular cases may occur in which some other social duty is so important, as to overrule any one of the general maxims of justice. Thus, to save a life, it may not only be allowable, but a duty, to steal, or take by force, the necessary food or medicine, or to kidnap, and compel to officiate, the only qualified medical practitioner. In such cases, as we do not call anything justice which is not a virtue, we usually say, not that justice must give way to some other moral principle, but that what is just in ordinary cases is, by reason of that other principle, not just in the particular case. By this useful accommodation of language, the character of indefeasibility attributed to justice is kept up, and we are saved from the necessity of maintaining that there can be laudable injustice.

The considerations which have now been adduced resolve, I conceive, the only real difficulty in the utilitarian theory of morals. It has always been evident that all cases of justice are also cases of expediency: the difference is in the peculiar sentiment which

attaches to the former, as contradistinguished from the latter. If this characteristic sentiment has been sufficiently accounted for; if there is no necessity to assume for it any peculiarity of origin; if it is simply the natural feeling of resentment, moralized by being made coextensive with the demands of social good; and if this feeling not only does but ought to exist in all the classes of cases to which the idea of justice corresponds; that idea no longer presents itself as a stumbling-block to the utilitarian ethics. Justice remains the appropriate name for certain social utilities which are vastly more important, and therefore more absolute and imperative, than any others are as a class (though not more so than others may be in particular cases); and which, therefore, ought to be, as well as naturally are, guarded by a sentiment not only different in degree, but also in kind; distinguished from the milder feeling which attaches to the mere idea of promoting human pleasure or convenience, at once by the more definite nature of its commands, and by the sterner character of its sanctions.

THE END.

FOOTNOTES:

[Footnote C: See this point enforced and illustrated by Professor Bain, in an admirable chapter (entitled "The Ethical Emotions, or the Moral Sense") of the second of the two treatises composing his elaborate and profound work on the Mind.]

[Footnote D: This implication, in the first principle of the utilitarian scheme, of perfect impartiality between persons, is regarded by Mr. Herbert Spencer (in his _Social Statics_) as a disproof of the pretentions of utility to be a sufficient guide to right; since (he says) the principle of utility presupposes the anterior principle, that everybody has an equal right to happiness. It may be more correctly described as supposing that equal amounts of happiness are equally desirable, whether felt by the same or by different persons. This, however, is not a pre-supposition; not a premise needful to support the principle of utility, but the very principle itself; for what is the principle of utility, if it be not that 'happiness' and 'desirable' are synonymous terms? If there is any anterior principle implied, it can be no other than this, that the truths of arithmetic are applicable to the valuation of happiness, as of all other measurable quantities.

[Mr. Herbert Spencer, in a private communication on the subject of the preceding Note, objects to being considered an opponent of Utilitarianism; and states that he regards happiness as the ultimate end of morality; but deems that end only partially attainable by empirical generalizations from the observed results of conduct, and completely attainable only by deducing, from the laws of life and the conditions of existence, what kinds of action necessarily tend to produce happiness, and what kinds to produce unhappiness. With the exception of the word "necessarily," I have no dissent to express from this doctrine; and (omitting that word) I am not aware that any modern advocate of utilitarianism is of a different opinion. Bentham, certainly, to whom in the _Social Statics_ Mr. Spencer particularly referred, is, least of all writers, chargeable with unwillingness to deduce the effect of actions on happiness from the laws of human nature and the universal conditions of human life. The common charge against him is of relying too exclusively upon such deductions, and declining altogether to be bound by the generalizations from specific experience which Mr. Spencer thinks that utilitarians generally confine themselves to. My own opinion (and, as I collect, Mr. Spencer's) is, that in ethics, as in all other branches of scientific study, the consilience of the results of both these processes, each corroborating and verifying the other, is requisite to give to any general proposition the kind and degree of evidence which constitutes scientific proof.]]

Hostería de Cristófano Buttarelli. The Inn of Cristófano Puerta en el fondo que da a la calle: Buttarelli. A door at the back mesas, jarros y demás utensilios leads out to the street: tables, propios de semejante lugar. jugs and other utensils appropriate for such a place.

ESCENA PRIMERA SCENE I

(Don Juan, con antifaz, sentado a una (Don Juan, masked, seated at a mesa escribiendo. Buttarelli y table, writing. Buttarelli and Ciutti, a un lado esperando. Al Ciutti, to one side, waiting. As levantarse el telón, se ven pasar por the curtain rises, in the la puerta del fondo máscaras, background one can see through estudiantes y pueblo con hachones, the door at the back people músicas, etc.) wearing masks, students, people with torches, musicians, etc.)

DON JUAN: ¡Cuál gritan esos malditos! How they shout those devils! Pero ¡mal rayo me parta Let me be damned by forked lightning si, en concluyendo la carta , if when this letter I'm writing no pagan caros sus gritos! is done, I don't end their revels! (Sigue escribiendo.) (He continues writing.)

BUTTARELLI: (¡A Ciutti.) (To Ciutti) Buen carnaval. A good Carnival.

CIUTTI: (A Buttarelli.) (To Buttarelli) Buen agosto A good harvest para rellenar la arquilla. for re-filling the coffers.

BUTTARELLI: ¡Quiá! Corre ahora por Sevilla Hey! No fun and plenty of bother poco gusto y mucho mosto. running around in Seville's dust. Ni caen aquí buenos peces, And you don't catch such good fish here, que son casas mal miradas since these inns don't find favour por gentes acomodadas, with gentlemen who are wealthy: y atropelladas a veces. or even, at times, the masses.

CIUTTI: Pero hoy... But today...

BUTTARELLI: Hoy no entra en la cuenta, Is not in the reckoning. se ha hecho buen trabajo. Good work's already been done.

CIUTTI: ¡Chist! Habla un poco más Shhh! Talk a little less loud bajo, then, que mi señor se impacienta pronto. or my master will soon be beckoning.

BUTTARELLI: ¿A su servicio estás? So you're his servant?

CIUTTI: Ya ha un año. For a year.

BUTTARELLI: ¿Y qué tal te sale? And how's it been?

CIUTTI: No hay prior que se me iguale; No abbot to equal me's been seen, tengo cuanto quiero, y más. I've all I ever could want. Tiempo libre, bolsa llena, Good women and good wine, buenas mozas y buen vino. free time, and a full pocket,

BUTTARELLI: ¡Cuerpo de tal, qué My God, what a racket! destino!

CIUTTI: (Señalando a don Juan.) (Pointing to Don Juan) Y todo ello a costa ajena. All paid for by that master of mine.

BUTTARELLI: Rico, ¿eh? He's rich, eh?

CIUTTI: Varea la plata. He's rolling, in brief.

BUTTARELLI: ¿Franco? Generous?

CIUTTI: Como un estudiante. Yes, like a student you see.

BUTTARELLI: ¡Y noble! And noble!

CIUTTI: Como un infante. As every prince should be.

BUTTARELLI: ¡Y bravo! And fierce!

CIUTTI: Como un pirata. As a pirate chief.

BUTTARELLI: ¡Español? A Spaniard?

CIUTTI: Creo que sí. Well, I think so.

BUTTARELLI: ¿Su nombre? His name?

CIUTTI: Lo ignoro, en suma. I don't know, again.

BUTTARELLI: ¡Bribón! ¿Y dónde va? Wretch! Where's he heading?

CIUTTI: Aquí. Here, I know.

BUTTARELLI: Largo plumea. He's been writing a lot.

CIUTTI: Es gran pluma. Well he has a big pen.

BUTTARELLI: ¿Y a quién mil diablos escribe And who's he writing to then tan cuidadoso y prolijo? as carefully and fully as he's done?

CIUTTI: A su padre. To his father.

BUTTARELLI: ¡Vaya un hijo! What a son!

CIUTTI: Para el tiempo en que se vive For the times in which we live, he's an es un hombre extraordinario. extraordinary man. Mas ¡silencio! But: silence!

DON JUAN: (Cerrando la carta.) (Closing the letter) ¡Firmo! y plego. I've signed and sealed it. ¿Ciutti? Ciutti?

CIUTTI: Señor. Sir?

DON JUAN: Este pliego This message, yield it irá dentro del horario to her now, let it appear en que reza doña Inés in the hands of doña Inés, a sus manos a parar. inside her book of prayers.

CIUTTI: ¿Hay respuesta que aguardar? Should I wait for an answer?

DON JUAN: Del diablo con guardapiés From that devil that guards her, que la asiste, de su dueña that attends her, her dueña, que mis intenciones sabe, who knows my every intention, recogerás una llave, you will pick up a key, she'll mention una hora y una seña; a time and a signal, y más ligero que el viento and swift as the wind aquí otra vez. you be back here again.

CIUTTI: Bien está. (Vase.) Fine. (He leaves.)

ESCENA DOS SCENE II.

Doña Ines, Don Juan , Buttarelli Doña Ines, Don Juan , Buttarelli

DON JUAN: Cristófano, vieni quá. Cristófano, vieni quá. (In Italian)

BUTTARELLI: Eccellenenza! Eccellenenza!

DON JUAN: Senti. Senti.

BUTTARELLI: Sento. Sento. Ma ho imparato il castigliano, Ma ho imparato il castigliano, se è più facile al signor se è più facile al signor la sua lingua... la sua lingua...

DON JUAN: (Spanish)Sí, es mejor: (Spanish)Sí, es mejor: lascia dunque il tuo toscano, lascia dunque il tuo toscano, y dime: ¿don Luis Mejía And tell me, has Don Luis Mejía ha venido hoy? been here today?

BUTTARELLI: Excelencia, Excellency, no está en Sevilla. he is not in Sevilla,

DON JUAN: ¿Su ausencia Is he still absent? dura en verdad todavía? Really?

BUTTARELLI: Tal creo. I think so.

DON JUAN: ¿Y noticia alguna And it's right no tienes de él? you've no news of him?

BUTTARELLI: ¡Ah! Una historia Ah, I find me viene ahora a la memoria there's a story coming to mind que os podrá dar... I should tell you....

DON JUAN: ¿Oportuna Shedding light luz sobre el caso? on the case?

BUTTARELLI: Tal vez. Maybe.

DON JUAN: Habla pues. Speak then.

BUTTARELLI: (Hablando consigo mismo.) (Talking to himself) No, no me engaño: No, no, I've just got it right. esta noche cumple el año, the year is up tonight lo había olvidado. I'd forgotten that.

DON JUAN: ¡Pardiez! For God's sake ¿Acabarás con tu cuento? will you start your tale?

BUTTARELLI: Perdonad, señor: estaba Excuse me sir, at once, recordando el hecho. I was thinking of the event.

DON JUAN: ¡Acaba, Out with it, then, because vive Dios!, que me impaciento. I'm getting more than impatient!

BUTTARELLI: Pues es el caso, señor, Well, the story sir, round here que el caballero Mejía is that the gentleman, Mejía por quien preguntáis, dio un día whom you ask about, he I fear en la ocurrencia peor hit on the very worst idea que ocurrírsele podía. that is ever likely to appear.

DON JUAN: Suprime lo al hecho extraño; Skip the extraordinary que apostaron me es notorio idea, it's well known to me, a quién haría en un año as to who in the space of a year, con más fortuna más daño could do more harm with more good luck, Luis Mejía y Juan Tenorio. Juan Tenorio or Luis Mejía.

BUTTARELLI: ¿La historia sabéis? You know the story?

DON JUAN: Entera; In its entirety: por eso te he preguntado that's why I asked por Mejía. for Mejía.

BUTTARELLI: ¡Oh! me pluguiera Oh! What fun que la apuesta se cumpliera, if the bet were done, que pagan bien y al contado. because they pay well, in cash.

DON JUAN: ¿Y no tienes confianza And don't you believe en que don Luis a esta cita Don Luis will keep acuda? his appointment?

BUTTARELLI: ¡Quiá! ni esperanza: Whoa, not a chance: el fin del plazo se avanza the end of the term's at hand y estoy cierto que maldita and I'm sure there's no way la memoria que ninguno a damned soul can say guarda de ello. they remember a thing about it.

DON JUAN: Basta ya. That's enough. Toma. Here!

BUTTARELLI: ¡Excelencia! Your excellency! (Saluda profundamente.) (He bows deeply) ¿Y de alguno And do you know about de ellos sabéis vos? either of them?

DON JUAN: Quizá. Perhaps.

BUTTARELLI: ¿Vendrán, pues? Then they'll come?

DON JUAN Al menos uno; At least one. mas por si acaso los dos but if by chance both bother dirigen aquí sus huellas to direct their footsteps here el uno del otro en pos, one after the other, well tus dos mejores botellas let two best bottles appear prevénles. for them.

BUTTARELLI: Mas... But

DON JUAN:¡Chito...! Adiós. Shhh! Farewell!

ESCENA III SCENE III

Buttarelli ¡Santa MaDoña! De vuelta Holy Mother of God! Mejía y Tenorio están Its Tenorio and Mejía..... sin duda... y recogerán it's certain they'll both reappear los dos la palabra suelta. to pick up where they left off. ¡Oh! sí, ese hombre tiene traza Ah yes, and that man there de saberlo a fondo. seems to know all about it. (Ruido dentro.) (A noise off stage.) Pero But ¿qué es esto? what's this? (Se asoma a la puerta.) (He goes to the door) ¡Anda! ¡El forastero The stranger, está riñendo en la plaza! fighting in the square! ¡Válgame Dios! ¡Qué bullicio! Good Lord, what a rumpus! Cómo se le arremolina How the crowd mills round! chusma...! ¡Y cómo la acoquina Look at him hold the ground él solo...! ¡Puf! ¡Qué estropicio! alone...! My God! What a fuss! ¡Cuál corren delante de él! How they run like hell! No hay duda, están en Castilla There's no doubt they are in Castilla, los dos, y anda ya Sevilla both of them, now poor Sevilla toda revuelta. ¡Miguel! is turned upside down..... Miguel!

ESCENA IV SCENE IV

Buttarelli, Miguel Buttarelli, Miguel

MIGUEL: ¿Che comanda? ¿Che comanda? (More Italian)

BUTTARELLI: Presto, qui Presto, qui servi una tavola, amico: servi una tavola, amico: e del Lacryma più antico e del Lacryma più antico porta due buttiglie. porta due buttiglie.

MIGUEL: Si, Si, signor padron. signor padron.

BUTTARELLI: Micheletto, Micheletto, apparechia in carità apparechia in carità il più ricco que si fa, lo più ricco que si fa, ¡afrettati! ¡afrettati!

MIGUEL: Gia mi afretto, Gia mi afretto, signor padrone. (Vase.) signor padrone. (He goes.)

ESCENA V SCENE V

(Buttarelli, Don Gonzalo) (Buttarelli, Don Gonzalo)

DON GONZALO: Aquí es. Here it is. ¿Patrón? Innkeeper?

BUTTARELLI: ¿Qué se ofrece? May I help you?

DON GONZALO: Quiero I wish hablar con el hostelero. to speak to the innkeeper.

BUTTARELLI: Con él habláis; decid, You are speaking with him. Talk pues. then.

DON GONZALO: ¿Sois Vos? You are he?

BUTTARELLI: Sí, mas despachad, Yes, but quickly, say, que estoy de priesa. since I'm in a hurry.

DON GONZALO: En tal caso In that case look ved si es cabal y de paso and see if this coin is enough esa dobla y contestad. and answer on the way.

BUTTARELLI: ¡Oh, excelencia! Oh Excellency!

DON GONZALO: ¿Conocéis Do you know a don Juan Tenorio? Don Juan Tenorio?

BUTTARELLI: Sí. Yes.

DON GONZALO: ¿Y es cierto que tiene aquí And is it true that he has hoy una cita? a meeting here today?

BUTTARELLI: ¡Oh! ¿seréis Oh! vos el otro? you must be the other one?

DON GONZALO: ¿Quién? Who?

BUTTARELLI: Don Luis. Don Luis.

DON GONZALO: No; pero estar me interesa No, but it interests me en su entrevista. to be at the interview.

BUTTARELLI: Esta mesa You'll see les preparo; si os servís I'm setting a table for them: en esotra colocaros, and if you like I'll place you podréis presenciar la cena here, so you can see, then, que les daré... ¡Oh! será escena the meal I'm serving them. que espero que ha de admiraros. Oh I hope the scene will amaze you.

DON GONZALO: Lo creo. I believe it.

BUTTARELLI: Son sin disputa Without a doubt they remain los dos mozos más gentiles the two most gallant men de España. in Spain.

DON GONZALO: Sí, y los más viles Yes, and the vilest of men también. as well.

BUTTARELLI: ¡Bah! Se les imputa Bah! Again, cuanto malo se hace hoy día; they say that every day here mas la malicia lo inventa, but its malice they invent, pues nadie paga su cuenta since no one pays the rent como Tenorio y Mejía. like Tenorio and Mejía.

DON GONZALO: ¡Ya! Really!

BUTTARELLI: Es afán de murmurar, It's just love of gossip, porque conmigo, señor, because with me, sir ninguno lo hace mejor, no one behaves better, y bien lo puedo jurar. and I can swear to it.

DON GONZALO: No es necesario; mas... It's not necessary, but...

BUTTARELLI: ¿Qué? Yes?

DON GONZALO:Quisiera yo ocultamente I should like to see verlos, y sin que la gente without them seeing me me reconociera. or being recognised.

BUTTARELLI: A fe Faith, que eso es muy fácil, señor. that's very easy, sir. Las fiestas de carnaval Carnival celebrations let al hombre más principal the most important guest permiten, sin deshonor without any real dishonour de su linaje, servirse make very good use of de un antifaz, y bajo él, a mask, and, behind a false face, ¿quién sabe hasta descubrirse who knows, till he takes the lid off, de qué carne es el pastel? what's in the pie he'll taste?

DON GONZALO: Mejor fuera en aposento It would be better if I were contiguo... nearby in another room...

BUTTARELLI: Ninguno cae There are none aquí. here.

DON GONZALO: Pues entonces trae Well then, bring on el antifaz. the mask.

BUTTARELLI- Al momento. Right away, sir.

ESCENA VI SCENE VI

DON GONZALO No cabe en mi corazón I'm sick at heart que tal hombre pueda haber there is such a man y no quiero cometer but I don't want to start con él una sinrazón. a quarrel to plan. Yo mismo indagar prefiero I prefer to find the truth la verdad..., mas a ser cierta for myself, but if the thing la apuesta, primero muerta is certain, I'd rather she were dead que esposa suya la quiero. than he and she were wed. No hay en la tierra interés There's no joy left on earth que si la daña me cuadre; if the wickedness is done: primero seré buen padre, I'll be a good gentleman, buen caballero después. but a good father first. Enlace es de gran ventaja, Its a good match I agree, mas no quiero que Tenorio but I don't wish Tenorio del velo del desposorio to cut a shroud of sorrow la recorte una mortaja. for her, from her finery.

ESCENA VII SCENE VII

(Don Gonzalo, (Don Gonzalo and Buttarelli, que trae un antifaz.) Buttarelli, who brings a mask.)

BUTTARELLI: Ya está aquí. Here it is.

DON GONZALO: Gracias, patrón: Thanks, my man: ¿tardarán mucho en llegar?. will they be long arriving?.

BUTTARELLI: Si vienen no han de If they come, there'll be no tardar: delaying: cerca de las ocho son. It's almost eight, at hand.

DON GONZALO: ¿Esa es hora señalada? Is that the time they said?

BUTTARELLI: Cierra el plazo, y es The same (it's nearly time) asunto de perder quien no esté a punto who's not here at first chime de la primer campanada. of the bell, gets knocked on the head!

DON GONZALO: Quiera Dios que sea una chanza, May God will what I fear y no lo que se murmura. is not true, the things they're saying.

BUTTARELLI: No tengo aún por muy segura Well I'm still not laying de que cumplan, la esperanza; a bet that they'll be here, pero si tanto os importa but if it's such a bother, lo que ello sea saber, if it matters so much to you, pues la hora está al caer, the hour is almost due, la dilación es ya corta. the waiting's nearly over.

DON GONZALO: Cúbrome, pues, y me siento. I'll put on the mask and sit down. (Se sienta en una mesa a la derecha y (He sits at a table to the right se pone el antifaz.) and puts on the mask)

BUTTARELLI: (Curioso el viejo me tiene (The old man puzzles me: del misterio con que viene his coming here's a mystery, y no me quedo contento and I'll be hanging around hasta saber quién es él.) till I know who he is.) (Limpia y trajina, mirándole de (He cleans, and clears up, reojo.) looking at him out of the corner of his eye.)

DON GONZALO: (¡Que un hombre como yo tenga (That a man such as I has to stay que esperar aquí y se avenga and agree to play con semejante papel! such a role! En fin, me importa el sosiego But my house's tranquility de mi casa y la ventura is important to me, and what's more de una hija sencilla y pura, my daughter, who's simple and pure: y no es para echarlo a juego.) I'll not risk her destiny.)

ESCENA VIII SCENE VIII

(Don Gonzalo, Buttarelli; Don Diego, la puerta del fondo.)

DON DIEGO: La seña está terminante; The sign is right. It's the inn. aquí es: bien me han informado; It's here, according to plan. llego, pues. I've arrived.

BUTTARELLI: ¿Otro embozado? Another masked man?

DON DIEGO: ¡Ah de esta casa! Ah, this is the place!

BUTTARELLI: Adelante. Come in.

DON DIEGO: ¿La hostería del Laurel? Is this it, The Laurel Inn?

BUTTARELLI: En ella estáis, caballero. Sir, you are in it, you see.

DON DIEGO: ¿Está en casa el hostelero? And the innkeeper, is he in?

BUTTARELLI: Estáis hablando con él. You are talking to him.

DON DIEGO: ¿Sois vos Buttarelli? You're Buttarelli?

BUTTARELLI: Yo. I am.

DON DIEGO: ¿Es verdad que hoy tiene aquí Is it true that Tenorio has Tenorio una cita? an appointment here today?

BUTTARELLI: Sí. Yes.

DON DIEGO: ¿Y ha acudido a ella ? And has he dared to attend?

BUTTARELLI: No. No.

DON DIEGO: ¿Pero acudirá? But will he come?

BUTTARELLI: No sé. I don't know.

DON DIEGO: ¿Le esperáis vos? Do you expect him?

BUTTARELLI: Por si acaso Probably he'll come, venir le place. if it pleases him.

DON DIEGO: En tal caso In that case yo también le esperaré. I'll wait for him too. (Se sienta en el lado opuesto a don (Sits on the side opposite to Gonzalo) Don Gonzalo.)

BUTTARELLI: ¿Que os sirva vianda alguna Shall I serve you something while queréis mientras? you wait?

DON DIEGO: No: tomad. No. Here. (Dale dinero.) (He gives him money)

DON DIEGO: Y excusad And forget...

BUTTARELLI: ¡Excelencia! Excellency!

DON DIEGO: conversación importuna. .....the unnecessary conversation.

BUTTARELLI: Perdonad. I'm sorry.

DON DIEGO: Vais perdonado: You're forgiven. dejadme pues. Go on, then.

BUTTARELLI: (¡Jesucristo! (Jesus Christ! En toda mi vida he visto In all the days of my life hombre más malhumorado.) I've not seen a worse disposition.).

DON DIEGO: (¡Que un hombre de mi linaje (That a man of my descent descienda a tan ruin mansión! should stoop to such a game. Pero no hay humillación But for a father there's no shame a que un padre no se baje to which he'll not consent por un hijo. Quiero ver for a son. I need to see, por mis ojos la verdad with my eyes, the reality, y el monstruo de liviandad this monster of depravity, a quien pude dar el ser.) that I have caused to be.) (Buttarelli que anda arreglando (Buttarelli, who is going around sus trastos, arranging his things, contempla desde el fondo contemplates Don Gonzalo and Don Diego a don Gonzalo y a don Diego, from the back. que permanecerán embozados y en They remain masked and in silencio.) silence.)

BUTTARELLI: ¡Vaya un par de hombres de piedra! What a pair of stony-faced men! Para éstos sobra mi abasto; My supplies are more than enough mas, ¡pardiez!, pagan el gasto but Lord, they're paying for stuff que no hacen, y así se medra. not ordered, so much the better then.

ESCENA IX SCENE IX

(Buttarelli, Don Gonzalo, Don Diego, (Buttarelli, Don Gonzalo, Don El capitán Diego, Captain Centellas, dos caballeros, Avellaneda) Centellas, two gentlemen, Avellaneda)

AVELLANEDA: Vinieron, y os aseguro They came, and I assure you que se efectuará la apuesta. the bet will be carried through.

CENTELLAS Entremos, pues. ¡Buttarelli! Lets go in then. Buttarelli!

BUTTARELLI: Señor capitán Centellas, Captain Centellas, ¿vos por aquí? You too?

CENTELLAS Sí, Cristófano. Yes Cristófano. ¿Cuándo aquí, sin mi presencia, When was anything staged, tuvieron lugar las orgías that has come to light in this age que han hecho raya en la época? without my being present?

BUTTARELLI: Como ha tanto tiempo ya Why haven't I seen you que no os he visto. for such a long time then?

CENTELLAS Las guerras The wars of the Emperor, del Emperador, a Túnez in Tunis, took me away, me llevaron; mas mi hacienda but my affairs bring me me vuelve a traer a Sevilla; back to Seville again, y, según lo que me cuentan, according to what they say, llego lo más a propósito I've here at just the right time para renovar añejas to renew all the old lines amistades. Conque apróntanos of friendship. So, bring us now luego unas cuantas botellas, some bottles right away y en tanto que humedecemos and while we take a drop, la garganta, verdadera give us a true account relación haznos de un lance of a thing about which sobre el cual hay controversia. there's a great deal of lather.

BUTTARELLI: Todo se andará, mas antes It will be done, but first, dejadme ir a la bodega. let me go to the wine cellar.

VARIOS: Sí, sí. Well, of course!

ESCENA X SCENE X

(Dichos, menos Buttarelli) (The same minus Buttarelli)

CENTELLAS: Sentarse, señores, Sit down gentlemen. y que siga Avellaneda Let Avellaneda continue con la historia de don Luis. with the story of Don Luis.

AVELLANEDA: No hay ya más que decir de ella There's no more to tell of it sino que creo imposible except, that I think it's impossible que la de Tenorio sea for Tenorio to be the worse devil más endiablada, y que apuesto and I bet on por don Luis. don Luis.

CENTELLAS: Acaso pierdas. Perhaps you'll lose. Don Juan Tenorio se sabe Don Juan Tenorio is known que es la más mala cabeza as the most evil character del orbe, y no hubo hombre al in the world, and there's no man que aventajarle pudiera who can get the better of him con sólo su inclinación; if he's so inclined, conque ¿qué hará si se empeña? so what might he do if he made an effort?

AVELLANEDA: Pues yo sé bien que Mejía Well, I know well that Mejía las ha hecho tales, que a ciegas has done such deeds se puede apostar por él. I can blindly wager on him.

CENTELLAS Pues el capitán Centellas Well, captain Centellas pone por don Juan Tenorio bets everything he has cuanto tiene. on Don Juan Tenorio.

AVELLANEDA: Pues se acepta It's accepted on Don Luis' behalf, por don Luis, que es muy mi amigo. for he's very much my friend.

CENTELLAS: Pues todo en contra se arriesga; I'm risking all on the contrary, porque no hay como Tenorio since there's no other man otro hombre sobre la tierra, like Tenorio on this earth, y es proverbial su fortuna and his fortune is proverbial y extremadas sus empresas. and his deeds are stupendous.

ESCENA XI SCENE XI

(Dichos, Buttarelli, con botellas) (The same: Buttarelli with bottles.)

BUTTARELLI: Aquí hay Falerno, Borgoña, Here is Falerno, Burgundy, Sorrento. Sorrento.

CENTELLAS De lo que quieras Serve what you want sirve, Cristófano, y dinos: Cristófano, and tell us, ¿qué hay de cierto en una apuesta what's the truth about the bet por don Juan Tenorio ha un año made between Don Juan Tenorio y don Luis Mejía hecha? and Luis Mejía a year ago?

BUTTARELLI: Señor capitán, no sé Captain, I don't know tan a fondo la materia the matter well enough que os pueda sacar de dudas, to erase all your doubts, pero diré lo que sepa. but I'll tell you what I know.

VARIOS: Habla, habla. Tell: tell!

BUTTARELLI: Yo, la verdad, Honestly, aunque fue en mi casa mesma though it was in my own inn la cuestión entre ambos, como that the question arose between them, pusieron tan larga fecha as they set such a far-off date a su plazo, creí siempre for the bet, I always thought que nunca a efecto viniera; it would never come about, así es, que ni aun me acordaba which explains why I didn't remember de tal cosa a la hora de ésta. a thing about it till now. Mas esta tarde, sería But this afternoon, it must have been al anochecer apenas, scarcely before twilight, entróse aquí un caballero a gentleman came in here pidiéndome que le diera asking me to give him recado con que escribir materials for writing una carta: y a sus letras a letter: and he attending only atento no más, me dio to his writing, I had time tiempo a que charla metiera to strike up a conversation con un paje que traía, with a servant that he brought, paisano mío, de Génova. from my country, from Genoa. No saqué nada del paje, I got nothing from the servant que es, por Dios, muy brava pesca; who, my God, is a slippery fish: mas cuando su amo acababa but when his master finished su carta, le envió con ella the letter, he sent him with it a quien iba dirigida: to the person it addressed. el caballero en mi lengua The gentleman spoke my language me habló y me pidió noticias and asked for information de don Luis. Dijo que entera. about Don Luis. He said sabía de ambos la historia, he knew the two of them que tenía certeza and that he was certain de que al menos uno de ellos that at least one of them acudiría a la apuesta. would show up for the wager. Yo quise saber más de él, I tried to find more about him mas púsome dos monedas but he put two gold coins de oro en la mano diciéndome into my hand and told me así, como a la deshecha: as if by the way, "Y por si acaso los dos "And if by chance the two al tiempo aplazado llegan, arrive at the given time, ten prevenidas para ambos have prepared for both tus dos mejores botellas". your two best bottles of wine." Largóse sin decir más, He left without saying more, yo, atento a sus monedas, I, intent on his coins, les puse en el mismo sitio set the table in the same spot donde apostaron, la mesa. where they made the wager. Y vedla allí con dos sillas, And you can see it there, with two chairs, dos copas y dos botellas. two glasses and two bottles.

AVELLANEDA: Pues señor, no hay que dudar; Well sir, there's no doubt era don Luis. it was Don Luis.

CENTELLAS: Don Juan era. It was Don Juan.

AVELLANEDA: ¿Tú no le viste la cara? Didn't you see his face?

BUTTARELLI: ¡Si la traía cubierta He had it covered con un antifaz! with a mask.

CENTELLAS Pero, hombre, Good Lord man, ¿tú a los dos no les recuerdas? Don't you recall the two of them? ¿no sabes distinguir Can't you make out a las gentes por sus señas who someone is by their actions lo mismo que por sus caras? as well as by their face?

BUTTARELLI: Pues confieso mi torpeza; I confess my stupidity, no le supe conocer at not being able to recognize him, y lo procuré de veras. because I really tried. Pero silencio. But, be quiet.

AVELLANEDA: ¿Qué pasa? What's happening?

BUTTARELLI: A dar el reló comienza The chimes are beginning to strike los cuartos para las ocho. for eight o'clock. (Dan.) (The clock strikes.)

CENTELLAS: Ved, ved la gente que se entra. Look, see the people coming in.

AVELLANEDA: Como que está de este lance That's because all of Seville curiosa Sevilla entera. is curious about this affair. (Se oyen dar las ocho; varias (Eight o'clock is heard, several personas entran y se reparten en people enter and disburse in silencio por la escena; al dar la silence around the stage; as the última campanada, don Juan, con last chime is struck, don Juan, antifaz, se llega a la mesa que ha masked, approaches the table preparado Buttarelli en el centro del that Buttarelli has prepared in escenario, y se dispone a ocupar una the centre of the stage; and de las dos sillas que están delante gets ready to occupy one of the de ella. Inmediatamente después de two chairs in front of it. él, entra don Luis también con Immediately after him don Luis antifaz y se

dirige a la otra. Todos also enters masked and proceeds los miran) to the other. Everyone watches them.)

ESCENA XII SCENE XII

(Don Diego, Don Gonzalo, Don Juan, (Don Diego, Don Gonzalo, Don Don Luis, Buttarelli, Centellas, Juan, Don Luis, Buttarelli, Avellaneda, caballeros, curiosos, Centellas, Avellaneda, enmascarados.) gentlemen, onlookers, masqueraders.)

AVELLANEDA: (A Centellas, por don Juan.) (To Centellas, on Don Juan's behalf) Verás aquél, si ellos vienen, You'll see, if they come qué buen chasco que se lleva. what a good joke goes forward.

CENTELLAS: (A Avellaneda, por don Luis.) (To Avellandeda, on Don Luis' behalf) Pues allí va otro a ocupar Well, here comes another one to take la otra silla: ¡uf! aquí es ella. the other chair. Ah, here it is.

DON JUAN: ¿A don Luis.) (To Don Luis) Esa silla está comprada, That chair is taken, hidalgo. my good man.

DON LUIS: (A don Juan.) (To Don Juan) Lo mismo digo, I say the same, hidalgo; para un amigo my good man, I have paid for tengo yo esotra pagada. that one for a friend.

DON JUAN: Que ésta es mía haré I maintain this is mine. notorio.

DON LUIS: Y yo también que ésta es And I also, this is mine. mía.

DON JUAN: Luego sois don Luis Mejía. Then you are Don Luis Mejía.

DON LUIS: Seréis, pues, don Juan Then you must be Don Juan Tenorio. Tenorio.

DON JUAN: Puede ser. Maybe.

DON LUIS: Vos lo decís. You said so.

DON JUAN: ¿No os fiáis? Don't you trust me?

DON LUIS: No. No.

DON JUAN: Yo tampoco. Nor I you.

DON LUIS: Pues no hagamos más el coco. Well, let's not beat around the bush.

DON JUAN: Yo soy don Juan. I am Don Juan. (Quitándose la máscara.) (Taking off the mask)

DON LUIS: Yo don Luis. (Se quita la máscara.) And I Don Luis. (He takes off the mask.) (Se descubren y se sientan. El (They take off their hats and capitán Centellas, Avellaneda, sit down. Captain Centellas, Buttarelli y algunos otros se van a Avellaneda, Buttarelli, and some ellos y les saludan, abrazan y dan la others go up to them and greet mano, y hacen otras semejantes them, embrace and shake hands muestras de cariño y amistad. Don and give other similar signs of Juan y don Luis las aceptan affection and friendship. Don cortésmente.) Juan and Don Luis accept them courteously.)

CENTELLAS ¡Don Juan! Don Juan!

AVELLANEDA: ¡Don Luis! Don Luis!

DON JUAN: ¡Caballeros! Gentlemen!

DON LUIS: ¡Oh amigos! ¿Qué dicha es ésta? My friends, what delight?

AVELLANEDA: Sabíamos vuestra apuesta, We knew of the bet tonight, y hemos acudido a veros. and we came to see you two.

DON LUIS: Don Juan y yo tal bondad Don Juan and I are grateful en mucho os agradecemos. for such kindness from you.

DON JUAN: El tiempo no malgastemos, Lets not waste time Don Luis. don Luis. (A los otros.) Sillas (To the others.) Pull up a pew. arrimad. (A los que están lejos.) (To those further away.) Caballeros, yo supongo Gentlemen, I imagine que a ustedes también aquí the wager brings you, so les trae la apuesta, y por mí on my part I have no a antojo tal no me opongo. objection to such a whim.

DON LUIS: Ni yo: que aunque nada más Nor I, although the game fue el empeño entre los dos, was only between this pair, no ha de decirse por Dios by God, don't imagine I care que me avergonzó jamás. or consider it any shame.

DON JUAN: Ni a mí, que el orbe es Nor I, as all the world knows, testigo de que hipócrita no soy, I am no hypocrite, pues por doquiera que voy since scandal's mixed up in it, va el escándalo conmigo. wherever I choose to go.

DON LUIS: ¡Eh! ¿Y ésos dos no se Wait. Those two there don't llegan a escuchar? Vos. seem to be to listening? You? (Por don Diego y don Gonzalo.) (to Don Diego and Don Gonzalo)

DON DIEGO: Yo estoy bien. This chair is fine.

DON LUIS: ¿Y vos? And you?

DON GONZALO: De aquí oigo también. I can hear from mine.

DON LUIS: Razón tendrán si se niegan. They must be fine, if they won't move. (Se sientan todos alrededor de la (Everyone sits down around the mesa en que están don Luis Mejía y table, at which are seated Don don Juan Tenorio.) Luis Mejía, and Don Juan Tenorio.)

DON JUAN: ¿Estamos listos? Are we all ready?

DON LUIS: Estamos. We are.

DON JUAN: Como quien somos cumplimos. Then let's show all we have been.

DON LUIS: Veamos, pues, lo que Let all that we did be seen. hicimos.

DON JUAN: Bebamos antes. Lets drink first.

DON LUIS: Bebamos. (Lo hacen.) Lets drink. (They do)

DON JUAN: La apuesta fue... The bet was...

DON LUIS: Porque un día Because one day, it's true, dije que en España entera I said that in Spain, no one no habría nadie que hiciera could do, not another man, lo que hiciera Luis Mejía. what Luis Mejía could do.

DON JUAN: Y siendo contradictorio And my opinion, as I breathe, al vuestro mi parecer, was contrary to yours, I fear, yo os dije: "Nadie ha de hacer I told you "No one can come near lo que hará don Juan Tenorio". what Tenorio will achieve." No es así? Isn't that so?

DON LUIS: Sin duda alguna: By the book, y vinimos a apostar and we ended up betting we two quién de ambos sabría obrar which of us would best know how to peor, con mejor fortuna, effect the worst, with the best of luck, en el término de un año, in the space of a single year, juntándonos aquí hoy meeting again today, here, a probarlo. to prove it.

DON JUAN: Y aquí estoy. And here I am.

DON LUIS: Y yo. And I.

CENTELLAS ¡Empeño bien extraño A truly strange undertaking, por vida mía! upon my soul!

DON JUAN: Hablad, pues. Then, come!

DON LUIS: No, vos debéis empezar. No, you open the gate.

DON JUAN: Como gustéis, igual es, As you please, its all one, que nunca me hago esperar. for I never make myself wait. Pues señor, yo desde aquí, Well sir, leaving town, buscando mayor espacio seeking a greater measure, para mis hazañas, di of space for my deeds, I hit on sobre Italia, porque allí Italy, since there a man tiene el placer un palacio. finds the palace of pleasure. De la guerra y del amor The ancient and classical land, antigua y clásica tierra, the country of love and war, y en ella el Emperador, and in it the Emperor. con ella y con Francia en guerra, fighting, at war with France, díjeme: ¿Dónde mejor? I said to myself : 'What more Donde hay soldados hay juego, could I want? Soldiers are good hay pendencias y amoríos. for brawling, and lovers' sprees.' Y, pues, sobre Italia luego And so, now to Italy buscando a sangre y a fuego for blood and fire, fuelling amores y desafíos. love

affairs and duelling. En Roma, a mi apuesta fiel, In Rome, faithful to our bet, fijé entre hostil y amatorio between quarreling and Love's net, en mi puerta este cartel: I posted a sign to let them know: Aquí está don Juan Tenorio 'Here's Don Juan Tenorio, para quien quiera algo de él. for whoever wants to have a go.' De aquellos días la historia I wont relate the story a relataros renuncio: of those days, my recreation, remítome a la memoria I'll leave it to the memory que dejé allí, y de mi gloria that I left there, and my glory podéis juzgar por mi anuncio. you can judge from my declaration. Las romanas caprichosas, The Roman women: capricious, las costumbres licenciosas, their customs: licentious, yo gallardo y calavera, I: a gallant rake ¿quién a cuento redujera who on earth could make mis empresas amorosas? the count of my amorous adventures? Salí de Roma por fin I finally left Rome's eyes, como os podéis figurar, as you can imagine, sadly, con un disfraz harto ruin, in a quite lowly disguise, y a lomos de un mal rocín, on a nag that was hardly a prize, pues me querían ahorcar. since they truly wanted to hang me. Fui al ejército de España, I went to the Spanish army mas todos paisanos míos, but all were my kinsmen, soldados y en tierra extraña, soldiers, and in a strange country, dejé pronto su compaña I soon left their company, tras cinco u seis desafíos. after five or six duels, again. Nápoles, rico vergel Naples, a rich love-garden de amor, del placer emporio, an empire of pleasure, and so vio en mi segundo cartel: it saw my second proclamation: Aquí está don Juan Tenorio, 'Here's Don Juan Tenorio y no hay hombre para él. who has no competition. Desde la princesa altiva From the princess who will not bend a la que pesca en ruin barca, to a fishergirl in a lowly boat, no hay hembra a quien no suscriba; there's no female who does not attend, y a cualquier empresa abarca no enterprise he will not float, si en oro o valor estriba. whether it smacks of gold or valour. Búsquenle los reñidores; Let the quarrelsome ones, cérquenle los jugadores; and the gamblers, come: quien se precie, que le ataje; whoever is proud, let him see Y a ver si hay quien le aventaje if he can take advantage of me, en juego, en lid o en amores. in gaming, in loving, or fighting!' Esto escribí; y en medio año That's what I wrote, and in the half-year que mi presencia gozó that Naples enjoyed my presence there, Nápoles, no hay lance extraño, there was no strange affair, no hay escándalo ni engaño no scandal or fraud, I fear, en que no me hallara yo. towards which I didn't steer. Por dondequiera que fui Wherever I strayed la razón atropellé, I trampled on right, la virtud escarnecí, virtue, the jade, a la justicia burlé, I scorned, tricked the might y a las mujeres vendí. of the law, and women betrayed. Yo a las cabañas bajé, I went down the alleys. yo a los palacios subí, and up to the palaces, yo los claustros escalé, boarded cloisters, like galleys, y en todas partes dejé and wherever I sallied, memoria amarga de mí. left bitter memories, Ni reconocí sagrado, knew nothing holy. ni hubo ocasión ni lugar There was no occasion or place por mi audacia respetado; respected by my audacity, ni en distinguir me he parado nor did I stop, for veracity, al clérigo del seglar. to distinguish a lay from a clerical face. A quien quise provoqué, Any whose wish I detected con quien quiso me batí, I challenged, and any I chose, y nunca consideré and I never once reflected que pudo matarme a mí that any I killed of those aquel a quien yo maté. might have had me dissected. A esto don Juan se arrojó, This is what Don Juan undertook, y escrito en este papel and written on this sheet está cuanto consiguió, is what he made of his luck, y lo que él aquí escribió and what he wrote here, look, mantenido está por él. is vouched for by him, and complete.

DON LUIS: Leed, pues. Read it then.

DON JUAN: No, oigamos antes No, first lets hear news vuestros bizarros extremos, of your extravagant acts, y si traéis terminantes and if you've the proof, vuestras notas comprobantes, that will show us the truth, lo escrito cotejaremos. let's hear the facts.

DON LUIS: Decís bien; cosa es que You speak well, yes, that's right está, don Juan, muy puesta en razón; Don Juan, its said with reason; aunque a mi ver poco irá though in my opinion it's slight, de una a otra relación. any small difference between them.

DON JUAN: Empezad, pues. Begin then.

DON LUIS: Allá va. Here goes. Buscando yo como vos I, like you, searching out a mi aliento empresas grandes, great actions to embrace, dije: ¿Dó iré, ¡vive Dios!, cry 'Where will I go? Good God', I shout de amor y lides en pos, 'if it's love and duels we're about que vaya mejor que a Flandes? Flanders is the place. Allí; puesto que empeñadas Since there are, I'm told, guerras hay, a mis deseos fierce wars there, perfect chances to seize, habrá al par centuplicadas multiplied a hundred fold, ocasiones extremadas to meet my desires for brave and bold de riñas y galanteos. duels and gallantries.' Y en Flandes conmigo di, But in Flanders, unfortunately, mas con tan negra fortuna I had an unlucky run que al mes de encontrarme allí so that within a month, you see, todo mi caudal perdí, I was no longer rich, as formerly, dobla a dobla, una por una. coin by coin, gone, one by one. En tan total carestía Seeing I was in such need mirándome de dineros, of a little ready money, de mí todo el mundo huía; everyone fled from me, mas yo busqué compañia but I sought company, y me uní a unos bandoleros. and joined the banditry. Lo hicimos bien, ¡voto a tal!, We did well, by the devil, y fuimos tan adelante and such a road we went, con suerte tan colosal with such good luck in our revel, que entramos a saco en Gante that we entered and sacked, in Ghent, el palacio episcopal. the bishop's episcopal palace. ¡Qué noche! Por el decoro What a night! To keep the rule de la Pascua, el buen obispo of Easter, the good bishop, the fool, bajó a presidir el

coro, went down to preside, and school y aún de alegría me crispo the choir, and I shiver with joy, can't stop, al recordar su tesoro. when I remember his treasure. Todo cayó en poder nuestro: It all fell to us, at the start, mas mi capitán, avaro, but my greedy captain, at leisure, puso mi parte en secuestro; confiscated my part: reñimos, fui yo más diestro we fought, I had more art, y le crucé sin reparo. I ran him through with pleasure. Juróme al punto la gente His men, then, made me stand capitán, por más valiente. for Captain, I as the better man. Juréles yo amistad franca. I swore to be their friend. Pero a la noche siguiente But the following night I ran, huí, y les dejé sin blanca. left them not a thing in the end. Yo me acordé del refrán And I remembered the proverb, de que quien roba al ladrón 'who robs a thief of his ration ha cien años de perdón, gets a hundred-year pardon', y me arrojé a tal desmán and I carried it out with nerve mirando a mi salvación. looking to my salvation. Pasé a Alemania opulento: I crossed to Germany, now rich, mas un provincial jerónimo, but a provincial clerk hombre de mucho talento, a man of many gifts, me conoció, y al momento recognized and denounced me, me delató en un anónimo. in a note he wrote anonymously. Compré a fuerza de dinero By means of money, I bought la libertad y el papel; the note and my freedom, y topando en un sendero and running across the clerk al fraile, le envié certero on a path, I sent him my thoughts una bala envuelta en él. with a bullet wrapped inside them. Salté a Francia. ¡Buen país! I jumped over to France, a fine place, Y como en Nápoles vos and like you, in Naples, I too puse un cartel en París posted a sign, in Paris, diciendo: Aquí hay un don Luis saying: 'Here is Don Luis que vale lo menos dos. who's worth at least two of you. Parará aquí algunos meses, He'll stay here a few months, then, y no trae más intereses and really his only yen, ni se aviene a más empresas really his only game, is que a adorar a las francesas to adore all the French ladies, y a reñir con los franceses. and fight all the French men.' Esto escribí; y en medio año I wrote this, and in the half-year, que mi presencia gozó that Paris held me dear, París, no hubo lance extaño there was no strange affair, ni hubo escándalo ni daño no scandal or public fear, donde no me hallara yo. in which I did not appear. Mas, como don Juan, mi historia Like don Juan, my story también a alargar renuncio; will be no long creation: que basta para mi gloria its sufficent for my glory la magnífica memoria the truly magnificent memory que allí dejé con mi anuncio. I left by my proclamation. Y cual vos, por donde fui And like you, wherever I strayed la razón atropellé, I trampled on right la virtud escarnecí, and virtue, the jade, a la justicia burlé, I scorned, tricked the might y a las mujeres vendí. of the law, and women betrayed. Mi hacienda llevo perdida I have lost all my property tres veces: mas se me antoja three times: but then I plan reponerla, y me convida to recover it, and marry mi boda comprometida as is customary, con doña Ana de Pantoja. with the lovely Lady Anne. Mujer muy rica me dan, She's a very rich one y mañana hay que cumplir and tomorrow I must take care los tratos que hechos están; to close the deal according to plan, lo que os advierto, don Juan, and I say it to you Don Juan, por si queréis asistir. in case you want to be there. A esto don Luis se arrojó, This, Don Luis undertook, y escrito en este papel and written on this sheet está lo que consiguió, is what he made of his luck y lo que él aquí escribió and what he wrote here, look, mantenido está por él. is vouched for by him, and complete.

DON JUAN: La historia es tan semejante The stories are such a close fit que está en el fiel la balanza; they balance, the scales are equal: mas vamos a lo importante, but lets get to the vital bit que es el guarismo a que alcanza which is the total, the sequel, el papel: conque adelante. how it all sums up; so lets have it.

DON LUIS: Razón tenéis en verdad. You are right. Truly. Aquí está el mío: mirad, Here's mine, I've duly por una línea apartados set out on separate lines traigo los nombres sentados all the names, and the times, para mayor claridad. for clarity, and fully.

DON LUIS: Del mismo modo arregladas I have the accounts in mine mis cuentas traigo en el mío: arranged in just the same way: en dos líneas separadas in two separate lines, los muertos en desafío the men killed in my duels y las mujeres burladas. and the women betrayed. Contad. Count.

DON LUIS: Contad. Count.

DON JUAN: Veinte y tres. Twenty three.

DON LUIS: Son los muertos. A ver vos. Those are the dead men. Now you. ¡Por la cruz de San Andrés! By the cross of Saint Andrew! Aquí sumo treinta y dos. I count thirty-two.

DON JUAN: Son los muertos. They are the men who lost.

DON LUIS: Matar es. A killing.

DON JUAN: Nueve os llevo. I have nine more than you.

DON LUIS: Me vencéis. You've won. Pasemos a las conquistas. Lets move to the conquests.

DON JUAN: Sumo aquí cincuenta y seis. I count fifty-six.

DON LUIS: Y yo sumo en vuestras listas And I'll check your list. setenta y dos. Seventy-two.

DON JUAN: Pues perdéis. So, you lose.

DON LUIS: ¡Es increíble, don Juan! That's incredible, don Juan!

DON JUAN: Si lo dudáis, apuntados The witnesses if you doubt it los testigos ahí están, are all written down here que si fueren preguntados so if they're asked about it os lo testificarán. they'll testify, no fear.

DON LUIS: ¡Oh! y vuestra lista es Oh your list is fine. cabal.

DON JUAN: Desde una princesa real From a princess royal a la hija de un pescador, to a fisherman's daughter, ¡oh! ha recorrido mi amor I've spanned with lover's toil toda la escala social. the whole social ladder. ¿Tenéis algo que tachar? Is there anything wrong with it, now?

DON LUIS: Sólo una os falta en Only one thing to be fair. justicia.

DON JUAN: ¿Me la podéis señalar? Where do you read it?

DON LUIS: Sí, por cierto, una novicia Yes, look, a novice nun, there, que esté para profesar. about to take her vow.

DON JUAN: ¡Bah! pues yo os complaceré Bah. I'll satisfy you doubly, doblemente, porque os digo since I tell you that, just for fun, que a la novicia uniré I'll add a friend's lady la dama de algún amigo to the novice nun, que para casarse esté. whom he's about to marry.

DON LUIS: ¡Pardiez que sois atrevido! God's blood you're a daring man!

DON JUAN: Yo os lo apuesto si queréis. I'll wager if you want to.

DON LUIS: Digo que acepto el partido. I accept the plan. ¿Para darlo por perdido In order to accomplish it queréis veinte días? do you want twenty days?

DON JUAN: Seis. Six, is all I need in hand.

DON LUIS: ¡Por Dios que sois hombre extraño! Lord you're a strange man. ¿Cuántos días empleáis How many days do you employ en cada mujer que amáis? on each woman you enjoy?

DON JUAN: Partid los días del año Divide the days of the year entre las que ahí encontráis. among those you find here. Uno para enamorarlas, One day to seduce them, otro para conseguirlas, another to reduce them, otro para abanDoñarlas, another one to leave them, dos para sustituirlas, two days to replace them, y una hora para olvidarlas. and a single hour to forget them. Pero, la verdad a hablaros, But, to tell the truth, as I said, pedir más no se me antoja I only ask for a few, porque, pues vais a casaros, because you are getting wed, mañana pienso quitaros tomorrow I'll take instead a doña Ana de Pantoja. Doña Ana, from you.

DON LUIS: Don Juan, ¿qué es lo que decís? Don Juan, what are you saying?

DON JUAN: Don Luis, lo que oído Don Luis, what you are hearing. habéis.

DON LUIS: Ved, don Juan, lo que emprendéis. Don Juan, see what you're doing.

DON JUAN: Lo que he de lograr, don That I intend to, Don Luis. Luis.

DON LUIS: ¡Gastón! (Llamando.) Gastón! (Calling)

GASTON: ¿Señor? Sir?

DON LUIS: Ven acá. Come here. (Habla don Luis en secreto con (Don Luis speaks in secret with Gastón, y éste se va Gaston, and the latter leaves precipitadamente.) quickly.)

DON JUAN: ¡Ciutti! (Llamando.) Ciutti! (Calling)

CIUTTI: ¿Señor? Sir?

DON JUAN: Ven aquí. Come here! (Don Juan habla en secreto con (Don Juan talks in secret with Ciutti, éste se va precipitadamente.) Ciutti and the latter leaves quickly.)

DON LUIS: ¿Estáis en lo dicho? Is it agreed?

DON JUAN: Sí. It is.

DON LUIS: Pues va la vida. It's the way life goes.

DON JUAN: Pues va. So it does. (Don Gonzalo, levantándose de la mesa (Don Gonzalo, getting up from en que ha permanecido inmóvil durante the table where he has been la escena anterior se afronta con don motionless during the preceding Juan y don Luis.) scene, and he confronts Don Juan and Don Luis.)

DON GONZALO: ¡Insensatos! ¡Vive Dios Dear God, men without feeling! que a no temblarme las manos If my hands weren't trembling so, a palos, como a villanos, with my club you'd see me dealing os diera muerte a los dos! a villain's death to you both.

DON JUAN Y DON LUIS. Veamos. What's this?

DON GONZALO: Excusado es, Needless to say que he vivido lo bastante I've lived long enough para no estar arrogante not to try and play rough donde no puedo when I can't win the day.

DON JUAN: Idos, pues. Be off then.

DON GONZALO: Antes, don Juan, de salir Don Juan, before you go, de donde oírme podáis, to where you cannot hear me, es necesario que oigáis it's essential you do hear me, lo que os tengo que decir. listen to what I tell you. Vuestro buen padre don Diego, Your good father, Don Diego porque pleitos acomoda, to meet his obligations os apalabró una boda promised you marriage celebrations que iba a celebrarse luego; as soon as it could be so, pero por mí mismo yo but I, wanting to catch a sight lo que érais queriendo ver, of the sort of man you were vine aquí al anochecer, came past at evening light y el veros me avergonzó. and....I'm ashamed to be here.

DON JUAN: ¡Por Satanás, viejo insano, The devil! You insane old man. que no sé cómo he tenido I don't know how I remain calma para haberte oído calm, and listen, it's plain sin asentarte la mano! I should raise my hand to you again. Pero di pronto quién eres, But, who you are, come tell, porque me siento capaz though I don't need to ask, de arrancarte el antifaz I'll tear away your mask con el alma que tuvieres. and your very soul as well.

DON GONZALO: ¡Don Juan! Don Juan!

DON JUAN: ¡Pronto! Quickly!

DON GONZALO: Mira, pues. Look! Well?

DON JUAN: ¡Don Gonzalo! Don Gonzalo!

DON GONZALO: El mismo soy. I am he. Y adiós, don Juan: mas desde hoy And farewell, Don Juan; but see no penséis en doña Inés. don't think now of Doña Inés. Porque antes que consentir For rather than consent en que se case con vos, that she marry you, el sepulcro ¡juro a Dios! by God, I swear it's true, por mi mano la he de abrir. I'd make sure to the grave she went.

DON JUAN: Me hacéis reír, Don Gonzalo; Don Gonzalo, you make me laugh; pues venirme a provocar coming here to provoke es como ir a amenazar me, is like setting out to poke a un león con un mal palo. a lion with a paltry staff. Y pues hay tiempo, advertir And since there's time, I need os quiero a mi vez a vos to warn you, privately, que o me la dais, o por Dios that you either give her to me, que a quitárosla he de ir. or I'll have her from you indeed.

DON GONZALO: ¡Miserable! Wretch!

DON JUAN: Dicho está: That has been said: sólo una mujer como ésta a woman like this was yet me falta para mi apuesta; still needed for my bet; ved, pues, que apostada va. See, she is wagered instead. (Don Diego, levantándose de la mesa (Don Diego, getting up from the en que ha permanecido encubierto table where he has remained mientras la escena anterior baja al incognito during the previous centro de la escena, encarándose con scene, goes to centre stage, don Juan.) facing Don Juan.)

DON DIEGO: No puedo más escucharte, I can't listen to you any more, vil don Juan, porque recelo you're evil Don Juan, I fear que hay algún rayo en el cielo a lightning bolt from heaven is near, preparado a aniquilarte. that will annihilate you. ¡Ah...! No pudiendo creer Ah! Unable to believe lo que de ti me decían, what I was told about you confiando en que mentían, I came, hoping I was deceived, te vine esta noche a ver. tonight, to find out what was true. Pero te juro, malvado, Evil man, I swear to you, que me pesa haber venido that I'm grieved I came, para salir convencido now I leave convinced your game de lo que es para ignorado. is something I'd rather not know. Sigue, pues, con ciego afán Continue then, in your blind frenzy en tu torpe frenesí, your wicked delirium, mas nunca vuelvas a mí; but never turn to me; no te conozco, don Juan. I do not know you, Don Juan.

DON JUAN: ¿Quién nunca a ti se volvió? Who has ever turned to you, then? ¿Ni quién osa hablarme así, And who dares to speak to me so, ni qué se me importa a mí and what does it matter, in turn, que me conozcas o no? if you know or do not know?

DON DIEGO: Adiós, pues: mas no te olvides, Farewell, but don't forget de que hay un Dios justiciero. that there is a God of Justice.

DON JUAN: Ten. (Deteniéndole.) Wait. (Stopping him)

DON DIEGO: ¿Qué queréis ? What do you want?

DON JUAN: Verte quiero. I want to see your face.

DON DIEGO: Nunca, en vano me lo pides. Never. You ask me in vain.

DON JUAN: ¿Nunca? Never?

DON DIEGO: No. No.

DON JUAN: Cuando me cuadre. When I want to, rather.

DON DIEGO: ¿Cómo? How?

DON JUAN: Así. (Le arranca el So. (He rips off the mask) antifaz.)

TODOS: ¡Don Juan! Don Juan!

DON DIEGO: ¡Villano! Disgrace! ¡Me has puesto en la faz la mano! You have raised your hand to my face!

DON JUAN: ¡Válgame Cristo, mi padre! Ah, Christ! It's my father.

DON DIEGO: Mientes, no lo fui jamás. You lie, and of that I am certain.

DON JUAN: ¡Reportaos, con Belcebú! Control yourself, by Beelzebub!

DON DIEGO: No, los hijos como tú No. A lion's cub son hijos de Satanás. like you is the son of Satan. Comendador, nulo sea Comendador, the deal we made lo hablado. is void.

DON GONZALO: Ya lo es por mí; It is on my part: vamos. let's leave.

DON DIEGO: Si, vamos de aquí Yes, let's depart, donde tal monstruo no vea. go where monsters are not displayed. Don Juan, en brazos del vicio Don Juan, I abandon you wholly, desolado te abandono: desolately, to the arms of evil: me matas... mas te perdono you are killing me....yet I pardon you still de Dios en el santo juicio. through God's justice, which is holy. (Vanse poco a poco don Diego y don (Don Diego and Don Gonzalo Gonzalo.) leave, slowly.)

DON JUAN: Largo el plazo me ponéis: You grant me a long term of grace: mas ved que os quiero advertir but, see now, I want to say que yo no os he ido a pedir I've never asked for a day jamás que me perdonéis. of pardon, in my place. Conque no paséis afán So don't worry about me de aquí adelante por mí, from this time on, since how que como vivió hasta aquí he's always lived till now's vivirá siempre don Juan. how Don Juan will ever be.

ESCENA XIII SCENE XIII

(Don Juan, Don Luis, Centella, (Don Juan, Don Luis, Centella, Avellaneda, Buttarelli, Curiosos, Avellanada, Buttarelli, Máscaras.) Onlookers, Maskers.)

DON JUAN: ¡Eh! Ya salimos del paso: Ah! Now we've left off that bind, y no hay que extrañar la homilía; don't be surprised at his homily; son pláticas de familia, those were words in the family de las que nunca hice caso. of the sort that I never mind. Conque lo dicho, don Luis, So we're agreed, Don Luis, van doña Ana y doña Inés Doña Ana and Doña Inés en apuesta. are wagered.

DON LUIS: Y el precio es And the price is la vida. life.

DON JUAN: Vos lo decís: So you say: vamos. Let's go.

DON LUIS: Vamos. Let's go. (Al salir se presenta una ronda, que (As they leave, they are stopped les detiene.) by a night-patrol.)

ESCENA XIV SCENE XIV

(Dichos, una ronda de Alguaciles) (The same characters, a band of Constables.)

ALGUACIL: Alto allá. Halt there. ¿Don Juan Tenorio? Don Juan Tenorio?

DON JUAN: Yo soy. That's me.

ALGUACIL: Sed preso. We have you.

DON JUAN: ¿Soñando estoy? Am I dreaming? ¿Por qué? Why?

ALGUACIL: Después lo verá. You'll find out later.

DON LUIS: (Acercándose a don Juan y (Approaching Don Juan and riéndose.) laughing) Tenorio, no lo extrañéis, Don't be surprised Tenorio, pues mirando a lo apostado since, in addressing the bet, mi paje os ha delatado my servant has seen to it para que vos no ganéis. that you won't win through.

DON JUAN: ¡Hola! Pues no os suponía Well now, I didn't suppose con tal despejo, ¡pardiez! you'd hit it so on the nose.

DON LUIS: Id, pues, que por esta vez, Go on now, and this time don Juan, la partida es mía. Don Juan, the game is mine.

DON JUAN: Vamos pues. Let's go then. (Al salir, les detiene otra ronda que (As they leave another patrol entra en la escena.) come on stage.)

ESCENA XV SCENE XV

Dichos, una ronda (The same characters, a patrol, as before.)

ALGUACIL: (Que entra.) (Entering) Ténganse allá. Stop right there. ¿Don Luis Mejía? Don Luis Mejía?

DON LUIS: Yo soy. That's me.

ALGUACIL: Sed preso. We have you.

DON LUIS. ¿Soñando estoy? Am I dreaming? ¡Yo preso! Me, under arrest?

DON JUAN: (Soltando la carcajada.) (bursting out laughing.) ¡Ja, ja, ja, ja! Ha ha ha!! Mejía, no lo extrañéis, Don't be surprised, Mejía, pues, mirando a lo apostado, since, in addressing the bet, mi paje os ha delatado my servant has seen to it para que no me estorbéis. you're not in the way, round here.

DON LUIS: Satisfecho quedaré I'll be content if they aunque ambos muramos. lock us both away.

DON JUAN: Vamos; Lets go, then; conque, señores, quedamos provided, sirs, we say en que la apuesta está en pie. the bet is still in play. (Las rondas se llevan a don Juan y a (The patrols take Don Juan and don Luis, muchos los siguen, El Don Luis away, many follow them, capitán Centellas, Avellaneda y sus Captain Centellas, Avellaneda amigos quedan en la escena mirándose and his friends stay on stage unos a otros.) looking at one another.)

ESCENA XVI SCENE XVI

(El capitán Centellas, Avellaneda, (Captain Centellas, Avellaneda, curiosos.) Onlookers.)

AVELLANEDA: ¡Parece un juego ilusorio? Doesn't this seem a fantastic scenario?

CENTELLAS: ¡Sin verlo no lo creería! I wouldn't believe it if I wasn't here.

AVELLANEDA: Pues yo apuesto por Mejía. Well, my money's on Mejía.

CENTELLAS: Y yo pongo por Tenorio. And mine's on Don Juan Tenorio.

FIN DEL ACTO PRIMERO END OF THE FIRST ACT.

ACTO SEGUNDO ACT TWO

DESTREZA SKILL

(Exterior de la casa de doña Ana, (Outside Doña Ana's house, vista por una esquina. Las dos paredes which is seen from a corner. que forman el ángulo se prolongan The two walls that form the igualmente por ambos lados, dejando angle extend equally on both ver en la de la derecha una reja, y en sides, allowing one to see on la izquierda una reja y una puerta.) the right a grilled window, and on the left a grilled window and a door.)

ESCENA PRIMERA SCENE I

Don Luis Mejía, embozado (Don Luis, muffled in his cloak) Ya estoy frente de la casa Here I am at Doña Ana's de doña Ana, y es preciso to warn her, especially, que esta noche tenga aviso of what tonight we may see de lo que en Sevilla pasa. happening in Sevilla. No di con persona alguna Oh, what anxiety! Luckily por dicha mía... ¡Oh qué afán! I didn't meet a soul. Pero ahora, señor don Juan, Now, Don Juan, the bold, cada cual con su fortuna. each to his own destiny! Si honor y vida se juega, If honour and life are at stake mi destreza y mi valor my skill and my valour por mi vida y por mi honor will defend life and honour. jugarán... Mas alguien llega. But now someone's awake.

ESCENA SEGUNDA SCENE II

(Don Luis, Pascual) (Don Luis, Pascual)

PASCUAL:¡Quién creyera lance tal! Prisoners! Who would credit it all! ¡Jesús, qué escándalo! ¡Presos! Lord, what a scandal.

DON LUIS. ¿Qué veo? ¡Es Pascual! What's this I see? It's Pascual!

PASCUAL: Los sesos My brains must be me estrellaría. addled.

DON LUIS. ¿Pascual? Pascual?

PASCUAL: ¿Quién me llama tan apriesa? Who is calling me so loudly?

DON LUIS. Yo. Don Luis. Me. Don Luis.

PASCUAL: ¡Válame Dios! Good God!

DON LUIS. ¿Qué te asombra? What's the surprise?

PASCUAL: Que seáis vos. That it's you.

DON LUIS: Mi suerte, Pascual, es ésa. Then it's great luck, Pascual, Que a no ser yo quien me soy for if I weren't who I am today y a no dar contigo ahora, and you and I hadn't met, el honor de mi señora well, the honour of my lady doña Ana moría hoy. Doña Ana, we could forget.

PASCUAL: Qué es lo que decís ? What's this you say?

DON LUIS. ¿Conoces Do you know a don Juan Tenorio? Don Juan Tenorio?

PASCUAL: Sí. Yea. ¿Quién no le conoce aquí? Who doesn't know him round here? Mas según públicas voces But according to public rumour estábais presos los dos. you were prisoners the two of you. Vamos, ¡lo que el vulgo miente! But, how the public lies!

DON LUIS. Ahora acertadamente Just now the public spoke habló el vulgo: y ¡juro a Dios rightly, and I swear to God que a no ser porque mi primo, if it hadn't been that my cousin el tesorero real, the royal treasurer quiso fiarme, Pascual, was willing to bail me out, Pascual, pierdo cuanto más estimo! I'd have lost all I value.

PASCUAL: ¿Pues cómo? What do you mean?

DON LUIS. ¿En servirme estás? Are you prepared to serve me?

PASCUAL: Hasta morir. Till death.

DON LUIS. Pues escucha. Then listen. Don Juan y yo en una lucha Don Juan and I find ourselves arriesgada por demás embroiled in a struggle empeñados nos hallamos; that's needlessly risky, pero, a querer tú ayudarme, but if you are willing to help me más que la vida salvarme you can save even more than puedes. my life.

PASCUAL: ¿Qué hay que hacer? Sepamos. What must I do. Tell me.

DON LUIS. En una insigne locura In a moment of utter madness look dimos tiempo ha: en apostar a while ago, we wagered, you see cuál de ambos sabría obrar which of the two of us could be peor, con mejor ventura. the worst, with the best of luck. Ambos nos hemos portado We have both been bravely bizarramente a cual más; vying, each with the other one, pero él es un Satanás, but he is Satan's son, y por fin me ha aventajado. and gained the advantage of me. Púsele no sé qué pero, I don't know quite know dijímonos no sé qué what it was I said sobre ello, y el hecho fue some words or other, but they led que él mofándome altanero to him mocking me haughtily me dijo: "Y si esto no os llena, saying: 'If this is not adequate proof, pues que os casáis con doña Ana, since you and Doña Ana are to be wed, os apuesto a que mañana I'll wager that by tomorrow instead os la quito yo". I'll take her away from you.

PASCUAL: ¡Esa es buena! That's a good one! ¿Tal se ha atrevido a decir? He dared say such a thing to you?

DON LUIS: No es lo malo que lo diga, The bad part is not that he said it, Pascual, sino que consiga Pascual, but that he's bound to do it, lo que intenta. if that's what he intends.

PASCUAL: ¿Conseguir? He will do it? En tanto que yo esté aquí, Not while I am here, see, descuidad, don Luis. don't worry, Don Luis.

DON LUIS. Te juro I swear to you que si el lance no aseguro, if I don't win through no sé qué va a ser de mí. I don't know what will become of me.

PASCUAL: ¡Por la Virgen del Pilar! By the Virgin of Pilar, he's evil, ¿Le teméis? Are you afraid of him?

DON LUIS. No, Dios testigo. As God is my witness, no. Mas lleva ese hombre consigo But that man goes to and fro algún diablo familiar. with his familiar devil.

PASCUAL: Dadlo por asegurado. Consider the matter done.

DON LUIS. ¡Oh! Tal es el afán mío Oh, but I'm afraid que ni en mí propio me fío, I don't even have faith con un hombre tan osado. in myself, with such a daring man.

PASCUAL: Yo os juro por San Ginés, I vow to you by Saint Ginés que, con toda su osadía, in spite of all his boldness le ha de hacer, por vida mía, an Aragonese will give him mal tercio un aragonés: I swear on my life, a beating: nos veremos. you'll see.

DON LUIS. ¡Ay, Pascual, Ah Pascual, que en qué te metes no sabes! you don't know what you're doing!

PASCUAL: En apreturas más graves I've found worse things brewing me he visto y no salí mal. and came out not badly at all.

DON LUIS. Estriba en lo perentorio The difficulty lies in the hour del plazo, y en ser quien es. and his being who he is.

PASCUAL: Más que un buen aragonés A Tenorio can't have the power no ha de valer un Tenorio. of a good Aragonese. Todos esos lenguaraces All these bullies cower, espadachines de oficio just professional braggards, no son más que frontispicio nothing more than blaggards, y de poca alma capaces. only a cowardly shower. Para infamar a mujeres They've glib tongues for defaming women tienen lengua, y tienen manos and they have ready hands para osar a los ancianos for challenging some old man o apalear a mercaderes. or beating up the tradesmen. Mas cuando una buena espada, But when challenged by a good blade, por un buen

brazo esgrimida, given a strong arm weighed, con la muerte les convida, inviting them to die, todo su valor es nada. all their braveries fade. Y sus empresas y bullas And their song and dance se reducen todas ellas all of it boils down a hablar mal de las doncellas to speaking harm of a silken gown, y a huir ante las patrullas. and fleeing patrols at the slightest chance.

DON LUIS. ¡Pascual! Pascual!

PASCUAL: No lo hablo por vos, Oh, not you of course: que aunque sóis un calavera though you're wild I swear it, tenéis la alma bien entera you have a fighting spirit y reñís bien, ¡voto a bríos! and carry things out with force.

DON LUIS: Pues si es en mí tan notorio Well if valour's so marked in me el valor, mira, Pascual, then note this well Pascual, que el valor es proverbial that valour is proverbial en la raza de Tenorio. in Tenorio's family. Y porque conozco bien And because I know that well, I trust de su valor el extremo, his courage in a difficult fix, de sus ardides me temo and so the more I fear his tricks que en tierra con mi honra den. will drag my name in the dust.

PASCUAL: Pues suelto estáis ya, don Luis; But Don Luis, now you are free y pues que tanto os acucia and because anxious jealousy el mal de celos, su astucia troubles you so much, I say, maybe, con la astucia prevenís. you should match his wit with your subtlety. ¿Qué teméis de él? What do you fear from him?

DON LUIS. No lo sé; I don't know mas esta noche sospecho but I suspect tonight that he que ha de procurar el hecho will attempt a deed consumar. of devilry.

PASCUAL: Soñáis. You are dreaming.

DON LUIS. ¿Por qué? Why?

PASCUAL: ¿No está preso? Isn't he in jail?

DON LUIS. Sí que está; Yes, he is, mas también lo estaba yo, but I was as well, y un hidalgo me fió. and a nobleman made my bail.

PASCUAL: Mas ¿quién a él le fiará? But who will bail him out?

DON LUIS: En fin, sólo un medio encuentro In truth, I only see de satisfacerme. one way to satisfy me.

PASCUAL: ¿Cuál? What?

DON LUIS: Que de esta casa, Pascual, That for tonight, Pascual quede yo esta noche dentro. I should stay inside this house.

PASCUAL: Mirad que así de doña Ana Beware if in doing so, you tenéis el honor vendido. besmirch the honour of Doña Ana.

DON LUIS. ¡Qué mil rayos! ¿Su marido A thousand curses! Isn't it true no voy a ser yo mañana? I'll be her husband tomorrow?

PASCUAL: Mas, señor, ¿no os digo yo But sir, am I not saying que os fío con la existencia...? that I guarantee you, on my life...?

DON LUIS. Sí; salir de una pendencia, Yes, to get out of a fight, mas de un ardid diestro, no. but out of a clever trap, no. Y en fin, o paso en la casa And anyway, either I spend the night la noche, o tomo la calle in the house, or I'll spend it in the street. aunque la justicia me halle. though the patrol find me on their beat.

PASCUAL: Señor don Luis, eso pasa Señor Don Luis, that goes right de terquedad, y es capricho beyond stubbornness, it's insane que dejar os aconsejo and I advise you again y os irá bien. forget it, everything will be fine. Don Luis; No lo dejo, No, I'm not abandoning it Pascual. Pascual.

PASCUAL: ¡Don Luis! Don Luis!

DON LUIS. Está dicho. I've spoken.

PASCUAL: ¡Vive Dios! ¿Hay tal afán? Good God! Was there ever such a difficult man?

DON LUIS. Tú dirás lo que quisieres, You may say what may be mas yo fío en las mujeres but I have much less faith in the lady mucho menos que en don Juan; than I do in Don Juan; pues lance es extremado for this is an extreme case por dos locos emprendido, undertaken by two fools bien será un loco atrevido and a fool may easily break the rules para un loco desalmado.

when another fool is base.

PASCUAL: Mirad bien lo que decís, Take care what you say in this manner porque yo sirvo a doña Ana for I've served Doña Ana desde que nació, y mañana since she was born, and I guarantee seréis su esposo, don Luis. you'll be hers tomorrow Don Luis.

DON LUIS. Pascual, esa hora llegada Pascual, when that time is here y ese derecho adquirido, and I've acquired the right to be yo sabré ser su marido her husband, I'll be good to her, you'll see, y la haré ser bien casada. and I'll make her happy, no fear. Mas en tanto... But meanwhile....

PASCUAL: No habléis más. Let it pass. Yo os conozco desde niños I've known you since we were kids y sé lo que son cariños, and I know what affection is, ¡por vida de Barrabás! I swear by Barrabas! Oíd: mi cuarto es sobrado Listen, my room will just do para los dos; dentro de él for the two of us, you can stay quedad; mas palabra fiel in there, but give me your word, and say dadme de estaros callado. that you'll remain quiet too.

DON LUIS. Te la doy. I give my word to you.

PASCUAL: Y hasta mañana And till tomorrow, we'll stay awake juntos con doble cautela together we'll both make nos quedaremos en vela. a double guard for her sake.

DON LUIS. Y se salvará doña Ana. And Doña Ana will not be lost.

PASCUAL: Sea. So be it.

DON LUIS. Pues vamos. Then lets go.

PASCUAL: Teneos. Wait. ¿Qué vais a hacer? What are you going to do.

DON LUIS. A entrar. Go in. Since it's late

PASCUAL: ¿Ya? Already?

DON LUIS. ¿Quién sabe lo que él hará? Who knows what he'll perpetrate?

PASCUAL:Vuestros celosos deseos Repress your jealous hate reprimid: que ser no puede for it can't safely be mientras que no se recoja until my master Don Gil mi amo, don Gil de Pantoja, retires to bed, and all's still, y todo en silencio quede. you see.

DON LUIS. Voto a... I swear....

PASCUAL: ¡Eh! Dad una vez Oh! Just for once let's have breves treguas al amor. a brief respite from love.

DON LUIS. ¿Y a qué hora ese buen señor And at what time is that good man suele acostarse? accustomed to go to bed?

PASCUAL: A las diez; At ten, y en esa calleja estrecha and in that narrow alley hay una reja; llamad there's a grilled window, call a las diez, y descuidad at ten, and, in the meantime, mientras en mí. rely on me.

DON LUIS. Es cosa hecha. Done.

PASCUAL: Don Luis, hasta luego, pues. Till then, Don Luis.

DON LUIS. Adiós, Pascual, hasta luego. Goodbye Pascual, till then.

ESCENA III SCENE III

Don Luis Jamás tal desasosiego I have never experienced tuve. Paréceme que es such apprehension. It seems to me esta noche hora menguada tonight will be a wearing para mí... y no sé qué vago one for me....I don't know what strange presentimiento, qué estrago foreboding, what disastrous change teme mi alma acongojada. my afflicted soul is fearing. ¡Por Dios que nunca pensé By God, I never really que a doña Ana amara así, thought I would love Ana so ni por ninguna sentí or feel for anyone though lo que por ella...! ¡Oh! Y a fe what I feel for her. Oh, truly, que de don Juan me amedrenta Don Juan's not the better of us two no el valor, mas la ventura. in courage, but only in luck. Parece que le asegura It seems that Satan writes the book Satanás en cuanto intenta. of whatever he tries to do. No, no: es un hombre infernal, No, no. He's a devil infernal y téngome para mí and I truly fear que si me aparto de aquí that if I move away from here me burla, pese a Pascual. he'll trick me, in spite of Pascual. Y aunque me tenga por

necio, And even if I'm considered a born quiero entrar: que con don Juan fool I'll go in, for with Don Juan las precauciones no están one's defence must be planned para vistas con desprecio. not viewed with scorn. (Llama a la ventana.) (He knocks on the window)

ESCENA IV SCENE IV

(Don Luis, Doña Ana) (Don Luis, Doña Ana)

DOÑA ANA: ¿Quién va? Who goes there?

DON LUIS. ¿No es Pascual? You are not Pascual?

DOÑA ANA: ¡Don Luis! Don Luis!

DON LUIS. ¡Doña Ana! Doña Ana!

DOÑA ANA: ¿Por la ventana Did you knock on the llamas ahora? window just now?

DON LUIS. ¡Ay, doña Ana, Yes, Doña Ana, cuán a buen tiempo salís! how opportunely you've come.

DOÑA ANA: Pues ¿qué hay, Mejía? But what's wrong, Mejía?

DON LUIS. Un empeño An attempt por tu beldad con un hombre on your beauty, by a man que temo. whom I fear.

DOÑA ANA: ¿Y qué hay que te asombre And what is there to fear from him en él, cuando eres tú el dueño when you possess de mi corazón? my heart?

DON LUIS. Doña Ana, Doña Ana, no lo puedes comprender you cannot understand de ese hombre sin conocer about that man without knowing nombre y suerte. his name and his good fortune.

DOÑA ANA: Será vana His good fortune will be su buena suerte conmigo; of no account to me, ya ves, sólo horas nos faltan you see, only a few hours remain para la boda, y te asaltan before the wedding, and vain vanos temores. fears assail you.

DON LUIS. Testigo I swear piously me es Dios que nada por mí nothing frightens me, it's true, me da pavor, mientras tenga for myself, while I have here espada y ese hombre venga my sword, or if that man were cara a cara contra ti. to come face to face with you. Mas como el león audaz But like an audacious lion y cauteloso y prudente both crafty and prudent como la astuta serpiente... like the astute serpent...

DOÑA ANA: ¡Bah! Duerme, don Luis, en paz, Oh! Sleep in peace, Don Luis que su audacia y su prudencia his audacity and prudence nada lograrán de mí, will never succeed with me, que tengo cifrada en ti for I've settled on you, you see, la gloria de mi existencia. the glory of my existence.

DON LUIS. Pues bien, Ana, de ese amor Very well, Ana, in the name of que me aseguras en nombre, that love of which you assure me, para no temer a ese hombre in order not to fear him, please, voy a pedirte un favor. I'm going to ask you a favour.

DOÑA ANA: Di; mas bajo, por si escucha Speak; more quietly in case tal vez alguno. someone can hear us.

DON LUIS. Oye, pues. Then listen.

ESCENA V SCENE V

(Doña Ana y Don Luis, a la reja (Doña Ana and Don Luis at the derecha; Don Juan y Ciutti, en la right grilled window; Don Juan calle izquierda) and Ciutti on the street to the left.)

CIUTTI: Señor, por mi vida, que es My word, in truth your vuestra suerte buena y mucha. luck is good and plentiful.

DON JUAN: Ciutti, nadie como yo: Ciutti, there's no one like me: ya viste cuán fácilmente you saw how easily el buen alcaide prudente the good and wise constabulary se avino y suelta me dio. came to terms, and set me free. Mas no hay ya en ello que hablar: But there's no need to talk of that. ¿mis encargos has cumplido? Have you done what I said?

CIUTTI: Todos los he concluido I have done it all mejor que pude esperar. better than I could have hoped.

DON JUAN: ¿La beata...? The governess?

CIUTTI: Esta es la llave This is the key de la puerta del jardín, to the gate in the garden wall, que habrá que escalar al fin, that you'd have had to climb, and it's tall, pues, como usarced ya sabe, since, as you're able to see, las tapias de ese convento the walls of that particular convent no tienen entrada alguna. have no other entrance at all.

DON JUAN: ¿Y te dio carta? And did she give you a letter?

CIUTTI: Ninguna; No, none, me dijo que aquí al momento she told me that in a moment iba a salir de camino; she was coming out for a walk: que al convento se volvía and she'd return to the convent y que con vos hablaría. after the two of you talk.

DON JUAN: Mejor es. That's even better.

CIUTTI: Lo mismo opino. I thought so.

DON JUAN: ¿Y los caballos? And the horses?

CIUTTI: Con silla I have them bridled y freno los tengo ya. and ready.

DON JUAN: ¿Y la gente? And my men?

CIUTTI: Cerca está. Are nearby.

DON JUAN: Bien, Ciutti; mientras Sevilla Good Ciutti; while Seville tranquila en sueño reposa reposes in tranquil sleep creyéndome encarcelado, believing me imprisoned otros dos nombres añado another two names will be added a mi lista numerosa. to the long list I keep. ¡Ja!, ¡ja! Ha ha!

CIUTTI: Señor. Sir.

DON JUAN: ¿Qué? What?

CIUTTI: Callad. Be quiet.

DON JUAN: ¿Qué hay, Ciutti? What's wrong Ciutti?

CIUTTI: Al doblar la esquina, On turning the corner en esa reja vecina at the neighbouring window he visto un hombre. I saw a man.

DON JUAN: Es verdad: Its true: pues ahora sí que es mejor so now the affair is el lance: ¿y si es ése? going better. Could it be him?

CIUTTI: ¿Quién? Who?

DON JUAN: Don Luis. Don Luis.

CIUTTI: Imposible. Impossible.

DON JUAN: ¡Toma! Why? ¿No estoy yo aquí? Well, am I not here?

CIUTTI: Diferencia There's a big difference va de él a vos. between you and him.

DON JUAN: Evidencia I believe the evidence, man, lo creo Ciutti; allí asoma Ciutti; there is still tras de la reja una dama. a lady behind the grill.

CIUTTI: Una criada tal vez. Perhaps a servant.

DON JUAN: Preciso es verlo, ¡pardiez!, By heaven! I want no perdamos lance y fama. to see, not lose the game or the fame. Mira, Ciutti: a fuer de ronda, Look, Ciutti, play at being the night patrol, tú con varios de los míos with several of my men por esa calle escurríos scatter through that street, again, dando vuelta a la redonda and set up around the whole a la casa. house.

CIUTTI: Y en tal caso In that case cerrará ella. she'll close the window.

DON JUAN: Pues con eso, And in that way, ella ignorante y él preso, him a prisoner, her unaware, nos dejarán franco el paso. the way will be clear for us there.

CIUTTI: Decís bien. That's right.

DON JUAN: Corre y atájale, Run and overtake him que en ello el vencer consiste. For winning depends on it.

CIUTTI: ¿Mas si el truhán se But if the scoundrel resists? resiste?

DON JUAN: Entonces de un tajo, rájale. Then with one sword-stroke break him.

ESCENA VI SCENE VI

(Don Juan, Doña Ana, Don Luis) (Don Juan, Doña Ana, Don Luis)

DON LUIS. ¿Me das, pues, tu asentimiento? Then you give me your consent?

DOÑA ANA: Consiento. I agree.

DON LUIS. ¿Complácesme de ese modo? And in this way you will please me?

DOÑA ANA: En todo. In everything, you'll see.

DON LUIS. Pues te velaré hasta el día. Then I'll spend the time till daylight here.

DOÑA ANA: Sí, Mejía. Yes, Mejía.

DON LUIS. Páguete el cielo, Ana mía, May heaven reward you Ana dear, satisfacción tan entera. and bring your happiness near.

DOÑA ANA: Porque me juzgues sincera, Because you believe me sincere consiento en todo, Mejía. I consent to everything Mejía.

DON LUIS. Volveré, pues, otra vez. I'll return then later, have no fear.

DOÑA ANA: Si, a las diez. Yes, at ten, please appear.

DON LUIS. ¿Me aguardarás, Ana? Will you wait for me, Ana?

DOÑA ANA: Sí. Yes.

DON LUIS. Aquí. Here.

DOÑA ANA: ¿Y tú estarás puntual, eh? And you'll be on time?

DON LUIS. Estaré. Assuredly.

DOÑA ANA: La llave, pues, te daré. Then I'll give you the key.

DON LUIS. Y dentro yo de tu casa, And, with me inside, venga Tenorio. let Tenorio come.

DOÑA ANA: Alguien pasa. Someone goes by! A las diez. Until ten.

DON LUIS. Aquí estaré. Then we'll see.

ESCENA VII SCENE VII

(Don Juan, Don Luis) (Don Juan, Don Luis)

DON LUIS: Mas se acercan. ¿Quién va allá? Someone is coming. Who goes there?

DON JUAN: Quien va. Whoever it is who goes there.

DON LUIS. De quien va así ¿qué se infiere? What does he want, whoever goes there?

DON JUAN: Que quiere... He wants....

DON LUIS. ¿Ver si la lengua le arranco ? To see me chop out his tongue?

DON JUAN: El paso franco. A clear run.

DON LUIS. Guardado está. This house is closely guarded.

DON JUAN: ¿Y soy yo manco? Do you think I'm unarmed then?

DON LUIS. Pidiéraislo en cortesía. You must ask more courteously here.

DON JUAN: ¿Y a quién? Of whom?

DON LUIS. A don Luis Mejía. Of Don Luis Mejía.

DON JUAN: Quien va quiere el paso franco. He who goes here wants a clear run.

DON LUIS. ¿Conocéisme? Do you know me?

DON JUAN: Sí. Yes.

DON LUIS. ¿Y yo a vos? And I you?

DON JUAN: Los dos. Both of us do.

DON LUIS. ¿Y en qué estriba el estorballe? And where's the hindrance to your feet?

DON JUAN: En la calle. Here in the street

DON LUIS. ¿De ella los dos por ser amos? Because we're both standing in it?

DON JUAN: Estamos. We are both in it.

DON LUIS. Dos hay no más que podamos There are only two of us who necesitarla a la vez. need it just now, though.

DON JUAN: Lo sé. I know.

DON LUIS. ¡Sois don Juan! You are Don Juan!

DON JUAN: ¡Pardiez! So!.... los dos ya en la calle estamos. we are both in the street now.

DON LUIS. ¿No os prendieron? Didn't they arrest you?

DON JUAN: Como a vos. Like you.

DON LUIS. ¡Vive Dios! Good Lord. Y huisteis? And you got away?

DON JUAN: Os imité: I did what you did. ¿y qué? Why?

DON LUIS. Que perderéis. So that you'll lose.

DON JUAN: No sabemos. We don't know so.

DON LUIS. Lo veremos. We'll see though.

DON JUAN: La dama entrambos tenemos We have both set out to know sitiada y estáis cogido. the lady, and you're trapped too.

DON LUIS. Tiempo hay. There's still time.

DON JUAN: Para vos perdido. To be lost, by you.

DON LUIS. ¡Vive Dios que lo veremos! By God we will see, though! (Don Luis desenvaina su espada, mas (Don Luis unsheathes his sword, Ciutti, que ha bajado con los suyos but Ciutti, who has craftily cautelosamente hasta colocarse tras approached with his men until él, le sujeta.) they are behind him, grabs him.)

DON JUAN: Señor don Luis, vedlo, pues. Don Luis, now you see,

DON LUIS. Traición es. This is treachery.

DON JUAN: La boca... His mouth... (A los suyos, que se la tapan a don (To his men who cover Don Luis' Luis.) mouth.)

DON LUIS. ¡Oh! Oh!

DON JUAN: (Le sujetan los brazos.) (They pin his arms.) Sujeto atrás: Tie them: más. more. La empresa es, señor Mejía, The game, Mejía, como mía. is mine, I fear. Encerrádmele hasta el día. Lock him up for a day. (A los suyos.) (To his men) La apuesta está ya en mi mano. And so the game falls to me. (A don Luis.) (To Don Luis) Adiós, don Luis: si os la gano, Goodbye, Don Luis, if I win, you see, traición es; mas como mía. by treachery, it's the way I play.

ESCENA VIII SCENE VIII

DON JUAN: Buen lance, ¡viven los cielos! By heaven! A fine affair. Estos son los que dan fama: This is the kind that wins fame today: mientras le soplo la dama, while I snatch his lady away, él se arrancará los pelos he'll be tearing out his hair encerrado en mi bodega. imprisoned in my wine cellar. ¿Y ella...? Cuando crea hallarse And she? When she thinks she's with him again con él..., ¡ja!, ¡ja...! ¡Oh! y ...ha! ha! Oh, and he can't quejarse complain. no puede; limpio se juega. I play fair, he can tell her. A la cárcel le llevé I got him jailed y salió: llevóme a mí and he was bailed: he trapped me y salí; hallarnos aquí and I was bailed; it was destiny era fuerza..., ya se ve, that we'd meet here, neither failed su parte en la grave apuesta: to defend his name defendía cada cual. in this serious jest. Mas con la suerte está mal But Mejía's luck is not of the best Mejía, y también pierde ésta. and he'll also lose this game. Sin embargo, y por si acaso, Nevertheless, and just to be sure, no es demás asegurarse it's not showing too much fear de Lucía, a desgraciarse to make certain of Lucía, no vaya por poco el paso. since there's some danger of failure. Mas por allí un bulto negro But a dark shadow appears, se aproxima..., y a mi ver and in my opinion es el bulto una mujer. the shape is that of a woman. ¿Otra aventura? Me alegro. Another adventure? I'm cheered.

ESCENA IX SCENE IX

(Don Juan, Brígida) (Don Juan, Brigida)

BRÍGIDA: ¿Caballeros? Gentlemen?

DON JUAN: ¿Quién va allá? Who goes there?

BRÍGIDA: ¿Sois don Juan? Are you Don Juan?

DON JUAN: ¡Por vida de...! What can I say!.... ¡Si es la beata! ¡Y a fe It's the guardian! And in faith que la había olvidado ya! I had forgotten about her! Llegaos; don Juan soy yo. Approach, I am Don Juan.

BRÍGIDA: ¿Estáis solo? Are you alone?

DON JUAN: Con el diablo. With the devil, I own.

BRÍGIDA: ¡Jesucristo! Goodness me!

DON JUAN: Por vos lo hablo. I say that because of you.

BRÍGIDA: ¿Soy yo el diablo? Do I look like the devil to you?

DON JUAN: Créolo. I think so.

BRÍGIDA: ¡Vaya! ¡Qué cosas tenéis! Ah, how you speak to me! Vos sí que sois un diablillo... You really are a devil or worse.

DON JUAN: Que te llenará el bolsillo One who will fill up your little purse si le sirves. if you serve him.

BRÍGIDA: Lo veréis. You'll see.

DON JUAN: Descarga, pues, ese pecho. Unburden yourself then. ¿Qué hiciste? What did you do?

BRÍGIDA: Cuanto me ha dicho All that your servant told me to. vuestro paje... ¡Y qué mal bicho And what a scamp he is, it's true, es ese Ciutti! that Ciutti.

DON JUAN: ¿Qué ha hecho? What did he do?

BRÍGIDA: ¡Gran bribón! He's a great rascal.

DON JUAN: ¿No os ha entregado Didn't he turn over to you un bolsillo y un papel? a purse and a letter?

BRÍGIDA: Leyendo estará ahora en él Doña Inés is getting better doña Inés. acquainted with it right now.

DON JUAN: ¿La has preparado? Have you prepared her?

BRÍGIDA: Vaya; y os la he convencido I have convinced her con tal maña y de manera in such a clever way que irá como una cordera she'll follow you, any day, tras vos. like a little lamb.

DON JUAN: ¡Tan fácil te ha sido! Was it that easy for you?

BRÍGIDA: ¡Bah! Pobre garza enjaulada, Bah. Poor little bird in a cage dentro la jaula nacida, to be born here and to die, ¿qué sabe ella si hay más vida what does she know, at her age, ni más aire en que volar? of another life, free, in which to fly? Si no vio nunca sus plumas If she's never seen her feathers del sol a los resplandores, shine in the sun, poor thing, ¿qué sabe de los colores what does she know of the colours de que se puede ufanar? of which her heart might sing? No cuenta la pobrecilla The poor little child is diez y siete primaveras a bare seventeen y, aún virgen a las primeras and wholly a virgin impresiones del amor, to love's first idea, nunca concibió la dicha she's never conceived of pleasure, fuera de su pobre estancia outside her poor dwelling's measure, tratada desde su infancia treated from infancy like a treasure, con cauteloso rigor. with careful strictness, poor dear. Y tantos años monótonos And so many monotonous years de soledad y convento of convent solitude tenían su pensamiento have kept her thoughts subdued, ceñido a punto tan ruin, imprisoned in such a ruinous way, a tan reducido espacio captive to such a degree, y a círculo tan mezquino, and in such wretched society, que era el claustro su destino that the cloister was her destiny, el altar era su fin. devotion was her fate. "Aquí está Dios", la dijeron; "God is here," they told her; y ella dijo: "Aquí le adoro". And she said: "Here I'll adore" "Aquí está el claustro y el coro." Here is the cloister and choir. Y pensó: "No hay más allá". And thought "Beyond, there is nothing more." Y sin otras ilusiones And without any illusions que sus sueños infantiles, more than her childish dreams, pasó diez y siete abriles she spent seventeen years growing sin conocerlo quizá. here, almost without knowing.

DON JUAN: ¿Y está hermosa? And is she beautiful?

BRÍGIDA: ¡Oh! Como un ángel. Oh, as an angel.

DON JUAN: ¿Y la has dicho...? And you have unfurled...?

BRÍGIDA: Figuraos You may well guess si habré metido mal caos how I have stirred wicked chaos en su cabeza, don Juan. inside her head, Don Juan. La hablé del amor, del mundo, I spoke to her of love, of the world de la corte y los placeres, of pleasures, the court, how gallant de cuánto con las mujeres you are, how prodigious a talent erais pródigo y galán. you possess with women. La dije que erais el hombre I told her you were the man por su padre destinado chosen for her by her father, para suyo; os he pintado and I have painted you rather muerto por ella de amor, as dying for her love, desesperado por ella, desperate for her, y por ella perseguido, because of her, in a lather, por ella decidido determined to risk honour a perder vida y honor. for her, and life above. En fin, mis dulces palabras, In short, my words of sweetness al posarse en sus oídos, so possessed her hearing, sus deseos mal dormidos desires still slumbering, arrastraron de sí en pos; awakened in her, beating y allá dentro de su pecho there inside her breast, han inflamado una llama set light to a flame so true, de fuerza tal, que ya os ama that she already loves you, y no piensa más que en vos. and it's only of you she's thinking.

DON JUAN: Tan incentiva pintura Such an alluring picture los sentidos me enajena, inflames my senses, whole, el alma ardiente me llena and fills my burning soul de su insensata pasión. with senseless ardour. Empezó por una apuesta, It began as a wager, siguió por un devaneo, followed by mad desire, engendró luego un deseo, engendering the fire, y hoy me quema el corazón. and now my heart's alight. Poco es el centro de un claustro; A cloister is no matter; ¡al mismo infierno bajara, I'd go downwards to the Inferno, y a estocadas la arrancara and with sword thrusts, to and fro, de los brazos de Satán! from the arms of Satan, seize her. ¡Oh! Hermosa flor, cuyo cáliz Oh beautiful flower, whose calyx al rocío aún no se ha abierto, never opened to the dew, a trasplantarte va al huerto to the garden of his love de sus amores don Juan. Don Juan will transplant you. ¿Brígida? Brigida?

BRÍGIDA: Os estoy oyendo, I'm listening. y me hacéis perder el tino: and you confuse me; yo os creía un libertino I thought you a libertine sin alma y sin corazón. without a soul or heart.

DON JUAN: ¿Eso extrañas? ¿No está claro That surprises you? Isn't it clear que en un objeto tan noble that a noble aim in mind hay que interesarse doble must interest a man of my kind que en otros? twice as much as others.

BRÍGIDA: Tenéis razón. You're a man apart.

DON JUAN: Conque ¿a qué hora se recogen So at what time do the reverend las madres? mothers seek their beds?

BRÍGIDA: Ya recogidas They've probably already done so. estarán. ¿Vos prevenidas Do you have everything, though, todas las cosas tenéis? prepared and ready?

DON JUAN: Todas. Everything.

BRÍGIDA: Pues luego que doblen Then as soon as they ring a las ánimas, con tiento for prayers, carefully, saltando al huerto, al convento jumping into the garden, see, fácilmente entrar podéis you can enter the convent easily con la llave que os he enviado: with the key I sent you: de un claustro oscuro y estrecho that of a dark and narrow door, es, seguidle bien derecho, follow it straight through, and your y daréis con poco afán passage is made, with little worry, en nuestra celda. to our cell.

DON JUAN: Y si acierto And if I succeed, at leisure, a robar tan gran tesoro, in stealing such a treasure, te he de hacer pesar en oro. I'll give you your weight in gold, with pleasure.

BRÍGIDA: Por mí no queda, don Juan. Don't stay for me, Don Juan, hurry.

DON JUAN: Ve y aguárdame. Go and wait for me Brígida; Voy, pues, Brigida, I am going straight there a entrar por la portería, through the little door here, y a cegar a sor María to blind Sister Maria, la tornera. Hasta después. the doorkeeper. Till later. (Vase Brígida, y un poco antes de (Brigida leaves. And a little concluir esta escena sale Ciutti, que before this scene ends, Ciutti se para en el fondo, esperando) comes in and stops in the background, waiting.)

ESCENA X SCENE X

(Don Juan, Ciutti) (Don Juan, Ciutti)

DON JUAN: Pues, señor, ¡soberbio envite! Well sir. A fine start to it! Muchas hice hasta esta hora, I've played lots of hands before mas ¡por Dios que la de ahora but, by God, I never saw será tal que me acredite! one that will do me more credit! Mas ya veo que me espera But I see Ciutti is waiting. Ciutti. ¿Lebrel? (Llamándole.) Lebrel? (Calling him)

CIUTTI: Aquí estoy. I am here.

DON JUAN: ¿Y don Luis? And Don Luis?

CIUTTI: Libre por hoy You're free of him, have no fear estáis de él. for today.

DON JUAN: Ahora quisiera Now I desire ver a Lucía. To see Lucia.

CIUTTI: Llegar This way. Here. podéis aquí: (A la reja derecha.) (At the right grill.) yo la llamo I'll call out, y al salir a mi reclamo and when she answers my shout, la podéis vos abordar. you can accost her.

DON JUAN: Llama, pues. Knock then.

CIUTTI: La seña mía She knows my signal so well sabe bien para que dude she might hesitate en acudir. to answer the bell.

DON JUAN: Pues si acude, Well if she does come, I say it, lo demás es cuenta mía. the rest is for me to tell. (Ciutti llama a la reja con una seña (Ciutti knocks on the grill que parezca convenida. Lucía se asoma with a signal that seems a ella, y al ver a don Juan se detiene appropriate. Lucia comes to it un momento.) and when she sees Don Juan, she stops for a moment.)

ESCENA XI SCENE XI

(Don Juan, Lucia, Ciutti) (Don Juan, Lucia, Ciutti)

LUCÍA: ¿Qué queréis, buen caballero? What do you want, sir knight?

DON JUAN: Quiero. I want...

LUCÍA: ¿Qué queréis, vamos a ver? Well! Lets see, what you want?

DON JUAN: Ver. To see...

LUCÍA: ¿Ver? ¿Qué veréis a esta hora? To see? Who would you see so late?

DON JUAN: A tu señora. Your lady.

LUCÍA: Idos, hidalgo, en mal hora; Go away, fine sir, to your sorry fate ¿quién pensáis que vive aquí? Who do you think lives here?

DON JUAN: Doña Ana Pantoja, y Doña Ana Pantoja is there, quiero ver a tu señora. and I want to see your lady.

LUCÍA: ¿Sabéis que casa doña Ana? Do you know Doña Ana is to be wed?

DON JUAN: Sí, mañana. Yes, tomorrow, I've heard it said.

LUCÍA: ¿Y ha de ser tan infiel ya? And is she to be unfaithful already?

DON JUAN: Sí será. Yes, she will be, she's ready.

LUCÍA: ¿Pues no es de don Luis Mejía? But isn't she promised to Luis Mejía?

DON JUAN: ¡Ca! Otro día. Ah, another day, I hear. Hoy no es mañana, Lucía; Today is not tomorrow, Lucia; yo he de estar hoy con doña Ana, I must be with Doña Ana today, y si se casa mañana, and let her marry tomorrow, I say, mañana será otro día. for tomorrow is another day.

LUCÍA: ¡Ah! ¡En recibiros está? Ah, is she prepared to receive you?

DON JUAN: Podrá. It could be.

LUCÍA: ¿Qué haré, si os he de servir? What am I to do to serve you?

DON JUAN: Abrir. Open up.

LUCÍA: ¡Bah! ¿Y quién abre este Bah. And what can open this castillo? fortress?

DON JUAN: Ese bolsillo. That purse.

LUCÍA: ¿Oro? Gold?

DON JUAN: Pronto te dio el brillo. You soon caught sight of its brightness.

LUCÍA: ¿Cuánto? How much, all told?

DON JUAN: De cien doblas pasa. More than a hundred golden pieces.

LUCÍA: Jesús! Jesus!

DON JUAN: Cuenta y di: ¿esta casa Count it and say if that purse pleases podrá abrir, ese bolsillo? enough to open this house.

LUCÍA: ¡Oh! Si es quien me dora el Oh, if someone puts gold in my pico... mouth...

DON JUAN: Muy rico. Who is very rich. (Interrumpiéndola.) (Interrupting her.)

LUCÍA: ¿Si? ¿Qué nombre usa el galán? Yes? And the name of the noble man?

DON JUAN: Don Juan. Don Juan.

LUCÍA: ¿Sin apellido notorio? With a notorious last name?

DON JUAN: Tenorio. Tenorio, the very same.

LUCÍA: ¡Animas del purgatorio! By the spirits amongst the flame! ¿Vos don Juan? You are Don Juan?

DON JUAN: ¿Qué te amedrenta, Does it cause you to fear, si a tus ojos se presenta that some rich Don Juan Tenorio muy rico don Juan Tenorio. presents himself to your eyes here?

LUCÍA: Rechina la cerradura. The lock is making a noise.

DON JUAN: Se asegura: It's secure.

LUCÍA: ¿Y a mí quién? ¡Por Belcebú! And who makes me secure?

DON JUAN: Tú. By Beelzebub. Why you, for sure.

LUCÍA: ¿Y qué me abrirá el camino? And what will smooth the road for me?

DON JUAN: Buen tino. Good sense, I'm told.

LUCÍA: ¡Bah! Ir en brazos del Bah. You're too bold..... destino...

DON JUAN: Dobla el oro. I'll double the gold.

LUCÍA: Me acomodo. I agree.

DON JUAN: Pues mira cómo de todo Just see how your good sense se asegura tu buen tino. reassures you totally.

LUCÍA: Dadme algún tiempo, ¡pardiez! Give me time, for heaven's sake!

DON JUAN: A las diez. Till ten, then, take.

LUCÍA: ¿Dónde os busco, o vos a mí? I'll find you, or you me, where?

DON JUAN: Aquí. Here.

LUCÍA: ¿Conque estaréis puntual, eh? So you'll be waiting for me?

DON JUAN: Estaré. I will be.

LUCÍA: Pues yo una llave os traeré. Then I'll bring you a key.

DON JUAN: Y yo otra igual cantidad. And I an equal amount of gold.

LUCÍA: No me faltéis. Don't fail me.

DON JUAN: No en verdad; No, for in truth, I told a las diez aquí estaré. you, I'll be here at ten. Adiós, pues, y en mí te fía. Good bye, and trust me, my dear.

LUCÍA: Y en mí el garboso galán. And you, me, my elegant gentleman.

DON JUAN: Adiós, pues, franca Lucía. Good bye, then, generous Lucia.

LUCÍA: Adiós, pues, rico don Juan. Good bye, then, rich Don Juan. (Lucía cierra la ventana. Ciutti se (Lucia closes the window. acerca a don Juan a una seña de éste.) Ciutti approaches Don Juan at a signal from the latter.)

ESCENA XII SCENE XII

(Don Juan, Ciutti) (Don Juan, Ciutti)

DON JUAN: (Riéndose.) (Laughing) Con oro nada hay que falle. With gold everything's sweet. Ciutti, ya sabes mi intento: Ciutti, you know my true intent: a las nueve en el convento, at nine inside the old convent, a las diez en esta calle. (Vanse.) at ten outside in the street. (They leave.)

FIN DE ACTO SEGUNDO END OF THE SECOND ACT

ACTO TERCERO ACT THREE

PROFANACION PROFANATION

(Celda de doña Inés. Puerta en el (The cell of Doña Ines. A door at fondo y a la izquierda.) the back and to the left.)

ESCENA I SCENE I

(Doña Inés, la Abadesa) (Doña Ines and the abbess.)

ABADESA:¿Conque me habéis So, you've understood me? entendido?

DOÑA INÉS: Si, señora. Yes, my lady.

ABADESA: Está muy bien; That's well; la voluntad decisiva such is your father's de vuestro padre tal es. firm wish, you hear. Sois joven, cándida y buena; You are young, innocent, and good: vivido en el claustro habéis you've lived in the cloister, here, casi desde que nacisteis; since you were born, my dear, y para quedar en él and in order to stay here now, atada con santos votos bound by a sacred vow para siempre, ni aún tenéis, eternally, you have no como otras, pruebas difíciles difficult penances to perform ni penitencias que hacer. or trials like others. ¡Dichosa mil veces vos! You're a thousand times fortunate! Dichosa, sí, doña Inés, Fortunate, yes, Doña Ines, que no conociendo el mundo for, not knowing the world, no le debéis de temer. you do not have to fear it. ¡Dichosa vos que, del claustro Fortunate, that crossing al pisar en el dintel, the threshold of the cloister no os volveréis a mirar you will not turn to look back lo que tras vos dejaréis! at what you are leaving behind. Y los mundanos recuerdos And the worldly memory del bullicio y del placer of hubbub and pleasure no os turbarán tentadores will not trouble you, tempting you, del ara santa a los pies; at the foot of the sacred altar: pues ignorando lo que hay since not knowing what is there, tras esa santa pared, behind that sacred wall, lo que tras ella se queda you will never long for jamás apeteceréis. what remains beyond it. Mansa paloma enseñada A tame dove that has learned en las palmas a comer to eat from the palm del dueño que la ha criado of the master who raised you en doméstico vergel, in a private orchard, no habiendo salido nunca never having left de la protectora red, the net that protects you, no ansiaréis nunca las alas you will not yearn for wings por el espacio tender. to extend into space. Lirio gentil, cuyo tallo A gentle lily, whose stem mecieron sólo tal vez was only rocked for hours las embalsamadas brisas by the perfumed breezes del más florecido mes, of a month of flowers, aquí a los besos del aura here at the kisses of the gentle breeze vuestro cáliz abriréis, your calyx will unfold y aquí vendrán vuestras hojas and here your leaves will begin tranquilamente a caer. tranquilly to fall. Y en el pedazo de tierra And in the piece of earth que abarca nuestra estrechez, which our poverty encloses, y en el pedazo de cielo and in the piece of sky que por las rejas se ve, that is seen through the bars, vos no veréis más que un lecho you'll find only a bed do en dulce sueño yacer, where in sweet sleep you'll lie y un velo azul suspendido and a blue veil suspended a las puertas del Edén. at the gates of Eden. ¡Ay! En verdad que os envidio, Oh, in truth I envy you venturosa doña Inés, fortunate Doña Ines, con vuestra inocente vida, with your innocent life, la virtud del no saber. the virtue of not knowing. Mas ¿por qué estáis cabizbaja? But, why are you so sad? ¿Por qué no me respondéis Why do you not reply como otras veces, alegre, as at other times, happily, cuando en lo mismo os hablé? when I speak like this to you? ¿Suspiráis?... ¡Oh!, ya comprendo You sigh? Oh, now I understand de vuelta aquí hasta no ver not having seen your Duenna a vuestra aya estáis inquieta, returning, you are anxious, pero nada receléis. but have no fears at all. A casa de vuestro padre She went to your father's house fue casi al anochecer, almost at nightfall y abajo en la portería and she is probably in the estará: yo os la enviaré, gatehouse; I will send her to you que estoy de vela esta noche. since I'm on watch tonight. Conque, vamos, doña Inés, So come now, Doña Ines, recogeos, que ya es hora: collect yourself, for it's time; mal ejemplo no me deis don't set a bad example a las novicias, que ha tiempo to the novices, asleep, quiet que duermen ya. Hasta después. for some while. Till later.

DOÑA INÉS: Id con Dios, madre Go with God, mother Abbess. abadesa.

ABADESA: Adiós, hija. Goodbye my daughter.

ESCENA II SCENE II

(Doña Inés) (Doña Inés)

DOÑA INÉS: Ya se fue. She's gone. No sé qué tengo, ¡ay de mí!, I don't know what's wrong with me. que en tumultuoso tropel Alas! For in a tumultous crowd mil encontradas ideas a thousand conflicting ideas me combaten a la vez. assail me all at once. Otras noches complacida On other nights I listened, sus palabras escuché; complacently, to her words; y de esos cuadros tranquilos and those tranquil pictures que sabe pintar tan bien, she knows how to paint so well, de esos placeres domésticos those domestic pleasures, la dichosa sencillez their delightful simplicity, y la calma venturosa, and their happy calm, me hicieron apetecer made me yearn for la soledad de los claustros the silence of the cloisters y su santa rigidez. and their holy rule. Mas hoy la oí

distraída But today I listened distracted y en sus pláticas hallé, and I found in her chatter si no enojosos discursos, if not bothersome discourse a lo menos aridez. at the very least aridity. Y no sé por qué, al decirme And I don't know why, at her telling me que podría acontecer that it might happen, que se acelerase el día that the day for my vows de mi profesión, temblé might come quickly, I trembled y sentí del corazón and I felt in my heart acelerarse el vaivén, excitement quicken, teñírseme el semblante my face become discolored de amarilla palidez. with yellowish pallor. ¡Ay de mí...! ¡Pero mi dueña Ah me! But where can my dónde estará...! Esa mujer Duenna be. That woman con sus pláticas al cabo sometimes entertains me entretiene alguna vez. after all, with her gossip. Y hoy la echo menos... acaso And today I miss her...perhaps porque la voy a perder, because I'm going to lose her, que en profesando es preciso for when taking vows it's necessary renunciar a cuanto amé. to renounce everything you love. Mas pasos siento en el claustro; But I hear steps in the cloister: ¡oh!, reconozco muy bien Oh! I truly recognize sus pisadas... Ya está aquí. her footsteps. She is here.

ESCENA III SCENE III

(Doña Inés, Brígida) (Doña Inés, Brígida)

BRIGIDA: Buena noches Doña Inés. Good evening, Doña Ines.

DOÑA INES: Cómo habéis tardado Why are you so late? tanto?

BRÍGIDA: Voy a cerrar esta puerta. I'm going to close this gate.

DOÑA INÉS: Hay orden de que esté The rule is to keep it open. abierta.

BRÍGIDA: Eso es muy bueno y muy It is very good and holy santo para las otras novicias for all the other novices que han de consagrarse a Dios, to be consecrated to God: no, doña Inés, para vos. but not, Doña Ines, for you.

DOÑA INÉS: Brígida, ¿no ves que Brígida, don't you see you are vicias las reglas del monasterio breaking the convent rules que no permiten...? that do not permit.....?

BRÍGIDA: ¡Bah!, ¡bah! Bah, bah! Más seguro así se está, We are safer so, y así se habla sin misterio and so we can talk without mystery ni estorbos. ¿Habéis mirado or hindrance. Have you looked carefully el libro que os he traído? at the book I brought you?

DOÑA INÉS: ¡Ay!, se me había Ay, I forgot it. olvidado.

BRÍGIDA: ¡Pues me hace gracia el (Ironically) Well, thank you for olvido! forgetting it!

DOÑA INÉS: ¡Como la madre abadesa Because the mother Abbess se entró aquí inmediatamente! came in straight away.

BRÍGIDA: ¡Vieja más impertinente! What a meddlesome old woman!

DOÑA INÉS: ¿Pues tanto el libro You are interested in the book? interesa?

BRÍGIDA: ¡Vaya si interesa! Mucho. Oh yes, it interests me. A great deal! ¡Pues quedó con poco afán For the poor man left it behind el infeliz! along with a little longing. (Ironically)

DOÑA INÉS: ¿Quién? Who did?

BRÍGIDA: Don Juan. Don Juan!

DOÑA INÉS: ¿Válgame el cielo! ¡Qué escucho! Good heavens, what do I hear! Es don Juan quien me le envía. Don Juan sent it to me?

BRÍGIDA: Por supuesto. That's so.

DOÑA INÉS: ¡Oh! Yo no debo Oh! I ought not to go tomarle. accepting it.

BRÍGIDA: ¡Pobre mancebo! Poor young man, though! Desairarle así, sería To slight him thus would be matarle. to kill him.

DOÑA INÉS: ¿Qué estás diciendo? What are you saying?

BRÍGIDA: Si ese horario no tomáis, If you don't accept his book of prayer tal pesadumbre le dais you'll cause him such despair que va a enfermar: lo estoy viendo that he'll sicken: I can see it now.

DOÑA INÉS: ¡Ah! No, no; de esa Ah! No, no; in that case manera le tomaré. I will take it.

BRÍGIDA: Bien haréis. You'll do well.

DOÑA INÉS: ¡Y qué bonito es! And how pretty it is!

BRÍGIDA: Ya veis; Well, you see, it is: quien quiere agradar se esmera. who wants to please tries his best.

DOÑA INÉS: Con sus manecillas de With little clasps of gold. oro. ¡Y cuidado que está prieto! And it's comfortable to hold! A ver, a ver si completo Lets see, lets see if it has the whole contiene el rezo del coro. choir prayer all told. (Le abre, y cae una carta de entre (She opens it and a letter falls sus hojas.) out from between the leaves.) Mas ¿qué cayó? But what fell?

BRÍGIDA: Un papelito. A little paper.

DOÑA INÉS: ¡Una carta! A letter!

BRÍGIDA: Claro está; Of course it is: en esa carta os vendrá he is probably offering you ofreciendo el regalito. his gift in that letter.

DOÑA INÉS: ¡Qué! ¿Será suyo el What! Can this paper be his? papel?

BRÍGIDA: ¡Vaya, que sois inocente! Come now, how innocent you are! Pues que os feria, es consiguiente Since he is giving you a present, que la carta será de él. it follows the letter is his.

DOÑA INÉS: ¡Ay, Jesús! Merciful Heavens!

BRÍGIDA: ¿Qué es lo que os da? Whats the matter, poor thing?

DOÑA INÉS: Nada, Brigida, no es Nothing, Brigida, it's nothing. nada.

BRÍGIDA: No, no; si estáis No, no: you seem bothered by inmutada. something. (Ya presa en la red está.) (Aside) She's already caught in the net. ¿Se os pasa? Is anything wrong?

DOÑA INÉS: Sí. Yes.

BRÍGIDA: Eso habrá sido It must have been excess cualquier mareíllo vano. of some passing dizziness.

DOÑA INÉS: ¡Ay! Se me abrasa la Ah! My hand is burning where mano con que el papel he cogido. I held it against the paper.

BRÍGIDA: Doña Inés, ¡válgame Dios!, Goodness, Doña Ines jamás os he visto así: I've never seen you like this: estáis trémula. you're trembling.

DOÑA INÉS: ¡Ay de mí! Ah, yes!

BRÍGIDA: ¿Qué es lo que pasa por vos? What's happening to you?

DOÑA INÉS: No sé... El campo de mi mente I don't know...I feel as if I see siento que cruzan perdidas a thousand unknown shadows wind, mil sombras desconocidas wandering, throughout my mind, que me inquietan vagamente that vaguely trouble me, y ha tiempo al alma me dan and for some time now they've been con su agitación tortura. tormenting me with their passing.

BRÍGIDA: ¿Tiene alguna por ventura Perhaps Don Juan's face passing el semblante de don Juan? has something to do with it?

DOÑA INÉS: No sé: desde que le vi, I don't know, but ever since I came to see Brígida mía, y su nombre him, Brigida, and you told me his name, me dijiste, tengo a ese hombre I always have that man, the same siempre delante de mí. one, in front of me. Por doquiera me distraigo Wherever I am, I'm distracted con su agradable recuerdo, by the pleasant memory of him, y si un instante le pierdo, and if for a moment I forget him, en su recuerdo recaigo. I remember how he acted. No sé qué fascinación I don't know what fascination en mis sentidos ejerce, he holds for my senses, que siempre hacia él se me tuerce I have no defences, la mente y el corazón: mind and heart are turned his way: y aquí y en el oratorio and here in the oratory, oh, y en todas partes advierto I notice I entertain que el pensamiento divierto my thoughts again and again con la imagen de Tenorio. with the form of Tenorio.

BRÍGIDA: ¡Válgame Dios! Doña Inés, Heaven help us, Doña Ines, según lo vais explicando, according to what you've told me tentaciones me van dando you tempt me to believe, you see de creer que eso amor es. that it is love, no less.

DOÑA INÉS: ¡Amor has dicho! Love you say!

BRÍGIDA: Sí, amor. Yes. Love.

DOÑA INÉS: No, de ninguna manera. No, by no manner of means.

BRÍGIDA: Pues por amor lo Well, the slowest witted it seems entendiera el menos entendedor; would know that it is love: mas vamos la carta a ver. but let me see the letter. ¿En qué os paráis? ¿Un suspiro? What stops you, then? A sigh?

DOÑA INÉS: ¡Ay! Que cuanto más la Ay! The more I look at it, miro, menos me atrevo a leer. the less I dare to read it. (Lee.) (She reads) "Doña Inés del alma mía." "Doña Ines, the soul of love" ¡Virgen Santa, qué principio! Saints above, what an introduction!

BRÍGIDA: Vendrá en verso, y será Since it is a verse production un ripio que traerá la poesía. it's required by the poetry. Vamos, seguid adelante. Go on: keep reading.

DOÑA INÉS: (Lee.) (reads) "Luz de donde el sol la toma, "Light that creates the sun above, hermosísima paloma most beautiful and gentle dove privada de libertad, deprived of liberty, si os dignáis por estas letras if you deign to pass pasar vuestros lindos ojos, your pretty eyes over these letters today, no los tornéis con enojos do not angrily turn them away sin concluir, acabad." without finishing: read them and see."

BRÍGIDA: ¡Qué humildad! ¡Y qué What humility! What finesse! finura! ¿Dónde hay mayor rendimiento? Where is there greater devotion?

DOÑA INÉS: Brigida, no sé qué Brigida, I don't know this emotion siento. I feel.

BRÍGIDA: Seguid, seguid la lectura. Go on, what's next?

DOÑA INÉS: (Lee) (Reading) "Nuestros padres de consuno "Our fathers, together, both nuestras bodas acordaron, agreed we should wed porque los cielos juntaron because the heavens joined los destinos de los dos. our two destinies. Y halagado desde entonces And since then, flattered by con tan risueña esperanza, such a delightful hope, mi alma, doña Inés, no alcanza Doña Ines, my soul seeks no otro porvenir que vos. other future than you. Indeed, De amor con ella en mi pecho a tiny spark of love brotó una chispa ligera, ignited here in my chest que han convertido en hoguera and time and fixed affection have tiempo y afición tenaz: made it a roaring fire; y esta llama que en mí mismo and this unquenchable zest se alimenta inextinguible, that finds itself inside me cada día más terrible every day more terribly, va creciendo y más voraz.., increasing, blazing higher...."

BRÍGIDA: Es claro; esperar le It's clear: they made him wait hicieron en vuestro amor algún día, to gain your love one day, y hondas raíces tenía and found tenacious roots cuando a arrancársele fueron. when they tried to tear them away. Seguid. Continue.

DOÑA INÉS: (Lee.) "En vano a apagarla "Time and absence, in vain, though concurren tiempo y ausencia, seek to extinguish it, que doblando su violencia for doubling in violence, it no hoguera ya, volcán es. is no longer a fire, but a volcano. Y yo, que en medio del cráter And I, suspended, O, desamparado batallo, I battle without shelter, suspendido en él me hallo in the midst of a crater entre mi tumba y mi Inés." between my tomb and my Inés, so"

BRÍGIDA: ¿Lo veis, Inés? Si ese Do you see Inés? If you flout horario le despreciáis, al instante that prayerbook you crave le preparan el sudario. they'll prepare his shroud.

DOÑA INÉS: Yo desfallezco. I'm faint.

BRÍGIDA: Adelante. Oh. be brave!

DOÑA INÉS: (Lee.) (She reads) "Inés, alma de mi alma, "Inés, soul of my soul, perpetuo imán de mi vida, my life's eternal goal, perla sin concha escondida a pearl concealed, without a shell, entre las algas del mar; deep beneath the ocean swell: garza que nunca del nido bird that never from its nest tender osastes el vuelo, dared to stretch its wings and fly, el diáfano azul del cielo through the translucent azure sky para aprender a cruzar; learning how to cross: si es que a través de esos muros if at the world beyond those walls el mundo apenada miras, you peer in misery, y por el mundo suspiras and sigh for a world of liberty de libertad con afán, with yearning, understand acuérdate que al pie mismo that at the very foot de esos muros que te guardan, of those same

walls, await you para salvarte te aguardan to save you, yes, await you, los brazos de tu don Juan." the arms of your Don Juan." (Representa.) (She shows her emotions.) ¿Qué es lo que me pasa, ¡cielo!, Dear heaven, what's happening to my state que me estoy viendo morir? of mind, for I seem to be dying?

BRÍGIDA: ¡Ya tragó todo el anzuelo. (Aside) She's already swallowed the bait! Vamos, que está al concluir. Go on, for he's almost finished sighing.

DOÑA INÉS: (Lee.) (Reading) "Acuérdate de quien llora "Remember the one who weeps al pie de tu celosía, below your window pane y allí le sorprende el día till the day surprises him again, y le halla la noche allí; the night still finds him there. acuérdate de quien vive Remember the one who lives sólo por ti, ¡vida mía!, only for you, my sweet, y que a tus pies volaría who would fly to your feet si me llamaras a ti." if you were to call me there."

BRÍGIDA: ¿Lo veis? Vendría. Do you see? He'd come.

DOÑA INÉS: ¡Vendría! He'd be here!

BRÍGIDA: A postrarse a vuestros To kneel at your feet, no less. pies.

DOÑA INÉS: ¿Puede? Could he?

BRÍGIDA: ¡Oh, sí! Oh yes.

DOÑA INÉS: ¡Virgen María! Sweet Maria!

BRÍGIDA: Pero acabad, doña Inés. But finish, Doña Inés.

DOÑA INÉS: (Lee.) (Reading) "Adiós, ¡oh luz de mis ojos! "Farewell, oh light of my eyes. Adiós, Inés de mi alma: Farewell, Inés of my soul. medita, por Dios, en calma consider, in God's name, the whole las palabras que aquí van; of what is written here: be calm y si odias esa clausura, and if you would hate the cloister que ser tu sepulcro debe; to be, as it will be, your tomb, manda, que a todo se atreve at your command is he who will come, por tu hermosura don Juan." daring all for your beauty, Don Juan." (Representa doña Inés.) (Showing emotion) ¡Ay! ¿Qué filtro envenenado Ah, what a deadly venom me dan en este papel, has been given me with this paper que el corazón desgarrado for I feel my heart ripped open me estoy sintiendo con él? on reading his letter. ¿Qué sentimientos dormidos What slumbering oceans son los que revela en mí? are those it reveals to me? ¿Qué impulsos jamás sentidos? What never-experienced emotions? ¿Qué luz, que hasta hoy nunca vi? What light I could never see? ¿Qué es lo que engendra en mi alma What is it my soul creates, tan nuevo y profundo afán? such a new, deep, yearning? Who can ¿Quién roba la dulce calma steal my sweet calm, who takes de mi corazón? it from my heart?

BRÍGIDA: Don Juan. Don Juan.

DOÑA INÉS: ¿Don Juan dices...? Conque ese Don Juan you say? So that man hombre me ha de seguir por doquier? is to follow me everywhere? ¿Sólo he de escuchar su nombre? Am I to hear only his name? ¿ Sólo su sombra he de ver? See only his shadow there? ¡Ah! Bien dice: juntó el cielo Oh, he spoke rightly, heaven mated los destinos de los dos, our two destinies, y en mi alma engendró este anhelo and engendered in my soul this fated fatal. longing.

BRÍGIDA: ¡Silencio, por Dios! For God's sake, quietly! (Se oyen dar las ánimas.) (They hear the bells for the prayers of the dead.)

DOÑA INÉS: ¿Qué? What?

BRÍGIDA: ¡Silencio! Silence!

DOÑA INÉS: Me estremeces. You make me tremble, too.

BRÍGIDA: ¿Oís, doña Inés, tocar? Do you hear the bells ring over our head?

DOÑA INÉS: Sí, lo mismo que otras Yes, the same as they always do. veces las ánimas oigo dar. calling for prayers for the dead.

BRÍGIDA: ¡Pues no habléis de él. Well, don't speak of him. Cielo santo! Merciful heavens! Oh!

DOÑA INÉS: ¿De quién? Of whom?

BRÍGIDA: ¿De quién ha de ser? Why whom do you fear? De ese don Juan que amáis tanto, Of whom? That Don Juan that you love so, porque puede aparecer. since he might appear.

DOÑA INÉS: ¡Me amedrentas! ¿Puede ese hombre You terrify me! Could that man llegar hasta aquí? even approach me here?

BRÍGIDA: Quizá. Perhaps. Porque el eco de su nombre Because the echo of his name tal vez llega adonde está. maybe it reaches him, clear.

DOÑA INÉS: ¡Cielos! ¿Y podrá...? Heavens! And could he?

BRÍGIDA: ¿Quién sabe? Who knows?

DOÑA INÉS: ¿Es un espíritu, pues? Is he a spirit then? Confess!

BRÍGIDA: No, mas si tiene una No, but if he has a key, and llave... goes.....

DOÑA INÉS: ¡Dios! Dear God!

BRÍGIDA: Silencio, doña Inés: Silence Doña Inés. ¿No oís pasos? Didn't you hear footsteps?

DOÑA INÉS: ¡Ay! Ahora Yes! They came to my hearing, nada oigo. now I hear nothing.

BRÍGIDA: Las nueve dan. Its striking nine o'clock. And Suben... se acercan... Señora... they're ascending...my lady....nearing Ya está aquí. He's here.

DOÑA INÉS: ¿Quién? Who?

BRÍGIDA: Él. He is.

DOÑA INÉS: ¡Don Juan! Don Juan!

ESCENA IV SCENE IV

(Doña Inés, Don Juan, Brígida) (Doña Inés, Don Juan, Brígida)

DOÑA INÉS: ¿Qué es esto? Sueño... What is this? A dream...or is it deliro. delirium.

DON JUAN: ¡Inés de mi corazón! Inés of my heart!

DOÑA INÉS: ¿Es realidad lo que miro Is what I gaze at real, or the art o es una fascinación...? that is illusion? Tenedme... apenas respiro... Hold me....my lips scarce part Sombra... huye por compasión. Shade...flee, out of compassion. ¡ Ay de mí...! Alas for me...! (Desmáyase doña Inés y don Juan la (Doña Inés faints and don Juan sostiene. La carta de don Juan holds her up. Don Juan's letter queda en el suelo abanDoñada por remains abandoned on the floor by doña Inés al desmayarse.) Doña Inés when she faints.)

BRÍGIDA: La ha fascinado Your sudden entrance here vuestra repentina entrada, has quite overpowered her y el pavor la ha trastornado. and she's overcome by fear.

DON JUAN: Mejor: así nos ha All the better. That means a mere ahorrado la mitad de la jornada. half of my effort's needed for her. ¡Ea! No desperdiciemos Well, lets not waste more time el tiempo aquí en contemplarla, gazing at her charms, si perdernos no queremos. if we don't want to be lost in crime. En los brazos a tomarla I'll carry her in my arms, voy, y cuanto antes ganemos and as soon as I can be I'm ese claustro solitario. free of this cloister's solitude.

BRÍGIDA: ¡Oh! ¿Vais a sacarla así? Oh! You'll take her like this?

DON JUAN: ¡Necia! ¿Piensas que Foolish woman. Do you think, rompí confess, la clausura, temerario, that I broke in here, showing fortitude, para dejármela aquí? only to leave behind my bliss? Mi gente abajo me espera: My people are waiting below: sígueme. follow!

BRÍGIDA: ¡Sin alma estoy! My heart is in my mouth! Indeed, ¡Ay! Este hombre es una fiera, this man is a wild beast, no nada le ataja ni altera... one stops him or deflects him, so Sí, sí; a su sombra me voy. I'll go wherever his shadow leads.

ESCENA V SCENE V

La ABADESA: Jurara que había oído I could swear that I heard....wait!... por estos claustros andar: someone walking these cloisters: hoy a doña Inés velar today when I've let Doña Inés algo más la he permitido, stay up until it grows late, y me temo... Mas no están and I'm afraid... But they're not here, so aquí. ¿Qué pudo ocurrir what could have occurred, a las dos para salir for both to have stirred de la celda? ¿Dónde irán? from the cell? Where have they gone to? ¡Hola! Yo las ataré Well now. I'll tether them corto para que no vuelvan with a short rope so they try a enredar y me revuelvan no more tricks, nor trouble my a las novicias... sí, a fe. novices..yes, that's for certain. Mas siento por allá fuera But I sense footsteps outside. pasos. ¿Quién es? Who is there?

ESCENA VI SCENE VI

(La Abadesa, la tornera) (The abbess and the doorkeeper.)

TORNERA: Yo, señora. Milady, it's me.

ABADESA: ¿Vos en el claustro a You are still inside I see? esta hora? ¿Qué es esto, hermana tornera? What's going on sister doorkeeper.

TORNERA: Madre abadesa, os buscaba. Mother Abbess, I was looking for you.

ABADESA: ¿Qué hay? Decid. What is it? Speak.

TORNERA: Un noble anciano An elderly noble quiere hablaros. wants to speak to you.

ABADESA: Es en vano. It's not possible.

TORNERA: Dice que es de Calatrava He says he's a knight of Calatrava: caballero; que sus fueros and that their laws allow le autorizan a este paso, him to enter here y que la urgencia del caso and it's urgent, so it's clear le obliga al instante a veros. he means to see you now.

ABADESA: ¿Dijo su nombre? Did he give his name?

TORNERA: El señor El Señor Don Gonzalo Ulloa. Don Gonzalo Ulloa.

ABADESA: ¿Qué What can he want here? puede querer...? Abralé Open the door for him sister: hermana: es Comendador He is a Comendador de la orden, y derecho of our order and has the right tiene en el claustro de entrada. to enter our cloister.

ESCENA VII SCENE VII

La ABADESA: ¿A una hora tan To come so, at such a late hour? avanzada venir así...? No sospecho I can't imagine at all qué pueda ser..., mas me place, what it might be...but then I'm pues no hallando a su hija aquí, pleased... when he finds his daughter free la reprenderá, y así he'll scold her, and then we'll see mirará otra vez lo que hace. she'll think twice what she does next time.

ESCENA VIII SCENE VIII

(La Abadesa, Don Gonzalo; la (The Abbess, Don Gonzalo; the tornera a la puerta) doorkeeper)

DON GONZALO: Perdonad, madre abadesa, Mother Abbess, forgive me que en hora tal os moleste; for bothering you at such a time, mas para mí asunto es éste but for me this is a matter of my que honra y vida me interesa. life and my honour, you see.

ABADESA: ¡Jesús! Saints above!

DON GONZALO: Oíd. Hear me.

ABADESA: Hablad, pues. Then speak at leisure !

DON GONZALO: Yo guardé hasta hoy un tesoro Today there's a treasure I hold de más quilates que el oro, of greater value than gold, y ese tesoro es mi Inés. and my Inés is that treasure.

ABADESA: A propósito. Of course.

DON GONZALO: Escuchad. Listen, closely! Se me acaba de decir I have only now been que han visto a su dueña ir told her Duenna was seen ha poco por la ciudad walking through the city hablando con el criado talking with the servant de un don Juan, de tal renombre of a certain Don Juan, he of such fame que no hay en la tierra otro hombre there's no man on earth I could name. tan audaz ni tan malvado. as audacious or as errant. En tiempo atrás se pensó Some time ago I intended, you see, con él a mi hija casar, to have him marry my daughter, y hoy, que se la fui a negar, and today, when I forbade him to court her, robármela me juró. he swore he'd steal her from me. Que por el torpe doncel This young man of sin ganada la dueña está has won over her Duenna, I'm sure, no puedo dudarlo ya: I can doubt it no more: debo, pues, guardarme de él. I must guard her from him. Y un día, una hora quizás In just one day that man, de imprevisión le bastara, a careless hour would do it, para que mi honor manchara, would steal my honour, or stain it, a ese hijo de Satanás. that very son of Satan. He aquí mi inquietud cuál es; It's the cause of my disquiet, now: por la dueña, en conclusión, on account of the Duenna, my confession, vengo; vos la profesión I've come: will you cut short the profession abreviad de doña Inés. of Doña Inés's vow.

ABADESA: Sois padre, y es vuestro You're a father, your concern is afán muy justo, Comendador; very just, Comendador: mas ved que ofende a mi honor. but see how you offend my honour.

DON GONZALO: No sabéis quién es don Juan. You do not know who Don Juan is.

ABADESA: Aunque le pintáis tan Though you paint him as an evil malo, case, yo os puedo decir de mí, I say to you, have no fear, que mientra Inés esté aquí, for while Inés is here, segura está, Don Gonzalo. Don Gonzalo, she is safe.

DON GONZALO: Lo creo; mas las razones I believe it, but lets choose abreviemos; entregadme to end this speech: hand over to me a esa dueña, y perdonadme the Duenna, and indeed forgive me mis mundanas opiniones. for my worldly views. Si vos de vuestra virtud You may defend virtue, me respondéis, yo me fundo but I trust to what I know en que conozco del mundo of the heedless youth who go la insensata juventud. through this world, in truth.

ABADESA: Se hará como lo exigís. It will be done straight away. Hermana tornera, id, pues, Sister doorkeeper, yes, a buscar a doña Inés go and get Doña Inés. y a su dueña. (Vase la tornera.) and her Duenna. (the doorkeeper leaves)

DON GONZALO: ¿Qué decís, What is this that you say señora? traición me ha hecho milady? Is my memory misled mi memoria, o yo sé bien or am I not aware, truly que ésta es hora de que estén that at this hour, surely ambas a dos en su lecho. both should be in their bed.

ABADESA: Ha un punto sentí a las A while ago I heard both leave dos salir de aquí, no sé a qué. and I don't know why.

DON GONZALO: ¡Ay! Por qué tiemblo no sé. I don't know why I tremble. Ay! ¡Mas qué veo, santo Dios! Dear Lord! What do I see? Un papel... Me lo decía A paper. My disquiet just began a voces mi mismo afán. to worry at me and call me. (Leyendo.) (Reading) "Doña Inés del alma mía..." "Doña Inés of my soul..." Y la firma de don Juan. And the signature....Don Juan. Ved..., ved..., esa prueba escrita. See...see....the proof on paper. Leed ahí... ¡Oh! Mientras que vos Read here. Oh! Abbess, while you por ella rogáis a Dios, were praying to God, it's true, viene el diablo y os la quita. the devil came down and stole her.

ESCENA IX SCENE IX

La Abadesa, Don Gonzalo, la tornera The Abbess, Don Gonzalo, the Turnkey

TORNERA: Señora... Milady...

ABADESA: ¿Qué es? What is it?

TORNERA: Vengo muerta. I'm appalled.

DON GONZALO: Concluid. Speak.

TORNERA: No acierto a hablar... I can't bring myself to speak... He visto a un hombre saltar I just saw a man leap por las tapias de la huerta. over the garden wall.

DON GONZALO: ¿Veis? Corramos. ¡Ay de mí! You see! Lets run. Oh, I fear!

ABADESA: ¿Dónde vais, Comendador? Comendador, where are you fleeing?

DON GONZALO: ¡Imbécil! tras de mi honor Fool! After my honour, seeing que os roban a vos de aquí. they've stolen it from here.

FIN DEL ACTO TERCERO END OF THE THIRD ACT

ACTO CUARTO ACT FOUR

El DIABLO A LAS PUERTAS DEL CIELO THE DEVIL AT THE GATES OF HEAVEN

(Quinta de don Juan Tenorio cerca (Don Juan Tenorio's estate near de Sevilla y sobre el Guadalquivir. Seville and on the Guadalquivir Balcón en el fondo. Dos puertas a river. A balcony at the back. Two cada lado.) doors to each side.)

ESCENA PRIMERA SCENE I

(Brígida, Ciutti) (Brígida, Ciutti)

BRÍGIDA: ¡Qué noche, válgame Dios! My God what a night! A poderlo calcular Had I foreseen it, no me meto yo a servir I wouldn't have offered to serve a tan fogoso galán. such a fiery young man as this. ¡Ay, Ciutti! Molida estoy; Ah Ciutti! I'm battered and bruised no me puedo menear. and I can't move a muscle.

CIUTTI: Pues ¿qué os duele ? But what pains you?

BRÍGIDA: Todo el cuerpo My whole body, y toda el alma además. and all my soul besides.

CIUTTI: ¡Ya! No estáis acostumbrada Ah, you're just not used al caballo, es natural. to riding, it's natural.

BRÍGIDA: Mil veces pensé caer: I thought I'd fall a thousand times. ¡uf!, ¡qué mareo!, ¡qué afán! Oh! What dizziness! What fear! Veía yo unos tras otros I saw the trees one after another ante mis ojos pasar passing before my eyes los árboles, como en alas as if on wings, blown by llevados de un huracán, so quickly in a storm tan apriesa y produciéndome that they produced in me ilusión tan infernal, such a hellish illusion que perdiera los sentidos that had we delayed our halt si tardamos en parar. much longer, I'd have lost my senses.

CIUTTI: Pues de estas cosas veréis, But you'll see things of this sort si en esta casa os quedáis, if you stay in this house lo menos seis por semana. at least six times a week.

BRÍGIDA: ¡Jesús! Good God!

CIUTTI: ¿Y esa niña está And is that little girl reposando todavía? still resting?

BRÍGIDA: ¿Y a qué se ha de And why should she wake? despertar?

CIUTTI: Sí, es mejor que abra los Yes, it's better she opens her eyes ojos en los brazos de don Juan. in the arms of Don Juan.

BRÍGIDA: Preciso es que tu amo tenga Your master must have algún diablo familiar. some devil as his familiar.

CIUTTI: Yo creo que sea él mismo I think that he himself is un diablo en carne mortal, a devil in mortal flesh, porque a lo que él, solamente because only Satan would se arrojara Satanás. dare to do what he does.

BRÍGIDA: ¡Oh! ¡El lance ha sido extremado! Ah! The deed was amazing.

CIUTTI: Pero al fin logrado está. But it is finally done.

BRÍGIDA: ¡Salir así de un convento To take her from a convent en medio de una ciudad in the middle of a place como Sevilla! like Seville!

CIUTTI: Es empresa It's an undertaking tan sólo para hombre tal. fit only for such a man. Mas, ¡qué diablos!, si a su lado But, devil take it, it's as if la fortuna siempre va, fortune is always with him, encadenado a sus pies chained at his feet duerme sumiso el azar. while chance sleeps in submission.

BRÍGIDA: Si, decís bien. Yes, you speak well.

CIUTTI: No he visto hombre I have never seen a man de corazón más audaz; with a more audacious heart ni halla riesgo que le espante who never finds a risk he fears ni encuentra dificultad nor finds a single problem que al empeñarse en vencer he'll not attempt to vanquish le haga un punto vacilar. or that makes him halt a moment. A todo osado se arroja, He attempts everything with daring de todo se ve capaz, thinks himself in control of all things ni mira dónde se mete, neither cares where he gets involved ni lo pregunta jamás. nor even questions the reason for it. "Allí hay un lance", le dicen; They tell him "there's an affair" y él dice: "Allá va don Juan". And he says: "Don Juan goes there." ¡Mas ya tarda, vive Dios! But Lord, it's getting late.

BRÍGIDA: Las doce en la catedral A while ago it struck han dado ha tiempo. twelve in the cathedral.

CIUTTI: Y de vuelta And he was supposed debía a las doce estar. to be back at twelve.

BRÍGIDA: Pero ¿por qué no se vino But why didn't he come con nosotros? with us?

CIUTTI: Tiene allá, He still has a few things there en la ciudad, todavía in the city cuatro cosas que arreglar. to arrange.

BRÍGIDA: ¿Para el viaje? For the trip?

CIUTTI: Por supuesto; Of course; aunque muy fácil será though it would be all too easy que esta noche a los infernos for them to have him travel le hagan a él mismo viajar. straight to Hell tonight.

BRÍGIDA: ¡Jesús, qué ideas! Heavens, what ideas!

CIUTTI: Pues digo, Well I say son obras de caridad these are works of charity en las que nos empleamos on which we are engaged para mejor esperar. while awaiting something better. Aunque seguros estamos Even so we'll be safe como vuelva por acá. provided he returns here.

BRÍGIDA: ¿De veras, Ciutti? Truly Ciutti?

CIUTTI: Venid Come a este balcón y mirad. to this balcony and look. ¿Qué veis? What do you see?

BRÍGIDA: Veo un bergantín I see a boat que anclado en el río está. anchored in the river.

CIUTTI: Pues su patrón sólo aguarda Well its owner only waits for las órdenes de don Juan, the orders of Don Juan. y salvos en todo caso and in any case it will take us a Italia nos llevará. safely to Italy.

BRÍGIDA: ¿Cierto? Are you sure?

CIUTTI: Y nada receléis And fear nothing por nuestra seguridad; for our safety; que es el barco más velero since it's the swiftest ship que boga sobre la mar. that sails on the sea.

BRÍGIDA: ¡Chist! Ya siento a doña Shh! I hear Doña Inés. Inés.

CIUTTI: Pues yo me voy, que don Juan Then I'm leaving, since Don Juan encargó que sola vos ordered that only you debíais con ella hablar. were to speak with her.

BRÍGIDA: Y encargó bien, que yo And he ordered well, since I entiendo de esto. know about these things.

CIUTTI: Adiós, pues. Good bye then.

BRÍGIDA: Vete en paz. Go in peace.

ESCENA II SCENE II

(Doña Inés, Brígida) (Doña Inés, Brígida)

DOÑA INÉS: Dios mío, ¡cuánto he Good Lord, how I have dreamed! soñado! Loca estoy: ¿qué hora será? I must be mad. What time can it be? Pero ¿qué es esto?, ¡ay de mí! But what is this? Ay de mi! No recuerdo que jamás I don't recall that I have ever haya visto este aposento. seen this room. ¿Quién me trajo aquí? Who brought me here?

BRÍGIDA: Don Juan. Don Juan.

DOÑA INÉS: Siempre don Juan. Mas conmigo Always Don Juan. But you aquí tú también estás, are here with me too, Brígida? Brigida.

BRÍGIDA: Sí, doña Inés. Yes, Doña Inés.

DOÑA INÉS: Pero dime, en caridad, But tell me for pity's sake, ¿dónde estamos? ¿Este cuarto where are we? This room, es del convento? does it belong to the convent?

BRÍGIDA: No tal: Not at all: aquello era un cuchitril that was a hovel en donde no había más in which there was nothing but que miseria. misery.

DOÑA INÉS: Pero en fin But then, ¿en dónde estamos? where are we?

BRÍGIDA: Mirad, Look, mirad por este balcón, look from this balcony, y alcanzaréis lo que va and you will see how far desde un convento de monjas a convent of nuns is from a una quinta de don Juan. the estate of Don Juan.

DOÑA INÉS: ¿Es de don Juan esta This estate belongs to Don Juan? quinta?

BRÍGIDA: Y creo que vuestra ya. And I think it is yours now.

DOÑA INÉS: Pero no comprendo, I don't understand Brigida Brigida, lo que me hablas. what are you talking about?

BRÍGIDA: Escuchad. Listen. Estabais en el convento You were reading with delight leyendo con mucho afán in the convent, in your hand una carta de don Juan, a letter from don Juan, cuando estalló en un momento when suddenly in the night un incendio formidable. a terrible fire broke out there.

DOÑA INÉS: ¡Jesús! Merciful heavens!

BRÍGIDA: Espantoso, inmenso; Terrifying, immense: el humo era ya tan denso the smoke itself was so dense que el aire se hizo palpable. you could almost touch the air.

DOÑA INÉS: Pues no recuerdo... But I don't remember.

BRÍGIDA: Las dos Well we two con la carta entretenidas, were so engrossed with our reading olvidamos nuestras vidas, oblivious, forgetful, of everything, yo oyendo y leyendo vos. you speaking, I listening to you. Y estaba, en verdad, tan tierna, And it was so tender I know, que entrambas a su lectura that we both ascribed achacamos la tortura the torment we felt inside que sentíamos interna. to reading it so. Apenas ya respirar We could scarcely find breath podíamos, y las llamas and the flames, as I said, prendían ya en nuestras camas: had already consumed our beds: nos íbamos a asfixiar we were facing certain death cuando don Juan, que os adora when Don Juan, who you'll find que rondaba el convento, adores you, circling the wall, al ver crecer con el viento seeing the flames so tall la llama devastadora, increasing with the wind con inaudito valor, with unheard of courage, viendo que ibais a abrasaros, seeing you were going to die se metió para salvaros undertook to save you, by por donde pudo mejor. the best way he could manage. Vos al verle así asaltar You, upon seeing him try la celda tan de improviso, your cell door suddenly os desmayasteis..., preciso; fainted. Oh, of necessity: la cosa era de esperar. it was to be expected. Why, Y él, cuando os vio caer así, he, when he saw you fall en sus brazos os tomó took you in his arms y echó a huir; yo le seguí, and fled. I followed his call, y del fuego nos sacó. and he got us away from harm. ¿Dónde vamos a esta hora? Where to go at that hour of night? Vos seguíais desmayada, You still in a faint, yo estaba ya casi ahogada. I my throat in such constraint. Dijo, pues: "Hasta la aurora He said then, "Till morning light en mi casa las tendré". I'll protect them here at my house." Y henos, doña Inés, aquí. And that's why we're here Inés.

DOÑA INÉS: ¿Conque ésta es su casa? So this is his house?

BRÍGIDA: Sí. Yes.

DOÑA INÉS: Pues nada recuerdo, a fe. I remember nothing. His house! Pero... ¡en su casa...! ¡Oh! Al Oh! Quickly. Oh! punto salgamos de ella..., yo tengo Lets leave here...I can go la de mi padre. to my father's house.

BRÍGIDA: Convengo Of course, con vos; pero es el asunto... but the fact is, you know.....

DOÑA INÉS: ¿Qué? What?

BRÍGIDA: Que no podemos ir. We can't go there.

DOÑA INÉS: Oir tal me maravilla. I am amazed to hear it. We will.

BRÍGIDA: Nos aparta de Sevilla... But we're separated from Seville....

DOÑA INÉS: ¿Quién? By what?

BRÍGIDA: Vedlo, el Guadalquivir. See. The Guadalquivir.

DOÑA INÉS: ¿No estamos en la ciudad? Then we're not in the city?

BRÍGIDA: A una legua nos hallamos We find ourselves a mile de sus murallas. from its walls.

DOÑA INÉS: ¡Oh! ¡Estamos Oh! Then I'll perdidas! be lost!

BRÍGIDA: ¿No sé en verdad I don't see truly por qué? why?

DOÑA INÉS: Me estás confundiendo, You're confusing me, Brígida..., y no sé qué redes Brigida, and I don't know what nets son las que entre estas paredes these are I fear you stretch temo que me estás tendiendo. around the walls and me. Nunca el claustro abandoné I don't know the world, indeed ni sé del mundo exterior I have never left the cloister, los usos; mas tengo honor, but I'm noble, Brigida: I have honour, noble soy, Brígida, y sé and I know, by every creed, que la casa de don Juan that Don Juan's house for me no es buen sitio para mí: is no good place to be: me lo está diciendo aquí I don't know what I foresee no sé qué escondido afán. warning me of this so clearly. Ven, huyamos. Come, lets leave.

BRÍGIDA: Doña Inés, Doña Inés, la existencia os ha salvado. he preserved your very existence!

DOÑA INÉS: Sí, pero me ha envenenado Yes, but his poison insists on el corazón. piercing my heart.

BRÍGIDA: ¿Le amáis, pues? You love him to excess?

DOÑA INÉS: No sé... Mas, por I don't know, but all the same compasión, huyamos pronto de ese hombre, let us flee quickly from here, tras de cuyo solo nombre in my very heart I fear se me escapa el corazón. even the sound of his name. ¡Ah! Tú me diste un papel You gave me a letter de mano de ese hombre escrito, written by that man himself, y algún encanto maldito and some wicked spell me diste encerrado en él. caught up in it's paper. Una sola vez le vi I could only see por entre unas celosías, him once through a window, que estaba, me decías, for you told me he was also en aquel sitio por mí. in that place because of me. Tú, Brígida, a todas horas You Brigida, in every place, me venías de él a hablar came to talk to me about him haciéndome recordar making me recall him sus gracias fascinadoras. his fascinating grace. Tú me dijiste que estaba You told me he was the same para mí destinado one, destined only for me por mi padre..., y me has jurado by my father, and swore to me en su nombre que me amaba. that he loved me, using his name. ¿Que le amo, dices?... Pues bien, Do I love him you ask? Well, si esto es amar, sí, le amo; yes I love him, if this is love: pero yo sé que me infamo but by that passion I prove con esa pasión también. that I also debase myself. Y si el débil corazón And if my weak heart should stray se me va tras de don Juan, following after Don Juan tirándome de él están my honour and obligation mi honor y mi obligación. pull me the other way. Vamos, pues; vamos de aquí So lets go, lets flee primero que ese hombre venga; before he returns again: pues fuerza acaso no tenga for perhaps I'll not have the strength si le veo junto a mí. if I see him near to me. Vamos, Brígida. Lets go Brigida.

BRÍGIDA: Esperad. Wait. ¿No oís? Don't you hear?

DOÑA INÉS: ¿Qué? What.

BRÍGIDA: Ruido de remos. The sound of men rowing.

DOÑA INÉS: Sí, dices bien; You're right. We're going volveremos en un bote a la ciudad. back by boat to the city.

BRÍGIDA: Mirad, mirad, doña Inés. Look, look Doña Inés.

DOÑA INÉS: Acaba..., por Dios, Stop that. Dear God, lets go. partamos.

BRÍGIDA: Ya imposible que salgamos. Its impossible for us now.

DOÑA INÉS: ¿Por qué razón? For what reason?

BRÍGIDA: Porque él es Because he is quien en ese barquichuelo the one proceeding up-river se adelanta por el río. in that little boat of course.

DOÑA INÉS: ¡Ay! ¡Dadme fuerzas, Dios mío! Ah! Give me strength dear Lord.

BRÍGIDA: Ya llegó, ya está en el He's here. He's leaving the water. suelo. Sus gentes nos volverán I know that he must plan a casa: mas antes de irnos for his people to return us es preciso despedirnos but before we go we must a lo menos de don Juan. say our farewells to Don Juan.

DOÑA INÉS: Sea, y vamos al instante: All right, but then lets go, we two. No quiero volverle a ver. I don't want to see him again.

BRÍGIDA: (Los ojos te hará volver Aside: (He will make your eyes strain el encontrarle delante.) towards him when he's before you.) Vamos. Come.

DOÑA INÉS: Vamos. Lets go.

CIUTTI: (Dentro.) Aquí están. Here they are.

DON JUAN: (Idem) Alumbra. Bring a light.

BRÍGIDA: ¡Nos busca! He's looking for us!

DOÑA INÉS: Él es. He's here.

ESCENA III SCENE III

(Dichas, Don Juan) (As before, Don Juan)

DON JUAN: ¿Adónde vais, doña Inés? Where are you going, Doña Inés.

DOÑA INÉS: Dejadme salir, don Juan. Let me leave, Don Juan.

DON JUAN: ¿Que os deje salir? Let you leave?

BRÍGIDA: Señor, Señor, sabiendo ya el accidente now he knows about the fire del fuego, estará impaciente he can have only one desire, por su hija el Comendador. for his daughter, the Comendador.

DON JUAN: ¡El fuego! ¡Ah! No os dé cuidado The fire! Ah! Now I see: por Don Gonzalo, que ya about Don Gonzalo, don't worry: dormir tranquilo le hará the message I've sent already el mensaje que le he enviado. has him sleeping peacefully.

DOÑA INÉS: ¿Le habéis dicho...? You have told him?

DON JUAN: Que os hallabais You are safe with me, bajo mi amparo segura, in my protection, where y el aura del campo pura the pure earth's gentle air libre por fin respirabais. is yours to breathe, you see. (Vase Brígida.) (Brigida exits.) ¡Cálmate, pues, vida mía! Be calm then, my dear care! Reposa aquí, y un momento Rest here and, for a moment, olvida de tu convento forget about the convent la triste cárcel sombría. the gloomy shadows there. ¡Ah! ¿No es cierto, ángel de amor, Oh, my angel of love, do you see que en esta apartada orilla that on this secluded shore más pura la luna brilla the moon shines clear and pure y se respira mejor? and one breathes more easily? Esta aura que vaga llena The gentle air from the fields de los sencillos olores filled with its sweet scents de las campesinas flores of the wildflowers' incense que brota esa orilla amena; that this sweet shore yields: esa agua limpia y serena that limpid wave so calm que atraviesa sin temor that the fishermen here la barca del pescador cross without a fear que espera cantando al día, as, singing, they wait for dawn, ¿no es cierto, paloma mía, isn't it true, my dove, que están respirando amor? that they are breathing love? Esa armonía que el viento That harmony that the breeze recoge entre esos millares creates among countless leaves de floridos olivares, of flourishing olive trees, que agita con manso aliento; that it stirs so tenderly, ese dulcísimo acento that sweetest mystery con que trina el ruiseñor from the tree-top, close to dawn, de sus copas morador that calls the approaching morn, llamando al cercano día, the nightingale's trill, sweet spell, ¿no es verdad, gacela mía, isn't it true, my gazelle que están respirando amor? that they are breathing love? Y estas palabras que están And these words that can filtrando insensiblemente be heard insensibly, tu corazón ya pendiente in your heart, unfailingly, de los labios de don Juan, from the lips of Don Juan y cuyas ideas van and whose thoughts are then inflamando en su interior lighting, in you, desire un fuego germinador their incipient fire, no encendido todavía, though still not shining far, ¿no es verdad, estrella mía, is it not true, my star que están

respirando amor? that they are breathing love? Y esas dos líquidas perlas And those two pearls so chaste que se desprenden tranquilas that in silence slide de tus radiantes pupilas from your radiant eyes convidándome a beberlas, inviting me to taste evaporarse, a no verlas, in order not to see de sí mismas al calor; them vanish with their heat: y ese encendido color and the blush so sweet que en tu semblante no había, not in your cheek before, ¿no es verdad, hermosa mía, is it not true, my beauty pure, que están respirando amor? that they are breathing love? ¡Oh! Sí, bellísima Inés Oh, my loveliest Inés espejo y luz de mis ojos; mirror and light of vision, escucharme sin enojos, listen without derision, como lo haces, amor es: as you do so, it's love: yes, mira aquí a tus plantas, pues, see here at your feet, I confess todo el altivo rigor all the haughty pride de este corazón traidor of this traitorous heart inside que rendirse no creía, that never thought to yield, adorando, vida mía, adores you, my life, ah, I feel la esclavitud de tu amor. the slavery of your love.

DOÑA INÉS: Callad, por Dios, ¡oh, don Juan!, Oh God! Silence! How can I stand que no podré resistir to resist, with my sighing, mucho tiempo sin morir any longer, without dying, tan nunca sentido afán. ah, such longing, Don Juan? ¡Ah! Callad por compasión, Ah, to silence, for pity's sake, turn, que oyéndoos me parece for hearing you seems to me que mi cerebro enloquece to bring my mind infirmity, se arde mi corazón. and cause my heart to burn. ¡Ah! Me habéis dado a beber Ah! You have doubtless given me un filtro infernal, sin duda, an infernal potion, oh some que a rendiros os ayuda charm that helps you overcome la virtud de la mujer. a woman's purity. (Tal vez poseéis, don Juan, Perhaps, Don Juan, you possess an amulet un misterioso amuleto a thing of mystery que a vos me atrae en secreto that draws me secretly como irresistible imán. like an irresistible magnet. Tal vez Satán puso en vos: Perhaps Satan set in your eyes su vista fascinadora, his fascinating gaze su palabra seductora, his seductive maze, y el amor que negó a Dios. of words, and the Love he denies ¡Y qué he de hacer ¡ay de mí! to God. Ah, what am I to do, sino caer en vuestros brazos, but fall into those two si el corazón en pedazos arms, if you continue to me vais robando de aquí? shatter my heart in two? No, don Juan, en poder mío Don Juan, it's no longer in me resistirte no está ya: to own the power to resist you: no, yo voy a ti como va I turn to you as the river flows sorbido al mar ese río. that runs down to the sea. Tu presencia me enajena, Your presence maddens me, tus palabras me alucinan, your words hypnotize me, y tus ojos me fascinan, and your eyes fascinate me, y tu aliento me envenena. and your breath envenoms me. ¡Don Juan! ¡Don Juan!, yo lo imploro Don Juan! Don Juan, I implore you de tu hidalga compasión: in your noble heart, of pity, o arráncame el corazón, either tear my heart from me, o ámame, porque te adoro. or love me, because I adore you.

DON JUAN: ¿Alma mía! Esa palabra My soul! Those words indeed cambia de modo mi ser, change my whole state of being. que alcanzo que puede hacer and I know perhaps I am seeing hasta que el Edén se me abra. Paradise open to me. No es, doña Inés, Satanás Doña Inés, it is not Satan, in sin, quien pone este amor en mí; who creates this love in me: es Dios, que quiere por ti it is God, who wants, perhaps ganarme para Él quizás. through you, to win me to Him. No, el amor que hoy se atesora No, the love that is precious en mi corazón mortal in my heart, that is mortal, no es un amor terrenal is not that love, terrestrial, como el que sentí hasta ahora; that up to now I've treasured; no es esa chispa fugaz nor is it a fleeting spark of need que cualquier ráfaga apaga; that a breath of wind defeats: es incendio que se traga it is a roaring fire that eats cuanto ve, inmenso, voraz. all it sees, in its vast greed. Desecha, pues, tu inquietud, Calm then your fears, oh you bellísima doña Inés, my most beautiful Inés, porque me siento a tus pies for at your feet I feel that, yes, capaz aún de la virtud. even I am filled with virtue. Sí, iré mi orgullo a postrar Ah, I will swallow my pride ante el buen Comendador, before the good Comendador, y o habrá de darme tu amor, and he'll either give me you to adore o me tendrá que matar. or death will be my bride.

DOÑA INÉS: ¡Don Juan de mi corazón! My dearest Don Juan!

DON JUAN: ¡Silencio! ¿Habéis Silence. Did you hear? escuchado...?

DOÑA INÉS: ¿Qué? What?

DON JUAN: (Mirando por el balcón.) (Looking over the balcony) Sí, una barca ha atracado Yes, a boat has landed debajo de ese balcón. below the balcony. Un hombre embozado de ella A man wrapped in a cloak is salta... Brígida, al momento leaping out. Brigida, go quickly (Entra Brígida) (Brigida enters) pasad a ese otro aposento, into the other room, perdonad, Inés bella, pardon me, beautiful Inés si solo me importa estar. it's important I am alone.

DOÑA INÉS: ¿Tardarás? Will you be long?

DON JUAN: Poco ha de ser. Just a little while.

DOÑA INÉS: A mi padre hemos de ver. We have to see my father.

DON JUAN: Sí, en cuanto empiece a Yes, when it begins to grow light. clarear. Adiós. Farewell.

ESCENA IV SCENE IV

(Don Juan, Ciutti) (Don Juan, Ciutti)

CIUTTI: Señor. Señor.

DON JUAN: ¿Qué sucede, What's happening Ciutti? Ciutti?

CIUTTI: Ahí está un embozado There's a man cloaked from view en veros muy empeñado. anxious to speak to you.

DON JUAN: ¿Quién es? Who is he?

CIUTTI: Dice que no puede He says he cannot be descubrirse más que a vos, any more open with you, y que es cosa de tal priesa, and that it is truly urgent, que en ella se os interesa it's about an issue sent la vida a entrambos a dos. to trouble both of you.

DON JUAN: ¿Y en él no has reconocido And you could not find marca ni señal alguna any mark or sign que os oriente? to give you a clue?

CIUTTI: Ninguna; No. None: mas a veros decidido but he's of a mind viene. to see you.

DON JUAN: ¿Trae gente? Are his people with him?

CIUTTI: No más Only the rowers que los remeros del bote. in the boat below.

DON JUAN: Que entre. Have him come in.

ESCENA V SCENE V

(Don Juan; luego Ciutti y Don Luis, (Don Juan, then Ciutti. Don Luis, embozado) cloaked to the eyes.)

DON JUAN: ¡Jugamos a escote We are playing la vida...! Mas ¿si es quizás for our lives! But if indeed un traidor que hasta mi quinta it's treachery that's planned me viene siguiendo el paso? trailing me to my estate? Hálleme, pues, por si acaso Let him find me then, just in case, con las armas en la cinta. with my weapons to hand. (Se ciñe la espada y suspende al (He puts on his sword and suspends cinto un par de pistolas que habrá from his belt a pair of pistols colocado sobre la mesa a su salida that he had placed on the table en la escena tercera. Al momento upon exiting in the third scene. sale Ciutti conduciendo a don Luis, Immediately Ciutti comes out que, embozado hasta los ojos, leading Don Luis who, muffled to espera que se queden solos. Don the eyes, waits until they are Juan hace una seña a Ciutti para alone. Don Juan makes a sign to que se retire. Lo hace.) Ciutti that he withdraw. He does so.)

ESCENA VI SCENE VI

(Don Juan, Don Luis) (Don Juan, Don Luis)

DON JUAN: aparte(Buen talante.) Aside (What a nice appearance) Bien venido, caballero Welcome, sir. Don Luis: Bien hallado, señor mío. The same, sir.

DON JUAN: Sin cuidado hablad. Speak freely.

DON LUIS: Jamás lo he tenido. I always do.

DON JUAN: Decid, pues: ¿a qué Say then. Why have you come venís a esta hora y con tal afán? at this hour so eagerly?

DON LUIS: Vengo a mataros, don Juan. I've come to kill you Don Juan.

DON JUAN: Según eso, sois don Luis. Ah then, you are Don Luis.

DON LUIS: No os engañó el corazón, Your heart does not lie, y el tiempo no malgastemos and lets not waste time. Don Juan; los dos no cabemos There's not room, Don Juan. ya en la tierra. on this earth for you and I.

DON JUAN: En conclusión, In conclusion, señor Mejía, ¿es decir Mejia, that's to say que porque os gané la apuesta that because I won the game queréis que acabe la fiesta you want to fight all the same con salirnos a batir? to end the day?

DON LUIS: Estáis puesto en la razón: You are right: wholeheartedly, la vida apostado habemos, we have bet our lives in play y es fuerza que nos paguemos. and it is necessary we pay.

DON JUAN: Soy de la misma opinión. Well yes I agree. Mas ved que os debo advertir But I must point out to you que sois vos quien la ha perdido. that you are the one who lost.

DON LUIS: Pues por eso os la he And that's why I'm here of course: traído; mas no creo que morir but I don't believe it true deba nunca un caballero, that a gentleman who in life que lleva en el cinto espada, carries a sword at his side como una res destinada should ever be destined to die por su dueño al matadero. like an animal under the knife.

DON JUAN: Ni yo creo que resquicio Nor do I believe you have ever habréis jamás encontrado found the slightest cause por donde me hayáis tomado that could make you take me for por un cortador de oficio. a professional butcher.

DON LUIS: De ningún modo; y ya veis By no means: and now you see que, pues os vengo a buscar, that since I've come to find you mucho en vos debo fiar. I must place great faith in you.

DON JUAN: No más de lo que podéis. No more than you should, indeed. Y por mostraros mejor And to show even better mi generosa hidalguía, my generous nobility decid si aún puedo, Mejía, Mejia, please tell me satisfacer vuestro honor. how I can satisfy your honour. Leal la apuesta os gané; I won the wager fairly, mas si tanto os ha escocido, but if it has pained you so, mirad si halláis conocido if there's some answer you know, remedio, y le aplicaré. I'll apply the remedy.

DON LUIS: No hay más que el que os There is nothing but what I say he propuesto, Don Juan. don Juan. Me habéis maniatado You have manacled me y habéis la casa asaltado, and you have assaulted me usurpándome mi puesto; usurping my true place pues el mío tomasteis for you have stolen my name para triunfar de doña Ana, to triumph over Doña Ana, no sois vos, don Juan, quien gana, you're not the winner Don Juan porque por otro jugasteis. since you acted as me in the game.

DON JUAN: Ardides del juego son. Those are the tricks of the trade.

DON LUIS: Pues no os los quiero Well, I don't want to ignore them pasar, y por ellos a jugar and even on account of them, vamos ahora el corazón. let's still see our lives played.

DON JUAN: ¿Le arriesgáis, pues, en revancha You'll risk it then, in play de doña Ana de Pantoja? for Doña Ana again?

DON LUIS: Sí, y lo que tardo me Yes. To cleanse such a stain enoja en lavar tan fea mancha. and it angers me we delay Don Juan, yo la amaba, sí; Don Juan, I loved her, yes. mas, con lo que habéis osado, but after what you have dared imposible la hais dejado neither of us can have her para vos y para mí. now she's abandoned, bereft.

DON JUAN: ¿Por qué la apostasteis, Why did you wager her then? pues?

DON LUIS: Porque no pude pensar Because Icould never have come que lo pudierais lograr. to believe you might have won. Y... vamos, por San Andrés, And, by Saint Andrew, lets go then a reñir, que me impaciento. and duel, for I grow impatient

DON JUAN: Bajemos a la ribera. Lets go down to the river.

DON LUIS: Aquí mismo. No here.

DON JUAN: Necio fuera: They'd capture the winner ¿no veis que en este aposento in this room, don't you see, be patient, prendieran al vencedor? that's a foolish idea. Vos traéis una barquilla. Your boat's here still?

DON LUIS: Sí. Yes.

DON JUAN: Pues que lleve a Sevilla The winner takes it al que quede. to Seville.

DON LUIS: Eso es mejor; That is better: salgamos, pues. Lets go then.

DON JUAN: Esperad. Wait.

DON LUIS: ¿Qué sucede? What is it?

DON JUAN: Ruido siento. I hear a sound.

DON LUIS: Pues no perdamos momento. Well let's not stay around.

ESCENA VII SCENE VII

(Don Juan, Don Luis, Ciutti) (Don Juan, Don Luis, Ciutti)

CIUTTI: Señor, la vida salvad. Sir, save your life.

DON JUAN: ¿Qué hay, pues? What is it?

CIUTTI: El Comendador, The Comendador que llega con gente armada. who's come with armed men.

DON JUAN: Déjale franca la entrada, Let him enter freely, then pero a él solo. but him alone.

CIUTTI: Mas, señor... But señor...

DON JUAN: Obedéceme. (Vase Ciutti.) Obey me. (Ciutti goes out.)

ESCENA VIII SCENE VIII

(Don Juan, Don Luis) (Don Juan, Don Luis)

DON JUAN: Don Luis, Don Luis, pues de mí os habéis fiado since you've given me your trust, cuanto dejáis demostrado as you have shown me, just cuando a mi casa venís, by coming here to see me, no dudaré en suplicaros, I do not hesitate to beg you pues mi valor conocéis since you know my courage, in faith, que un instante me aguardéis. to grant me a moment's grace.

DON LUIS: Yo nunca puse reparos I never found fault with you en valor que es tan notorio, in your bravery which is so mas no me fío de vos. well-known, but I've never trusted you.

DON JUAN: Ved que las partes son dos Notice that there were two de la apuesta con Tenorio, parts to the bet with Tenorio y que ganadas están. and they are both won.

DON LUIS: ¿Lograsteis a un At the same time? tiempo...?

DON JUAN: Sí: Yes, I fear: la del convento está aquí; the one from the convent is here: y pues viene de don Juan whoever wishes may come a reclamarla quien puede, to claim her from Don Juan, cuando me podéis matar and since you may cause my death no debo asunto dejar I must not leave behind a breath tras mí que pendiente quede. of business still to be done.

DON LUIS: Pero mirad que meter You see that whoever comes might quien puede el lance impedir be able to prevent the affair entre los dos puede ser... between the two of us here....

DON JUAN: ¿Qué? What?

DON LUIS: Excusaros de reñir. And excuse you from a fight.

DON JUAN: ¡Miserable...! De don Juan Wretch! Only you can doubt podéis dudar sólo vos; Don Juan's intention mas aquí entrad, ¡vive Dios!, but, in here, by Heaven, y no tengáis tanto afán and don't be so ready to shout por vengaros, que este asunto for vengeance: once this thing arreglado con ese hombre, is settled with that man, don Luis, yo os juro a mi nombre Don Luis, I swear we can que nos batimos al punto. begin our duelling.

DON LUIS: Pero... But...

DON JUAN: ¡Con una legión The Devils' Legion! de diablos! Entrad aquí, Go in here, and see que harta nobleza es en mí there's sufficient nobility in me aun daros satisfacción. to give you satisfaction. Desde ahí ved y escuchad; Watch and listen from there: franca tenéis esa puerta. you may leave that door open. Si veis mi conducta incierta, If you see my conduct's uncertain como os acomode obrad. then act as you dare.

DON LUIS: Me avengo, si muy reacio I'll avenge myself if you no andáis. continue to be so stubborn.

DON JUAN: Calculadlo vos Judge as you will a placer: mas, ¡vive Dios!, but by heaven que para todo hay espacio. there is time enough for you. (Entra don Luís en el cuarto que (Don Luis goes into the room Don don Juan le señala.) Juan points out to him) Ya suben. (Don Juan escucha.) They are coming up. (He listens)

DON GONZALO: (Dentro.) ¿Dónde está? (Inside) Where is he?

DON JUAN: Él es. It is I.

ESCENA IX SCENE IX

(Don Juan, Don Gonzalo) (Don Juan, Don Gonzalo)

DON GONZALO: ¿Adónde está ese traidor? Where is that traitor?

DON JUAN: Aquí está Comendador. Here he is Comendador.

DON GONZALO: ¿De rodillas? On your knees?

DON JUAN: Y a tus pies. And at your feet.

DON GONZALO: Vil eres hasta en tus crímenes. You are vile even in your crimes.

DON JUAN: Anciano, la lengua ten, Old man, hold your tongue, y escúchame un solo instante. and just listen for a moment.

DON GONZALO: ¿Qué puede en tu lengua haber What could come from your mouth que borre lo que tu mano that could cancel what your hand escribió en este papel? wrote on this paper? ¡Ir a sorprender, ¡infame!, Infamous man, to surprise la cándida sencillez the pure simplicity de quien no pudo el veneno of someone who could not guard de esas letras precaver! against the poison of these words. Derramar en su alma virgen To spill into her virgin soul traidoramente la hiel treacherously the bitterness en que rebosa la tuya, with which yours overflows, seca de virtud y fe! empty of virtue and faith! ¡Proponerse así enlodar To propose thus to soil de mis timbres la alta prez, the high glory of my family emblem como si fuera un harapo as if it were a rag que desecha un mercader! that a merchant casts aside. ¿Ese es el valor, Tenorio, That is the courage, Tenorio de que blasonas? ¿Esa es of which you boast? That is la proverbial osadía the proverbial daring que te da al vulgo a temer? that you cause men to fear? ¿Con viejos y con doncellas With old men and young girls la muestras...? Y ¿para qué? you show it? And why? ¡Vive Dios! Para venir Saints above! To come sus plantas así a lamer, and lick my boots, mostrándote a un tiempo ajeno showing yourself at the same time de valor y de honradez. without valour or honour.

DON JUAN: ¡Comendador! Comendador!

DON GONZALO: Miserable, Miserable man tú has robado a mi hija Inés you have stolen my daughter Inés de su convento, y yo vengo from her convent, and I'm here por tu vida o por mi bien. for your life, or for my good.

DON JUAN: Jamás delante de un hombre Before no man mi alta cerviz incliné, have I ever bent my neck ni he suplicado jamás nor have I ever begged ni a mi padre ni a mi rey. from my father or my king. Y pues conservo a tus plantas And while I stay at your feet la postura en que me ves, in the attitude you see me here considera, Don Gonzalo, consider Don Gonzalo que razón debo tener. that I may have a reason.

DON GONZALO: Lo que tienes es pavor What you have is fear de mi justicia. of my justice.

DON JUAN: ¡Pardiez! By God! Oyeme, Comendador, Listen to me Comendador. o tenerme no sabré or I won't be able to contain myself y seré quien siempre he sido, and I will be what I have always been no queriéndolo ahora ser. not wanting to be it now.

DON GONZALO: ¡Vive Dios! Good God!

DON JUAN: Comendador, Comendador yo idolatro a doña Inés, I idolize Doña Inés, persuadido de que el cielo persuaded that heaven me la quiso conceder intended to grant her to me, para enderezar mis pasos to lead my steps por el sendero del bien. along the true path. No amé la hermosura en ella, It is not the beauty in her ni sus gracias adoré; alone I adore, nor her grace: lo que adoro es la virtud, what I adore is the virtue, Don Gonzalo, en doña Inés. Don Gonzalo, in Doña Inés. Lo que justicias ni obispos What neither judges nor bishops no pudieron de mí hacer could do con cárceles y sermones, with prisons and sermons, lo pudo su candidez. she with her purity succeeded. Su amor me torna en otro hombre Her love turns me into another man

regenerando mi ser, regenerates my being y ella puede hacer un ángel and she can make an angel de quien un demonio fue. of a man who was a devil. Escucha, pues, Don Gonzalo, Listen then Don Gonzalo lo que te puede ofrecer to what Don Juan's daring el audaz don Juan Tenorio can offer you de rodillas a tus pies. on his knees and at your feet. Yo seré esclavo de tu hija, I will be your daughter's slave. en tu casa viviré, I will live in your house, tú gobernarás mi hacienda you will govern my property diciéndome: esto ha de ser. telling me, it shall be so. El tiempo que señalares Whenever you request it en reclusión estaré; I will stay in seclusion: cuantas pruebas exigieres whatever proofs you ask de mi audacia o mi altivez, of my daring or my nobility del modo que me ordenares, in any way you command con sumisión te daré: I will obey submissively: y cuando estime tu juicio And when in your judgement que la puedo merecer, you decide I might merit it yo la daré un buen esposo I'll be a good husband to her y ella me dará el Edén. and she'll lead me to Paradise.

DON GONZALO: Basta, don Juan; no sé cómo Enough Don Juan: I don't know how me he podido contener, I've been able to contain myself, oyendo tan torpes pruebas listening to the sordid proof de tu infame avilantez. of your infamous vileness. Don Juan, tú eres un cobarde Don Juan, you are a coward cuando en la ocasión te ves, when you find yourself in danger y no hay bajeza a que no oses and there is no baseness you will not dare como te saque con bien. as long as you escape successfully.

DON JUAN: ¡Don Gonzalo! Don Gonzalo!

DON GONZALO: Y me avergüenzo I am ashamed to see you de mirarte así a mis pies, so, at my feet, lo que apostabas por fuerza what you risked by force suplicando por merced. begging now as a grace.

DON JUAN: Todo así se satisface, Everything will be reconciled Don Gonzalo, de una vez. Don Gonzalo at the same time.

DON GONZALO: ¡Nunca, nunca! ¿Tú su esposo? Never. You her husband? Never! Primero la mataré. I'll kill her first. ¡Ea! Entrégamela al punto Hand her over to me immediately o, sin poderme valer, or, unable to control myself, en esa postura vil I'll strike you dead el pecho te cruzaré. in that vile pose.

DON JUAN: Míralo bien, Don Gonzalo, Consider well, Don Gonzalo que vas a hacerme perder that you, perhaps, will make me lose con ella hasta la esperanza my own salvation, de mi salvación tal vez. together with hope of her.

DON GONZALO: ¿Y qué tengo yo, don Juan, And what have I to do Don Juan, con tu salvación que ver? with your salvation?

DON JUAN: ¡Comendador, que me Comendador, you destroy me! pierdes!

DON GONZALO: Mi hija. My daughter!

DON JUAN: Considera bien Consider then que por cuantos medios pude that as fully as I could te quise satisfacer, I tried to satisfy you. y que con armas al cinto and with arms at my side tus denuestos toleré, I tolerated your insults, proponiéndote la paz proposing peace to you, de rodillas a tus pies. on my knees and at your feet.

ESCENA X SCENE X

(Dichos; Don Luis, soltando una (The same characters: Don Luis, carcajada de burla) bursting out in a jeering shout of laughter)

DON LUIS: Muy bien, don Juan. Well done, Don Juan.

DON JUAN: ¡Vive Dios! God above! Who?

DON GONZALO: ¿Quién es ese hombre? Who is that man?

DON LUIS: Un testigo A witness in the end de su miedo, y un amigo, to his cowardice, and a friend, Comendador, para vos. Comendador, to you.

DON JUAN: ¿Don Luis? Don Luis?

DON LUIS: Ya he visto bastante, I've seen all I need, don Juan, para conocer Don Juan, to recognise cuál uso puedes hacer the way that you realise de tu valor arrogante; your arrogant valour; indeed y quien hiere por detrás the one who strikes in that way y se humilla en la ocasión, from behind, debases himself in danger es tan vil como el ladrón as vile as a thieving stranger que roba y huye. who steals and runs away.

DON JUAN: ¿Esto más? Now this too?

DON LUIS: Y pues la ira soberana And since the sovereign anger de Dios junta, como ves, of God, as you see, joins together al padre de doña Inés that of Doña Inés's father y al vengador de doña Ana, and Doña Ana's avenger, mira el fin que aquí te espera see the end that awaits you here cuando a igual tiempo te alcanza, when you meet at the same moment aquí dentro su venganza vengeance here, inside, y la justicia allá fuera. and justice, outside, there.

DON GONZALO: ¡Oh! Ahora comprendo... ¿Sois vos Ah, now I understand, then you el que...? are?

DON LUIS: Soy don Luis Mejía, Don Luis Mejia, a quien a tiempo os envía whom God in due time sends here por vuestra venganza Dios. to take revenge, for you.

DON JUAN: ¡Basta, pues, de tal Enough of this torturing vice! suplicio! Si con hacienda y honor If with property and truth ni os muestro ni doy valor I can't show you proof a mi franco sacrificio, of my free sacrifice, y la leal solicitud and the loyal and true con que ofrezco cuanto puedo petition which I offer, tomáis, ¡vive Dios!, por miedo that you take, by heaven, for fear, y os mofáis de mi virtud, mocking my virtue, os acepto el que me dais I'll accept what you hand out plazo breve y perentorio a brief, peremptory moment to show para mostrarme el Tenorio Don Juan Tenorio de cuyo valor dudáis. and the courage that you doubt.

DON LUIS: Sea; y cae a nuestros pies, So be it, and fall at our feet. digno al menos de esa fama worthy at least of that fame que por tan bravo te aclama. that has given your courage a name.

DON JUAN: Y venza el infierno, pues. Let Hell's victory be complete, Ulloa, pues mi alma así Ulloa, since my soul again vuelves a hundir en el vicio, you plunge into devilry, cuando Dios me llame a juicio when God judges me tú responderás por mí. you will take the blame. (Le da un pistoletazo.) (He shoots him with his pistol)

DON GONZALO: ¡Asesino! (Cae.) Murderer! (He falls)

DON JUAN: Y tú, insensato, And you, man without grace que me llamas vil ladrón, who call me a vile thief, too, di en prueba de tu razón let this speak to show it's true, que cara a cara te mato. I'll destroy you face to face. (Riñen, y le da una estocada.) (They duel and he gives him a sword thrust)

DON LUIS: ¡Jesús! (Cae.) Jesus! (He falls)

DON JUAN: Tarde tu fe ciega Your blind faith calls out acude al cielo, Mejía, to heaven too late, Mejia: y no fue por culpa mía; all was not my fault, here, pero la justicia llega, but the officials are now about, y a fe que ha de ver quién soy. and by faith they'll see a man.

CIUTTI: (Dentro.) ¿Don Juan? Don Juan? (Inside)

DON JUAN: (Asomando al baldón.) (Approaching the balcony.) ¿Quién es? Who is it?

CIUTTI: (Dentro.) Por aquí; (Inside) Through here, salvaos.

DON JUAN: ¿Hay paso? Is there a way?

CIUTTI: Sí; Yes. arrojaos. Jump clear.

DON JUAN: Allá voy. Here I am. Llamé al cielo y no me oyó, I called to heaven: it did not see, y pues sus puertas me cierra, and since it closes its doors de mis pasos en la tierra to my whole earthly course, responda el cielo, y no yo. let heaven be blamed, not me. (Se arroja por el balcón, y se le (He jumps from the balcony and you oye caer en el agua del río, al can hear him fall in the water of mismo tiempo que el ruido de los the river, and at the same time remos muestra la rapidez del barco the noise of the oars shows the en que parte; se oyen golpes en la rapidity of the boat as it leaves: puerta de la habitación; poco knocks are heard on the door of después entra la justicia, the room, and a little later the soldados, etc.) officials come in, soldiers, etc.)

ESCENA XI SCENE XI

(Alguaciles, soldados, luego Doña (Constables, soldiers, then Doña Inés y Brígida) Ines and Brigida.)

ALGUACIL: El tiro ha sonado aquí. The shot came from here

ALGUACIL: Aún hay humo. There's still smoke.

ALGUACIL: ¿Santo Dios! Holy God. Aquí hay un cadáver. There's a body here.

ALGUACIL: Dos. Two.

ALGUACIL: ¿Y el matador? And the killer?

ALGUACIL: Por allí. Through there. (Abren el cuarto en que está Doña (They open the room in which Doña Inés y Brígida, y las sacan a la Ines and Brigida are and bring escena; doña Inés reconoce el them out on stage. Doña Inés cadáver de su padre.) recognizes the body of her father.)

ALGUACIL: ¡Dos mujeres! Two women!

DOÑA INÉS: ¡Ah, qué horror, Oh what horror, padre mío! Dear father.

ALGUACIL: ¡Es su hija! It's his daughter.

BRÍGIDA: Sí. Yes.

DD: ¡Ay! ¿Dó estás, don Juan, que Ah, where are you Don Juan who aquí me olvidas en tal dolor? abandon me here in such grief.

ALGUACIL: Él le asesinó. He killed him.

DOÑA INÉS: Dios mío Dear Lord. ¿Me guardabas esto más? You sent me this too?

ALGUACIL: Por aquí ese Satanás That Satan jumped down here se arrojó sin duda al río. doubtless into the river.

ALGUACIL: Miradlos..., a bordo están Look, they are on board del bergantín calabrés. the Calabrian vessel.

TODOS: ¡Justicia por doña Inés! Justice for Doña Ines!

DOÑA INÉS: Pero no contra don Juan. But not against Don Juan. (Cayendo de rodillas.) (Falling on her knees)

FIN DEL ACTO CUARTO END OF THE FOURTH ACT

PARTE SEGUNDA PART TWO

ACTO PRIMERO ACT ONE

LA SOMBRA DE DOÑA INÉS THE SHADE OF DOÑA INÉS

(Panteón de la familia Tenorio. (The pantheon of the Tenorio family. El teatro representa un The stage is a magnificent cemetery, magnífico cementerio, hermoseado decorated in the style of a garden. a manera de jardín. En primer In the foreground, conspicuously set término, aislados y de bulto, apart, are the tombs of Don Gonzalo los sepulcros de don Gonzalo de de Ulloa, Doña Inés and don Luis Ulloa, de Doña Inés y de don Mejia, on top of which are stone Luis Mejía, sobre los cuales se statues. Don Gonzalo's tomb is to the ven sus estatuas de piedra. El right with his statue kneeling, that sepulcro de don Gonzalo a la of Don Luis to the left and his derecha, y su estatua de statue is also kneeling; that of Doña rodillas; el de don Luis a la Inés is in the centre and her statue izquierda, y su estatua también is standing. In the midground another de rodillas; el de doña Inés en two tombs in a suitable form, and in el centro, y su estatua de pie. the background and on an elevated En segundo término otros dos plane, the tomb and statue of the sepulcros en la forma que founder, Don Diego Tenorio. The convenga; y en tercer término y perspective of the tombs focuses on en puesto elevado, el sepulcro y this figure. Una pared llena de when the staging requires it. nichos y lápidas cubre el cuadro Cypresses and flowers of all kinds hasta el horizonte. Dos llorones embellish the set which is not to a cada lado de la tumba de doña have anything horrible in it. The Inés dispuestos a servir de la action takes place on a quiet summer manera que a su tiempo exige el night, and is lit by a very bright juego escénico. Cipreses y moon.) flores de todas clases embellecen la decoración, que no debe tener nada de horrible. La acción se supone en una tranquila noche de verano, y alumbrada por una clarísima luna.)

ESCENA PRIMERA SCENE I

(El Escultor, disponiéndose a (The Sculptor, getting ready to marchar) leave.) Pues, señor, es cosa hecha: Well sir, it is done: el alma del buen don Diego the soul of good Don Diego puede, a mi ver, con sosiego can, in my opinion, know reposar muy satisfecha. its rest in complete satisfaction. La obra está rematada The work is unfurled con cuanta suntuosidad with as much sumptuousness su postrera voluntad as his last will required, yes, dejó al mundo encomendada. entrusted to the world. Y ya quisieran, ¡pardiez!, And, by God, every rich man todos los ricos que mueren who dies should want to see que su voluntad cumplieren the living celebrate their memory los vivos, como esta vez. as here I have done. Mas ya de marcharme es hora: But it's time I was away, todo corriente lo dejo, I leave it all in order, I will y de Sevilla me alejo be leaving Seville al despuntar de la aurora. at the break of day. ¡Ah! Mármoles que mis manos Ah! Marble polished pulieron con tanto afán, with such care, by my hands, mañana os contemplarán tomorrow the Sevillians los absortos sevillanos; will gaze at you, astonished: y al mirar de este panteón and seeing the true proportion las gigantes proporciones, of this enormous pantheon, tendrán las generaciones the future generation la nuestra en veneración. will hold ours in veneration. Mas yendo y viniendo días Some things as days come and go, se hundirán unas tras otras, one by one, sink again mientra en pie estaréis vosotras, while yours will remain póstumas memorias mías. a memory of me. Oh! ¡Oh!, frutos de mis desvelos, fruit of my waking eyes, peñas a quien yo animé stones to which I gave life y por quienes arrostré for whom I bore the strife la intemperie de los cielos; of the intemperate skies; el que forma y ser os dio he who gave you form and being va ya a perderos de vista; will now lose you from his sight; ¡velad mi gloria de artista, since you will live longer than I, pues viviréis más que yo! watch over my glory, unseeing. Mas ¿quién llega? But who is approaching?

ESCENA II SCENE II

(El Escultor; Don Juan, que (The sculptor, and Don Juan who entra embozado) enters muffled in his cloak.)

ESCULTOR: Caballero... Sir....

DON JUAN: Dios te guarde. God keep you.

ESCULTOR: Perdonad, Pardon me, mas ya es tarde, y... its already late and...

DON JUAN: Aguardad Stay with me un instante, porque quiero a moment, I'd prefer que me expliquéis... if you would explain...

ESCULTOR: ¿Por acaso Perhaps sois forastero? you are a stranger?

DON JUAN: Años ha I should explain, que falto de España ya, for years now I've been gone from Spain, y me chocó el ver al paso, and it shocked me, as I passed, cuando a esas verjas llegué, as I reached these gates today que encontraba este recinto to find this district strange, enteramente distinto entirely different, changed de cuando yo le dejé. from when I went away.

ESCULTOR: Yo lo creo; como que esto I believe you; and you see era entonces un palacio, it was a palace then, y hoy es panteón el espacio and today there's a pantheon donde aquél estuvo puesto. where the palace used to be.

DON JUAN: ¡El palacio hecho The palace made into a pantheon! panteón!

ESCULTOR: Tal fue de su antiguo dueño Such was its former owner's will la voluntad, y fue empeño and an undertaking that still que dio al mundo admiración. provokes the world's admiration.

DON JUAN: ¡Y, por Dios, que es de admirar! And by heaven, it's worthy!

ESCULTOR: Es una famosa historia It's a famous story a la cual debo mi gloria. to which I owe my glory.

DON JUAN: ¿Me la podréis relatar? Can you tell it me?

ESCULTOR: Sí; aunque muy Yes, but very succinctly, sucintamente, pues me aguardan. as someone's waiting.

DON JUAN: Sea. So be it.

ESCULTOR: Oíd Listen la verdad pura. to the whole truth.

DON JUAN: Decid, Speak, then que me tenéis impaciente. I hear, impatiently.

ESCULTOR: Pues habitó esta ciudad Well, there lived, in this city, y este palacio heredado the heir to the palace, a Don, un varón muy estimado very well esteemed, a man por su noble calidad. of the noblest quality.

DON JUAN: Don Diego Tenorio. Don Diego Tenorio.

ESCULTOR: El mismo. The same. Well, Tuvo un hijo este don Diego this Don Diego had a son peor mil veces que el fuego, a thousand times worse a one, un aborto del abismo. than fire, an abortion from Hell. Un mozo sangriento y cruel A young man bloody and savage que, con tierra y cielo en guerra, at war with earth and heaven: dicen que nada en la tierra they say nothing on earth even fue respetado por él. won his respect, in this age. Quimerista, seductor A wrangler, a seducer y jugador con ventura, and a gambler with fate, no hubo para él segura from him nothing was safe vida, ni hacienda, ni honor. life, property or honour. Así le pinta la historia, So says the story y si tal era, por cierto and if he was such, certainly que obró cuerdamente el muerto the dead man behaved wisely para ganarse la gloria. himself, to ensure his glory.

DON JUAN: Pues ¿cómo obró ? Well, how did he behave?

ESCULTOR: Dejó entera He left his entire property su hacienda al que la empleara to the one who would fashion en un panteón que asombrara a wonderful pantheon a la gente venidera. to astound posterity. Mas con condición que dijo He made one condition, que se enterraran en él that they should bury here los que a la mano crüel those who died, in fear, sucumbieron de su hijo. at the cruel hand of his son. Y mirad en derredor And look around at los sepulcros de los más the tombs of most de ellos. of them.

DON JUAN: ¿Y vos sois quizás And you perhaps el conserje? are the keeper?

ESCULTOR: El Escultor The sculptor charged de estas obras encargado. with these works.

DON JUAN: ¡Ah! ¿Y las habéis Ah! And you have finished? concluido?

ESCULTOR: Ha un mes; mas me he detenido A month ago, but I waited hasta ver ese enverjado to see this grill erected colocado en su lugar, set on its base pues he querido impedir because I wanted to prevent que pueda el vulgo venir the entry of those with intent este sitio a profanar. to profane the place.

DON JUAN: (Mirando.) (Looking around) ¡Bien empleó sus riquezas The dead man used his money el difunto! well!

ESCULTOR: ¡Ya lo creo! Yes, I should say so! Miradle allí. See over there.

DON JUAN: Ya le veo. I see him though.

ESCULTOR: ¿Le conocisteis? Did you know him?

DON JUAN: Sí. Yes.

ESCULTOR: Piezas The statuary son todas muy parecidas shows a very good likeness y a conciencia trabajadas. made with conscientiousness.

DON JUAN: ¡Cierto que son They are fashioned excellently! extremadas!

ESCULTOR: ¿Os han sido conocidas Did you know them indeed las personas? these people?

DON JUAN: Todas ellas. All of them by sight.

ESCULTOR: ¿Y os parecen bien? And they seem well done?

DON JUAN: Sin duda, Without doubt según lo que a ver me ayuda according to what I make out el fulgor de las estrellas. by the glow of the starlight.

ESCULTOR: ¡Oh! Se ven como de día Oh! They can be seen as well here con esta luna tan clara. as by day, with this bright moon. Esta es mármol de Carrara. This is Carrara stone. (Señalando a la de don Luis.) (Pointing to the statue of Don Luis.)

DON JUAN: ¡Buen busto es el de Mejía! That's a good bust of Mejia! (Contempla las estatuas unas (He contemplates the statues one after tras otras.) another.) ¡Hola! Aquí el Comendador Hello! Here is the Comendador se representa muy bien. very well represented.

ESCULTOR: Yo quise poner también I also intended la estatua del matador a statue of their killer entre sus víctimas, pero among the victims, but fate no pude a manos haber did not find me a way su retrato... Un Lucifer to his portrait...they say dicen que era el caballero he was the devil incarnate don Juan Tenorio. that Don Juan Tenorio

DON JUAN: ¡Muy malo! Very evil. That's so. Mas, como pudiera hablar, And if its tongue was free le había algo de abonar you would hear it agree, la estatua de Don Gonzalo. that statue of Don Gonzalo.

ESCULTOR: ¿También habéis Did you also know conocido a don Juan? Don Juan?

DON JUAN: Mucho. Very well,

ESCULTOR: Don Diego Don Diego le abandonó desde luego, immediately abandoned him, so desheredándole. disinheriting him, though.

DON JUAN: Ha Sido To Don Juan that did no para don Juan poco daño great harm, it is said ése, porque la fortuna because fortune, on this earth va tras él desde la cuna. followed him from birth.

ESCULTOR: Dicen que ha muerto. They say he is dead.

DON JUAN: Es engaño: That's a ruse: vive. he's alive.

ESCULTOR: ¿Y dónde? And where?

DON JUAN: Aquí, en Sevilla. Here, in Seville.

ESCULTOR: ¿Y no teme que el furor And doesn't he ever popular...? fear the people's anger?

DON JUAN: En su valor The seed of fear has never no ha echado el miedo semilla. affected his courage, or will.

ESCULTOR: Mas cuando vea el lugar But when he sees the way en que está ya convertido what was once his property el solar que suyo ha sido, has been treated, maybe no osará en Sevilla estar. in Seville he'll not dare stay.

DON JUAN: Antes ver tendrá a Rather he'll think it fortunate fortuna en su casa reünidas to have the people he knew personas de él conocidas, reunited, since it's true puesto que no odia a ninguna. for them he had no hate.

ESCULTOR: ¿Creéis que ose aquí Do you believe he'd dare come here? venir?

DON JUAN: ¿Por qué no? Pienso, a Why not? In my opinion, I mi ver, que donde vino a nacer think it's right he should come to die justo es que venga a morir. in the place where he was reared. Y pues le quitan su herencia And since they've taken his legacy para enterrar a éstos bien, in order to bury these people so, a él es muy justo también it is only fair that they also que le entierren con decencia. bury him decently.

ESCULTOR: Sólo a él le está He is the only one forbidden prohibida en este panteón la entrada. to enter this pantheon.

DON JUAN: Trae don Juan muy buena espada, Don Juan carries a very fine sword: y no sé quién se la impida. I don't know who dare enforce that word.

ESCULTOR: ¡Jesús! ¡Tal Dear Lord, what profanation! profanación!

DON JUAN: Hombre es don Juan que, a querer, Don Juan is the sort of man, volverá el palacio a hacer who might remake the pantheon encima del panteón. as a palace, as an act of restoration.

ESCULTOR: ¡Tan audaz ese hombre es Is that man so daring that he que aun a los muertos se atreve? even dares to oppose the dead?

DON JUAN: ¿Qué respetos gastar debe What respect should he show instead con los que tendió a sus pies? to those he stretched out at his feet?

ESCULTOR: Pero ¿no tiene conciencia But does that man have then ni alma ese hombre? no conscience or soul?

DON JUAN: Tal vez no, Perhaps none, que al cielo una vez llamó for he called on heaven once con voces de penitencia, with the voice of a penitent y el cielo en trance tan fuerte and heaven treated him so fiercely allí mismo le metió, it seems that there and then que a dos inocentes dio he killed two innocent men para salvarse la muerte. in order to save himself, wholly.

ESCULTOR: ¡Qué monstruo, supremo Holy Father, what a monster! Dios!

DON JUAN: Podéis estar convencido You can be certain, indeed, de que Dios no le ha querido. that God did not love him. Agreed.

ESCULTOR: Tal será. It must be so.

DON JUAN: Mejor que vos. He's your better.

ESCULTOR: (¿Y quién será el que a don Juan Aside: (And who can it be abona con tanto brío?) who defends Don Juan so?) Caballero, a pesar mío, Sir, excuse me, I must go: como aguardándome están... they are waiting for me.

DON JUAN: Idos, pues, Go then, if it pleases you. enhorabuena.

ESCULTOR: He de cerrar. I have to close up.

DON JUAN: No cerréis, Not for me, y marchaos. just leave.

ESCULTOR: Mas ¿no veis...? But, don't you see...?

DON JUAN: Veo una noche serena I see a calm night, true y un lugar que me acomoda and a place that gives me pleasure para gozar su frescura, where I might enjoy the fresh air still y aquí he de estar a mi holgura in spite of all Seville. si pesa a Sevilla toda. and here I intend to take my leisure.

ESCULTOR: (¿Si acaso padecerá (I wonder if he might be de locura desvaríos?) suffering from delusions?)

DON JUAN: (Dirigiéndose a las (Addressing the statues.) estatuas.) Ya estoy aquí, amigos míos. Now here I am my friends.

ESCULTOR: ¿No lo dije? Loco está. Didn't I say so? He's crazy.

DON JUAN: Mas, ¡cielos, qué es lo que veo! But good Lord, what do I see! es ilusión de mi vista, It's an illusion I've invented o a doña Inés el artista or the artist has represented aquí representa, creo. Doña Inés here, before me.

ESCULTOR: Sin duda. Doubtless.

DON JUAN: ¿También murió? She also died?

ESCULTOR: Dicen que de They say she died of grief, sent sentimiento cuando de nuevo al convento back again to her convent abanDoñada volvió abandoned, and denied por don Juan. by Don Juan. Don Juan; ¿Y yace aquí? And she lies here?

ESCULTOR: Sí. Yes.

DON JUAN: ¿La visteis muerta vos? Did you see her body, then?

ESCULTOR: Sí. Yes.

DON JUAN: ¿Cómo estaba? What was she like?

ESCULTOR: ¡Por Dios By heaven, que dormida la creí! I thought she was sleeping there. La muerte fue tan piadosa Death was so gentle, I suppose, con su cándida hermosura, with her in her purity, que la envió con la frescura that it sent her the beauty las tintas de la rosa. of the fresh tint of the rose.

DON JUAN: ¡Ah! Mal la muerte podría Ah! Death could not undo deshacer con torpe mano with its clumsy hand's excess el semblante soberano the sovereign loveliness que un ángel envidiaría. an angel would envy too. ¡Cuán bella y cuán parecida How beautiful and how true su efigie en el mármol es! her effigy in marble is. ¡Quién pudiera, doña Inés, Would that I, Doña Inés volver a darte la vida! could return you to life anew. ¿Es obra del cincel vuestro? Is this your chisel's art?

ESCULTOR: Como todas las demás. Like the others here, that you see.

DON JUAN: Pues bien merece algo más Well, such mastery un retrato tan maestro. deserves something apart. Tomad. Here.

ESCULTOR: ¿Qué me dais aquí? What do you give me?

DON JUAN: ¿No lo veis? Don't you see?

ESCULTOR: Mas... caballero... But,...sir....why... ¿por qué razón...? for what reason?...

DON JUAN: Porque quiero Because I yo que os acordéis de mí. want you to remember me.

ESCULTOR: Mirad que están bien But I was well paid, you see. pagadas.

DON JUAN: Así lo estarán mejor. So you'll have even more.

ESCULTOR: Mas vamos de aquí, señor, But lets leave here sir, for sure que aun las llaves entregadas I must still return the key no están, y al salir la aurora of this gate, and at dawn tengo que partir de aquí. I have to leave here, you see.

DON JUAN: Entregádmelas a mí, Hand them over to me, y marchaos desde ahora. and you..... go on.

ESCULTOR: ¿A vos? To you?

DON JUAN: A mí: ¿qué dudáis? To me: why hesitate?

ESCULTOR: Como no tengo el Ah, I do not have the honour... honor...

DON JUAN: Ea, acabad, Escultor. That's enough, Sculptor.

ESCULTOR: Si el nombre al menos que usáis If at least you would state supiera... your name....

DON JUAN: ¡Viven los cielos! Merciful heaven! Why, Dejad a don Juan Tenorio you leave Don Juan velar el lecho mortuorio to watch over the tomb en que duermen sus abuelos. in which his ancestors lie.

ESCULTOR: ¡Don Juan Tenorio! Don Juan Tenorio!

DON JUAN: Yo soy. I am the man. Y si no me satisfaces, And if you don't satisfy me, compañía juro que haces I swear you'll keep company a tus estatuas desde hoy. with your statues from now on.

ESCULTOR: (Alargándole las llaves.) (Holding out the keys to him) Tomad. (No quiero la piel Here. Aside: (I won't risk my skin dejar aquí entre sus manos. at his hands, but bow to his will. Ahora que los sevillanos Let the folks of Seville se las compongan con él.) (Vase.) take good care of him.) (He leaves)

ESCENA III SCENE III

DON JUAN: Mi buen padre empleó My good father spent the whole en esto entera la hacienda mía; of my inheritance on this display; hizo bien: yo al otro día he did well: on any given day la hubiera a una carta puesto. I'd have bet it on a hand of cards. So, No os podéis quejar de mí, you can't complain of me, you vosotros a quien maté; whom I chose to kill: si buena vida os quité, if I took your noble life, still buena sepultura os di. I gave you a noble tomb. ¡Magnífica es en verdad This pantheon and it's art, la idea del tal panteón! truly, a magnificent idea! Y... siento que el corazón And I feel the solitude here me halaga esta soledad. is soothing to my heart. ¡Hermosa noche...! ¡Ay de mí! A beautiful night! Ah me! ¡Cuántas como ésta tan puras How many like this, and as pure, en infames aventuras in notorious adventure desatinado perdí! I wasted foolishly. ¡Cuántas al mismo fulgor How many times, in the same bright hour de esa luna trasparente of that translucent moon, arranqué a algún inocente I wrenched away too soon la existencia o el honor! some innocent's life or honour. Sí, después de tantos años Yes, after all these years cuyos recuerdos me espantan, whose memories terrify me, siento que en mí se levantan I feel thoughts well inside me, pensamientos en mí extraños. the new and strange appears. ¡Oh! Acaso me los inspira Oh! Perhaps they arise in me desde el cielo en donde mora from heaven where she dwells, esa sombra protectora one of the guardian angels, que por mi mal no respira. who through me no longer breathes. (Se dirige a la estatua de doña (He addresses the statue of Doña Inés, hablándole con respeto.) Inés, speaking to it respectfully.) Mármol en quien doña Inés Marble, in which Doña Inés, en cuerpo sin alma existe, a body without soul, exists, deja que el alma de un triste permit the soul of a sad wretch llore un momento a tus pies. to kneel a moment, in his distress. De azares mil a través Through misadventure's excess conservé tu imagen pura, I kept your image pure, pues la mala ventura since evil destiny, before, te asesinó de don Juan, through Don Juan, murdered you, contempla con cuánto afán contemplate with what true vendrá hoy a tu sepultura. grief he comes here once more. En ti nada más pensó With you his thoughts were burning, desde que se fue de ti; from the time he left, I say: y desde que huyó de aquí since the hour he ran away, sólo en volver meditó. he dreamed only of returning. Don Juan tan sólo esperó Don Juan's only yearning de doña Inés su ventura, was for joy with Doña Inés, y hoy que en pos de su hermosura now, seeking her loveliness vuelve el infeliz don Juan, wretched Don Juan returns: mira cuál será su afán see with what pain he burns, al dar con tu sepultura. finding her tomb, his distress. Inocente doña Inés, Innocent Doña Inés cuya hermosa juventud whose beauty and tender years encerró en el ataúd were closed in a coffin here quien llorando está a tus

pies; by him who weeps, ah yes, si de esa piedra a través if through this stone, no less, puedes mirar la amargura you can see the bitterness del alma que tu hermosura of a soul that adored your loveliness adoró con tanto afán, with such yearning, then for that man prepara un lado a don Juan prepare a place, for Don Juan, en tu misma sepultura. in your tomb, where he may rest. Dios te crió por mi bien, God created you for my good, I por ti pensé en la virtud, thought of virtue, for you, adoré su excelsitud I adored your sublimity, too, y anhelé su santo Edén. and longed for your holy paradise. Sí, aun hoy mismo en ti también Yes, even today my hope still lies mi esperanza se asegura, in you, entrusted to you, que oigo una voz que murmura for I hear a voice, that's true, en derredor de don Juan that murmurs round Don Juan, palabras con que su afán words which calm me, as I stand se calma en tu sepultura. here in pain, by your grave, by you. ¡Oh doña Inés de mi vida! Oh Doña Inés, my life itself! Si esa voz con quien deliro If that voice I babble of es el postrimer suspiro is the last sigh, above, de tu eterna despedida; of your eternal farewell; si es que de ti desprendida if that voice from your very self llega esa voz a la altura reaches the farthest sky, y hay un Dios tras esa anchura and there is a God on high, por donde los astros van, with stars on either hand, dile que mire a don Juan tell him to gaze at Don Juan, llorando en tu sepultura. by your tomb, and my weeping eyes. (Se apoya en el sepulcro, (He leans on the tomb, hiding his ocultando el rostro; y mientras face; and while he maintains this se conserva en esta postura, un posture, a vapour that arises from vapor que se levanta del the grave hides the statue of Doña sepulcro oculta la estatua de Inés. When the vapour dissipates, the doña Inés. Cuando el vapor se statue has disappeared. Don Juan desvanece, la estatua ha comes out of his trance.) desaparecido. Don Juan sale de su enajenamiento.) Este mármol sepulcral This sepulchral marble's essence adormece mi vigor, seems to drain away my strength y sentir creo en redor and round me I feel the sense un ser sobrenatural. of a supernatural presence. Mas..., cielos! ¡El pedestal But....my God! The pedestal's stone no mantiene su escultura! no longer holds her sculpture. ¿Qué es esto? ¿Aquella figura What is this? Was that figure fue creación de mi afán? my imagination alone?

ESCENA IV SCENE IV

(El llorón y las flores de la (The weeping willow and the flowers izquierda del sepulcro de doña to the left of Doña Inés's sepulchre Inés se cambian en una change into a stage decoration in apariencia, dejando ver dentro which one can see, in the middle of de ella, en medio de glowing lights, the spirit of Doña resplandores, la sombra de doña Inés.) Inés.) (Don Juan, la sombra de Doña (Don Juan, the spirit of Doña Inés) Inés)

SOMBRA: No; mi espíritu, don No: my spirit, Don Juan, Juan, te aguardó en mi sepultura. waited for you in the grave.

DON JUAN: (De rodillas.) (Kneeling) ¡Doña Inés! Sombra querida, Doña Ines, beloved spirit, alma de mi corazón, soul of my very heart, ¡no me quites la razón don't rob me of reason's art si me has de dejar la vida! if you plan to let me live yet! Si eres imagen fingida, If you're only the child of my madness, sólo hija de mi locura, if you're only a false illusion, no aumentes mi desventura do not increase my misfortune, burlando mi loco afán. by mocking my mad passion.

SOMBRA: Yo soy doña Inés, don Juan, I am Doña Inés, Don Juan, que te oyó en su sepultura. who heard you in her tomb.

DON JUAN: ¿Conque vives? So you're alive?

SOMBRA: Para ti; For you: but see mas tengo mi purgatorio my purgatory is there en ese mármol mortuorio in that marble mausoleum where que labraron para mí. they made a grave for me. Yo a Dios mi alma ofrecí I offered my soul to God, the fee en precio de tu alma impura, for your impure soul, and yes, y Dios, al ver la ternura God, on seeing the tenderness con que te amaba mi afán, with which I loved a man, me dijo: "Espera a don Juan said: 'Wait then for Don Juan en tu misma sepultura. in your grave's loneliness. Y pues quieres ser tan fiel And since you want to be loyal a un amor de Satanás, to the love of a son of Satan, con don Juan te salvarás, you'll be saved with Don Juan o te perderás con él. or be lost with him. You will Por él vela: mas si cruel watch over him; but if he's cruel te desprecia tu ternura, and scorns your tenderness y en su torpeza y locura in his crudity and madness, sigue con bárbaro afán, and goes on, in barbarous zeal, llévese tu alma don Juan he will carry off your soul de tu misma sepultura". from the very grave itself.'

DON JUAN: (Fascinado.) (Amazed!) ¡Yo estoy soñando quizás Perhaps I only dream con las sombras de un Edén! of the spirits in Paradise!

SOMBRA: No; y ve que si piensas bien No: you'll have me at your side a tu lado me tendrás; if your thoughts are always seen mas si obras mal causarás to be good, but if you seem nuestra eterna desventura. evil, you'll damn us eternally. Y medita con cordura And so consider wisely que es esta noche, don Juan, this is the night, Don Juan, el espacio que nos dan the moment we have at hand para buscar sepultura. to seek our fate, you see. Adiós, pues; y en la ardua lucha Farewell, then; in the intense en que va a

entrar tu existencia, battle your being will enter de tu dormida conciencia listen to the voice you'll hear la voz que va a alzarse escucha; of your dormant conscience: porque es de importancia mucha it's of the first importance meditar con sumo tiento you ponder with deepest care la elección de aquel momento your choice of that moment, where que, sin poder evadirnos, what we cannot evade al mal o al bien ha de abrirnos will open the door of the grave la losa del monumento. to the good or evil there. (Ciérrase la apariencia; (The stage decoration closes; Doña desaparece doña Inés, Y todo Inés disappears, and everything queda como al principio del acto remains as at the beginning of the menos la estatua de doña Inés, act, except the statue of Doña Inés que no vuelve a su lugar. Don that does not return to its place. Juan queda atónito.) Don Juan remains astonished.)

ESCENA V SCENE V

DON JUAN: ¡Cielos! ¿Qué es lo que escuché? My God! What do I find? ¡Hasta los muertos así Even the dead, I see, dejan sus tumbas por mí! forsake their tombs for me! Mas sombra, delirio fue. But the spirit was my illusion, Yo en mi mente le forjé; one I forged in my mind, la imaginación le dio my imagination gave it that same la forma en que se mostró, form in which it came: y ciego vine a creer I blindly believing en la realidad de un ser in the reality of that being que mi mente fabricó. know my mind gave it a name. Mas nunca de modo tal But never before so real fanatizó mi razón the way my crazed reason mi loca imaginación filled my mad imagination con su poder ideal. with the power of the ideal. Sí, algo sobrenatural Yes, something supernatural vi en aquella doña Inés I saw in that Doña Inés tan vaporosa a través through that vaporous haze aun de esa enramada espesa; that dense cloud of trees: mas..., ¡bah!, circunstancia es but... bah!, this is indeed ésa que propia de sombras es. appropriate for the spirits. ¿Qué más diáfano y sutil What's more delicate or subtle que las quimeras de un sueño? than the fantasy of our dreams? ¿Dónde hay nada más risueño, Where is there anything that seems más flexible y más gentil? more sweet and malleable? ¿Y no pasa veces mil And doesn't it happen a thousand fold que en febril exaltación that in feverish exultation ve nuestra imaginación what we see in imagination como ser y realidad as truth and reality la vacía vanidad is the empty vanity de una anhelada ilusión? of a longed-for illusion? ¡Sí, por Dios, delirio fue! Yes, by God, that's it! Mas su estatua estaba aquí. But her statue was here to see. Sí, yo la vi y la toqué, Yes, I saw it and touched it: y aun en albricias le di even gave a trifling fee al Escultor no sé qué. to the sculptor who carved it. ¡Y ahora sólo el pedestal Now there's only the pedestal veo en la urna funeral! and the urn from her funeral. ¡Cielos! La mente me falta, My God! I'm losing my mind, o de improviso me asalta or unexpectedly find algún vértigo infernal. some dizziness, infernal. ¿Qué dijo aquella visión? What did that vision say? ¡Oh! Yo la oí claramente, Oh! I heard her clearly, y su voz triste y doliente and her grieving voice, sadly resonó en mi corazón. sounds in my heart again. ¡Ah! ¡Y breves las horas son Ah! The hours slip away del plazo que nos augura! of the term granted to us. No, no; de mi calentura No, no: that's the madness delirio insensato es! of senseless delirium. Mi fiebre fue a doña Inés My fever opened the tomb quien abrió la sepultura. the grave of Doña Inés. ¡Pasad y desvaneceos; Leave now, and expire: pasad, siniestros vapores sinister vapours, clear, de mis perdidos amores mists of my lost love here, mis fallidos deseos! and my failed desire! Pasad, vanos devaneos Leave, vain remnants of fire de un amor muerto al nacer; of a love that died being born, no me volváis a traer do not bring back in the storm, entre vuestro torbellino in your whirlwind of confusion, ese fantasma divino that divine illusion, que recuerda a una mujer! recalling a woman's form! ¡Ah! ¡Estos sueños me aniquilan, Ah, these dreams annihilate, mi cerebro se enloquece... me, maddening my brain... y esos mármoles parece and those marbles seem again que estremecidos vacilan! to tremble and vacillate! (Las estatuas se mueven (The statues move slowly and turn lentamente y vuelven la cabeza their heads towards him.) hacia él.) Sí, sí: sus bustos oscilan, Yes, yes, their torsos turn. Wait, su vago contorno medra... their vague outlines grow clear... Pero don Juan no se arredra: But Don Juan has no fear: ¡alzaos, fantasmas vanos, rise, you vain illusions, y os volveré con mis manos and with my hands I'll turn you a vuestros lechos de piedra! towards your stone beds, here. No, no me causan pavor No, your wretched forms vuestros semblantes esquivos; cause me no terror: instead, jamás, ni muertos ni vivos, I swear, alive or dead, humillaréis mi valor. you'll never diminish my valour. Yo soy vuestro matador I am still your executioner, como al mundo es bien notorio; as all the world well knows: si en vuestro alcázar mortuorio if in your deadly fortress though me aprestáis venganza fiera, you seek fierce vengeance on me, daos prisa: aquí os espera hasten: I wait here, as you see otra vez don Juan Tenorio. once more, Don Juan Tenorio.

ESCENA VI SCENE VI

(Don Juan, El capitán Centellas, (Don Juan, Captain Centellas, Avellaneda) Avellaneda)

CENTELLAS: (Dentro.) (Within) ¿Don Juan Tenorio? Don Juan Tenorio?

DON JUAN: (¿Volviendo en sí.) (Coming to himself) ¿Qué es eso? Who's this? Quién me repite mi nombre? Who calls my name?

AVELLANEDA: (Silencio.) (Silence) (A Centellas.) (To Centellas) ¿Veis a alguien? Do you see it?

CENTELLAS: (Idem.) Sí, allí hay Yes, a man. Again. un hombre.

DON JUAN: ¿Quién va? Who's there?

AVELLANEDA: Él es. It's him.

CENTELLAS: (Yéndose a don Juan.) (Going to Don Juan) Yo pierdo el seso I'm wild with joy. So! con la alegría. ¡Don Juan! Don Juan!

AVELLANEDA: ¡Señor Tenorio! Señor Tenorio!

DON JUAN: ¡Apartaos, Be gone, vanas sombras! vain spirits!

CENTELLAS: Reportaos, Be calm, señor don Juan... Los que están Señor, Don Juan. Those who stand en vuestra presencia ahora in your presence then no son sombras, hombres son, are not spirits, but men, y hombres cuyo corazón and men whose hearts, again, vuestra amistad atesora. value you as a friend. A la luz de las estrellas See now, we recognized you os hemos reconocido, by the stars clear light, y un abrazo hemos venido and are here that we might a daros. embrace you.

DON JUAN: Gracias, Centellas. Centellas, thank you

CENTELLAS: Mas ¿qué tenéis? ¡Por mi vida By my soul, are you ill? que os tiembla el brazo, y está Your arm is trembling, see it, vuestra faz descolorida! your face is pale and still.

DON JUAN: (Recobrando su aplomo.) (Recovering his composure.) La luna tal vez lo hará. Perhaps the moonlight does it.

AVELLANEDA: Mas, don Juan, ¿qué hacéis aquí? But Don Juan, why are you here? ¿Este sitio conocéis? Do you know this place?

DON JUAN: ¿No es un panteón? Isn't it a pantheon?

CENTELLAS: ¿Y sabéis You know, in any case a quién pertenece? to whom it belongs?

DON JUAN: A mí: To me: that's clear mirad a mi alrededor look now all around me y no veréis más que amigos and you'll see only friends de mi niñez o testigos of my childhood, or testaments de mi audacia y mi valor. to my courage and audacity.

CENTELLAS: Pero os oímos hablar: But we heard you talk ¿con quién estabais? Who were you with?

DON JUAN: Con ellos. With them.

CENTELLAS: ¿Venís aun a You came here to mock them, then? escarnecellos?

DON JUAN: No, los vengo a No, to visit, for a walk. visitar. Mas un vértigo insensato But a senseless dizziness que la mente me asaltó overwhelmed my mind, un momento me turbó, dazed me, made me blind, y a fe que me dio mal rato. and in truth, I was in distress. Esos fantasma de piedra Those stone phantoms here me amenazaban tan fieros, threatened me so fiercely que a mí acercado a no haberos if you had not come to me pronto... so soon....

CENTELLAS: ¡Ja!, ¡ja!, ¡ja! ¿Os Ah ha! Don Juan! Does fear arredra, don Juan, como a los villanos, of the dead overwhelm your faith el temor de los difuntos? as it does lesser men?

DON JUAN: No, a fe; contra todos No, by God, against all of them juntos tengo aliento y tengo manos. I still have hands and breath. Si volvieran a salir If they came forth again de las tumbas en que están, from their tombs, to stand a las manos de don Juan here, they'd die at the hand volverían a morir. of Don Juan, again. Y desde aquí en adelante And from this moment, you'll see, sabed, señor capitán, captain, as a man, que yo soy siempre don Juan, I am always Don Juan, y no hay cosa que me espante. nothing can frighten me. Un vapor calenturiento A feverish excitement un punto me fascinó, dazed me for a while, Centellas, mas ya pasó: Centellas, but it goes by. cualquiera duda un momento. Any man may doubt for a moment

AVELLANEDA Y CENTELLAS: Es verdad. That's true.

DON JUAN: Vamos de aquí. Lets leave here, though.

CENTELLAS: Vamos, y nos contaréis Lets leave, and tell us, if you will, cómo a Sevilla volvéis how you returned to Seville tercera vez. for the third time.

DON JUAN: Lo haré así, I'll do so, si mi historia os interesa: if my story's of interest: y a fe que oirse merece, you deserve to hear it, truly aunque mejor me parece though, it seems to me, que la oigáis de sobremesa. over dinner would be best. ¿No opináis...? You agree?

AVELLANEDA Y CENTELLAS: Como As you wish. gustéis.

DON JUAN: Pues bien: cenaréis conmigo Very well, you'll dine with me y en mi casa. and at my house.

CENTELLAS: Pero digo, Can it be ¿es cosa de que dejéis that you abandon some guest algún huésped por nosotros? for our sake too? ¿No tenéis gato encerrado? What is it you hide?

DON JUAN: ¡Bah! Si apenas he Bah. I've scarcely arrived: llegado: no habrá allí más que vosotros tonight there'll be esta noche. no one but you.

CENTELLAS: ¿Y no hay tapada And there's no secret woman a quien algún plantón demos? we forced you to leave?

DON JUAN: Los tres solos We'll dine alone I believe cenaremos. Digo, si de esta jornada unless, at my invitation, no quiere igualmente ser one of these statues here alguno de éstos. wishes to attend. (Señalando a las estatuas de los (Pointing to the statues on the sepulcros.) graves)

CENTELLAS: Don Juan, Don Juan dejad tranquilos yacer leave those alone, show fear, a los que con Dios están. of those who are of God, not man.

DON JUAN: ¡Hola! ¡Parece que vos Aha! Now it seems it's you, sois ahora el que teméis you are the ones who stare, y mala cara ponéis and pale before the glare a los muertos? Mas, ¡por Dios, of the dead. But, by God, it's true que ya que de mi os burlasteis since you mocked me there cuando me visteis así, when you all saw me, so en lo que penda de mí leave it to me to show os mostraré cuánto errasteis! you all how much you erred! Por mí, pues, no ha de quedar On my side, I've said y, a poder ser, estad ciertos if it's possible, it's certain, que cenaréis con los muertos, since I'm going to invite them, y os los voy a convidar. that tonight you'll dine with the dead,

AVELLANEDA: Dejaos de esas quimeras. Leave off this fantasy.

DON JUAN: ¿Duda en mi valor ponerme Do you doubt my courage is cuando hombre soy para hacerme great enough for me to insist platos de sus calaveras? their skulls provide bowls for me? Yo a nada tengo pavor. I fear nothing any more. (Dirigiéndose a la estatua de (Addressing the statue of Don don Gonzalo, que es la que tiene Gonzalo, which is the nearest one.) más cerca.) Tú eres el más ofendido; You're the one most offended; mas, si quieres, te convido but, if you wish, I've extended a cenar, Comendador. an invitation, Comendador. Que no lo puedas hacer That I believe you're unable creo, y es lo que me pesa; to attend, well that gives me pain, mas por mi parte en la mesa but for my part, at the table te haré un cubierto poner. I'll set your place again. Y a fe que favor me harás, And you'll do me a favour, pues podré saber de ti since I'll find out from you si hay más mundo que el de aquí if there's another world, or two, y otra vida, en que jamás and another life to savour, a decir verdad creí. though I never believed it true.

CENTELLAS: Don Juan, eso no es valor; Don Juan, this is not valour: locura, delirio es. this is madness, and illusion.

DON JUAN: Como lo juzguéis mejor; So much the better, be sure yo cumplo así. Vamos, pues. I'll fulfil my promise then. Go on. Lo dicho, Comendador. Remember, Comendador.

FIN DEL ACTO PRIMERO END OF THE FIRST ACT

ACTO SEGUNDO ACT TWO

LA ESTATUA DE DON GONZALO THE STATUE OF DON GONZALO (Aposento de don Juan Tenorio. Dos (A room in Don Juan Tenorio's puertas en el fondo a derecha e house. Two doors in the background izquierda preparadas para el juego to the right and left prepared for escénico del acto. Otra puerta en the action described in this act. el bastidor que cierra la Another door in the stage flat that decoración por la izquierda. closes the stage on the left. A Ventana en el de la derecha. Al window in the one on the

right. alzarse el telón están sentados a When the curtain rises, Don Juan, la mesa don Juan, Centellas y Centellas and Avellaneda are seated Avellaneda. La mesa ricamente at the table. The table is richly servida, el mantel cogido con set, the tablecloth caught up with guirnaldas de flores, etc. garlands of flowers, etc. In front Enfrente del espectador, don Juan, of the audience, Don Juan, and to y a su izquierda Avellaneda; en el his left Avellaneda; to the left of lado izquierdo de la mesa the table Centellas and in the one Centellas, y en el de enfrente de in front of the latter a chair and éste una silla y un cubierto a table setting are not being used.) desocupados.)

ESCENA PRIMERA SCENE I

(Don Juan, El capitán Centellas, (Don Juan, Captain Centellas, Avellaneda, Ciutti, un paje) Avellaneda, Ciutti, a page.)

DON JUAN: Tal es mi historia, Gentlemen: such is my story, señores; pagado de mi valor, pleased by my bravery, quiso el mismo Emperador the Emperor wished, as you see, dispensarme sus favores. himself, to favour my glory. Y aunque oyó mi historia entera, Though he heard my story entire dijo: " Hombre de tanto brío he said: " A man with such flare merece el amparo mío; deserves to be under my care vuelva a España cuando quiera". to return to Spain when he desires." Y heme aquí en Sevilla ya. And so here I am in Seville.

CENTELLAS: ¡Y con qué lujo y With what luxury and wealth! riqueza!

DON JUAN: Siempre He vive con grandeza who has greatness as his destiny quien hecho a grandeza está. lives life with greatness still.

CENTELLAS: A vuestra vuelta. To your return.

DON JUAN: Bebamos. Well, Lets drink.

CENTELLAS: Lo que no acierto a But how on earth, I must say, creer es cómo, llegando ayer, having arrived just yesterday, ya establecido os hallamos. we find you here, I can't think.

DON JUAN: Fue el adquirirme; señores, Gentlemen, it was a case of taking tal casa con tal boato, a house with all its display porque se vendió a barato since it was being sold that day para pago de acreedores. with all the creditors waiting. Y como al llegar aquí And arriving here, you see, desheredado me hallé, I found myself disinherited tal como está la compré. so I bought it just as it stood.

CENTELLAS: ¿Amueblada y todo? Furnishings too?

DON JUAN: Sí. Indeed. Un necio que se arruinó It was sold by a foolish man por una mujer, vendióla. who ruined himself for a woman.

CENTELLAS: ¿Y vendió la hacienda Did he only sell house and land? sola?

DON JUAN: Y el alma al diablo. That, and his soul to Satan.

CENTELLAS: ¿Murió? Did he die?

DON JUAN: De repente; y la justicia, Suddenly: and the court of law, que iba a hacer de cualquier modo who were going to sell it anyway, pronto despacho de todo, with every haste, in every way, viendo que yo su codicia seeing that I would be much more saciaba, pues los dineros likely to satisfy their greed, ofrecía dar al punto, and I offered to pay immediately, cedióme el caudal por junto granted me the whole estate y estafó a los usureros. and defrauded the usurers, indeed.

CENTELLAS: Y la mujer, ¿qué fue de And the woman, what happened to her? ella?

DON JUAN: Un escribano la pista A clerk was sent after her, la siguió, pero fue lista but she was more than clever, y escapó. and escaped.

CENTELLAS: ¿Moza? Young?

DON JUAN: Y muy bella. A beautiful girl.

CENTELLAS: Entrar hubiera debido She should have been included en los muebles de la casa. with the furnishings, I feel!

DON JUAN: Don Juan Tenorio no pasa Don Juan Tenorio does not deal moneda que se ha perdido. in goods that become jaded. Casa y bodega he comprado I bought the house and the wine dos cosas que, no os asombre, two things, I'm sure you'll agree, pueden bien hacer a un hombre that allow good company, vivir siempre acompañado, and help a man have a good time, como lo puede mostrar as your agreeable presence shows vuestra agradable presencia, and clearly demonstrates for me, que espero que con frecuencia since I hope you'll frequently me hagáis ambos disfrutar. help me enjoy them both.

CENTELLAS: Y nos haréis honra inmensa. And you do us immense honour.

DON JUAN: Y a mí vos. ¡Ciutti! And you me. Ciutti!

CIUTTI: ¿Señor? Señor?

DON JUAN: Pon vino al Comendador. Pour a glass for the Comendador. (Señalando el vaso del puesto (Pointing to the glass at the empty vacío.) place.)

AVELLANEDA: Don Juan, aún en eso piensa Does your madness reach that far, vuestra locura? Don Juan?

DON JUAN: ¡Sí, a fe! Yes! For, in my defence, Que si él no puede venir, if he cannot come today, de mí no podréis decir at least you'll not be able to say que en ausencia no le honré. I failed to honour his absence.

CENTELLAS: ¡Ja, ja, ja! Señor Tenorio, Ha ha! Tenorio. creo que vuestra cabeza I think you, perhaps, instead, va menguando en fortaleza. are becoming soft in the head.

DON JUAN: Fuera en mí It would be a contradiction though contradictorio y ajeno de mi hidalguía and foreign to my lineage a un amigo convidar to offer to invite a friend y no guardarle el lugar and not keep a place till the end mientras que llegar podría. for him to arrive on stage. Tal ha sido mi costumbre It's been my custom time and again siempre, y siempre ha de ser ésa; and so it will ever be: y el mirar sin él la mesa seeing the table without him, you see, me da, en verdad, pesadumbre. in truth, it causes me pain. Porque si el Comendador Because if the Comendador es, difunto, tan tenaz is as tenacious, being dead, como vivo, es muy capaz as he was living, he's able, I said, de seguirnos el humor. to be here to humour us and more.

CENTELLAS: Brindemos a su memoria, Lets drink to his memory, y más en él no pensemos. and lets not think....

DON JUAN: Sea. ....about him. No

CENTELLAS: Brindemos. Let's drink!

AVELLANEDA y DON JUAN: Brindemos. Let's drink!

CENTELLAS: A que Dios le dé su To God's granting him glory. gloria.

DON JUAN: Mas yo, que no creo que haya But I who believe instead más gloria que esta mortal there's no glory beyond the mortal one no hago mucho en brindis tal; find it hard to make room mas por complaceros, ¡vaya! for that toast, but go ahead. Y brindo a que Dios te dé And I drink to God's granting you la gloria, Comendador. glory, Comendador. (Mientras beben se oye lejos un (While they drink a distant aldabonazo, que se supone dado en knocking is heard that one supposes la puerta de la calle.) comes from the door to the street.) Mas ¿llamaron? But did some one knock?

CIUTTI: Sí, señor. Yes Señor.

DON JUAN: Ve quién. Well then, go and see whom.

CIUTTI: (Asomando por la ventana.) (Approaching the window.) A nadie se ve. I don't see anyone. ¿Quién va allá? Nadie responde. Who goes there? No one replies.

CENTELLAS: Algún chusco. Some joker.

AVELLANEDA: Algún menguado Some wretch que al pasar habrá llamado who, on passing by, knocked sin mirar siquiera dónde. without even using his eyes.

DON JUAN (A Ciutti.): Pues cierra y sirve licor. Well, close up and serve the liquor. (Llaman otra vez más recio.) (Another stronger knock) Mas ¿llamaron otra vez? But, a knock on the door again?

CIUTTI: Sí. Yes.

DON JUAN: Vuelve a mirar. Look!

CIUTTI: ¡Pardiez! By Heaven, A nadie veo, señor. I don't see anyone, Señor.

DON JUAN: ¡Pues por Dios que del bromazo Well by God, whoever he is quien es no se ha de alabar! will not get to boast of his joke. Ciutti, si vuelve a llamar, Ciutti, if he knocks again, poke suéltale un pistoletazo. your head out and shoot him with this. (Llaman otra vez, y se oye (A knock is heard again, un poco más cerca.) only a little closer.) ¿Otra vez? Again?

CIUTTI: ¡Cielos! My God! Centellas y AVELLANEDA: ¿Qué pasa? What's happening?

CIUTTI: Que esa aldabada postrera It was on the stairway, ha sonado en la escalera, not at the door I say, no en la puerta de la casa. that last knocking.

AVELLANEDA y CENTELLAS ¿Qué dices? What? (Levantándose asombrados.) (Both stand up, frightened)

CIUTTI: Digo lo cierto I'm telling the truth, and how: nada más: dentro han llamado someone knocked... de la casa. .....inside.

DON JUAN: ¿Qué ós ha dado? What's got into you? Inside? ¿Pensáis ya que sea el muerto? Do you think it's that dead man, now? Mis armas cargué con bala; I've loaded my pistols I say Ciutti, sal a ver quién es. Ciutti, go out then and see. (Vuelven a llamar más cerca.) (The knocking sounds again even nearer)

AVELLANEDA: ¿Oísteis? Did you hear it?

CIUTTI: Por San Ginés, Saint Ginés, help me. ¡que eso ha sido en la antesala! that one was in the hallway.

DON JUAN: ¡Ah! Ya lo entiendo; me habéis Ah! Now, I understand vosotros mismos dispuesto you yourselves I see esta comedia, supuesto have arranged this comedy: que lo del muerto sabéis. you know all about the dead man.

AVELLANEDA: Yo os juro, don Juan... I swear to you, Don Juan..

CENTELLAS: Y yo. We both do.

DON JUAN: ¡Bah! Diera en ello el más topo; Bah! The biggest fool would see, y apuesto a que ese galopo and I bet that rascal, he los medios para ello os dio. created this opportunity for you.

AVELLANEDA: Señor don Juan, escondido Don Juan, secretly, algún misterio hay aquí. here, some new mystery looms. (Vuelven a llamar más cerca.) (The knock sounds again, closer.)

CENTELLAS: ¡Llamaron otra vez! The sound again, on the floor!

CIUTTI: Sí; Yes: ya en el salón ha sido. Now it's in one of the rooms.

DON JUAN: ¡Ya! Mis llaves en manojo. Enough! You must have given habréis dado a la fantasma, my bunch of keys to the phantom que entre así no me pasma; so I'm not surprised he could come: mas no saldrá a vuestro antojo, but it won't be as you assume, ni me han de impedir cenar nor will your wretched game vuestras farsas desdichadas. keep me from my meal. (Se levanta, y corre los cerrojos (He stands up and closes the bolts de las puertas del fondo volviendo on the doors at the back, returning a su lugar.) to his place.) Ya están las puertas cerradas: Now the doors are locked, for real, ahora el coco, para entrar, and your bogey man, with no name, tendrá que echarlas al suelo, will have to break them open y en el punto que lo intente and the moment he shows his head que con los muertos se cuente, he may count himself one of the dead, y apele después al cielo. and then he can call on heaven.

CENTELLAS: ¡Qué diablos, tenéis What the devil, that sounds like razón! reason!

DON JUAN: ¿Pues no temblabais? But weren't you trembling?

CENTELLAS: ¡Confieso! I confess! que, en tanto que no di en eso, Until you made your guess, tuve un poco de aprensión. I did feel some apprehension.

DON JUAN: ¿Declaráis, pues, vuestro enredo? You won't admit it's a game?

AVELLANEDA: Por mi parte nada sé. On my part, I know nothing about it.

CENTELLAS: Ni yo. Nor I.

DON JUAN: Pues yo volveré Well, I'll reverse it contra el inventor el miedo. on its author, all the same. Mas sigamos con la cena; But lets carry on with the meal; vuelva cada uno a su puesto, each of you return to your place que luego sabremos de esto. for we'll soon resolve the case.

AVELLANEDA: Tenéis razón. You're right.

DON JUAN: (Sirviendo a Centellas.) (Serving Centellas) Cariñena; Carinena might appeal sé que os gusta, capitán. a wine that you like, Captain.

CENTELLAS: Como que somos paisanos. Since we're fellow countrymen.

DON JUAN: (A Avellaneda, (To Avellaneda, serving him from sirviéndole de otra botella.) another bottle.) Jerez a los sevillanos, Sherry for the Sevillians, then, don Rafael. a Don Rafael.

AVELLANEDA: Habéis, don Juan, Don Juan, again dado a entrambos por el gusto; you satisfy each of us, mas ¿con cuál brindaréis vos? but what will you toast with, then?

DON JUAN: Yo haré justicia a los I'll do justice to both of them. dos.

CENTELLAS: Vos siempre estáis en lo justo. You're always in the right of course.

DON JUAN: Sí, a fe; bebamos. Yes, by Jove, lets drink.

AVELLANEDA Y CENTELLAS: Bebamos. Lets drink. (Llaman a la misma puerta de la (The knock on the same door on the escena, fondo, derecha.) right at the back)

DON JUAN: Pesada me es ya tal broma, I'm tired of this joke now, mas veremos quién asoma but we'll see who comes, and how, mientras en la mesa estamos. while we're at table, I think. (A Ciutti, que se manifiesta (To Ciutti who is obviously asombrado.) frightened) ¿Y qué haces tú ahí, bergante? And what are you doing there, fool? ¡Listo! Trae otro manjar; (Vase Quickly! Bring more to eat: (Ciutti Ciutti.) leaves) mas me ocurre en este instante but it's just occurred to me too que nos podemos mofar that we can make fun, indeed, de los de afuera invitándoles of those outside by inviting them a probar su sutileza, to prove their subtlety entrándose hasta esta pieza without the use of a key y sus puertas no franqueándoles. and gain entry to this room.

AVELLANEDA: Bien dicho. Well said.

CENTELLAS: Idea brillante. A brilliant idea. (Llaman fuerte, fondo derecha.) (A loud knock from the right back)

DON JUAN: ¡Señores! ¿A qué llamar? Gentlemen! What are you knocking for? Los muertos se han de filtrar The dead can slip through any door por la pared; adelante. or wall: So, come in here! (La estatua de Don Gonzalo pasa (The statue of Don Gonzalo passes por la puerta sin abrirla, y sin through the door without opening it hacer ruido.) and without making a sound.)

ESCENA II SCENE II

(Don Juan, Centellas, Avellaneda, (Don Juan, Centellas, Avellaneda, y la estatua de don Gonzalo) and the statue of Don Gonzalo)

CENTELLAS: ¡Jesús! Jesus!

AVELLANEDA: ¡Dios! My God!

DON JUAN: ¡Qué es esto! What's this?

AVELLANEDA: Yo desfallezco. (Cae desvanecido.) I'm fainting. (He falls in a faint.)

CENTELLAS: Yo expiro. (Cae lo I'm a dead man. (He falls) mismo.)

DON JUAN. ¡Es realidad o deliro! Is this reality or illusion? Es su figura..., su gesto. It's his form...the shape is his.

ESTATUA: ¿Por qué te causa pavor What are you frightened for, quien convidado a tu mesa when a guest invited to your table viene por ti? comes to see you, since he's able?

DON JUAN: ¡Dios! ¿No es ésa That's the voice la voz del Comendador? of the Comendador?

ESTATUA: Siempre supuse que aquí I actually thought that you no me habías de esperar. wouldn't wait for me here.

DON JUAN: Mientes, porque hice arrimar You're wrong, because I had esa silla para ti. that chair and place set for you. Llega, pues, para que veas Come, then, and you'll see que, aunque dudé en un extremo that though I hesitate, de sorpresa, no te temo, amazed, I'll not fear or hate, aunque el mismo Ulloa seas. even if you are Ulloa.

ESTATUA: ¿Aún lo dudas? You still doubt?

DON JUAN: No lo sé. I don't know.

ESTATUA: Pon, si quieres, hombre Then place your hand impío, tu mano en el mármol frío on the marble, impious man de mi estatua. on my statue's cold stone.

DON JUAN: ¿Para qué? Why? Me basta oírlo de ti; Its enough that I hear: cenemos, pues; mas te advierto... lets dine, but a warning I give...

ESTATUA: ¿Qué? Of what?

DON JUAN: Que, si no eres el That if you still live muerto, lo vas a salir de aquí. you'll be dead when you leave here. ¡Eh! Alzad. (A Centellas y Oh, get up. (To Centellas and Avellaneda.) Avellaneda)

ESTATUA: No pienses, no, Don't think it, Don Juan, no que se levanten, don Juan they'll not open their eyes, porque en sí no volverán since they can't arise hasta que me ausente yo. until I choose to go. Que la divina clemencia For the Lord's divine mercy del Señor para contigo requires no other witness no requiere más testigo than your mind and your conscience que tu juicio y tu conciencia. to act for you, you see. Al sacrílego convite Just to enlighten your reason que me has hecho en el panteón, God permitted me to come para alumbrar tu razón, in reply to your impious invitation Dios asistir me permite. extended to me in the pantheon. Y heme que vengo en su nombre And I am here in His name a enseñarte la verdad; to teach you truth, finally: y es: que hay una eternidad which is: that there is an eternity tras de la vida del hombre. after man's life, all the same, Que numerados están and the days you may have planned los días que has de vivir, to live, have all passed by, y que tienes que morir and you have to die mañana mismo, don Juan. tomorrow, Don Juan. Mas, como esto que a tus ojos But, as you might surmise está pasando supones that this is your soul's aberration, ser del alma aberraciones or the ghosts of apprehension, y de la aprensión antojos, appearing before your eyes, Dios, en su santa clemencia, God, in his holy mercy te concede todavía, still grants you time, I say don Juan, hasta el nuevo día Don Juan, till the new day para ordenar tu conciencia. to set your conscience free. Y su justicia infinita And that his infinite justice por que conozcas mejor, you might better understand espero de tu valor I hope you're enough of a man que me pagues la visita. to honour me with a visit. ¿Irás, don Juan? Will you, Don Juan?

DON JUAN: Iré, Sí; I will go, yes: mas me quiero convencer but I want to be satisfied. de lo vago de tu ser before you leave my sight, antes que salgas de aquí. of your being's emptiness. (Coge una pistola.) (He grabs a pistol.)

ESTATUA: Tu necio orgullo delira, Your pride is wandering, foolishly, don Juan; los hierros más gruesos Don Juan; the strongest iron of all, y los muros más espesos and the very thickest wall, se abren a mi paso; mira. opens before my step: See! (Desaparece la estatua sumiéndose (The statue disappears, vanishing por la pared.) through the wall.)

ESCENA III SCENE III

(Don Juan, Avellaneda, Centellas) (Don Juan, Avellaneda, Centellas)

DON JUAN: ¡Cielos! ¡Su esencia se Good God! His being alters trueca el muro hasta penetrar, to penetrate the wall cual mancha de agua que seca as when dog days of summer el ardor canicular! dry up a waterfall. ¿No me dijo: "El mármol toca Didn't he tell me "Touch the marble de mi estatua." ¿Cómo, pues, of my statue." How then can se desvanece una roca? a rock disappear at all? ¡Imposible! Ilusión es. Impossible to understand! Acaso su antiguo dueño Perhaps some former owner mis cubas envenenó, poisoned my casks of wine, y el licor tan vano ensueño and the bottles from his cellar en mi mente levantó. stirred a dream in my mind. ¡Mas si éstas que sombras creo But what if these I think are ghosts, espíritus reales son are real spirits, that dwell apart, que

por celestial empleo sent from the heavenly hosts llaman a mi corazón! to visit my heart! Entonces, para que iguale Well, if the penitence su penitencia don Juan of a Don Juan ought to be con sus delitos, ¿qué vale equal to his crimes, what's the sense el plazo ruin que le dan? in this wretched term they give me? ¡Dios me da tan sólo un día... God is giving me only one day... Si fuese Dios en verdad, If in truth it were the deity, a más distancia pondría he would give a greater space su aviso y mi eternidad. for his warnings of eternity. "Piensa bien, que al lado tuyo "Think, for you will have me me tendrás...", dijo de Inés at your side..." is what she said la sombra, y si bien arguyo, the spirit of Inés, pues no la veo, sueño es. since I don't see her, it's a dream. (Transparéntase en la pared la (The shade of Doña Ines shows sombra de doña Inés.) through the wall)

ESCENA IV SCENE IV

Don Juan, la sombra de doña Inés, Don Juan, the ghost of Doña Inés, Centellas y Avellaneda, dormidos Centellas and Avellaneda (both asleep)

SOMBRA: Aquí estoy. Here am I.

DON JUAN: ¡Cielos! Good God!

SOMBRA: Medita Think instead lo que al buen Comendador of what you heard before has oído, y ten valor from the good Comendador, para acudir a su cita: be brave, respond to what he said. Un punto se necesita Only one moment is needed para morir con ventura; to die in peace you see: elígele con cordura So choose it, and wisely, porque mañana, don Juan, for tomorrow, Don Juan, nuestros cuerpos dormirán our bodies will be as one, en la misma sepultura. in the same grave we'll sleep. (Desaparece la sombra.) (The shade disappears)

ESCENA V SCENE V

(Don Juan, Centellas, Avellaneda) (Don Juan, Centellas, Avellaneda)

DON JUAN: Tente, doña Inés, espera, Stop, Doña Inés, wait for me, y si me amas en verdad, and if you truly love hazme al fin la realidad make me capable of distinguir de la quimera. distinguishing truth from fantasy. Alguna más duradera Give me some certainty señal dame, que segura a sign to prove, no less, me pruebe que no es locura that this is not the madness lo que imagina mi afán, of an imaginative man para que baje don Juan so that Don Juan tranquilo a la sepultura. may go calm to death's caress. Mas ya me irrita, por Dios, But, by God, I grow angry el verme siempre burlado, knowing I'm always tricked, corriendo desatentado always the one who's picked siempre de sombras en pos. to chase after shadows madly. ¡Oh! Tal vez todo esto ha sido Oh! Perhaps all this has been por estos dos preparado, prepared by you two: y mientras se ha ejecutado, and while it took place, you su privación han fingido. both pretended to the scene. ¡Mas, por Dios, que si es así, Well, by God, if you dared, se han de acordar de don Juan! you will never forget Don Juan! ¡Eh! don Rafael, capitán. Hey! Don Rafael, Captain. Ya basta: alzaos de ahí. That's enough: get up from there. (Don Juan mueve a Centellas y a (Don Juan stirs Centellas and Avellaneda, que se levantan como Avellaneda who get up as if they quien vuelve de un profundo sueño.) were waking from a deep sleep.)

CENTELLAS: ¿Quién va? Who is it?

DON JUAN: Levantad. Get up.

AVELLANEDA: ¿Qué pasa? What's happening now? ¡Hola, sois vos! Hello, it's you!

CENTELLAS: ¿Dónde estamos? Where are we?

DON JUAN: Caballeros, claros vamos. Gentlemen, well, let me see, Yo os he traído a mi casa I brought you to my house y temo que a ella al venir, and I'm afraid that once here con artificio apostado, having craftily made a bet, habéis sin duda pensado you doubtless planned yet a costa mía reír; to mock my groundless fears, mas basta ya de ficción but have done with this, it's absurd y concluid de una vez. end it for once and all.

CENTELLAS: Yo no os entiendo. Good God! I don't understand

AVELLANEDA: ¡Pardiez! at all. Tampoco yo. Me neither.

DON JUAN: En conclusión, Then, you have not heard ¿nada habéis visto ni oído? or seen it, either of you?

AVELLANEDA Y CENTELLAS ¿De qué? Seen what?

DON JUAN: No finjáis ya más. Don't pretend any more.

CENTELLAS: Yo no he fingido jamás, I haven't pretended at all, señor don Juan. Don Juan.

DON JUAN: ¡Habrá sido! It must have been true! realidad! ¿Contra Tenorio They strive against Tenorio, las piedras se han animado, the stones themselves come alive, y su vida han acotada and set limits to his life, con plazo tan perentorio? for such a brief moment though? Hablad, pues, por compasión. Speak then from your compassion.

CENTELLAS: ¡Voto va Dios! ¡Ya comprendo I swear to God! Now I understand lo que pretendéis! what you claim,

DON JUAN: Pretendo and I demand que me deis una razón that you give me a reason de lo que ha pasado aquí, for what happened here, recently, señores, o juro a Dios gentlemen, or I swear to God, oh, que os haré ver a los dos I'll make the two of you show que no hay quien me burle a mí. no one can make fun of me.

CENTELLAS: Pues ya que os Since you're now serious formalizáis, don Juan, sabed que sospecho Don Juan, know I suspect que vos la burla habéis hecho that you're the one in fact de nosotros. who played a trick on us.

DON JUAN: ¡Me insultáis! You insult me!

CENTELLAS: No, por Dios; mas si No, by God, but if you cerrado seguís en que aquí han venido insist on phantoms again fantasmas, lo sucedido come, let me tell you how I explain oíd cómo me he explicado. to myself what's really true. Yo he perdido aquí del todo I completely lost consciousness, los sentidos, sin exceso and I explain, I say, de ninguna especie, y eso the whole thing in this way lo entiendo yo de este modo. since it was no drunken excess.

DON JUAN: A ver, decídmelo pues. Fine, well tell me then.

CENTELLAS: Vos habéis compuesto en vino, You introduced in the drink semejante desatino some kind of madness I think para encajarnos después. to fool us, as and when.

DON JUAN: ¡Centellas! Centellas!

CENTELLAS: Vuestro valor In order to show al extremo por mostrar, your extreme courage and more convidasteis a cenar you invited the Comendador con vos al Comendador. to dine with you also. Y para poder decir And in order to be able to say que a vuestro convite exótico that he attended your feast asistió, con un narcótico you gave us drugs at least nos habéis hecho dormir. to make us slumber away. Si es broma, puede pasar, It it's a joke, forget it, mas a ese extremo llevada, but carried to those extremes ni puede probarnos nada, it proves nothing, it seems, ni os la hemos de tolerar. nor will we tolerate it.

AVELLANEDA: Soy de la misma My opinion's the same. opinión.

DON JUAN: ¡Mentís! You lie!

CENTELLAS: Vos. No, you.

DON JUAN: Vos, capitán. You, my man.

CENTELLAS: Esa palabra, don Juan... Ah, that word, Don Juan.....

DON JUAN: La he dicho de corazón. I spoke from my heart again. Mentís; no son a mis bríos You lie: my courage is fine menester falsos portentos, it requires no false proof, porque tienen mis alientos because the best proof is the truth su mejor prueba en ser míos. of its being mine.

AVELLANEDA Y CENTELLAS: Veamos. Lets see. (Ponen mano a sus espadas.) (They put their hands to their swords.)

DON JUAN: Poned a tasa Restrain your fury, please, vuestra furia y vamos fuera, until we step outside no piense después cualquiera so no one will think you died que os asesiné en mi casa. in my house, but in the street.

AVELLANEDA: Decís bien... Mas somos dos. You speak rightly. ...But we are two.

CENTELLAS: Reñiremos, si os fiáis, We'll duel, if you agree, el uno del otro en pos. one after the other, serially.

DON JUAN: O los dos, como queráis. Or I'll fight both of you

CENTELLAS: ¡Villano fuera, por Dios! By God, that's villainy! Elegid uno, don Juan, Choose one of us, Don Juan, por primero. to go first.

DON JUAN: Sedlo vos. Then, you are the man.

CENTELLAS: Vamos. Let's go.

DON JUAN: Vamos, capitán. Then go before me.

FIN DEL ACTO SEGUNDO END OF THE SECOND ACT

ACTO TERCERO ACT THREE

MISERICORDIA DE DIOS Y APOTEOSIS GOD'S MERCY AND LOVE'S APOTHEOSIS

DEL AMOR (Panteón de la familia Tenorio. (The Tenorio family pantheon. As Como estaba en el acto primero de it was in the first act of the la segunda parte, menos las second part, except the statues of estatuas de doña Inés y de don Doña Inés and Don Gonzalo are not Gonzalo, que no están en su lugar.) in their places.)

ESCENA PRIMERA SCENE I

(Don Juan, embozado y distraído, (Don Juan, muffled to the eyes and entra en la escena lentamente:) distraught, enters the stage slowly.)

DON JUAN: Culpa mía no fue: delirio insano It wasn't my fault, some inflammation me enajenó la mente acalorada. drove my fevered mind mad. Necesitaba víctimas mi mano My hand needed victims, I had que inmolar a mi de desesperada, to sacrifice them, in my desperation, y al verlos en mitad de mi camino and those at the heart of my course, I see presa les hice allí de mi locura. I made prisoners of my insanity. ¡No fui yo, vive Dios! ¡Fue su It wasn't me, I swear! It was destino! destiny! Sabían mi destreza y mi ventura. They knew my luck and ability. ¡Oh! Arrebatado el corazón me Oh! I feel my heart seized by siento por vértigo infernal..., mi alma an infernal dizziness... my soul perdida va cruzando el desierto de la vida is crossing life's desert without a goal, cual hoja seca que arrebata el like a dry leaf whirled through the viento. sky. Dudo..., temo..., vacilo..., en mi I doubt... I fear....I sway... in cabeza my head siento arder un volcán..., muevo a volcano burns...without will, my la planta foot sin voluntad, y humilla mi grandeza moves, my greatness is anything but, un no sé qué de grande que me bowed before some great unknown espanta. dread. (Un momento de pausa.) (A moment's pause) ¡Jamás mi orgullo concibió que My pride never dreamed there could hubiere be nada más que el valor...! Que se any virtue but courage! I thought aniquila no less el alma con el cuerpo cuando muere that the soul was destroyed with the flesh, creí..., mas hoy mi corazón vacila. ...but today my heart wavers in me. ¡Jamás creí en fantasmas...! I never believed in ghosts...! No! ¡Desvaríos! Mas del fantasma aquel, pese a mi But despite my courage, I hear aliento, stone feet los pies de piedra caminando siento of that phantom walking, on every street, por doquiera que voy, tras de los behind me, wherever I go. míos. ¡ Oh! Y me trae a este sitio And a power that's irresistible irresistible misterioso poder... brings me to this place... (Levanta la cabeza y ve que no (He raises his head and sees that está en el pedestal la estatua de the statue of Don Gonzalo is not on don Gonzalo.) the pedestal.) ¡Pero qué veo! But what do I see! Falta de allí su estatua...! Sueño His statue is missing there...! horrible, Horrible déjame de una vez... No, no te dream, once and for all.. I don't creo. believe. Sal, huye de mi mente fascinada, Leave my dazed mind and flee fatídica ilusión..., estás en vano gloomy illusion.....in vain con pueriles asombros empeñada you insist on childish alarms again en agotar mi aliento sobrehumano. to quell superhuman bravery. Si todo es ilusión, mentido sueño, If all is illusion, lying dreams, nadie me ha de aterrar con no one scares me with tricks of trampantojos; their making si es realidad, querer es necio while appeasement, if it's as it empeño seems, aplacar de los cielos los enojos. of Heaven's, a foolish undertaking. No; sueño o realidad, del todo No: dream or reality, I long to try, anhelo vencerle o que me venza; y si to conquer it all, lest it conquer piadoso me; busca tal vez mi corazón el cielo, and, if my heart is sought on high, que le busque más franco y may it be frankly and generously. generoso. La efigie de esa tumba me ha The effigy from that tomb asked me invitado a venir a buscar prueba más cierta to come and seek a proof most certain de la verdad en que dudé of the truth which I've doubted obstinado... obstinately. Heme aquí, pues: Comendador, Here I am, then Comendador, rise despierta. again! (Llama al sepulcro del Comendador. (He knocks on the tomb of the Este sepulcro se cambia en una Comendador. This sepulchre turns mesa que parodia horriblemente la into a table that horribly parodies mesa en que cenaron en el acto the table at which Don Juan, anterior

don Juan, Centellas y Centellas and Avellaneda dined in Avellaneda. En vez de las the previous act. Instead of the guirnaldas que cogían en garlands that caught up his pabellones sus manteles, de sus tablecloths in ruffles, of flowers flores y lujoso servicio, and ostentatious table settings, culebras, huesos y fuego, etc. (A there are snakes, bones, fire, etc. gusto del pintor.) Encima de esta (According to the taste of the set mesa aparece un plato de ceniza, designer.) On top of this table una copa de fuego y un reló de appears a plate of ashes, a goblet arena. Al cambiarse este sepulcro, of fire and an hourglass. When this todos las demás se abren y dejan grave changes, all the rest open up paso a las osamentas de las and give way to the skeletons of personas que se suponen enterradas the people supposed to be buried in en ellos, envueltas en sus them, wrapped in their shrouds. sudarios. Sombras, espectros y Shades, spectres and spirits espíritus pueblan el fondo de la populate the background of the escena. La tumba de doña Inés stage. The tomb of Doña Inés stays permanece.) the same.)

ESCENA II SCENE II

(Don Juan, La estatua de don (Don Juan, The statue of Don Gonzalo, las sombras) Gonzalo, the spirits)

ESTATUA: Aquí me tienes, don Juan, Here I am then, Don Juan, y he aquí que vienen conmigo and here in the company los que tu eterno castigo of those who call on God, you see, de Dios reclamando están. for your eternal punishment, as man.

DON JUAN: ¡Jesús! Oh, Jesus!

ESTATUA: ¿Y de qué te alteras, And why are you troubled, then, si nada hay que a ti te asombre, if nothing can frighten you y para hacerte eres hombre and you're man enough to make a few platos con sus calaveras? bowls of skulls, again?

DON JUAN: ¡Ay de mi! Woe is me!

ESTATUA: ¿Qué? ¿El corazón What? Your heart te desmaya? grows faint?

DON JUAN: No lo sé; I don't know concibo que me engañé: I realize I was wrong: oh no son sueños... ¡ellos son! they're not dreams...they're not art! (Mirando a los espectros.) (Looking at the spectres.) Pavor jamás conocido Fear, never known before to me el alma fiera me asalta, overwhelms my fierce soul, y aunque el valor no me falta, and while I never lack courage, I know me va faltando el sentido. my senses are failing me.

ESTATUA: Eso es, don Juan, que se That is because, Don Juan va concluyendo tu existencia, your existence is at an end, y el plazo de tu sentencia and the judgement to which you tend está cumpliéndose ya. is now already at hand.

DON JUAN: ¿Qué dices? What do you mean?

DON GONZALO: Lo que hace poco What a while ago que doña Inés te avisó, Doña Ines warned you of, lo que te he avisado yo, what I too warned you of, y lo que olvidaste loco. and you did not wish to know. Mas el festín que me has dado But the place you set for me debo volverte, y así I must set for you, llega, don Juan, que yo aquí here you are, Don Juan, I too cubierto te he preparado. have prepared a place you see.

DON JUAN: ¿Y qué es lo que ahí me And what is it you have for me das? there?

DON GONZALO: Aquí fuego, allí Here ashes, and there the fire. ceniza.

DON JUAN: El cabello se me eriza. My hair stands on end, a pyre!

ESTATUA: Te doy lo que tú serás. I show you what you shall be.

DON JUAN: ¡Fuego y ceniza he de I'm to be ashes and flame! ser!

ESTATUA: Cual los que ves en redor: Like those you see around you en eso para el valor, that's how courage, youth too, la juventud y el poder. and power, end all the same.

DON JUAN: Ceniza, bien; ¡pero Ashes, that's so. But fire! fuego!

DON GONZALO: El de la ira omnipotente That of all-powerful anger, you see do arderás eternamente where you'll burn eternally por tu desenfreno ciego. for your blind, unbridled desire.

DON JUAN: ¿Conque hay otra vida más So there is another life, then, y otro mundo que el de aquí? and another world beyond this? Conque es verdad, ¡ay de mí!, What I never believed in exists! lo que no creí jamás? Woe is me, once again! ¡Fatal verdad que me hiela A fatal truth that chills la sangre en el corazón! the blood itself in my veins! Verdad que mi perdición A truth that only makes plain solamente me revela. my perdition, and all my ills. ¿Y ese reló? And that hourglass?

DON GONZALO: Es la medida It measures, one by one de tu tiempo. The moments left.

DON JUAN: ¡Expira ya! It's done!

ESTATUA: Sí: en cada grano se va With each grain a moment's gone un instante de tu vida. of your life under the sun.

DON JUAN: ¿ Y ésos me quedan no And there are no more to fall? más?

ESTATUA: Sí. No.

DON JUAN: ¡Injusto Dios! Tu poder Unjust God! You show me me haces ahora conocer your power now, I see, cuando tiempo no me das when there's no time at all de arrepentirme. to repent.

ESTATUA: Don Juan, Don Juan, un punto de contrición one moment of contrition da a un alma la salvación, even in your position y ese punto aún te le dan... gives a soul salvation.....

DON JUAN: ¡Imposible! ¡En un Impossible! In a moment's flight momento borrar treinta años malditos to wipe out thirty years, de crímenes y delitos!: whose sin and crime appears!

ESTATUA: Aprovéchale con tiento, Take care, for you might. (Tocan a muerto.) (The tolling for the dead is heard.) porque el plazo va a expirar. The term is about to expire y las campanas doblando and the bells that you hear ringing por ti están, y están cavando are for you, and they are digging la fosa en que te han de echar. the ditch where you'll lie in the mire. (Se oye a lo lejos el oficio de (Far off is heard the office of the difuntos.) dead.)

DON JUAN: ¿Conque por mi doblan? So they are ringing for me?

DON GONZALO: Sí. The same.

DON JUAN: ¿Y esos cantos funerales? And those funereal chants?

ESTATUA: Los salmos From whence penitenciales, rise psalms of penitence: que están cantando por ti. they are singing your name. (Se ve pasar por la izquierda luz (Lighted torches can be seen de hachones, y rezan dentro.) passing by on the left, and prayers are heard off stage.)

DON JUAN: ¿Y aquel entierro que And that burial procession whose pasa? feet go by?

DON GONZALO: Es el tuyo. Is yours.

DON JUAN: ¡Muerto yo! I'm dead!

DON GONZALO: El capitán te mató The Captain killed you, instead, a la puerta de tu casa. at the door of your house, in the street.

DON JUAN: Tarde la luz de la fe Too late faith's perfect light penetra en mi corazón, pierces my heart, and brings pues crímenes mi razón with sweet illuminings a su luz tan sólo ve. my crimes to reason's sight. Los ve... y con horrible afán, Sight...of horrible pain, porque al ver su multitud since to see their multitude ve a Dios en la plenitud is to see the plenitude de su ira contra don Juan. of God's anger with Don Juan. ¡Ah! Por doquiera que fui Oh! Wherever I strayed la razón atropellé, I trampled on right, la virtud escarnecí, virtue, the jade, a la justicia burlé, I scorned, tricked the might y a las mujeres vendí. of the law, and women, betrayed. Yo a las cabañas bajé, I went down the alleys. yo a los palacios subí, and up to the palaces, yo los claustros escalé, boarded cloisters, like galleys, pues tal mi vida fue, ... no, no pardon for me. no, no hay perdón para mí. since my life was such as this, Mas ¡ah! estáis todavía But you are still here for me, (A los fantasmas.) (To the phantoms) con quietud tan pertinaz! with such enduring quietude! Dejadme morir en paz Let me die in peace, in solitude a solas con mi agonía. alone in my agony. Mas con esa horrenda calma, But with that awful silence, ¿qué me auguráis, sombras fieras? what do you augur, fierce spirits? ¿Qué esperan de mí? What do you want from me? (A la estatua de Don Gonzalo.) (To the statue of Don Gonzalo)

ESTATUA: Que mueras, That you cease to exist, para llevarse tu alma. your soul forget this existence. Y adiós, don Juan; ya tu vida And so goodbye Don Juan, the bells toca a su fin, y pues vano toll the end of your being, and todo fue, dame la mano since all was in vain, give me your hand, en señal de despedida. as a token of our farewells.

DON JUAN: ¿Muéstrasme ahora Now your friendship, at the end? amistad?

ESTATUA: Si; que injusto fui Yes, for I was unjust to you, contigo, y Dios me manda tu amigo and God now orders me to volver a la eternidad. return to eternity as your friend.

DON JUAN: Toma, pues. Here then.

DON GONZALO: Ahora, don Juan, Don Juan, now pues desperdicias también that you even throw away el momento que te dan, the last moment allowed, conmigo al infierno ven. come with me to hell, today.

DON JUAN: ¡Aparta, piedra fingida! Deceiving stone, take flight! Suelta, suéltame esa mano, Let go, let go of my hand, que aun queda el último grano for the last grain still hangs en el reló de mi vida. in the hourglass of my life. Suéltala, que si es verdad Let go: if it's true for me que un punto de contrición that a moment of contrition da a un alma la salvación can yield a soul's salvation de toda una eternidad, for all eternity, yo, Santo Dios, creo en Ti; Holy God, I believe in You: may it be si es mi maldad inaudita, though my sins are mighty, I admit, tu piedad es infinita... that your mercy indeed is infinite... ¡Señor, ten piedad de mí! Lord, have mercy on me!

ESTATUA: Ya es tarde. It is..... too late. (Don Juan se hinca de rodillas, (Don Juan falls to his knees, tendiendo al cielo la mano que le stretching the hand the statue deja libre la estatua. Las leaves free to heaven. At the sombras, esqueletos, etc., van a moment the shades, skeletons, etc. abalanzarse sobre él, en cuyo are about to fall on him, the tomb momento se abre la tumba de doña of Doña Inés opens and she appears. Inés y aparece ésta. Doña Inés Doña Inés takes the hand Don Juan toma la mano que don Juan tiende stretches toward heaven.) al cielo.)

ESCENA III SCENE III

(Don Juan, la estatua de don (Don Juan, the statue of Don Gonzalo, doña Inés, sombras, etc.) Gonzalo, Doña Inés, spirits, etc.)

DOÑA INÉS: ¡No! Heme ya aquí, No! For I am here, don Juan; mi mano asegura Don Juan; my hand preserves esta mano que a la altura your outstretched hand, that serves tendió tu contrito afán, to lift your heart on high, and y Dios perdona a don Juan God forgives Don Juan, al pie de mi sepultura. by my grave, as love deserves.

DON JUAN: ¡Dios clemente! ¡Doña Merciful God! Doña Ines! Inés!

DOÑA INÉS: Fantasmas, desvaneceos: Phantoms, vanish below! su fe nos salva..., volveos His faith saves us.. and so a vuestros sepulcros pues. to your graves again, no less. La voluntad de Dios es: It is the will of God: and yes, de mi alma con la amargura with the astringency of my soul purifiqué su alma impura, I cleansed his impure soul, y Dios concedió a mi afán and God yielded, at my desire, la salvación de don Juan Don Juan's salvation from fire, al pie de la sepultura. by the grave's threshold.

DON JUAN: ¡Inés de mi corazón! Inés, my heart's true passion!

DOÑA INÉS: Yo mi alma he dado por ti I gave my soul for you y Dios te otorga por mí and God grants that it's true tu dudosa salvación. your despaired-of salvation. Misterio es que en comprensión This is a mystery of creation no cabe de criatura, no mortal may comprehend, y sólo en vida más pura and only in that life without end, los justos comprenderán the just shall understand que el amor salvó a don Juan that love has saved Don Juan al pie de la sepultura. before he could descend. Cesad, cantos funerales; Cease, you funeral sounds: (Cesa la música y salmodia.) (The music and psalms cease.) callad, mortuorias campanas; Be still, death's bells on high: (Dejan de tocar a muerto.) (They stop tolling the death bells) ocupad, sombras livianas, fickle shadows, occupy vuestras urnas sepulcrales; your sepulchral mounds. (Vuelven los esqueletos a sus (The skeletons return to their tumbas, que se cierran.) tombs that close.) volved a los pedestales, On your pedestals, be found, animadas esculturas; you living sculptures, soon: (Vuelven las estatuas a sus (The statues return to their lugares.) places.) y las celestes venturas let heavenly fortune en que los justos están in which the just delight empiecen para don Juan begin for Don Juan, in sight en las mismas sepulturas. of his very tomb. (Las flores se abren y dan paso a (The flowers open and reveal varios angelitos que rodean a doña various little angels that surround Inés y a don Juan, derramando Doña Inés and Don Juan, sprinkling sobre ellos flores y perfumes, y on them flowers and perfumes, and al son de la música dulce y lejana at the sound of the sweet far off se ilumina el

teatro con luz de music, the stage lights up with the aurora. Doña Inés cae sobre un light of dawn. Doña Inés falls on a lecho de flores, que quedará a la bed of flowers that remain in view, vista, en lugar de su tumba, que instead of her tomb which desaparece.) disappears.)

ESCENA ULTIMA FINAL SCENE

(Doña Inés, don Juan, los ángeles) (Doña Inés, Don Juan, angels)

DON JUAN: ¡Clemente Dios, gloria a Ti! Merciful God, Glory to You! Mañana a los sevillanos Tomorrow, the Sevillians, aterrará el creer que a manos thinking I fell at my victim's hands, de mis víctimas caí. will be astonished, it's true. Mas es justo; quede aquí But that is just: for eternity, too, al universo notorio may the universe record, men know, que, pues me abre el purgatorio that the God of mercy, here below, un punto de penitencia, who, at the moment of contrition, es el Dios de la clemencia saved my spirit from perdition, el Dios de Don Juan Tenorio. is the God of Don Juan Tenorio. (Cae don Juan a los pies de doña (Don Juan falls at the feet of Doña Inés, y mueren ambos. De sus bocas Inés, and they both die. Their salen sus almas representadas en souls represented by two brilliant dos brillantes llamas, que se flames, leave their mouths and pierden en el espacio al son de la disappear into space accompanied by música. Cae el telón.) the sound of music. The curtain falls.)

(Don Juan, con antifaz, sentado a una (Don Juan, masked, seated at a mesa escribiendo. Buttarelli y table, writing. Buttarelli and Ciutti, a un lado esperando. Al Ciutti, to one side, waiting. As levantarse el telón, se ven pasar por the curtain rises, in the la puerta del fondo máscaras, background one can see through estudiantes y pueblo con hachones, the door at the back people músicas, etc.) wearing masks, students, people with torches, musicians, etc.)

DON JUAN: ¡Cuál gritan esos malditos! How they shout those devils! Pero ¡mal rayo me parta Let me be damned by forked lightning si, en concluyendo la carta , if when this letter I'm writing no pagan caros sus gritos! is done, I don't end their revels! (Sigue escribiendo.) (He continues writing.)

BUTTARELLI: (¡A Ciutti.) (To Ciutti) Buen carnaval. A good Carnival.

CIUTTI: (A Buttarelli.) (To Buttarelli) Buen agosto A good harvest para rellenar la arquilla. for re-filling the coffers.

BUTTARELLI: ¡Quiá! Corre ahora por Sevilla Hey! No fun and plenty of bother poco gusto y mucho mosto. running around in Seville's dust. Ni caen aquí buenos peces, And you don't catch such good fish here, que son casas mal miradas since these inns don't find favour por gentes acomodadas, with gentlemen who are wealthy: y atropelladas a veces. or even, at times, the masses.

CIUTTI: Pero hoy... But today...

BUTTARELLI: Hoy no entra en la cuenta, Is not in the reckoning. se ha hecho buen trabajo. Good work's already been done.

CIUTTI: ¡Chist! Habla un poco más Shhh! Talk a little less loud bajo, then, que mi señor se impacienta pronto. or my master will soon be beckoning.

BUTTARELLI: ¿A su servicio estás? So you're his servant?

CIUTTI: Ya ha un año. For a year.

BUTTARELLI: ¿Y qué tal te sale? And how's it been?

CIUTTI: No hay prior que se me iguale; No abbot to equal me's been seen, tengo cuanto quiero, y más. I've all I ever could want. Tiempo libre, bolsa llena, Good women and good wine, buenas mozas y buen vino. free time, and a full pocket,

BUTTARELLI: ¡Cuerpo de tal, qué My God, what a racket! destino!

CIUTTI: (Señalando a don Juan.) (Pointing to Don Juan) Y todo ello a costa ajena. All paid for by that master of mine.

BUTTARELLI: Rico, ¿eh? He's rich, eh?

CIUTTI: Varea la plata. He's rolling, in brief.

BUTTARELLI: ¿Franco? Generous?

CIUTTI: Como un estudiante. Yes, like a student you see.

BUTTARELLI: ¡Y noble! And noble!

CIUTTI: Como un infante. As every prince should be.

BUTTARELLI: ¡Y bravo! And fierce!

CIUTTI: Como un pirata. As a pirate chief.

BUTTARELLI: ¡Español? A Spaniard?

CIUTTI: Creo que sí. Well, I think so.

BUTTARELLI: ¿Su nombre? His name?

CIUTTI: Lo ignoro, en suma. I don't know, again.

BUTTARELLI: ¡Bribón! ¿Y dónde va? Wretch! Where's he heading?

CIUTTI: Aquí. Here, I know.

BUTTARELLI: Largo plumea. He's been writing a lot.

CIUTTI: Es gran pluma. Well he has a big pen.

BUTTARELLI: ¿Y a quién mil diablos escribe And who's he writing to then tan cuidadoso y prolijo? as carefully and fully as he's done?

CIUTTI: A su padre. To his father.

BUTTARELLI: ¡Vaya un hijo! What a son!

CIUTTI: Para el tiempo en que se vive For the times in which we live, he's an es un hombre extraordinario. extraordinary man. Mas ¡silencio! But: silence!

DON JUAN: (Cerrando la carta.) (Closing the letter) ¡Firmo! y plego. I've signed and sealed it. ¿Ciutti? Ciutti?

CIUTTI: Señor. Sir?

DON JUAN: Este pliego This message, yield it irá dentro del horario to her now, let it appear en que reza doña Inés in the hands of doña Inés, a sus manos a parar. inside her book of prayers.

CIUTTI: ¿Hay respuesta que aguardar? Should I wait for an answer?

DON JUAN: Del diablo con guardapiés From that devil that guards her, que la asiste, de su dueña that attends her, her dueña, que mis intenciones sabe, who knows my every intention, recogerás una llave, you will pick up a key, she'll mention una hora y una seña; a time and a signal, y más ligero que el viento and swift as the wind aquí otra vez. you be back here again.

CIUTTI: Bien está. (Vase.) Fine. (He leaves.)

ESCENA DOS SCENE II.

Doña Ines, Don Juan , Buttarelli Doña Ines, Don Juan , Buttarelli

DON JUAN: Cristófano, vieni quá. Cristófano, vieni quá. (In Italian)

BUTTARELLI: Eccellenenza! Eccellenenza!

DON JUAN: Senti. Senti.

BUTTARELLI: Sento. Sento. Ma ho imparato il castigliano, Ma ho imparato il castigliano, se è più facile al signor se è più facile al signor la sua lingua... la sua lingua...

DON JUAN: (Spanish)Sí, es mejor: (Spanish)Sí, es mejor: lascia dunque il tuo toscano, lascia dunque il tuo toscano, y dime: ¿don Luis Mejía And tell me, has Don Luis Mejía ha venido hoy? been here today?

BUTTARELLI: Excelencia, Excellency, no está en Sevilla. he is not in Sevilla,

DON JUAN: ¿Su ausencia Is he still absent? dura en verdad todavía? Really?

BUTTARELLI: Tal creo. I think so.

DON JUAN: ¿Y noticia alguna And it's right no tienes de él? you've no news of him?

BUTTARELLI: ¡Ah! Una historia Ah, I find me viene ahora a la memoria there's a story coming to mind que os podrá dar... I should tell you....

DON JUAN: ¿Oportuna Shedding light luz sobre el caso? on the case?

BUTTARELLI: Tal vez. Maybe.

DON JUAN: Habla pues. Speak then.

BUTTARELLI: (Hablando consigo mismo.) (Talking to himself) No, no me engaño: No, no, I've just got it right. esta noche cumple el año, the year is up tonight lo había olvidado. I'd forgotten that.

DON JUAN: ¡Pardiez! For God's sake ¿Acabarás con tu cuento? will you start your tale?

BUTTARELLI: Perdonad, señor: estaba Excuse me sir, at once, recordando el hecho. I was thinking of the event.

DON JUAN: ¡Acaba, Out with it, then, because vive Dios!, que me impaciento. I'm getting more than impatient!

BUTTARELLI: Pues es el caso, señor, Well, the story sir, round here que el caballero Mejía is that the gentleman, Mejía por quien preguntáis, dio un día whom you ask about, he I fear en la ocurrencia peor hit on the very worst idea que ocurrírsele podía. that is ever likely to appear.

DON JUAN: Suprime lo al hecho extraño; Skip the extraordinary que apostaron me es notorio idea, it's well known to me, a quién haría en un año as to who in the space of a year, con más fortuna más daño could do more harm with more good luck, Luis Mejía y Juan Tenorio. Juan Tenorio or Luis Mejía.

BUTTARELLI: ¿La historia sabéis? You know the story?

DON JUAN: Entera; In its entirety: por eso te he preguntado that's why I asked por Mejía. for Mejía.

BUTTARELLI: ¡Oh! me pluguiera Oh! What fun que la apuesta se cumpliera, if the bet were done, que pagan bien y al contado. because they pay well, in cash.

DON JUAN: ¿Y no tienes confianza And don't you believe en que don Luis a esta cita Don Luis will keep acuda? his appointment?

BUTTARELLI: ¡Quiá! ni esperanza: Whoa, not a chance: el fin del plazo se avanza the end of the term's at hand y estoy cierto que maldita and I'm sure there's no way la memoria que ninguno a damned soul can say guarda de ello. they remember a thing about it.

DON JUAN: Basta ya. That's enough. Toma. Here!

BUTTARELLI: ¡Excelencia! Your excellency! (Saluda profundamente.) (He bows deeply) ¿Y de alguno And do you know about de ellos sabéis vos? either of them?

DON JUAN: Quizá. Perhaps.

BUTTARELLI: ¿Vendrán, pues? Then they'll come?

DON JUAN Al menos uno; At least one. mas por si acaso los dos but if by chance both bother dirigen aquí sus huellas to direct their footsteps here el uno del otro en pos, one after the other, well tus dos mejores botellas let two best bottles appear prevénles. for them.

BUTTARELLI: Mas... But

DON JUAN:¡Chito...! Adiós. Shhh! Farewell!

ESCENA III SCENE III

Buttarelli ¡Santa MaDoña! De vuelta Holy Mother of God! Mejía y Tenorio están Its Tenorio and Mejía..... sin duda... y recogerán it's certain they'll both reappear los dos la palabra suelta. to pick up where they left off. ¡Oh! sí, ese hombre tiene traza Ah yes, and that man there de saberlo a fondo. seems to know all about it. (Ruido dentro.) (A noise off stage.) Pero But ¿qué es esto? what's this? (Se asoma a la puerta.) (He goes to the door) ¡Anda! ¡El forastero The stranger, está riñendo en la plaza! fighting in the square! ¡Válgame Dios! ¡Qué bullicio! Good Lord, what a rumpus! Cómo se le arremolina How the crowd mills round! chusma...! ¡Y cómo la acoquina Look at him hold the ground él solo...! ¡Puf! ¡Qué estropicio! alone...! My God! What a fuss! ¡Cuál corren delante de él! How they run like hell! No hay duda, están en Castilla There's no doubt they are in Castilla, los dos, y anda ya Sevilla both of them, now poor Sevilla toda revuelta. ¡Miguel! is turned upside down..... Miguel!

ESCENA IV SCENE IV

Buttarelli, Miguel Buttarelli, Miguel

MIGUEL: ¿Che comanda? ¿Che comanda? (More Italian)

BUTTARELLI: Presto, qui Presto, qui servi una tavola, amico: servi una tavola, amico: e del Lacryma più antico e del Lacryma più antico porta due buttiglie. porta due buttiglie.

MIGUEL: Si, Si, signor padron. signor padron.

BUTTARELLI: Micheletto, Micheletto, apparechia in carità apparechia in carità il più ricco que si fa, lo più ricco que si fa, ¡afrettati! ¡afrettati!

MIGUEL: Gia mi afretto, Gia mi afretto, signor padrone. (Vase.) signor padrone. (He goes.)

ESCENA V SCENE V

(Buttarelli, Don Gonzalo) (Buttarelli, Don Gonzalo)

DON GONZALO: Aquí es. Here it is. ¿Patrón? Innkeeper?

BUTTARELLI: ¿Qué se ofrece? May I help you?

DON GONZALO: Quiero I wish hablar con el hostelero. to speak to the innkeeper.

BUTTARELLI: Con él habláis; decid, You are speaking with him. Talk pues. then.

DON GONZALO: ¿Sois Vos? You are he?

BUTTARELLI: Sí, mas despachad, Yes, but quickly, say, que estoy de priesa. since I'm in a hurry.

DON GONZALO: En tal caso In that case look ved si es cabal y de paso and see if this coin is enough esa dobla y contestad. and answer on the way.

BUTTARELLI: ¡Oh, excelencia! Oh Excellency!

DON GONZALO: ¿Conocéis Do you know a don Juan Tenorio? Don Juan Tenorio?

BUTTARELLI: Sí. Yes.

DON GONZALO: ¿Y es cierto que tiene aquí And is it true that he has hoy una cita? a meeting here today?

BUTTARELLI: ¡Oh! ¿seréis Oh! vos el otro? you must be the other one?

DON GONZALO: ¿Quién? Who?

BUTTARELLI: Don Luis. Don Luis.

DON GONZALO: No; pero estar me interesa No, but it interests me en su entrevista. to be at the interview.

BUTTARELLI: Esta mesa You'll see les preparo; si os servís I'm setting a table for them: en esotra colocaros, and if you like I'll place you podréis presenciar la cena here, so you can see, then, que les daré... ¡Oh! será escena the meal I'm serving them. que espero que ha de admiraros. Oh I hope the scene will amaze you.

DON GONZALO: Lo creo. I believe it.

BUTTARELLI: Son sin disputa Without a doubt they remain los dos mozos más gentiles the two most gallant men de España. in Spain.

DON GONZALO: Sí, y los más viles Yes, and the vilest of men también. as well.

BUTTARELLI: ¡Bah! Se les imputa Bah! Again, cuanto malo se hace hoy día; they say that every day here mas la malicia lo inventa, but its malice they invent, pues nadie paga su cuenta since no one pays the rent como Tenorio y Mejía. like Tenorio and Mejía.

DON GONZALO: ¡Ya! Really!

BUTTARELLI: Es afán de murmurar, It's just love of gossip, porque conmigo, señor, because with me, sir ninguno lo hace mejor, no one behaves better, y bien lo puedo jurar. and I can swear to it.

DON GONZALO: No es necesario; mas... It's not necessary, but...

BUTTARELLI: ¿Qué? Yes?

DON GONZALO:Quisiera yo ocultamente I should like to see verlos, y sin que la gente without them seeing me me reconociera. or being recognised.

BUTTARELLI: A fe Faith, que eso es muy fácil, señor. that's very easy, sir. Las fiestas de carnaval Carnival celebrations let al hombre más principal the most important guest permiten, sin deshonor without any real dishonour de su linaje, servirse make very good use of de un antifaz, y bajo él, a mask, and, behind a false face, ¿quién sabe hasta descubrirse who knows, till he takes the lid off, de qué carne es el pastel? what's in the pie he'll taste?

DON GONZALO: Mejor fuera en aposento It would be better if I were contiguo... nearby in another room...

BUTTARELLI: Ninguno cae There are none aquí. here.

DON GONZALO: Pues entonces trae Well then, bring on el antifaz. the mask.

BUTTARELLI- Al momento. Right away, sir.

ESCENA VI SCENE VI

DON GONZALO No cabe en mi corazón I'm sick at heart que tal hombre pueda haber there is such a man y no quiero cometer but I don't want to start con él una sinrazón. a quarrel to plan. Yo mismo indagar prefiero I prefer to find the truth la verdad..., mas a ser cierta for myself, but if the thing la apuesta, primero muerta is certain, I'd rather she were dead que esposa suya la quiero. than he and she were wed. No hay en la tierra interés There's no joy left on earth que si la daña me cuadre; if the wickedness is done: primero seré buen padre, I'll be a good gentleman, buen caballero después. but a good father first. Enlace es de gran ventaja, Its a good match I agree, mas no quiero que Tenorio but I don't wish Tenorio del velo del desposorio to cut a shroud of sorrow la recorte una mortaja. for her, from her finery.

ESCENA VII SCENE VII

(Don Gonzalo, (Don Gonzalo and Buttarelli, que trae un antifaz.) Buttarelli, who brings a mask.)

BUTTARELLI: Ya está aquí. Here it is.

DON GONZALO: Gracias, patrón: Thanks, my man: ¿tardarán mucho en llegar?. will they be long arriving?.

BUTTARELLI: Si vienen no han de If they come, there'll be no tardar: delaying: cerca de las ocho son. It's almost eight, at hand.

DON GONZALO: ¿Esa es hora señalada? Is that the time they said?

BUTTARELLI: Cierra el plazo, y es The same (it's nearly time) asunto de perder quien no esté a punto who's not here at first chime de la primer campanada. of the bell, gets knocked on the head!

DON GONZALO: Quiera Dios que sea una chanza, May God will what I fear y no lo que se murmura. is not true, the things they're saying.

BUTTARELLI: No tengo aún por muy segura Well I'm still not laying de que cumplan, la esperanza; a bet that they'll be here, pero si tanto os importa but if it's such a bother, lo que ello sea saber, if it matters so much to you, pues la hora está al caer, the hour is almost due, la dilación es ya corta. the waiting's nearly over.

DON GONZALO: Cúbrome, pues, y me siento. I'll put on the mask and sit down. (Se sienta en una mesa a la derecha y (He sits at a table to the right se pone el antifaz.) and puts on the mask)

BUTTARELLI: (Curioso el viejo me tiene (The old man puzzles me: del misterio con que viene his coming here's a mystery, y no me quedo contento and I'll be hanging around hasta saber quién es él.) till I know who he is.) (Limpia y trajina, mirándole de (He cleans, and clears up, reojo.) looking at him out of the corner of his eye.)

DON GONZALO: (¡Que un hombre como yo tenga (That a man such as I has to stay que esperar aquí y se avenga and agree to play con semejante papel! such a role! En fin, me importa el sosiego But my house's tranquility de mi casa y la ventura is important to me, and what's more de una hija sencilla y pura, my daughter, who's simple and pure: y no es para echarlo a juego.) I'll not risk her destiny.)

ESCENA VIII SCENE VIII

(Don Gonzalo, Buttarelli; Don Diego, la puerta del fondo.)

DON DIEGO: La seña está terminante; The sign is right. It's the inn. aquí es: bien me han informado; It's here, according to plan. llego, pues. I've arrived.

BUTTARELLI: ¿Otro embozado? Another masked man?

DON DIEGO: ¡Ah de esta casa! Ah, this is the place!

BUTTARELLI: Adelante. Come in.

DON DIEGO: ¿La hostería del Laurel? Is this it, The Laurel Inn?

BUTTARELLI: En ella estáis, caballero. Sir, you are in it, you see.

DON DIEGO: ¿Está en casa el hostelero? And the innkeeper, is he in?

BUTTARELLI: Estáis hablando con él. You are talking to him.

DON DIEGO: ¿Sois vos Buttarelli? You're Buttarelli?

BUTTARELLI: Yo. I am.

DON DIEGO: ¿Es verdad que hoy tiene aquí Is it true that Tenorio has Tenorio una cita? an appointment here today?

BUTTARELLI: Sí. Yes.

DON DIEGO: ¿Y ha acudido a ella ? And has he dared to attend?

BUTTARELLI: No. No.

DON DIEGO: ¿Pero acudirá? But will he come?

BUTTARELLI: No sé. I don't know.

DON DIEGO: ¿Le esperáis vos? Do you expect him?

BUTTARELLI: Por si acaso Probably he'll come, venir le place. if it pleases him.

DON DIEGO: En tal caso In that case yo también le esperaré. I'll wait for him too. (Se sienta en el lado opuesto a don (Sits on the side opposite to Gonzalo) Don Gonzalo.)

BUTTARELLI: ¿Que os sirva vianda alguna Shall I serve you something while queréis mientras? you wait?

DON DIEGO: No: tomad. No. Here. (Dale dinero.) (He gives him money)

DON DIEGO: Y excusad And forget...

BUTTARELLI: ¡Excelencia! Excellency!

DON DIEGO: conversación importuna. .....the unnecessary conversation.

BUTTARELLI: Perdonad. I'm sorry.

DON DIEGO: Vais perdonado: You're forgiven. dejadme pues. Go on, then.

BUTTARELLI: (¡Jesucristo! (Jesus Christ! En toda mi vida he visto In all the days of my life hombre más malhumorado.) I've not seen a worse disposition.).

DON DIEGO: (¡Que un hombre de mi linaje (That a man of my descent descienda a tan ruin mansión! should stoop to such a game. Pero no hay humillación But for a father there's no shame a que un padre no se baje to which he'll not consent por un hijo. Quiero ver for a son. I need to see, por mis ojos la verdad with my eyes, the reality, y el monstruo de liviandad this monster of depravity, a quien pude dar el ser.) that I have caused to be.) (Buttarelli que anda arreglando (Buttarelli, who is going around sus trastos, arranging his things, contempla desde el fondo contemplates Don Gonzalo and Don Diego a don Gonzalo y a don Diego, from the back. que permanecerán embozados y en They remain masked and in silencio.) silence.)

BUTTARELLI: ¡Vaya un par de hombres de piedra! What a pair of stony-faced men! Para éstos sobra mi abasto; My supplies are more than enough mas, ¡pardiez!, pagan el gasto but Lord, they're paying for stuff que no hacen, y así se medra. not ordered, so much the better then.

ESCENA IX SCENE IX

(Buttarelli, Don Gonzalo, Don Diego, (Buttarelli, Don Gonzalo, Don El capitán Diego, Captain Centellas, dos caballeros, Avellaneda) Centellas, two gentlemen, Avellaneda)

AVELLANEDA: Vinieron, y os aseguro They came, and I assure you que se efectuará la apuesta. the bet will be carried through.

CENTELLAS Entremos, pues. ¡Buttarelli! Lets go in then. Buttarelli!

BUTTARELLI: Señor capitán Centellas, Captain Centellas, ¿vos por aquí? You too?

CENTELLAS Sí, Cristófano. Yes Cristófano. ¿Cuándo aquí, sin mi presencia, When was anything staged, tuvieron lugar las orgías that has come to light in this age que han hecho raya en la época? without my being present?

BUTTARELLI: Como ha tanto tiempo ya Why haven't I seen you que no os he visto. for such a long time then?

CENTELLAS Las guerras The wars of the Emperor, del Emperador, a Túnez in Tunis, took me away, me llevaron; mas mi hacienda but my affairs bring me me vuelve a traer a Sevilla; back to Seville again, y, según lo que me cuentan, according to what they say, llego lo más a propósito I've here at just the right time para renovar añejas to renew all the old lines amistades. Conque apróntanos of friendship. So, bring us now luego unas cuantas botellas, some bottles right away y en tanto que humedecemos and while we take a drop, la garganta, verdadera give us a true account relación haznos de un lance of a thing about which sobre el cual hay controversia. there's a great deal of lather.

BUTTARELLI: Todo se andará, mas antes It will be done, but first, dejadme ir a la bodega. let me go to the wine cellar.

VARIOS: Sí, sí. Well, of course!

ESCENA X SCENE X

(Dichos, menos Buttarelli) (The same minus Buttarelli)

CENTELLAS: Sentarse, señores, Sit down gentlemen. y que siga Avellaneda Let Avellaneda continue con la historia de don Luis. with the story of Don Luis.

AVELLANEDA: No hay ya más que decir de ella There's no more to tell of it sino que creo imposible except, that I think it's impossible que la de Tenorio sea for Tenorio to be the worse devil más endiablada, y que apuesto and I bet on por don Luis. don Luis.

CENTELLAS: Acaso pierdas. Perhaps you'll lose. Don Juan Tenorio se sabe Don Juan Tenorio is known que es la más mala cabeza as the most evil character del orbe, y no hubo hombre al in the world, and there's no man que aventajarle pudiera who can get the better of him con sólo su inclinación; if he's so inclined, conque ¿qué hará si se empeña? so what might he do if he made an effort?

AVELLANEDA: Pues yo sé bien que Mejía Well, I know well that Mejía las ha hecho tales, que a ciegas has done such deeds se puede apostar por él. I can blindly wager on him.

CENTELLAS Pues el capitán Centellas Well, captain Centellas pone por don Juan Tenorio bets everything he has cuanto tiene. on Don Juan Tenorio.

AVELLANEDA: Pues se acepta It's accepted on Don Luis' behalf, por don Luis, que es muy mi amigo. for he's very much my friend.

CENTELLAS: Pues todo en contra se arriesga; I'm risking all on the contrary, porque no hay como Tenorio since there's no other man otro hombre sobre la tierra, like Tenorio on this earth, y es proverbial su fortuna and his fortune is proverbial y extremadas sus empresas. and his deeds are stupendous.

ESCENA XI SCENE XI

(Dichos, Buttarelli, con botellas) (The same: Buttarelli with bottles.)

BUTTARELLI: Aquí hay Falerno, Borgoña, Here is Falerno, Burgundy, Sorrento. Sorrento.

CENTELLAS De lo que quieras Serve what you want sirve, Cristófano, y dinos: Cristófano, and tell us, ¿qué hay de cierto en una apuesta what's the truth about the bet por don Juan Tenorio ha un año made between Don Juan Tenorio y don Luis Mejía hecha? and Luis Mejía a year ago?

BUTTARELLI: Señor capitán, no sé Captain, I don't know tan a fondo la materia the matter well enough que os pueda sacar de dudas, to erase all your doubts, pero diré lo que sepa. but I'll tell you what I know.

VARIOS: Habla, habla. Tell: tell!

BUTTARELLI: Yo, la verdad, Honestly, aunque fue en mi casa mesma though it was in my own inn la cuestión entre ambos, como that the question arose between them, pusieron tan larga fecha as they set such a far-off date a su plazo, creí siempre for the bet, I always thought que nunca a efecto viniera; it would never come about, así es, que ni aun me acordaba which explains why I didn't remember de tal cosa a la hora de ésta. a thing about it till now. Mas esta tarde, sería But this afternoon, it must have been al anochecer apenas, scarcely before twilight, entróse aquí un caballero a gentleman came in here pidiéndome que le diera asking me to give him recado con que escribir materials for writing una carta: y a sus letras a letter: and he attending only atento no más, me dio to his writing, I had time tiempo a que charla metiera to strike up a conversation con un paje que traía, with a servant that he brought, paisano mío, de Génova. from my country, from Genoa. No saqué nada del paje, I got nothing from the servant que es, por Dios, muy brava pesca; who, my God, is a slippery fish: mas cuando su amo acababa but when his master finished su carta, le envió con ella the letter, he sent him with it a quien iba dirigida: to the person it addressed. el caballero en mi lengua The gentleman spoke my language me habló y me pidió noticias and asked for information de don Luis. Dijo que entera. about Don Luis. He said sabía de ambos la historia, he knew the two of them que tenía certeza and that he was certain de que al menos uno de ellos that at least one of them acudiría a la apuesta. would show up for the wager. Yo quise saber más de él, I tried to find more about him mas púsome dos monedas but he put two gold coins de oro en la mano diciéndome into my hand and told me así, como a la deshecha: as if by the way, "Y por si acaso los dos "And if by chance the two al tiempo aplazado llegan, arrive at the given time, ten prevenidas para ambos have prepared for both tus dos mejores botellas". your two best bottles of wine." Largóse sin decir más, He left without saying more, yo, atento a sus monedas, I, intent on his coins, les puse en el mismo sitio set the table in the same spot donde apostaron, la mesa. where they made the wager. Y vedla allí con dos sillas, And you can see it there, with two chairs, dos copas y dos botellas. two glasses and two bottles.

AVELLANEDA: Pues señor, no hay que dudar; Well sir, there's no doubt era don Luis. it was Don Luis.

CENTELLAS: Don Juan era. It was Don Juan.

AVELLANEDA: ¿Tú no le viste la cara? Didn't you see his face?

BUTTARELLI: ¡Si la traía cubierta He had it covered con un antifaz! with a mask.

CENTELLAS Pero, hombre, Good Lord man, ¿tú a los dos no les recuerdas? Don't you recall the two of them? ¿no sabes distinguir Can't you make out a las gentes por sus señas who someone is by their actions lo mismo que por sus caras? as well as by their face?

BUTTARELLI: Pues confieso mi torpeza; I confess my stupidity, no le supe conocer at not being able to recognize him, y lo procuré de veras. because I really tried. Pero silencio. But, be quiet.

AVELLANEDA: ¿Qué pasa? What's happening?

BUTTARELLI: A dar el reló comienza The chimes are beginning to strike los cuartos para las ocho. for eight o'clock. (Dan.) (The clock strikes.)

CENTELLAS: Ved, ved la gente que se entra. Look, see the people coming in.

AVELLANEDA: Como que está de este lance That's because all of Seville curiosa Sevilla entera. is curious about this affair. (Se oyen dar las ocho; varias (Eight o'clock is heard, several personas entran y se reparten en people enter and disburse in silencio por la escena; al dar la silence around the stage; as the última campanada, don Juan, con last chime is struck, don Juan, antifaz, se llega a la mesa que ha masked, approaches the table preparado Buttarelli en el centro del that Buttarelli has prepared in escenario, y se dispone a ocupar una the centre of the stage; and de las dos sillas que están delante gets ready to occupy one of the de ella. Inmediatamente después de two chairs in front of it. él, entra don Luis también con Immediately after him don Luis antifaz y se

dirige a la otra. Todos also enters masked and proceeds los miran) to the other. Everyone watches them.)

ESCENA XII SCENE XII

(Don Diego, Don Gonzalo, Don Juan, (Don Diego, Don Gonzalo, Don Don Luis, Buttarelli, Centellas, Juan, Don Luis, Buttarelli, Avellaneda, caballeros, curiosos, Centellas, Avellaneda, enmascarados.) gentlemen, onlookers, masqueraders.)

AVELLANEDA: (A Centellas, por don Juan.) (To Centellas, on Don Juan's behalf) Verás aquél, si ellos vienen, You'll see, if they come qué buen chasco que se lleva. what a good joke goes forward.

CENTELLAS: (A Avellaneda, por don Luis.) (To Avellandeda, on Don Luis' behalf) Pues allí va otro a ocupar Well, here comes another one to take la otra silla: ¡uf! aquí es ella. the other chair. Ah, here it is.

DON JUAN: ¿A don Luis.) (To Don Luis) Esa silla está comprada, That chair is taken, hidalgo. my good man.

DON LUIS: (A don Juan.) (To Don Juan) Lo mismo digo, I say the same, hidalgo; para un amigo my good man, I have paid for tengo yo esotra pagada. that one for a friend.

DON JUAN: Que ésta es mía haré I maintain this is mine. notorio.

DON LUIS: Y yo también que ésta es And I also, this is mine. mía.

DON JUAN: Luego sois don Luis Mejía. Then you are Don Luis Mejía.

DON LUIS: Seréis, pues, don Juan Then you must be Don Juan Tenorio. Tenorio.

DON JUAN: Puede ser. Maybe.

DON LUIS: Vos lo decís. You said so.

DON JUAN: ¿No os fiáis? Don't you trust me?

DON LUIS: No. No.

DON JUAN: Yo tampoco. Nor I you.

DON LUIS: Pues no hagamos más el coco. Well, let's not beat around the bush.

DON JUAN: Yo soy don Juan. I am Don Juan. (Quitándose la máscara.) (Taking off the mask)

DON LUIS: Yo don Luis. (Se quita la máscara.) And I Don Luis. (He takes off the mask.) (Se descubren y se sientan. El (They take off their hats and capitán Centellas, Avellaneda, sit down. Captain Centellas, Buttarelli y algunos otros se van a Avellaneda, Buttarelli, and some ellos y les saludan, abrazan y dan la others go up to them and greet mano, y hacen otras semejantes them, embrace and shake hands muestras de cariño y amistad. Don and give other similar signs of Juan y don Luis las aceptan affection and friendship. Don cortésmente.) Juan and Don Luis accept them courteously.)

CENTELLAS ¡Don Juan! Don Juan!

AVELLANEDA: ¡Don Luis! Don Luis!

DON JUAN: ¡Caballeros! Gentlemen!

DON LUIS: ¡Oh amigos! ¿Qué dicha es ésta? My friends, what delight?

AVELLANEDA: Sabíamos vuestra apuesta, We knew of the bet tonight, y hemos acudido a veros. and we came to see you two.

DON LUIS: Don Juan y yo tal bondad Don Juan and I are grateful en mucho os agradecemos. for such kindness from you.

DON JUAN: El tiempo no malgastemos, Lets not waste time Don Luis. don Luis. (A los otros.) Sillas (To the others.) Pull up a pew. arrimad. (A los que están lejos.) (To those further away.) Caballeros, yo supongo Gentlemen, I imagine que a ustedes también aquí the wager brings you, so les trae la apuesta, y por mí on my part I have no a antojo tal no me opongo. objection to such a whim.

DON LUIS: Ni yo: que aunque nada más Nor I, although the game fue el empeño entre los dos, was only between this pair, no ha de decirse por Dios by God, don't imagine I care que me avergonzó jamás. or consider it any shame.

DON JUAN: Ni a mí, que el orbe es Nor I, as all the world knows, testigo de que hipócrita no soy, I am no hypocrite, pues por doquiera que voy since scandal's mixed up in it, va el escándalo conmigo. wherever I choose to go.

DON LUIS: ¡Eh! ¿Y ésos dos no se Wait. Those two there don't llegan a escuchar? Vos. seem to be to listening? You? (Por don Diego y don Gonzalo.) (to Don Diego and Don Gonzalo)

DON DIEGO: Yo estoy bien. This chair is fine.

DON LUIS: ¿Y vos? And you?

DON GONZALO: De aquí oigo también. I can hear from mine.

DON LUIS: Razón tendrán si se niegan. They must be fine, if they won't move. (Se sientan todos alrededor de la (Everyone sits down around the mesa en que están don Luis Mejía y table, at which are seated Don don Juan Tenorio.) Luis Mejía, and Don Juan Tenorio.)

DON JUAN: ¿Estamos listos? Are we all ready?

DON LUIS: Estamos. We are.

DON JUAN: Como quien somos cumplimos. Then let's show all we have been.

DON LUIS: Veamos, pues, lo que Let all that we did be seen. hicimos.

DON JUAN: Bebamos antes. Lets drink first.

DON LUIS: Bebamos. (Lo hacen.) Lets drink. (They do)

DON JUAN: La apuesta fue... The bet was...

DON LUIS: Porque un día Because one day, it's true, dije que en España entera I said that in Spain, no one no habría nadie que hiciera could do, not another man, lo que hiciera Luis Mejía. what Luis Mejía could do.

DON JUAN: Y siendo contradictorio And my opinion, as I breathe, al vuestro mi parecer, was contrary to yours, I fear, yo os dije: "Nadie ha de hacer I told you "No one can come near lo que hará don Juan Tenorio". what Tenorio will achieve." No es así? Isn't that so?

DON LUIS: Sin duda alguna: By the book, y vinimos a apostar and we ended up betting we two quién de ambos sabría obrar which of us would best know how to peor, con mejor fortuna, effect the worst, with the best of luck, en el término de un año, in the space of a single year, juntándonos aquí hoy meeting again today, here, a probarlo. to prove it.

DON JUAN: Y aquí estoy. And here I am.

DON LUIS: Y yo. And I.

CENTELLAS ¡Empeño bien extraño A truly strange undertaking, por vida mía! upon my soul!

DON JUAN: Hablad, pues. Then, come!

DON LUIS: No, vos debéis empezar. No, you open the gate.

DON JUAN: Como gustéis, igual es, As you please, its all one, que nunca me hago esperar. for I never make myself wait. Pues señor, yo desde aquí, Well sir, leaving town, buscando mayor espacio seeking a greater measure, para mis hazañas, di of space for my deeds, I hit on sobre Italia, porque allí Italy, since there a man tiene el placer un palacio. finds the palace of pleasure. De la guerra y del amor The ancient and classical land, antigua y clásica tierra, the country of love and war, y en ella el Emperador, and in it the Emperor. con ella y con Francia en guerra, fighting, at war with France, díjeme: ¿Dónde mejor? I said to myself : 'What more Donde hay soldados hay juego, could I want? Soldiers are good hay pendencias y amoríos. for brawling, and lovers' sprees.' Y, pues, sobre Italia luego And so, now to Italy buscando a sangre y a fuego for blood and fire, fuelling amores y desafíos. love

affairs and duelling. En Roma, a mi apuesta fiel, In Rome, faithful to our bet, fijé entre hostil y amatorio between quarreling and Love's net, en mi puerta este cartel: I posted a sign to let them know: Aquí está don Juan Tenorio 'Here's Don Juan Tenorio, para quien quiera algo de él. for whoever wants to have a go.' De aquellos días la historia I wont relate the story a relataros renuncio: of those days, my recreation, remítome a la memoria I'll leave it to the memory que dejé allí, y de mi gloria that I left there, and my glory podéis juzgar por mi anuncio. you can judge from my declaration. Las romanas caprichosas, The Roman women: capricious, las costumbres licenciosas, their customs: licentious, yo gallardo y calavera, I: a gallant rake ¿quién a cuento redujera who on earth could make mis empresas amorosas? the count of my amorous adventures? Salí de Roma por fin I finally left Rome's eyes, como os podéis figurar, as you can imagine, sadly, con un disfraz harto ruin, in a quite lowly disguise, y a lomos de un mal rocín, on a nag that was hardly a prize, pues me querían ahorcar. since they truly wanted to hang me. Fui al ejército de España, I went to the Spanish army mas todos paisanos míos, but all were my kinsmen, soldados y en tierra extraña, soldiers, and in a strange country, dejé pronto su compaña I soon left their company, tras cinco u seis desafíos. after five or six duels, again. Nápoles, rico vergel Naples, a rich love-garden de amor, del placer emporio, an empire of pleasure, and so vio en mi segundo cartel: it saw my second proclamation: Aquí está don Juan Tenorio, 'Here's Don Juan Tenorio y no hay hombre para él. who has no competition. Desde la princesa altiva From the princess who will not bend a la que pesca en ruin barca, to a fishergirl in a lowly boat, no hay hembra a quien no suscriba; there's no female who does not attend, y a cualquier empresa abarca no enterprise he will not float, si en oro o valor estriba. whether it smacks of gold or valour. Búsquenle los reñidores; Let the quarrelsome ones, cérquenle los jugadores; and the gamblers, come: quien se precie, que le ataje; whoever is proud, let him see Y a ver si hay quien le aventaje if he can take advantage of me, en juego, en lid o en amores. in gaming, in loving, or fighting!' Esto escribí; y en medio año That's what I wrote, and in the half-year que mi presencia gozó that Naples enjoyed my presence there, Nápoles, no hay lance extraño, there was no strange affair, no hay escándalo ni engaño no scandal or fraud, I fear, en que no me hallara yo. towards which I didn't steer. Por dondequiera que fui Wherever I strayed la razón atropellé, I trampled on right, la virtud escarnecí, virtue, the jade, a la justicia burlé, I scorned, tricked the might y a las mujeres vendí. of the law, and women betrayed. Yo a las cabañas bajé, I went down the alleys. yo a los palacios subí, and up to the palaces, yo los claustros escalé, boarded cloisters, like galleys, y en todas partes dejé and wherever I sallied, memoria amarga de mí. left bitter memories, Ni reconocí sagrado, knew nothing holy. ni hubo ocasión ni lugar There was no occasion or place por mi audacia respetado; respected by my audacity, ni en distinguir me he parado nor did I stop, for veracity, al clérigo del seglar. to distinguish a lay from a clerical face. A quien quise provoqué, Any whose wish I detected con quien quiso me batí, I challenged, and any I chose, y nunca consideré and I never once reflected que pudo matarme a mí that any I killed of those aquel a quien yo maté. might have had me dissected. A esto don Juan se arrojó, This is what Don Juan undertook, y escrito en este papel and written on this sheet está cuanto consiguió, is what he made of his luck, y lo que él aquí escribió and what he wrote here, look, mantenido está por él. is vouched for by him, and complete.

DON LUIS: Leed, pues. Read it then.

DON JUAN: No, oigamos antes No, first lets hear news vuestros bizarros extremos, of your extravagant acts, y si traéis terminantes and if you've the proof, vuestras notas comprobantes, that will show us the truth, lo escrito cotejaremos. let's hear the facts.

DON LUIS: Decís bien; cosa es que You speak well, yes, that's right está, don Juan, muy puesta en razón; Don Juan, its said with reason; aunque a mi ver poco irá though in my opinion it's slight, de una a otra relación. any small difference between them.

DON JUAN: Empezad, pues. Begin then.

DON LUIS: Allá va. Here goes. Buscando yo como vos I, like you, searching out a mi aliento empresas grandes, great actions to embrace, dije: ¿Dó iré, ¡vive Dios!, cry 'Where will I go? Good God', I shout de amor y lides en pos, 'if it's love and duels we're about que vaya mejor que a Flandes? Flanders is the place. Allí; puesto que empeñadas Since there are, I'm told, guerras hay, a mis deseos fierce wars there, perfect chances to seize, habrá al par centuplicadas multiplied a hundred fold, ocasiones extremadas to meet my desires for brave and bold de riñas y galanteos. duels and gallantries.' Y en Flandes conmigo di, But in Flanders, unfortunately, mas con tan negra fortuna I had an unlucky run que al mes de encontrarme allí so that within a month, you see, todo mi caudal perdí, I was no longer rich, as formerly, dobla a dobla, una por una. coin by coin, gone, one by one. En tan total carestía Seeing I was in such need mirándome de dineros, of a little ready money, de mí todo el mundo huía; everyone fled from me, mas yo busqué compañia but I sought company, y me uní a unos bandoleros. and joined the banditry. Lo hicimos bien, ¡voto a tal!, We did well, by the devil, y fuimos tan adelante and such a road we went, con suerte tan colosal with such good luck in our revel, que entramos a saco en Gante that we entered and sacked, in Ghent, el palacio episcopal. the bishop's episcopal palace. ¡Qué noche! Por el decoro What a night! To keep the rule de la Pascua, el buen obispo of Easter, the good bishop, the fool, bajó a presidir el

coro, went down to preside, and school y aún de alegría me crispo the choir, and I shiver with joy, can't stop, al recordar su tesoro. when I remember his treasure. Todo cayó en poder nuestro: It all fell to us, at the start, mas mi capitán, avaro, but my greedy captain, at leisure, puso mi parte en secuestro; confiscated my part: reñimos, fui yo más diestro we fought, I had more art, y le crucé sin reparo. I ran him through with pleasure. Juróme al punto la gente His men, then, made me stand capitán, por más valiente. for Captain, I as the better man. Juréles yo amistad franca. I swore to be their friend. Pero a la noche siguiente But the following night I ran, huí, y les dejé sin blanca. left them not a thing in the end. Yo me acordé del refrán And I remembered the proverb, de que quien roba al ladrón 'who robs a thief of his ration ha cien años de perdón, gets a hundred-year pardon', y me arrojé a tal desmán and I carried it out with nerve mirando a mi salvación. looking to my salvation. Pasé a Alemania opulento: I crossed to Germany, now rich, mas un provincial jerónimo, but a provincial clerk hombre de mucho talento, a man of many gifts, me conoció, y al momento recognized and denounced me, me delató en un anónimo. in a note he wrote anonymously. Compré a fuerza de dinero By means of money, I bought la libertad y el papel; the note and my freedom, y topando en un sendero and running across the clerk al fraile, le envié certero on a path, I sent him my thoughts una bala envuelta en él. with a bullet wrapped inside them. Salté a Francia. ¡Buen país! I jumped over to France, a fine place, Y como en Nápoles vos and like you, in Naples, I too puse un cartel en París posted a sign, in Paris, diciendo: Aquí hay un don Luis saying: 'Here is Don Luis que vale lo menos dos. who's worth at least two of you. Parará aquí algunos meses, He'll stay here a few months, then, y no trae más intereses and really his only yen, ni se aviene a más empresas really his only game, is que a adorar a las francesas to adore all the French ladies, y a reñir con los franceses. and fight all the French men.' Esto escribí; y en medio año I wrote this, and in the half-year, que mi presencia gozó that Paris held me dear, París, no hubo lance extaño there was no strange affair, ni hubo escándalo ni daño no scandal or public fear, donde no me hallara yo. in which I did not appear. Mas, como don Juan, mi historia Like don Juan, my story también a alargar renuncio; will be no long creation: que basta para mi gloria its sufficent for my glory la magnífica memoria the truly magnificent memory que allí dejé con mi anuncio. I left by my proclamation. Y cual vos, por donde fui And like you, wherever I strayed la razón atropellé, I trampled on right la virtud escarnecí, and virtue, the jade, a la justicia burlé, I scorned, tricked the might y a las mujeres vendí. of the law, and women betrayed. Mi hacienda llevo perdida I have lost all my property tres veces: mas se me antoja three times: but then I plan reponerla, y me convida to recover it, and marry mi boda comprometida as is customary, con doña Ana de Pantoja. with the lovely Lady Anne. Mujer muy rica me dan, She's a very rich one y mañana hay que cumplir and tomorrow I must take care los tratos que hechos están; to close the deal according to plan, lo que os advierto, don Juan, and I say it to you Don Juan, por si queréis asistir. in case you want to be there. A esto don Luis se arrojó, This, Don Luis undertook, y escrito en este papel and written on this sheet está lo que consiguió, is what he made of his luck y lo que él aquí escribió and what he wrote here, look, mantenido está por él. is vouched for by him, and complete.

DON JUAN: La historia es tan semejante The stories are such a close fit que está en el fiel la balanza; they balance, the scales are equal: mas vamos a lo importante, but lets get to the vital bit que es el guarismo a que alcanza which is the total, the sequel, el papel: conque adelante. how it all sums up; so lets have it.

DON LUIS: Razón tenéis en verdad. You are right. Truly. Aquí está el mío: mirad, Here's mine, I've duly por una línea apartados set out on separate lines traigo los nombres sentados all the names, and the times, para mayor claridad. for clarity, and fully.

DON LUIS: Del mismo modo arregladas I have the accounts in mine mis cuentas traigo en el mío: arranged in just the same way: en dos líneas separadas in two separate lines, los muertos en desafío the men killed in my duels y las mujeres burladas. and the women betrayed. Contad. Count.

DON LUIS: Contad. Count.

DON JUAN: Veinte y tres. Twenty three.

DON LUIS: Son los muertos. A ver vos. Those are the dead men. Now you. ¡Por la cruz de San Andrés! By the cross of Saint Andrew! Aquí sumo treinta y dos. I count thirty-two.

DON JUAN: Son los muertos. They are the men who lost.

DON LUIS: Matar es. A killing.

DON JUAN: Nueve os llevo. I have nine more than you.

DON LUIS: Me vencéis. You've won. Pasemos a las conquistas. Lets move to the conquests.

DON JUAN: Sumo aquí cincuenta y seis. I count fifty-six.

DON LUIS: Y yo sumo en vuestras listas And I'll check your list. setenta y dos. Seventy-two.

DON JUAN: Pues perdéis. So, you lose.

DON LUIS: ¡Es increíble, don Juan! That's incredible, don Juan!

DON JUAN: Si lo dudáis, apuntados The witnesses if you doubt it los testigos ahí están, are all written down here que si fueren preguntados so if they're asked about it os lo testificarán. they'll testify, no fear.

DON LUIS: ¡Oh! y vuestra lista es Oh your list is fine. cabal.

DON JUAN: Desde una princesa real From a princess royal a la hija de un pescador, to a fisherman's daughter, ¡oh! ha recorrido mi amor I've spanned with lover's toil toda la escala social. the whole social ladder. ¿Tenéis algo que tachar? Is there anything wrong with it, now?

DON LUIS: Sólo una os falta en Only one thing to be fair. justicia.

DON JUAN: ¿Me la podéis señalar? Where do you read it?

DON LUIS: Sí, por cierto, una novicia Yes, look, a novice nun, there, que esté para profesar. about to take her vow.

DON JUAN: ¡Bah! pues yo os complaceré Bah. I'll satisfy you doubly, doblemente, porque os digo since I tell you that, just for fun, que a la novicia uniré I'll add a friend's lady la dama de algún amigo to the novice nun, que para casarse esté. whom he's about to marry.

DON LUIS: ¡Pardiez que sois atrevido! God's blood you're a daring man!

DON JUAN: Yo os lo apuesto si queréis. I'll wager if you want to.

DON LUIS: Digo que acepto el partido. I accept the plan. ¿Para darlo por perdido In order to accomplish it queréis veinte días? do you want twenty days?

DON JUAN: Seis. Six, is all I need in hand.

DON LUIS: ¡Por Dios que sois hombre extraño! Lord you're a strange man. ¿Cuántos días empleáis How many days do you employ en cada mujer que amáis? on each woman you enjoy?

DON JUAN: Partid los días del año Divide the days of the year entre las que ahí encontráis. among those you find here. Uno para enamorarlas, One day to seduce them, otro para conseguirlas, another to reduce them, otro para abanDoñarlas, another one to leave them, dos para sustituirlas, two days to replace them, y una hora para olvidarlas. and a single hour to forget them. Pero, la verdad a hablaros, But, to tell the truth, as I said, pedir más no se me antoja I only ask for a few, porque, pues vais a casaros, because you are getting wed, mañana pienso quitaros tomorrow I'll take instead a doña Ana de Pantoja. Doña Ana, from you.

DON LUIS: Don Juan, ¿qué es lo que decís? Don Juan, what are you saying?

DON JUAN: Don Luis, lo que oído Don Luis, what you are hearing. habéis.

DON LUIS: Ved, don Juan, lo que emprendéis. Don Juan, see what you're doing.

DON JUAN: Lo que he de lograr, don That I intend to, Don Luis. Luis.

DON LUIS: ¡Gastón! (Llamando.) Gastón! (Calling)

GASTON: ¿Señor? Sir?

DON LUIS: Ven acá. Come here. (Habla don Luis en secreto con (Don Luis speaks in secret with Gastón, y éste se va Gaston, and the latter leaves precipitadamente.) quickly.)

DON JUAN: ¡Ciutti! (Llamando.) Ciutti! (Calling)

CIUTTI: ¿Señor? Sir?

DON JUAN: Ven aquí. Come here! (Don Juan habla en secreto con (Don Juan talks in secret with Ciutti, éste se va precipitadamente.) Ciutti and the latter leaves quickly.)

DON LUIS: ¿Estáis en lo dicho? Is it agreed?

DON JUAN: Sí. It is.

DON LUIS: Pues va la vida. It's the way life goes.

DON JUAN: Pues va. So it does. (Don Gonzalo, levantándose de la mesa (Don Gonzalo, getting up from en que ha permanecido inmóvil durante the table where he has been la escena anterior se afronta con don motionless during the preceding Juan y don Luis.) scene, and he confronts Don Juan and Don Luis.)

DON GONZALO: ¡Insensatos! ¡Vive Dios Dear God, men without feeling! que a no temblarme las manos If my hands weren't trembling so, a palos, como a villanos, with my club you'd see me dealing os diera muerte a los dos! a villain's death to you both.

DON JUAN Y DON LUIS. Veamos. What's this?

DON GONZALO: Excusado es, Needless to say que he vivido lo bastante I've lived long enough para no estar arrogante not to try and play rough donde no puedo when I can't win the day.

DON JUAN: Idos, pues. Be off then.

DON GONZALO: Antes, don Juan, de salir Don Juan, before you go, de donde oírme podáis, to where you cannot hear me, es necesario que oigáis it's essential you do hear me, lo que os tengo que decir. listen to what I tell you. Vuestro buen padre don Diego, Your good father, Don Diego porque pleitos acomoda, to meet his obligations os apalabró una boda promised you marriage celebrations que iba a celebrarse luego; as soon as it could be so, pero por mí mismo yo but I, wanting to catch a sight lo que érais queriendo ver, of the sort of man you were vine aquí al anochecer, came past at evening light y el veros me avergonzó. and....I'm ashamed to be here.

DON JUAN: ¡Por Satanás, viejo insano, The devil! You insane old man. que no sé cómo he tenido I don't know how I remain calma para haberte oído calm, and listen, it's plain sin asentarte la mano! I should raise my hand to you again. Pero di pronto quién eres, But, who you are, come tell, porque me siento capaz though I don't need to ask, de arrancarte el antifaz I'll tear away your mask con el alma que tuvieres. and your very soul as well.

DON GONZALO: ¡Don Juan! Don Juan!

DON JUAN: ¡Pronto! Quickly!

DON GONZALO: Mira, pues. Look! Well?

DON JUAN: ¡Don Gonzalo! Don Gonzalo!

DON GONZALO: El mismo soy. I am he. Y adiós, don Juan: mas desde hoy And farewell, Don Juan; but see no penséis en doña Inés. don't think now of Doña Inés. Porque antes que consentir For rather than consent en que se case con vos, that she marry you, el sepulcro ¡juro a Dios! by God, I swear it's true, por mi mano la he de abrir. I'd make sure to the grave she went.

DON JUAN: Me hacéis reír, Don Gonzalo; Don Gonzalo, you make me laugh; pues venirme a provocar coming here to provoke es como ir a amenazar me, is like setting out to poke a un león con un mal palo. a lion with a paltry staff. Y pues hay tiempo, advertir And since there's time, I need os quiero a mi vez a vos to warn you, privately, que o me la dais, o por Dios that you either give her to me, que a quitárosla he de ir. or I'll have her from you indeed.

DON GONZALO: ¡Miserable! Wretch!

DON JUAN: Dicho está: That has been said: sólo una mujer como ésta a woman like this was yet me falta para mi apuesta; still needed for my bet; ved, pues, que apostada va. See, she is wagered instead. (Don Diego, levantándose de la mesa (Don Diego, getting up from the en que ha permanecido encubierto table where he has remained mientras la escena anterior baja al incognito during the previous centro de la escena, encarándose con scene, goes to centre stage, don Juan.) facing Don Juan.)

DON DIEGO: No puedo más escucharte, I can't listen to you any more, vil don Juan, porque recelo you're evil Don Juan, I fear que hay algún rayo en el cielo a lightning bolt from heaven is near, preparado a aniquilarte. that will annihilate you. ¡Ah...! No pudiendo creer Ah! Unable to believe lo que de ti me decían, what I was told about you confiando en que mentían, I came, hoping I was deceived, te vine esta noche a ver. tonight, to find out what was true. Pero te juro, malvado, Evil man, I swear to you, que me pesa haber venido that I'm grieved I came, para salir convencido now I leave convinced your game de lo que es para ignorado. is something I'd rather not know. Sigue, pues, con ciego afán Continue then, in your blind frenzy en tu torpe frenesí, your wicked delirium, mas nunca vuelvas a mí; but never turn to me; no te conozco, don Juan. I do not know you, Don Juan.

DON JUAN: ¿Quién nunca a ti se volvió? Who has ever turned to you, then? ¿Ni quién osa hablarme así, And who dares to speak to me so, ni qué se me importa a mí and what does it matter, in turn, que me conozcas o no? if you know or do not know?

DON DIEGO: Adiós, pues: mas no te olvides, Farewell, but don't forget de que hay un Dios justiciero. that there is a God of Justice.

DON JUAN: Ten. (Deteniéndole.) Wait. (Stopping him)

DON DIEGO: ¿Qué queréis ? What do you want?

DON JUAN: Verte quiero. I want to see your face.

DON DIEGO: Nunca, en vano me lo pides. Never. You ask me in vain.

DON JUAN: ¿Nunca? Never?

DON DIEGO: No. No.

DON JUAN: Cuando me cuadre. When I want to, rather.

DON DIEGO: ¿Cómo? How?

DON JUAN: Así. (Le arranca el So. (He rips off the mask) antifaz.)

TODOS: ¡Don Juan! Don Juan!

DON DIEGO: ¡Villano! Disgrace! ¡Me has puesto en la faz la mano! You have raised your hand to my face!

DON JUAN: ¡Válgame Cristo, mi padre! Ah, Christ! It's my father.

DON DIEGO: Mientes, no lo fui jamás. You lie, and of that I am certain.

DON JUAN: ¡Reportaos, con Belcebú! Control yourself, by Beelzebub!

DON DIEGO: No, los hijos como tú No. A lion's cub son hijos de Satanás. like you is the son of Satan. Comendador, nulo sea Comendador, the deal we made lo hablado. is void.

DON GONZALO: Ya lo es por mí; It is on my part: vamos. let's leave.

DON DIEGO: Si, vamos de aquí Yes, let's depart, donde tal monstruo no vea. go where monsters are not displayed. Don Juan, en brazos del vicio Don Juan, I abandon you wholly, desolado te abandono: desolately, to the arms of evil: me matas... mas te perdono you are killing me....yet I pardon you still de Dios en el santo juicio. through God's justice, which is holy. (Vanse poco a poco don Diego y don (Don Diego and Don Gonzalo Gonzalo.) leave, slowly.)

DON JUAN: Largo el plazo me ponéis: You grant me a long term of grace: mas ved que os quiero advertir but, see now, I want to say que yo no os he ido a pedir I've never asked for a day jamás que me perdonéis. of pardon, in my place. Conque no paséis afán So don't worry about me de aquí adelante por mí, from this time on, since how que como vivió hasta aquí he's always lived till now's vivirá siempre don Juan. how Don Juan will ever be.

ESCENA XIII SCENE XIII

(Don Juan, Don Luis, Centella, (Don Juan, Don Luis, Centella, Avellaneda, Buttarelli, Curiosos, Avellanada, Buttarelli, Máscaras.) Onlookers, Maskers.)

DON JUAN: ¡Eh! Ya salimos del paso: Ah! Now we've left off that bind, y no hay que extrañar la homilía; don't be surprised at his homily; son pláticas de familia, those were words in the family de las que nunca hice caso. of the sort that I never mind. Conque lo dicho, don Luis, So we're agreed, Don Luis, van doña Ana y doña Inés Doña Ana and Doña Inés en apuesta. are wagered.

DON LUIS: Y el precio es And the price is la vida. life.

DON JUAN: Vos lo decís: So you say: vamos. Let's go.

DON LUIS: Vamos. Let's go. (Al salir se presenta una ronda, que (As they leave, they are stopped les detiene.) by a night-patrol.)

ESCENA XIV SCENE XIV

(Dichos, una ronda de Alguaciles) (The same characters, a band of Constables.)

ALGUACIL: Alto allá. Halt there. ¿Don Juan Tenorio? Don Juan Tenorio?

DON JUAN: Yo soy. That's me.

ALGUACIL: Sed preso. We have you.

DON JUAN: ¿Soñando estoy? Am I dreaming? ¿Por qué? Why?

ALGUACIL: Después lo verá. You'll find out later.

DON LUIS: (Acercándose a don Juan y (Approaching Don Juan and riéndose.) laughing) Tenorio, no lo extrañéis, Don't be surprised Tenorio, pues mirando a lo apostado since, in addressing the bet, mi paje os ha delatado my servant has seen to it para que vos no ganéis. that you won't win through.

DON JUAN: ¡Hola! Pues no os suponía Well now, I didn't suppose con tal despejo, ¡pardiez! you'd hit it so on the nose.

DON LUIS: Id, pues, que por esta vez, Go on now, and this time don Juan, la partida es mía. Don Juan, the game is mine.

DON JUAN: Vamos pues. Let's go then. (Al salir, les detiene otra ronda que (As they leave another patrol entra en la escena.) come on stage.)

ESCENA XV SCENE XV

Dichos, una ronda (The same characters, a patrol, as before.)

ALGUACIL: (Que entra.) (Entering) Ténganse allá. Stop right there. ¿Don Luis Mejía? Don Luis Mejía?

DON LUIS: Yo soy. That's me.

ALGUACIL: Sed preso. We have you.

DON LUIS. ¿Soñando estoy? Am I dreaming? ¡Yo preso! Me, under arrest?

DON JUAN: (Soltando la carcajada.) (bursting out laughing.) ¡Ja, ja, ja, ja! Ha ha ha!! Mejía, no lo extrañéis, Don't be surprised, Mejía, pues, mirando a lo apostado, since, in addressing the bet, mi paje os ha delatado my servant has seen to it para que no me estorbéis. you're not in the way, round here.

DON LUIS: Satisfecho quedaré I'll be content if they aunque ambos muramos. lock us both away.

DON JUAN: Vamos; Lets go, then; conque, señores, quedamos provided, sirs, we say en que la apuesta está en pie. the bet is still in play. (Las rondas se llevan a don Juan y a (The patrols take Don Juan and don Luis, muchos los siguen, El Don Luis away, many follow them, capitán Centellas, Avellaneda y sus Captain Centellas, Avellaneda amigos quedan en la escena mirándose and his friends stay on stage unos a otros.) looking at one another.)

ESCENA XVI SCENE XVI

(El capitán Centellas, Avellaneda, (Captain Centellas, Avellaneda, curiosos.) Onlookers.)

AVELLANEDA: ¡Parece un juego ilusorio? Doesn't this seem a fantastic scenario?

CENTELLAS: ¡Sin verlo no lo creería! I wouldn't believe it if I wasn't here.

AVELLANEDA: Pues yo apuesto por Mejía. Well, my money's on Mejía.

CENTELLAS: Y yo pongo por Tenorio. And mine's on Don Juan Tenorio.

FIN DEL ACTO PRIMERO END OF THE FIRST ACT.

ACTO SEGUNDO ACT TWO

DESTREZA SKILL

(Exterior de la casa de doña Ana, (Outside Doña Ana's house, vista por una esquina. Las dos paredes which is seen from a corner. que forman el ángulo se prolongan The two walls that form the igualmente por ambos lados, dejando angle extend equally on both ver en la de la derecha una reja, y en sides, allowing one to see on la izquierda una reja y una puerta.) the right a grilled window, and on the left a grilled window and a door.)

ESCENA PRIMERA SCENE I

Don Luis Mejía, embozado (Don Luis, muffled in his cloak) Ya estoy frente de la casa Here I am at Doña Ana's de doña Ana, y es preciso to warn her, especially, que esta noche tenga aviso of what tonight we may see de lo que en Sevilla pasa. happening in Sevilla. No di con persona alguna Oh, what anxiety! Luckily por dicha mía... ¡Oh qué afán! I didn't meet a soul. Pero ahora, señor don Juan, Now, Don Juan, the bold, cada cual con su fortuna. each to his own destiny! Si honor y vida se juega, If honour and life are at stake mi destreza y mi valor my skill and my valour por mi vida y por mi honor will defend life and honour. jugarán... Mas alguien llega. But now someone's awake.

ESCENA SEGUNDA SCENE II

(Don Luis, Pascual) (Don Luis, Pascual)

PASCUAL:¡Quién creyera lance tal! Prisoners! Who would credit it all! ¡Jesús, qué escándalo! ¡Presos! Lord, what a scandal.

DON LUIS. ¿Qué veo? ¡Es Pascual! What's this I see? It's Pascual!

PASCUAL: Los sesos My brains must be me estrellaría. addled.

DON LUIS. ¿Pascual? Pascual?

PASCUAL: ¿Quién me llama tan apriesa? Who is calling me so loudly?

DON LUIS. Yo. Don Luis. Me. Don Luis.

PASCUAL: ¡Válame Dios! Good God!

DON LUIS. ¿Qué te asombra? What's the surprise?

PASCUAL: Que seáis vos. That it's you.

DON LUIS: Mi suerte, Pascual, es ésa. Then it's great luck, Pascual, Que a no ser yo quien me soy for if I weren't who I am today y a no dar contigo ahora, and you and I hadn't met, el honor de mi señora well, the honour of my lady doña Ana moría hoy. Doña Ana, we could forget.

PASCUAL: Qué es lo que decís ? What's this you say?

DON LUIS. ¿Conoces Do you know a don Juan Tenorio? Don Juan Tenorio?

PASCUAL: Sí. Yea. ¿Quién no le conoce aquí? Who doesn't know him round here? Mas según públicas voces But according to public rumour estábais presos los dos. you were prisoners the two of you. Vamos, ¡lo que el vulgo miente! But, how the public lies!

DON LUIS. Ahora acertadamente Just now the public spoke habló el vulgo: y ¡juro a Dios rightly, and I swear to God que a no ser porque mi primo, if it hadn't been that my cousin el tesorero real, the royal treasurer quiso fiarme, Pascual, was willing to bail me out, Pascual, pierdo cuanto más estimo! I'd have lost all I value.

PASCUAL: ¿Pues cómo? What do you mean?

DON LUIS. ¿En servirme estás? Are you prepared to serve me?

PASCUAL: Hasta morir. Till death.

DON LUIS. Pues escucha. Then listen. Don Juan y yo en una lucha Don Juan and I find ourselves arriesgada por demás embroiled in a struggle empeñados nos hallamos; that's needlessly risky, pero, a querer tú ayudarme, but if you are willing to help me más que la vida salvarme you can save even more than puedes. my life.

PASCUAL: ¿Qué hay que hacer? Sepamos. What must I do. Tell me.

DON LUIS. En una insigne locura In a moment of utter madness look dimos tiempo ha: en apostar a while ago, we wagered, you see cuál de ambos sabría obrar which of the two of us could be peor, con mejor ventura. the worst, with the best of luck. Ambos nos hemos portado We have both been bravely bizarramente a cual más; vying, each with the other one, pero él es un Satanás, but he is Satan's son, y por fin me ha aventajado. and gained the advantage of me. Púsele no sé qué pero, I don't know quite know dijímonos no sé qué what it was I said sobre ello, y el hecho fue some words or other, but they led que él mofándome altanero to him mocking me haughtily me dijo: "Y si esto no os llena, saying: 'If this is not adequate proof, pues que os casáis con doña Ana, since you and Doña Ana are to be wed, os apuesto a que mañana I'll wager that by tomorrow instead os la quito yo". I'll take her away from you.

PASCUAL: ¡Esa es buena! That's a good one! ¿Tal se ha atrevido a decir? He dared say such a thing to you?

DON LUIS: No es lo malo que lo diga, The bad part is not that he said it, Pascual, sino que consiga Pascual, but that he's bound to do it, lo que intenta. if that's what he intends.

PASCUAL: ¿Conseguir? He will do it? En tanto que yo esté aquí, Not while I am here, see, descuidad, don Luis. don't worry, Don Luis.

DON LUIS. Te juro I swear to you que si el lance no aseguro, if I don't win through no sé qué va a ser de mí. I don't know what will become of me.

PASCUAL: ¡Por la Virgen del Pilar! By the Virgin of Pilar, he's evil, ¿Le teméis? Are you afraid of him?

DON LUIS. No, Dios testigo. As God is my witness, no. Mas lleva ese hombre consigo But that man goes to and fro algún diablo familiar. with his familiar devil.

PASCUAL: Dadlo por asegurado. Consider the matter done.

DON LUIS. ¡Oh! Tal es el afán mío Oh, but I'm afraid que ni en mí propio me fío, I don't even have faith con un hombre tan osado. in myself, with such a daring man.

PASCUAL: Yo os juro por San Ginés, I vow to you by Saint Ginés que, con toda su osadía, in spite of all his boldness le ha de hacer, por vida mía, an Aragonese will give him mal tercio un aragonés: I swear on my life, a beating: nos veremos. you'll see.

DON LUIS. ¡Ay, Pascual, Ah Pascual, que en qué te metes no sabes! you don't know what you're doing!

PASCUAL: En apreturas más graves I've found worse things brewing me he visto y no salí mal. and came out not badly at all.

DON LUIS. Estriba en lo perentorio The difficulty lies in the hour del plazo, y en ser quien es. and his being who he is.

PASCUAL: Más que un buen aragonés A Tenorio can't have the power no ha de valer un Tenorio. of a good Aragonese. Todos esos lenguaraces All these bullies cower, espadachines de oficio just professional braggards, no son más que frontispicio nothing more than blaggards, y de poca alma capaces. only a cowardly shower. Para infamar a mujeres They've glib tongues for defaming women tienen lengua, y tienen manos and they have ready hands para osar a los ancianos for challenging some old man o apalear a mercaderes. or beating up the tradesmen. Mas cuando una buena espada, But when challenged by a good blade, por un buen

brazo esgrimida, given a strong arm weighed, con la muerte les convida, inviting them to die, todo su valor es nada. all their braveries fade. Y sus empresas y bullas And their song and dance se reducen todas ellas all of it boils down a hablar mal de las doncellas to speaking harm of a silken gown, y a huir ante las patrullas. and fleeing patrols at the slightest chance.

DON LUIS. ¡Pascual! Pascual!

PASCUAL: No lo hablo por vos, Oh, not you of course: que aunque sóis un calavera though you're wild I swear it, tenéis la alma bien entera you have a fighting spirit y reñís bien, ¡voto a bríos! and carry things out with force.

DON LUIS: Pues si es en mí tan notorio Well if valour's so marked in me el valor, mira, Pascual, then note this well Pascual, que el valor es proverbial that valour is proverbial en la raza de Tenorio. in Tenorio's family. Y porque conozco bien And because I know that well, I trust de su valor el extremo, his courage in a difficult fix, de sus ardides me temo and so the more I fear his tricks que en tierra con mi honra den. will drag my name in the dust.

PASCUAL: Pues suelto estáis ya, don Luis; But Don Luis, now you are free y pues que tanto os acucia and because anxious jealousy el mal de celos, su astucia troubles you so much, I say, maybe, con la astucia prevenís. you should match his wit with your subtlety. ¿Qué teméis de él? What do you fear from him?

DON LUIS. No lo sé; I don't know mas esta noche sospecho but I suspect tonight that he que ha de procurar el hecho will attempt a deed consumar. of devilry.

PASCUAL: Soñáis. You are dreaming.

DON LUIS. ¿Por qué? Why?

PASCUAL: ¿No está preso? Isn't he in jail?

DON LUIS. Sí que está; Yes, he is, mas también lo estaba yo, but I was as well, y un hidalgo me fió. and a nobleman made my bail.

PASCUAL: Mas ¿quién a él le fiará? But who will bail him out?

DON LUIS: En fin, sólo un medio encuentro In truth, I only see de satisfacerme. one way to satisfy me.

PASCUAL: ¿Cuál? What?

DON LUIS: Que de esta casa, Pascual, That for tonight, Pascual quede yo esta noche dentro. I should stay inside this house.

PASCUAL: Mirad que así de doña Ana Beware if in doing so, you tenéis el honor vendido. besmirch the honour of Doña Ana.

DON LUIS. ¡Qué mil rayos! ¿Su marido A thousand curses! Isn't it true no voy a ser yo mañana? I'll be her husband tomorrow?

PASCUAL: Mas, señor, ¿no os digo yo But sir, am I not saying que os fío con la existencia...? that I guarantee you, on my life...?

DON LUIS. Sí; salir de una pendencia, Yes, to get out of a fight, mas de un ardid diestro, no. but out of a clever trap, no. Y en fin, o paso en la casa And anyway, either I spend the night la noche, o tomo la calle in the house, or I'll spend it in the street. aunque la justicia me halle. though the patrol find me on their beat.

PASCUAL: Señor don Luis, eso pasa Señor Don Luis, that goes right de terquedad, y es capricho beyond stubbornness, it's insane que dejar os aconsejo and I advise you again y os irá bien. forget it, everything will be fine. Don Luis; No lo dejo, No, I'm not abandoning it Pascual. Pascual.

PASCUAL: ¡Don Luis! Don Luis!

DON LUIS. Está dicho. I've spoken.

PASCUAL: ¡Vive Dios! ¿Hay tal afán? Good God! Was there ever such a difficult man?

DON LUIS. Tú dirás lo que quisieres, You may say what may be mas yo fío en las mujeres but I have much less faith in the lady mucho menos que en don Juan; than I do in Don Juan; pues lance es extremado for this is an extreme case por dos locos emprendido, undertaken by two fools bien será un loco atrevido and a fool may easily break the rules para un loco desalmado.

when another fool is base.

PASCUAL: Mirad bien lo que decís, Take care what you say in this manner porque yo sirvo a doña Ana for I've served Doña Ana desde que nació, y mañana since she was born, and I guarantee seréis su esposo, don Luis. you'll be hers tomorrow Don Luis.

DON LUIS. Pascual, esa hora llegada Pascual, when that time is here y ese derecho adquirido, and I've acquired the right to be yo sabré ser su marido her husband, I'll be good to her, you'll see, y la haré ser bien casada. and I'll make her happy, no fear. Mas en tanto... But meanwhile....

PASCUAL: No habléis más. Let it pass. Yo os conozco desde niños I've known you since we were kids y sé lo que son cariños, and I know what affection is, ¡por vida de Barrabás! I swear by Barrabas! Oíd: mi cuarto es sobrado Listen, my room will just do para los dos; dentro de él for the two of us, you can stay quedad; mas palabra fiel in there, but give me your word, and say dadme de estaros callado. that you'll remain quiet too.

DON LUIS. Te la doy. I give my word to you.

PASCUAL: Y hasta mañana And till tomorrow, we'll stay awake juntos con doble cautela together we'll both make nos quedaremos en vela. a double guard for her sake.

DON LUIS. Y se salvará doña Ana. And Doña Ana will not be lost.

PASCUAL: Sea. So be it.

DON LUIS. Pues vamos. Then lets go.

PASCUAL: Teneos. Wait. ¿Qué vais a hacer? What are you going to do.

DON LUIS. A entrar. Go in. Since it's late

PASCUAL: ¿Ya? Already?

DON LUIS. ¿Quién sabe lo que él hará? Who knows what he'll perpetrate?

PASCUAL:Vuestros celosos deseos Repress your jealous hate reprimid: que ser no puede for it can't safely be mientras que no se recoja until my master Don Gil mi amo, don Gil de Pantoja, retires to bed, and all's still, y todo en silencio quede. you see.

DON LUIS. Voto a... I swear....

PASCUAL: ¡Eh! Dad una vez Oh! Just for once let's have breves treguas al amor. a brief respite from love.

DON LUIS. ¿Y a qué hora ese buen señor And at what time is that good man suele acostarse? accustomed to go to bed?

PASCUAL: A las diez; At ten, y en esa calleja estrecha and in that narrow alley hay una reja; llamad there's a grilled window, call a las diez, y descuidad at ten, and, in the meantime, mientras en mí. rely on me.

DON LUIS. Es cosa hecha. Done.

PASCUAL: Don Luis, hasta luego, pues. Till then, Don Luis.

DON LUIS. Adiós, Pascual, hasta luego. Goodbye Pascual, till then.

ESCENA III SCENE III

Don Luis Jamás tal desasosiego I have never experienced tuve. Paréceme que es such apprehension. It seems to me esta noche hora menguada tonight will be a wearing para mí... y no sé qué vago one for me....I don't know what strange presentimiento, qué estrago foreboding, what disastrous change teme mi alma acongojada. my afflicted soul is fearing. ¡Por Dios que nunca pensé By God, I never really que a doña Ana amara así, thought I would love Ana so ni por ninguna sentí or feel for anyone though lo que por ella...! ¡Oh! Y a fe what I feel for her. Oh, truly, que de don Juan me amedrenta Don Juan's not the better of us two no el valor, mas la ventura. in courage, but only in luck. Parece que le asegura It seems that Satan writes the book Satanás en cuanto intenta. of whatever he tries to do. No, no: es un hombre infernal, No, no. He's a devil infernal y téngome para mí and I truly fear que si me aparto de aquí that if I move away from here me burla, pese a Pascual. he'll trick me, in spite of Pascual. Y aunque me tenga por

necio, And even if I'm considered a born quiero entrar: que con don Juan fool I'll go in, for with Don Juan las precauciones no están one's defence must be planned para vistas con desprecio. not viewed with scorn. (Llama a la ventana.) (He knocks on the window)

ESCENA IV SCENE IV

(Don Luis, Doña Ana) (Don Luis, Doña Ana)

DOÑA ANA: ¿Quién va? Who goes there?

DON LUIS. ¿No es Pascual? You are not Pascual?

DOÑA ANA: ¡Don Luis! Don Luis!

DON LUIS. ¡Doña Ana! Doña Ana!

DOÑA ANA: ¿Por la ventana Did you knock on the llamas ahora? window just now?

DON LUIS. ¡Ay, doña Ana, Yes, Doña Ana, cuán a buen tiempo salís! how opportunely you've come.

DOÑA ANA: Pues ¿qué hay, Mejía? But what's wrong, Mejía?

DON LUIS. Un empeño An attempt por tu beldad con un hombre on your beauty, by a man que temo. whom I fear.

DOÑA ANA: ¿Y qué hay que te asombre And what is there to fear from him en él, cuando eres tú el dueño when you possess de mi corazón? my heart?

DON LUIS. Doña Ana, Doña Ana, no lo puedes comprender you cannot understand de ese hombre sin conocer about that man without knowing nombre y suerte. his name and his good fortune.

DOÑA ANA: Será vana His good fortune will be su buena suerte conmigo; of no account to me, ya ves, sólo horas nos faltan you see, only a few hours remain para la boda, y te asaltan before the wedding, and vain vanos temores. fears assail you.

DON LUIS. Testigo I swear piously me es Dios que nada por mí nothing frightens me, it's true, me da pavor, mientras tenga for myself, while I have here espada y ese hombre venga my sword, or if that man were cara a cara contra ti. to come face to face with you. Mas como el león audaz But like an audacious lion y cauteloso y prudente both crafty and prudent como la astuta serpiente... like the astute serpent...

DOÑA ANA: ¡Bah! Duerme, don Luis, en paz, Oh! Sleep in peace, Don Luis que su audacia y su prudencia his audacity and prudence nada lograrán de mí, will never succeed with me, que tengo cifrada en ti for I've settled on you, you see, la gloria de mi existencia. the glory of my existence.

DON LUIS. Pues bien, Ana, de ese amor Very well, Ana, in the name of que me aseguras en nombre, that love of which you assure me, para no temer a ese hombre in order not to fear him, please, voy a pedirte un favor. I'm going to ask you a favour.

DOÑA ANA: Di; mas bajo, por si escucha Speak; more quietly in case tal vez alguno. someone can hear us.

DON LUIS. Oye, pues. Then listen.

ESCENA V SCENE V

(Doña Ana y Don Luis, a la reja (Doña Ana and Don Luis at the derecha; Don Juan y Ciutti, en la right grilled window; Don Juan calle izquierda) and Ciutti on the street to the left.)

CIUTTI: Señor, por mi vida, que es My word, in truth your vuestra suerte buena y mucha. luck is good and plentiful.

DON JUAN: Ciutti, nadie como yo: Ciutti, there's no one like me: ya viste cuán fácilmente you saw how easily el buen alcaide prudente the good and wise constabulary se avino y suelta me dio. came to terms, and set me free. Mas no hay ya en ello que hablar: But there's no need to talk of that. ¿mis encargos has cumplido? Have you done what I said?

CIUTTI: Todos los he concluido I have done it all mejor que pude esperar. better than I could have hoped.

DON JUAN: ¿La beata...? The governess?

CIUTTI: Esta es la llave This is the key de la puerta del jardín, to the gate in the garden wall, que habrá que escalar al fin, that you'd have had to climb, and it's tall, pues, como usarced ya sabe, since, as you're able to see, las tapias de ese convento the walls of that particular convent no tienen entrada alguna. have no other entrance at all.

DON JUAN: ¿Y te dio carta? And did she give you a letter?

CIUTTI: Ninguna; No, none, me dijo que aquí al momento she told me that in a moment iba a salir de camino; she was coming out for a walk: que al convento se volvía and she'd return to the convent y que con vos hablaría. after the two of you talk.

DON JUAN: Mejor es. That's even better.

CIUTTI: Lo mismo opino. I thought so.

DON JUAN: ¿Y los caballos? And the horses?

CIUTTI: Con silla I have them bridled y freno los tengo ya. and ready.

DON JUAN: ¿Y la gente? And my men?

CIUTTI: Cerca está. Are nearby.

DON JUAN: Bien, Ciutti; mientras Sevilla Good Ciutti; while Seville tranquila en sueño reposa reposes in tranquil sleep creyéndome encarcelado, believing me imprisoned otros dos nombres añado another two names will be added a mi lista numerosa. to the long list I keep. ¡Ja!, ¡ja! Ha ha!

CIUTTI: Señor. Sir.

DON JUAN: ¿Qué? What?

CIUTTI: Callad. Be quiet.

DON JUAN: ¿Qué hay, Ciutti? What's wrong Ciutti?

CIUTTI: Al doblar la esquina, On turning the corner en esa reja vecina at the neighbouring window he visto un hombre. I saw a man.

DON JUAN: Es verdad: Its true: pues ahora sí que es mejor so now the affair is el lance: ¿y si es ése? going better. Could it be him?

CIUTTI: ¿Quién? Who?

DON JUAN: Don Luis. Don Luis.

CIUTTI: Imposible. Impossible.

DON JUAN: ¡Toma! Why? ¿No estoy yo aquí? Well, am I not here?

CIUTTI: Diferencia There's a big difference va de él a vos. between you and him.

DON JUAN: Evidencia I believe the evidence, man, lo creo Ciutti; allí asoma Ciutti; there is still tras de la reja una dama. a lady behind the grill.

CIUTTI: Una criada tal vez. Perhaps a servant.

DON JUAN: Preciso es verlo, ¡pardiez!, By heaven! I want no perdamos lance y fama. to see, not lose the game or the fame. Mira, Ciutti: a fuer de ronda, Look, Ciutti, play at being the night patrol, tú con varios de los míos with several of my men por esa calle escurríos scatter through that street, again, dando vuelta a la redonda and set up around the whole a la casa. house.

CIUTTI: Y en tal caso In that case cerrará ella. she'll close the window.

DON JUAN: Pues con eso, And in that way, ella ignorante y él preso, him a prisoner, her unaware, nos dejarán franco el paso. the way will be clear for us there.

CIUTTI: Decís bien. That's right.

DON JUAN: Corre y atájale, Run and overtake him que en ello el vencer consiste. For winning depends on it.

CIUTTI: ¿Mas si el truhán se But if the scoundrel resists? resiste?

DON JUAN: Entonces de un tajo, rájale. Then with one sword-stroke break him.

ESCENA VI SCENE VI

(Don Juan, Doña Ana, Don Luis) (Don Juan, Doña Ana, Don Luis)

DON LUIS. ¿Me das, pues, tu asentimiento? Then you give me your consent?

DOÑA ANA: Consiento. I agree.

DON LUIS. ¿Complácesme de ese modo? And in this way you will please me?

DOÑA ANA: En todo. In everything, you'll see.

DON LUIS. Pues te velaré hasta el día. Then I'll spend the time till daylight here.

DOÑA ANA: Sí, Mejía. Yes, Mejía.

DON LUIS. Páguete el cielo, Ana mía, May heaven reward you Ana dear, satisfacción tan entera. and bring your happiness near.

DOÑA ANA: Porque me juzgues sincera, Because you believe me sincere consiento en todo, Mejía. I consent to everything Mejía.

DON LUIS. Volveré, pues, otra vez. I'll return then later, have no fear.

DOÑA ANA: Si, a las diez. Yes, at ten, please appear.

DON LUIS. ¿Me aguardarás, Ana? Will you wait for me, Ana?

DOÑA ANA: Sí. Yes.

DON LUIS. Aquí. Here.

DOÑA ANA: ¿Y tú estarás puntual, eh? And you'll be on time?

DON LUIS. Estaré. Assuredly.

DOÑA ANA: La llave, pues, te daré. Then I'll give you the key.

DON LUIS. Y dentro yo de tu casa, And, with me inside, venga Tenorio. let Tenorio come.

DOÑA ANA: Alguien pasa. Someone goes by! A las diez. Until ten.

DON LUIS. Aquí estaré. Then we'll see.

ESCENA VII SCENE VII

(Don Juan, Don Luis) (Don Juan, Don Luis)

DON LUIS: Mas se acercan. ¿Quién va allá? Someone is coming. Who goes there?

DON JUAN: Quien va. Whoever it is who goes there.

DON LUIS. De quien va así ¿qué se infiere? What does he want, whoever goes there?

DON JUAN: Que quiere... He wants....

DON LUIS. ¿Ver si la lengua le arranco ? To see me chop out his tongue?

DON JUAN: El paso franco. A clear run.

DON LUIS. Guardado está. This house is closely guarded.

DON JUAN: ¿Y soy yo manco? Do you think I'm unarmed then?

DON LUIS. Pidiéraislo en cortesía. You must ask more courteously here.

DON JUAN: ¿Y a quién? Of whom?

DON LUIS. A don Luis Mejía. Of Don Luis Mejía.

DON JUAN: Quien va quiere el paso franco. He who goes here wants a clear run.

DON LUIS. ¿Conocéisme? Do you know me?

DON JUAN: Sí. Yes.

DON LUIS. ¿Y yo a vos? And I you?

DON JUAN: Los dos. Both of us do.

DON LUIS. ¿Y en qué estriba el estorballe? And where's the hindrance to your feet?

DON JUAN: En la calle. Here in the street

DON LUIS. ¿De ella los dos por ser amos? Because we're both standing in it?

DON JUAN: Estamos. We are both in it.

DON LUIS. Dos hay no más que podamos There are only two of us who necesitarla a la vez. need it just now, though.

DON JUAN: Lo sé. I know.

DON LUIS. ¡Sois don Juan! You are Don Juan!

DON JUAN: ¡Pardiez! So!.... los dos ya en la calle estamos. we are both in the street now.

DON LUIS. ¿No os prendieron? Didn't they arrest you?

DON JUAN: Como a vos. Like you.

DON LUIS. ¡Vive Dios! Good Lord. Y huisteis? And you got away?

DON JUAN: Os imité: I did what you did. ¿y qué? Why?

DON LUIS. Que perderéis. So that you'll lose.

DON JUAN: No sabemos. We don't know so.

DON LUIS. Lo veremos. We'll see though.

DON JUAN: La dama entrambos tenemos We have both set out to know sitiada y estáis cogido. the lady, and you're trapped too.

DON LUIS. Tiempo hay. There's still time.

DON JUAN: Para vos perdido. To be lost, by you.

DON LUIS. ¡Vive Dios que lo veremos! By God we will see, though! (Don Luis desenvaina su espada, mas (Don Luis unsheathes his sword, Ciutti, que ha bajado con los suyos but Ciutti, who has craftily cautelosamente hasta colocarse tras approached with his men until él, le sujeta.) they are behind him, grabs him.)

DON JUAN: Señor don Luis, vedlo, pues. Don Luis, now you see,

DON LUIS. Traición es. This is treachery.

DON JUAN: La boca... His mouth... (A los suyos, que se la tapan a don (To his men who cover Don Luis' Luis.) mouth.)

DON LUIS. ¡Oh! Oh!

DON JUAN: (Le sujetan los brazos.) (They pin his arms.) Sujeto atrás: Tie them: más. more. La empresa es, señor Mejía, The game, Mejía, como mía. is mine, I fear. Encerrádmele hasta el día. Lock him up for a day. (A los suyos.) (To his men) La apuesta está ya en mi mano. And so the game falls to me. (A don Luis.) (To Don Luis) Adiós, don Luis: si os la gano, Goodbye, Don Luis, if I win, you see, traición es; mas como mía. by treachery, it's the way I play.

ESCENA VIII SCENE VIII

DON JUAN: Buen lance, ¡viven los cielos! By heaven! A fine affair. Estos son los que dan fama: This is the kind that wins fame today: mientras le soplo la dama, while I snatch his lady away, él se arrancará los pelos he'll be tearing out his hair encerrado en mi bodega. imprisoned in my wine cellar. ¿Y ella...? Cuando crea hallarse And she? When she thinks she's with him again con él..., ¡ja!, ¡ja...! ¡Oh! y ...ha! ha! Oh, and he can't quejarse complain. no puede; limpio se juega. I play fair, he can tell her. A la cárcel le llevé I got him jailed y salió: llevóme a mí and he was bailed: he trapped me y salí; hallarnos aquí and I was bailed; it was destiny era fuerza..., ya se ve, that we'd meet here, neither failed su parte en la grave apuesta: to defend his name defendía cada cual. in this serious jest. Mas con la suerte está mal But Mejía's luck is not of the best Mejía, y también pierde ésta. and he'll also lose this game. Sin embargo, y por si acaso, Nevertheless, and just to be sure, no es demás asegurarse it's not showing too much fear de Lucía, a desgraciarse to make certain of Lucía, no vaya por poco el paso. since there's some danger of failure. Mas por allí un bulto negro But a dark shadow appears, se aproxima..., y a mi ver and in my opinion es el bulto una mujer. the shape is that of a woman. ¿Otra aventura? Me alegro. Another adventure? I'm cheered.

ESCENA IX SCENE IX

(Don Juan, Brígida) (Don Juan, Brigida)

BRÍGIDA: ¿Caballeros? Gentlemen?

DON JUAN: ¿Quién va allá? Who goes there?

BRÍGIDA: ¿Sois don Juan? Are you Don Juan?

DON JUAN: ¡Por vida de...! What can I say!.... ¡Si es la beata! ¡Y a fe It's the guardian! And in faith que la había olvidado ya! I had forgotten about her! Llegaos; don Juan soy yo. Approach, I am Don Juan.

BRÍGIDA: ¿Estáis solo? Are you alone?

DON JUAN: Con el diablo. With the devil, I own.

BRÍGIDA: ¡Jesucristo! Goodness me!

DON JUAN: Por vos lo hablo. I say that because of you.

BRÍGIDA: ¿Soy yo el diablo? Do I look like the devil to you?

DON JUAN: Créolo. I think so.

BRÍGIDA: ¡Vaya! ¡Qué cosas tenéis! Ah, how you speak to me! Vos sí que sois un diablillo... You really are a devil or worse.

DON JUAN: Que te llenará el bolsillo One who will fill up your little purse si le sirves. if you serve him.

BRÍGIDA: Lo veréis. You'll see.

DON JUAN: Descarga, pues, ese pecho. Unburden yourself then. ¿Qué hiciste? What did you do?

BRÍGIDA: Cuanto me ha dicho All that your servant told me to. vuestro paje... ¡Y qué mal bicho And what a scamp he is, it's true, es ese Ciutti! that Ciutti.

DON JUAN: ¿Qué ha hecho? What did he do?

BRÍGIDA: ¡Gran bribón! He's a great rascal.

DON JUAN: ¿No os ha entregado Didn't he turn over to you un bolsillo y un papel? a purse and a letter?

BRÍGIDA: Leyendo estará ahora en él Doña Inés is getting better doña Inés. acquainted with it right now.

DON JUAN: ¿La has preparado? Have you prepared her?

BRÍGIDA: Vaya; y os la he convencido I have convinced her con tal maña y de manera in such a clever way que irá como una cordera she'll follow you, any day, tras vos. like a little lamb.

DON JUAN: ¡Tan fácil te ha sido! Was it that easy for you?

BRÍGIDA: ¡Bah! Pobre garza enjaulada, Bah. Poor little bird in a cage dentro la jaula nacida, to be born here and to die, ¿qué sabe ella si hay más vida what does she know, at her age, ni más aire en que volar? of another life, free, in which to fly? Si no vio nunca sus plumas If she's never seen her feathers del sol a los resplandores, shine in the sun, poor thing, ¿qué sabe de los colores what does she know of the colours de que se puede ufanar? of which her heart might sing? No cuenta la pobrecilla The poor little child is diez y siete primaveras a bare seventeen y, aún virgen a las primeras and wholly a virgin impresiones del amor, to love's first idea, nunca concibió la dicha she's never conceived of pleasure, fuera de su pobre estancia outside her poor dwelling's measure, tratada desde su infancia treated from infancy like a treasure, con cauteloso rigor. with careful strictness, poor dear. Y tantos años monótonos And so many monotonous years de soledad y convento of convent solitude tenían su pensamiento have kept her thoughts subdued, ceñido a punto tan ruin, imprisoned in such a ruinous way, a tan reducido espacio captive to such a degree, y a círculo tan mezquino, and in such wretched society, que era el claustro su destino that the cloister was her destiny, el altar era su fin. devotion was her fate. "Aquí está Dios", la dijeron; "God is here," they told her; y ella dijo: "Aquí le adoro". And she said: "Here I'll adore" "Aquí está el claustro y el coro." Here is the cloister and choir. Y pensó: "No hay más allá". And thought "Beyond, there is nothing more." Y sin otras ilusiones And without any illusions que sus sueños infantiles, more than her childish dreams, pasó diez y siete abriles she spent seventeen years growing sin conocerlo quizá. here, almost without knowing.

DON JUAN: ¿Y está hermosa? And is she beautiful?

BRÍGIDA: ¡Oh! Como un ángel. Oh, as an angel.

DON JUAN: ¿Y la has dicho...? And you have unfurled...?

BRÍGIDA: Figuraos You may well guess si habré metido mal caos how I have stirred wicked chaos en su cabeza, don Juan. inside her head, Don Juan. La hablé del amor, del mundo, I spoke to her of love, of the world de la corte y los placeres, of pleasures, the court, how gallant de cuánto con las mujeres you are, how prodigious a talent erais pródigo y galán. you possess with women. La dije que erais el hombre I told her you were the man por su padre destinado chosen for her by her father, para suyo; os he pintado and I have painted you rather muerto por ella de amor, as dying for her love, desesperado por ella, desperate for her, y por ella perseguido, because of her, in a lather, por ella decidido determined to risk honour a perder vida y honor. for her, and life above. En fin, mis dulces palabras, In short, my words of sweetness al posarse en sus oídos, so possessed her hearing, sus deseos mal dormidos desires still slumbering, arrastraron de sí en pos; awakened in her, beating y allá dentro de su pecho there inside her breast, han inflamado una llama set light to a flame so true, de fuerza tal, que ya os ama that she already loves you, y no piensa más que en vos. and it's only of you she's thinking.

DON JUAN: Tan incentiva pintura Such an alluring picture los sentidos me enajena, inflames my senses, whole, el alma ardiente me llena and fills my burning soul de su insensata pasión. with senseless ardour. Empezó por una apuesta, It began as a wager, siguió por un devaneo, followed by mad desire, engendró luego un deseo, engendering the fire, y hoy me quema el corazón. and now my heart's alight. Poco es el centro de un claustro; A cloister is no matter; ¡al mismo infierno bajara, I'd go downwards to the Inferno, y a estocadas la arrancara and with sword thrusts, to and fro, de los brazos de Satán! from the arms of Satan, seize her. ¡Oh! Hermosa flor, cuyo cáliz Oh beautiful flower, whose calyx al rocío aún no se ha abierto, never opened to the dew, a trasplantarte va al huerto to the garden of his love de sus amores don Juan. Don Juan will transplant you. ¿Brígida? Brigida?

BRÍGIDA: Os estoy oyendo, I'm listening. y me hacéis perder el tino: and you confuse me; yo os creía un libertino I thought you a libertine sin alma y sin corazón. without a soul or heart.

DON JUAN: ¿Eso extrañas? ¿No está claro That surprises you? Isn't it clear que en un objeto tan noble that a noble aim in mind hay que interesarse doble must interest a man of my kind que en otros? twice as much as others.

BRÍGIDA: Tenéis razón. You're a man apart.

DON JUAN: Conque ¿a qué hora se recogen So at what time do the reverend las madres? mothers seek their beds?

BRÍGIDA: Ya recogidas They've probably already done so. estarán. ¿Vos prevenidas Do you have everything, though, todas las cosas tenéis? prepared and ready?

DON JUAN: Todas. Everything.

BRÍGIDA: Pues luego que doblen Then as soon as they ring a las ánimas, con tiento for prayers, carefully, saltando al huerto, al convento jumping into the garden, see, fácilmente entrar podéis you can enter the convent easily con la llave que os he enviado: with the key I sent you: de un claustro oscuro y estrecho that of a dark and narrow door, es, seguidle bien derecho, follow it straight through, and your y daréis con poco afán passage is made, with little worry, en nuestra celda. to our cell.

DON JUAN: Y si acierto And if I succeed, at leisure, a robar tan gran tesoro, in stealing such a treasure, te he de hacer pesar en oro. I'll give you your weight in gold, with pleasure.

BRÍGIDA: Por mí no queda, don Juan. Don't stay for me, Don Juan, hurry.

DON JUAN: Ve y aguárdame. Go and wait for me Brígida; Voy, pues, Brigida, I am going straight there a entrar por la portería, through the little door here, y a cegar a sor María to blind Sister Maria, la tornera. Hasta después. the doorkeeper. Till later. (Vase Brígida, y un poco antes de (Brigida leaves. And a little concluir esta escena sale Ciutti, que before this scene ends, Ciutti se para en el fondo, esperando) comes in and stops in the background, waiting.)

ESCENA X SCENE X

(Don Juan, Ciutti) (Don Juan, Ciutti)

DON JUAN: Pues, señor, ¡soberbio envite! Well sir. A fine start to it! Muchas hice hasta esta hora, I've played lots of hands before mas ¡por Dios que la de ahora but, by God, I never saw será tal que me acredite! one that will do me more credit! Mas ya veo que me espera But I see Ciutti is waiting. Ciutti. ¿Lebrel? (Llamándole.) Lebrel? (Calling him)

CIUTTI: Aquí estoy. I am here.

DON JUAN: ¿Y don Luis? And Don Luis?

CIUTTI: Libre por hoy You're free of him, have no fear estáis de él. for today.

DON JUAN: Ahora quisiera Now I desire ver a Lucía. To see Lucia.

CIUTTI: Llegar This way. Here. podéis aquí: (A la reja derecha.) (At the right grill.) yo la llamo I'll call out, y al salir a mi reclamo and when she answers my shout, la podéis vos abordar. you can accost her.

DON JUAN: Llama, pues. Knock then.

CIUTTI: La seña mía She knows my signal so well sabe bien para que dude she might hesitate en acudir. to answer the bell.

DON JUAN: Pues si acude, Well if she does come, I say it, lo demás es cuenta mía. the rest is for me to tell. (Ciutti llama a la reja con una seña (Ciutti knocks on the grill que parezca convenida. Lucía se asoma with a signal that seems a ella, y al ver a don Juan se detiene appropriate. Lucia comes to it un momento.) and when she sees Don Juan, she stops for a moment.)

ESCENA XI SCENE XI

(Don Juan, Lucia, Ciutti) (Don Juan, Lucia, Ciutti)

LUCÍA: ¿Qué queréis, buen caballero? What do you want, sir knight?

DON JUAN: Quiero. I want...

LUCÍA: ¿Qué queréis, vamos a ver? Well! Lets see, what you want?

DON JUAN: Ver. To see...

LUCÍA: ¿Ver? ¿Qué veréis a esta hora? To see? Who would you see so late?

DON JUAN: A tu señora. Your lady.

LUCÍA: Idos, hidalgo, en mal hora; Go away, fine sir, to your sorry fate ¿quién pensáis que vive aquí? Who do you think lives here?

DON JUAN: Doña Ana Pantoja, y Doña Ana Pantoja is there, quiero ver a tu señora. and I want to see your lady.

LUCÍA: ¿Sabéis que casa doña Ana? Do you know Doña Ana is to be wed?

DON JUAN: Sí, mañana. Yes, tomorrow, I've heard it said.

LUCÍA: ¿Y ha de ser tan infiel ya? And is she to be unfaithful already?

DON JUAN: Sí será. Yes, she will be, she's ready.

LUCÍA: ¿Pues no es de don Luis Mejía? But isn't she promised to Luis Mejía?

DON JUAN: ¡Ca! Otro día. Ah, another day, I hear. Hoy no es mañana, Lucía; Today is not tomorrow, Lucia; yo he de estar hoy con doña Ana, I must be with Doña Ana today, y si se casa mañana, and let her marry tomorrow, I say, mañana será otro día. for tomorrow is another day.

LUCÍA: ¡Ah! ¡En recibiros está? Ah, is she prepared to receive you?

DON JUAN: Podrá. It could be.

LUCÍA: ¿Qué haré, si os he de servir? What am I to do to serve you?

DON JUAN: Abrir. Open up.

LUCÍA: ¡Bah! ¿Y quién abre este Bah. And what can open this castillo? fortress?

DON JUAN: Ese bolsillo. That purse.

LUCÍA: ¿Oro? Gold?

DON JUAN: Pronto te dio el brillo. You soon caught sight of its brightness.

LUCÍA: ¿Cuánto? How much, all told?

DON JUAN: De cien doblas pasa. More than a hundred golden pieces.

LUCÍA: Jesús! Jesus!

DON JUAN: Cuenta y di: ¿esta casa Count it and say if that purse pleases podrá abrir, ese bolsillo? enough to open this house.

LUCÍA: ¡Oh! Si es quien me dora el Oh, if someone puts gold in my pico... mouth...

DON JUAN: Muy rico. Who is very rich. (Interrumpiéndola.) (Interrupting her.)

LUCÍA: ¿Si? ¿Qué nombre usa el galán? Yes? And the name of the noble man?

DON JUAN: Don Juan. Don Juan.

LUCÍA: ¿Sin apellido notorio? With a notorious last name?

DON JUAN: Tenorio. Tenorio, the very same.

LUCÍA: ¡Animas del purgatorio! By the spirits amongst the flame! ¿Vos don Juan? You are Don Juan?

DON JUAN: ¿Qué te amedrenta, Does it cause you to fear, si a tus ojos se presenta that some rich Don Juan Tenorio muy rico don Juan Tenorio. presents himself to your eyes here?

LUCÍA: Rechina la cerradura. The lock is making a noise.

DON JUAN: Se asegura: It's secure.

LUCÍA: ¿Y a mí quién? ¡Por Belcebú! And who makes me secure?

DON JUAN: Tú. By Beelzebub. Why you, for sure.

LUCÍA: ¿Y qué me abrirá el camino? And what will smooth the road for me?

DON JUAN: Buen tino. Good sense, I'm told.

LUCÍA: ¡Bah! Ir en brazos del Bah. You're too bold..... destino...

DON JUAN: Dobla el oro. I'll double the gold.

LUCÍA: Me acomodo. I agree.

DON JUAN: Pues mira cómo de todo Just see how your good sense se asegura tu buen tino. reassures you totally.

LUCÍA: Dadme algún tiempo, ¡pardiez! Give me time, for heaven's sake!

DON JUAN: A las diez. Till ten, then, take.

LUCÍA: ¿Dónde os busco, o vos a mí? I'll find you, or you me, where?

DON JUAN: Aquí. Here.

LUCÍA: ¿Conque estaréis puntual, eh? So you'll be waiting for me?

DON JUAN: Estaré. I will be.

LUCÍA: Pues yo una llave os traeré. Then I'll bring you a key.

DON JUAN: Y yo otra igual cantidad. And I an equal amount of gold.

LUCÍA: No me faltéis. Don't fail me.

DON JUAN: No en verdad; No, for in truth, I told a las diez aquí estaré. you, I'll be here at ten. Adiós, pues, y en mí te fía. Good bye, and trust me, my dear.

LUCÍA: Y en mí el garboso galán. And you, me, my elegant gentleman.

DON JUAN: Adiós, pues, franca Lucía. Good bye, then, generous Lucia.

LUCÍA: Adiós, pues, rico don Juan. Good bye, then, rich Don Juan. (Lucía cierra la ventana. Ciutti se (Lucia closes the window. acerca a don Juan a una seña de éste.) Ciutti approaches Don Juan at a signal from the latter.)

ESCENA XII SCENE XII

(Don Juan, Ciutti) (Don Juan, Ciutti)

DON JUAN: (Riéndose.) (Laughing) Con oro nada hay que falle. With gold everything's sweet. Ciutti, ya sabes mi intento: Ciutti, you know my true intent: a las nueve en el convento, at nine inside the old convent, a las diez en esta calle. (Vanse.) at ten outside in the street. (They leave.)

FIN DE ACTO SEGUNDO END OF THE SECOND ACT

ACTO TERCERO ACT THREE

PROFANACION PROFANATION

(Celda de doña Inés. Puerta en el (The cell of Doña Ines. A door at fondo y a la izquierda.) the back and to the left.)

ESCENA I SCENE I

(Doña Inés, la Abadesa) (Doña Ines and the abbess.)

ABADESA:¿Conque me habéis So, you've understood me? entendido?

DOÑA INÉS: Si, señora. Yes, my lady.

ABADESA: Está muy bien; That's well; la voluntad decisiva such is your father's de vuestro padre tal es. firm wish, you hear. Sois joven, cándida y buena; You are young, innocent, and good: vivido en el claustro habéis you've lived in the cloister, here, casi desde que nacisteis; since you were born, my dear, y para quedar en él and in order to stay here now, atada con santos votos bound by a sacred vow para siempre, ni aún tenéis, eternally, you have no como otras, pruebas difíciles difficult penances to perform ni penitencias que hacer. or trials like others. ¡Dichosa mil veces vos! You're a thousand times fortunate! Dichosa, sí, doña Inés, Fortunate, yes, Doña Ines, que no conociendo el mundo for, not knowing the world, no le debéis de temer. you do not have to fear it. ¡Dichosa vos que, del claustro Fortunate, that crossing al pisar en el dintel, the threshold of the cloister no os volveréis a mirar you will not turn to look back lo que tras vos dejaréis! at what you are leaving behind. Y los mundanos recuerdos And the worldly memory del bullicio y del placer of hubbub and pleasure no os turbarán tentadores will not trouble you, tempting you, del ara santa a los pies; at the foot of the sacred altar: pues ignorando lo que hay since not knowing what is there, tras esa santa pared, behind that sacred wall, lo que tras ella se queda you will never long for jamás apeteceréis. what remains beyond it. Mansa paloma enseñada A tame dove that has learned en las palmas a comer to eat from the palm del dueño que la ha criado of the master who raised you en doméstico vergel, in a private orchard, no habiendo salido nunca never having left de la protectora red, the net that protects you, no ansiaréis nunca las alas you will not yearn for wings por el espacio tender. to extend into space. Lirio gentil, cuyo tallo A gentle lily, whose stem mecieron sólo tal vez was only rocked for hours las embalsamadas brisas by the perfumed breezes del más florecido mes, of a month of flowers, aquí a los besos del aura here at the kisses of the gentle breeze vuestro cáliz abriréis, your calyx will unfold y aquí vendrán vuestras hojas and here your leaves will begin tranquilamente a caer. tranquilly to fall. Y en el pedazo de tierra And in the piece of earth que abarca nuestra estrechez, which our poverty encloses, y en el pedazo de cielo and in the piece of sky que por las rejas se ve, that is seen through the bars, vos no veréis más que un lecho you'll find only a bed do en dulce sueño yacer, where in sweet sleep you'll lie y un velo azul suspendido and a blue veil suspended a las puertas del Edén. at the gates of Eden. ¡Ay! En verdad que os envidio, Oh, in truth I envy you venturosa doña Inés, fortunate Doña Ines, con vuestra inocente vida, with your innocent life, la virtud del no saber. the virtue of not knowing. Mas ¿por qué estáis cabizbaja? But, why are you so sad? ¿Por qué no me respondéis Why do you not reply como otras veces, alegre, as at other times, happily, cuando en lo mismo os hablé? when I speak like this to you? ¿Suspiráis?... ¡Oh!, ya comprendo You sigh? Oh, now I understand de vuelta aquí hasta no ver not having seen your Duenna a vuestra aya estáis inquieta, returning, you are anxious, pero nada receléis. but have no fears at all. A casa de vuestro padre She went to your father's house fue casi al anochecer, almost at nightfall y abajo en la portería and she is probably in the estará: yo os la enviaré, gatehouse; I will send her to you que estoy de vela esta noche. since I'm on watch tonight. Conque, vamos, doña Inés, So come now, Doña Ines, recogeos, que ya es hora: collect yourself, for it's time; mal ejemplo no me deis don't set a bad example a las novicias, que ha tiempo to the novices, asleep, quiet que duermen ya. Hasta después. for some while. Till later.

DOÑA INÉS: Id con Dios, madre Go with God, mother Abbess. abadesa.

ABADESA: Adiós, hija. Goodbye my daughter.

ESCENA II SCENE II

(Doña Inés) (Doña Inés)

DOÑA INÉS: Ya se fue. She's gone. No sé qué tengo, ¡ay de mí!, I don't know what's wrong with me. que en tumultuoso tropel Alas! For in a tumultous crowd mil encontradas ideas a thousand conflicting ideas me combaten a la vez. assail me all at once. Otras noches complacida On other nights I listened, sus palabras escuché; complacently, to her words; y de esos cuadros tranquilos and those tranquil pictures que sabe pintar tan bien, she knows how to paint so well, de esos placeres domésticos those domestic pleasures, la dichosa sencillez their delightful simplicity, y la calma venturosa, and their happy calm, me hicieron apetecer made me yearn for la soledad de los claustros the silence of the cloisters y su santa rigidez. and their holy rule. Mas hoy la oí

distraída But today I listened distracted y en sus pláticas hallé, and I found in her chatter si no enojosos discursos, if not bothersome discourse a lo menos aridez. at the very least aridity. Y no sé por qué, al decirme And I don't know why, at her telling me que podría acontecer that it might happen, que se acelerase el día that the day for my vows de mi profesión, temblé might come quickly, I trembled y sentí del corazón and I felt in my heart acelerarse el vaivén, excitement quicken, teñírseme el semblante my face become discolored de amarilla palidez. with yellowish pallor. ¡Ay de mí...! ¡Pero mi dueña Ah me! But where can my dónde estará...! Esa mujer Duenna be. That woman con sus pláticas al cabo sometimes entertains me entretiene alguna vez. after all, with her gossip. Y hoy la echo menos... acaso And today I miss her...perhaps porque la voy a perder, because I'm going to lose her, que en profesando es preciso for when taking vows it's necessary renunciar a cuanto amé. to renounce everything you love. Mas pasos siento en el claustro; But I hear steps in the cloister: ¡oh!, reconozco muy bien Oh! I truly recognize sus pisadas... Ya está aquí. her footsteps. She is here.

ESCENA III SCENE III

(Doña Inés, Brígida) (Doña Inés, Brígida)

BRIGIDA: Buena noches Doña Inés. Good evening, Doña Ines.

DOÑA INES: Cómo habéis tardado Why are you so late? tanto?

BRÍGIDA: Voy a cerrar esta puerta. I'm going to close this gate.

DOÑA INÉS: Hay orden de que esté The rule is to keep it open. abierta.

BRÍGIDA: Eso es muy bueno y muy It is very good and holy santo para las otras novicias for all the other novices que han de consagrarse a Dios, to be consecrated to God: no, doña Inés, para vos. but not, Doña Ines, for you.

DOÑA INÉS: Brígida, ¿no ves que Brígida, don't you see you are vicias las reglas del monasterio breaking the convent rules que no permiten...? that do not permit.....?

BRÍGIDA: ¡Bah!, ¡bah! Bah, bah! Más seguro así se está, We are safer so, y así se habla sin misterio and so we can talk without mystery ni estorbos. ¿Habéis mirado or hindrance. Have you looked carefully el libro que os he traído? at the book I brought you?

DOÑA INÉS: ¡Ay!, se me había Ay, I forgot it. olvidado.

BRÍGIDA: ¡Pues me hace gracia el (Ironically) Well, thank you for olvido! forgetting it!

DOÑA INÉS: ¡Como la madre abadesa Because the mother Abbess se entró aquí inmediatamente! came in straight away.

BRÍGIDA: ¡Vieja más impertinente! What a meddlesome old woman!

DOÑA INÉS: ¿Pues tanto el libro You are interested in the book? interesa?

BRÍGIDA: ¡Vaya si interesa! Mucho. Oh yes, it interests me. A great deal! ¡Pues quedó con poco afán For the poor man left it behind el infeliz! along with a little longing. (Ironically)

DOÑA INÉS: ¿Quién? Who did?

BRÍGIDA: Don Juan. Don Juan!

DOÑA INÉS: ¿Válgame el cielo! ¡Qué escucho! Good heavens, what do I hear! Es don Juan quien me le envía. Don Juan sent it to me?

BRÍGIDA: Por supuesto. That's so.

DOÑA INÉS: ¡Oh! Yo no debo Oh! I ought not to go tomarle. accepting it.

BRÍGIDA: ¡Pobre mancebo! Poor young man, though! Desairarle así, sería To slight him thus would be matarle. to kill him.

DOÑA INÉS: ¿Qué estás diciendo? What are you saying?

BRÍGIDA: Si ese horario no tomáis, If you don't accept his book of prayer tal pesadumbre le dais you'll cause him such despair que va a enfermar: lo estoy viendo that he'll sicken: I can see it now.

DOÑA INÉS: ¡Ah! No, no; de esa Ah! No, no; in that case manera le tomaré. I will take it.

BRÍGIDA: Bien haréis. You'll do well.

DOÑA INÉS: ¡Y qué bonito es! And how pretty it is!

BRÍGIDA: Ya veis; Well, you see, it is: quien quiere agradar se esmera. who wants to please tries his best.

DOÑA INÉS: Con sus manecillas de With little clasps of gold. oro. ¡Y cuidado que está prieto! And it's comfortable to hold! A ver, a ver si completo Lets see, lets see if it has the whole contiene el rezo del coro. choir prayer all told. (Le abre, y cae una carta de entre (She opens it and a letter falls sus hojas.) out from between the leaves.) Mas ¿qué cayó? But what fell?

BRÍGIDA: Un papelito. A little paper.

DOÑA INÉS: ¡Una carta! A letter!

BRÍGIDA: Claro está; Of course it is: en esa carta os vendrá he is probably offering you ofreciendo el regalito. his gift in that letter.

DOÑA INÉS: ¡Qué! ¿Será suyo el What! Can this paper be his? papel?

BRÍGIDA: ¡Vaya, que sois inocente! Come now, how innocent you are! Pues que os feria, es consiguiente Since he is giving you a present, que la carta será de él. it follows the letter is his.

DOÑA INÉS: ¡Ay, Jesús! Merciful Heavens!

BRÍGIDA: ¿Qué es lo que os da? Whats the matter, poor thing?

DOÑA INÉS: Nada, Brigida, no es Nothing, Brigida, it's nothing. nada.

BRÍGIDA: No, no; si estáis No, no: you seem bothered by inmutada. something. (Ya presa en la red está.) (Aside) She's already caught in the net. ¿Se os pasa? Is anything wrong?

DOÑA INÉS: Sí. Yes.

BRÍGIDA: Eso habrá sido It must have been excess cualquier mareíllo vano. of some passing dizziness.

DOÑA INÉS: ¡Ay! Se me abrasa la Ah! My hand is burning where mano con que el papel he cogido. I held it against the paper.

BRÍGIDA: Doña Inés, ¡válgame Dios!, Goodness, Doña Ines jamás os he visto así: I've never seen you like this: estáis trémula. you're trembling.

DOÑA INÉS: ¡Ay de mí! Ah, yes!

BRÍGIDA: ¿Qué es lo que pasa por vos? What's happening to you?

DOÑA INÉS: No sé... El campo de mi mente I don't know...I feel as if I see siento que cruzan perdidas a thousand unknown shadows wind, mil sombras desconocidas wandering, throughout my mind, que me inquietan vagamente that vaguely trouble me, y ha tiempo al alma me dan and for some time now they've been con su agitación tortura. tormenting me with their passing.

BRÍGIDA: ¿Tiene alguna por ventura Perhaps Don Juan's face passing el semblante de don Juan? has something to do with it?

DOÑA INÉS: No sé: desde que le vi, I don't know, but ever since I came to see Brígida mía, y su nombre him, Brigida, and you told me his name, me dijiste, tengo a ese hombre I always have that man, the same siempre delante de mí. one, in front of me. Por doquiera me distraigo Wherever I am, I'm distracted con su agradable recuerdo, by the pleasant memory of him, y si un instante le pierdo, and if for a moment I forget him, en su recuerdo recaigo. I remember how he acted. No sé qué fascinación I don't know what fascination en mis sentidos ejerce, he holds for my senses, que siempre hacia él se me tuerce I have no defences, la mente y el corazón: mind and heart are turned his way: y aquí y en el oratorio and here in the oratory, oh, y en todas partes advierto I notice I entertain que el pensamiento divierto my thoughts again and again con la imagen de Tenorio. with the form of Tenorio.

BRÍGIDA: ¡Válgame Dios! Doña Inés, Heaven help us, Doña Ines, según lo vais explicando, according to what you've told me tentaciones me van dando you tempt me to believe, you see de creer que eso amor es. that it is love, no less.

DOÑA INÉS: ¡Amor has dicho! Love you say!

BRÍGIDA: Sí, amor. Yes. Love.

DOÑA INÉS: No, de ninguna manera. No, by no manner of means.

BRÍGIDA: Pues por amor lo Well, the slowest witted it seems entendiera el menos entendedor; would know that it is love: mas vamos la carta a ver. but let me see the letter. ¿En qué os paráis? ¿Un suspiro? What stops you, then? A sigh?

DOÑA INÉS: ¡Ay! Que cuanto más la Ay! The more I look at it, miro, menos me atrevo a leer. the less I dare to read it. (Lee.) (She reads) "Doña Inés del alma mía." "Doña Ines, the soul of love" ¡Virgen Santa, qué principio! Saints above, what an introduction!

BRÍGIDA: Vendrá en verso, y será Since it is a verse production un ripio que traerá la poesía. it's required by the poetry. Vamos, seguid adelante. Go on: keep reading.

DOÑA INÉS: (Lee.) (reads) "Luz de donde el sol la toma, "Light that creates the sun above, hermosísima paloma most beautiful and gentle dove privada de libertad, deprived of liberty, si os dignáis por estas letras if you deign to pass pasar vuestros lindos ojos, your pretty eyes over these letters today, no los tornéis con enojos do not angrily turn them away sin concluir, acabad." without finishing: read them and see."

BRÍGIDA: ¡Qué humildad! ¡Y qué What humility! What finesse! finura! ¿Dónde hay mayor rendimiento? Where is there greater devotion?

DOÑA INÉS: Brigida, no sé qué Brigida, I don't know this emotion siento. I feel.

BRÍGIDA: Seguid, seguid la lectura. Go on, what's next?

DOÑA INÉS: (Lee) (Reading) "Nuestros padres de consuno "Our fathers, together, both nuestras bodas acordaron, agreed we should wed porque los cielos juntaron because the heavens joined los destinos de los dos. our two destinies. Y halagado desde entonces And since then, flattered by con tan risueña esperanza, such a delightful hope, mi alma, doña Inés, no alcanza Doña Ines, my soul seeks no otro porvenir que vos. other future than you. Indeed, De amor con ella en mi pecho a tiny spark of love brotó una chispa ligera, ignited here in my chest que han convertido en hoguera and time and fixed affection have tiempo y afición tenaz: made it a roaring fire; y esta llama que en mí mismo and this unquenchable zest se alimenta inextinguible, that finds itself inside me cada día más terrible every day more terribly, va creciendo y más voraz.., increasing, blazing higher...."

BRÍGIDA: Es claro; esperar le It's clear: they made him wait hicieron en vuestro amor algún día, to gain your love one day, y hondas raíces tenía and found tenacious roots cuando a arrancársele fueron. when they tried to tear them away. Seguid. Continue.

DOÑA INÉS: (Lee.) "En vano a apagarla "Time and absence, in vain, though concurren tiempo y ausencia, seek to extinguish it, que doblando su violencia for doubling in violence, it no hoguera ya, volcán es. is no longer a fire, but a volcano. Y yo, que en medio del cráter And I, suspended, O, desamparado batallo, I battle without shelter, suspendido en él me hallo in the midst of a crater entre mi tumba y mi Inés." between my tomb and my Inés, so"

BRÍGIDA: ¿Lo veis, Inés? Si ese Do you see Inés? If you flout horario le despreciáis, al instante that prayerbook you crave le preparan el sudario. they'll prepare his shroud.

DOÑA INÉS: Yo desfallezco. I'm faint.

BRÍGIDA: Adelante. Oh. be brave!

DOÑA INÉS: (Lee.) (She reads) "Inés, alma de mi alma, "Inés, soul of my soul, perpetuo imán de mi vida, my life's eternal goal, perla sin concha escondida a pearl concealed, without a shell, entre las algas del mar; deep beneath the ocean swell: garza que nunca del nido bird that never from its nest tender osastes el vuelo, dared to stretch its wings and fly, el diáfano azul del cielo through the translucent azure sky para aprender a cruzar; learning how to cross: si es que a través de esos muros if at the world beyond those walls el mundo apenada miras, you peer in misery, y por el mundo suspiras and sigh for a world of liberty de libertad con afán, with yearning, understand acuérdate que al pie mismo that at the very foot de esos muros que te guardan, of those same

walls, await you para salvarte te aguardan to save you, yes, await you, los brazos de tu don Juan." the arms of your Don Juan." (Representa.) (She shows her emotions.) ¿Qué es lo que me pasa, ¡cielo!, Dear heaven, what's happening to my state que me estoy viendo morir? of mind, for I seem to be dying?

BRÍGIDA: ¡Ya tragó todo el anzuelo. (Aside) She's already swallowed the bait! Vamos, que está al concluir. Go on, for he's almost finished sighing.

DOÑA INÉS: (Lee.) (Reading) "Acuérdate de quien llora "Remember the one who weeps al pie de tu celosía, below your window pane y allí le sorprende el día till the day surprises him again, y le halla la noche allí; the night still finds him there. acuérdate de quien vive Remember the one who lives sólo por ti, ¡vida mía!, only for you, my sweet, y que a tus pies volaría who would fly to your feet si me llamaras a ti." if you were to call me there."

BRÍGIDA: ¿Lo veis? Vendría. Do you see? He'd come.

DOÑA INÉS: ¡Vendría! He'd be here!

BRÍGIDA: A postrarse a vuestros To kneel at your feet, no less. pies.

DOÑA INÉS: ¿Puede? Could he?

BRÍGIDA: ¡Oh, sí! Oh yes.

DOÑA INÉS: ¡Virgen María! Sweet Maria!

BRÍGIDA: Pero acabad, doña Inés. But finish, Doña Inés.

DOÑA INÉS: (Lee.) (Reading) "Adiós, ¡oh luz de mis ojos! "Farewell, oh light of my eyes. Adiós, Inés de mi alma: Farewell, Inés of my soul. medita, por Dios, en calma consider, in God's name, the whole las palabras que aquí van; of what is written here: be calm y si odias esa clausura, and if you would hate the cloister que ser tu sepulcro debe; to be, as it will be, your tomb, manda, que a todo se atreve at your command is he who will come, por tu hermosura don Juan." daring all for your beauty, Don Juan." (Representa doña Inés.) (Showing emotion) ¡Ay! ¿Qué filtro envenenado Ah, what a deadly venom me dan en este papel, has been given me with this paper que el corazón desgarrado for I feel my heart ripped open me estoy sintiendo con él? on reading his letter. ¿Qué sentimientos dormidos What slumbering oceans son los que revela en mí? are those it reveals to me? ¿Qué impulsos jamás sentidos? What never-experienced emotions? ¿Qué luz, que hasta hoy nunca vi? What light I could never see? ¿Qué es lo que engendra en mi alma What is it my soul creates, tan nuevo y profundo afán? such a new, deep, yearning? Who can ¿Quién roba la dulce calma steal my sweet calm, who takes de mi corazón? it from my heart?

BRÍGIDA: Don Juan. Don Juan.

DOÑA INÉS: ¿Don Juan dices...? Conque ese Don Juan you say? So that man hombre me ha de seguir por doquier? is to follow me everywhere? ¿Sólo he de escuchar su nombre? Am I to hear only his name? ¿ Sólo su sombra he de ver? See only his shadow there? ¡Ah! Bien dice: juntó el cielo Oh, he spoke rightly, heaven mated los destinos de los dos, our two destinies, y en mi alma engendró este anhelo and engendered in my soul this fated fatal. longing.

BRÍGIDA: ¡Silencio, por Dios! For God's sake, quietly! (Se oyen dar las ánimas.) (They hear the bells for the prayers of the dead.)

DOÑA INÉS: ¿Qué? What?

BRÍGIDA: ¡Silencio! Silence!

DOÑA INÉS: Me estremeces. You make me tremble, too.

BRÍGIDA: ¿Oís, doña Inés, tocar? Do you hear the bells ring over our head?

DOÑA INÉS: Sí, lo mismo que otras Yes, the same as they always do. veces las ánimas oigo dar. calling for prayers for the dead.

BRÍGIDA: ¡Pues no habléis de él. Well, don't speak of him. Cielo santo! Merciful heavens! Oh!

DOÑA INÉS: ¿De quién? Of whom?

BRÍGIDA: ¿De quién ha de ser? Why whom do you fear? De ese don Juan que amáis tanto, Of whom? That Don Juan that you love so, porque puede aparecer. since he might appear.

DOÑA INÉS: ¡Me amedrentas! ¿Puede ese hombre You terrify me! Could that man llegar hasta aquí? even approach me here?

BRÍGIDA: Quizá. Perhaps. Porque el eco de su nombre Because the echo of his name tal vez llega adonde está. maybe it reaches him, clear.

DOÑA INÉS: ¡Cielos! ¿Y podrá...? Heavens! And could he?

BRÍGIDA: ¿Quién sabe? Who knows?

DOÑA INÉS: ¿Es un espíritu, pues? Is he a spirit then? Confess!

BRÍGIDA: No, mas si tiene una No, but if he has a key, and llave... goes.....

DOÑA INÉS: ¡Dios! Dear God!

BRÍGIDA: Silencio, doña Inés: Silence Doña Inés. ¿No oís pasos? Didn't you hear footsteps?

DOÑA INÉS: ¡Ay! Ahora Yes! They came to my hearing, nada oigo. now I hear nothing.

BRÍGIDA: Las nueve dan. Its striking nine o'clock. And Suben... se acercan... Señora... they're ascending...my lady....nearing Ya está aquí. He's here.

DOÑA INÉS: ¿Quién? Who?

BRÍGIDA: Él. He is.

DOÑA INÉS: ¡Don Juan! Don Juan!

ESCENA IV SCENE IV

(Doña Inés, Don Juan, Brígida) (Doña Inés, Don Juan, Brígida)

DOÑA INÉS: ¿Qué es esto? Sueño... What is this? A dream...or is it deliro. delirium.

DON JUAN: ¡Inés de mi corazón! Inés of my heart!

DOÑA INÉS: ¿Es realidad lo que miro Is what I gaze at real, or the art o es una fascinación...? that is illusion? Tenedme... apenas respiro... Hold me....my lips scarce part Sombra... huye por compasión. Shade...flee, out of compassion. ¡ Ay de mí...! Alas for me...! (Desmáyase doña Inés y don Juan la (Doña Inés faints and don Juan sostiene. La carta de don Juan holds her up. Don Juan's letter queda en el suelo abanDoñada por remains abandoned on the floor by doña Inés al desmayarse.) Doña Inés when she faints.)

BRÍGIDA: La ha fascinado Your sudden entrance here vuestra repentina entrada, has quite overpowered her y el pavor la ha trastornado. and she's overcome by fear.

DON JUAN: Mejor: así nos ha All the better. That means a mere ahorrado la mitad de la jornada. half of my effort's needed for her. ¡Ea! No desperdiciemos Well, lets not waste more time el tiempo aquí en contemplarla, gazing at her charms, si perdernos no queremos. if we don't want to be lost in crime. En los brazos a tomarla I'll carry her in my arms, voy, y cuanto antes ganemos and as soon as I can be I'm ese claustro solitario. free of this cloister's solitude.

BRÍGIDA: ¡Oh! ¿Vais a sacarla así? Oh! You'll take her like this?

DON JUAN: ¡Necia! ¿Piensas que Foolish woman. Do you think, rompí confess, la clausura, temerario, that I broke in here, showing fortitude, para dejármela aquí? only to leave behind my bliss? Mi gente abajo me espera: My people are waiting below: sígueme. follow!

BRÍGIDA: ¡Sin alma estoy! My heart is in my mouth! Indeed, ¡Ay! Este hombre es una fiera, this man is a wild beast, no nada le ataja ni altera... one stops him or deflects him, so Sí, sí; a su sombra me voy. I'll go wherever his shadow leads.

ESCENA V SCENE V

La ABADESA: Jurara que había oído I could swear that I heard....wait!... por estos claustros andar: someone walking these cloisters: hoy a doña Inés velar today when I've let Doña Inés algo más la he permitido, stay up until it grows late, y me temo... Mas no están and I'm afraid... But they're not here, so aquí. ¿Qué pudo ocurrir what could have occurred, a las dos para salir for both to have stirred de la celda? ¿Dónde irán? from the cell? Where have they gone to? ¡Hola! Yo las ataré Well now. I'll tether them corto para que no vuelvan with a short rope so they try a enredar y me revuelvan no more tricks, nor trouble my a las novicias... sí, a fe. novices..yes, that's for certain. Mas siento por allá fuera But I sense footsteps outside. pasos. ¿Quién es? Who is there?

ESCENA VI SCENE VI

(La Abadesa, la tornera) (The abbess and the doorkeeper.)

TORNERA: Yo, señora. Milady, it's me.

ABADESA: ¿Vos en el claustro a You are still inside I see? esta hora? ¿Qué es esto, hermana tornera? What's going on sister doorkeeper.

TORNERA: Madre abadesa, os buscaba. Mother Abbess, I was looking for you.

ABADESA: ¿Qué hay? Decid. What is it? Speak.

TORNERA: Un noble anciano An elderly noble quiere hablaros. wants to speak to you.

ABADESA: Es en vano. It's not possible.

TORNERA: Dice que es de Calatrava He says he's a knight of Calatrava: caballero; que sus fueros and that their laws allow le autorizan a este paso, him to enter here y que la urgencia del caso and it's urgent, so it's clear le obliga al instante a veros. he means to see you now.

ABADESA: ¿Dijo su nombre? Did he give his name?

TORNERA: El señor El Señor Don Gonzalo Ulloa. Don Gonzalo Ulloa.

ABADESA: ¿Qué What can he want here? puede querer...? Abralé Open the door for him sister: hermana: es Comendador He is a Comendador de la orden, y derecho of our order and has the right tiene en el claustro de entrada. to enter our cloister.

ESCENA VII SCENE VII

La ABADESA: ¿A una hora tan To come so, at such a late hour? avanzada venir así...? No sospecho I can't imagine at all qué pueda ser..., mas me place, what it might be...but then I'm pues no hallando a su hija aquí, pleased... when he finds his daughter free la reprenderá, y así he'll scold her, and then we'll see mirará otra vez lo que hace. she'll think twice what she does next time.

ESCENA VIII SCENE VIII

(La Abadesa, Don Gonzalo; la (The Abbess, Don Gonzalo; the tornera a la puerta) doorkeeper)

DON GONZALO: Perdonad, madre abadesa, Mother Abbess, forgive me que en hora tal os moleste; for bothering you at such a time, mas para mí asunto es éste but for me this is a matter of my que honra y vida me interesa. life and my honour, you see.

ABADESA: ¡Jesús! Saints above!

DON GONZALO: Oíd. Hear me.

ABADESA: Hablad, pues. Then speak at leisure !

DON GONZALO: Yo guardé hasta hoy un tesoro Today there's a treasure I hold de más quilates que el oro, of greater value than gold, y ese tesoro es mi Inés. and my Inés is that treasure.

ABADESA: A propósito. Of course.

DON GONZALO: Escuchad. Listen, closely! Se me acaba de decir I have only now been que han visto a su dueña ir told her Duenna was seen ha poco por la ciudad walking through the city hablando con el criado talking with the servant de un don Juan, de tal renombre of a certain Don Juan, he of such fame que no hay en la tierra otro hombre there's no man on earth I could name. tan audaz ni tan malvado. as audacious or as errant. En tiempo atrás se pensó Some time ago I intended, you see, con él a mi hija casar, to have him marry my daughter, y hoy, que se la fui a negar, and today, when I forbade him to court her, robármela me juró. he swore he'd steal her from me. Que por el torpe doncel This young man of sin ganada la dueña está has won over her Duenna, I'm sure, no puedo dudarlo ya: I can doubt it no more: debo, pues, guardarme de él. I must guard her from him. Y un día, una hora quizás In just one day that man, de imprevisión le bastara, a careless hour would do it, para que mi honor manchara, would steal my honour, or stain it, a ese hijo de Satanás. that very son of Satan. He aquí mi inquietud cuál es; It's the cause of my disquiet, now: por la dueña, en conclusión, on account of the Duenna, my confession, vengo; vos la profesión I've come: will you cut short the profession abreviad de doña Inés. of Doña Inés's vow.

ABADESA: Sois padre, y es vuestro You're a father, your concern is afán muy justo, Comendador; very just, Comendador: mas ved que ofende a mi honor. but see how you offend my honour.

DON GONZALO: No sabéis quién es don Juan. You do not know who Don Juan is.

ABADESA: Aunque le pintáis tan Though you paint him as an evil malo, case, yo os puedo decir de mí, I say to you, have no fear, que mientra Inés esté aquí, for while Inés is here, segura está, Don Gonzalo. Don Gonzalo, she is safe.

DON GONZALO: Lo creo; mas las razones I believe it, but lets choose abreviemos; entregadme to end this speech: hand over to me a esa dueña, y perdonadme the Duenna, and indeed forgive me mis mundanas opiniones. for my worldly views. Si vos de vuestra virtud You may defend virtue, me respondéis, yo me fundo but I trust to what I know en que conozco del mundo of the heedless youth who go la insensata juventud. through this world, in truth.

ABADESA: Se hará como lo exigís. It will be done straight away. Hermana tornera, id, pues, Sister doorkeeper, yes, a buscar a doña Inés go and get Doña Inés. y a su dueña. (Vase la tornera.) and her Duenna. (the doorkeeper leaves)

DON GONZALO: ¿Qué decís, What is this that you say señora? traición me ha hecho milady? Is my memory misled mi memoria, o yo sé bien or am I not aware, truly que ésta es hora de que estén that at this hour, surely ambas a dos en su lecho. both should be in their bed.

ABADESA: Ha un punto sentí a las A while ago I heard both leave dos salir de aquí, no sé a qué. and I don't know why.

DON GONZALO: ¡Ay! Por qué tiemblo no sé. I don't know why I tremble. Ay! ¡Mas qué veo, santo Dios! Dear Lord! What do I see? Un papel... Me lo decía A paper. My disquiet just began a voces mi mismo afán. to worry at me and call me. (Leyendo.) (Reading) "Doña Inés del alma mía..." "Doña Inés of my soul..." Y la firma de don Juan. And the signature....Don Juan. Ved..., ved..., esa prueba escrita. See...see....the proof on paper. Leed ahí... ¡Oh! Mientras que vos Read here. Oh! Abbess, while you por ella rogáis a Dios, were praying to God, it's true, viene el diablo y os la quita. the devil came down and stole her.

ESCENA IX SCENE IX

La Abadesa, Don Gonzalo, la tornera The Abbess, Don Gonzalo, the Turnkey

TORNERA: Señora... Milady...

ABADESA: ¿Qué es? What is it?

TORNERA: Vengo muerta. I'm appalled.

DON GONZALO: Concluid. Speak.

TORNERA: No acierto a hablar... I can't bring myself to speak... He visto a un hombre saltar I just saw a man leap por las tapias de la huerta. over the garden wall.

DON GONZALO: ¿Veis? Corramos. ¡Ay de mí! You see! Lets run. Oh, I fear!

ABADESA: ¿Dónde vais, Comendador? Comendador, where are you fleeing?

DON GONZALO: ¡Imbécil! tras de mi honor Fool! After my honour, seeing que os roban a vos de aquí. they've stolen it from here.

FIN DEL ACTO TERCERO END OF THE THIRD ACT

ACTO CUARTO ACT FOUR

El DIABLO A LAS PUERTAS DEL CIELO THE DEVIL AT THE GATES OF HEAVEN

(Quinta de don Juan Tenorio cerca (Don Juan Tenorio's estate near de Sevilla y sobre el Guadalquivir. Seville and on the Guadalquivir Balcón en el fondo. Dos puertas a river. A balcony at the back. Two cada lado.) doors to each side.)

ESCENA PRIMERA SCENE I

(Brígida, Ciutti) (Brígida, Ciutti)

BRÍGIDA: ¡Qué noche, válgame Dios! My God what a night! A poderlo calcular Had I foreseen it, no me meto yo a servir I wouldn't have offered to serve a tan fogoso galán. such a fiery young man as this. ¡Ay, Ciutti! Molida estoy; Ah Ciutti! I'm battered and bruised no me puedo menear. and I can't move a muscle.

CIUTTI: Pues ¿qué os duele ? But what pains you?

BRÍGIDA: Todo el cuerpo My whole body, y toda el alma además. and all my soul besides.

CIUTTI: ¡Ya! No estáis acostumbrada Ah, you're just not used al caballo, es natural. to riding, it's natural.

BRÍGIDA: Mil veces pensé caer: I thought I'd fall a thousand times. ¡uf!, ¡qué mareo!, ¡qué afán! Oh! What dizziness! What fear! Veía yo unos tras otros I saw the trees one after another ante mis ojos pasar passing before my eyes los árboles, como en alas as if on wings, blown by llevados de un huracán, so quickly in a storm tan apriesa y produciéndome that they produced in me ilusión tan infernal, such a hellish illusion que perdiera los sentidos that had we delayed our halt si tardamos en parar. much longer, I'd have lost my senses.

CIUTTI: Pues de estas cosas veréis, But you'll see things of this sort si en esta casa os quedáis, if you stay in this house lo menos seis por semana. at least six times a week.

BRÍGIDA: ¡Jesús! Good God!

CIUTTI: ¿Y esa niña está And is that little girl reposando todavía? still resting?

BRÍGIDA: ¿Y a qué se ha de And why should she wake? despertar?

CIUTTI: Sí, es mejor que abra los Yes, it's better she opens her eyes ojos en los brazos de don Juan. in the arms of Don Juan.

BRÍGIDA: Preciso es que tu amo tenga Your master must have algún diablo familiar. some devil as his familiar.

CIUTTI: Yo creo que sea él mismo I think that he himself is un diablo en carne mortal, a devil in mortal flesh, porque a lo que él, solamente because only Satan would se arrojara Satanás. dare to do what he does.

BRÍGIDA: ¡Oh! ¡El lance ha sido extremado! Ah! The deed was amazing.

CIUTTI: Pero al fin logrado está. But it is finally done.

BRÍGIDA: ¡Salir así de un convento To take her from a convent en medio de una ciudad in the middle of a place como Sevilla! like Seville!

CIUTTI: Es empresa It's an undertaking tan sólo para hombre tal. fit only for such a man. Mas, ¡qué diablos!, si a su lado But, devil take it, it's as if la fortuna siempre va, fortune is always with him, encadenado a sus pies chained at his feet duerme sumiso el azar. while chance sleeps in submission.

BRÍGIDA: Si, decís bien. Yes, you speak well.

CIUTTI: No he visto hombre I have never seen a man de corazón más audaz; with a more audacious heart ni halla riesgo que le espante who never finds a risk he fears ni encuentra dificultad nor finds a single problem que al empeñarse en vencer he'll not attempt to vanquish le haga un punto vacilar. or that makes him halt a moment. A todo osado se arroja, He attempts everything with daring de todo se ve capaz, thinks himself in control of all things ni mira dónde se mete, neither cares where he gets involved ni lo pregunta jamás. nor even questions the reason for it. "Allí hay un lance", le dicen; They tell him "there's an affair" y él dice: "Allá va don Juan". And he says: "Don Juan goes there." ¡Mas ya tarda, vive Dios! But Lord, it's getting late.

BRÍGIDA: Las doce en la catedral A while ago it struck han dado ha tiempo. twelve in the cathedral.

CIUTTI: Y de vuelta And he was supposed debía a las doce estar. to be back at twelve.

BRÍGIDA: Pero ¿por qué no se vino But why didn't he come con nosotros? with us?

CIUTTI: Tiene allá, He still has a few things there en la ciudad, todavía in the city cuatro cosas que arreglar. to arrange.

BRÍGIDA: ¿Para el viaje? For the trip?

CIUTTI: Por supuesto; Of course; aunque muy fácil será though it would be all too easy que esta noche a los infernos for them to have him travel le hagan a él mismo viajar. straight to Hell tonight.

BRÍGIDA: ¡Jesús, qué ideas! Heavens, what ideas!

CIUTTI: Pues digo, Well I say son obras de caridad these are works of charity en las que nos empleamos on which we are engaged para mejor esperar. while awaiting something better. Aunque seguros estamos Even so we'll be safe como vuelva por acá. provided he returns here.

BRÍGIDA: ¿De veras, Ciutti? Truly Ciutti?

CIUTTI: Venid Come a este balcón y mirad. to this balcony and look. ¿Qué veis? What do you see?

BRÍGIDA: Veo un bergantín I see a boat que anclado en el río está. anchored in the river.

CIUTTI: Pues su patrón sólo aguarda Well its owner only waits for las órdenes de don Juan, the orders of Don Juan. y salvos en todo caso and in any case it will take us a Italia nos llevará. safely to Italy.

BRÍGIDA: ¿Cierto? Are you sure?

CIUTTI: Y nada receléis And fear nothing por nuestra seguridad; for our safety; que es el barco más velero since it's the swiftest ship que boga sobre la mar. that sails on the sea.

BRÍGIDA: ¡Chist! Ya siento a doña Shh! I hear Doña Inés. Inés.

CIUTTI: Pues yo me voy, que don Juan Then I'm leaving, since Don Juan encargó que sola vos ordered that only you debíais con ella hablar. were to speak with her.

BRÍGIDA: Y encargó bien, que yo And he ordered well, since I entiendo de esto. know about these things.

CIUTTI: Adiós, pues. Good bye then.

BRÍGIDA: Vete en paz. Go in peace.

ESCENA II SCENE II

(Doña Inés, Brígida) (Doña Inés, Brígida)

DOÑA INÉS: Dios mío, ¡cuánto he Good Lord, how I have dreamed! soñado! Loca estoy: ¿qué hora será? I must be mad. What time can it be? Pero ¿qué es esto?, ¡ay de mí! But what is this? Ay de mi! No recuerdo que jamás I don't recall that I have ever haya visto este aposento. seen this room. ¿Quién me trajo aquí? Who brought me here?

BRÍGIDA: Don Juan. Don Juan.

DOÑA INÉS: Siempre don Juan. Mas conmigo Always Don Juan. But you aquí tú también estás, are here with me too, Brígida? Brigida.

BRÍGIDA: Sí, doña Inés. Yes, Doña Inés.

DOÑA INÉS: Pero dime, en caridad, But tell me for pity's sake, ¿dónde estamos? ¿Este cuarto where are we? This room, es del convento? does it belong to the convent?

BRÍGIDA: No tal: Not at all: aquello era un cuchitril that was a hovel en donde no había más in which there was nothing but que miseria. misery.

DOÑA INÉS: Pero en fin But then, ¿en dónde estamos? where are we?

BRÍGIDA: Mirad, Look, mirad por este balcón, look from this balcony, y alcanzaréis lo que va and you will see how far desde un convento de monjas a convent of nuns is from a una quinta de don Juan. the estate of Don Juan.

DOÑA INÉS: ¿Es de don Juan esta This estate belongs to Don Juan? quinta?

BRÍGIDA: Y creo que vuestra ya. And I think it is yours now.

DOÑA INÉS: Pero no comprendo, I don't understand Brigida Brigida, lo que me hablas. what are you talking about?

BRÍGIDA: Escuchad. Listen. Estabais en el convento You were reading with delight leyendo con mucho afán in the convent, in your hand una carta de don Juan, a letter from don Juan, cuando estalló en un momento when suddenly in the night un incendio formidable. a terrible fire broke out there.

DOÑA INÉS: ¡Jesús! Merciful heavens!

BRÍGIDA: Espantoso, inmenso; Terrifying, immense: el humo era ya tan denso the smoke itself was so dense que el aire se hizo palpable. you could almost touch the air.

DOÑA INÉS: Pues no recuerdo... But I don't remember.

BRÍGIDA: Las dos Well we two con la carta entretenidas, were so engrossed with our reading olvidamos nuestras vidas, oblivious, forgetful, of everything, yo oyendo y leyendo vos. you speaking, I listening to you. Y estaba, en verdad, tan tierna, And it was so tender I know, que entrambas a su lectura that we both ascribed achacamos la tortura the torment we felt inside que sentíamos interna. to reading it so. Apenas ya respirar We could scarcely find breath podíamos, y las llamas and the flames, as I said, prendían ya en nuestras camas: had already consumed our beds: nos íbamos a asfixiar we were facing certain death cuando don Juan, que os adora when Don Juan, who you'll find que rondaba el convento, adores you, circling the wall, al ver crecer con el viento seeing the flames so tall la llama devastadora, increasing with the wind con inaudito valor, with unheard of courage, viendo que ibais a abrasaros, seeing you were going to die se metió para salvaros undertook to save you, by por donde pudo mejor. the best way he could manage. Vos al verle así asaltar You, upon seeing him try la celda tan de improviso, your cell door suddenly os desmayasteis..., preciso; fainted. Oh, of necessity: la cosa era de esperar. it was to be expected. Why, Y él, cuando os vio caer así, he, when he saw you fall en sus brazos os tomó took you in his arms y echó a huir; yo le seguí, and fled. I followed his call, y del fuego nos sacó. and he got us away from harm. ¿Dónde vamos a esta hora? Where to go at that hour of night? Vos seguíais desmayada, You still in a faint, yo estaba ya casi ahogada. I my throat in such constraint. Dijo, pues: "Hasta la aurora He said then, "Till morning light en mi casa las tendré". I'll protect them here at my house." Y henos, doña Inés, aquí. And that's why we're here Inés.

DOÑA INÉS: ¿Conque ésta es su casa? So this is his house?

BRÍGIDA: Sí. Yes.

DOÑA INÉS: Pues nada recuerdo, a fe. I remember nothing. His house! Pero... ¡en su casa...! ¡Oh! Al Oh! Quickly. Oh! punto salgamos de ella..., yo tengo Lets leave here...I can go la de mi padre. to my father's house.

BRÍGIDA: Convengo Of course, con vos; pero es el asunto... but the fact is, you know.....

DOÑA INÉS: ¿Qué? What?

BRÍGIDA: Que no podemos ir. We can't go there.

DOÑA INÉS: Oir tal me maravilla. I am amazed to hear it. We will.

BRÍGIDA: Nos aparta de Sevilla... But we're separated from Seville....

DOÑA INÉS: ¿Quién? By what?

BRÍGIDA: Vedlo, el Guadalquivir. See. The Guadalquivir.

DOÑA INÉS: ¿No estamos en la ciudad? Then we're not in the city?

BRÍGIDA: A una legua nos hallamos We find ourselves a mile de sus murallas. from its walls.

DOÑA INÉS: ¡Oh! ¡Estamos Oh! Then I'll perdidas! be lost!

BRÍGIDA: ¿No sé en verdad I don't see truly por qué? why?

DOÑA INÉS: Me estás confundiendo, You're confusing me, Brígida..., y no sé qué redes Brigida, and I don't know what nets son las que entre estas paredes these are I fear you stretch temo que me estás tendiendo. around the walls and me. Nunca el claustro abandoné I don't know the world, indeed ni sé del mundo exterior I have never left the cloister, los usos; mas tengo honor, but I'm noble, Brigida: I have honour, noble soy, Brígida, y sé and I know, by every creed, que la casa de don Juan that Don Juan's house for me no es buen sitio para mí: is no good place to be: me lo está diciendo aquí I don't know what I foresee no sé qué escondido afán. warning me of this so clearly. Ven, huyamos. Come, lets leave.

BRÍGIDA: Doña Inés, Doña Inés, la existencia os ha salvado. he preserved your very existence!

DOÑA INÉS: Sí, pero me ha envenenado Yes, but his poison insists on el corazón. piercing my heart.

BRÍGIDA: ¿Le amáis, pues? You love him to excess?

DOÑA INÉS: No sé... Mas, por I don't know, but all the same compasión, huyamos pronto de ese hombre, let us flee quickly from here, tras de cuyo solo nombre in my very heart I fear se me escapa el corazón. even the sound of his name. ¡Ah! Tú me diste un papel You gave me a letter de mano de ese hombre escrito, written by that man himself, y algún encanto maldito and some wicked spell me diste encerrado en él. caught up in it's paper. Una sola vez le vi I could only see por entre unas celosías, him once through a window, que estaba, me decías, for you told me he was also en aquel sitio por mí. in that place because of me. Tú, Brígida, a todas horas You Brigida, in every place, me venías de él a hablar came to talk to me about him haciéndome recordar making me recall him sus gracias fascinadoras. his fascinating grace. Tú me dijiste que estaba You told me he was the same para mí destinado one, destined only for me por mi padre..., y me has jurado by my father, and swore to me en su nombre que me amaba. that he loved me, using his name. ¿Que le amo, dices?... Pues bien, Do I love him you ask? Well, si esto es amar, sí, le amo; yes I love him, if this is love: pero yo sé que me infamo but by that passion I prove con esa pasión también. that I also debase myself. Y si el débil corazón And if my weak heart should stray se me va tras de don Juan, following after Don Juan tirándome de él están my honour and obligation mi honor y mi obligación. pull me the other way. Vamos, pues; vamos de aquí So lets go, lets flee primero que ese hombre venga; before he returns again: pues fuerza acaso no tenga for perhaps I'll not have the strength si le veo junto a mí. if I see him near to me. Vamos, Brígida. Lets go Brigida.

BRÍGIDA: Esperad. Wait. ¿No oís? Don't you hear?

DOÑA INÉS: ¿Qué? What.

BRÍGIDA: Ruido de remos. The sound of men rowing.

DOÑA INÉS: Sí, dices bien; You're right. We're going volveremos en un bote a la ciudad. back by boat to the city.

BRÍGIDA: Mirad, mirad, doña Inés. Look, look Doña Inés.

DOÑA INÉS: Acaba..., por Dios, Stop that. Dear God, lets go. partamos.

BRÍGIDA: Ya imposible que salgamos. Its impossible for us now.

DOÑA INÉS: ¿Por qué razón? For what reason?

BRÍGIDA: Porque él es Because he is quien en ese barquichuelo the one proceeding up-river se adelanta por el río. in that little boat of course.

DOÑA INÉS: ¡Ay! ¡Dadme fuerzas, Dios mío! Ah! Give me strength dear Lord.

BRÍGIDA: Ya llegó, ya está en el He's here. He's leaving the water. suelo. Sus gentes nos volverán I know that he must plan a casa: mas antes de irnos for his people to return us es preciso despedirnos but before we go we must a lo menos de don Juan. say our farewells to Don Juan.

DOÑA INÉS: Sea, y vamos al instante: All right, but then lets go, we two. No quiero volverle a ver. I don't want to see him again.

BRÍGIDA: (Los ojos te hará volver Aside: (He will make your eyes strain el encontrarle delante.) towards him when he's before you.) Vamos. Come.

DOÑA INÉS: Vamos. Lets go.

CIUTTI: (Dentro.) Aquí están. Here they are.

DON JUAN: (Idem) Alumbra. Bring a light.

BRÍGIDA: ¡Nos busca! He's looking for us!

DOÑA INÉS: Él es. He's here.

ESCENA III SCENE III

(Dichas, Don Juan) (As before, Don Juan)

DON JUAN: ¿Adónde vais, doña Inés? Where are you going, Doña Inés.

DOÑA INÉS: Dejadme salir, don Juan. Let me leave, Don Juan.

DON JUAN: ¿Que os deje salir? Let you leave?

BRÍGIDA: Señor, Señor, sabiendo ya el accidente now he knows about the fire del fuego, estará impaciente he can have only one desire, por su hija el Comendador. for his daughter, the Comendador.

DON JUAN: ¡El fuego! ¡Ah! No os dé cuidado The fire! Ah! Now I see: por Don Gonzalo, que ya about Don Gonzalo, don't worry: dormir tranquilo le hará the message I've sent already el mensaje que le he enviado. has him sleeping peacefully.

DOÑA INÉS: ¿Le habéis dicho...? You have told him?

DON JUAN: Que os hallabais You are safe with me, bajo mi amparo segura, in my protection, where y el aura del campo pura the pure earth's gentle air libre por fin respirabais. is yours to breathe, you see. (Vase Brígida.) (Brigida exits.) ¡Cálmate, pues, vida mía! Be calm then, my dear care! Reposa aquí, y un momento Rest here and, for a moment, olvida de tu convento forget about the convent la triste cárcel sombría. the gloomy shadows there. ¡Ah! ¿No es cierto, ángel de amor, Oh, my angel of love, do you see que en esta apartada orilla that on this secluded shore más pura la luna brilla the moon shines clear and pure y se respira mejor? and one breathes more easily? Esta aura que vaga llena The gentle air from the fields de los sencillos olores filled with its sweet scents de las campesinas flores of the wildflowers' incense que brota esa orilla amena; that this sweet shore yields: esa agua limpia y serena that limpid wave so calm que atraviesa sin temor that the fishermen here la barca del pescador cross without a fear que espera cantando al día, as, singing, they wait for dawn, ¿no es cierto, paloma mía, isn't it true, my dove, que están respirando amor? that they are breathing love? Esa armonía que el viento That harmony that the breeze recoge entre esos millares creates among countless leaves de floridos olivares, of flourishing olive trees, que agita con manso aliento; that it stirs so tenderly, ese dulcísimo acento that sweetest mystery con que trina el ruiseñor from the tree-top, close to dawn, de sus copas morador that calls the approaching morn, llamando al cercano día, the nightingale's trill, sweet spell, ¿no es verdad, gacela mía, isn't it true, my gazelle que están respirando amor? that they are breathing love? Y estas palabras que están And these words that can filtrando insensiblemente be heard insensibly, tu corazón ya pendiente in your heart, unfailingly, de los labios de don Juan, from the lips of Don Juan y cuyas ideas van and whose thoughts are then inflamando en su interior lighting, in you, desire un fuego germinador their incipient fire, no encendido todavía, though still not shining far, ¿no es verdad, estrella mía, is it not true, my star que están

respirando amor? that they are breathing love? Y esas dos líquidas perlas And those two pearls so chaste que se desprenden tranquilas that in silence slide de tus radiantes pupilas from your radiant eyes convidándome a beberlas, inviting me to taste evaporarse, a no verlas, in order not to see de sí mismas al calor; them vanish with their heat: y ese encendido color and the blush so sweet que en tu semblante no había, not in your cheek before, ¿no es verdad, hermosa mía, is it not true, my beauty pure, que están respirando amor? that they are breathing love? ¡Oh! Sí, bellísima Inés Oh, my loveliest Inés espejo y luz de mis ojos; mirror and light of vision, escucharme sin enojos, listen without derision, como lo haces, amor es: as you do so, it's love: yes, mira aquí a tus plantas, pues, see here at your feet, I confess todo el altivo rigor all the haughty pride de este corazón traidor of this traitorous heart inside que rendirse no creía, that never thought to yield, adorando, vida mía, adores you, my life, ah, I feel la esclavitud de tu amor. the slavery of your love.

DOÑA INÉS: Callad, por Dios, ¡oh, don Juan!, Oh God! Silence! How can I stand que no podré resistir to resist, with my sighing, mucho tiempo sin morir any longer, without dying, tan nunca sentido afán. ah, such longing, Don Juan? ¡Ah! Callad por compasión, Ah, to silence, for pity's sake, turn, que oyéndoos me parece for hearing you seems to me que mi cerebro enloquece to bring my mind infirmity, se arde mi corazón. and cause my heart to burn. ¡Ah! Me habéis dado a beber Ah! You have doubtless given me un filtro infernal, sin duda, an infernal potion, oh some que a rendiros os ayuda charm that helps you overcome la virtud de la mujer. a woman's purity. (Tal vez poseéis, don Juan, Perhaps, Don Juan, you possess an amulet un misterioso amuleto a thing of mystery que a vos me atrae en secreto that draws me secretly como irresistible imán. like an irresistible magnet. Tal vez Satán puso en vos: Perhaps Satan set in your eyes su vista fascinadora, his fascinating gaze su palabra seductora, his seductive maze, y el amor que negó a Dios. of words, and the Love he denies ¡Y qué he de hacer ¡ay de mí! to God. Ah, what am I to do, sino caer en vuestros brazos, but fall into those two si el corazón en pedazos arms, if you continue to me vais robando de aquí? shatter my heart in two? No, don Juan, en poder mío Don Juan, it's no longer in me resistirte no está ya: to own the power to resist you: no, yo voy a ti como va I turn to you as the river flows sorbido al mar ese río. that runs down to the sea. Tu presencia me enajena, Your presence maddens me, tus palabras me alucinan, your words hypnotize me, y tus ojos me fascinan, and your eyes fascinate me, y tu aliento me envenena. and your breath envenoms me. ¡Don Juan! ¡Don Juan!, yo lo imploro Don Juan! Don Juan, I implore you de tu hidalga compasión: in your noble heart, of pity, o arráncame el corazón, either tear my heart from me, o ámame, porque te adoro. or love me, because I adore you.

DON JUAN: ¿Alma mía! Esa palabra My soul! Those words indeed cambia de modo mi ser, change my whole state of being. que alcanzo que puede hacer and I know perhaps I am seeing hasta que el Edén se me abra. Paradise open to me. No es, doña Inés, Satanás Doña Inés, it is not Satan, in sin, quien pone este amor en mí; who creates this love in me: es Dios, que quiere por ti it is God, who wants, perhaps ganarme para Él quizás. through you, to win me to Him. No, el amor que hoy se atesora No, the love that is precious en mi corazón mortal in my heart, that is mortal, no es un amor terrenal is not that love, terrestrial, como el que sentí hasta ahora; that up to now I've treasured; no es esa chispa fugaz nor is it a fleeting spark of need que cualquier ráfaga apaga; that a breath of wind defeats: es incendio que se traga it is a roaring fire that eats cuanto ve, inmenso, voraz. all it sees, in its vast greed. Desecha, pues, tu inquietud, Calm then your fears, oh you bellísima doña Inés, my most beautiful Inés, porque me siento a tus pies for at your feet I feel that, yes, capaz aún de la virtud. even I am filled with virtue. Sí, iré mi orgullo a postrar Ah, I will swallow my pride ante el buen Comendador, before the good Comendador, y o habrá de darme tu amor, and he'll either give me you to adore o me tendrá que matar. or death will be my bride.

DOÑA INÉS: ¡Don Juan de mi corazón! My dearest Don Juan!

DON JUAN: ¡Silencio! ¿Habéis Silence. Did you hear? escuchado...?

DOÑA INÉS: ¿Qué? What?

DON JUAN: (Mirando por el balcón.) (Looking over the balcony) Sí, una barca ha atracado Yes, a boat has landed debajo de ese balcón. below the balcony. Un hombre embozado de ella A man wrapped in a cloak is salta... Brígida, al momento leaping out. Brigida, go quickly (Entra Brígida) (Brigida enters) pasad a ese otro aposento, into the other room, perdonad, Inés bella, pardon me, beautiful Inés si solo me importa estar. it's important I am alone.

DOÑA INÉS: ¿Tardarás? Will you be long?

DON JUAN: Poco ha de ser. Just a little while.

DOÑA INÉS: A mi padre hemos de ver. We have to see my father.

DON JUAN: Sí, en cuanto empiece a Yes, when it begins to grow light. clarear. Adiós. Farewell.

ESCENA IV SCENE IV

(Don Juan, Ciutti) (Don Juan, Ciutti)

CIUTTI: Señor. Señor.

DON JUAN: ¿Qué sucede, What's happening Ciutti? Ciutti?

CIUTTI: Ahí está un embozado There's a man cloaked from view en veros muy empeñado. anxious to speak to you.

DON JUAN: ¿Quién es? Who is he?

CIUTTI: Dice que no puede He says he cannot be descubrirse más que a vos, any more open with you, y que es cosa de tal priesa, and that it is truly urgent, que en ella se os interesa it's about an issue sent la vida a entrambos a dos. to trouble both of you.

DON JUAN: ¿Y en él no has reconocido And you could not find marca ni señal alguna any mark or sign que os oriente? to give you a clue?

CIUTTI: Ninguna; No. None: mas a veros decidido but he's of a mind viene. to see you.

DON JUAN: ¿Trae gente? Are his people with him?

CIUTTI: No más Only the rowers que los remeros del bote. in the boat below.

DON JUAN: Que entre. Have him come in.

ESCENA V SCENE V

(Don Juan; luego Ciutti y Don Luis, (Don Juan, then Ciutti. Don Luis, embozado) cloaked to the eyes.)

DON JUAN: ¡Jugamos a escote We are playing la vida...! Mas ¿si es quizás for our lives! But if indeed un traidor que hasta mi quinta it's treachery that's planned me viene siguiendo el paso? trailing me to my estate? Hálleme, pues, por si acaso Let him find me then, just in case, con las armas en la cinta. with my weapons to hand. (Se ciñe la espada y suspende al (He puts on his sword and suspends cinto un par de pistolas que habrá from his belt a pair of pistols colocado sobre la mesa a su salida that he had placed on the table en la escena tercera. Al momento upon exiting in the third scene. sale Ciutti conduciendo a don Luis, Immediately Ciutti comes out que, embozado hasta los ojos, leading Don Luis who, muffled to espera que se queden solos. Don the eyes, waits until they are Juan hace una seña a Ciutti para alone. Don Juan makes a sign to que se retire. Lo hace.) Ciutti that he withdraw. He does so.)

ESCENA VI SCENE VI

(Don Juan, Don Luis) (Don Juan, Don Luis)

DON JUAN: aparte(Buen talante.) Aside (What a nice appearance) Bien venido, caballero Welcome, sir. Don Luis: Bien hallado, señor mío. The same, sir.

DON JUAN: Sin cuidado hablad. Speak freely.

DON LUIS: Jamás lo he tenido. I always do.

DON JUAN: Decid, pues: ¿a qué Say then. Why have you come venís a esta hora y con tal afán? at this hour so eagerly?

DON LUIS: Vengo a mataros, don Juan. I've come to kill you Don Juan.

DON JUAN: Según eso, sois don Luis. Ah then, you are Don Luis.

DON LUIS: No os engañó el corazón, Your heart does not lie, y el tiempo no malgastemos and lets not waste time. Don Juan; los dos no cabemos There's not room, Don Juan. ya en la tierra. on this earth for you and I.

DON JUAN: En conclusión, In conclusion, señor Mejía, ¿es decir Mejia, that's to say que porque os gané la apuesta that because I won the game queréis que acabe la fiesta you want to fight all the same con salirnos a batir? to end the day?

DON LUIS: Estáis puesto en la razón: You are right: wholeheartedly, la vida apostado habemos, we have bet our lives in play y es fuerza que nos paguemos. and it is necessary we pay.

DON JUAN: Soy de la misma opinión. Well yes I agree. Mas ved que os debo advertir But I must point out to you que sois vos quien la ha perdido. that you are the one who lost.

DON LUIS: Pues por eso os la he And that's why I'm here of course: traído; mas no creo que morir but I don't believe it true deba nunca un caballero, that a gentleman who in life que lleva en el cinto espada, carries a sword at his side como una res destinada should ever be destined to die por su dueño al matadero. like an animal under the knife.

DON JUAN: Ni yo creo que resquicio Nor do I believe you have ever habréis jamás encontrado found the slightest cause por donde me hayáis tomado that could make you take me for por un cortador de oficio. a professional butcher.

DON LUIS: De ningún modo; y ya veis By no means: and now you see que, pues os vengo a buscar, that since I've come to find you mucho en vos debo fiar. I must place great faith in you.

DON JUAN: No más de lo que podéis. No more than you should, indeed. Y por mostraros mejor And to show even better mi generosa hidalguía, my generous nobility decid si aún puedo, Mejía, Mejia, please tell me satisfacer vuestro honor. how I can satisfy your honour. Leal la apuesta os gané; I won the wager fairly, mas si tanto os ha escocido, but if it has pained you so, mirad si halláis conocido if there's some answer you know, remedio, y le aplicaré. I'll apply the remedy.

DON LUIS: No hay más que el que os There is nothing but what I say he propuesto, Don Juan. don Juan. Me habéis maniatado You have manacled me y habéis la casa asaltado, and you have assaulted me usurpándome mi puesto; usurping my true place pues el mío tomasteis for you have stolen my name para triunfar de doña Ana, to triumph over Doña Ana, no sois vos, don Juan, quien gana, you're not the winner Don Juan porque por otro jugasteis. since you acted as me in the game.

DON JUAN: Ardides del juego son. Those are the tricks of the trade.

DON LUIS: Pues no os los quiero Well, I don't want to ignore them pasar, y por ellos a jugar and even on account of them, vamos ahora el corazón. let's still see our lives played.

DON JUAN: ¿Le arriesgáis, pues, en revancha You'll risk it then, in play de doña Ana de Pantoja? for Doña Ana again?

DON LUIS: Sí, y lo que tardo me Yes. To cleanse such a stain enoja en lavar tan fea mancha. and it angers me we delay Don Juan, yo la amaba, sí; Don Juan, I loved her, yes. mas, con lo que habéis osado, but after what you have dared imposible la hais dejado neither of us can have her para vos y para mí. now she's abandoned, bereft.

DON JUAN: ¿Por qué la apostasteis, Why did you wager her then? pues?

DON LUIS: Porque no pude pensar Because Icould never have come que lo pudierais lograr. to believe you might have won. Y... vamos, por San Andrés, And, by Saint Andrew, lets go then a reñir, que me impaciento. and duel, for I grow impatient

DON JUAN: Bajemos a la ribera. Lets go down to the river.

DON LUIS: Aquí mismo. No here.

DON JUAN: Necio fuera: They'd capture the winner ¿no veis que en este aposento in this room, don't you see, be patient, prendieran al vencedor? that's a foolish idea. Vos traéis una barquilla. Your boat's here still?

DON LUIS: Sí. Yes.

DON JUAN: Pues que lleve a Sevilla The winner takes it al que quede. to Seville.

DON LUIS: Eso es mejor; That is better: salgamos, pues. Lets go then.

DON JUAN: Esperad. Wait.

DON LUIS: ¿Qué sucede? What is it?

DON JUAN: Ruido siento. I hear a sound.

DON LUIS: Pues no perdamos momento. Well let's not stay around.

ESCENA VII SCENE VII

(Don Juan, Don Luis, Ciutti) (Don Juan, Don Luis, Ciutti)

CIUTTI: Señor, la vida salvad. Sir, save your life.

DON JUAN: ¿Qué hay, pues? What is it?

CIUTTI: El Comendador, The Comendador que llega con gente armada. who's come with armed men.

DON JUAN: Déjale franca la entrada, Let him enter freely, then pero a él solo. but him alone.

CIUTTI: Mas, señor... But señor...

DON JUAN: Obedéceme. (Vase Ciutti.) Obey me. (Ciutti goes out.)

ESCENA VIII SCENE VIII

(Don Juan, Don Luis) (Don Juan, Don Luis)

DON JUAN: Don Luis, Don Luis, pues de mí os habéis fiado since you've given me your trust, cuanto dejáis demostrado as you have shown me, just cuando a mi casa venís, by coming here to see me, no dudaré en suplicaros, I do not hesitate to beg you pues mi valor conocéis since you know my courage, in faith, que un instante me aguardéis. to grant me a moment's grace.

DON LUIS: Yo nunca puse reparos I never found fault with you en valor que es tan notorio, in your bravery which is so mas no me fío de vos. well-known, but I've never trusted you.

DON JUAN: Ved que las partes son dos Notice that there were two de la apuesta con Tenorio, parts to the bet with Tenorio y que ganadas están. and they are both won.

DON LUIS: ¿Lograsteis a un At the same time? tiempo...?

DON JUAN: Sí: Yes, I fear: la del convento está aquí; the one from the convent is here: y pues viene de don Juan whoever wishes may come a reclamarla quien puede, to claim her from Don Juan, cuando me podéis matar and since you may cause my death no debo asunto dejar I must not leave behind a breath tras mí que pendiente quede. of business still to be done.

DON LUIS: Pero mirad que meter You see that whoever comes might quien puede el lance impedir be able to prevent the affair entre los dos puede ser... between the two of us here....

DON JUAN: ¿Qué? What?

DON LUIS: Excusaros de reñir. And excuse you from a fight.

DON JUAN: ¡Miserable...! De don Juan Wretch! Only you can doubt podéis dudar sólo vos; Don Juan's intention mas aquí entrad, ¡vive Dios!, but, in here, by Heaven, y no tengáis tanto afán and don't be so ready to shout por vengaros, que este asunto for vengeance: once this thing arreglado con ese hombre, is settled with that man, don Luis, yo os juro a mi nombre Don Luis, I swear we can que nos batimos al punto. begin our duelling.

DON LUIS: Pero... But...

DON JUAN: ¡Con una legión The Devils' Legion! de diablos! Entrad aquí, Go in here, and see que harta nobleza es en mí there's sufficient nobility in me aun daros satisfacción. to give you satisfaction. Desde ahí ved y escuchad; Watch and listen from there: franca tenéis esa puerta. you may leave that door open. Si veis mi conducta incierta, If you see my conduct's uncertain como os acomode obrad. then act as you dare.

DON LUIS: Me avengo, si muy reacio I'll avenge myself if you no andáis. continue to be so stubborn.

DON JUAN: Calculadlo vos Judge as you will a placer: mas, ¡vive Dios!, but by heaven que para todo hay espacio. there is time enough for you. (Entra don Luís en el cuarto que (Don Luis goes into the room Don don Juan le señala.) Juan points out to him) Ya suben. (Don Juan escucha.) They are coming up. (He listens)

DON GONZALO: (Dentro.) ¿Dónde está? (Inside) Where is he?

DON JUAN: Él es. It is I.

ESCENA IX SCENE IX

(Don Juan, Don Gonzalo) (Don Juan, Don Gonzalo)

DON GONZALO: ¿Adónde está ese traidor? Where is that traitor?

DON JUAN: Aquí está Comendador. Here he is Comendador.

DON GONZALO: ¿De rodillas? On your knees?

DON JUAN: Y a tus pies. And at your feet.

DON GONZALO: Vil eres hasta en tus crímenes. You are vile even in your crimes.

DON JUAN: Anciano, la lengua ten, Old man, hold your tongue, y escúchame un solo instante. and just listen for a moment.

DON GONZALO: ¿Qué puede en tu lengua haber What could come from your mouth que borre lo que tu mano that could cancel what your hand escribió en este papel? wrote on this paper? ¡Ir a sorprender, ¡infame!, Infamous man, to surprise la cándida sencillez the pure simplicity de quien no pudo el veneno of someone who could not guard de esas letras precaver! against the poison of these words. Derramar en su alma virgen To spill into her virgin soul traidoramente la hiel treacherously the bitterness en que rebosa la tuya, with which yours overflows, seca de virtud y fe! empty of virtue and faith! ¡Proponerse así enlodar To propose thus to soil de mis timbres la alta prez, the high glory of my family emblem como si fuera un harapo as if it were a rag que desecha un mercader! that a merchant casts aside. ¿Ese es el valor, Tenorio, That is the courage, Tenorio de que blasonas? ¿Esa es of which you boast? That is la proverbial osadía the proverbial daring que te da al vulgo a temer? that you cause men to fear? ¿Con viejos y con doncellas With old men and young girls la muestras...? Y ¿para qué? you show it? And why? ¡Vive Dios! Para venir Saints above! To come sus plantas así a lamer, and lick my boots, mostrándote a un tiempo ajeno showing yourself at the same time de valor y de honradez. without valour or honour.

DON JUAN: ¡Comendador! Comendador!

DON GONZALO: Miserable, Miserable man tú has robado a mi hija Inés you have stolen my daughter Inés de su convento, y yo vengo from her convent, and I'm here por tu vida o por mi bien. for your life, or for my good.

DON JUAN: Jamás delante de un hombre Before no man mi alta cerviz incliné, have I ever bent my neck ni he suplicado jamás nor have I ever begged ni a mi padre ni a mi rey. from my father or my king. Y pues conservo a tus plantas And while I stay at your feet la postura en que me ves, in the attitude you see me here considera, Don Gonzalo, consider Don Gonzalo que razón debo tener. that I may have a reason.

DON GONZALO: Lo que tienes es pavor What you have is fear de mi justicia. of my justice.

DON JUAN: ¡Pardiez! By God! Oyeme, Comendador, Listen to me Comendador. o tenerme no sabré or I won't be able to contain myself y seré quien siempre he sido, and I will be what I have always been no queriéndolo ahora ser. not wanting to be it now.

DON GONZALO: ¡Vive Dios! Good God!

DON JUAN: Comendador, Comendador yo idolatro a doña Inés, I idolize Doña Inés, persuadido de que el cielo persuaded that heaven me la quiso conceder intended to grant her to me, para enderezar mis pasos to lead my steps por el sendero del bien. along the true path. No amé la hermosura en ella, It is not the beauty in her ni sus gracias adoré; alone I adore, nor her grace: lo que adoro es la virtud, what I adore is the virtue, Don Gonzalo, en doña Inés. Don Gonzalo, in Doña Inés. Lo que justicias ni obispos What neither judges nor bishops no pudieron de mí hacer could do con cárceles y sermones, with prisons and sermons, lo pudo su candidez. she with her purity succeeded. Su amor me torna en otro hombre Her love turns me into another man

regenerando mi ser, regenerates my being y ella puede hacer un ángel and she can make an angel de quien un demonio fue. of a man who was a devil. Escucha, pues, Don Gonzalo, Listen then Don Gonzalo lo que te puede ofrecer to what Don Juan's daring el audaz don Juan Tenorio can offer you de rodillas a tus pies. on his knees and at your feet. Yo seré esclavo de tu hija, I will be your daughter's slave. en tu casa viviré, I will live in your house, tú gobernarás mi hacienda you will govern my property diciéndome: esto ha de ser. telling me, it shall be so. El tiempo que señalares Whenever you request it en reclusión estaré; I will stay in seclusion: cuantas pruebas exigieres whatever proofs you ask de mi audacia o mi altivez, of my daring or my nobility del modo que me ordenares, in any way you command con sumisión te daré: I will obey submissively: y cuando estime tu juicio And when in your judgement que la puedo merecer, you decide I might merit it yo la daré un buen esposo I'll be a good husband to her y ella me dará el Edén. and she'll lead me to Paradise.

DON GONZALO: Basta, don Juan; no sé cómo Enough Don Juan: I don't know how me he podido contener, I've been able to contain myself, oyendo tan torpes pruebas listening to the sordid proof de tu infame avilantez. of your infamous vileness. Don Juan, tú eres un cobarde Don Juan, you are a coward cuando en la ocasión te ves, when you find yourself in danger y no hay bajeza a que no oses and there is no baseness you will not dare como te saque con bien. as long as you escape successfully.

DON JUAN: ¡Don Gonzalo! Don Gonzalo!

DON GONZALO: Y me avergüenzo I am ashamed to see you de mirarte así a mis pies, so, at my feet, lo que apostabas por fuerza what you risked by force suplicando por merced. begging now as a grace.

DON JUAN: Todo así se satisface, Everything will be reconciled Don Gonzalo, de una vez. Don Gonzalo at the same time.

DON GONZALO: ¡Nunca, nunca! ¿Tú su esposo? Never. You her husband? Never! Primero la mataré. I'll kill her first. ¡Ea! Entrégamela al punto Hand her over to me immediately o, sin poderme valer, or, unable to control myself, en esa postura vil I'll strike you dead el pecho te cruzaré. in that vile pose.

DON JUAN: Míralo bien, Don Gonzalo, Consider well, Don Gonzalo que vas a hacerme perder that you, perhaps, will make me lose con ella hasta la esperanza my own salvation, de mi salvación tal vez. together with hope of her.

DON GONZALO: ¿Y qué tengo yo, don Juan, And what have I to do Don Juan, con tu salvación que ver? with your salvation?

DON JUAN: ¡Comendador, que me Comendador, you destroy me! pierdes!

DON GONZALO: Mi hija. My daughter!

DON JUAN: Considera bien Consider then que por cuantos medios pude that as fully as I could te quise satisfacer, I tried to satisfy you. y que con armas al cinto and with arms at my side tus denuestos toleré, I tolerated your insults, proponiéndote la paz proposing peace to you, de rodillas a tus pies. on my knees and at your feet.

ESCENA X SCENE X

(Dichos; Don Luis, soltando una (The same characters: Don Luis, carcajada de burla) bursting out in a jeering shout of laughter)

DON LUIS: Muy bien, don Juan. Well done, Don Juan.

DON JUAN: ¡Vive Dios! God above! Who?

DON GONZALO: ¿Quién es ese hombre? Who is that man?

DON LUIS: Un testigo A witness in the end de su miedo, y un amigo, to his cowardice, and a friend, Comendador, para vos. Comendador, to you.

DON JUAN: ¿Don Luis? Don Luis?

DON LUIS: Ya he visto bastante, I've seen all I need, don Juan, para conocer Don Juan, to recognise cuál uso puedes hacer the way that you realise de tu valor arrogante; your arrogant valour; indeed y quien hiere por detrás the one who strikes in that way y se humilla en la ocasión, from behind, debases himself in danger es tan vil como el ladrón as vile as a thieving stranger que roba y huye. who steals and runs away.

DON JUAN: ¿Esto más? Now this too?

DON LUIS: Y pues la ira soberana And since the sovereign anger de Dios junta, como ves, of God, as you see, joins together al padre de doña Inés that of Doña Inés's father y al vengador de doña Ana, and Doña Ana's avenger, mira el fin que aquí te espera see the end that awaits you here cuando a igual tiempo te alcanza, when you meet at the same moment aquí dentro su venganza vengeance here, inside, y la justicia allá fuera. and justice, outside, there.

DON GONZALO: ¡Oh! Ahora comprendo... ¿Sois vos Ah, now I understand, then you el que...? are?

DON LUIS: Soy don Luis Mejía, Don Luis Mejia, a quien a tiempo os envía whom God in due time sends here por vuestra venganza Dios. to take revenge, for you.

DON JUAN: ¡Basta, pues, de tal Enough of this torturing vice! suplicio! Si con hacienda y honor If with property and truth ni os muestro ni doy valor I can't show you proof a mi franco sacrificio, of my free sacrifice, y la leal solicitud and the loyal and true con que ofrezco cuanto puedo petition which I offer, tomáis, ¡vive Dios!, por miedo that you take, by heaven, for fear, y os mofáis de mi virtud, mocking my virtue, os acepto el que me dais I'll accept what you hand out plazo breve y perentorio a brief, peremptory moment to show para mostrarme el Tenorio Don Juan Tenorio de cuyo valor dudáis. and the courage that you doubt.

DON LUIS: Sea; y cae a nuestros pies, So be it, and fall at our feet. digno al menos de esa fama worthy at least of that fame que por tan bravo te aclama. that has given your courage a name.

DON JUAN: Y venza el infierno, pues. Let Hell's victory be complete, Ulloa, pues mi alma así Ulloa, since my soul again vuelves a hundir en el vicio, you plunge into devilry, cuando Dios me llame a juicio when God judges me tú responderás por mí. you will take the blame. (Le da un pistoletazo.) (He shoots him with his pistol)

DON GONZALO: ¡Asesino! (Cae.) Murderer! (He falls)

DON JUAN: Y tú, insensato, And you, man without grace que me llamas vil ladrón, who call me a vile thief, too, di en prueba de tu razón let this speak to show it's true, que cara a cara te mato. I'll destroy you face to face. (Riñen, y le da una estocada.) (They duel and he gives him a sword thrust)

DON LUIS: ¡Jesús! (Cae.) Jesus! (He falls)

DON JUAN: Tarde tu fe ciega Your blind faith calls out acude al cielo, Mejía, to heaven too late, Mejia: y no fue por culpa mía; all was not my fault, here, pero la justicia llega, but the officials are now about, y a fe que ha de ver quién soy. and by faith they'll see a man.

CIUTTI: (Dentro.) ¿Don Juan? Don Juan? (Inside)

DON JUAN: (Asomando al baldón.) (Approaching the balcony.) ¿Quién es? Who is it?

CIUTTI: (Dentro.) Por aquí; (Inside) Through here, salvaos.

DON JUAN: ¿Hay paso? Is there a way?

CIUTTI: Sí; Yes. arrojaos. Jump clear.

DON JUAN: Allá voy. Here I am. Llamé al cielo y no me oyó, I called to heaven: it did not see, y pues sus puertas me cierra, and since it closes its doors de mis pasos en la tierra to my whole earthly course, responda el cielo, y no yo. let heaven be blamed, not me. (Se arroja por el balcón, y se le (He jumps from the balcony and you oye caer en el agua del río, al can hear him fall in the water of mismo tiempo que el ruido de los the river, and at the same time remos muestra la rapidez del barco the noise of the oars shows the en que parte; se oyen golpes en la rapidity of the boat as it leaves: puerta de la habitación; poco knocks are heard on the door of después entra la justicia, the room, and a little later the soldados, etc.) officials come in, soldiers, etc.)

ESCENA XI SCENE XI

(Alguaciles, soldados, luego Doña (Constables, soldiers, then Doña Inés y Brígida) Ines and Brigida.)

ALGUACIL: El tiro ha sonado aquí. The shot came from here

ALGUACIL: Aún hay humo. There's still smoke.

ALGUACIL: ¿Santo Dios! Holy God. Aquí hay un cadáver. There's a body here.

ALGUACIL: Dos. Two.

ALGUACIL: ¿Y el matador? And the killer?

ALGUACIL: Por allí. Through there. (Abren el cuarto en que está Doña (They open the room in which Doña Inés y Brígida, y las sacan a la Ines and Brigida are and bring escena; doña Inés reconoce el them out on stage. Doña Inés cadáver de su padre.) recognizes the body of her father.)

ALGUACIL: ¡Dos mujeres! Two women!

DOÑA INÉS: ¡Ah, qué horror, Oh what horror, padre mío! Dear father.

ALGUACIL: ¡Es su hija! It's his daughter.

BRÍGIDA: Sí. Yes.

DD: ¡Ay! ¿Dó estás, don Juan, que Ah, where are you Don Juan who aquí me olvidas en tal dolor? abandon me here in such grief.

ALGUACIL: Él le asesinó. He killed him.

DOÑA INÉS: Dios mío Dear Lord. ¿Me guardabas esto más? You sent me this too?

ALGUACIL: Por aquí ese Satanás That Satan jumped down here se arrojó sin duda al río. doubtless into the river.

ALGUACIL: Miradlos..., a bordo están Look, they are on board del bergantín calabrés. the Calabrian vessel.

TODOS: ¡Justicia por doña Inés! Justice for Doña Ines!

DOÑA INÉS: Pero no contra don Juan. But not against Don Juan. (Cayendo de rodillas.) (Falling on her knees)

FIN DEL ACTO CUARTO END OF THE FOURTH ACT

PARTE SEGUNDA PART TWO

ACTO PRIMERO ACT ONE

LA SOMBRA DE DOÑA INÉS THE SHADE OF DOÑA INÉS

(Panteón de la familia Tenorio. (The pantheon of the Tenorio family. El teatro representa un The stage is a magnificent cemetery, magnífico cementerio, hermoseado decorated in the style of a garden. a manera de jardín. En primer In the foreground, conspicuously set término, aislados y de bulto, apart, are the tombs of Don Gonzalo los sepulcros de don Gonzalo de de Ulloa, Doña Inés and don Luis Ulloa, de Doña Inés y de don Mejia, on top of which are stone Luis Mejía, sobre los cuales se statues. Don Gonzalo's tomb is to the ven sus estatuas de piedra. El right with his statue kneeling, that sepulcro de don Gonzalo a la of Don Luis to the left and his derecha, y su estatua de statue is also kneeling; that of Doña rodillas; el de don Luis a la Inés is in the centre and her statue izquierda, y su estatua también is standing. In the midground another de rodillas; el de doña Inés en two tombs in a suitable form, and in el centro, y su estatua de pie. the background and on an elevated En segundo término otros dos plane, the tomb and statue of the sepulcros en la forma que founder, Don Diego Tenorio. The convenga; y en tercer término y perspective of the tombs focuses on en puesto elevado, el sepulcro y this figure. Una pared llena de when the staging requires it. nichos y lápidas cubre el cuadro Cypresses and flowers of all kinds hasta el horizonte. Dos llorones embellish the set which is not to a cada lado de la tumba de doña have anything horrible in it. The Inés dispuestos a servir de la action takes place on a quiet summer manera que a su tiempo exige el night, and is lit by a very bright juego escénico. Cipreses y moon.) flores de todas clases embellecen la decoración, que no debe tener nada de horrible. La acción se supone en una tranquila noche de verano, y alumbrada por una clarísima luna.)

ESCENA PRIMERA SCENE I

(El Escultor, disponiéndose a (The Sculptor, getting ready to marchar) leave.) Pues, señor, es cosa hecha: Well sir, it is done: el alma del buen don Diego the soul of good Don Diego puede, a mi ver, con sosiego can, in my opinion, know reposar muy satisfecha. its rest in complete satisfaction. La obra está rematada The work is unfurled con cuanta suntuosidad with as much sumptuousness su postrera voluntad as his last will required, yes, dejó al mundo encomendada. entrusted to the world. Y ya quisieran, ¡pardiez!, And, by God, every rich man todos los ricos que mueren who dies should want to see que su voluntad cumplieren the living celebrate their memory los vivos, como esta vez. as here I have done. Mas ya de marcharme es hora: But it's time I was away, todo corriente lo dejo, I leave it all in order, I will y de Sevilla me alejo be leaving Seville al despuntar de la aurora. at the break of day. ¡Ah! Mármoles que mis manos Ah! Marble polished pulieron con tanto afán, with such care, by my hands, mañana os contemplarán tomorrow the Sevillians los absortos sevillanos; will gaze at you, astonished: y al mirar de este panteón and seeing the true proportion las gigantes proporciones, of this enormous pantheon, tendrán las generaciones the future generation la nuestra en veneración. will hold ours in veneration. Mas yendo y viniendo días Some things as days come and go, se hundirán unas tras otras, one by one, sink again mientra en pie estaréis vosotras, while yours will remain póstumas memorias mías. a memory of me. Oh! ¡Oh!, frutos de mis desvelos, fruit of my waking eyes, peñas a quien yo animé stones to which I gave life y por quienes arrostré for whom I bore the strife la intemperie de los cielos; of the intemperate skies; el que forma y ser os dio he who gave you form and being va ya a perderos de vista; will now lose you from his sight; ¡velad mi gloria de artista, since you will live longer than I, pues viviréis más que yo! watch over my glory, unseeing. Mas ¿quién llega? But who is approaching?

ESCENA II SCENE II

(El Escultor; Don Juan, que (The sculptor, and Don Juan who entra embozado) enters muffled in his cloak.)

ESCULTOR: Caballero... Sir....

DON JUAN: Dios te guarde. God keep you.

ESCULTOR: Perdonad, Pardon me, mas ya es tarde, y... its already late and...

DON JUAN: Aguardad Stay with me un instante, porque quiero a moment, I'd prefer que me expliquéis... if you would explain...

ESCULTOR: ¿Por acaso Perhaps sois forastero? you are a stranger?

DON JUAN: Años ha I should explain, que falto de España ya, for years now I've been gone from Spain, y me chocó el ver al paso, and it shocked me, as I passed, cuando a esas verjas llegué, as I reached these gates today que encontraba este recinto to find this district strange, enteramente distinto entirely different, changed de cuando yo le dejé. from when I went away.

ESCULTOR: Yo lo creo; como que esto I believe you; and you see era entonces un palacio, it was a palace then, y hoy es panteón el espacio and today there's a pantheon donde aquél estuvo puesto. where the palace used to be.

DON JUAN: ¡El palacio hecho The palace made into a pantheon! panteón!

ESCULTOR: Tal fue de su antiguo dueño Such was its former owner's will la voluntad, y fue empeño and an undertaking that still que dio al mundo admiración. provokes the world's admiration.

DON JUAN: ¡Y, por Dios, que es de admirar! And by heaven, it's worthy!

ESCULTOR: Es una famosa historia It's a famous story a la cual debo mi gloria. to which I owe my glory.

DON JUAN: ¿Me la podréis relatar? Can you tell it me?

ESCULTOR: Sí; aunque muy Yes, but very succinctly, sucintamente, pues me aguardan. as someone's waiting.

DON JUAN: Sea. So be it.

ESCULTOR: Oíd Listen la verdad pura. to the whole truth.

DON JUAN: Decid, Speak, then que me tenéis impaciente. I hear, impatiently.

ESCULTOR: Pues habitó esta ciudad Well, there lived, in this city, y este palacio heredado the heir to the palace, a Don, un varón muy estimado very well esteemed, a man por su noble calidad. of the noblest quality.

DON JUAN: Don Diego Tenorio. Don Diego Tenorio.

ESCULTOR: El mismo. The same. Well, Tuvo un hijo este don Diego this Don Diego had a son peor mil veces que el fuego, a thousand times worse a one, un aborto del abismo. than fire, an abortion from Hell. Un mozo sangriento y cruel A young man bloody and savage que, con tierra y cielo en guerra, at war with earth and heaven: dicen que nada en la tierra they say nothing on earth even fue respetado por él. won his respect, in this age. Quimerista, seductor A wrangler, a seducer y jugador con ventura, and a gambler with fate, no hubo para él segura from him nothing was safe vida, ni hacienda, ni honor. life, property or honour. Así le pinta la historia, So says the story y si tal era, por cierto and if he was such, certainly que obró cuerdamente el muerto the dead man behaved wisely para ganarse la gloria. himself, to ensure his glory.

DON JUAN: Pues ¿cómo obró ? Well, how did he behave?

ESCULTOR: Dejó entera He left his entire property su hacienda al que la empleara to the one who would fashion en un panteón que asombrara a wonderful pantheon a la gente venidera. to astound posterity. Mas con condición que dijo He made one condition, que se enterraran en él that they should bury here los que a la mano crüel those who died, in fear, sucumbieron de su hijo. at the cruel hand of his son. Y mirad en derredor And look around at los sepulcros de los más the tombs of most de ellos. of them.

DON JUAN: ¿Y vos sois quizás And you perhaps el conserje? are the keeper?

ESCULTOR: El Escultor The sculptor charged de estas obras encargado. with these works.

DON JUAN: ¡Ah! ¿Y las habéis Ah! And you have finished? concluido?

ESCULTOR: Ha un mes; mas me he detenido A month ago, but I waited hasta ver ese enverjado to see this grill erected colocado en su lugar, set on its base pues he querido impedir because I wanted to prevent que pueda el vulgo venir the entry of those with intent este sitio a profanar. to profane the place.

DON JUAN: (Mirando.) (Looking around) ¡Bien empleó sus riquezas The dead man used his money el difunto! well!

ESCULTOR: ¡Ya lo creo! Yes, I should say so! Miradle allí. See over there.

DON JUAN: Ya le veo. I see him though.

ESCULTOR: ¿Le conocisteis? Did you know him?

DON JUAN: Sí. Yes.

ESCULTOR: Piezas The statuary son todas muy parecidas shows a very good likeness y a conciencia trabajadas. made with conscientiousness.

DON JUAN: ¡Cierto que son They are fashioned excellently! extremadas!

ESCULTOR: ¿Os han sido conocidas Did you know them indeed las personas? these people?

DON JUAN: Todas ellas. All of them by sight.

ESCULTOR: ¿Y os parecen bien? And they seem well done?

DON JUAN: Sin duda, Without doubt según lo que a ver me ayuda according to what I make out el fulgor de las estrellas. by the glow of the starlight.

ESCULTOR: ¡Oh! Se ven como de día Oh! They can be seen as well here con esta luna tan clara. as by day, with this bright moon. Esta es mármol de Carrara. This is Carrara stone. (Señalando a la de don Luis.) (Pointing to the statue of Don Luis.)

DON JUAN: ¡Buen busto es el de Mejía! That's a good bust of Mejia! (Contempla las estatuas unas (He contemplates the statues one after tras otras.) another.) ¡Hola! Aquí el Comendador Hello! Here is the Comendador se representa muy bien. very well represented.

ESCULTOR: Yo quise poner también I also intended la estatua del matador a statue of their killer entre sus víctimas, pero among the victims, but fate no pude a manos haber did not find me a way su retrato... Un Lucifer to his portrait...they say dicen que era el caballero he was the devil incarnate don Juan Tenorio. that Don Juan Tenorio

DON JUAN: ¡Muy malo! Very evil. That's so. Mas, como pudiera hablar, And if its tongue was free le había algo de abonar you would hear it agree, la estatua de Don Gonzalo. that statue of Don Gonzalo.

ESCULTOR: ¿También habéis Did you also know conocido a don Juan? Don Juan?

DON JUAN: Mucho. Very well,

ESCULTOR: Don Diego Don Diego le abandonó desde luego, immediately abandoned him, so desheredándole. disinheriting him, though.

DON JUAN: Ha Sido To Don Juan that did no para don Juan poco daño great harm, it is said ése, porque la fortuna because fortune, on this earth va tras él desde la cuna. followed him from birth.

ESCULTOR: Dicen que ha muerto. They say he is dead.

DON JUAN: Es engaño: That's a ruse: vive. he's alive.

ESCULTOR: ¿Y dónde? And where?

DON JUAN: Aquí, en Sevilla. Here, in Seville.

ESCULTOR: ¿Y no teme que el furor And doesn't he ever popular...? fear the people's anger?

DON JUAN: En su valor The seed of fear has never no ha echado el miedo semilla. affected his courage, or will.

ESCULTOR: Mas cuando vea el lugar But when he sees the way en que está ya convertido what was once his property el solar que suyo ha sido, has been treated, maybe no osará en Sevilla estar. in Seville he'll not dare stay.

DON JUAN: Antes ver tendrá a Rather he'll think it fortunate fortuna en su casa reünidas to have the people he knew personas de él conocidas, reunited, since it's true puesto que no odia a ninguna. for them he had no hate.

ESCULTOR: ¿Creéis que ose aquí Do you believe he'd dare come here? venir?

DON JUAN: ¿Por qué no? Pienso, a Why not? In my opinion, I mi ver, que donde vino a nacer think it's right he should come to die justo es que venga a morir. in the place where he was reared. Y pues le quitan su herencia And since they've taken his legacy para enterrar a éstos bien, in order to bury these people so, a él es muy justo también it is only fair that they also que le entierren con decencia. bury him decently.

ESCULTOR: Sólo a él le está He is the only one forbidden prohibida en este panteón la entrada. to enter this pantheon.

DON JUAN: Trae don Juan muy buena espada, Don Juan carries a very fine sword: y no sé quién se la impida. I don't know who dare enforce that word.

ESCULTOR: ¡Jesús! ¡Tal Dear Lord, what profanation! profanación!

DON JUAN: Hombre es don Juan que, a querer, Don Juan is the sort of man, volverá el palacio a hacer who might remake the pantheon encima del panteón. as a palace, as an act of restoration.

ESCULTOR: ¡Tan audaz ese hombre es Is that man so daring that he que aun a los muertos se atreve? even dares to oppose the dead?

DON JUAN: ¿Qué respetos gastar debe What respect should he show instead con los que tendió a sus pies? to those he stretched out at his feet?

ESCULTOR: Pero ¿no tiene conciencia But does that man have then ni alma ese hombre? no conscience or soul?

DON JUAN: Tal vez no, Perhaps none, que al cielo una vez llamó for he called on heaven once con voces de penitencia, with the voice of a penitent y el cielo en trance tan fuerte and heaven treated him so fiercely allí mismo le metió, it seems that there and then que a dos inocentes dio he killed two innocent men para salvarse la muerte. in order to save himself, wholly.

ESCULTOR: ¡Qué monstruo, supremo Holy Father, what a monster! Dios!

DON JUAN: Podéis estar convencido You can be certain, indeed, de que Dios no le ha querido. that God did not love him. Agreed.

ESCULTOR: Tal será. It must be so.

DON JUAN: Mejor que vos. He's your better.

ESCULTOR: (¿Y quién será el que a don Juan Aside: (And who can it be abona con tanto brío?) who defends Don Juan so?) Caballero, a pesar mío, Sir, excuse me, I must go: como aguardándome están... they are waiting for me.

DON JUAN: Idos, pues, Go then, if it pleases you. enhorabuena.

ESCULTOR: He de cerrar. I have to close up.

DON JUAN: No cerréis, Not for me, y marchaos. just leave.

ESCULTOR: Mas ¿no veis...? But, don't you see...?

DON JUAN: Veo una noche serena I see a calm night, true y un lugar que me acomoda and a place that gives me pleasure para gozar su frescura, where I might enjoy the fresh air still y aquí he de estar a mi holgura in spite of all Seville. si pesa a Sevilla toda. and here I intend to take my leisure.

ESCULTOR: (¿Si acaso padecerá (I wonder if he might be de locura desvaríos?) suffering from delusions?)

DON JUAN: (Dirigiéndose a las (Addressing the statues.) estatuas.) Ya estoy aquí, amigos míos. Now here I am my friends.

ESCULTOR: ¿No lo dije? Loco está. Didn't I say so? He's crazy.

DON JUAN: Mas, ¡cielos, qué es lo que veo! But good Lord, what do I see! es ilusión de mi vista, It's an illusion I've invented o a doña Inés el artista or the artist has represented aquí representa, creo. Doña Inés here, before me.

ESCULTOR: Sin duda. Doubtless.

DON JUAN: ¿También murió? She also died?

ESCULTOR: Dicen que de They say she died of grief, sent sentimiento cuando de nuevo al convento back again to her convent abanDoñada volvió abandoned, and denied por don Juan. by Don Juan. Don Juan; ¿Y yace aquí? And she lies here?

ESCULTOR: Sí. Yes.

DON JUAN: ¿La visteis muerta vos? Did you see her body, then?

ESCULTOR: Sí. Yes.

DON JUAN: ¿Cómo estaba? What was she like?

ESCULTOR: ¡Por Dios By heaven, que dormida la creí! I thought she was sleeping there. La muerte fue tan piadosa Death was so gentle, I suppose, con su cándida hermosura, with her in her purity, que la envió con la frescura that it sent her the beauty las tintas de la rosa. of the fresh tint of the rose.

DON JUAN: ¡Ah! Mal la muerte podría Ah! Death could not undo deshacer con torpe mano with its clumsy hand's excess el semblante soberano the sovereign loveliness que un ángel envidiaría. an angel would envy too. ¡Cuán bella y cuán parecida How beautiful and how true su efigie en el mármol es! her effigy in marble is. ¡Quién pudiera, doña Inés, Would that I, Doña Inés volver a darte la vida! could return you to life anew. ¿Es obra del cincel vuestro? Is this your chisel's art?

ESCULTOR: Como todas las demás. Like the others here, that you see.

DON JUAN: Pues bien merece algo más Well, such mastery un retrato tan maestro. deserves something apart. Tomad. Here.

ESCULTOR: ¿Qué me dais aquí? What do you give me?

DON JUAN: ¿No lo veis? Don't you see?

ESCULTOR: Mas... caballero... But,...sir....why... ¿por qué razón...? for what reason?...

DON JUAN: Porque quiero Because I yo que os acordéis de mí. want you to remember me.

ESCULTOR: Mirad que están bien But I was well paid, you see. pagadas.

DON JUAN: Así lo estarán mejor. So you'll have even more.

ESCULTOR: Mas vamos de aquí, señor, But lets leave here sir, for sure que aun las llaves entregadas I must still return the key no están, y al salir la aurora of this gate, and at dawn tengo que partir de aquí. I have to leave here, you see.

DON JUAN: Entregádmelas a mí, Hand them over to me, y marchaos desde ahora. and you..... go on.

ESCULTOR: ¿A vos? To you?

DON JUAN: A mí: ¿qué dudáis? To me: why hesitate?

ESCULTOR: Como no tengo el Ah, I do not have the honour... honor...

DON JUAN: Ea, acabad, Escultor. That's enough, Sculptor.

ESCULTOR: Si el nombre al menos que usáis If at least you would state supiera... your name....

DON JUAN: ¡Viven los cielos! Merciful heaven! Why, Dejad a don Juan Tenorio you leave Don Juan velar el lecho mortuorio to watch over the tomb en que duermen sus abuelos. in which his ancestors lie.

ESCULTOR: ¡Don Juan Tenorio! Don Juan Tenorio!

DON JUAN: Yo soy. I am the man. Y si no me satisfaces, And if you don't satisfy me, compañía juro que haces I swear you'll keep company a tus estatuas desde hoy. with your statues from now on.

ESCULTOR: (Alargándole las llaves.) (Holding out the keys to him) Tomad. (No quiero la piel Here. Aside: (I won't risk my skin dejar aquí entre sus manos. at his hands, but bow to his will. Ahora que los sevillanos Let the folks of Seville se las compongan con él.) (Vase.) take good care of him.) (He leaves)

ESCENA III SCENE III

DON JUAN: Mi buen padre empleó My good father spent the whole en esto entera la hacienda mía; of my inheritance on this display; hizo bien: yo al otro día he did well: on any given day la hubiera a una carta puesto. I'd have bet it on a hand of cards. So, No os podéis quejar de mí, you can't complain of me, you vosotros a quien maté; whom I chose to kill: si buena vida os quité, if I took your noble life, still buena sepultura os di. I gave you a noble tomb. ¡Magnífica es en verdad This pantheon and it's art, la idea del tal panteón! truly, a magnificent idea! Y... siento que el corazón And I feel the solitude here me halaga esta soledad. is soothing to my heart. ¡Hermosa noche...! ¡Ay de mí! A beautiful night! Ah me! ¡Cuántas como ésta tan puras How many like this, and as pure, en infames aventuras in notorious adventure desatinado perdí! I wasted foolishly. ¡Cuántas al mismo fulgor How many times, in the same bright hour de esa luna trasparente of that translucent moon, arranqué a algún inocente I wrenched away too soon la existencia o el honor! some innocent's life or honour. Sí, después de tantos años Yes, after all these years cuyos recuerdos me espantan, whose memories terrify me, siento que en mí se levantan I feel thoughts well inside me, pensamientos en mí extraños. the new and strange appears. ¡Oh! Acaso me los inspira Oh! Perhaps they arise in me desde el cielo en donde mora from heaven where she dwells, esa sombra protectora one of the guardian angels, que por mi mal no respira. who through me no longer breathes. (Se dirige a la estatua de doña (He addresses the statue of Doña Inés, hablándole con respeto.) Inés, speaking to it respectfully.) Mármol en quien doña Inés Marble, in which Doña Inés, en cuerpo sin alma existe, a body without soul, exists, deja que el alma de un triste permit the soul of a sad wretch llore un momento a tus pies. to kneel a moment, in his distress. De azares mil a través Through misadventure's excess conservé tu imagen pura, I kept your image pure, pues la mala ventura since evil destiny, before, te asesinó de don Juan, through Don Juan, murdered you, contempla con cuánto afán contemplate with what true vendrá hoy a tu sepultura. grief he comes here once more. En ti nada más pensó With you his thoughts were burning, desde que se fue de ti; from the time he left, I say: y desde que huyó de aquí since the hour he ran away, sólo en volver meditó. he dreamed only of returning. Don Juan tan sólo esperó Don Juan's only yearning de doña Inés su ventura, was for joy with Doña Inés, y hoy que en pos de su hermosura now, seeking her loveliness vuelve el infeliz don Juan, wretched Don Juan returns: mira cuál será su afán see with what pain he burns, al dar con tu sepultura. finding her tomb, his distress. Inocente doña Inés, Innocent Doña Inés cuya hermosa juventud whose beauty and tender years encerró en el ataúd were closed in a coffin here quien llorando está a tus

pies; by him who weeps, ah yes, si de esa piedra a través if through this stone, no less, puedes mirar la amargura you can see the bitterness del alma que tu hermosura of a soul that adored your loveliness adoró con tanto afán, with such yearning, then for that man prepara un lado a don Juan prepare a place, for Don Juan, en tu misma sepultura. in your tomb, where he may rest. Dios te crió por mi bien, God created you for my good, I por ti pensé en la virtud, thought of virtue, for you, adoré su excelsitud I adored your sublimity, too, y anhelé su santo Edén. and longed for your holy paradise. Sí, aun hoy mismo en ti también Yes, even today my hope still lies mi esperanza se asegura, in you, entrusted to you, que oigo una voz que murmura for I hear a voice, that's true, en derredor de don Juan that murmurs round Don Juan, palabras con que su afán words which calm me, as I stand se calma en tu sepultura. here in pain, by your grave, by you. ¡Oh doña Inés de mi vida! Oh Doña Inés, my life itself! Si esa voz con quien deliro If that voice I babble of es el postrimer suspiro is the last sigh, above, de tu eterna despedida; of your eternal farewell; si es que de ti desprendida if that voice from your very self llega esa voz a la altura reaches the farthest sky, y hay un Dios tras esa anchura and there is a God on high, por donde los astros van, with stars on either hand, dile que mire a don Juan tell him to gaze at Don Juan, llorando en tu sepultura. by your tomb, and my weeping eyes. (Se apoya en el sepulcro, (He leans on the tomb, hiding his ocultando el rostro; y mientras face; and while he maintains this se conserva en esta postura, un posture, a vapour that arises from vapor que se levanta del the grave hides the statue of Doña sepulcro oculta la estatua de Inés. When the vapour dissipates, the doña Inés. Cuando el vapor se statue has disappeared. Don Juan desvanece, la estatua ha comes out of his trance.) desaparecido. Don Juan sale de su enajenamiento.) Este mármol sepulcral This sepulchral marble's essence adormece mi vigor, seems to drain away my strength y sentir creo en redor and round me I feel the sense un ser sobrenatural. of a supernatural presence. Mas..., cielos! ¡El pedestal But....my God! The pedestal's stone no mantiene su escultura! no longer holds her sculpture. ¿Qué es esto? ¿Aquella figura What is this? Was that figure fue creación de mi afán? my imagination alone?

ESCENA IV SCENE IV

(El llorón y las flores de la (The weeping willow and the flowers izquierda del sepulcro de doña to the left of Doña Inés's sepulchre Inés se cambian en una change into a stage decoration in apariencia, dejando ver dentro which one can see, in the middle of de ella, en medio de glowing lights, the spirit of Doña resplandores, la sombra de doña Inés.) Inés.) (Don Juan, la sombra de Doña (Don Juan, the spirit of Doña Inés) Inés)

SOMBRA: No; mi espíritu, don No: my spirit, Don Juan, Juan, te aguardó en mi sepultura. waited for you in the grave.

DON JUAN: (De rodillas.) (Kneeling) ¡Doña Inés! Sombra querida, Doña Ines, beloved spirit, alma de mi corazón, soul of my very heart, ¡no me quites la razón don't rob me of reason's art si me has de dejar la vida! if you plan to let me live yet! Si eres imagen fingida, If you're only the child of my madness, sólo hija de mi locura, if you're only a false illusion, no aumentes mi desventura do not increase my misfortune, burlando mi loco afán. by mocking my mad passion.

SOMBRA: Yo soy doña Inés, don Juan, I am Doña Inés, Don Juan, que te oyó en su sepultura. who heard you in her tomb.

DON JUAN: ¿Conque vives? So you're alive?

SOMBRA: Para ti; For you: but see mas tengo mi purgatorio my purgatory is there en ese mármol mortuorio in that marble mausoleum where que labraron para mí. they made a grave for me. Yo a Dios mi alma ofrecí I offered my soul to God, the fee en precio de tu alma impura, for your impure soul, and yes, y Dios, al ver la ternura God, on seeing the tenderness con que te amaba mi afán, with which I loved a man, me dijo: "Espera a don Juan said: 'Wait then for Don Juan en tu misma sepultura. in your grave's loneliness. Y pues quieres ser tan fiel And since you want to be loyal a un amor de Satanás, to the love of a son of Satan, con don Juan te salvarás, you'll be saved with Don Juan o te perderás con él. or be lost with him. You will Por él vela: mas si cruel watch over him; but if he's cruel te desprecia tu ternura, and scorns your tenderness y en su torpeza y locura in his crudity and madness, sigue con bárbaro afán, and goes on, in barbarous zeal, llévese tu alma don Juan he will carry off your soul de tu misma sepultura". from the very grave itself.'

DON JUAN: (Fascinado.) (Amazed!) ¡Yo estoy soñando quizás Perhaps I only dream con las sombras de un Edén! of the spirits in Paradise!

SOMBRA: No; y ve que si piensas bien No: you'll have me at your side a tu lado me tendrás; if your thoughts are always seen mas si obras mal causarás to be good, but if you seem nuestra eterna desventura. evil, you'll damn us eternally. Y medita con cordura And so consider wisely que es esta noche, don Juan, this is the night, Don Juan, el espacio que nos dan the moment we have at hand para buscar sepultura. to seek our fate, you see. Adiós, pues; y en la ardua lucha Farewell, then; in the intense en que va a

entrar tu existencia, battle your being will enter de tu dormida conciencia listen to the voice you'll hear la voz que va a alzarse escucha; of your dormant conscience: porque es de importancia mucha it's of the first importance meditar con sumo tiento you ponder with deepest care la elección de aquel momento your choice of that moment, where que, sin poder evadirnos, what we cannot evade al mal o al bien ha de abrirnos will open the door of the grave la losa del monumento. to the good or evil there. (Ciérrase la apariencia; (The stage decoration closes; Doña desaparece doña Inés, Y todo Inés disappears, and everything queda como al principio del acto remains as at the beginning of the menos la estatua de doña Inés, act, except the statue of Doña Inés que no vuelve a su lugar. Don that does not return to its place. Juan queda atónito.) Don Juan remains astonished.)

ESCENA V SCENE V

DON JUAN: ¡Cielos! ¿Qué es lo que escuché? My God! What do I find? ¡Hasta los muertos así Even the dead, I see, dejan sus tumbas por mí! forsake their tombs for me! Mas sombra, delirio fue. But the spirit was my illusion, Yo en mi mente le forjé; one I forged in my mind, la imaginación le dio my imagination gave it that same la forma en que se mostró, form in which it came: y ciego vine a creer I blindly believing en la realidad de un ser in the reality of that being que mi mente fabricó. know my mind gave it a name. Mas nunca de modo tal But never before so real fanatizó mi razón the way my crazed reason mi loca imaginación filled my mad imagination con su poder ideal. with the power of the ideal. Sí, algo sobrenatural Yes, something supernatural vi en aquella doña Inés I saw in that Doña Inés tan vaporosa a través through that vaporous haze aun de esa enramada espesa; that dense cloud of trees: mas..., ¡bah!, circunstancia es but... bah!, this is indeed ésa que propia de sombras es. appropriate for the spirits. ¿Qué más diáfano y sutil What's more delicate or subtle que las quimeras de un sueño? than the fantasy of our dreams? ¿Dónde hay nada más risueño, Where is there anything that seems más flexible y más gentil? more sweet and malleable? ¿Y no pasa veces mil And doesn't it happen a thousand fold que en febril exaltación that in feverish exultation ve nuestra imaginación what we see in imagination como ser y realidad as truth and reality la vacía vanidad is the empty vanity de una anhelada ilusión? of a longed-for illusion? ¡Sí, por Dios, delirio fue! Yes, by God, that's it! Mas su estatua estaba aquí. But her statue was here to see. Sí, yo la vi y la toqué, Yes, I saw it and touched it: y aun en albricias le di even gave a trifling fee al Escultor no sé qué. to the sculptor who carved it. ¡Y ahora sólo el pedestal Now there's only the pedestal veo en la urna funeral! and the urn from her funeral. ¡Cielos! La mente me falta, My God! I'm losing my mind, o de improviso me asalta or unexpectedly find algún vértigo infernal. some dizziness, infernal. ¿Qué dijo aquella visión? What did that vision say? ¡Oh! Yo la oí claramente, Oh! I heard her clearly, y su voz triste y doliente and her grieving voice, sadly resonó en mi corazón. sounds in my heart again. ¡Ah! ¡Y breves las horas son Ah! The hours slip away del plazo que nos augura! of the term granted to us. No, no; de mi calentura No, no: that's the madness delirio insensato es! of senseless delirium. Mi fiebre fue a doña Inés My fever opened the tomb quien abrió la sepultura. the grave of Doña Inés. ¡Pasad y desvaneceos; Leave now, and expire: pasad, siniestros vapores sinister vapours, clear, de mis perdidos amores mists of my lost love here, mis fallidos deseos! and my failed desire! Pasad, vanos devaneos Leave, vain remnants of fire de un amor muerto al nacer; of a love that died being born, no me volváis a traer do not bring back in the storm, entre vuestro torbellino in your whirlwind of confusion, ese fantasma divino that divine illusion, que recuerda a una mujer! recalling a woman's form! ¡Ah! ¡Estos sueños me aniquilan, Ah, these dreams annihilate, mi cerebro se enloquece... me, maddening my brain... y esos mármoles parece and those marbles seem again que estremecidos vacilan! to tremble and vacillate! (Las estatuas se mueven (The statues move slowly and turn lentamente y vuelven la cabeza their heads towards him.) hacia él.) Sí, sí: sus bustos oscilan, Yes, yes, their torsos turn. Wait, su vago contorno medra... their vague outlines grow clear... Pero don Juan no se arredra: But Don Juan has no fear: ¡alzaos, fantasmas vanos, rise, you vain illusions, y os volveré con mis manos and with my hands I'll turn you a vuestros lechos de piedra! towards your stone beds, here. No, no me causan pavor No, your wretched forms vuestros semblantes esquivos; cause me no terror: instead, jamás, ni muertos ni vivos, I swear, alive or dead, humillaréis mi valor. you'll never diminish my valour. Yo soy vuestro matador I am still your executioner, como al mundo es bien notorio; as all the world well knows: si en vuestro alcázar mortuorio if in your deadly fortress though me aprestáis venganza fiera, you seek fierce vengeance on me, daos prisa: aquí os espera hasten: I wait here, as you see otra vez don Juan Tenorio. once more, Don Juan Tenorio.

ESCENA VI SCENE VI

(Don Juan, El capitán Centellas, (Don Juan, Captain Centellas, Avellaneda) Avellaneda)

CENTELLAS: (Dentro.) (Within) ¿Don Juan Tenorio? Don Juan Tenorio?

DON JUAN: (¿Volviendo en sí.) (Coming to himself) ¿Qué es eso? Who's this? Quién me repite mi nombre? Who calls my name?

AVELLANEDA: (Silencio.) (Silence) (A Centellas.) (To Centellas) ¿Veis a alguien? Do you see it?

CENTELLAS: (Idem.) Sí, allí hay Yes, a man. Again. un hombre.

DON JUAN: ¿Quién va? Who's there?

AVELLANEDA: Él es. It's him.

CENTELLAS: (Yéndose a don Juan.) (Going to Don Juan) Yo pierdo el seso I'm wild with joy. So! con la alegría. ¡Don Juan! Don Juan!

AVELLANEDA: ¡Señor Tenorio! Señor Tenorio!

DON JUAN: ¡Apartaos, Be gone, vanas sombras! vain spirits!

CENTELLAS: Reportaos, Be calm, señor don Juan... Los que están Señor, Don Juan. Those who stand en vuestra presencia ahora in your presence then no son sombras, hombres son, are not spirits, but men, y hombres cuyo corazón and men whose hearts, again, vuestra amistad atesora. value you as a friend. A la luz de las estrellas See now, we recognized you os hemos reconocido, by the stars clear light, y un abrazo hemos venido and are here that we might a daros. embrace you.

DON JUAN: Gracias, Centellas. Centellas, thank you

CENTELLAS: Mas ¿qué tenéis? ¡Por mi vida By my soul, are you ill? que os tiembla el brazo, y está Your arm is trembling, see it, vuestra faz descolorida! your face is pale and still.

DON JUAN: (Recobrando su aplomo.) (Recovering his composure.) La luna tal vez lo hará. Perhaps the moonlight does it.

AVELLANEDA: Mas, don Juan, ¿qué hacéis aquí? But Don Juan, why are you here? ¿Este sitio conocéis? Do you know this place?

DON JUAN: ¿No es un panteón? Isn't it a pantheon?

CENTELLAS: ¿Y sabéis You know, in any case a quién pertenece? to whom it belongs?

DON JUAN: A mí: To me: that's clear mirad a mi alrededor look now all around me y no veréis más que amigos and you'll see only friends de mi niñez o testigos of my childhood, or testaments de mi audacia y mi valor. to my courage and audacity.

CENTELLAS: Pero os oímos hablar: But we heard you talk ¿con quién estabais? Who were you with?

DON JUAN: Con ellos. With them.

CENTELLAS: ¿Venís aun a You came here to mock them, then? escarnecellos?

DON JUAN: No, los vengo a No, to visit, for a walk. visitar. Mas un vértigo insensato But a senseless dizziness que la mente me asaltó overwhelmed my mind, un momento me turbó, dazed me, made me blind, y a fe que me dio mal rato. and in truth, I was in distress. Esos fantasma de piedra Those stone phantoms here me amenazaban tan fieros, threatened me so fiercely que a mí acercado a no haberos if you had not come to me pronto... so soon....

CENTELLAS: ¡Ja!, ¡ja!, ¡ja! ¿Os Ah ha! Don Juan! Does fear arredra, don Juan, como a los villanos, of the dead overwhelm your faith el temor de los difuntos? as it does lesser men?

DON JUAN: No, a fe; contra todos No, by God, against all of them juntos tengo aliento y tengo manos. I still have hands and breath. Si volvieran a salir If they came forth again de las tumbas en que están, from their tombs, to stand a las manos de don Juan here, they'd die at the hand volverían a morir. of Don Juan, again. Y desde aquí en adelante And from this moment, you'll see, sabed, señor capitán, captain, as a man, que yo soy siempre don Juan, I am always Don Juan, y no hay cosa que me espante. nothing can frighten me. Un vapor calenturiento A feverish excitement un punto me fascinó, dazed me for a while, Centellas, mas ya pasó: Centellas, but it goes by. cualquiera duda un momento. Any man may doubt for a moment

AVELLANEDA Y CENTELLAS: Es verdad. That's true.

DON JUAN: Vamos de aquí. Lets leave here, though.

CENTELLAS: Vamos, y nos contaréis Lets leave, and tell us, if you will, cómo a Sevilla volvéis how you returned to Seville tercera vez. for the third time.

DON JUAN: Lo haré así, I'll do so, si mi historia os interesa: if my story's of interest: y a fe que oirse merece, you deserve to hear it, truly aunque mejor me parece though, it seems to me, que la oigáis de sobremesa. over dinner would be best. ¿No opináis...? You agree?

AVELLANEDA Y CENTELLAS: Como As you wish. gustéis.

DON JUAN: Pues bien: cenaréis conmigo Very well, you'll dine with me y en mi casa. and at my house.

CENTELLAS: Pero digo, Can it be ¿es cosa de que dejéis that you abandon some guest algún huésped por nosotros? for our sake too? ¿No tenéis gato encerrado? What is it you hide?

DON JUAN: ¡Bah! Si apenas he Bah. I've scarcely arrived: llegado: no habrá allí más que vosotros tonight there'll be esta noche. no one but you.

CENTELLAS: ¿Y no hay tapada And there's no secret woman a quien algún plantón demos? we forced you to leave?

DON JUAN: Los tres solos We'll dine alone I believe cenaremos. Digo, si de esta jornada unless, at my invitation, no quiere igualmente ser one of these statues here alguno de éstos. wishes to attend. (Señalando a las estatuas de los (Pointing to the statues on the sepulcros.) graves)

CENTELLAS: Don Juan, Don Juan dejad tranquilos yacer leave those alone, show fear, a los que con Dios están. of those who are of God, not man.

DON JUAN: ¡Hola! ¡Parece que vos Aha! Now it seems it's you, sois ahora el que teméis you are the ones who stare, y mala cara ponéis and pale before the glare a los muertos? Mas, ¡por Dios, of the dead. But, by God, it's true que ya que de mi os burlasteis since you mocked me there cuando me visteis así, when you all saw me, so en lo que penda de mí leave it to me to show os mostraré cuánto errasteis! you all how much you erred! Por mí, pues, no ha de quedar On my side, I've said y, a poder ser, estad ciertos if it's possible, it's certain, que cenaréis con los muertos, since I'm going to invite them, y os los voy a convidar. that tonight you'll dine with the dead,

AVELLANEDA: Dejaos de esas quimeras. Leave off this fantasy.

DON JUAN: ¿Duda en mi valor ponerme Do you doubt my courage is cuando hombre soy para hacerme great enough for me to insist platos de sus calaveras? their skulls provide bowls for me? Yo a nada tengo pavor. I fear nothing any more. (Dirigiéndose a la estatua de (Addressing the statue of Don don Gonzalo, que es la que tiene Gonzalo, which is the nearest one.) más cerca.) Tú eres el más ofendido; You're the one most offended; mas, si quieres, te convido but, if you wish, I've extended a cenar, Comendador. an invitation, Comendador. Que no lo puedas hacer That I believe you're unable creo, y es lo que me pesa; to attend, well that gives me pain, mas por mi parte en la mesa but for my part, at the table te haré un cubierto poner. I'll set your place again. Y a fe que favor me harás, And you'll do me a favour, pues podré saber de ti since I'll find out from you si hay más mundo que el de aquí if there's another world, or two, y otra vida, en que jamás and another life to savour, a decir verdad creí. though I never believed it true.

CENTELLAS: Don Juan, eso no es valor; Don Juan, this is not valour: locura, delirio es. this is madness, and illusion.

DON JUAN: Como lo juzguéis mejor; So much the better, be sure yo cumplo así. Vamos, pues. I'll fulfil my promise then. Go on. Lo dicho, Comendador. Remember, Comendador.

FIN DEL ACTO PRIMERO END OF THE FIRST ACT

ACTO SEGUNDO ACT TWO

LA ESTATUA DE DON GONZALO THE STATUE OF DON GONZALO (Aposento de don Juan Tenorio. Dos (A room in Don Juan Tenorio's puertas en el fondo a derecha e house. Two doors in the background izquierda preparadas para el juego to the right and left prepared for escénico del acto. Otra puerta en the action described in this act. el bastidor que cierra la Another door in the stage flat that decoración por la izquierda. closes the stage on the left. A Ventana en el de la derecha. Al window in the one on the

right. alzarse el telón están sentados a When the curtain rises, Don Juan, la mesa don Juan, Centellas y Centellas and Avellaneda are seated Avellaneda. La mesa ricamente at the table. The table is richly servida, el mantel cogido con set, the tablecloth caught up with guirnaldas de flores, etc. garlands of flowers, etc. In front Enfrente del espectador, don Juan, of the audience, Don Juan, and to y a su izquierda Avellaneda; en el his left Avellaneda; to the left of lado izquierdo de la mesa the table Centellas and in the one Centellas, y en el de enfrente de in front of the latter a chair and éste una silla y un cubierto a table setting are not being used.) desocupados.)

ESCENA PRIMERA SCENE I

(Don Juan, El capitán Centellas, (Don Juan, Captain Centellas, Avellaneda, Ciutti, un paje) Avellaneda, Ciutti, a page.)

DON JUAN: Tal es mi historia, Gentlemen: such is my story, señores; pagado de mi valor, pleased by my bravery, quiso el mismo Emperador the Emperor wished, as you see, dispensarme sus favores. himself, to favour my glory. Y aunque oyó mi historia entera, Though he heard my story entire dijo: " Hombre de tanto brío he said: " A man with such flare merece el amparo mío; deserves to be under my care vuelva a España cuando quiera". to return to Spain when he desires." Y heme aquí en Sevilla ya. And so here I am in Seville.

CENTELLAS: ¡Y con qué lujo y With what luxury and wealth! riqueza!

DON JUAN: Siempre He vive con grandeza who has greatness as his destiny quien hecho a grandeza está. lives life with greatness still.

CENTELLAS: A vuestra vuelta. To your return.

DON JUAN: Bebamos. Well, Lets drink.

CENTELLAS: Lo que no acierto a But how on earth, I must say, creer es cómo, llegando ayer, having arrived just yesterday, ya establecido os hallamos. we find you here, I can't think.

DON JUAN: Fue el adquirirme; señores, Gentlemen, it was a case of taking tal casa con tal boato, a house with all its display porque se vendió a barato since it was being sold that day para pago de acreedores. with all the creditors waiting. Y como al llegar aquí And arriving here, you see, desheredado me hallé, I found myself disinherited tal como está la compré. so I bought it just as it stood.

CENTELLAS: ¿Amueblada y todo? Furnishings too?

DON JUAN: Sí. Indeed. Un necio que se arruinó It was sold by a foolish man por una mujer, vendióla. who ruined himself for a woman.

CENTELLAS: ¿Y vendió la hacienda Did he only sell house and land? sola?

DON JUAN: Y el alma al diablo. That, and his soul to Satan.

CENTELLAS: ¿Murió? Did he die?

DON JUAN: De repente; y la justicia, Suddenly: and the court of law, que iba a hacer de cualquier modo who were going to sell it anyway, pronto despacho de todo, with every haste, in every way, viendo que yo su codicia seeing that I would be much more saciaba, pues los dineros likely to satisfy their greed, ofrecía dar al punto, and I offered to pay immediately, cedióme el caudal por junto granted me the whole estate y estafó a los usureros. and defrauded the usurers, indeed.

CENTELLAS: Y la mujer, ¿qué fue de And the woman, what happened to her? ella?

DON JUAN: Un escribano la pista A clerk was sent after her, la siguió, pero fue lista but she was more than clever, y escapó. and escaped.

CENTELLAS: ¿Moza? Young?

DON JUAN: Y muy bella. A beautiful girl.

CENTELLAS: Entrar hubiera debido She should have been included en los muebles de la casa. with the furnishings, I feel!

DON JUAN: Don Juan Tenorio no pasa Don Juan Tenorio does not deal moneda que se ha perdido. in goods that become jaded. Casa y bodega he comprado I bought the house and the wine dos cosas que, no os asombre, two things, I'm sure you'll agree, pueden bien hacer a un hombre that allow good company, vivir siempre acompañado, and help a man have a good time, como lo puede mostrar as your agreeable presence shows vuestra agradable presencia, and clearly demonstrates for me, que espero que con frecuencia since I hope you'll frequently me hagáis ambos disfrutar. help me enjoy them both.

CENTELLAS: Y nos haréis honra inmensa. And you do us immense honour.

DON JUAN: Y a mí vos. ¡Ciutti! And you me. Ciutti!

CIUTTI: ¿Señor? Señor?

DON JUAN: Pon vino al Comendador. Pour a glass for the Comendador. (Señalando el vaso del puesto (Pointing to the glass at the empty vacío.) place.)

AVELLANEDA: Don Juan, aún en eso piensa Does your madness reach that far, vuestra locura? Don Juan?

DON JUAN: ¡Sí, a fe! Yes! For, in my defence, Que si él no puede venir, if he cannot come today, de mí no podréis decir at least you'll not be able to say que en ausencia no le honré. I failed to honour his absence.

CENTELLAS: ¡Ja, ja, ja! Señor Tenorio, Ha ha! Tenorio. creo que vuestra cabeza I think you, perhaps, instead, va menguando en fortaleza. are becoming soft in the head.

DON JUAN: Fuera en mí It would be a contradiction though contradictorio y ajeno de mi hidalguía and foreign to my lineage a un amigo convidar to offer to invite a friend y no guardarle el lugar and not keep a place till the end mientras que llegar podría. for him to arrive on stage. Tal ha sido mi costumbre It's been my custom time and again siempre, y siempre ha de ser ésa; and so it will ever be: y el mirar sin él la mesa seeing the table without him, you see, me da, en verdad, pesadumbre. in truth, it causes me pain. Porque si el Comendador Because if the Comendador es, difunto, tan tenaz is as tenacious, being dead, como vivo, es muy capaz as he was living, he's able, I said, de seguirnos el humor. to be here to humour us and more.

CENTELLAS: Brindemos a su memoria, Lets drink to his memory, y más en él no pensemos. and lets not think....

DON JUAN: Sea. ....about him. No

CENTELLAS: Brindemos. Let's drink!

AVELLANEDA y DON JUAN: Brindemos. Let's drink!

CENTELLAS: A que Dios le dé su To God's granting him glory. gloria.

DON JUAN: Mas yo, que no creo que haya But I who believe instead más gloria que esta mortal there's no glory beyond the mortal one no hago mucho en brindis tal; find it hard to make room mas por complaceros, ¡vaya! for that toast, but go ahead. Y brindo a que Dios te dé And I drink to God's granting you la gloria, Comendador. glory, Comendador. (Mientras beben se oye lejos un (While they drink a distant aldabonazo, que se supone dado en knocking is heard that one supposes la puerta de la calle.) comes from the door to the street.) Mas ¿llamaron? But did some one knock?

CIUTTI: Sí, señor. Yes Señor.

DON JUAN: Ve quién. Well then, go and see whom.

CIUTTI: (Asomando por la ventana.) (Approaching the window.) A nadie se ve. I don't see anyone. ¿Quién va allá? Nadie responde. Who goes there? No one replies.

CENTELLAS: Algún chusco. Some joker.

AVELLANEDA: Algún menguado Some wretch que al pasar habrá llamado who, on passing by, knocked sin mirar siquiera dónde. without even using his eyes.

DON JUAN (A Ciutti.): Pues cierra y sirve licor. Well, close up and serve the liquor. (Llaman otra vez más recio.) (Another stronger knock) Mas ¿llamaron otra vez? But, a knock on the door again?

CIUTTI: Sí. Yes.

DON JUAN: Vuelve a mirar. Look!

CIUTTI: ¡Pardiez! By Heaven, A nadie veo, señor. I don't see anyone, Señor.

DON JUAN: ¡Pues por Dios que del bromazo Well by God, whoever he is quien es no se ha de alabar! will not get to boast of his joke. Ciutti, si vuelve a llamar, Ciutti, if he knocks again, poke suéltale un pistoletazo. your head out and shoot him with this. (Llaman otra vez, y se oye (A knock is heard again, un poco más cerca.) only a little closer.) ¿Otra vez? Again?

CIUTTI: ¡Cielos! My God! Centellas y AVELLANEDA: ¿Qué pasa? What's happening?

CIUTTI: Que esa aldabada postrera It was on the stairway, ha sonado en la escalera, not at the door I say, no en la puerta de la casa. that last knocking.

AVELLANEDA y CENTELLAS ¿Qué dices? What? (Levantándose asombrados.) (Both stand up, frightened)

CIUTTI: Digo lo cierto I'm telling the truth, and how: nada más: dentro han llamado someone knocked... de la casa. .....inside.

DON JUAN: ¿Qué ós ha dado? What's got into you? Inside? ¿Pensáis ya que sea el muerto? Do you think it's that dead man, now? Mis armas cargué con bala; I've loaded my pistols I say Ciutti, sal a ver quién es. Ciutti, go out then and see. (Vuelven a llamar más cerca.) (The knocking sounds again even nearer)

AVELLANEDA: ¿Oísteis? Did you hear it?

CIUTTI: Por San Ginés, Saint Ginés, help me. ¡que eso ha sido en la antesala! that one was in the hallway.

DON JUAN: ¡Ah! Ya lo entiendo; me habéis Ah! Now, I understand vosotros mismos dispuesto you yourselves I see esta comedia, supuesto have arranged this comedy: que lo del muerto sabéis. you know all about the dead man.

AVELLANEDA: Yo os juro, don Juan... I swear to you, Don Juan..

CENTELLAS: Y yo. We both do.

DON JUAN: ¡Bah! Diera en ello el más topo; Bah! The biggest fool would see, y apuesto a que ese galopo and I bet that rascal, he los medios para ello os dio. created this opportunity for you.

AVELLANEDA: Señor don Juan, escondido Don Juan, secretly, algún misterio hay aquí. here, some new mystery looms. (Vuelven a llamar más cerca.) (The knock sounds again, closer.)

CENTELLAS: ¡Llamaron otra vez! The sound again, on the floor!

CIUTTI: Sí; Yes: ya en el salón ha sido. Now it's in one of the rooms.

DON JUAN: ¡Ya! Mis llaves en manojo. Enough! You must have given habréis dado a la fantasma, my bunch of keys to the phantom que entre así no me pasma; so I'm not surprised he could come: mas no saldrá a vuestro antojo, but it won't be as you assume, ni me han de impedir cenar nor will your wretched game vuestras farsas desdichadas. keep me from my meal. (Se levanta, y corre los cerrojos (He stands up and closes the bolts de las puertas del fondo volviendo on the doors at the back, returning a su lugar.) to his place.) Ya están las puertas cerradas: Now the doors are locked, for real, ahora el coco, para entrar, and your bogey man, with no name, tendrá que echarlas al suelo, will have to break them open y en el punto que lo intente and the moment he shows his head que con los muertos se cuente, he may count himself one of the dead, y apele después al cielo. and then he can call on heaven.

CENTELLAS: ¡Qué diablos, tenéis What the devil, that sounds like razón! reason!

DON JUAN: ¿Pues no temblabais? But weren't you trembling?

CENTELLAS: ¡Confieso! I confess! que, en tanto que no di en eso, Until you made your guess, tuve un poco de aprensión. I did feel some apprehension.

DON JUAN: ¿Declaráis, pues, vuestro enredo? You won't admit it's a game?

AVELLANEDA: Por mi parte nada sé. On my part, I know nothing about it.

CENTELLAS: Ni yo. Nor I.

DON JUAN: Pues yo volveré Well, I'll reverse it contra el inventor el miedo. on its author, all the same. Mas sigamos con la cena; But lets carry on with the meal; vuelva cada uno a su puesto, each of you return to your place que luego sabremos de esto. for we'll soon resolve the case.

AVELLANEDA: Tenéis razón. You're right.

DON JUAN: (Sirviendo a Centellas.) (Serving Centellas) Cariñena; Carinena might appeal sé que os gusta, capitán. a wine that you like, Captain.

CENTELLAS: Como que somos paisanos. Since we're fellow countrymen.

DON JUAN: (A Avellaneda, (To Avellaneda, serving him from sirviéndole de otra botella.) another bottle.) Jerez a los sevillanos, Sherry for the Sevillians, then, don Rafael. a Don Rafael.

AVELLANEDA: Habéis, don Juan, Don Juan, again dado a entrambos por el gusto; you satisfy each of us, mas ¿con cuál brindaréis vos? but what will you toast with, then?

DON JUAN: Yo haré justicia a los I'll do justice to both of them. dos.

CENTELLAS: Vos siempre estáis en lo justo. You're always in the right of course.

DON JUAN: Sí, a fe; bebamos. Yes, by Jove, lets drink.

AVELLANEDA Y CENTELLAS: Bebamos. Lets drink. (Llaman a la misma puerta de la (The knock on the same door on the escena, fondo, derecha.) right at the back)

DON JUAN: Pesada me es ya tal broma, I'm tired of this joke now, mas veremos quién asoma but we'll see who comes, and how, mientras en la mesa estamos. while we're at table, I think. (A Ciutti, que se manifiesta (To Ciutti who is obviously asombrado.) frightened) ¿Y qué haces tú ahí, bergante? And what are you doing there, fool? ¡Listo! Trae otro manjar; (Vase Quickly! Bring more to eat: (Ciutti Ciutti.) leaves) mas me ocurre en este instante but it's just occurred to me too que nos podemos mofar that we can make fun, indeed, de los de afuera invitándoles of those outside by inviting them a probar su sutileza, to prove their subtlety entrándose hasta esta pieza without the use of a key y sus puertas no franqueándoles. and gain entry to this room.

AVELLANEDA: Bien dicho. Well said.

CENTELLAS: Idea brillante. A brilliant idea. (Llaman fuerte, fondo derecha.) (A loud knock from the right back)

DON JUAN: ¡Señores! ¿A qué llamar? Gentlemen! What are you knocking for? Los muertos se han de filtrar The dead can slip through any door por la pared; adelante. or wall: So, come in here! (La estatua de Don Gonzalo pasa (The statue of Don Gonzalo passes por la puerta sin abrirla, y sin through the door without opening it hacer ruido.) and without making a sound.)

ESCENA II SCENE II

(Don Juan, Centellas, Avellaneda, (Don Juan, Centellas, Avellaneda, y la estatua de don Gonzalo) and the statue of Don Gonzalo)

CENTELLAS: ¡Jesús! Jesus!

AVELLANEDA: ¡Dios! My God!

DON JUAN: ¡Qué es esto! What's this?

AVELLANEDA: Yo desfallezco. (Cae desvanecido.) I'm fainting. (He falls in a faint.)

CENTELLAS: Yo expiro. (Cae lo I'm a dead man. (He falls) mismo.)

DON JUAN. ¡Es realidad o deliro! Is this reality or illusion? Es su figura..., su gesto. It's his form...the shape is his.

ESTATUA: ¿Por qué te causa pavor What are you frightened for, quien convidado a tu mesa when a guest invited to your table viene por ti? comes to see you, since he's able?

DON JUAN: ¡Dios! ¿No es ésa That's the voice la voz del Comendador? of the Comendador?

ESTATUA: Siempre supuse que aquí I actually thought that you no me habías de esperar. wouldn't wait for me here.

DON JUAN: Mientes, porque hice arrimar You're wrong, because I had esa silla para ti. that chair and place set for you. Llega, pues, para que veas Come, then, and you'll see que, aunque dudé en un extremo that though I hesitate, de sorpresa, no te temo, amazed, I'll not fear or hate, aunque el mismo Ulloa seas. even if you are Ulloa.

ESTATUA: ¿Aún lo dudas? You still doubt?

DON JUAN: No lo sé. I don't know.

ESTATUA: Pon, si quieres, hombre Then place your hand impío, tu mano en el mármol frío on the marble, impious man de mi estatua. on my statue's cold stone.

DON JUAN: ¿Para qué? Why? Me basta oírlo de ti; Its enough that I hear: cenemos, pues; mas te advierto... lets dine, but a warning I give...

ESTATUA: ¿Qué? Of what?

DON JUAN: Que, si no eres el That if you still live muerto, lo vas a salir de aquí. you'll be dead when you leave here. ¡Eh! Alzad. (A Centellas y Oh, get up. (To Centellas and Avellaneda.) Avellaneda)

ESTATUA: No pienses, no, Don't think it, Don Juan, no que se levanten, don Juan they'll not open their eyes, porque en sí no volverán since they can't arise hasta que me ausente yo. until I choose to go. Que la divina clemencia For the Lord's divine mercy del Señor para contigo requires no other witness no requiere más testigo than your mind and your conscience que tu juicio y tu conciencia. to act for you, you see. Al sacrílego convite Just to enlighten your reason que me has hecho en el panteón, God permitted me to come para alumbrar tu razón, in reply to your impious invitation Dios asistir me permite. extended to me in the pantheon. Y heme que vengo en su nombre And I am here in His name a enseñarte la verdad; to teach you truth, finally: y es: que hay una eternidad which is: that there is an eternity tras de la vida del hombre. after man's life, all the same, Que numerados están and the days you may have planned los días que has de vivir, to live, have all passed by, y que tienes que morir and you have to die mañana mismo, don Juan. tomorrow, Don Juan. Mas, como esto que a tus ojos But, as you might surmise está pasando supones that this is your soul's aberration, ser del alma aberraciones or the ghosts of apprehension, y de la aprensión antojos, appearing before your eyes, Dios, en su santa clemencia, God, in his holy mercy te concede todavía, still grants you time, I say don Juan, hasta el nuevo día Don Juan, till the new day para ordenar tu conciencia. to set your conscience free. Y su justicia infinita And that his infinite justice por que conozcas mejor, you might better understand espero de tu valor I hope you're enough of a man que me pagues la visita. to honour me with a visit. ¿Irás, don Juan? Will you, Don Juan?

DON JUAN: Iré, Sí; I will go, yes: mas me quiero convencer but I want to be satisfied. de lo vago de tu ser before you leave my sight, antes que salgas de aquí. of your being's emptiness. (Coge una pistola.) (He grabs a pistol.)

ESTATUA: Tu necio orgullo delira, Your pride is wandering, foolishly, don Juan; los hierros más gruesos Don Juan; the strongest iron of all, y los muros más espesos and the very thickest wall, se abren a mi paso; mira. opens before my step: See! (Desaparece la estatua sumiéndose (The statue disappears, vanishing por la pared.) through the wall.)

ESCENA III SCENE III

(Don Juan, Avellaneda, Centellas) (Don Juan, Avellaneda, Centellas)

DON JUAN: ¡Cielos! ¡Su esencia se Good God! His being alters trueca el muro hasta penetrar, to penetrate the wall cual mancha de agua que seca as when dog days of summer el ardor canicular! dry up a waterfall. ¿No me dijo: "El mármol toca Didn't he tell me "Touch the marble de mi estatua." ¿Cómo, pues, of my statue." How then can se desvanece una roca? a rock disappear at all? ¡Imposible! Ilusión es. Impossible to understand! Acaso su antiguo dueño Perhaps some former owner mis cubas envenenó, poisoned my casks of wine, y el licor tan vano ensueño and the bottles from his cellar en mi mente levantó. stirred a dream in my mind. ¡Mas si éstas que sombras creo But what if these I think are ghosts, espíritus reales son are real spirits, that dwell apart, que

por celestial empleo sent from the heavenly hosts llaman a mi corazón! to visit my heart! Entonces, para que iguale Well, if the penitence su penitencia don Juan of a Don Juan ought to be con sus delitos, ¿qué vale equal to his crimes, what's the sense el plazo ruin que le dan? in this wretched term they give me? ¡Dios me da tan sólo un día... God is giving me only one day... Si fuese Dios en verdad, If in truth it were the deity, a más distancia pondría he would give a greater space su aviso y mi eternidad. for his warnings of eternity. "Piensa bien, que al lado tuyo "Think, for you will have me me tendrás...", dijo de Inés at your side..." is what she said la sombra, y si bien arguyo, the spirit of Inés, pues no la veo, sueño es. since I don't see her, it's a dream. (Transparéntase en la pared la (The shade of Doña Ines shows sombra de doña Inés.) through the wall)

ESCENA IV SCENE IV

Don Juan, la sombra de doña Inés, Don Juan, the ghost of Doña Inés, Centellas y Avellaneda, dormidos Centellas and Avellaneda (both asleep)

SOMBRA: Aquí estoy. Here am I.

DON JUAN: ¡Cielos! Good God!

SOMBRA: Medita Think instead lo que al buen Comendador of what you heard before has oído, y ten valor from the good Comendador, para acudir a su cita: be brave, respond to what he said. Un punto se necesita Only one moment is needed para morir con ventura; to die in peace you see: elígele con cordura So choose it, and wisely, porque mañana, don Juan, for tomorrow, Don Juan, nuestros cuerpos dormirán our bodies will be as one, en la misma sepultura. in the same grave we'll sleep. (Desaparece la sombra.) (The shade disappears)

ESCENA V SCENE V

(Don Juan, Centellas, Avellaneda) (Don Juan, Centellas, Avellaneda)

DON JUAN: Tente, doña Inés, espera, Stop, Doña Inés, wait for me, y si me amas en verdad, and if you truly love hazme al fin la realidad make me capable of distinguir de la quimera. distinguishing truth from fantasy. Alguna más duradera Give me some certainty señal dame, que segura a sign to prove, no less, me pruebe que no es locura that this is not the madness lo que imagina mi afán, of an imaginative man para que baje don Juan so that Don Juan tranquilo a la sepultura. may go calm to death's caress. Mas ya me irrita, por Dios, But, by God, I grow angry el verme siempre burlado, knowing I'm always tricked, corriendo desatentado always the one who's picked siempre de sombras en pos. to chase after shadows madly. ¡Oh! Tal vez todo esto ha sido Oh! Perhaps all this has been por estos dos preparado, prepared by you two: y mientras se ha ejecutado, and while it took place, you su privación han fingido. both pretended to the scene. ¡Mas, por Dios, que si es así, Well, by God, if you dared, se han de acordar de don Juan! you will never forget Don Juan! ¡Eh! don Rafael, capitán. Hey! Don Rafael, Captain. Ya basta: alzaos de ahí. That's enough: get up from there. (Don Juan mueve a Centellas y a (Don Juan stirs Centellas and Avellaneda, que se levantan como Avellaneda who get up as if they quien vuelve de un profundo sueño.) were waking from a deep sleep.)

CENTELLAS: ¿Quién va? Who is it?

DON JUAN: Levantad. Get up.

AVELLANEDA: ¿Qué pasa? What's happening now? ¡Hola, sois vos! Hello, it's you!

CENTELLAS: ¿Dónde estamos? Where are we?

DON JUAN: Caballeros, claros vamos. Gentlemen, well, let me see, Yo os he traído a mi casa I brought you to my house y temo que a ella al venir, and I'm afraid that once here con artificio apostado, having craftily made a bet, habéis sin duda pensado you doubtless planned yet a costa mía reír; to mock my groundless fears, mas basta ya de ficción but have done with this, it's absurd y concluid de una vez. end it for once and all.

CENTELLAS: Yo no os entiendo. Good God! I don't understand

AVELLANEDA: ¡Pardiez! at all. Tampoco yo. Me neither.

DON JUAN: En conclusión, Then, you have not heard ¿nada habéis visto ni oído? or seen it, either of you?

AVELLANEDA Y CENTELLAS ¿De qué? Seen what?

DON JUAN: No finjáis ya más. Don't pretend any more.

CENTELLAS: Yo no he fingido jamás, I haven't pretended at all, señor don Juan. Don Juan.

DON JUAN: ¡Habrá sido! It must have been true! realidad! ¿Contra Tenorio They strive against Tenorio, las piedras se han animado, the stones themselves come alive, y su vida han acotada and set limits to his life, con plazo tan perentorio? for such a brief moment though? Hablad, pues, por compasión. Speak then from your compassion.

CENTELLAS: ¡Voto va Dios! ¡Ya comprendo I swear to God! Now I understand lo que pretendéis! what you claim,

DON JUAN: Pretendo and I demand que me deis una razón that you give me a reason de lo que ha pasado aquí, for what happened here, recently, señores, o juro a Dios gentlemen, or I swear to God, oh, que os haré ver a los dos I'll make the two of you show que no hay quien me burle a mí. no one can make fun of me.

CENTELLAS: Pues ya que os Since you're now serious formalizáis, don Juan, sabed que sospecho Don Juan, know I suspect que vos la burla habéis hecho that you're the one in fact de nosotros. who played a trick on us.

DON JUAN: ¡Me insultáis! You insult me!

CENTELLAS: No, por Dios; mas si No, by God, but if you cerrado seguís en que aquí han venido insist on phantoms again fantasmas, lo sucedido come, let me tell you how I explain oíd cómo me he explicado. to myself what's really true. Yo he perdido aquí del todo I completely lost consciousness, los sentidos, sin exceso and I explain, I say, de ninguna especie, y eso the whole thing in this way lo entiendo yo de este modo. since it was no drunken excess.

DON JUAN: A ver, decídmelo pues. Fine, well tell me then.

CENTELLAS: Vos habéis compuesto en vino, You introduced in the drink semejante desatino some kind of madness I think para encajarnos después. to fool us, as and when.

DON JUAN: ¡Centellas! Centellas!

CENTELLAS: Vuestro valor In order to show al extremo por mostrar, your extreme courage and more convidasteis a cenar you invited the Comendador con vos al Comendador. to dine with you also. Y para poder decir And in order to be able to say que a vuestro convite exótico that he attended your feast asistió, con un narcótico you gave us drugs at least nos habéis hecho dormir. to make us slumber away. Si es broma, puede pasar, It it's a joke, forget it, mas a ese extremo llevada, but carried to those extremes ni puede probarnos nada, it proves nothing, it seems, ni os la hemos de tolerar. nor will we tolerate it.

AVELLANEDA: Soy de la misma My opinion's the same. opinión.

DON JUAN: ¡Mentís! You lie!

CENTELLAS: Vos. No, you.

DON JUAN: Vos, capitán. You, my man.

CENTELLAS: Esa palabra, don Juan... Ah, that word, Don Juan.....

DON JUAN: La he dicho de corazón. I spoke from my heart again. Mentís; no son a mis bríos You lie: my courage is fine menester falsos portentos, it requires no false proof, porque tienen mis alientos because the best proof is the truth su mejor prueba en ser míos. of its being mine.

AVELLANEDA Y CENTELLAS: Veamos. Lets see. (Ponen mano a sus espadas.) (They put their hands to their swords.)

DON JUAN: Poned a tasa Restrain your fury, please, vuestra furia y vamos fuera, until we step outside no piense después cualquiera so no one will think you died que os asesiné en mi casa. in my house, but in the street.

AVELLANEDA: Decís bien... Mas somos dos. You speak rightly. ...But we are two.

CENTELLAS: Reñiremos, si os fiáis, We'll duel, if you agree, el uno del otro en pos. one after the other, serially.

DON JUAN: O los dos, como queráis. Or I'll fight both of you

CENTELLAS: ¡Villano fuera, por Dios! By God, that's villainy! Elegid uno, don Juan, Choose one of us, Don Juan, por primero. to go first.

DON JUAN: Sedlo vos. Then, you are the man.

CENTELLAS: Vamos. Let's go.

DON JUAN: Vamos, capitán. Then go before me.

FIN DEL ACTO SEGUNDO END OF THE SECOND ACT

ACTO TERCERO ACT THREE

MISERICORDIA DE DIOS Y APOTEOSIS GOD'S MERCY AND LOVE'S APOTHEOSIS

DEL AMOR (Panteón de la familia Tenorio. (The Tenorio family pantheon. As Como estaba en el acto primero de it was in the first act of the la segunda parte, menos las second part, except the statues of estatuas de doña Inés y de don Doña Inés and Don Gonzalo are not Gonzalo, que no están en su lugar.) in their places.)

ESCENA PRIMERA SCENE I

(Don Juan, embozado y distraído, (Don Juan, muffled to the eyes and entra en la escena lentamente:) distraught, enters the stage slowly.)

DON JUAN: Culpa mía no fue: delirio insano It wasn't my fault, some inflammation me enajenó la mente acalorada. drove my fevered mind mad. Necesitaba víctimas mi mano My hand needed victims, I had que inmolar a mi de desesperada, to sacrifice them, in my desperation, y al verlos en mitad de mi camino and those at the heart of my course, I see presa les hice allí de mi locura. I made prisoners of my insanity. ¡No fui yo, vive Dios! ¡Fue su It wasn't me, I swear! It was destino! destiny! Sabían mi destreza y mi ventura. They knew my luck and ability. ¡Oh! Arrebatado el corazón me Oh! I feel my heart seized by siento por vértigo infernal..., mi alma an infernal dizziness... my soul perdida va cruzando el desierto de la vida is crossing life's desert without a goal, cual hoja seca que arrebata el like a dry leaf whirled through the viento. sky. Dudo..., temo..., vacilo..., en mi I doubt... I fear....I sway... in cabeza my head siento arder un volcán..., muevo a volcano burns...without will, my la planta foot sin voluntad, y humilla mi grandeza moves, my greatness is anything but, un no sé qué de grande que me bowed before some great unknown espanta. dread. (Un momento de pausa.) (A moment's pause) ¡Jamás mi orgullo concibió que My pride never dreamed there could hubiere be nada más que el valor...! Que se any virtue but courage! I thought aniquila no less el alma con el cuerpo cuando muere that the soul was destroyed with the flesh, creí..., mas hoy mi corazón vacila. ...but today my heart wavers in me. ¡Jamás creí en fantasmas...! I never believed in ghosts...! No! ¡Desvaríos! Mas del fantasma aquel, pese a mi But despite my courage, I hear aliento, stone feet los pies de piedra caminando siento of that phantom walking, on every street, por doquiera que voy, tras de los behind me, wherever I go. míos. ¡ Oh! Y me trae a este sitio And a power that's irresistible irresistible misterioso poder... brings me to this place... (Levanta la cabeza y ve que no (He raises his head and sees that está en el pedestal la estatua de the statue of Don Gonzalo is not on don Gonzalo.) the pedestal.) ¡Pero qué veo! But what do I see! Falta de allí su estatua...! Sueño His statue is missing there...! horrible, Horrible déjame de una vez... No, no te dream, once and for all.. I don't creo. believe. Sal, huye de mi mente fascinada, Leave my dazed mind and flee fatídica ilusión..., estás en vano gloomy illusion.....in vain con pueriles asombros empeñada you insist on childish alarms again en agotar mi aliento sobrehumano. to quell superhuman bravery. Si todo es ilusión, mentido sueño, If all is illusion, lying dreams, nadie me ha de aterrar con no one scares me with tricks of trampantojos; their making si es realidad, querer es necio while appeasement, if it's as it empeño seems, aplacar de los cielos los enojos. of Heaven's, a foolish undertaking. No; sueño o realidad, del todo No: dream or reality, I long to try, anhelo vencerle o que me venza; y si to conquer it all, lest it conquer piadoso me; busca tal vez mi corazón el cielo, and, if my heart is sought on high, que le busque más franco y may it be frankly and generously. generoso. La efigie de esa tumba me ha The effigy from that tomb asked me invitado a venir a buscar prueba más cierta to come and seek a proof most certain de la verdad en que dudé of the truth which I've doubted obstinado... obstinately. Heme aquí, pues: Comendador, Here I am, then Comendador, rise despierta. again! (Llama al sepulcro del Comendador. (He knocks on the tomb of the Este sepulcro se cambia en una Comendador. This sepulchre turns mesa que parodia horriblemente la into a table that horribly parodies mesa en que cenaron en el acto the table at which Don Juan, anterior

don Juan, Centellas y Centellas and Avellaneda dined in Avellaneda. En vez de las the previous act. Instead of the guirnaldas que cogían en garlands that caught up his pabellones sus manteles, de sus tablecloths in ruffles, of flowers flores y lujoso servicio, and ostentatious table settings, culebras, huesos y fuego, etc. (A there are snakes, bones, fire, etc. gusto del pintor.) Encima de esta (According to the taste of the set mesa aparece un plato de ceniza, designer.) On top of this table una copa de fuego y un reló de appears a plate of ashes, a goblet arena. Al cambiarse este sepulcro, of fire and an hourglass. When this todos las demás se abren y dejan grave changes, all the rest open up paso a las osamentas de las and give way to the skeletons of personas que se suponen enterradas the people supposed to be buried in en ellos, envueltas en sus them, wrapped in their shrouds. sudarios. Sombras, espectros y Shades, spectres and spirits espíritus pueblan el fondo de la populate the background of the escena. La tumba de doña Inés stage. The tomb of Doña Inés stays permanece.) the same.)

ESCENA II SCENE II

(Don Juan, La estatua de don (Don Juan, The statue of Don Gonzalo, las sombras) Gonzalo, the spirits)

ESTATUA: Aquí me tienes, don Juan, Here I am then, Don Juan, y he aquí que vienen conmigo and here in the company los que tu eterno castigo of those who call on God, you see, de Dios reclamando están. for your eternal punishment, as man.

DON JUAN: ¡Jesús! Oh, Jesus!

ESTATUA: ¿Y de qué te alteras, And why are you troubled, then, si nada hay que a ti te asombre, if nothing can frighten you y para hacerte eres hombre and you're man enough to make a few platos con sus calaveras? bowls of skulls, again?

DON JUAN: ¡Ay de mi! Woe is me!

ESTATUA: ¿Qué? ¿El corazón What? Your heart te desmaya? grows faint?

DON JUAN: No lo sé; I don't know concibo que me engañé: I realize I was wrong: oh no son sueños... ¡ellos son! they're not dreams...they're not art! (Mirando a los espectros.) (Looking at the spectres.) Pavor jamás conocido Fear, never known before to me el alma fiera me asalta, overwhelms my fierce soul, y aunque el valor no me falta, and while I never lack courage, I know me va faltando el sentido. my senses are failing me.

ESTATUA: Eso es, don Juan, que se That is because, Don Juan va concluyendo tu existencia, your existence is at an end, y el plazo de tu sentencia and the judgement to which you tend está cumpliéndose ya. is now already at hand.

DON JUAN: ¿Qué dices? What do you mean?

DON GONZALO: Lo que hace poco What a while ago que doña Inés te avisó, Doña Ines warned you of, lo que te he avisado yo, what I too warned you of, y lo que olvidaste loco. and you did not wish to know. Mas el festín que me has dado But the place you set for me debo volverte, y así I must set for you, llega, don Juan, que yo aquí here you are, Don Juan, I too cubierto te he preparado. have prepared a place you see.

DON JUAN: ¿Y qué es lo que ahí me And what is it you have for me das? there?

DON GONZALO: Aquí fuego, allí Here ashes, and there the fire. ceniza.

DON JUAN: El cabello se me eriza. My hair stands on end, a pyre!

ESTATUA: Te doy lo que tú serás. I show you what you shall be.

DON JUAN: ¡Fuego y ceniza he de I'm to be ashes and flame! ser!

ESTATUA: Cual los que ves en redor: Like those you see around you en eso para el valor, that's how courage, youth too, la juventud y el poder. and power, end all the same.

DON JUAN: Ceniza, bien; ¡pero Ashes, that's so. But fire! fuego!

DON GONZALO: El de la ira omnipotente That of all-powerful anger, you see do arderás eternamente where you'll burn eternally por tu desenfreno ciego. for your blind, unbridled desire.

DON JUAN: ¿Conque hay otra vida más So there is another life, then, y otro mundo que el de aquí? and another world beyond this? Conque es verdad, ¡ay de mí!, What I never believed in exists! lo que no creí jamás? Woe is me, once again! ¡Fatal verdad que me hiela A fatal truth that chills la sangre en el corazón! the blood itself in my veins! Verdad que mi perdición A truth that only makes plain solamente me revela. my perdition, and all my ills. ¿Y ese reló? And that hourglass?

DON GONZALO: Es la medida It measures, one by one de tu tiempo. The moments left.

DON JUAN: ¡Expira ya! It's done!

ESTATUA: Sí: en cada grano se va With each grain a moment's gone un instante de tu vida. of your life under the sun.

DON JUAN: ¿ Y ésos me quedan no And there are no more to fall? más?

ESTATUA: Sí. No.

DON JUAN: ¡Injusto Dios! Tu poder Unjust God! You show me me haces ahora conocer your power now, I see, cuando tiempo no me das when there's no time at all de arrepentirme. to repent.

ESTATUA: Don Juan, Don Juan, un punto de contrición one moment of contrition da a un alma la salvación, even in your position y ese punto aún te le dan... gives a soul salvation.....

DON JUAN: ¡Imposible! ¡En un Impossible! In a moment's flight momento borrar treinta años malditos to wipe out thirty years, de crímenes y delitos!: whose sin and crime appears!

ESTATUA: Aprovéchale con tiento, Take care, for you might. (Tocan a muerto.) (The tolling for the dead is heard.) porque el plazo va a expirar. The term is about to expire y las campanas doblando and the bells that you hear ringing por ti están, y están cavando are for you, and they are digging la fosa en que te han de echar. the ditch where you'll lie in the mire. (Se oye a lo lejos el oficio de (Far off is heard the office of the difuntos.) dead.)

DON JUAN: ¿Conque por mi doblan? So they are ringing for me?

DON GONZALO: Sí. The same.

DON JUAN: ¿Y esos cantos funerales? And those funereal chants?

ESTATUA: Los salmos From whence penitenciales, rise psalms of penitence: que están cantando por ti. they are singing your name. (Se ve pasar por la izquierda luz (Lighted torches can be seen de hachones, y rezan dentro.) passing by on the left, and prayers are heard off stage.)

DON JUAN: ¿Y aquel entierro que And that burial procession whose pasa? feet go by?

DON GONZALO: Es el tuyo. Is yours.

DON JUAN: ¡Muerto yo! I'm dead!

DON GONZALO: El capitán te mató The Captain killed you, instead, a la puerta de tu casa. at the door of your house, in the street.

DON JUAN: Tarde la luz de la fe Too late faith's perfect light penetra en mi corazón, pierces my heart, and brings pues crímenes mi razón with sweet illuminings a su luz tan sólo ve. my crimes to reason's sight. Los ve... y con horrible afán, Sight...of horrible pain, porque al ver su multitud since to see their multitude ve a Dios en la plenitud is to see the plenitude de su ira contra don Juan. of God's anger with Don Juan. ¡Ah! Por doquiera que fui Oh! Wherever I strayed la razón atropellé, I trampled on right, la virtud escarnecí, virtue, the jade, a la justicia burlé, I scorned, tricked the might y a las mujeres vendí. of the law, and women, betrayed. Yo a las cabañas bajé, I went down the alleys. yo a los palacios subí, and up to the palaces, yo los claustros escalé, boarded cloisters, like galleys, pues tal mi vida fue, ... no, no pardon for me. no, no hay perdón para mí. since my life was such as this, Mas ¡ah! estáis todavía But you are still here for me, (A los fantasmas.) (To the phantoms) con quietud tan pertinaz! with such enduring quietude! Dejadme morir en paz Let me die in peace, in solitude a solas con mi agonía. alone in my agony. Mas con esa horrenda calma, But with that awful silence, ¿qué me auguráis, sombras fieras? what do you augur, fierce spirits? ¿Qué esperan de mí? What do you want from me? (A la estatua de Don Gonzalo.) (To the statue of Don Gonzalo)

ESTATUA: Que mueras, That you cease to exist, para llevarse tu alma. your soul forget this existence. Y adiós, don Juan; ya tu vida And so goodbye Don Juan, the bells toca a su fin, y pues vano toll the end of your being, and todo fue, dame la mano since all was in vain, give me your hand, en señal de despedida. as a token of our farewells.

DON JUAN: ¿Muéstrasme ahora Now your friendship, at the end? amistad?

ESTATUA: Si; que injusto fui Yes, for I was unjust to you, contigo, y Dios me manda tu amigo and God now orders me to volver a la eternidad. return to eternity as your friend.

DON JUAN: Toma, pues. Here then.

DON GONZALO: Ahora, don Juan, Don Juan, now pues desperdicias también that you even throw away el momento que te dan, the last moment allowed, conmigo al infierno ven. come with me to hell, today.

DON JUAN: ¡Aparta, piedra fingida! Deceiving stone, take flight! Suelta, suéltame esa mano, Let go, let go of my hand, que aun queda el último grano for the last grain still hangs en el reló de mi vida. in the hourglass of my life. Suéltala, que si es verdad Let go: if it's true for me que un punto de contrición that a moment of contrition da a un alma la salvación can yield a soul's salvation de toda una eternidad, for all eternity, yo, Santo Dios, creo en Ti; Holy God, I believe in You: may it be si es mi maldad inaudita, though my sins are mighty, I admit, tu piedad es infinita... that your mercy indeed is infinite... ¡Señor, ten piedad de mí! Lord, have mercy on me!

ESTATUA: Ya es tarde. It is..... too late. (Don Juan se hinca de rodillas, (Don Juan falls to his knees, tendiendo al cielo la mano que le stretching the hand the statue deja libre la estatua. Las leaves free to heaven. At the sombras, esqueletos, etc., van a moment the shades, skeletons, etc. abalanzarse sobre él, en cuyo are about to fall on him, the tomb momento se abre la tumba de doña of Doña Inés opens and she appears. Inés y aparece ésta. Doña Inés Doña Inés takes the hand Don Juan toma la mano que don Juan tiende stretches toward heaven.) al cielo.)

ESCENA III SCENE III

(Don Juan, la estatua de don (Don Juan, the statue of Don Gonzalo, doña Inés, sombras, etc.) Gonzalo, Doña Inés, spirits, etc.)

DOÑA INÉS: ¡No! Heme ya aquí, No! For I am here, don Juan; mi mano asegura Don Juan; my hand preserves esta mano que a la altura your outstretched hand, that serves tendió tu contrito afán, to lift your heart on high, and y Dios perdona a don Juan God forgives Don Juan, al pie de mi sepultura. by my grave, as love deserves.

DON JUAN: ¡Dios clemente! ¡Doña Merciful God! Doña Ines! Inés!

DOÑA INÉS: Fantasmas, desvaneceos: Phantoms, vanish below! su fe nos salva..., volveos His faith saves us.. and so a vuestros sepulcros pues. to your graves again, no less. La voluntad de Dios es: It is the will of God: and yes, de mi alma con la amargura with the astringency of my soul purifiqué su alma impura, I cleansed his impure soul, y Dios concedió a mi afán and God yielded, at my desire, la salvación de don Juan Don Juan's salvation from fire, al pie de la sepultura. by the grave's threshold.

DON JUAN: ¡Inés de mi corazón! Inés, my heart's true passion!

DOÑA INÉS: Yo mi alma he dado por ti I gave my soul for you y Dios te otorga por mí and God grants that it's true tu dudosa salvación. your despaired-of salvation. Misterio es que en comprensión This is a mystery of creation no cabe de criatura, no mortal may comprehend, y sólo en vida más pura and only in that life without end, los justos comprenderán the just shall understand que el amor salvó a don Juan that love has saved Don Juan al pie de la sepultura. before he could descend. Cesad, cantos funerales; Cease, you funeral sounds: (Cesa la música y salmodia.) (The music and psalms cease.) callad, mortuorias campanas; Be still, death's bells on high: (Dejan de tocar a muerto.) (They stop tolling the death bells) ocupad, sombras livianas, fickle shadows, occupy vuestras urnas sepulcrales; your sepulchral mounds. (Vuelven los esqueletos a sus (The skeletons return to their tumbas, que se cierran.) tombs that close.) volved a los pedestales, On your pedestals, be found, animadas esculturas; you living sculptures, soon: (Vuelven las estatuas a sus (The statues return to their lugares.) places.) y las celestes venturas let heavenly fortune en que los justos están in which the just delight empiecen para don Juan begin for Don Juan, in sight en las mismas sepulturas. of his very tomb. (Las flores se abren y dan paso a (The flowers open and reveal varios angelitos que rodean a doña various little angels that surround Inés y a don Juan, derramando Doña Inés and Don Juan, sprinkling sobre ellos flores y perfumes, y on them flowers and perfumes, and al son de la música dulce y lejana at the sound of the sweet far off se ilumina el

teatro con luz de music, the stage lights up with the aurora. Doña Inés cae sobre un light of dawn. Doña Inés falls on a lecho de flores, que quedará a la bed of flowers that remain in view, vista, en lugar de su tumba, que instead of her tomb which desaparece.) disappears.)

ESCENA ULTIMA FINAL SCENE

(Doña Inés, don Juan, los ángeles) (Doña Inés, Don Juan, angels)

DON JUAN: ¡Clemente Dios, gloria a Ti! Merciful God, Glory to You! Mañana a los sevillanos Tomorrow, the Sevillians, aterrará el creer que a manos thinking I fell at my victim's hands, de mis víctimas caí. will be astonished, it's true. Mas es justo; quede aquí But that is just: for eternity, too, al universo notorio may the universe record, men know, que, pues me abre el purgatorio that the God of mercy, here below, un punto de penitencia, who, at the moment of contrition, es el Dios de la clemencia saved my spirit from perdition, el Dios de Don Juan Tenorio. is the God of Don Juan Tenorio. (Cae don Juan a los pies de doña (Don Juan falls at the feet of Doña Inés, y mueren ambos. De sus bocas Inés, and they both die. Their salen sus almas representadas en souls represented by two brilliant dos brillantes llamas, que se flames, leave their mouths and pierden en el espacio al son de la disappear into space accompanied by música. Cae el telón.) the sound of music. The curtain falls.)

CONTENTS OF VOLUME I. [LETTERS LISTED BY DATE]

PREFACE

A full and authentic edition of Mozart's Letters ought to require no special apology; for, though their essential substance has already been made known by quotations from biographies by Nissen, Jahn, and myself, taken from the originals, still in these three works the letters are necessarily not only very imperfectly given, but in some parts so fragmentary, that the peculiar charm of this correspondence--namely, the familiar and confidential mood in which it was written at the time--is entirely destroyed. It was only possible to restore, and to enable others to enjoy this charm--a charm so novel, even to those already conversant with Mozart's life, that the most familiar incidents acquire fresh zest from it--by an ungarbled edition of these letters. This is what I now offer, feeling convinced that it will be welcome not only to the mass of Mozart's admirers, but also to professional musicians; for in them alone is strikingly set forth how Mozart lived and labored, enjoyed and suffered, and this with a degree of vivid and graphic reality which no biography, however complete, could ever succeed in giving. Who does not know the varied riches of Mozart's life? All that agitated the minds of men in that day--nay, all that now moves, and ever will move, the heart of man--vibrated with fresh pulsation, and under the most manifold forms, in his sensitive soul, and mirrored itself in a series of letters, which indeed rather resemble a journal than a correspondence.

This artist, Nature had gifted in all respects with the most clear and vigorous intellect that ever man possessed. Even in a language which he had not so fully mastered as to acquire the facility of giving expression to his ideas, he contrived to relate to others all that he saw and heard, and felt and thought, with surprising clearness and the most charming sprightliness, combined with talent and good feeling. Above all, in his letters to his father when travelling, we meet with the most minute delineations of countries and people, of the progress of the fine arts, especially in the theatres and in music; we also see the impulses of his own heart and a hundred other things which, in fascination, and universal as well as artistic interest, have scarcely a parallel in our literature. The style may fail to a certain degree in polish, that is, in definite purpose in expressing what he wished to say in an attractive or congenial form,--an art, however, which Mozart so thoroughly understood in his music. His mode of writing, especially in the later letters from Vienna, is often very slovenly, evidencing how averse the Maestro was to the task. Still these letters are manifestly the unconstrained, natural, and simple outpourings of his heart, delightfully recalling to our minds all the sweetness and pathos, the

spirit and grace, which have a thousand times enchanted us in the music of Mozart. The accounts of his visit to Paris may, indeed, lay claim to a certain aesthetic value, for they are written throughout with visible zest in his own descriptions, and also with wit, and charm, and characteristic energy. As these combined merits can only become apparent by an ungarbled series of the letters, I have resolved, after many long years of zealous research in collecting them, to undertake the work,--that is, to publish the letters entire that have come to my knowledge.

It now only remains for me to give some words of explanation as to the method I have pursued in editing them.

In the first place, this edition, (being transcribed closely from the originals,) if compared with the letters already published, will prove that the latter are open to many corrections, both in trivial and more important respects. I have forborne, however, attracting attention to the deviations from the original text, either in Nissen or Jahn. I have no wish to be punctilious about trifles, where, as in the case of Jahn, the principal points are correct. Further, by this faithful production of the letters, (nothing being omitted but the constant repetition of forms of greeting and subscription,) we find many an additional feature in the Maestro's life, and chiefly various facts with regard to the creation and publication of his works, which may serve to complete and to amend various statements in Dr. Ludwig Ritter von Kochel's "Chronological Thematic Catalogue of the Musical Compositions of W. A. Mozart," (Leipzig, Breitkopf and Hartel). This will be effected not only by the hitherto unpublished letters, though comparatively few in number, but also by passages being given in full, which have been hitherto suppressed as of no consequence. I have referred to Nissen and Jahn only when, in spite of all my inquiries, I could not discover the proprietor of the original, or procure a correct copy.

I must also remark that all letters without a special address are written to his father. I have only adhered to Mozart's defective orthography in his few letters of early date, and in the rest adopted the more modern fashion. I did so for this simple reason, that these defects form a charm in his juvenile letters, from being in accordance with their boyish contents, while, with regard to the others, they only tend to distract the attention from the substance of the letters, instead of imparting additional interest to them. Biographers can, and ought always to render faithfully the original writing, because quotations alternate with the text of the biographer; but in a regular and uninterrupted series of letters this attraction must be very sparingly used, or it will have a pernicious effect.

The explanatory remarks, and also the supplementary Lexicon, in which I have availed myself of Jahn's catalogue, will make the letters more intelligible to the world at large. The Index, too, has been most carefully prepared to facilitate references.

Lastly, I return my best thanks to the keeper of the Archives of the Mozarteum in Salzburg, to Herr Jellinck, and to all the librarians and collectors of autographs who have assisted me in my task, either by furnishing me with copies of their Mozart letters, or by letting me know where I could procure them. I would also earnestly request all who may possess any Mozart letters to send me an exact transcript of them in the interest of Art; for those here given allude to many still unknown, which are no doubt scattered about here and there, waiting to be brought to light.

With respect to myself, the best reward I aspire to in return for the many sacrifices this collection has cost me, is, that my readers may do justice to the purpose which chiefly guided me throughout this publication,--my desire being not merely to benefit science, and to give a graphic description of the amiability and purity of heart which so distinguished this attractive man, (for such was my aim in my "Life of Mozart,") but above all to draw attention afresh to the unremitting zeal with which Mozart did homage to every advance in Art, striving to make music more and more the interpreter of man's innermost being. I also wished to show how much his course was impeded by the sluggishness and stupidity of the multitude, though partly sustained by the sympathy of kindred souls, till the glorious victory was won over routine and imbecility. Amidst all the fatiguing process of copying and collating letters already so familiar to me, these considerations moved me more vividly than ever; and no work on the Maestro can ever bring them with such force before the intelligent reader as this connected succession of letters, containing his own details of his unwearied artistic struggles and productions. May these letters, then, kindle fresh zeal in our artists of the present day, both in youthful genius and in laurel-crowned Maestri!--especially may they have the happiest influence on those who devote themselves to that phase of Art in which Mozart attained the highest renown!--may they impart that energetic courage which is derived from the experience that incessant efforts for the progress of Art and its appliances enlarge the limits of human intellect, and can alone insure an immortal crown!

LUDWIG NOHL.

MUNICH, October 1, 1864.

FIRST PART--ITALY, VIENNA, MUNICH.--1770 TO 1776.

Wolfgang Amadeus Mozart was born in Salzburg on the 17th January, 1756. His father, Leopold Mozart, belonged to a respectable tradesman's family in the free city of Augsburg. Conscious of being gifted with no small portion of intellectual endowments, he followed the impulse that led him to aim at a higher position in life, and went to the then celebrated University of Salzburg in order to study jurisprudence. As he did not, however, at once succeed in procuring employment in this profession, he was forced, from his straitened means, to enter the service of Canon Count Thun as valet. Subsequently, however, his talents, and that thorough knowledge of music by which he had already (according to the custom of many students) gained some part of his livelihood, obtained for him a better position. In the year 1743 he was received into the band (Kapelle) of the Salzburg cathedral by Archbishop Sigismund; and as his capabilities and fame as a violinist increased, the same Prince shortly afterwards promoted him to the situation of Hof-Componist (Court Composer) and leader of the orchestra, and in 1762 he was appointed Hof-Kapellmeister (conductor of the Court music).

In 1747 Leopold Mozart married Anna Maria Pertlin, a foster-child of the Convent of St. Gilgen. The fruits of this marriage were seven children, two of whom alone survived,--Maria Anna, (the fourth), called Nannerl, born in 1751; and the youngest, Wolfgang Amadeus Johannes Chrysostomus. The daughter at a very early age displayed a most remarkable talent for music, and when her father began to give her instructions in it, an inborn and passionate love of this art was soon evident in her little brother of three years old, who at once gave tokens of a degree of genius far surpassing all experience, and really bordering on the marvellous. In his fourth year he could play all sorts of little pieces on the piano. He only required half an hour to learn a minuet, and one hour for a longer movement; and in his fifth year he actually composed some pretty short pieces, several of which are still extant.

[Footnote: The Grand Duchess Helene Paulowna, a few weeks ago, made a present to the Mozarteum of the music-book from which Mozart learned music, and in which he wrote down his first compositions.]

The wonderful acquirements of both these children, to which Wolfgang soon added skilful playing on the violin and organ, induced their father to travel with them. In January, 1702, when the boy was just six years old, they went first to Munich, and in the autumn to Vienna, the children everywhere on their journey exciting the greatest sensation, and being handsomely remunerated. Leopold Mozart, therefore, soon afterwards resolved to undertake a longer journey, accompanied by his whole family. This lasted more than three years, extending from the smaller towns in West Germany to Paris and London, while they visited, on their way back, Holland, France, and Switzerland. The careful musical instruction which the father perseveringly bestowed on his son, went hand in hand with the most admirable education, and the boy was soon as universally beloved for his amiable disposition and natural simplicity and candor, as admired for his rare gifts and acquirements.

After nearly a year passed at home in unremitting musical instruction, and practice of various instruments as well as composition, the father once more set off with all his family to Vienna,--on this occasion with a view to Wolfgang paving the way to Italy by the composition of an opera, (Italy, at that time, being the Eldorado of music.) He succeeded in procuring the scrittura of an opera buffa, "La Finta semplice;" but, when finished, although the Emperor himself had intrusted the composition to the boy, the cabals of envious singers effectually prevented its being performed. But a German operetta which the lad of twelve also wrote at that time, "Bastien und Bastienne," was given in private, at the summer residence of the Mesmer family, in the suburb called Landstrasse. The father, too, had some compensation by the Emperor commissioning his son to compose a solemn mass for the consecration of the new Waisenhaus church, which Wolfgang himself directed with the conductor's baton, in presence of the Imperial Family, on the 7th December, 1768.

Immediately on their return home, the young virtuoso was appointed archiepiscopal Concertmeister. He passed almost the whole of the year 1769 in Salzburg, chiefly engaged in the composition of masses. We also see him at that time eagerly occupied in improving his knowledge of Latin, although two years previously he had composed a comedy in that language,--"Apollo et Hyacinthus." From this study proceeds the first letter which is still extant from his hand:--

1.

Salzburg, 1769.

MY DEAR YOUNG LADY,--

I beg you will pardon the liberty I take in plaguing you with these few lines, but as you said yesterday that there was nothing you could not understand in Latin, and I might write what I chose in that language, I could not resist the bold impulse to write you a few Latin lines. When you have deciphered these, be so good as to send me the answer by one of Hagenauer's servants, for my messenger cannot wait; remember, you must answer this by a letter.

[Footnote: By a messenger of the Hagenauer family, in whose house, opposite the inn of "Den drei Allurten," Mozart was born, and with whom his family were on the most intimate terms.]

"Cuperem scire, de qua causa, a quam plurimis adolescentibus ottium usque adeo oestimetur, ut ipsi se nec verbis, nec verberibus ad hoc sinant abduci."

[Footnote: "I should like to know the reason why indolence is so highly prized by very many young men, that neither by words nor blows will they suffer themselves to be roused from it."]

WOLFGANG MOZART.

The father's plan to go to Italy, there to lay the foundation of a European reputation for his son, was realized in the beginning of December, 1769, and during the journey, the boy, who was at that time just entering his fifteenth year, subjoined to his father's reports scraps of his own writing, in which, in true boyish fashion, he had recourse to all kinds of languages and witticisms, but always exhibiting in his opinions on music the closest observation, the gravest thought, and the most acute judgment.

2.

Verona, Jan. 1770.

MY VERY DEAREST SISTER,--

I have at last got a letter a span long after hoping so much for an answer that I lost patience; and I had good cause to do so before receiving yours at last. The German blockhead having said his say, now the Italian one begins. Lei e piu franca nella lingua italiana di quel che mi ho immaginato. Lei mi dica la cagione perche lei non fu nella commedia che hanno giocata i Cavalieri. Adesso sentiamo sempre una opera titolata Il Ruggiero. Oronte, il padre di Bradamante, e un principe (il Signor Afferi) bravo cantante, un baritono, [Footnote: "You are more versed in the Italian language than I believed. Tell me why you were not one of the actors in the comedy performed by the Cavaliers. We are now hearing an opera called 'Il Ruggiero.' Oronte, the father of Bradamante, is a Prince (acted by Afferi, a good singer, a baritone)."] but very affected when he speaks out a falsetto, but not quite so much so as Tibaldi in Vienna. Bradamante innamorata di Ruggiero (ma [Footnote: "Bradamante is enamored of Ruggiero, but"]--she is to marry Leone, but will not) fa una povera Baronessa, che ha avuto una gran disgrazia, ma non so la quale; recita [Footnote: "Pretends to be a poor Baroness who has met with some great misfortune, but what it is I don't know, she performs"] under an assumed name, but the name I forget; ha una voce passabile, e la statura non sarebbe male, ma distuona come il diavolo. Ruggiero, un ricco principe innamorato di Bradamante, e un musico; canta un poco Manzuolisch [Footnote: Manzuoli was a celebrated soprano, from whom Mozart had lessons in singing when in London.] ed ha una bellissima voce forte ed e gia vecchio; ha 55 anni, ed ha una [Footnote: "She has a tolerable voice, and her appearance is in her favor, but she sings out of tune like a devil Ruggiero, a rich Prince enamored of Bradamante, is a musico, and sings rather in Manzuoli's style, and has a fine powerful voice, though quite old; he is fifty-five, and has a"] flexible voice. Leone is to marry Bradamante--richississimo e, [Footnote: "Immensely rich."] but whether he is rich off the stage I can't say. La moglie di Afferi, che ha una bellissima voce, ma e tanto susurro nel teatro che non si sente niente. Irene fa una sorella di Lolli, del gran violinista che habbiamo sentito a Vienna, a una [Footnote: "Afferi's wife has a most beautiful voice, but sings so softly on the stage that you really hear nothing at all. A sister of Lolli, the great violinist whom we heard at Vienna, acts Irene; she has a"] very harsh voce, e canta sempre [Footnote: "Voice, and always sings"] a quaver too tardi o troppo a buon' ora. Granno fa un signore, che non so come si chiame; e la prima volta che lui recita. [Footnote: "Slow or too fast. Ganno is acted by a gentleman whose name I never heard. It is his first appearance on the stage."] There is a ballet between each act. We have a good dancer here called Roessler. He is a German, and dances right well. The very last time we were at the opera (but not, I hope, the very last time we ever shall be there) we got M. Roessler to come up to our palco, (for M. Carlotti gives us his box, of which we have the key,) and conversed with him. Apropos, every one is now in maschera, and one great convenience is, that if you fasten your mask on your hat you have the privilege of not taking off your hat when any one speaks to you; and you never address them by name, but always as "Servitore umilissimo, Signora Maschera." Cospetto di Bacco! that is fun! The most

strange of all is that we go to bed at half-past seven! Se lei indovinasse questo, io diro certamente che lei sia la madre di tutti gli indovini. [Footnote: "If you guess this, I shall say that you are the mother of all guessers."] Kiss mamma's hand for me, and to yourself I send a thousand kisses, and assure you that I shall always be your affectionate brother.

Portez-vous bien, et aimez-moi toujours.

3.

Milan, Jan. 26, 1770.

I REJOICE in my heart that you were so well amused at the sledging party you write to me about, and I wish you a thousand opportunities of pleasure, so that you may pass your life merrily. But one thing vexes me, which is, that you allowed Herr von Molk [an admirer of this pretty young girl of eighteen] to sigh and sentimentalize, and that you did not go with him in his sledge, that he might have upset you. What a lot of pocket-handkerchiefs he must have used that day to dry the tears he shed for you! He no doubt, too, swallowed at least three ounces of cream of tartar to drive away the horrid evil humors in his body. I know nothing new except that Herr Gellert, the Leipzig poet, [Footnote: Old Mozart prized Gellert's poems so highly, that on one occasion he wrote to him expressing his admiration.] is dead, and has written no more poetry since his death. Just before beginning this letter I composed an air from the "Demetrio" of Metastasio, which begins thus, "Misero tu non sei."

The opera at Mantua was very good. They gave "Demetrio." The prima donna sings well, but is inanimate, and if you did not see her acting, but only singing, you might suppose she was not singing at all, for she can't open her mouth, and whines out everything; but this is nothing new to us. The seconda donna looks like a grenadier, and has a very powerful voice; she really does not sing badly, considering that this is her first appearance. Il primo uomo, il musico, sings beautifully, but his voice is uneven; his name is Caselli. Il secondo uomo is quite old, and does not at all please me. The tenor's name is Ottini; he does not sing unpleasingly, but with effort, like all Italian tenors. We know him very well. The name of the second I don't know; he is still young, but nothing at all remarkable. Primo ballerino good; prima ballerina good, and people say pretty, but I have not seen her near. There is a grotesco who jumps cleverly, but cannot write as I do--just as pigs grunt. The orchestra is tolerable. In Cremona, the orchestra is good, and Spagnoletta is the name of the first violinist there. Prima donna very passable--rather ancient, I fancy, and as ugly as sin. She does not sing as well as she acts, and is the wife of a violin-player at the opera. Her name is Masci. The opera was the "Clemenza di Tito." Seconda donna not ugly on the stage, young, but nothing superior. Primo uomo, un musico, Cicognani, a fine voice, and a beautiful cantabile. The other two musici young and passable. The tenor's name is non lo so [I don't know what]. He has a pleasing exterior, and resembles Le Roi at Vienna. Ballerino primo good, but an ugly dog. There was a ballerina who danced far from badly, and, what is a capo d'opera, she is anything but plain, either on the stage or off it. The rest were the usual average. I cannot write much about the Milan opera, for we did not go there, but we heard that it was not successful. Primo uomo, Aprile, who sings well, and has a fine even voice; we heard him at a grand church festival. Madame Piccinelli, from Paris, who sang at one of our concerts, acts at the opera. Herr Pick, who danced at Vienna, is now dancing here. The opera is "Didone abbandonata," but it is not to be given much longer. Signor Piccini, who is writing the next opera, is here. I am told that the title is to be "Cesare in Egitto."

WOLFGANG DE MOZART,

Noble of Hohenthal and attached to the Exchequer.

4.

Milan, Feb. 10, 1770.

SPEAK of the wolf, and you see his ears! I am quite well, and impatiently expecting an answer from you. I kiss mamma's hand, and send you a little note and a little kiss; and remain, as before, your----What? Your aforesaid merry-andrew brother, Wolfgang in Germany, Amadeo in Italy.

DE MORZANTINI.

5.

Milan, Feb. 17, 1770.

Now I am in for it! My Mariandel! I am so glad that you were so tremendously merry. Say to nurse Urserl that I still think I sent back all her songs, but if, engrossed by high and mighty thoughts of Italy, I carried one off with me, I shall not fail, if I find it, to enclose it in one of my letters. Addio, my children, farewell! I kiss mamma's hands a thousand times, and send you a thousand kisses and salutes on your queer monkey face. Per fare il fine, I am yours, &c.

6.

Milan, Carnival, Erchtag.

MANY kisses to mamma and to you. I am fairly crazed with so much business, [Footnote: Concerts and compositions of every kind occupied Mozart. The principal result of his stay in Milan was, that the young maestro got the scrittura of an opera for the ensuing season. As the libretto was to be sent to them, they could first make a journey through Italy with easy minds. The opera was "Mitridate, Re di Ponto."] so I can't possibly write any more.

7.

Milan, March 3, 1770.

CARA SORELLA MIA,--

I am heartily glad that you have had so much amusement. Perhaps you may think that I have not been as merry as you; but, indeed, I cannot sum up all we have done. I think we have been at least six or seven times at the opera and the feste di ballo, which, as in Vienna, begin after the opera, but with this difference, that at Vienna the dancing is more orderly. We also saw the facchinata and chiccherata. The first is a masquerade, an amusing sight, because the men go as facchini, or porters; there was also a barca filled with people, and a great number on foot besides; and five or six sets of trumpets and kettledrums, besides several bands of violins and other instruments. The chiccherata is also a masquerade. What the people of Milan call chicchere, we call petits maitres, or fops. They were all on horseback, which was a pretty sight. I am as happy now to hear that Herr von Aman [Footnote: The father had written in a previous letter, "Herr von Aman's accident, of which you wrote to us, not only distressed us very much, but cost Wolfgang many tears. You know how sensitive he is"] is better, as I was grieved when you mentioned that he had met with an accident. What kind of mask did Madame Rosa wear, and Herr von Molk, and Herr von Schiedenhofen? Pray write this to me, if you know it; your doing so will oblige me very much. Kiss mamma's hands for me a thousand million times, and a thousand to yourself from "Catch him who can!" Why, here he is!

8.

Bologna, March 24, 1770.

Oh, you busy creature!

Having been so long idle, I thought it would do me no harm to set to work again for a short time. On the post-days, when the German letters come, all that I eat and drink tastes better than usual. I beg you will let me know who are to sing in the oratorio, and also its title. Let me hear how you like the Haydn minuets, and whether they are better than the first. From my heart I rejoice to hear that Herr von Aman is now quite recovered; pray say to him that he must take great care of himself and beware of any unusual exertion. Be sure you tell him this. I intend shortly to send you a minuet that Herr Pick danced on the stage, and which every one in Milan was dancing at the feste di ballo, only that you may see by it how slowly people dance. The minuet itself is beautiful. Of course it comes from Vienna, so no doubt it is either Teller's or Starzer's. It has a great many notes. Why? Because it is a theatrical minuet, which is in slow time. The Milan and Italian minuets, however, have a vast number of notes, and are slow and with a quantity of bars; for instance, the first part has sixteen, the second twenty, and even twenty-four.

We made the acquaintance of a singer in Parma, and also heard her to great advantage in her own house--I mean the far-famed Bastardella. She has, first, a fine voice; second, a flexible organ; third, an incredibly high compass. She sang the following notes and passages in my presence.

[Here, Mozart illustrates with about 20 measures of music]

9.

Rome, April 14, 1770.

I AM thankful to say that my stupid pen and I are all right, so we send a thousand kisses to you both. I wish that my sister were in Rome, for this city would assuredly delight her, because St. Peter's is symmetrical, and many other things in Rome are also symmetrical. Papa has just told me that the loveliest flowers are being carried past at this moment. That I am no wiseacre is pretty well known.

Oh! I have one annoyance--there is only a single bed in our lodgings, so mamma may easily imagine that I get no rest beside papa. I rejoice at the thoughts of a new lodging. I have just finished sketching St. Peter with his keys, St. Paul with his sword, and St. Luke with--my sister, &c., &c. I had the honor of kissing St. Peter's foot at San Pietro, and as I have the misfortune to be so short, your good old

WOLFGANG MOZART

was lifted up!

10.

Rome, April 21, 1770.

CARA SORELLA MIA,--

Pray try to find the "Art of Ciphering" which you copied out, but I have lost it, and know nothing about it. So pray do write it out again for me, with some other copies of sums, and send them to me here.

Manzuoli has entered into a contract with the Milanese to sing in my opera [see Nos. 2-6]. For this reason he sang four or five arias to me in Florence, and also some of my own, which I was obliged to compose in Milan (none of my theatrical things having been heard there) to prove that I was capable of writing an opera. Manzuoli asks 1000 ducats. It is not yet quite certain whether Gabrielli will come. Some say Madame de' Amicis will sing in it; we shall see her in Naples. I wish that she and Manzuoli could act together; we should then be sure of two good friends. The libretto is not yet chosen. I recommended one of Metastasio's to Don Ferdinando [Count Firmiani's steward, in Milan] and to Herr von Troyer. I am at this moment at work on the aria "Se ardore e speranza."

11.

Rome, April 25, 1770.

CARA SORELLA MIA,--

Io vi accerto che io aspetto con una incredibile premura tutte le giornate di posta qualche lettere di Salisburgo. Jeri fummo a S. Lorenzo e sentimmo il Vespero, e oggi matina la messa cantata, e la sera poi il secondo vespero, perche era la festa della Madonna del Buonconsiglio. Questi giorni fummi nel Campidoglio e viddemmo varie belle cose. Se io volessi scrivere tutto quel che viddi, non bastarebbe questo foglietto. In due Accademie suonai, e domani suonero anche in una.--Subito dopo pranzo giuochiamo a Potsch [Boccia]. Questo e un giuoco che imparai qui, quando verro a casa, ve l'imparero. Finita questa lettera finiro una sinfonia mia, che comminciai. L'aria e finita, una sinfonia e dal copista (il quale e il mio padre) perche noi non la vogliamo dar via per copiarla; altrimente ella sarebbe rubata.

WOLFGANGO in Germania. AMADEO MOZART in Italia.

Roma caput mundi il 25 Aprile anno 1770 nell' anno venture 1771.

[Footnote:

"DEAREST SISTER,--

"I assure you that I always expect with intense eagerness my letters from Salzburg on post-days. Yesterday we were at S. Lorenzo and heard vespers, and to-day at the chanted mass, and in the evening at the second vespers, because it was the Feast of the Madonna del Buonconsiglio. A few days ago we were at the Campidoglio, where we saw a great many fine things. If I tried to write you an account of all I saw, this sheet would not suffice. I played at two concerts, and to-morrow I am to play at another. After

dinner we played at Potsch [Boccia]. This is a game I have learnt, and when I come home, I will teach it to you. When I have finished this letter, I am going to complete a symphony that I have begun. The aria is finished. The copyist (who is my father) has the symphony, because we do not choose it to be copied by any one else, or it might be stolen.

"WOLFGANGO in Germany.

"AMADEO MOZART in Italy.

"Rome, mistress of the world: April 25, 1770."]

12.

Naples, May 19, 1770.

CARA SORELLA MIA,--

Vi prego di scrivermi presto e tutti i giorni di posta. Io vi ringrazio di avermi mandata questi "Art of Ciphering," [FOOTNOTE: "I beg you will write to me soon, indeed every post-day. I thank you for having sent me the 'Art of Ciphering.'"] e vi prego, se mai volete avere mal di testa, di mandarmi ancora un poco di questi "books." [FOOTNOTE: "And I beg if you ever want to have a headache, that you will send me some more."] Perdonate mi che scrivo si malamente, ma la razione e perche anche io ebbi un poco mal di testa. [FOOTNOTE: "of the same kind. Excuse my writing so badly, but the reason is that I have a bit of a headache myself."]

Haydn's twelfth minuet, which you sent me, pleases me very much; you have composed an inimitable bass for it, and without the slightest fault. I do beg that you will often exercise yourself in such things. Mamma must not forget to see that the guns are both polished up. Tell me how Master Canary is? Does he still sing? and still whistle? Do you know why I am thinking about the canary? Because we have one in our ante-room that chirps out a G sharp just like ours. [Footnote: Mozart was extremely fond of animals, and later in life had always birds in his room.] A propos, Herr Johannes [Hagenauer], no doubt, received the letter of congratulation which we intended to write to him? But if he has not got it, I will tell him myself, when we meet in Salzburg, what ought to have been in it. Yesterday we wore our new clothes; we were as handsome as angels. My kind regards to Nandl; she must not fail to pray diligently for me.

Jomelli's opera is to be given on the 30th. We saw the king and queen at mass in the court chapel at Portici, and we also saw Vesuvius. Naples is beautiful, but as crowded with people as Vienna or Paris. As for London and Naples, I think that in point of insolence on the part of the people Naples almost surpasses London; because here the lazzaroni have their regular head or leader, who receives twenty-five ducati d'argento monthly from the king for keeping the lazzaroni in order.

Madame de' Amicis sings in the opera--we were there. Caffaro is to compose the second opera, Ciccio di Majo the third, but who is to compose the fourth is not yet known. Be sure you go regularly to Mirabell, to hear the Litanies, and listen to the "Regina Coeli" or the "Salve Regina," and sleep sound, and take care to have no evil dreams. My most transcendent regards to Herr von Schiedenhofen--tralaliera! tralaliera! Tell him to learn the repetition minuet on the piano, to be sure to DO so, and DO not let him forget it. He must DO this in order to DO me the favor to let me accompany him some day or other. DO give my best compliments to all my friends, and DO continue to live happily, and DO not die, but DO live on, that you may be able to DO another letter for me, and I DO one for you, and thus we shall go on DOING till we can DO something worth DOING; but I am one of those who will go on DOING till all DOINGS are at an end. In the mean time I DO subscribe myself

Your W. M.

13.

Naples, May 29, 1770.

Jeri l'altro fummo nella prova dell' opera del Sign. Jomelli, la quale e una opera che e ben scritta e che me piace veramente. Il Sign. Jomelli ci ha parlato ed era molto civile. E fummo anche in una chiesa a sentir una Musica la quale fu del Sign. Ciccio di Majo, ed era una bellissima Musica. Anche lui ci parlci ed era molto compito. La Signora de' Amicis canto a meraviglia. Stiamo Dio grazia assai bene di salute, particolarmente io, quando viene una lettera di Salisburgo. Vi prego di scrivermi tutti giorni di posta, e se anche non avete niente da scrivermi, solamente vorrei averlo per aver qualche lettera tutti giorni di posta. Egli non sarebbe mal fatto, se voi mi scriveste qualche volta una letterina italiana.

[FOOTNOTE: "The other day we attended the rehearsal of Signor Jomelli's opera, which is well written and pleases me exceedingly. Signor Jomelli spoke to us and was very civil. We also went to a church to hear a mass by Signor Ciccio di Majo, and it was most beautiful music. Signora de' Amicus sang incomparably. We are, thank God, very well, and I feel particularly so when a letter from Salzburg arrives. I beg you will write to me every post-day, even if you have nothing to write about, for I should like to have a letter by every post. It would not be a bad idea to write me a little letter in Italian."]

14.

Naples, June 5, 1770.

Vesuvius is smoking fiercely! Thunder and lightning and blazes! Haid homa gfresa beim Herr Doll. Das is a deutscha Compositor, und a browa Mo. [Footnote: "Today we dined with Herr Doll, he is a good composer and a worthy man" [Vienna Patois]] Now I begin to describe my course of life.--Alle 9 ore, qualche volta anche alle dieci mi svelgio, e poi andiamo fuor di casa, e poi pranziamo da un trattore, e dopo pranzo scriviamo, e poi sortiamo, e indi ceniamo, ma che cosa? Al giorno di grasso, un mezzo pollo ovvero un piccolo boccone d'arrosto; al giorno di magro un piccolo pesce; e di poi andiamo a dormire. Est-ce que vous avez compris?--Redma dafir Soisburgarisch, don as is gschaida. Wir sand Gottlob gesund da Voda und i. [Footnote: "I rise generally every morning at 9 o'clock, but sometimes not till 10, when we go out. We dine at a restaurateur's, after dinner I write, and then we go out again, and afterwards sup, but on what? on jours gras, half a fowl, or a small slice of roast meat, on jours maigres a little fish, and then we go to sleep. Do you understand? Let us talk Salzburgisch, for that is more sensible. Thank God, my father and I are well" [Patois]] I hope you and mamma are so also. Naples and Rome are two drowsy cities. A scheni Schrift! net wor? [Footnote: "Fine writing, is it not?" [Patois.]] Write to me, and do not be so lazy. Altrimente avrete qualche bastonate di me. Quel plaisir! Je te casserai la tete. [Footnote: "Otherwise I will cudgel you soundly. What a pleasure--to break your head!"] I am delighted with the thoughts of the portraits [of his mother and sister, who had promised to have their likenesses taken], und i bi korios wias da gleich sieht; wons ma gfoin, so los i mi und den Vodan a so macho. Maidli, lass Da saga, wo list dan gwesa he? [Footnote: "And I am anxious to see what they are like, and then I will have my father and myself also taken. Fair maiden, say, where have you been, eh?" [Patois.]] The opera here is Jomelli's; it is fine, but too grave and old-fashioned for this stage. Madame de' Amicis sings incomparably, and so does Aprile, who used to sing at Milan. The dancing is miserably pretentious. The theatre beautiful. The King has been brought up in the rough Neapolitan fashion, and at the opera always stands on a stool, so that he may look a little taller than the Queen, who is beautiful and so gracious, for she bowed to me in the most condescending manner no less than six times on the Molo.

15.

Naples, June 16, 1770.

I AM well and lively and happy as ever, and as glad to travel. I made an excursion on the Mediterranean. I kiss mamma's hand and Nannerl's a thousand times, and am your son, Steffl, and your brother, Hansl.

16.

Rome, July 7, 1770.

CARA SORELLA MIA,--

I am really surprised that you can compose so charmingly. In a word, the song is beautiful. Often try something similar. Send me soon the other six minuets of Haydn. Mademoiselle, j'ai l'honneur d'etre votre tres-humble serviteur et frere,

CHEVALIER DE MOZART.

[He had received from the Pope the cross of the Order of the Golden Spur.]

17.

Bologna, July 21, 1770.

I WISH mamma joy of her name-day, and hope that she may live for many hundred years to come and retain good health, which I always ask of God, and pray to Him for you both every day. I cannot do honor to the occasion except with some Loretto bells, and wax tapers, and caps, and gauze when I return. In the mean time, good-bye, mamma. I kiss your hand a thousand times, and remain, till death, your attached son.

18.

Io vi auguro d'Iddio, vi dia sempre salute, e vi lasci vivere ancora cent' anni e vi faccia morire quando avrete mille anni. Spero che voi imparerete meglio conoscermi ni avvenire e che poi ne giudicherete come ch' egli vi piace. Il tempo non mi permette di scriver motto. La penna non vale un corno, ne pure quello che la dirigge. Il titolo dell' opera che ho da comporre a Milano, non si sa ancora.

[Footnote: "My prayer to God is, that He may grant you health, and allow you to live to be a hundred, and not to die till you are a thousand years old. I hope that you will learn to know me better in future, and that you will then judge of me as you please. Time does not permit me to write much. My pen is not worth a pin, nor the hand that guides it. I don't yet know the title of the opera that I am to compose at Milan."]

My landlady at Rome made me a present of the "Thousand and One Nights" in Italian; it is most amusing to read.

19.

Bologna, August 4, 1770.

I GRIEVE from my heart to hear that Jungfrau Marthe is still so ill, and I pray every day that she may recover. Tell her from me that she must beware of much fatigue and eat only what is strongly salted [she was consumptive]. A propos, did you give my letter to Robinsiegerl? [Sigismund Robinig, a friend of his]. You did not mention it when you wrote. I beg that when you see him you will tell him he is not quite to forget me. I can't possibly write better, for my pen is only fit to write music and not a letter. My violin has been newly strung, and I play every day. I only mention this because mamma wished to know whether I still played the violin. I have had the honor to go at least six times by myself into the churches to attend their splendid ceremonies. In the mean time I have composed four Italian symphonies [overtures], besides five or six arias, and also a motett.

Does Herr Deibl often come to see you? Does he still honor you by his amusing conversation? And the noble Herr Carl von Vogt, does he still deign to listen to your tiresome voices? Herr von Schiedenhofen must assist you often in writing minuets, otherwise he shall have no sugar-plums.

If time permitted, it would be my duty to trouble Herr von Molk and Herr von Schiedenhofen with a few lines; but as that most indispensable of all things is wanting, I hope they will forgive my neglect, and consider me henceforth absolved from this honor. I have begun various cassations [a kind of divertimento], so I have thus responded to your desire. I don't think the piece in question can be one of mine, for who would venture to publish as his own composition what is, in reality, written by the son of the Capellmeister, and whose mother and sister are in the same town? Addio--farewell! My sole recreations consist in dancing English hornpipes and cutting capers. Italy is a land of sleep; I am always drowsy here. Addio--good-bye!

20.

Bologna, August 21, 1770.

I AM not only still alive, but in capital spirits. To-day I took a fancy to ride a donkey, for such is the custom in Italy, so I thought that I too must give it a trial. We have the honor to associate with a certain Dominican who is considered a very pious ascetic. I somehow don't quite think so, for he constantly takes a cup of chocolate for breakfast, and immediately afterwards a large glass of strong Spanish wine; and I have myself had the privilege of dining with this holy man, when he drank a lot of wine at dinner and a full glass of very strong wine afterwards, two large slices of melons, some peaches and pears for dessert, five cups of coffee, a whole plateful of nuts, and two dishes of milk and lemons. This he may perhaps do out of bravado, but I don't think so--at all events, it is far too much; and he eats a great deal also at his afternoon collation.

21.

Bologna, Sept. 8, 1770.

NOT to fail in my duty, I must write a few words. I wish you would tell me in your next letter to what brotherhoods I belong, and also let me know the prayers I am bound to offer up for them. I am now reading "Telemachus," and am already in the second volume. Good-bye for the present! Love to mamma.

22.

I HOPE that mamma and you are both well, but I wish you would answer my letters more punctually in time to come; indeed, it is far easier to answer than to originate. I like these six minuets far better than the first twelve; we often played them to the Countess [Pallivicini, at whose country-seat, near Bologna, father and son spent some months]. We only wish we could succeed in introducing a taste for German minuets into Italy, as their minuets last nearly as long as entire symphonies. Forgive my bad writing; I could write better, but I am in such a hurry.

23.

Bologna, Sept. 29, 1770.

IN order to fill up papa's letter, I intend to add a few words. I grieve deeply to hear of Jungfrau Marthe's long-continued illness, which the poor girl bears, too, with such patience. I hope, please God, she may still recover. If not, we must not grieve too much, for the will of God is always best, and God certainly knows better than we do whether it is most for our good to be in this world or in the next. But it will cheer her to enjoy this fine weather once more after all the rain.

24.

Bologna, Oct. 6, 1770.

I AM heartily glad that you have been so gay; I only wish I had been with you. I hope Jungfrau Marthe is better. To-day I played the organ at the Dominicans. Congratulate the .... from me, and say that I sincerely wish they may live to see the fiftieth anniversary of Father Dominikus's saying mass, and that we may all once more have a happy meeting.

[Footnote: Jahn observes that he probably alludes to their intimate friends, the merchant Hagenauer's family, with whom old Mozart had many pecuniary transactions for the purpose of his travels, and whose son entered the church in 1764.]

My best wishes to all Thereserls, and compliments to all my friends in the house and out of the house. I wish I were likely soon to hear the Berchtesgadner symphonies, and perhaps blow a trumpet or play a fife in one myself. I saw and heard the great festival of St. Petronius in Bologna. It was fine, but long. The trumpeters came from Lucca to make the proper flourish of honor, but their trumpeting was detestable.

25.

Milan, Oct. 20, 1770.

MY DEAR MAMMA,--

I cannot write much, for my fingers ache from writing out such a quantity of recitative. I hope you will pray for me that my opera ["Mitridate Re di Ponto"] may go off well, and that we soon may have a joyful meeting. I kiss your hands a thousand times, and have a great deal to say to my sister; but what? That is known only to God and myself. Please God, I hope soon to be able to confide it to her verbally; in the mean time, I send her a thousand kisses. My compliments to all kind friends. We have lost our good Martherl, but we hope that by the mercy of God she is now in a state of blessedness.

26.

Milan, Oct. 27, 1770.

MY VERY DEAREST SISTER,--

You know that I am a great talker, and was so when I left you. At present I replace this very much by signs, for the son of this family is deaf and dumb. I must now set to work at my opera. I regret very much that I cannot send you the minuet you wish to have, but, God willing, perhaps about Easter you may see both it and me. I can write no more.--Farewell! and pray for me.

27.

Milan, Nov. 3, 1770.

MY VERY DEARLY LOVED SISTER,--

I thank you and mamma for your sincere good wishes; my most ardent desire is to see you both soon in Salzburg. In reference to your congratulations, I may say that I believe Herr Martinelli suggested your Italian project. My dear sister, you are always so very clever, and contrived it all so charmingly that, just underneath your congratulations in Italian, followed M. Martini's compliments in the same style of penmanship, so that I could not possibly find you out; nor did I do so, and I immediately said to papa, "Oh! how I do wish I were as clever and witty as she is!" Then papa answered, "Indeed, that is true enough." On which I rejoined, "Oh! I am so sleepy;" so he merely replied, "Then stop writing." Addio! Pray to God that my opera may be successful. I am your brother,

W. M.,

whose fingers are weary from writing.

28.

Milan, Dec. 1, 1770.

DEAREST SISTER,--

As it is so long since I wrote to you, I thought that I might perhaps pacify your just wrath and indignation by these lines. I have now a great deal to work at, and to write for my opera. I trust all will go well, with the help of God. Addio! As ever, your faithful brother,

WOLFGANG MOZART.

29.

MY DARLING SISTER,--

It is long since I have written to you, having been so much occupied with my opera. As I have now more time, I shall attend better to my duty. My opera, thank God, is popular, as the theatre is full every evening, which causes great surprise, for many say that during all the time they have lived in Milan they never saw any first opera so crowded as on this occasion. I am thankful to say that both papa and I are quite well, and I hope at Easter to have an opportunity of relating everything to mamma and you. Addio! A propos, the copyist was with us yesterday, and said that he was at that moment engaged in transcribing my opera for the Lisbon court. Good-bye, my dear Madlle. sister,

Always and ever your attached brother.

30.

Venice, Feb 15, 1771

MY VERY DEAR SISTER,--

You have, no doubt, heard from papa that I am well. I have nothing to write about, except my love and kisses to mamma. Give the enclosed--Al sig. Giovanni. La signora perla ricono la riverisce tanto come anche tutte le altre perle, e li assicuro che tutte sono inamorata di lei, e che sperano che lei prendera per moglie tutte, come i Turchi per contenar tutte sei. Questo scrivo in casa di Sign. Wider, il quale e un galant' uomo come lei melo scrisse, ed jeri abbiamo finito il carnavale da lui, cenardo da lui e poi ballammo ed andammo colle perle in compagnie nel ridotto nuovo, che mi piacque assai. Quando sto dal Sign. Wider e guardando fuori della finestra vedo la casa dove lei abito quando lei fu in Venezia. Il nuovo non so niente. Venezia mi piace assai. Il mio complimento al Sign., suo padre e madre, sorelle, fratelli, e a tutti i miei amici ed amiche. Addio!

[Footnote: "To Herr Johannes [Hagenauer] The fair 'pearl' has the same high opinion of you that all the other 'pearls' here have. I assure you that they are all in love with you, and their hope is that you will marry them all (like the Turks), and so please them every one. I write this in the house of Signor Wider, who is an excellent man and exactly what you wrote to me, yesterday we finished the Carnival in his house. We supped there and then danced, and went afterwards, in company with the 'pearls,' to the new masquerade, which amused me immensely. When I look out of the window at Signor Wider's, I see the house that you inhabited in Venice. I have no news. I like Venice very well. My compliments to your father and mother, brothers and sisters, and all my friends. Adieu!"]

31.

Venice, Feb. 20, 1771.

I AM still well, and, thank God, in the land of the living. Madame de' Amicis has been singing at S. Benedetto. Say to Herr Johannes that the Widerischen Berlein family are constantly speaking of him (particularly Madlle. Catherine), so he must soon return to Vienna to encounter the attacca--that is, in order to become a true Venetian, you must allow yourself to be bumped down on the ground. They wished to do this to me also, but though seven women tried it, the whole seven together did not succeed in throwing me down. Addio!

The travellers arrived again at home towards the end of March, 1771. The marriage of the Archduke Ferdinand with the Princess of Modena, which took place in the October of that year, was attended with great festivities, and recalled the father and son to Italy in the course of a few months, Wolfgang having received a command from the Empress Maria Theresa to compose a dramatic serenata in honor of these nuptials.

32.

Verona, August 18, 1771.

DEAREST SISTER,--

I have not slept more than half an hour, for I don't like to sleep after eating. You may hope, believe, think, be of opinion, cherish the expectation, desire, imagine, conceive, and confidently suppose, that we are in good health; but I can tell you so to a certainty. Wish Herr von Heffner a happy journey from me, and ask him if he has seen Annamindl?

[Wolfgang, who was then fifteen, had taken advantage of his leisure during their short stay in Salzburg to fall in love for the first time. We shall find frequent allusions to this subject. See also No. 25.]

33.

Milan, August 23, 1771.

MY VERY DEAR SISTER,--

We suffered much from heat in the course of our journey, and the dust constantly dried us up so impertinently that we should have been choked, or died of thirst, if we had not been too sensible for that. For a whole month past (say the Milanese) there has been no rain here; to-day a slight drizzle began, but the sun has now come out again, and it is once more very warm. What you promised me (you well know my meaning, you kind creature!) don't fail to perform, I entreat. I shall be indeed very grateful to you. I am at this moment actually panting from the heat--I tear open my waistcoat! Addio--good-bye!

WOLFGANG.

Above us we have a violinist, below us is another, next to us a singing-master, who gives lessons, and, in the room opposite, a hautboy-player. This is famous for a composer--it inspires so many fine thoughts.

34.

Milan, August 31, 1771.

MY DEAREST SISTER,--

We are quite well, thank God! I have been eating quantities of fine pears, peaches, and melons in your place. My greatest amusement is to talk by signs to the dumb, which I can do to perfection. Herr Hasse [the celebrated opera composer] arrived here yesterday, and to-day we are going to pay him a visit. We only received the book of the Serenata last Thursday. [Footnote: It was "Ascanio in Alba" that Wolfgang got to compose for Milan; and it was this music which made Hasse exclaim, "This boy will cause us all to be forgotten."] I have very little to write about. Do not, I entreat, forget about THE ONE OTHER, where no other can ever be. You understand me, I know.

35.

Milan, Sept. 13, 1771.

DEAR SISTER,--

I write only for writing's sake. It is indeed very inconvenient, because I have a severe cold. Say to Fraulein W. von Molk that I rejoice at the thoughts of Salzburg, in the hope that I may again receive the same kind of present for the minuets which was bestowed on me at a similar concert. She knows all about it.

36.

Milan, Sept. 21, 1771.

I AM well, God be praised! I can't write much. 1st, I have nothing to say. 2d, my fingers ache from writing. I often whistle an air, but no one responds. Only two arias of the Serenata are still wanting, and then it will be finished. I have no longer any fancy for Salzburg; I am afraid I might go mad too. [He had heard that several persons there had lost their reason.]

37.

Milan, Oct. 5, 1771.

I AM in good health, but always sleepy. Papa has snatched from my pen all that I had to write about, which is, that he has already written everything. Signora Gabrielli is here, and we are soon going to see her, as we wish to become acquainted with all distinguished singers.

38.

Milan, Oct. 26, 1771.

MY work being now completed, I have more time to write, but have nothing to say, as papa has written you all I could have said. I am well, thank God! but have no news, except that in the lottery the numbers 35, 59, 60, 61, and 62 have turned up prizes, so if we had selected these we should have won; but as we did not put in at all we neither won nor lost, but only laughed at those who did the latter. The two arias encored in the Serenata were those of Manzuoli, and Girelli, the prima donna, I hope you may be well amused in Triebenbach with shooting, and (weather permitting) with walking.

39.

Milan, Nov. 2, 1771.

Papa says that Herr Kerschbaumer travels with profit and observation, and we can testify that he conducts himself very judiciously; at all events he can give a more satisfactory account of his journey than some of his friends, one of whom said that he could not see Paris properly because the houses there were too high. To-day Hasse's opera is to be given; as papa, however, is not going, I can't go either. [FOOTNOTE: Hasse had also a festal opera to compose, but Leopold Mozart writes, "I am sorry to say that Wolfgang's Serenata has totally eclipsed Hasse's opera."] Fortunately I know all the airs thoroughly by heart, so I can see and hear them in my own thoughts at home.

40.

Milan, Nov. 24, 1771.

DEAREST SISTER,--

Herr Manzuoli, the musico, who has always been considered and esteemed as the best of his class, has in his old age given a proof of his folly and arrogance. He was engaged at the opera for the sum of 500 gigliati (ducats), but as no mention was made in the contract of the Serenata, he demanded 500 ducats more for singing in it, making 1000. The court only sent him 700 and a gold box, (and enough too, I think,) but he returned the 700 ducats and the box, and went away without anything. I don't know what the result of this history will be--a bad one, I fear!

41.

Milan, Nov. 30, 1771.

That you may not suppose I am ill, I write you a few lines. I saw four fellows hanged in the Dom Platz. They hang here just as they do in Lyons.

We now find the father and son once more in Salzburg, in the middle of December, 1771. Archbishop Sigismund died, and on the 14th of March, 1772, Archbishop Hieronymus was elected, who was destined to cause much sorrow to Mozart. Soon after, in honor of the procession and homage of the new prince, he composed the allegorical azione teatrale "Il sogno di Scipione." In October he resumed his travels, having undertaken the scrittura for the approaching Carnivals both at Milan and at Venice.

42.

Bologna, Oct. 28, 1772.

We have got to Botzen already. Already? rather not till now. I am hungry, thirsty, sleepy, and lazy, but I am quite well. We saw the monastery in Hall, and I played the organ there. When you see Nadernannerl, tell her I spoke to Herr Brindl (her lover), and he charged me to give her his regards. I hope that you kept your promise and went last Sunday to D----N----[in cipher]. Farewell! write me some news. Botzen--a pig-sty!

43.

Milan, Nov. 7, 1772.

Don't be startled at seeing my writing instead of papa's. These are the reasons: first, we are at Herr von Oste's, and the Herr Baron Christiani is also here, and they have so much to talk about, that papa cannot possibly find time to write; and, secondly, he is too lazy. We arrived here at 4 o'clock this afternoon, and are both well. All our good friends are in the country or at Mantua, except Herr von Taste and his wife, who send you and my sister their compliments. Herr Misliweczeck [a young composer of operas from Paris] is still here. There is not a word of truth either in the Italian war, which is so eagerly discussed in Germany, or in the castles here being fortified. Forgive my bad writing.

Address your letters direct to us, for it is not the custom here, as in Germany, to carry the letters round; we are obliged to go ourselves to fetch them on post-days. There is nothing new here; we expect news from Salzburg.

Not having a word more to say, I must conclude. Our kind regards to all our friends. We kiss mamma 1,000,000,000 times (I have no room for more noughts); and as for my sister, I would rather embrace her in persona than in imagination.

44.

CARISSIMA SORELLA,--

Spero che voi sarete stata dalla Signora, che voi gia sapete. Vi prego, se la videte di farla un Complimento da parte mia. Spero e non dubito punto che voi starete bene di salute. Mi son scordato di darvi nuova, che abbiamo qui trovato quel Sign. Belardo, ballerina, che abbiamo conosciuto in Haye ed in Amsterdam, quello che attaco colla spada il ballerino, il Sign. Neri, perche credeva che lui fosse cagione che non ebbe la permission di ballar in teatro. Addio, non scordarvi di me, io sono sempre il vostro fidele fratello.

[FOOTNOTE: "DEAREST SISTER,--I hope you have been to see the lady--you know who. I beg that when you see her you will give her my compliments. I hope, and do not doubt, that you are in good health. I forgot to tell you that we found Signor Belardo here, a dancer whom we knew at the Hague and at Amsterdam--the same person who attacked Signor Neri with a sword, because he thought he was the cause of his not obtaining permission to dance in the theatre. Adieu! Do not forget me, always your faithful brother."]

45.

Milan, Nov. 21, 1772.

I thank you exceedingly--you know for what. I cannot possibly write to Herr von Heffner. When you see him, make him read aloud what follows. I hope he will be satisfied with it:--

"I am not to take it amiss that my unworthy friend has not answered my letter; as soon as he has more leisure, he will certainly, beyond all doubt, positively and punctually send me a reply."

46.

Milan, Nov. 28, 1772.

We both send our congratulations to Herr von Aman; tell him from me that, owing to his having all along made a mystery of the affair, I feel much annoyed, for I fear I may have said more than I ought about his bride. I thought he had been more straightforward. One thing more. Say to Herr von Aman that, if he wishes to have a right merry wedding, he must be so kind as to wait till we return, so that what he promised me may come to pass, namely, that I was to dance at his wedding. Tell Herr Leitgeb [a horn-player in the Archbishop's orchestra] that he must come straight to Milan, for he is sure to succeed well here; but he must come soon. Pray let him know this, for I am anxious about it.

47.

Milan, Dec. 5, 1772.

I have now about fourteen pieces to write, and then I shall have finished. [Footnote: He alludes to his Milan opera, "Lucio Silla."] Indeed, the trio and the duet may be considered as four. I cannot possibly write much, for I have no news, and in the next place I scarcely know what I am writing, as all my thoughts are absorbed in my opera, so there is some danger of my writing you a whole aria instead of a letter. I have learned a new game here, called mercanti in fiera. As soon as I come home we can play at it together. I have also learned a new language from Frau von Taste, which is easy to speak, though troublesome to write, but still useful. It is, I own, rather a little childish, but will do capitally for Salzburg. My kind regards to pretty Nandl and to the canary, for these two and yourself are the most innocent creatures in our house. Fischietti [the Archbishop's Capellmeister] will no doubt soon begin to work at his opera buffa (translated into German, his CRAZY opera!). Addio!

The following letter of Wolfgang's shows the sparkling state of his spirits, caused by the completion of his opera. At each line he turns the page, so that one line stands, as it were, on the head of the other. The father, too, in the joy of his heart that the arduous work was drawing to a close, and with it his long journey, writes four lines, one above another, round the edge of the page, so that the whole forms a framework for a sketch of a burning heart and four triangles (symbols of fidelity), and a bird on the wing from whose beak a distich is streaming:--

Oh! fly to seek my child so fair Here, and there, and everywhere!

Wolfgang adds:--

48.

Milan, Dec. 18, 1772.

I HOPE, dear sister, that you are well, dear sister. When this letter reaches you, dear sister, my opera will be in scena, dear sister. Think of me, dear sister, and try, dear sister, to imagine with all your might that my dear sister sees and hears it also. In truth, it is hard to say, as it is now eleven o'clock at night, but I do believe, and don't at all doubt, that in the daytime it is brighter than at

Easter. My dear sister, to-morrow we dine with Herr von Mayer; and do you know why? Guess! Because he invited us. The rehearsal to-morrow is to be in the theatre. The impresario, Signor Cassiglioni, has entreated me not to say a word of this to a soul, as all kinds of people would come crowding in, and that we don't wish. So, my child, I beg, my child, that you won't say one syllable to any one on the subject, or too many people would come crowding in, my child. Approposito, do you know the history that occurred here? Well, I will relate it to you. We were going home straight from Count Firmiani's, and when we came into our street we opened our door, and what do you think happened? We went in. Good-bye, my pet. Your unworthy brother (frater),

WOLFGANG.

On the 26th of December "an incomparable performance" of "Lucio Silla" took place; it was eminently successful, and continued to fill the house night after night in the most surprising way. The father writes home regularly, and Wolfgang subjoins the usual postscripts, which, however, at this time contain nothing worth quoting. We give only part of an Italian letter which he writes for practice:--

49.

.... Vi prego di dire al Sig. Giovanni Hagenauer da parte mia, che non dubiti, che andro a veder sicuramente in quella bottega delle armi, se ci sono quei nomi [?] che lui desidera, e che senza dubbio doppo averlo trovato le portero meco a Salisburgo. Mi dispiace che il Sig. Leitgeb e partito tanto tardi da Salisburgo [see No. 46] che non trovera piu in scena la mia opera e forte non ci trovera nemeno, se non in viaggio.

Hieri sera era la prima prova coi stromenti della seconda opera, ma ho sentito solamente il primo atto, perche a secondo mene andiedi essendo gia tardi. In quest' opera saranno sopra il balco 24 cavalli e . . . mondo di gente, che saro miracolo se non succede qualche disgrazia. La musica mi piace; se piace al replico non so, perche alle prime prove non e lecito l' andarci che alle personne che sono del Teatro. Io spero che domani il mio padre potra uscir di casa. Sta sera fa cativissimo tempo. La Signora Teyber e adesso a Bologna e il carnevale venturo recitera a Turino e l'anno sussiquente poi va a cantare a Napoli.

[Footnote: "Pray say from me to Johannes Hagenauer, that he may entirely rely on my going to the armorer's shop, to see if I can procure what he desires, and after getting it I will not fail to bring it with me to Salzburg. I regret that Herr Leitgeb delayed so long leaving Salzburg [see No. 46], for he will no longer find my opera in scena, nor will he find us either unless we meet on our travels. Yesterday evening was our first rehearsal of the second opera with instruments, but I only heard the first act, for I went away at the second, because it was so very late. In this opera there are to be twenty-four horses and a crowd of people on the stage at the same time, so it will be surprising if no accident happens. The music pleases me; whether it will please others I cannot tell, for no persons but those belonging to the theatre are permitted to attend the first rehearsals. I hope that papa will be able to leave the house to-morrow. The weather is detestable this evening. Madame Teyber is now at Bologna; she is to act at Turin in the ensuing Carnival, and the year following she is to sing at Naples."]

After enjoying some more of the amusements of the Carnival, they arrived again in Salzburg about the middle of March. This place, or rather their position at court there, was in the highest degree repugnant to both; so the father, in the course of his travels, applied to the Grand-Duke of Tuscany for an appointment for his son. As, however, nothing was to be got in that quarter, he directed his views to the Imperial capital itself; and thus, at the end of three months, we find him again with his son in Vienna. From thence Wolfgang often wrote to his loved ones at home.

50.

Vienna, August 14, 1773.

I HOPE that your Majesty [Footnote 1: O. Jahn remarks that this epithet is a reminiscence of a fantastic game that often amused the boy on his journeys. He imagined a kingdom, the inhabitants of which were endowed with every gift that could make them good and happy.] enjoys the best state of health; and yet that now and then--or rather sometimes--or, better still, from time to time--or, still better, qualche volta, as the Italians say--your Majesty will impart to me some of your grave and important thoughts (emanating from that most admirable and solid judgment which, in addition to beauty, your Majesty so eminently possesses; and thus, although in such tender years, my Queen casts into the shade not only the generality of men but even the gray-haired).

P. S. This is a most sensible production.

51.

Vienna, August 21, 1773.

When we contemplate the benefit of time, and yet are not entirely oblivious of the estimation in which we ought to hold the sun, then it is quite certain, Heaven be praised! that I am quite well. My second proposition is of a very different character. Instead of sun, let us put moon, and instead of benefit, science; then any one, gifted with a certain amount of reasoning powers, will at once draw the conclusion that--I am a fool because you are my sister. How is Miss Bimbles? [the dog.] I beg you will convey all sorts of amiable messages from me to her. I also send my kind remembrances to M. Kreibich [conductor of the Imperial chamber-music], whom we knew at Presburg and also at Vienna; and very best regards from Her Majesty the Empress, Frau Fischerin, and Prince Kaunitz. Oidda!

GNAGFLOW TRAZOM.

52.

Vienna, Sept. 15, 1773.

WE are quite well, thank God; on this occasion we have contrived to make time to write to you, although we have so much business to do. We hope you also are well. Dr. Niderl's death grieved us very much. I assure you we cried a good deal, and moaned and groaned. Our kind regards to "Alle gute Geister loben Gott den Herrn" [to all good spirits who praise the Lord], and to all our friends. We graciously remain

Yours, WOLFGANG.

Given from our capital of Vienna.

The travellers returned home the end of September, for no situation was to be found in Vienna either; indeed, they did not even give a public concert there. Wolfgang remained in his native town during the whole of the ensuing year, writing instrumental and church music. At length he received a commission from the Elector of Bavaria, Maximilian III., to write an opera buffa for the Carnival of 1775,--"La finta Giardiniera."

53.

Munich, Dec. 28, 1774.

My Dearest Sister,

I entreat you not to forget, before your journey, [FOOTNOTE: Nannerl had also the most eager desire to see the new opera, and the father at last succeeded in getting a lodging for her in the large market place, in the house of a widow, "a black-eyed brunette," Frau von Durst.] to perform your promise, that is, to make a certain visit. I have my reasons for this. Pray present my kind regards in that quarter, but in the most impressive and tender manner--the most tender; and, oh!----but I need not be in such anxiety on the subject, for I know my sister and her peculiarly loving nature, and I feel quite convinced that she will do all she can to give me pleasure--and from self-interest, too--rather a spiteful hit that! [Nannerl was considered a little selfish by her family.]

54.

Munich, Dec. 30, 1774.

I BEG my compliments to Roxalana, who is to drink tea this evening with the Sultan, All sorts of pretty speeches to Madlle. Mizerl; she must not doubt my love. I have her constantly before my eyes in her fascinating neglige. I have seen many pretty girls here, but not one whose beauty can be compared with hers. Do not forget to bring the variations on Ekart's menuet d'exaude, and also those on Fischer's minuet. I was at the theatre last night. The play was "Der Mode nach der Haushaltung," which was admirably acted. My kind regards to all my friends. I trust that you will not fail to--Farewell! I hope to see you soon in Munich. Frau von Durst sends you her remembrances. Is it true that Hagenauer is become a professor of sculpture in Vienna? Kiss mamma's hand for me, and now I stop for to-day. Wrap yourself up warmly on your journey, I entreat, or else you may chance to pass the fourteen days of your

visit in the house, stifling beside a stove, unable once to move. I see the vivid lightning flash, and fear there soon will be a crash!

Your brother.

55.

To HIS MOTHER.

Munich, Jan. 11, 1775.

WE are all three well, Heaven be praised! I cannot possibly write much, for I must go forthwith to the rehearsal. Tomorrow the grand rehearsal takes place, and on the 13th my opera is to be in scena. I am much vexed that you should cast any slight on Count Seeau [Intendant of the Munich Theatre], for no one can be more kind or courteous, and he has more good breeding than many of his degree in Munich. Herr von Molk was in such a state of wonder and admiration at the opera seria when he heard it, that we felt quite ashamed of him, for it clearly showed every one that he had never in his life seen anything but Salzburg and Innspruck. Addio!

56.

To HIS MOTHER.

Munich, Jan. 14, 1775.

GOD be praised! My opera was given yesterday, the 13th, and proved so successful that I cannot possibly describe all the tumult. In the first place, the whole theatre was so crammed that many people were obliged to go away. After each aria there was invariably a tremendous uproar and clapping of hands, and cries of Viva Maestro! Her Serene Highness the Electress and the Dowager (who were opposite me) also called out Bravo! When the opera was over, during the interval when all is usually quiet till the ballet begins, the applause and shouts of Bravo! were renewed; sometimes there was a lull, but only to recommence afresh, and so forth. I afterwards went with papa to a room through which the Elector and the whole court were to pass. I kissed the hands of the Elector and the Electress and the other royalties, who were all very gracious. At an early hour this morning the Prince Bishop of Chiemsee [who had most probably procured the scrittura for his young friend Wolfgang] sent to congratulate me that the opera had proved such a brilliant success in every respect. As to our return home, it is not likely to be soon, nor should mamma wish it, for she must know well what a good thing it is to have a little breathing time. We shall come quite soon enough to----. One most just and undeniable reason is, that my opera is to be given again on Friday next, and I am very necessary at the performance, or it might be difficult to recognize it again. There are very odd ways here. 1000 kisses to Miss Bimberl [the dog].

The Archbishop of Salzburg, who was very reluctant to admit the merits of his Concertmeister, was an involuntary witness of the universal approbation bestowed on Wolfgang's opera, although he would not go to hear it himself. On the 18th of January, 1775, Wolfgang added the following lines to his father's letter:--

57.

MY DEAR SISTER,

[FOOTNOTE: Nannerl had not yet gone home, but was enjoying the Carnival in various masks.]

How can I help the clock choosing at this moment to strike a quarter after seven o'clock? It is not papa's fault either. Mamma will hear all the rest from you. At present there is no fair sailing for me, as the Archbishop is staying here, though not for long. It is currently reported that he is to remain till he sets off again! I only regret that he is not to see the first masked ball.

Your faithful FRANZ v. NASENBLUT.

Milan, May 5, 1756.

Immediately after Ash Wednesday the trio returned to Salzburg, where Mozart remained uninterruptedly for another year and a half, actively engaged in the duties of his situation. He wrote the following letter on the 4th of September, 1776, to the celebrated Pater Martini in Bologna:--

58.

MOLTO REVDO PADE MAESTRO, PADRONE MIO STIMATISSIMO,--La venerazione, la stima e il rispetto, che porto verso la di lei degnissima persona mi spinse di incommodarla colle presente e di mandargli un debole pezzo di mia musica, rimmettendola alla di lei maestrale giudicatura. Scrissi l'anno scorso il Carnevale una opera buffa ("La finta Giardiniera") a Monaco in Baviera. Pochi giorni avanti la mia partenza di la desiderava S. A. Elletorale di sentire qualche mia musica in contrapunto: era adunque obligato di scriver questo Motetto in fretta per dar tempo a copiar il spartito per Sua Altezza ed a cavar le parti per poter produrlo la prossima domenica sotto la Messa grande in tempo del Offertorio. Carissimo e stimatissimo Sigr. P. Maestro! Lei e ardentemente pregato di dirmi francamente e senza riserva il di lei parere. Viviamo in questo mondo per imparare sempre industriosamente, e per mezzo dei raggionamenti di illuminarsi l'un l'altro e d'affatigarsi di portar via sempre avanti le scienze e le belle arti. Oh quante e quante volte desidero d'esser piu vicino per poter parlar e raggionar con Vostra Paternita molto Revda. Vivo in una paese dove la musica fa pocchissimo fortuna, benche oltre di quelli che ci hanno abandonati, ne abbiamo ancora bravissimi professori e particolarmente compositori di gran fondo, sapere e gusto. Per il teatro stiamo male per mancanza dei recitanti. Non abbiamo Musici e non gli averemo si facilmente, giache vogliono esser ben pagati: e la generosita, non e il nostro difetto. Io mi diverto intanto a scrivere per la camera e per la chiesa: e ne son quivi altri due bravissimi contrapuntisti, cioe il Sgr. Haydn e Adlgasser. Il mio padre e maestro della chiesa Metropolitana, che mi da l'occasione di scrivere per la chiesa, quanto che ne voglio. Per altro il mio padre gia 36 anni in servizio di questa Corte e sapendo, che questo Arcivescovo non puo e non vuol vedere gente avanzata in eta, non lo se ne prende a core, si e messo alla letteratura per altro gia suo studio favorito. La nostra musica di chiesa e assai differente di quella d'Italia e sempre piu, che una Messa con tutto il Kyrie, Gloria, Credo, la Sonata all' Epistola, l'Offertorio osia Motetto, Sanctus ed Agnus Dei, ed anche la piu solenne, quando dice la Messa il Principe stesso, non ha da durare che al piu longo 3 quarti d'ora. Ci vuole un studio particolare per queste sorte di compositione, e che deve pero essere una Messa con tutti stromenti--Trombe di guerra, Tympani ecc. Ah! che siamo si lontani Carissmo Sgr. P. Maestro, quante cose che avrai a dirgli!--Reverisco devotamente tutti i Sgri. Filarmonici: mi raccommando via sempre nelle grazie di lei e non cesso d'affligermi nel vedermi lontano dalla persona del mondo che maggiormente amo, venero e stimo, e di cui inviolabilmente mi protesto di V. Pta molto Rda

umilissmo e devotssmo servitore,

WOLFGANGO AMADEO MOZART.

Salisburgo, 4 Settembre, 1776.

[FOOTNOTE:

To Father Martini.

"Salzburg, Sept. 4, 1776.

"MOST REVEREND AND ESTEEMED FATHER AND MAESTRO,--

"The veneration, the esteem, and the respect I feel for your illustrious person, induce me to intrude on you with this letter, and also to send you a small portion of my music, which I venture to submit to your masterly judgment. Last year, at Monaco, in Bavaria, I wrote an opera buffa ("La finta Giardiniera") for the Carnival. A few days previous to my departure from thence, his Electoral Highness wished to hear some of my contrapuntal music; I was therefore obliged to write this motett in haste, to allow time for the score to be copied for his Highness, and to arrange the parts so that it might be produced on the following Sunday at grand mass at the offertory. Most dear and highly esteemed Maestro, I do entreat you to give me unreservedly your candid opinion of the motett. We live in this world in order always to learn industriously, and to enlighten each other by means of discussion, and to strive vigorously to promote the progress of science and the fine arts. Oh, how many and many a time have I desired to be nearer you, that I might converse and discuss with your Reverence! I live in a country where music has very little success, though, exclusive of those who have forsaken us, we have still admirable professors, and more particularly composers of great solidity, knowledge, and taste. We are rather badly off at the theatre from the want of actors. We have no MUSICI, nor shall we find it very easy to get any, because they insist upon being well paid, and generosity is not a failing of ours. I amuse myself in the mean time by writing church and chamber music, and we have two excellent contrapuntists here, Haydn and Adlgasser. My father is maestro at the Metropolitan church, which gives me an opportunity to write for the church as much as I please. Moreover, my father has been thirty-six years in the service of this court, and knowing that our present Archbishop neither can nor will endure the sight of elderly people, he does not take it to heart, but devotes himself to literature, which was always his favorite pursuit Our church music is rather different from

that of Italy, and the more so, as a mass including the Kyne, Gloria, Credo, the Sonata all Epistola, the Offertory or Motett, Sanctus, and Agnus Dei, and even a solemn mass, when the Prince himself officiates, must never last more than three-quarters of an hour. A particular course of study is required for this class of composition. And what must such a mass be, scored with all the instruments, war-drums, cymbals, &c, &c! Oh! why are we so far apart, dearest Signor Maestro? for how many things I have to say to you! I devoutly revere all the Signori Filarmonici. I venture to recommend myself to your good opinion, I shall never cease regretting being so distant from the person in the world whom I most love, venerate, and esteem. I beg to subscribe myself, reverend Father, always your most humble and devoted servant,

"WOLFGANG AMADEUS MOZART"]

SECOND PART.--MUNICH, AUGSBURG, MANNHEIM.--SEPTEMBER 1771 TO MARCH 1778.

On the 22d of December, 1777, Mozart's father wrote as follows to Padre Martini in Bologna:--"My son has been now five years in the service of our Prince, at a mere nominal salary, hoping that by degrees his earnest endeavors and any talents he may possess, combined with the utmost industry and most unremitting study, would be rewarded; but in this hope we find ourselves deceived. I forbear all allusion to our Prince's mode of thinking and acting; but he was not ashamed to declare that my son knew nothing, and that he ought to go to the musical training school in Naples to learn music. And why did he say all this? In order to intimate that a young man should not be so absurd as to believe that he deserved a rather higher salary after such a decisive verdict had issued from the lips of a prince. This has induced me to sanction my son giving up his present situation. He therefore left Salzburg on the 23d of September" [with his mother].

59.

Wasserburg, Sept. 23, 1777.

Mon Tres-Cher Pere,--

God be praised! we reached Waging, Stain, Ferbertshaim, and Wasserburg safely. Now for a brief report of our journey. When we arrived at the city gates, we were kept waiting for nearly a quarter of an hour till they could be thrown open for us, as they were under repair. Near Schinn we met a drove of cows, and one of these very remarkable, for each side was a different color, which we never before saw. When at last we got to Schinn, we met a carriage, which stopped, and ecce, our postilion called out we must change. "I don't care," said I. Mamma and I were parleying, when a portly gentleman came up, whose physiognomy I at once recognized; he was a Memmingen merchant. He stared at me for some time, and at last said, "You surely are Herr Mozart?" "At your service," said I; "I know you, too, by sight, but not your name. I saw you, a year ago, at Mirabell's [the palace garden in Salzburg] at a concert." He then told me his name, which, thank God! I have forgotten; but I retained one of probably more importance to me. When I saw this gentleman in Salzburg, he was accompanied by a young man whose brother was now with him, and who lives in Memmingen. His name is Herr Unhold, and he pressed me very much to come to Memmingen if possible. We sent a hundred thousand loves to papa by them, and to my sister, the madcap, which they promised to deliver without fail. This change of carriages was a great bore to me, for I wished to send a letter back from Waging by the postilion. We then (after a slight meal) had the honor of being conveyed as far as Stain, by the aforesaid post-horses, in an hour and a half. At Waging I was alone for a few minutes with the clergyman, who looked quite amazed, knowing nothing of our history. From Stain we were driven by a most tiresome phlegmatic postilion--N. B., in driving I mean; we thought we never were to arrive at the next stage. At last we did arrive, as you may see from my writing this letter. (Mamma is half asleep.) From Ferbertshaim to Wasserburg all went on well. Viviamo come i principi; we want nothing except you, dear papa. Well, this is the will of God; no doubt all will go on right. I hope to hear that papa is as well as I am and as happy. Nothing comes amiss to me; I am quite a second papa, and look after everything.[Footnote: The father had been very uneasy at the idea of allowing the inexperienced youth, whose unsuspicious good-nature exposed him still more to danger, to travel alone; for the mother also was not very expert in travelling.] I settled from the first to pay the postilions, for I can talk to such fellows better than mamma. At the Stern, in Wasserburg, we are capitally served; I am treated here like a prince. About half an hour ago (mamma being engaged at the time) the Boots knocked at the door to take my orders about various things, and I gave them to him with the same grave air that I have in my portrait. Mamma is just going to bed. We both beg that papa will be careful of his health, not go out too early, nor fret, [Footnote: The Father was strongly disposed to hypochondria.] but laugh and be merry and in good spirits. We think the Mufti H. C. [the Archbishop Hieronymus Colloredo] a MUFF, but we know God to be compassionate, merciful, and loving. I kiss papa's hands a thousand times, and embrace my SISTER MADCAP as often as I

have to-day taken snuff. I think I have left my diplomas at home? [his appointment at court.] I beg you will send them to me soon. My pen is rude, and I am not refined.

60.

Munich, Sept. 26, 1777.

WE arrived safely in Munich on the afternoon of the 24th, at half-past four o'clock. A complete novelty to me was being obliged to drive to the Custom House, escorted by a grenadier with a fixed bayonet. The first person we knew, who met us when driving, was Signor Consoli; he recognized me at once, and showed the utmost joy at seeing me again. Next day he called on us. I cannot attempt to describe the delight of Herr Albert [the "learned landlord" of the Black Eagle, on the Kaufinger Gasse, now Hotel Detzer]; he is indeed a truly honest man, and a very good friend of ours. On my arrival I went to the piano, and did not leave it till dinner-time. Herr Albert was not at home, but he soon came in, and we went down to dinner together. There I met M. Sfeer and a certain secretary, an intimate friend of his; both send their compliments to you. Though tired by our journey, we did not go to bed till late; we, however, rose next morning at seven o'clock. My hair was in such disorder that I could not go to Count Seeau's till half-past ten o'clock. When I got there I was told that he had driven out to the chasse. Patience! In the mean time I wished to call on Chorus-master Bernard, but he had gone to the country with Baron Schmid. I found Herr von Belvall deeply engaged in business; he sent you a thousand compliments. Rossi came to dinner, and at two o'clock Consoli, and at three arrived Becke [a friend of Mozart's and an admirable flute-player], and also Herr von Belvall. I paid a visit to Frau von Durst [with whom Nannerl had lived], who now lodges with the Franciscans. At six o'clock I took a short walk with Herr Becke. There is a Professor Huber here, whom you may perhaps remember better than I do; he says that the last time he either saw or heard me was at Vienna, at Herr von Mesmer's, junior. He is neither tall nor short, pale, with silvery-gray hair, and his physiognomy rather like that of Herr Unterbereiter. This gentleman is vice-intendant of the theatre; his occupation is to read through all the comedies to be acted, to improve or to spoil, to add to or to put them aside. He comes every evening to Albert's, and often talks to me. To-day, Friday, the 26th, I called on Count Seeau at half-past eight o'clock. This was what passed. As I was going into the house I met Madame Niesser, the actress, just coming out, who said, "I suppose you wish to see the Count?" "Yes!" "He is still in his garden, and Heaven knows when he may come!" I asked her where the garden was. "As I must see him also," said she, "let us go together." We had scarcely left the house when we saw the Count coming towards us about twelve paces off; he recognized and instantly named me. He was very polite, and seemed already to know all that had taken place about me. We went up the steps together slowly and alone; I told him briefly the whole affair. He said that I ought at once to request an audience of his Highness the Elector, but that, if I failed in obtaining it, I must make a written statement. I entreated him to keep this all quite private, and he agreed to do so. When I remarked to him that there really was room for a genuine composer here, he said, "I know that well." I afterwards went to the Bishop of Chiemsee, and was with him for half an hour. I told him everything, and he promised to do all he could for me in the matter. At one o'clock he drove to Nymphenburg, and declared positively he would speak to the Electress. On Sunday the Count comes here. Herr Joannes Kronner has been appointed Vice-Concertmeister, which he owes to a blunt speech of his. He has produced two symphonies--Deo mene liberi [God preserve me from such]--of his own composition. The Elector asked him, "Did you really compose these?" "Yes, your Royal Highness!" "From whom did you learn?" "From a schoolmaster in Switzerland, where so much importance is attached to the study of composition. This schoolmaster taught me more than all your composers here, put together, could teach me." Count Schonborn and his Countess, a sister of the Archbishop [of Salzburg], passed through here to-day. I chanced to be at the play at the time. Herr Albert, in the course of conversation, told them that I was here, and that I had given up my situation. They were all astonishment, and positively refused to believe him when he said that my salary, of blessed memory, was only twelve florins thirty kreuzers! They merely changed horses, and would gladly have spoken with me, but I was too late to meet them. Now I must inquire what you are doing, and how you are. Mamma and I hope that you are quite well. I am still in my very happiest humor; my head feels as light as a feather since I got away from that chicanery. I have grown fatter already.

61.

Munich, Sept. 29, 1777.

TRUE enough, a great many kind friends, but unluckily most of them have little or nothing in their power. I was with Count Seeau yesterday, at half-past ten o'clock, and found him graver and less natural than the first time; but it was only in appearance, for to-day I was at Prince Zeill's [Bishop of Chiemsee--No. 56], who, with all courtesy, said to me, "I don't think we shall effect much here. During dinner, at Nymphenburg, I spoke privately to the Elector, who replied: 'It is too soon at this moment; he must leave this

and go to Italy and become famous. I do not actually reject him, but these are too early days as yet.'" There it is! Most of these grandees have such paroxysms of enthusiasm for Italy. Still, he advised me to go to the Elector, and to place my case before him as I had previously intended. I spoke confidentially at dinner to-day with Herr Woschitka [violoncellist in the Munich court orchestra, and a member of the Elector's private band], and he appointed me to come to-morrow at nine o'clock, when he will certainly procure me an audience. We are very good friends now. He insisted on knowing the name of my informant; but I said to him, "Rest assured that I am your friend and shall continue to be so; I am in turn equally convinced of your friendship, so you must be satisfied with this." But to return to my narrative. The Bishop of Chiemsee also spoke to the Electress when tete-a-tete with her. She shrugged her shoulders, and said she would do her best, but was very doubtful as to her success. I now return to Count Seeau, who asked Prince Zeill (after he had told him everything). "Do you know whether Mozart has not enough from his family to enable him to remain here with a little assistance? I should really like to keep him." Prince Zeill answered: "I don't know, but I doubt it much; all you have to do is to speak to himself on the subject." This, then, was the cause of Count Seeau being so thoughtful on the following day. I like being here, and I am of the same opinion with many of my friends, that if I could only remain here for a year or two, I might acquire both money and fame by my works, and then more probably be sought by the court than be obliged to seek it myself. Since my return here Herr Albert has a project in his head, the fulfilment of which does not seem to me impossible. It is this: He wishes to form an association of ten kind friends, each of these to subscribe 1 ducat (50 gulden) monthly, 600 florins a year. If in addition to this I had even 200 florins per annum from Count Seeau, this would make 800 florins altogether. How does papa like this idea? Is it not friendly? Ought not I to accept it if they are in earnest? I am perfectly satisfied with it; for I should be near Salzburg, and if you, dearest papa, were seized with a fancy to leave Salzburg (which from my heart I wish you were) and to pass your life in Munich, how easy and pleasant would it be! For if we are obliged to live in Salzburg with 504 florins, surely we might live in Munich with 800.

To-day, the 30th, after a conversation with Herr Woschitka, I went to court by appointment. Every one was in hunting-costume. Baron Kern was the chamberlain on service. I might have gone there last night, but I could not offend M. Woschitka, who himself offered to find me an opportunity of speaking to the Elector. At 10 o'clock he took me into a narrow little room, through which his Royal Highness was to pass on his way to hear mass, before going to hunt. Count Seeau went by, and greeted me very kindly: "How are you, dear Mozart?" When the Elector came up to me, I said, "Will your Royal Highness permit me to pay my homage and to offer your Royal Highness my services?" "So you have finally left Salzburg?" "I have left it forever, your Royal Highness. I only asked leave to make a journey, and being refused, I was obliged to take this step, although I have long intended to leave Salzburg, which is no place for me, I feel sure." "Good heavens! you are quite a young man. But your father is still in Salzburg?" "Yes, your Royal Highness; he humbly lays his homage at your feet, &c., &c. I have already been three times in Italy. I have written three operas, and am a member of the Bologna Academy; I underwent a trial where several maestri toiled and labored for four or five hours, whereas I finished my work in one. This is a sufficient testimony that I have abilities to serve any court. My greatest wish is to be appointed by your Royal Highness, who is himself such a great &c., &c." "But, my good young friend, I regret that there is not a single vacancy. If there were only a vacancy!" "I can assure your Royal Highness that I would do credit to Munich." "Yes, but what does that avail when there is no vacancy?" This he said as he was moving on; so I bowed and took leave of his Royal Highness. Herr Woschitka advises me to place myself often in the way of the Elector. This afternoon I went to Count Salern's. His daughter is a maid of honor, and was one of the hunting-party. Ravani and I were in the street when the whole procession passed. The Elector and the Electress noticed me very kindly. Young Countess Salern recognized me at once, and waved her hand to me repeatedly. Baron Rumling, whom I had previously seen in the antechamber, never was so courteous to me as on this occasion. I will soon write to you what passed with Salern. He was very kind, polite, and straightforward.--P. S. Ma tres-chere soeur, next time I mean to write you a letter all for yourself. My remembrances to B. C. M. R. and various other letters of the alphabet. Adieu! A man built a house here and inscribed on it: "Building is beyond all doubt an immense pleasure, but I little thought that it would cost so much treasure." During the night some one wrote underneath, "You ought first to have counted the cost."

62.

Munich, Oct. 2, 1777.

YESTERDAY, October 1st, I was again at Count Salern's, and to-day I even dined with him. I have played a great deal during the last three days, and with right good will too. Papa must not, however, imagine that I like to be at Count Salern's on account of the young lady; by no means, for she is unhappily in waiting, and therefore never at home, but I am to see her at court to-morrow morning, at ten o'clock, in company with Madame Hepp, formerly Madlle. Tosson. On Saturday the court leaves this, and does not return till the 20th. To-morrow I am to dine with Madame and Madlle. de Branca, the latter being a kind of half pupil of mine, for Sigl

seldom comes, and Becke, who usually accompanies her on the flute, is not here. On the three days that I was at Count Salern's I played a great many things extempore--two Cassations [Divertimentos] for the Countess, and the finale and Rondo, and the latter by heart. You cannot imagine the delight this causes Count Salern. He understands music, for he was constantly saying Bravo! while other gentlemen were taking snuff, humming and hawing, and clearing their throats, or holding forth. I said to him, "How I do wish the Elector were only here, that he might hear me play! He knows nothing of me--he does not know what I can do. How sad it is that these great gentlemen should believe what any one tells them, and do not choose to judge for themselves! BUT IT IS ALWAYS SO. Let him put me to the test. He may assemble all the composers in Munich, and also send in quest of some from Italy and France, Germany, and England and Spain, and I will undertake to write against them all." I related to him all that had occurred to me in Italy, and begged him, if the conversation turned on me, to bring in these things. He said, "I have very little influence, but the little that is in my power I will do with pleasure." He is also decidedly of opinion that if I could only remain here, the affair would come right of itself. It would not be impossible for me to contrive to live, were I alone here, for I should get at least 300 florins from Count Seeau. My board would cost little, for I should be often invited out; and even were it not so, Albert would always be charmed to see me at dinner in his house. I eat little, drink water, and for dessert take only a little fruit and a small glass of wine. Subject to the advice of my kind friends, I would make the following contract with Count Seeau:--I would engage to produce every year four German operas, partly buffe and partly serie; from each of these I should claim the profits of one performance, for such is the custom here. This alone would bring me in 500 florins, which along with my salary would make up 800 florins, but in all probability more; for Reiner, an actor and singer, cleared 200 florins by his benefit, and I am VERY MUCH BELOVED HERE, and how much more so should I be if I contributed to the elevation of the national theatre of Germany in music! And this would certainly be the case with me, for I was inspired with the most eager desire to write when I heard the German operettas. The name of the first singer here is Keiserin; her father is cook to a count here; she is a very pleasing girl, and pretty on the stage; I have not yet seen her near. She is a native of this place. When I heard her it was only her third appearance on the stage. She has a fine voice, not powerful, though by no means weak, very pure, and a good intonation. Her instructor is Valesi; and her style of singing shows that her master knows how to sing as well as how to teach. When she sustains her voice for a couple of bars, I am quite surprised at the beauty of her crescendo and decrescendo. She as yet takes her shakes slowly, and this I highly approve of, for it will be all the more pure and clear if she ever wishes to take it quicker; besides, it is easier when quick. She is a great favorite with the people here, and with me.

Mamma was in the pit; she went as early as half-past four o'clock to get a place. I, however, did not go till half-past six o'clock, for I can go to any box I please, being pretty well known. I was in the Brancas' box; I looked at Keiserin with my opera-glass, and at times she drew tears from my eyes. I often called out bravo, bravissimo, for I always remembered that it was only her third appearance. The piece was Das Fischermadchen, a very good translation of Piccini's opera, with his music. As yet they have no original pieces, but are now anxious soon to give a German opera seria, and a strong wish prevails that I should compose it. The aforesaid Professor Huber is one of those who wish this. I shall now go to bed, for I can sit up no longer. It is just ten o'clock. Baron Rumling lately paid me the following compliment: "The theatre is my delight--good actors and actresses, good singers, and a clever composer, such as yourself." This is indeed only talk, and words are not of much value, but he never before spoke to me in this way.

I write this on the 3d of October. To-morrow the court departs, and does not return till the 20th. If it had remained here, I would have taken the step I intended, and stayed on here for a time; but as it is, I hope to resume my journey with mamma next Tuesday. But meanwhile the project of the associated friends, which I lately wrote to you about, may be realized, so that when we no longer care to travel we shall have a resource to fall back upon. Herr von Krimmel was to-day with the Bishop of Chiemsee, with whom he has a good deal to do on the subject of salt. He is a strange man; here he is called "your Grace,"--that is, THE LACKEYS do so. Having a great desire that I should remain here, he spoke very zealously to the Prince in my favor. He said to me, "Only let me alone; I will speak to the Prince, and I have a right to do so, for I have done many things to oblige him." The Prince promised him that I should POSITIVELY be appointed, but the affair cannot be so quickly settled. On the return of the court he is to speak to the Elector with all possible earnestness and zeal. At eight o'clock this morning I called on Count Seeau. I was very brief, and merely said, "I have only come, your Excellency, to explain my case clearly. I have been told that I ought to go to Italy, which is casting a reproach on me. I was sixteen months in Italy, I have written three operas, and all this is notorious enough. What further occurred, your Excellency will see from these papers." And after showing him the diplomata, I added, "I only show these and say this to your Excellency that, in the event of my being spoken of, and any injustice done me, your Excellency may with good grounds take my part." He asked me if I was now going to France. I said I intended to remain in Germany; by this, however, he supposed I meant Munich, and said, with a merry laugh, "So you are to stay here after all?" I replied, "No! to tell you the truth, I should like to have

stayed, if the Elector had favored me with a small sum, so that I might then have offered my compositions to your Excellency devoid of all interested motives. It would have been a pleasure to me to do this." At these words he half lifted his skull-cap.

At ten o'clock I went to court to call on Countess Salern. I dined afterwards with the Brancas. Herr Geheimrath von Branca, having been invited by the French Ambassador, was not at home. He is called "your Excellency." Countess Salern is a Frenchwoman, and scarcely knows a word of German; so I have always been in the habit of talking French to her. I do so quite boldly, and she says that I don't speak at all badly, and that I have the good habit of speaking slowly, which makes me more easily understood. She is a most excellent person, and very well-bred. The daughter plays nicely, but fails in time. I thought this arose from want of ear on her part, but I find I can blame no one but her teacher, who is too indulgent and too easily satisfied. I practised with her to-day, and I could pledge myself that if she were to learn from me for a couple of months, she would play both well and accurately.

At four o'clock I went to Frau von Tosson's, where I found mamma and also Frau von Hepp. I played there till eight o'clock, and after that we went home; and at half-past nine a small band of music arrived, consisting of five persons--two clarionet-players, two horns, and one bassoon. Herr Albert (whose name-day is to-morrow) arranged this music in honor of me and himself. They played rather well together, and were the same people whom we hear during dinner at Albert's, but it is well known that they are trained by Fiala. They played some of his pieces, and I must say they are very pretty: he has some excellent ideas. To-morrow we are to have a small musical party together, where I am to play. (Nota bene, on that miserable piano! oh, dear! oh, dear! oh, dear!) I beg you will excuse my horrid writing, but ink, haste, sleep, and dreams are all against me. I am now and forever amen, your dutiful son,

A. W. MOZART.

63.

Munich, Oct. 6, 1777.

Mamma cannot write; in the first place, she is not inclined, and, secondly, she has a headache. So I must hold the pen for her and keep faith with her. I am just going with the Professor to call on Madlle. Keiserin. Yesterday we had in our house a clerical wedding, or altum tempus ecclesiasticum. There was dancing, but I only danced four minuets, and was in my own room again by eleven o'clock, for, out of fifty young ladies, there was only one who danced in time--Madlle. Kaser, a sister of Count Perusa's secretary. The Professor thought fit to leave me in the lurch, so I did not go to Madlle. Keiserin, because I don't know where she lives. Last Saturday, the 4th, on the stately and solemn occasion of the name-day of his Royal Highness the Archduke Albert, we had a select music-party at home, which commenced at half-past three o'clock and finished at eight. M. Dubreil, whom papa no doubt remembers, was also present; he is a pupil of Tartini's. In the forenoon he gave a lesson on the violin to the youngest son, Carl, and I chanced to come in at the time, I never gave him credit for much talent, but I saw that he took great pains in giving his lesson; and when we entered into conversation about violin, concert, and orchestral playing, he reasoned very well, and was always of my opinion, so I retracted my former sentiments with regard to him, and was persuaded that I should find him play well in time, and a correct violinist in the orchestra. I, therefore, invited him to be so kind as to attend our little music rehearsal that afternoon. We played, first of all, the two quintets of Haydn, but to my dismay I could scarcely hear Dubreil, who could not play four continuous bars without a mistake. He could never find the positions, and he was no good friend to the sospirs [short pauses]. The only good thing was that he spoke politely and praised the quintets; otherwise--As it was, I said nothing to him, but he kept constantly saying himself, "I beg your pardon, but really I am out again! the thing is puzzling, but fine!" I invariably replied, "It does not in the least signify; we are only among ourselves." I then played the concertos in C, in B, and in E flat, and after that a trio of mine. This was finely accompanied, truly! In the adagio I was obliged to play six bars of his part. As a finale, I played my last divertimento in B; they all pricked up their ears. I played as if I had been the greatest violin-player in all Europe.

The Sunday after, at three o'clock, we were at a certain Herr von Hamm's. The Bishop of Chiemsee set off to-day for Salzburg. N. B.--I send my sister, by him, "6 duetti a clavicembalo e violino," by Schuster. I have often played them here; they are by no means bad. If I remain long enough, I intend to compose six in this style, for it is much liked here.

64.

Munich, Oct. 11, 1777.

WHY have I not as yet written anything about Misliweczeck? [See No. 43.] Because I was only too glad not to think of him; for when he is spoken of I invariably hear how highly he praises me, and what a kind and true friend he is of mine; but then follow pity and

lamentation. He was described to me, and deeply was I distressed. How could I bear that Misliweczeck, my intimate friend, should be in the same town, nay, even in the same corner of the world with me, and neither see him nor speak to him? Impossible! so I resolved to go to visit him. On the previous day, I called on the manager of the Duke's Hospital to ask if I might see my friend in the garden, which I thought best, though the doctors assured me there was no longer any risk of infection. The manager agreed to my proposal, and said I should find him in the garden between eleven and twelve o'clock, and, if he was not there when I came, to send for him. Next day I went with Herr von Hamm, secretary in the Crown Office, (of whom I shall speak presently,) and mamma to the Duke's Hospital. Mamma went into the Hospital church, and we into the garden. Misliweczeck was not there, so we sent him a message. I saw him coming across, and knew him at once from his manner of walking. I must tell you that he had already sent me his remembrances by Herr Heller, a violoncello-player, and begged me to visit him before I left Munich. When he came up to me, we shook hands cordially. "You see," said he, "how unfortunate I am." These words and his appearance, which papa is already aware of from description, so went to my heart that I could only say, with tears in my eyes, "I pity you from my heart, my dear friend." He saw how deeply I was affected, so rejoined quite cheerfully, "Now tell me what you are doing; when I heard that you were in Munich, I could scarcely believe it; how could Mozart be here and not long ago have come to see me?" "I hope you will forgive me, but I had such a number of visits to make, and I have so many kind friends here." "I feel quite sure that you have indeed many kind friends, but a truer friend than myself you cannot have." He asked me whether papa had told me anything of a letter he had received. I said, "Yes, he did write to me," (I was quite confused, and trembled so much in every limb that I could scarcely speak,) "but he gave me no details." He then told me that Signor Gaetano Santoro, the Neapolitan impresario, was obliged, owing to impegni and protezione, to give the composition of the opera for this Carnival to a certain Maestro Valentini; but he added, "Next year he has three at liberty, one of which is to be at my service. But as I have already composed six times for Naples, I don't in the least mind undertaking the less promising one, and making over to you the best libretto, viz. the one for the Carnival. God knows whether I shall be able to travel by that time, but if not, I shall send back the scrittura. The company for next year is good, being all people whom I have recommended. You must know that I have such influence in Naples that, when I say engage such a one, they do so at once." Marquesi is the primo uomo, whom he, and indeed all Munich too, praises very highly; Marchiani is a good prima donna; and there is a tenor, whose name I cannot recall, but Misliweczeck says he is the best in all Italy. He also said, "I do beg of you to go to Italy; there one is esteemed and highly prized." And in truth he is right. When I come to reflect on the subject, in no country have I received such honors, or been so esteemed, as in Italy, and nothing contributes more to a man's fame than to have written Italian operas, and especially for Naples. He said he would write a letter for me to Santoro, which I was to copy out when I went to see him next day; but finding it impossible to return, he sent me a sketch of the letter to-day. I was told that when Misliweczeck heard people here speaking of Becke, or other performers on the piano, he invariably said, "Let no one deceive himself; none can play like Mozart; in Italy, where the greatest masters are, they speak of no one but Mozart; when his name is mentioned, not a word is said of others." I can now write the letter to Naples when I please; but, indeed, the sooner the better. I should, however, first like to have the opinion of that highly discreet Hofcapellmeister, Herr von Mozart. I have the most ardent desire to write another opera. The distance is certainly great, but the period is still a long way off when I am to write this opera, and there may be many changes before then. I think I might at all events undertake it. If, in the mean time, I get no situation, eh, bien! I shall then have a resource in Italy. I am at all events certain to receive 100 ducats in the Carnival; and when I have once written for Naples I shall be sought for everywhere. As papa well knows, there is an opera buffa in Naples in spring, summer, and autumn, for which I might write for the sake of practice, not to be quite idle. It is true that there is not much to be got by this, but still there is something, and it would be the means of gaining more honor and reputation than by giving a hundred concerts in Germany, and I am far happier when I have something to compose, which is my chief delight and passion; and if I get a situation anywhere, or have hopes of one, the scrittura would be a great recommendation to me, and excite a sensation, and cause me to be more thought of. This is mere talk, but still I say what is in my heart. If papa gives me any good grounds to show that I am wrong, then I will give it up, though, I own, reluctantly. Even when I hear an opera discussed, or am in a theatre myself and hear voices, oh! I really am beside myself!

To-morrow, mamma and I are to meet Misliweczeck in the Hospital garden to take leave of him; for he wished me last time to fetch mamma out of church, as he said he should like to see the mother of so great a virtuoso. My dear papa, do write to him as often as you have time to do so; you cannot confer a greater pleasure on him, for the man is quite forsaken. Sometimes he sees no one for a whole week, and he said to me, "I do assure you it does seem so strange to me to see so few people; in Italy I had company every day." He looks thin, of course, but is still full of fire and life and genius, and the same kind, animated person he always was. People talk much of his oratorio of "Abraham and Isaac," which he produced here. He has just completed (with the exception of a few arias) a Cantata, or Serenata, for Lent; and when he was at the worst he wrote an opera for Padua. Herr Heller is just come from him. When I wrote to him yesterday I sent him the Serenata that I wrote in Salzburg: for the Archduke Maximilian ["Il Re

Pastore"].

Now to turn to something else. Yesterday I went with mamma immediately after dinner to take coffee with the two Fraulein von Freysinger. Mamma, however, took none, but drank two bottles of Tyrolese wine. At three o'clock she went home again to make preparations for our journey. I, however, went with the two ladies to Herr von Hamm's, whose three young ladies each played a concerto, and I one of Aichner's prima vista, and then went on extemporizing. The teacher of these little simpletons, the Demoiselles Hamm, is a certain clerical gentleman of the name of Schreier. He is a good organ-player, but no pianist. He kept staring at me with an eye-glass. He is a reserved kind of man who does not talk much; he patted me on the shoulder, sighed, and said, "Yes--you are--you understand--yes--it is true--you are an out-and-outer!" By the by, can you recall the name of Freysingen--the papa of the two pretty girls I mentioned? He says he knows you well, and that he studied with you. He particularly remembers Messenbrunn, where papa (this was quite new to me) played most incomparably on the organ. He said, "It was quite startling to see the pace at which both hands and feet went, but quite inimitable; a thorough master indeed; my father thought a great deal of him; and how he humbugged the priests about entering the Church! You are just what he was then, as like as possible; only he was a degree shorter when I knew him." A propos, a certain Hofrath Effeln sends you his kind regards; he is one of the best Hofraths here, and would long ago have been made chancellor but for one defect--TIPPLING. When we saw him for the first time at Albert's, both mamma and I thought, "What an odd-looking fish!" Just imagine a very tall man, stout and corpulent, and a ridiculous face. When he crosses the room to another table, he folds both hands on his stomach, stoops very low, and then draws himself up again, and makes little nods; and when this is over he draws back his right foot, and does this to each individual separately. He says that he knows papa intimately. I am now going for a little to the play. Next time I will write more fully, but I can't possibly go on to-day, for my fingers do ache uncommonly.

Munich, October 11th, at 1/4 to 12 at night, I write as follows:--I have been at the Drittl comedy, but only went in time for the ballet, or rather the pantomime, which I had not before seen. It is called "Das von der fur Girigaricanarimanarischaribari verfertigte Ei." It was very good and funny. We are going to-morrow to Augsburg on account of Prince Taxis not being at Ratisbon but at Teschingen. He is, in fact, at present at his country-seat, which is, however, only an hour from Teschingen. I send my sister, with this, four preludes; she will see and hear for herself the different keys into which they lead. My compliments to all my kind friends, particularly to young Count Arco, to Madlle. Sallerl, and to my best of all friends, Herr Bullinger; I do beg that next Sunday at the usual eleven-o'clock music he will be so good as to make an authoritative oration in my name, and present my regards to all the members of the orchestra and exhort them to industry, that I may not one day be accused of being a humbug, for I have everywhere extolled their orchestra, and I intend always to do so.

65.

Augsburg, Oct. 14, 1777.

I HAVE made no mistake in my date, for I write before dinner, and I think that next Friday, the day after to-morrow, we shall be off again. Pray hear how generous the gentlemen of Augsburg are. In no place was I ever so overwhelmed with marks of distinction as here. My first visit was to the Stadtpfleger Longo Tabarro [Burgomaster Langenmantl]. My cousin, [Footnote: Leopold Mozart had a brother in Augsburg, a bookbinder, whose daughter, "das Basle" (the cousin), was two years younger than Mozart.] a good, kind, honest man and worthy citizen, went with me, and had the honor to wait in the hall like a footman till my interview with the high and mighty Stadtpfleger was over. I did not fail first of all to present papa's respectful compliments. He deigned graciously to remember you, and said, "And pray how have things gone with him?" "Vastly well, God be praised!" I instantly rejoined, "and I hope things have also gone well with you?" He then became more civil, and addressed me in the third person, so I called him "Sir"; though, indeed, I had done so from the first. He gave me no peace till I went up with him to see his son-in-law (on the second floor), my cousin meanwhile having the pleasure of waiting in the staircase-hall. I was obliged to control myself with all my might, or I must have given some polite hint about this. On going upstairs I had the satisfaction of playing for nearly three-quarters of an hour on a good clavichord of Stein's, in the presence of the stuck-up young son, and his prim condescending wife, and the simple old lady. I first extemporized, and then played all the music he had, prima, vista, and among others some very pretty pieces of Edlmann's. Nothing could be more polite than they all were, and I was equally so, for my rule is to behave to people just as they behave to me; I find this to be the best plan. I said that I meant to go to Stein's after dinner, so the young man offered to take me there himself. I thanked him for his kindness, and promised to return at two o'clock. I did so, and we went together in company with his brother-in-law, who looks a genuine student. Although I had begged that my name should not be mentioned, Herr von Langenmantl was so incautious as to say, with a simper, to Herr Stein, "I have the honor to present to you a virtuoso on the piano." I instantly

protested against this, saying that I was only an indifferent pupil of Herr Sigl in Munich, who had charged me with a thousand compliments to him. Stein shook his head dubiously, and at length said, "Surely I have the honor of seeing M. Mozart?" "Oh, no," said I; "my name is Trazom, and I have a letter for you." He took the letter and was about to break the seal instantly, but I gave him no time for that, saying, "What is the use of reading the letter just now? Pray open the door of your saloon at once, for I am so very anxious to see your pianofortes." "With all my heart," said he, "just as you please; but for all that I believe I am not mistaken." He opened the door, and I ran straight up to one of the three pianos that stood in the room. I began to play, and he scarcely gave himself time to glance at the letter, so anxious was he to ascertain the truth; so he only read the signature. "Oh!" cried he, embracing me, and crossing himself and making all sorts of grimaces from intense delight. I will write to you another day about his pianos. He then took me to a coffee-house, but when we went in I really thought I must bolt, there was such a stench of tobacco-smoke, but for all that I was obliged to bear it for a good hour. I submitted to it all with a good grace, though I could have fancied that I was in Turkey. He made a great fuss to me about a certain Graf, a composer (of flute concertos only); and said, "He is something quite extraordinary," and every other possible exaggeration. I became first hot and then cold from nervousness. This Graf is a brother of the two who are in Harz and Zurich. He would not give up his intention, but took me straight to him--a dignified gentleman indeed; he wore a dressing-gown that I would not be ashamed to wear in the street. All his words are on stilts, and he has a habit of opening his mouth before knowing what he is going to say; so he often shuts it again without having said anything. After a great deal of ceremony he produced a concerto for two flutes; I was to play first violin. The concerto is confused, not natural, too abrupt in its modulations, and devoid of all genius. When it was over I praised it highly, for, indeed, he deserves this. The poor man must have had labor and study enough to write it. At last they brought a clavichord of Stein's out of the next room, a very good one, but inch-thick with dust. Herr Graf, who is director here, stood there looking like a man who had hitherto believed his own modulations to be something very clever, but all at once discovers that others may be still more so, and without grating on the ear. In a word, they all seemed lost in astonishment.

66.

Augsburg, Oct. 17, 1777.

WITH regard to the daughter of Hamm, the Secretary of War, I can only say that there can be no doubt she has a decided talent for music, for she has only learned three years, and can play a number of pieces very well. I find it difficult, however, to explain distinctly the impression she makes on me while she is playing; she seems to me so curiously constrained, and she has such an odd way of stalking over the keys with her long bony fingers! To be sure, she has had no really good master, and if she remains in Munich she will never become what her father wishes and hopes, for he is eager beyond measure that she should one day be a distinguished pianiste. If she goes to papa at Salzburg, it will be a twofold benefit to her, both as to music and common sense, of which she certainly has no great share. She has often made me laugh very much, and you would have amusement enough for your trouble. She is too absent to think of eating much. You say I ought to have practised with her? I really could not for laughing, for when I occasionally played something with the right hand, she instantly said bravissimo, and that in the voice of a little mouse.

I will now relate to you as briefly as possible the Augsburg history to which I have already alluded. Herr von Fingerle, who sent his compliments to you, was also at Herr Graf's. The people were very civil, and discussed the concert I proposed to give, all saying, "It will be one of the most brilliant concerts ever given in Augsburg. You have a great advantage in having made the acquaintance of our Stadtpfleger Langenmantl; besides, the name of Mozart has much influence here." So we separated mutually pleased. I must now tell you that Herr von Langenmantl, junior, when at Herr Stein's, said that he would pledge himself to arrange a concert in the Stube, [Footnote: The Bauernstube, the Patrician Casino.] (as something very select, and complimentary to me,) for the nobility alone. You can't think with what zeal he spoke, and promised to undertake it. We agreed that I should call on him the next morning for the answer; accordingly I went; this was on the 13th. He was very polite, but said that as yet he could not say anything decided. I played there again for an hour, and he invited me next day, the 14th, to dinner. In the forenoon he sent to beg that I would come to him at eleven o'clock, and bring some pieces with me, as he had asked some of the professional musicians, and they intended to have some music. I immediately sent some music, and went myself at eleven, when, with many lame excuses, he coolly said, "By the by, I could do nothing about the concert; oh, I was in such a rage yesterday on your account. The patrician members of the Casino said that their cashbox was at a very low ebb, and that you were not the kind of virtuoso who could expect a souverain d'or." I merely smiled, and said, "I quite agree with them." N. B.--He is Intendant of Music in the Casino, and the old father a magistrate! but I cared very little about it. We sat down to dinner; the old gentleman also dined up-stairs with us, and was very civil, but did not say a word about the concert. After dinner I played two concertos, something out of my head, and then a trio of Hafeneder's on the violin. I would gladly have played more, but I was so badly accompanied that it gave me the colic. He said to me, good-naturedly,

"Don't let us part company to-day; go to the play with us, and return here to supper." We were all very merry. When we came back from the theatre, I played again till we went to supper. Young Langenmantl had already questioned me in the forenoon about my cross, [Footnote: Mozart, by his father's desire, wore the "Order of the Golden Spur," conferred on him by the Pope.] and I told him exactly how I got it, and what it was. He and his brother-in-law said over and over again, "Let us order a cross, too, that we may be on a par with Herr Mozart." I took no notice of this. They also repeatedly said, "Hallo! you sir! Knight of the Spur!" I said not a word; but during supper it became really too bad. "What may it have cost? three ducats? must you have permission to wear it? Do you pay extra for leave to do so? We really must get one just like it." An officer there of the name of Bach, said, "For shame! what would you do with the cross?" That young ass, Kurzen Mantl, winked at him, but I saw him, and he knew that I did. A pause ensued, and then he offered me snuff, saying, "There, show that you don't care a pinch of snuff for it." I still said nothing. At length he began once more in a sneering tone: "I may then send to you to-morrow, and you will be so good as to lend me the cross for a few minutes, and I will return it immediately after I have spoken to the goldsmith about it. I know that when I ask him its value (for he is a queer kind of man) he will say a Bavarian thaler; it can't be worth more, for it is not gold, only copper, ha! ha!" I said, "By no means--it is lead, ha! ha!" I was burning with anger and rage. "I say," rejoined he, "I suppose I may, if need be, leave out the spur?" "Oh, yes," said I, "for you have one already in your head; I, too, have one in mine, but of a very different kind, and I should be sorry to exchange mine for yours; so there, take a pinch of snuff on that!" and I offered him snuff. He became pale with rage, but began again: "Just now that order looked so well on that grand waistcoat of yours." I made no reply, so he called the servant and said "Hallo! you must have greater respect for my brother-in-law and myself when we wear the same cross as Herr Mozart; take a pinch of snuff on that!" I started up; all did the same, and showed great embarrassment. I took my hat and my sword, and said, "I hope to have the pleasure of seeing you to-morrow." "To-morrow I shall not be here." "Well, then, the next morning, when I shall still be here." "Ho, ho! you surely don't mean to"--"I mean nothing; you are a set of boors, so good-night," and off I went.

Next day I told the whole story to Herr Stein, Herr Geniaulx, and to Herr Director Graf--I don't mean about the cross, but how highly disgusted I was at their having bragged so much about a concert, and now it had come to nothing. "I call this making a fool of a person and leaving him in the lurch. I am very sorry that I ever came here. I could not possibly have believed that in Augsburg, my papa's native town, such an insult could have been offered to his son." You cannot imagine, dear papa, how angry and indignant these three gentlemen were, saying, "Oh, you must positively give a concert here; we don't stand in need of the patricians." I, however, adhered to my resolution and said, "I am willing to give a small farewell concert at Herr Stein's, for my few kind friends here who are connoisseurs." The Director was quite distressed, and exclaimed, "It is abominable--shameful; who could have believed such a thing of Langenmantl! Par Dieu! if he really wished it, no doubt it would have been carried through." We then separated. The Director went down-stairs with me in his dressing-gown as far as the door, and Herr Stein and Geniaulx walked home with me. They urged us to make up our mind to stay here for a time, but we remained firm. I must not forget to say that, when young Langenmantl lisped out to me, in his usual cool indifferent way, the pleasant news as to my concert, he added, that the patricians invited me to their concert next Thursday. I said, "I will come as one of the audience." "Oh, we hope you will give us the pleasure of hearing you play also." "Well, perhaps I may; why not?" But having received so grievous an insult the next evening, I resolved not to go near him again, to steer clear of the whole set of patricians, and to leave Augsburg. During dinner, on the 16th, I was called out by a servant-maid of Langenmantl's, who wished to know whether he might expect me to go with him to the concert? and he begged I would come to him immediately after dinner. I sent my compliments in return, that I had no intention of going to the concert; nor could I come to him, as I was already engaged (which was quite true); but that I would call next morning to take leave of him, as on Saturday next, at furthest, I was to leave Augsburg. In the meantime Herr Stein had been to see the other patricians of the Evangelical party, and spoke so strongly to them that these gentlemen were quite excited. "What!" said they, "shall we permit a man who does us so much honor to leave this without even hearing him? Herr von Langenmantl, having already heard him, thinks that is enough."

At last they became so excited that Herr Kurzenmantl, the excellent youth, was obliged to go to Herr Stein himself to entreat him, in the name of the patricians, to do all in his power to persuade me to attend the concert, but to say that I must not expect great things. At last I went with him, though with considerable reluctance. The principal gentlemen were very polite, particularly Baron Belling, who is a director or some such animal; he opened my music-portfolio himself. I brought a symphony with me, which they played, and I took a violin part. The orchestra is enough to throw any one into fits. That young puppy Langenmantl was all courtesy, but his face looked as impertinent as ever; he said to me, "I was rather afraid you might have escaped us, or been offended by our jokes the other evening." "By no means," said I coolly; "you are still very young; but I advise you to be more cautious in future, for I am not accustomed to such jokes. The subject on which you were so facetious did you no credit, nor did it answer your purpose, for you see I still wear the order; you had better have chosen some other topic for your wit." "I assure you," said he, "it was only my

brother-in-law who"--"Let us say no more about it," said I. "We had nearly been deprived of the pleasure of seeing you altogether," he rejoined. "Yes; had it not been for Herr Stein, I certainly should not have come; and, to tell you the truth, I am only here now to prevent you Augsburg gentlemen being the laughing-stock of other countries, which would have been the case if I had told them that I was eight days in the city where my father was born, without any one there taking the trouble to hear me!" I played a concerto, and all went off well except the accompaniment; and as a finale I played a sonata. At the close, Baron Belling thanked me in the warmest manner in the name of all the company; and, begging me to consider only their good will, presented me with two ducats.

They give me no peace here till I agree to give a public concert next Saturday. Perhaps--but I own I am heartily sick of it all. I shall be indeed glad when I arrive at a place where there is a court. I may with truth say that, were it not for my kind cousins, my regrets would be as numberless as the hairs on my head for ever having come to Augsburg. I must write you some account of my fair cousin, but you must excuse my deferring this till to-morrow, for one ought to be quite fresh to praise her as highly as she deserves.

The 17th.--I now write early in the morning to say that my cousin is pretty, intelligent, lovable, clever, and gay, probably because she has lived so much in society; she was also some time at Munich. We do, indeed, exactly suit each other, for she too is rather inclined to be satirical, so we banter our friends most merrily together. [The Mozart family were both well known and dreaded for their somewhat sharp tongues.]

67.

Augsburg, Oct. 17, 1777.

I must now tell you about the Stein pianos. Before seeing these, Spath's pianos were my favorites; but I must own that I give the preference to those of Stein, for they damp much better than those in Ratisbon. If I strike hard, whether I let my fingers rest on the notes or lift them, the tone dies away at the same instant that it is heard. Strike the keys as I choose, the tone always remains even, never either jarring or failing to sound. It is true that a piano of this kind is not to be had for less than three hundred florins, but the pains and skill which Stein bestows on them cannot be sufficiently repaid. His instruments have a feature of their own; they are supplied with a peculiar escapement. Not one in a hundred makers attends to this; but, without it, it is impossible that a piano should not buzz and jar. His hammers fall as soon as they touch the strings, whether the keys be held down by the fingers or not. When he has completed an instrument of this class, (which he told me himself,) he tries all kinds of passages and runs on it, and works away at it, testing its powers till it is capable of doing anything, for he labors not for his own benefit alone, (or he might be saved much trouble,) but for that of music. He often says, "If I were not such a passionate lover of music, playing also myself a little on the piano, I should long ago have lost patience with my work, but I like my instruments to respond to the player, and to be durable." His pianos do really last well. He warrants the sounding-board neither breaking nor cracking; when he has finished one, he exposes it in the air to rain, snow, sun, and every kind of devilry, that it may give way, and then inserts slips of wood which he glues in, making it quite strong and solid. He is very glad when it does crack, for then he is pretty sure nothing further can happen to it. He frequently makes cuts into them himself, and then glues them up, thus making them doubly strong. He has three of these pianos at this moment finished, and I played on them again to-day.

We dined to-day with young Herr Gassner, who is the handsome widower of a lovely young wife; they were only married two years. He is an excellent and kind young man; he gave us a capital dinner. A colleague of the Abbe Henri Bullinger, and Wishofer also dined there, and an ex-Jesuit, who is at present Capellmeister in the cathedral here. He knows Herr Schachtner well [court-trumpeter at Salzburg], and was leader of his band in Ingolstadt; he is called Father Gerbl. Herr Gassner, and one of his wife's unmarried sisters, mamma, our cousin, and I went after dinner to Herr Stein's. At four o'clock came the Capellmeister and Herr Schmittbauer, the organist of St. Ulrich, a worthy good old man. I played at sight a sonata of Becke's, which was rather difficult, but very poor, al solito. The astonishment of the Capellmeister and the organist was indescribable. I have played my six sonatas by heart repeatedly, both here and in Munich. The fifth in G, I played at the distinguished Casino concert, and the last in D, which has an incomparable effect on Stein's pianos. The pedals, pressed by the knees, are also better made by him than by any one else; you scarcely require to touch them to make them act, and as soon as the pressure is removed not the slightest vibration is perceptible.

To-morrow perhaps I shall come to his organs, that is, write to you about them, and I reserve for the last the subject of his little daughter. When I said to Herr Stein that I should like to play on one of his organs, as the organ was my passion, he seemed surprised, and said, "What! such a man as you, so great a pianist, like to play on an instrument devoid of sweetness and expression, with no gradations from piano to forte, but always going on the same?" "That does not signify; the organ always was,

both in my eyes and ears, the king of all instruments." "Well, just as you please." So we went together. I could readily perceive from his conversation that he did not expect me to do great things on his organ, evidently thinking that I should handle it in the style of a piano. He told me that by Schobert's own desire he had taken him also to the organ, "and very nervous it made me," said he, "for Schobert had told everybody, and the church was nearly full. I did not doubt the man's spirit, fire, and execution; still, this does not much suit the organ. But the moment he began my opinion was entirely changed." I only said in reply, "Do you then think, Herr Stein, that I am likely to run wild on the organ?" "Oh! you!"--When we came to the organ-loft, I began a prelude, when he laughed. A fugue followed. "I can now quite understand why you like to play the organ," said he, "when you can play in this manner." At first the pedal was a little awkward for me, as it was without the breaks, beginning with C, then D E in one row, whereas with us D and E are above, just where E flat and F sharp are here; but I quickly mastered it.

I went also to try the old organ at St. Ulrich's. The stair that leads to it is really dreadful. I requested that some other person might play the organ for me, that I might go down and listen to it, for above the organ has no effect; but I profited very little by this, for the young leader of the choir, a priest, made such reckless runs on the organ that it was impossible to understand them, and when he attempted harmonies they proved only discords, being always false. Afterwards they would insist on our going to a coffee-room, for mamma and my cousin were with us. A certain Father Emilian, a conceited jackass and a sorry witling, was very sweet on my cousin, and wished to have his jest with her, but she made a jest of him. At last, when rather tipsy, (which soon occurred,) he began to talk about music, and sang a canon, saying, "I never in my life heard anything finer." I said, "I regret that I can't sing it with you, for nature has not given me the power of intoning." "No matter," said he. So he began. I made the third, but I sang different words--thus: "Pater Emilian, oh! thou numskull"--sotto voce to my cousin; then we laughed on for at least half an hour. The Pater said to me, "If we only could be longer together, we could discuss the art of musical composition." "In that case," said I, "our discussion would soon come to an end." A famous rap on the knuckles for him! TO BE CONTINUED.

68.

Augsburg, Oct. 23, 1777.

MY concert took place yesterday. Count Wolfeck interested himself much in it, and brought some chanoinesses with him. I went to his lodgings the very day I arrived, but he was not here at that time. A few days ago he returned, and on hearing that I was still in Augsburg, he did not wait for a visit from me, but at the very moment when I was taking my hat and sword to go to call on him he walked in. I must now give you a description of the last few days before my concert. Last Saturday I was at St. Ulrich's, as I already told you. Some days before my cousin took me with him to present me to the Prelate of the Holy Cross, a kind excellent old man. Previous to going to St. Ulrich's last Saturday, I went with my cousin to the Monastery of the Holy Cross, as the first time I was there neither the Deacon nor the Procurator was at home, and my cousin told me that the Procurator was very jolly. [Here mamma inserts a few lines--which frequently occurs in the letters. She says at the close:] "I am quite surprised that Schuster's duets [see No. 63] are still"--Wolfgang: "Oh, he has got them." Mamma: "No, indeed; he always writes that he has not got them." Wolfgang: "I hate arguing; I am sure he has got them, so there's an end of it." Mamma: "You are mistaken." Wolfgang: "No; I am right. I will show it to mamma in his own writing." Mamma: "Well, where is it?" Wolfgang: "Here; read it." She is reading it at this moment.

Last Sunday I attended service at the Holy Cross, and at ten o'clock we went to Herr Stein's, where we tried over a couple of symphonies for the concert. Afterwards I dined with my cousin at the Holy Cross, where a band played during dinner. Badly as they play in the monastery, I prefer it to the Augsburg orchestra. I played a symphony, and a concerto in B of Vanhall's, on the violin, with unanimous applause. The Dean is a kind, jovial man, a cousin of Eberlin [deceased Capellmeister of Salzburg]. His name is Zeschinger. He knows papa well. At night, after supper, I played the Strassburg concerto; it went as smooth as oil; every one praised the fine pure tone. A small clavichord was then brought in, on which I preluded, and played a sonata and the Fischer variations. Some of those present whispered to the Dean that he ought to hear me play in the organ style. I asked him to give me a theme, which he declined, but one of the monks did so. I handled it quite leisurely, and all at once (the fugue being in G minor) I brought in a lively movement in the major key, but in the same tempo, and then at the end the original subject, only reversed. At last it occurred to me to employ the lively movement for the subject of the fugue also, I did not hesitate long, but did so at once, and it went as accurately as if Daser [a Salzburg tailor] had taken its measure. The Dean was in a state of great excitement. "It is over," said he, "and it's no use talking about it, but I could scarcely have believed what I have just heard; you are indeed an able man. My prelate told me beforehand that in his life he never heard any one play the organ in a more finished and solid style" (he having heard me some days previously when the Dean was not here). At last some one brought me a fugued sonata, and asked me to play it. But I said, "Gentlemen, I really must say this is asking rather too much, for it is not likely I shall be able to play such a sonata

at sight." "Indeed, I think so too; it is too much; no one could do it," said the Dean eagerly, being all in my favor. "At all events," said I, "I can but try." I heard the Dean muttering all the time behind me, "Oh, you rogue! oh, you knave!" I played till 11 o'clock, bombarded and besieged, as it were, by fugue themes.

Lately, at Stein's, he brought me a sonata of Becke's, but I think I already told you this. A propos, as to his little girl, [Footnote: Nanette, at that time eight years old; afterwards the admirable wife of Andreas Streicher, the friend of Schiller's youth, and one of Beethoven's best friends in Vienna.] any one who can see and hear her play without laughing must be Stein [stone] like her father. She perches herself exactly opposite the treble, avoiding the centre, that she may have more room to throw herself about and make grimaces. She rolls her eyes and smirks; when a passage comes twice she always plays it slower the second time, and if three times, slower still. She raises her arms in playing a passage, and if it is to be played with emphasis she seems to give it with her elbows and not her fingers, as awkwardly and heavily as possible. The finest thing is, that if a passage occurs (which ought to flow like oil) where the fingers must necessarily be changed, she does not pay much heed to that, but lifts her hands, and quite coolly goes on again. This, moreover, puts her in a fair way to get hold of a wrong note, which often produces a curious effect. I only write this in order to give you some idea of pianoforte-playing and teaching here, so that you may in turn derive some benefit from it. Herr Stein is quite infatuated about his daughter. She is eight years old, and learns everything by heart. She may one day be clever, for she has genius, but on this system she will never improve, nor will she ever acquire much velocity of finger, for her present method is sure to make her hand heavy. She will never master what is the most difficult and necessary, and in fact the principal thing in music, namely, time; because from her infancy she has never been in the habit of playing in correct time. Herr Stein and I discussed this point together for at least two hours. I have, however, in some degree converted him; he asks my advice now on every subject. He was quite devoted to Becke, and now he sees and hears that I can do more than Becke, that I make no grimaces, and yet play with so much expression that he himself acknowledges none of his acquaintances have ever handled his pianos as I do. My keeping so accurately in time causes them all much surprise. The left hand being quite independent in the tempo rubato of an adagio, they cannot at all comprehend. With them the left hand always yields to the right. Count Wolfeck and others, who have a passionate admiration for Becke, said lately publicly in a concert that I beat Becke hollow. Count Wolfeck went round the room saying, "In my life I never heard anything like this." He said to me, "I must tell you that I never heard you play as you did to-day, and I mean to say so to your father as soon as I go to Salzburg." What do you think was the first piece after the symphony? The concerto for three pianos. Herr Demmler took the first part, I the second, and Herr Stein the third. I then played a solo, my last sonata in D, for Durnitz, and afterwards my concerto in B; then again a solo in the organ style, namely, a fugue in C minor, then all of a sudden a splendid sonata in C major, finishing with a rondo, all extempore. What a noise and commotion there was! Herr Stein did nothing but make faces and grimaces of astonishment. Herr Demmler was seized with fits of laughter, for he is a queer creature, and when anything pleases him exceedingly, he can't help laughing heartily; indeed, on this occasion he actually began to swear! Addio!

69.

Augsburg, Oct. 25, 1777.

The receipts of the concert were 90 florins, without deducting the expenses. Including, therefore, the two ducats we took in the Casino concert, we had 100 florins. The expenses of the concert did not exceed 16 florins 30 kreutzers; the room I had gratis. I believe most of the musicians will make no charge. We have now ALTOGETHER lost about 26 or 27 florins. This is not of much moment. I am writing this on Saturday the 25th. This morning early I received the letter with the sad news of Frau Oberbereiterin's death. Madlle. Tonerl can now purse up her mouth, or perhaps open it wide, and shut it again as empty as ever. As to the baker's daughter, I have no objection to make; I foresaw all this long ago. This was the cause of my reluctance to leave home, and finding it so difficult to go. I hope the affair is not by this time known all over Salzburg? I beg you, dear papa, most urgently to keep the matter quiet as long as possible, and in the mean time to pay her father on my account any expenses he may have incurred by her entrance into the convent, which I will repay gladly when I return to Salzburg.

I thank you most truly, dear papa, for your good wishes on my name-day. Do not be uneasy on my account, for I have always God before my eyes, I acknowledge His omnipotence, I dread His wrath; but I also know His love, His compassion and mercy towards His creatures, and that He will never forsake His servants. When His will is done I am resigned; so I never can fail to be happy and contented. I shall certainly also strive to live as strictly as possible in accordance with your injunctions and advice. Thank Herr Bullinger a thousand times for his congratulations. I mean to write to him soon and thank him myself, but I may in the mean time assure him that I neither know nor have any better, more sincere, or truer friend than himself. I beg also humbly to thank Madlle.

Sallerl; pray tell her I mean to enclose some verses to show my gratitude to her in my letter to Herr Bullinger. Thank my sister also; she is to keep the Schuster duets, and give herself no further trouble on the subject.

In your first letter, dear papa, you write that I lowered myself by my conduct to that lad Langenmantl. Anything but that! I was only straightforward, no more. I see you think he is still a boy; he is one or two and twenty, and a married man. Can any one be considered a boy who is married? I have never gone near him since. I left two cards for him to-day, and excused myself for not going in, having so many indispensable calls to make. I must now conclude, for mamma insists absolument on going to dinner, and then to pack. To-morrow we go straight to Wallerstein. My dear little cousin, who sends you her regards, is anything but a prude. She dressed a la Francaise to please me yesterday. She looked at least 5 per cent, prettier in consequence. Now, Addio!

On the 26th of October the mother and son set off to Mannheim. The mother writes that Wolfgang intended to write to Augsburg, "but he will scarcely be able to do so to-day, for he is now at the rehearsal of the oratorio; so I must beg you to accept my humble self instead." Wolfgang then adds:--

70.

Mannheim, Oct. 30, 1777.

I must beg you also to accept my insignificancy. I went to-day with Herr Danner to M. Cannabich's [Director of the Elector's orchestra]. He was uncommonly polite, and I played something for him on his piano, which is a very good one. We went together to the rehearsal. I could scarcely help laughing when I was presented to the musicians, because, though some who knew me by renomme were very civil and courteous, the rest, who knew nothing whatever about me, stared in such a ludicrous way, evidently thinking that because I am little and young nothing great or mature is to be found in me; but they shall soon find it out. Herr Cannabich is to take me himself to-morrow to Count Savioli, the Intendant of Music. One good thing is that the Elector's name-day is close at hand. The oratorio they are rehearsing is Handel's, but I did not stay to hear it, for they first rehearsed a Psalm Magnificat of the Vice-Capellmeister here, [Abbe] Vogler, which lasted a good hour. I must now conclude, for I have still to write to my cousin.

71.

Mannheim, Nov. 4, 1777.

I am at Cannabich's every day, and mamma went with me there to-day. He is a very different man from what he formerly was, [FOOTNOTE: Mozart had been at his house, when a boy, with his father.] and the whole orchestra say the same. He is very fond of me. He has a daughter who plays the piano very nicely, and in order to make him still more friendly towards me I am working just now at a sonata for her, which is finished all but the Rondo. When I had completed the first allegro and andante, I took it to him myself and played it over; you can't think what applause this sonata receives. There chanced to be some of the musicians there at the moment--young Danner, Lang, who plays the French horn, and the hautboy-player, whose name I forget, but who plays remarkably well, and has a pleasing delicate tone [Ramm]. I made him a present of a concerto for the hautboy; it is being copied in Cannabich's room. The man is wild with delight. I played him the concerto to-day at Cannabich's, and THOUGH KNOWN TO BE MINE it pleased very much. No one said that it was NOT WELL COMPOSED, because people here don't understand these things. They ought to apply to the Archbishop; he would soon put them on the right scent. [FOOTNOTE: The Archbishop never was satisfied with any of the compositions that Mozart wrote for his concerts, but invariably had some fault to find with them.] I played all my six sonatas to-day at Cannabich's. Herr Kapellmeister Holzbauer went with me to-day to Count Savioli's. Cannabich was there at the time. Herr Holzbauer said to the Count in Italian that I wished to have the honor of playing before his Serene Highness the Elector. "I was here fifteen years ago," said I, "but now I am older and more advanced, and I may say in music also"--"Oh!" said the Count, "you are"--I have no idea whom he took me for, as Cannabich interrupted him, but I affected not to hear, and entered into conversation with the others. Still I observed that he was speaking of me very earnestly. The Count then said to me, "I hear that you play the piano very tolerably?" I bowed.

I must now tell you about the music here. On Saturday, All-Saints' day, I attended high mass. The orchestra is very good and numerous. On each side ten or eleven violins, four tenors, two hautboys, two flutes, and two clarionets, two corni, four violoncellos, four bassoons, and four double basses, besides trumpets and kettle-drums. This should give fine music, but I would not venture to produce one of my masses here. Why? From their being short? No, everything is liked short. From their church style? By no

means; but solely because NOW in Mannheim, under present circumstances, it is necessary to write chiefly for the instruments, for nothing can possibly be conceived worse than the voices here. Six soprani, six alti, six tenori, and six bassi, to twenty violins and twelve bassi, are in the same proportion as 0 to 1. Is it not so, Herr Bullinger? It proceeds from this:--The Italians are miserably represented: they have only two musici here, and they are already old. This race is dying out. These soprano singers, too, would prefer singing counter-tenor; for they can no longer take the high notes. The few boys they have are wretched. The tenor and bass just like our singers at funerals. Vogler, who lately conducted the mass, is barren and frivolous--a man who imagines he can do a great deal, and does very little. The whole orchestra dislike him. To-day, Sunday, I heard a mass of Holzbauer's, which is now twenty-six years old, but excellent. He writes very well, and has a good church style, arranges the vocal parts as well as the instrumental, and writes good fugues. They have two organists here; it would be worth while to come to Mannheim on purpose to hear them--which I had a famous opportunity of doing, as it is the custom here for the organist to play during the whole of the Benedictus. I heard the second organist first, and then the other. In my opinion the second is preferable to the first; for when I heard the former, I asked, "Who is that playing on the organ?" "Our second organist." "He plays miserably." When the other began, I said, "Who may that be?" "Our first organist." "Why, he plays more miserably still." I believe if they were pounded together, something even worse would be the result. It is enough to kill one with laughing to look at these gentlemen. The second at the organ is like a child trying to lift a millstone. You can see his anguish in his face. The first wears spectacles. I stood beside him at the organ and watched him with the intention of learning something from him; at each note he lifts his hands entirely off the keys. What he believes to be his forte is to play in six parts, but he mostly makes fifths and octaves. He often chooses to dispense altogether with his right hand when there is not the slightest need to do so, and plays with the left alone; in short, he fancies that he can do as he will, and that he is a thorough master of his organ.

Mamma sends her love to you all; she cannot possibly write, for she has still to say her officium. We came home very late from the grand opera rehearsal. I must go to-morrow after high mass to the illustrious Electress; she is resolved absolument to teach me to knit filee. I am very eager about this, as she and the Elector wish that I should knit in public next Thursday at the great gala concert. The young Princess here, who is a child compared with the Electress, knits very prettily. The Zweenbruck and his Zwobrucken (Deux Ponts) arrived here at eight o'clock. A propos, mamma and I earnestly beg you, dear papa, to send our charming cousin a souvenir; we both regretted so much having nothing with us, but we promised to write to you to send her something. We wish two things to be sent--a double neckerchief in mamma's name, like the one she wears, and in mine some ornament; a box, or etui, or anything you like, only it must be pretty, for she deserves it. [FOOTNOTE: The father was still in possession of many of the ornaments and jewels presented to these children during their artistic tours.] She and her father took a great deal of trouble on our account, and wasted much time on us. My cousin took the receipts for me at my concert. Addio!

72.

Mannheim, Nov. 5, 1777.

My dear Coz--Buzz,--

I have safely received your precious epistle--thistle, and from it I perceive--achieve, that my aunt--gaunt, and you--shoe, are quite well--bell. I have to-day a letter--setter, from my papa--ah-ha, safe in my hands--sands. I hope you also got--trot, my Mannheim letter--setter. Now for a little sense--pence. The prelate's seizure--leisure, grieves me much--touch, but he will, I hope, get well--sell. You write--blight, you will keep--cheap, your promise to write to me--he-he, to Augsburg soon--spoon. Well, I shall be very glad--mad. You further write, indeed you declare, you pretend, you hint, you vow, you explain, you distinctly say, you long, you wish, you desire, you choose, command, and point out, you let me know and inform me that I must send you my portrait soon--moon. Eh, bien! you shall have it before long--song. Now I wish you good night--tight.

The 5th.--Yesterday I conversed with the illustrious Electress; and to-morrow, the 6th, I am to play in the gala concert, and afterwards, by desire of the Princess, in their private apartments. Now for something rational! I beg of you--why not?--I beg of you, my very dear cousin--why not?--when you write to Madame Tavernier in Munich, to convey a message from me to the two Demoiselles Freysinger--why not? odd enough! but why not?--and I humbly ask pardon of Madlle. Josepha--I mean the youngest, and pray why not? why should I not ask her pardon? strange! but I don't know why I should not, so I do ask her pardon very humbly--for not having yet sent the sonata I promised her, but I mean to do so as soon as possible. Why not? I don't know why not. I can now write no more--which makes my heart sore. To all my kind friends much love--dove. Addio! Your old young, till death--breath,

WOLFGANG AMADE ROSENCRANZ.

Miennham, eht ht5 rebotoc, 7771.

73.

Mannheim, Nov. 8, 1777.

This forenoon, at Herr Cannabich's, I wrote the Rondo of the sonata for his daughter; so they would not let me leave them all day. The Elector and the Electress, and the whole court, are very much pleased with me. Both times I played at the concert, the Elector and she stood close beside me at the piano. After the music was at an end, Cannabich managed that I should be noticed by the court. I kissed the Elector's hand, who said, "I think it is now fifteen years since you were here?" "Yes, your Highness, it is fifteen years since I had that honor." "You play inimitably." The Princess, when I kissed her hand, said, "Monsieur, je vous assure, on ne peut pas jouer mieux."

Yesterday I went with Cannabich to pay the visit mamma already wrote to you about [to Duke Carl Theodor's children], and there I conversed with the Elector as if he had been some kind friend. He is a most gracious and good Prince. He said to me, "I hear you wrote an opera at Munich" ["La finta Giardiniera"]? "Yes, your Highness, and, with your gracious permission, my most anxious wish is to write an opera here; I entreat you will not quite forget me. I could also write a German one, God be praised!" said I, smiling. "That may easily be arranged." He has one son and three daughters, the eldest of whom and the young Count play the piano. The Elector questioned me confidentially about his children. I spoke quite honestly, but without detracting from their master. Cannabich was entirely of my opinion. The Elector, on going away, took leave of me with much courtesy.

After dinner to-day I went, at two o'clock, with Cannabich to Wendling's, the flute-player, where they were all complaisance. The daughter, who was formerly the Elector's favorite, plays the piano very prettily; afterwards I played. I cannot describe to you the happy mood I was in. I played extempore, and then three duets with the violin, which I had never in my life seen, nor do I now know the name of the author. They were all so delighted that I--was desired to embrace the ladies. No hard task with the daughter, for she is very pretty.

We then went again to the Elector's children; I played three times, and from my heart too,--the Elector himself each time asking me to play. He seated himself each time close to me and never stirred. I also asked a certain Professor there to give me a theme for a fugue, and worked it out.

Now for my congratulations!

My very dearest papa,--I cannot write poetically, for I am no poet. I cannot make fine artistic phrases that cast light and shadow, for I am no painter; I can neither by signs nor by pantomime express my thoughts and feelings, for I am no dancer; but I can by tones, for I am a musician. So to-morrow, at Cannabich's, I intend to play my congratulations both for your name-day and birthday. Mon tres-cher pere, I can only on this day wish for you, what from my whole heart I wish for you every day and every night--health, long life, and a cheerful spirit. I would fain hope, too, that you have now less annoyance than when I was in Salzburg; for I must admit that I was the chief cause of this. They treated me badly, which I did not deserve, and you naturally took my part, only too lovingly. I can tell you this was indeed one of the principal and most urgent reasons for my leaving Salzburg in such haste. I hope, therefore, that my wish is fulfilled. I must now close by a musical congratulation. I wish that you may live as many years as must elapse before no more new music can be composed. Farewell! I earnestly beg you to go on loving me a little, and, in the mean time, to excuse these very poor congratulations till I open new shelves in my small and confined knowledge-box, where I can stow away the good sense which I have every intention to acquire.

74.

Mannheim, Nov. 13, 1777.

We received your last two letters, and now I must answer them in detail. Your letter desiring me to inquire about Becke's parents [in Wallerstein, No. 68] I did not get till I had gone to Mannheim, so too late to comply with your wish; but it never would have occurred to me to do so, for, in truth, I care very little about him. Would you like to know how I was received by him? Well and civilly; that is, he asked where I was going. I said, most probably to Paris. He then gave me a vast deal of advice, saying he had recently been there, and adding, "You will make a great deal by giving lessons, for the piano is highly prized in Paris." He also arranged that I

should dine at the officers' table, and promised to put me in the way of speaking to the Prince. He regretted very much having at that moment a sore throat, (which was indeed quite true,) so that he could not go out with me himself to procure me some amusement. He was also sorry that he could have no music in honor of me, because most of the musical people had gone that very day on some pedestrian excursion to--Heaven knows where! At his request I tried his piano, which is very good. He often said Bravo! I extemporized, and also played the sonatas in B and D. In short, he was very polite, and I was also polite, but grave. We conversed on a variety of topics--among others, about Vienna, and more particularly that the Emperor [Joseph II.] was no great lover of music. He said, "It is true he has some knowledge of composition, but of nothing else. I can still recall (and he rubbed his forehead) that when I was to play before him I had no idea what to play; so I began with some fugues and trifles of that kind, which in my own mind I only laughed at." I could scarcely resist saying, "I can quite fancy your laughing, but scarcely so loud as I must have done had I heard you!" He further said (what is the fact) that the music in the Emperor's private apartments is enough to frighten the crows. I replied, that whenever I heard such music, if I did not quickly leave the room it gave me a headache. "Oh! no; it has no such effect on me; bad music does not affect my nerves, but fine music never fails to give me a headache." I thought to myself again, such a shallow head as yours is sure to suffer when listening to what is beyond its comprehension.

Now for some of our news here. I was desired to go yesterday with Cannabich to the Intendant, Count Savioli, to receive my present. It was just what I had anticipated--a handsome gold watch. Ten Carolins would have pleased me better just now, though the watch and chain, with its appendages, are valued at twenty Carolins. Money is what is most needed on a journey; and, by your leave, I have now five watches. Indeed, I have serious thoughts of having a second watch-pocket made, and, when I visit a grandee, to wear two watches, (which is indeed the fashion here,) that no one may ever again think of giving me another. I see from your letter that you have not yet read Vogler's book. [FOOTNOTE: Ton Wissenschaft und Ton Kunst.] I have just finished it, having borrowed it from Cannabich. His history is very short. He came here in a miserable condition, performed on the piano, and composed a ballet. This excited the Elector's compassion, who sent him to Italy. When the Elector was in Bologna, he questioned Father Valoti about Vogler. "Oh! your Highness, he is a great man," &c., &c. He then asked Father Martini the same question. "Your Highness, he has talent; and by degrees, when he is older and more solid, he will no doubt improve, though he must first change considerably." When Vogler came back he entered the Church, was immediately appointed Court Chaplain, and composed a Miserere which all the world declares to be detestable, being full of false harmony. Hearing; that it was not much commended, he went to the Elector and complained that the orchestra played badly on purpose to vex and annoy him; in short, he knew so well how to make his game (entering into so many petty intrigues with women) that he became Vice-Capellmeister. He is a fool, who fancies that no one can be better or more perfect than himself. The whole orchestra, from the first to the last, detest him. He has been the cause of much annoyance to Holzbauer. His book is more fit to teach arithmetic than composition. He says that he can make a composer in three weeks, and a singer in six months; but we have not yet seen any proof of this. He despises the greatest masters. To myself he spoke with contempt of Bach [Johann Christian, J. Sebastian's youngest son, called the London Bach], who wrote two operas here, the first of which pleased more than the second, Lucio Silla. As I had composed the same opera in Milan, I was anxious to see it, and hearing from Holzbauer that Vogler had it, I asked him to lend it to me. "With all my heart," said he; "I will send it to you to-morrow without fail, but you won't find much talent in it." Some days after, when he saw me, he said with a sneer, "Well, did you discover anything very fine--did you learn anything from it? One air is rather good. What are the words?" asked he of some person standing near. "What air do you mean?" "Why, that odious air of Bach's, that vile--oh! yes, pupille amate. He must have written it after a carouse of punch." I really thought I must have laid hold of his pigtail; I affected, however, not to hear him, said nothing, and went away. He has now served out his time with the Elector.

The sonata for Madlle. Rosa Cannabich is finished. Last Sunday I played the organ in the chapel for my amusement. I came in while the Kyrie was going on, played the last part, and when the priest intoned the Gloria I made a cadence, so different, however, from what is usually heard here, that every one looked round in surprise, and above all Holzbauer. He said to me, "If I had known you were coming, I would have put out another mass for you." "Oh!" said I, "to puzzle me, I suppose?" Old Toeschi and Wendling stood all the time close beside me. I gave them enough to laugh at. Every now and then came a pizzicato, when I rattled the keys well; I was in my best humor. Instead of the Benedictus here, there is always a voluntary, so I took the ideas of the Sanctus and worked them out in a fugue. There they all stood making faces. At the close, after Ita missa est, I played a fugue. Their pedal is different from ours, which at first rather puzzled me, but I soon got used to it. I must now conclude. Pray write to us still at Mannheim. I know all about Misliweczeck's sonatas [see No. 64], and played them lately at Munich; they are very easy and agreeable to listen to. My advice is that my sister, to whom I humbly commend myself, should play them with much expression, taste, and fire, and learn them by heart. For these are sonatas which cannot fail to please every one, are not difficult to commit to memory, and produce a good effect when played with precision.

75.

Mannheim, Nov. 13, 1777.

Potz Himmel! Croatians, demons, witches, hags, and cross batteries! Potz Element! air, earth, fire, and water! Europe, Asia, Africa, and America! Jesuits, Augustines, Benedictines, Capucins, Minorites, Franciscans, Dominicans, Carthusians, and Knights of the Cross! privateers, canons regular and irregular, sluggards, rascals, scoundrels, imps, and villains all! donkeys, buffaloes, oxen, fools, blockheads, numskulls, and foxes! What means this? Four soldiers and three shoulder-belts! Such a thick packet and no portrait! [FOOTNOTE: The "Basle" (his cousin) had promised him her portrait. She sent it subsequently to Salzburg, where it still hangs in the Mozarteum.] I was so anxious about it--indeed, I felt sure of getting it, having yourself written long ago to say that I should have it soon, very soon. Perhaps you doubt my keeping my promise [about the ornaments--see No. 71], but I cannot think this either. So pray let me have the likeness as quickly as you can; and I trust it is taken as I entreated--in French costume.

How do I like Mannheim? As well as I can any place where my cousin is not. I hope, on the other hand, that you have at all events received my two letters--one from Hohenaltheim, and one from Mannheim--this, such as it is, being the third from here, but making the fourth in all. I must conclude, for we are just going to dinner, and I am not yet dressed. Love me as I love you, and then we shall never cease loving each other. Adieu! J'espere que vous aurez deja pris quelque lection dans la langue francaise, et je ne doute point que--ecoutez!--que vous aurez bientot le francais mieux que moi; car il y a certainement deux ans que je n'ai pas ecrit un mot de cette langue. Encore adieu! Je vous baise les mains.

76.

Mannheim, Nov. 14-16, 1777.

I, Johannes, Chrysostomus, Amadeus, Wolfgangus, Sigismundus, Mozart, plead guilty to having both yesterday and the day before (and very often besides) stayed away from home till twelve o'clock at night, from ten o'clock till the aforesaid hour, I being in the presence and company of M. Cannabich, his wife and daughter, the Herrn Schatzmeister, Ramm, and Lang, making doggerel rhymes with the utmost facility, in thought and word, but not in deed. I should not, however, have conducted myself in so reckless a manner if our ringleader, namely, the so-called Lisel (Elisabeth Cannabich), had not inveigled and instigated me to mischief, and I am bound to admit that I took great pleasure in it myself. I confess all these my sins and shortcomings from the depths of my heart; and in the hope of often having similar ones to confess, I firmly resolve to amend my present sinful life. I therefore beg for a dispensation if it can be granted; but, if not, it is a matter of indifference to me, for the game will go on all the same. Lusus enim suum habet ambitum, says the pious singer Meissner, (chap. 9, p. 24,) and also the pious Ascenditor, patron of singed coffee, musty lemonade, milk of almonds with no almonds in it, and, above all, strawberry ice full of lumps of ice, being himself a great connoisseur and artist in these delicacies.

The sonata I composed for Madlle. Cannabich I intend to write out as soon as possible on small paper, and to send it to my sister. I began to teach it to Madlle. Rose three days ago, and she has learned the allegro. The andante will give us most trouble, for it is full of expression, and must be played with accuracy and taste, and the fortes and pianos given just as they are marked. She is very clever, and learns with facility. Her right hand is very good, but the left is unhappily quite ruined. I must say that I do really feel very sorry for her, when I see her laboring away till she is actually panting for breath; and this not from natural awkwardness on her part, but because, being so accustomed to this method, she cannot play in any other way, never having been shown the right one. I said, both to her mother and herself, that if I were her regular master I would lock up all her music, cover the keys of the piano with a handkerchief, and make her exercise her right and left hand, at first quite slowly in nothing but passages and shakes, &c., until her hands were thoroughly trained; and after that I should feel confident of making her a genuine pianiste. They both acknowledged that I was right. It is a sad pity; for she has so much genius, reads very tolerably, has great natural aptitude, and plays with great feeling.

Now about the opera briefly. Holzbauer's music [for the first great German operetta, "Gunther von Schwarzburg"] is very beautiful, but the poetry is not worthy of such music. What surprises me most is, that so old a man as Holzbauer should still have so much spirit, for the opera is incredibly full of fire. The prima donna was Madame Elisabeth Wendling, not the wife of the flute-player, but of the violinist. She is in very delicate health; and, besides, this opera was not written for her, but for a certain Madame Danzi, who is now in England; so it does not suit her voice, and is too high for her. Herr Raaff, in four arias of somewhere about 450 bars, sang in a manner which gave rise to the remark that his want of voice was the principal cause of his singing so badly. When he begins an

air, unless at the same moment it recurs to your mind that this is Raaff, the old but once so renowned tenor, I defy any one not to burst out laughing. It is a fact, that in my own case I thought, if I did not know that this is the celebrated Raaff, I should be bent double from laughing, but as it is--I only take out my handkerchief to hide a smile. They tell me here that he never was a good actor; that people went to hear, but not to see him. He has by no means a pleasing exterior. In this opera he was to die, singing in a long, long, slow air; and he died laughing! and towards the end of the aria his voice failed him so entirely that it was impossible to stand it! I was in the orchestra next Wendling the flute-player, and as he had previously criticized the song, saying it was unnatural to sing so long before dying, adding, "I do think he will never die!" I said in return, "Have a little patience; it will soon be all over with him, for I can hear he is at the last gasp!" "And I too," said he, laughing. The second singer, Madlle. Strasserin, sang very well, and is an admirable actress.

There is a national stage here, which is permanent like that at Munich; German operettas are sometimes given, but the singers in them are wretched. Yesterday I dined with the Baron and Baroness von Hagen, Oberstjagermeister here. Three days ago I called on Herr Schmalz, a banker, to whom Herr Herzog, or rather Nocker and Schidl, had given me a letter. I expected to have found a very civil good sort of man. When I gave him the letter, he read it through, made me a slight bow, and said nothing. At last, after many apologies for not having sooner waited on him, I told him that I had played before the Elector. "Really!" Altum silentium. I said nothing, he said nothing. At last I began again: "I will no longer intrude on you. I have the honor to"--Here he interrupted me. "If I can be of any service to you, I beg"--"Before I leave this I must take the liberty to ask you"--"Not for money?" "Yes, if you will be so good as to"--"Oh! that I can't do; there is nothing in the letter about money. I cannot give you any money, but anything else"--"There is nothing else in which you can serve me--nothing whatever. I have the honor to take my leave." I wrote the whole history yesterday to Herr Herzog in Augsburg. We must now wait here for the answer, so you may still write to us at Mannheim. I kiss your hand, and am your young brother and father, as in your last letter you say "I am the old man and son." To-day is the 16th when I finish this, or else you will not know when it was sent off. "Is the letter ready?" "Yes, mamma, here it is!"

77.

Mannheim, Nov. 20, 1777.

The gala began again yesterday [in honor of the Elector's name-day]. I went to hear the mass, which was a spick-and-span new composition of Vogler's. Two days ago I was present at the rehearsal in the afternoon, but came away immediately after the Kyrie. I never in my life heard anything like it; there is often false harmony, and he rambles into the different keys as if he wished to drag you into them by the hair of your head; but it neither repays the trouble, nor does it possess any originality, but is only quite abrupt. I shall say nothing of the way in which he carries out his ideas. I only say that no mass of Vogler's can possibly please any composer (who deserves the name). For example, I suddenly hear an idea which is NOT BAD. Well, instead of remaining NOT BAD, no doubt it soon becomes good? Not at all! it becomes not only BAD, but VERY BAD, and this in two or three different ways: namely, scarcely has the thought arisen when something else interferes to destroy it; or he does not finish it naturally, so that it may remain good; or it is not introduced in the right place; or it is finally ruined by bad instrumentation. Such is Vogler's music.

Cannabich composes far better than when we knew him in Paris, but what both mamma and I remarked here at once in the symphonies is, that one begins just like another, always slow and unisono. I must now, dear papa, write you something about the Holy Cross in Augsburg, which I have always forgotten to do. I met with a great many civilities there, and the Prelate is the most good-natured man in the world--a kind, worthy old simpleton, who may be carried off at any moment, for his breath fails sadly. He recently--in fact, the very day we left--had an attack of paralysis. He, and the Dean and Procurator, begged us when we came back to Augsburg to drive straight to the Holy Cross. The Procurator is as jolly as Father Leopold at Seeon. [FOOTNOTE: A cloister in Lower Bavaria, that Wolfgang often visited with his father, as they had a dear friend there, Father Johannes.] My cousin told me beforehand what kind of man he was, so we soon became as well acquainted as if we had known each other for twenty years. I lent him the mass in F, and the first of the short masses in C, and the offertorium in counterpoint in D minor. My fair cousin has undertaken to be custodian of these. I got back the offertorium punctually, having desired that it should be returned first. They all, and even the Prelate, plagued me to give them a litany, De venerabili. I said I had not got it with me. I really was by no means sure; so I searched, but did not find it. They gave me no peace, evidently thinking that I only wished to evade their request; so I said, "I really have not the litany with me; it is at Salzburg. Write to my father; it is his affair. If he chooses to give it to you, well and good; if not, I have nothing to do with it." A letter from the Deacon to you will therefore probably soon make its appearance. Do just as you please, but if you do send him one, let it be the last in E flat; they have voices enough for anything, and a great many people will be assembled at that time; they even write for them to come from a distance, for it is their greatest festival. Adieu!

78.

Mannheim, Nov. 22, 1777.

THE first piece of information that I have to give you is, that my truthful letter to Herr Herzog in Augsburg, puncto Schmalzii, has had a capital effect. He wrote me a very polite letter in return, expressing his annoyance that I should have been received so uncourteously by detto Schmalz [melted butter]; so he herewith sent me a sealed letter to detto Herr Milk, with a bill of exchange for 150 florins on detto Herr Cheese. You must know that, though I only saw Herr Herzog once, I could not resist asking him to send me a draft on Herr Schmalz, or to Herrn Butter, Milk, and Cheese, or whom he would--a ca! This joke has succeeded; it is no good making a poor mouth!

We received this forenoon (the 21st) your letter of the 17th. I was not at home, but at Cannabich's, where Wendling was rehearsing a concerto for which I have written the orchestral accompaniments. To-day at six o'clock the gala concert took place. I had the pleasure of hearing Herr Franzl (who married a sister of Madame Cannabich's) play a concerto on the violin; he pleased me very much. You know that I am no lover of mere difficulties. He plays difficult music, but it does not appear to be so; indeed, it seems as if one could easily do the same, and this is real talent. He has a very fine round tone, not a note wanting, and everything distinct and well accentuated. He has also a beautiful staccato in bowing, both up and down, and I never heard such a double shake as his. In short, though in my opinion no WIZARD, he is a very solid violin-player.--I do wish I could conquer my confounded habit of writing crooked.

I am sorry I was not at Salzburg when that unhappy occurrence took place about Madame Adlgasserin, so that I might have comforted her; and that I would have done--particularly being so handsome a woman. [Footnote: Adlgasser was the organist of the cathedral. His wife was thought very stupid. See the letter of August 26, 1781.] I know already all that you write to me about Mannheim, but I never wish to say anything prematurely; all in good time. Perhaps in my next letter I may tell you of something VERY GOOD in your eyes, but only GOOD in mine; or something you will think VERY BAD, but I TOLERABLE; possibly, too, something only TOLERABLE for you, but VERY GOOD, PRECIOUS, and DELIGHTFUL for me! This sounds rather oracular, does it not? It is ambiguous, but still may be divined.

My regards to Herr Bullinger; every time that I get a letter from you, usually containing a few lines from him, I feel ashamed, as it reminds me that I have never once written to my best and truest friend, from whom I have received so much kindness and civility. But I cannot try to excuse myself. I only beg of him to do so for me as far as possible, and to believe that, as soon as I have a little leisure, I will write to him--as yet I have had none; for from the moment I know that it is even possible or probable that I may leave a place, I have no longer a single hour I can call my own, and though I have now a glimmer of hope, still I shall not be at rest till I know how things are. One of the oracle's sayings must come to pass. I think it will be the middle one or the last--I care not which, for at all events it will be something settled.

I no doubt wrote to you that Holzbauer's grand opera is in German. If not, I write it now. The title is "Gunther von Schwarzburg," but not our worshipful Herr Gunther, barber and councillor at Salzburg! "Rosamunde" is to be given during the ensuing Carnival, the libretto being a recent composition of Wieland's, and the music also a new composition of Herr Schweitzer. Both are to come here. I have already seen some parts of the opera and tried it over on the piano, but I say nothing about it as yet. The target you have had painted for me, to be given in my name to the shooting-match, is first-rate, and the verses inimitable. [Footnote: For cross-bow practice, attended weekly by a circle of his Salzburg friends. On the target was represented "the melancholy farewell of two persons dissolved in tears, Wolfgang and the 'Basle.'"] I have now no more to write, except that I wish you all a good night's rest, and that you may all sleep soundly till this letter comes to wake you. Adieu! I embrace from my heart--cart, my dear sister--blister, and am your dutiful and attached son,

WOLFGANG AMADE MOZART,

Knight of the Golden Spur, Member of the great Verona Academy, Bologna--oui, mon ami!

79.

Mannheim, Nov. 26, 1777. --MOREOVER, every one acquainted with Mannheim, even the nobility, advised me to come here. The reason why we are still in this place is that I have some thoughts of remaining the winter here, and I am only waiting for an answer from the Elector to decide my plans. The Intendant, Count Savioli, is a very worthy gentleman, and I told him to inform the Elector

that, this being such severe weather for travelling, I am willing to remain here to teach the young Count [Carl Theodor's son]. He promised me to do his best for me, but said that I must have patience till the gala days were over. All this took place with the consent and at the SUGGESTION of Cannabich. When I told him that I had spoken to Savioli and what I had said, he replied he really thought it was more likely to be brought about than not. Indeed, Cannabich spoke to the Elector on the subject before the Count did so; and now I must wait to hear the result. I am going to call on Herr Schmalz to draw my 150 florins, for my landlord would no doubt prefer the sound of gold to that of music. I little thought that I should have the gift of a watch here, [see No. 74,] but such is again the case. I would have been off long ago, but every one says to me, "Where do you intend to go for the winter? Travelling is detestable in such weather; stay here." Cannabich also wishes it very much; so now I have taken steps to do so, and as such an affair cannot be hurried, I must wait with patience, and I hope soon to be able to send you good news. I have already two pupils certain, besides the ARCH ones, who certainly won't give me less than a louis each monthly. Without these I could not indeed manage to remain. Now let the matter rest as it is, or as it may be, what avail useless speculations? What is to occur we do not know; still in so far we do! what God wills!

Now for a cheerful allegro--non siete si pegro. [Footnote: "Don't be so desponding."] If we do leave this, we shall go straight to--where? To Weilburg, or whatever the name of the place may be, to the Princess, sister of the Prince of Orange, whom we knew so well at the Hague. There we shall stay--N. B., so long as we like the officers' table, and no doubt receive at least six louis-d'or.

A few days ago Herr Sterkel came here from Wurzburg. The day before yesterday, the 24th, I dined with Cannabich's, and again at Oberstjager von Hagen's, and spent the evening al solito with Cannabich, where Sterkel joined us, [Footnote: Abbe Sterkel, a favorite composer and virtuoso on the piano, whom Beethoven, along with Simrock, Ries, and the two Rombergs, visited in the autumn of 1791, in Aschaffenberg.] and played five duets [sonatas with violin], but so quick that it was difficult to follow the music, and neither distinctly nor in time. Every one said the same. Madlle. Cannabich played my six sonatas, and in fact better than Sterkel. I must now conclude, for I cannot write in bed, and I am too sleepy to sit up any longer.

80.

Mannheim, Nov. 29, 1777.

I RECEIVED this morning your letter of the 24th, and perceive that you cannot reconcile yourself to the chances of good or bad fortune, if, indeed, the latter is to befall us. Hitherto, we four have neither been very lucky nor very unlucky, for which I thank God. You make us many reproaches which we do not deserve. We spend nothing but what is absolutely necessary, and as to what is required on a journey, you know that as well or better than we do. No one BUT MYSELF has been the cause of our remaining so long in Munich; and had I been alone I should have stayed there altogether. Why were we fourteen days in Augsburg? Surely you cannot have got my letters from there? I wished to give a concert. They played me false, so I thus lost eight days. I was absolument determined to go away, but was not allowed, so strong was the wish that I should give a concert. I wished to be urged to do so, and I was urged. I gave the concert; this accounts for the fourteen days. Why did we go direct to Mannheim? This I answered in my last letter. Why are we still here? How can you suppose that I would stay here without good cause? But my father, at all events, should--Well! you shall hear my reasons and the whole course of the affair; but I had quite resolved not to write to you on the subject until I could say something decided, (which even yet I cannot do,) on purpose to avoid causing you care and anxiety, which I always strive to do, for I knew that uncertain intelligence would only fret you. But when you ascribe this to my negligence, thoughtlessness, and indolence, I can only regret your having such an opinion of me, and from my heart grieve that you so little know your son. I am not careless, I am only prepared for the worst; so I can wait and bear everything patiently, so long as my honor and my good name of Mozart remain uninjured. But if it must be so, so let it be. I only beg that you will neither rejoice nor lament prematurely; for whatever may happen, all will be well if we only have health; for happiness exists--merely in the imagination.

Last Thursday week I went in the forenoon to wait on Count Savioli, and asked him if it were possible to induce the Elector to keep me here this winter, as I was anxious to give lessons to his children. His answer was, "I will suggest it to the Elector, and if it depends on me, the thing will certainly be done." In the afternoon I went to Cannabich's, and as I had gone to Savioli by his advice, he immediately asked me if I had been there. I told him everything, on which he said, "I should like you very much to spend the winter with us, but still more to see you in some permanent situation." I replied, "I could wish nothing better than to be settled near you, but I don't see how it is possible. You have already two Capellmeisters, so I don't know what I could have, for I would not be subordinate to Vogler." "That you would never be," said he. "Here not one of the orchestra is under the Capellmeister, nor even under the Intendant. The Elector might appoint you Chamber Court composer; only wait a little, and I will speak to Count Savioli on the subject." On the Thursday after there was a grand concert. When the Count saw me, he apologized for not having yet spoken to

the Elector, these being still gala days; but as soon as they were over (next Monday) he would certainly speak to his Royal Highness. I let three days pass, and, still hearing nothing whatever, I went to him to make inquiries. He said, "My good M. Mozart, (this was yesterday, Friday,) today there was a chasse, so it was impossible for me to ask the Elector, but to-morrow at this hour I will certainly give you an answer." I begged him not to forget it. To tell you the truth, when I left him I felt rather indignant, so I resolved to take with me the easiest of my six variations of the Fischer minuet, (which I wrote here for this express purpose,) to present to the young Count, in order to have an opportunity to speak to the Elector myself. When I went there, you cannot conceive the delight of the governess, by whom I was most politely received. When I produced the variations, and said that they were intended for the young Count, she said, "Oh! that is charming, but I hope you have something for the Countess also." "Nothing as yet," said I, "but if I stay here long enough to have time to write something I will do so." "A propos," said she, "I am so glad that you stay the winter here." "I? I have not heard a word of it." "That does surprise me; how very odd! for the Elector told me so himself lately; he said, 'By the by, Mozart remains here all winter.'" "Well, when he said so, he was the only man who could say so, for without the Elector I of course cannot remain here;" and then I told her the whole story. We agreed that I should come the next day (that is, to-day) at four o'clock, and bring some piece of music for the Countess. She was to speak to the Elector before I came; and I should be certain to meet him. I went today, but he had not been there at all; but I shall go again to-morrow. I have written a Rondo for the Countess. Have I not then sufficient cause to stay here and await the result? As this important step is finally taken, ought I at this moment to set off? I have now an opportunity of speaking to the Elector myself. I shall most probably spend the winter here, for I am a favorite with his Royal Highness, who thinks highly of me, and knows what I can do. I hope to be able to give you good news in my next letter. I entreat you once more neither to rejoice nor to be uneasy too soon, and not to confide the affair to any one except Herr Bullinger and my sister. I send my sister the allegro and the andante of the sonata I wrote for Madlle. Cannabich. The Rondo will follow shortly; the packet would have been too heavy had I sent it with the others. You must be satisfied with the original, for you can more easily get it copied for six kreutzers a sheet than I for twenty-four. Is not that dear? Adieu! Possibly you have heard some stray bits of this sonata; for at Cannabich's it is sung three times a day at least, played on the piano and violin, or whistled--only sotto voce, to be sure.

81.

Mannheim, Dec. 3, 1777.

I CAN still write nothing certain about my fate here. Last Monday, after going three days in succession to my ARCH pupils, morning and afternoon, I had the good fortune at last to meet the Elector. We all, indeed, thought that I had again come in vain, as it was so late in the day, but at length we saw him coming. The governess made the Countess seat herself at the piano, and I placed myself beside her to give her a lesson, and it was thus the Elector found us on entering. We rose, but he desired us to continue the lesson. When she had finished playing, the governess addressed him, saying that I had written a beautiful Rondo. I played it, and it pleased him exceedingly. At last he said, "Do you think that she will be able to learn it?" "Oh! yes," said I; "I only wish I had the good fortune to teach it to her myself." He smiled, and said, "I should also like it; but would it not be prejudicial to her to have two masters?" "Oh, no! your Highness," said I; "it all depends on whether she has a good or a bad one. I hope your Highness will place trust and confidence in me." "Oh, assuredly," said he. The governess then said, "M. Mozart has also written these variations on the Fischer minuet for the young Count." I played them, and he seemed to like them much. He now began to jest with the Countess. I thanked him for his present of a watch. He said, "I must reflect on your wish; how long do you intend to remain here?" My answer was, "As long as your Highness commands me to do so;" and then the interview was at an end. I went there again this morning, and was told that the Elector had repeated yesterday, "Mozart stays here this winter." Now I am fairly in for it; so you see I must wait.

I dined to-day (for the fourth time) with Wendling. Before dinner, Count Savioli came in with Capellmeister Schweitzer, who arrived yesterday evening. Savioli said to me, "I spoke again yesterday to the Elector, but he has not yet made up his mind." I answered, "I wish to say a few words to you privately;" so we went to the window. I told him the doubt the Elector had expressed, and complained of the affair dragging on so long, and said how much I had already spent here, entreating him to persuade the Elector to engage me permanently; for I fear that he will give me so little during the winter that it will be impossible for me to remain. "Let him give me work; for I like work." He said he would certainly suggest it to him, but this evening it was out of the question, as he was not to go to court; to-morrow, however, he promised me a decided answer. Now, let what will happen. If he does not engage me, I shall, at all events, apply for a sum of money for my travelling expenses, as I have no intention to make him a present of the Rondo and the variations. I assure you I am very easy on the subject, because I feel quite certain that, come what may, all will go right. I am entirely submissive to the will of God.

Your letter of the 27th arrived yesterday, and I hope you received the allegro and andante of the sonata. I now enclose the Rondo. Schweitzer is a good, worthy, upright man, dry and candid like our Haydn; only his mode of speaking is more polished. There are some very beautiful things in his new opera, and I don't doubt that it will prove a great success. "Alceste" is much liked, and yet it is not half so fine as "Rosamunde." Being the first German operetta no doubt contributed very much to its popularity; but now--N. B., on minds chiefly attracted by novelty--it scarcely makes the same impression. Herr Wieland, whose poetry it is, is also to come here this winter. That is a man I should indeed like to see. Who knows? Perhaps I may. When you read this, dear papa, please God, all will be settled.

If I do stay here, I am going to Paris during Lent with Herr Wendling, Herr Ramm, the hautboy-player, who plays admirably, and Ballet-master Cauchery. Wendling assures me I shall never regret it; he has been twice in Paris, and has only just returned from there. He says, "It is, in fact, the only place where either real fame or money is to be acquired. You are a man of genius; I will put you on the right path. You must write an opera seria and comique, an oratorio, and every kind of thing. Any one who composes a couple of operas in Paris receives a certain sum yearly. There is also the Concert Spirituel and the Academie des Amateurs, where you get five louis-d'or for a symphony. If you teach, the custom is three louis-d'or for twelve lessons; and then you get your sonatas, trios, and quartets published by subscription. Cannabich and Toeschi send a great part of their music to Paris." Wendling is a man who understands travelling. Write me your opinion of this scheme, I beg; it seems to me both wise and profitable. I shall travel with a man who knows all the ins and outs of Paris (as it now is) by heart, for it is very much changed. I should spend very little--indeed, I believe not one half of what I do at present, for I should only have to pay for myself, as mamma would stay here, and probably with the Wendlings.

On the 12th of this month, Herr Ritter, who plays the bassoon beautifully, sets off for Paris. If I had been alone, this would have been a famous opportunity for me; indeed, he spoke to me himself about it. Ramm (hautboy-player) is a good, jolly, worthy man, about thirty-five, who has travelled a great deal, so has much experience. The first and best musicians here like me very much, and respect me too. They always call me Herr Capellmeister. I cannot say how much I regret not having at least the copy of a mass with me, for I should certainly have had it performed, having lately heard one of Holzbauer's, which is also in our style. If I had only a copy of the Misericordias! But so it is, and it can't be helped now. I would have had one transcribed here, but copying does cost so much. Perhaps I should not have got as much for the mass itself as I must have paid for the copy. People here are by no means so very liberal.

82.

Mannheim, Dec. 6, 1777.

I CAN tell you nothing certain yet. I begin to be rather tired of this joke; I am only curious to know the result. Count Savioli has spoken three times to the Elector, and the answer was invariably a shrug of the shoulders, and "I will give you an answer presently, but--I have not yet made up my mind." My kind friends here quite agree with me in thinking that this hesitation and reserve are rather a favorable omen than the reverse. For if the Elector was resolved not to engage me, he would have said so at once; so I attribute the delay to Denari siamo un poco scrocconi [we are a little stingy of our money]. Besides, I know for certain that the Prince likes me; a buon canto, so we must wait. I may now say that it will be very welcome to me if the affair turns out well; if not, I shall much regret having lingered here so long and spent so much money. At all events, whatever the issue may be, it cannot be an evil one if it be the will of God; and my daily prayer is that the result may be in accordance with it. You have indeed, dear papa, rightly guessed the chief cause of Herr Cannabich's friendship for me. There is, however, another small matter in which he can make use of me--namely, he is obliged to publish a collection of all his ballets arranged for the piano. Now, he cannot possibly write these out himself in such a manner that the work may be correct and yet easy. For this purpose I am very welcome to him; (this was the case already with one of his contredanses.) He has been out shooting for the last week, and is not to return till next Tuesday. Such things contribute, indeed, very much to our good friendship; but, independent of this, he would at least never be inimical to me, for he is very much changed. When a man comes to a certain age, and sees his children grown up, he then no doubt thinks a little differently. His daughter, who is fifteen, and his eldest child, is a very pretty, pleasing girl. She has great good sense for her age, and an engaging demeanor; she is rather grave and does not talk much, but what she does say is always amiable and good-natured. She caused me most indescribable pleasure yesterday, by playing my sonata in the most admirable manner. The andante (which must not be played QUICK) she executed with the greatest possible feeling; and she likes to play it. You know that I finished the first allegro when I had been only two days here, and that I had then only seen Madlle. Cannabich once. Young Danner asked me how I intended to compose the andante. "Entirely in accordance with Madlle. Rose's character,"

said I. When I played it, it seemed to please much. Danner mentioned afterwards what I had said. And it is really so; she is just what the andante is. To-day I dined for the sixth time with Wendling, and for the second time in the company of Herr Schweitzer. To-morrow, by way of a change, I dine there again; I actually have my board there. I must now go to bed, so I wish you good-night.

I have this moment returned from Wendling's, and as soon as I have posted this letter I am going back there, for the opera is to be rehearsed in camera caritatis, as it were. I am going to Cannabich's afterwards, at half-past six o'clock, to give my usual daily music-lesson. A propos, I must correct a statement of mine. I said yesterday that Madlle. Cannabich was fifteen; it seems, however, that she is only just thirteen. Our kind regards to all our friends, especially to Herr Bullinger.

83.

Mannheim, Dec. 10, 1777.

ALL is at an end, for the present, with the Elector. I went to the court concert the day before yesterday, in the hope of getting an answer. Count Savioli evidently wished to avoid me; but I went up to him. When he saw me he shrugged his shoulders. "What!" said I, "still no answer?" "Pardon me!" said he, "but I grieve to say nothing can be done." "Eh, bien!" said I, "the Elector might have told me so sooner!" "True," said he, "but he would not even now have made up his mind, if I had not driven him to it by saying that you had already stayed here too long, spending your money in a hotel." "Truly, that is what vexes me most of all," I replied; "it is very far from pleasant. But, at all events, I am very much indebted to you, Count, (for he is not called "your Excellency,") for having taken my part so zealously, and I beg you will thank the Elector from me for his gracious, though somewhat tardy information; and I can assure him that, had he accepted my services, he never would have had cause to regret it." "Oh!" said he, "I feel more convinced of that than perhaps you think." When I told Herr Wendling of the final decision, he colored and said, quite indignantly, "Then we must find the means; you must, at least, remain here for the next two months, and after that we can go together to Paris. To-morrow Cannabich returns from shooting, and then we can talk further on the subject." I left the concert immediately, and went straight to Madame Cannabich. On my way thither, Herr Schatzmeister having come away from the concert with me, I told him all about it, as he is a good worthy man and a kind friend of mine. You cannot conceive how angry he was. When we went into Madame Cannabich's house, he spoke first, saying, "I bring you a man who shares the usual happy fate of those who have to do with courts." "What!" said Madame, "so it has all come to nothing?" I told her the whole, and in return they related to me numbers of similar things which had occurred here. When Madlle. Rose (who was in the third room from us, busy with the linen) had finished, she came in and said to me, "Do you wish me to begin now?" as it was the hour for her lesson. "I am at your orders," said I. "Do you know," said she, "that I mean to be very attentive to-day?" "I am sure you will," answered I, "for the lessons will not continue much longer." "How so? What do you mean?--Why?" She turned to her mamma, who told her. "What!" said she, "is this quite certain? I cannot believe it." "Yes--yes; quite certain," said I. She then played my sonata, but looked very grave. Do you know, I really could not suppress my tears; and at last they had all tears in their eyes--mother, daughter, and Schatzmeister, for she was playing the sonata at the moment, which is the favorite of the whole family. "Indeed," said Schatzmeister, "if the Herr Capellmeister (I am never called anything else here) leaves us, it will make us all weep." I must say that I have very kind friends here, for it is under such circumstances that we learn to know them; for they are so, not only in words but in deeds. Listen to this! The other day I went, as usual, to dine with Wendling, when he said to me, "Our Indian friend (a Dutchman, who lives on his own means, and is an amateur of all the fine arts, and a great friend and admirer of mine) is certainly an excellent fellow. He will give you twenty florins to write for him three little easy short concertos, and a couple of quattros for a leading flute. Cannabich can get you at least two pupils, who will play well; and you could write duets for the piano and violin, and publish them by subscription. Dinner and supper you will always have with us, and lodgings you have at the Herr Hofkammerrath's; so all this will cost you nothing. As for your mother, we can easily find her a cheap lodging for these two months, till you have had time to write about the matter to your father, when she will leave this for Salzburg and we for Paris." Mamma is quite satisfied; so all that is yet wanting is your consent, of which I feel so sure that, if the time for our journey were now come, I would set off for Paris without waiting for your reply; for I could expect nothing else from a sensible father, hitherto so anxious for the welfare of his children. Herr Wendling, who sends you his compliments, is very intimate with our dear friend Grimm, who, when he was here, spoke a great deal about me to Wendling; this was when he had just come from us at Salzburg. As soon as I receive your answer to this letter, I mean to write to him, for a stranger whom I met at dinner to-day told me that Grimm was now in Paris. As we don't leave this till the 8th of March, I beg you, if possible, to try to procure for me, either through Herr Mesmer at Vienna, or some one else, a letter to the Queen of France, if it can be done without much difficulty; if not, it does not much matter. It would be better if I could have one--of that there is no doubt; this is also the advice of Herr Wendling. I suppose what I am now writing must appear very strange to you, because you are in a city where there are only stupid enemies, and weak and simple friends, whose dreary daily bread at Salzburg is so essential to them, that they become

flatterers, and are not to be depended on from day to day. Indeed, this was why I wrote you nothing but childish nonsense, and jokes, and folly; I wished to await the event here, to save you from vexation, and my good friends from blame; for you very unwarrantably accuse them of working against me in an underhand way, which they certainly never did. Your letters obliged me to relate the whole affair to you. I entreat you most earnestly not to distress yourself on the subject; God has willed it so. Reflect also on this most undoubted truth, that we cannot do all we wish. We often think that such and such a thing would be very good, and another equally bad and evil, and yet if these things came to pass, we should sometimes learn that the very reverse was the case.

I must now go to bed. I shall have plenty of work to do during the two months of my stay,--three concertos, two quartets, five or six duets for the piano, and I also have thoughts of composing a new grand mass, and dedicating it to the Elector. Adieu! I will write to Prince Zeill next post-day to press forward matters in Munich; if you would also write to him, I should be very glad. But short and to the point--no cringing! for that I cannot bear. It is quite certain that he can do it if he likes, for all Munich told me so [see Nos. 56 and 60].

84.

Mannheim, Dec. 14, 1777.

I CAN only write a few words, as I did not get home till four o'clock, when I had a lesson to give to the young lady of the house. It is now nearly half-past five, so time to close my letter. I will ask mamma to write a few days beforehand, so that all our news may not be of the same date, for I can't easily do this. The little time that I have for writing must be devoted to composition, for I have a great deal of work before me. I entreat you to answer me very soon as to my journey to Paris. I played over my concertone on the piano to Herr Wendling, who said it was just the thing for Paris; if I were to play that to Baron Bach, he would be in ecstasies. Adieu!

85.

[A P.S. TO A LETTER FROM HIS MOTHER.]

Mannheim, Dec. 18, 1777.

IN the greatest haste and hurry! The organ that was tried to-day in the Lutheran church is very good, not only in certain registers, but in its whole compass. [Footnote: The mother writes: "A Lutheran of degree called on us to-day, and invited Wolfgang, with all due politeness, to try their new organ."] Vogler played on it. He is only a juggler, so to speak; as soon as he wishes to play in a majestic style, he becomes dull. Happily this seems equally tedious to himself, so it does not last long; but then, what follows? only an incomprehensible scramble. I listened to him from a distance. He began a fugue, in chords of six notes, and presto. I then went up to him, for I would far rather see than hear him. There were a great many people present, and among the musicians Holzbauer, Cannabich, Toeschi, &c.

A quartet for the Indian Dutchman, that true benefactor of man, will soon be finished. A propos, Herr told me that he had written to you by the last post. Addio! I was lately obliged to direct the opera with some violins at Wendling's, Schweitzer being unwell.

86.

Mannheim, Dec. 20, 1777.

I WISH you, dearest papa, a very happy new-year, and that your health, so precious in my eyes, may daily improve, for the benefit and happiness of your wife and children, the satisfaction of your true friends, and for the annoyance and vexation of your enemies. I hope also that in the coming year you will love me with the same fatherly tenderness you have hitherto shown me. I on my part will strive, and honestly strive, to deserve still more the love of such an admirable father. I was cordially delighted with your last letter of the 15th of December, for, thank God! I could gather from it that you are very well indeed. We, too, are in perfect health, God be praised! Mine is not likely to fail if constant work can preserve it. I am writing this at eleven at night, because I have no other leisure time. We cannot very well rise before eight o'clock, for in our rooms (on the ground-floor) it is not light till half-past eight. I then dress quickly; at ten o'clock I sit down to compose till twelve or half-past twelve, when I go to Wendling's, where I generally write till half-past one; we then dine. At three o'clock I go to the Mainzer Hof (an hotel) to a Dutch officer, to give him lessons in galanterie playing and thorough bass, for which, if I mistake not, he gives me four ducats for twelve lessons. At four o'clock I go home to teach the daughter of the house. We never begin till half past four, as we wait for lights. At six o'clock I go to Cannabich's to instruct

Madlle. Rose. I stay to supper there, when we converse and sometimes play; I then invariably take a book out of my pocket and read, as I used to do at Salzburg. I have already written to you the pleasure your last letter caused me, which is quite true; only one thing rather vexed me, the inquiry whether I had not perchance forgotten to go to confession. I shall not say anything further on this. Only allow me to make you one request, which is, not to think so badly of me. I like to be merry, but rest assured that I can be as serious as any one. Since I quitted Salzburg (and even in Salzburg) I have met with people who spoke and acted in a way that I should have felt ashamed to do, though they were ten, twenty, and thirty years older than myself. I implore of you therefore once more, and most earnestly, to have a better opinion of me.

87.

Mannheim, Dec. 27, 1777.

A PRETTY sort of paper this! I only wish I could make it better; but it is now too late to send for any other. You know, from our previous letters, that mamma and I have a capital lodging. It never was my intention that she should live apart from me; in fact, when the Hofkammerrath Serrarius so kindly offered me his house, I only expressed my thanks, which is by no means saying yes. The next day I went to see him with Herr Wendling and M. de Jean (our worthy Dutchman), and only waited till he should himself begin the subject. At length he renewed his offer, and I thanked him in these words: "I feel that it is a true proof of friendship on your part to do me the honor to invite me to live in your house; but I regret that unfortunately I cannot accept your most kind proposal. I am sure you will not take it amiss when I say that I am unwilling to allow my mother to leave me without sufficient cause; and I certainly know no reason why mamma should live in one part of the town and I in another. When I go to Paris, her not going with me would be a considerable pecuniary advantage to me, but here for a couple of months a few gulden more or less do not signify."

By this speech my wish was entirely fulfilled,--that is, that our board and lodging do not at all events make us poorer. I must go up-stairs to supper, for we have now chatted till half-past ten o'clock. I lately went with my scholar, the Dutch officer, M. de la Pottrie, into the Reformed church, where I played for an hour and a half on the organ. It came right from my heart too. We--that is, the Cannabichs, Wendlings, Serrariuses, and Mozarts--are going to the Lutheran Church, where I shall amuse myself gloriously on the organ. I tried its tone at the same rehearsal that I wrote to you about, but played very little, only a prelude and a fugue.

I have made acquaintance with Herr Wieland. He does not, however, know me as I know him, for he has heard nothing of me as yet. I had not at all imagined him to be what I find him. He speaks in rather a constrained way, and has a childish voice, his eyes very watery, and a certain pedantic uncouthness, and yet at times provokingly condescending. I am not, however, surprised that he should choose to behave in this way at Mannheim, though no doubt very differently at Weimar and elsewhere, for here he is stared at as if he had fallen from the skies. People seem to be so ceremonious in his presence, no one speaks, all are as still as possible, striving to catch every word he utters. It is unlucky that they are kept so long in expectation, for he has some impediment in his speech which causes him to speak very slowly, and he cannot say six words without pausing. Otherwise he is, as we all know, a man of excellent parts. His face is downright ugly and seamed with the small-pox, and he has a long nose. His height is rather beyond that of papa.

You need have no misgivings as to the Dutchman's 200 florins. I must now conclude, as I should like to compose for a little time. One thing more: I suppose I had better not write to Prince Zeill at present. The reason you no doubt already know, (Munich being nearer to Salzburg than to Mannheim,) that the Elector is at the point of death from small-pox. This is certain, so there will be a struggle there. Farewell! As for mamma's journey home, I think it could be managed best during Lent, by her joining some merchants. This is only my own idea; but what I do feel quite sure of is, that whatever you think right will be best, for you are not only the Herr Hofcapellmeister, but the most rational of all rational beings. If you know such a person as papa, tell him I kiss his hands 1000 times, and embrace my sister from my heart, and in spite of all this scribbling I am your dutiful son and affectionate brother.

88.

Mannheim, Jan. 7, 1778.

I HOPE you are both well. I am, thank God! in good health and spirits. You may easily conceive my sorrow at the death of the Elector of Bavaria. My sole wish is that our Elector here may have the whole of Bavaria, and transfer himself to Munich. I think you also would like this. This forenoon at twelve o'clock, Carl Theodor was proclaimed at court Duke of Bavaria. At Munich, Count

Daun, Oberststallmeister, immediately on the death of the Prince, received homage in the name of the Elector, and sent the dragoons to ride all round the environs of the city with trumpets and kettledrums, and to shout "Long live our Elector, Carl Theodor!" If all goes well, as I hope it may, Count Daun will receive a very handsome present. His aid-de-camp, whom he dispatched here with the tidings, (his name is Lilienau,) got 3000 florins from the Elector.

89.

Mannheim, Jan 10, 1778

YES, indeed! I also wish that from my heart. [Footnote: In the mother's letter, she had written, "May God grant us the blessing of peace"' for there was much talk about the invasion of Bavaria by the Prussians and Austrians, on account of the succession.] You have already learned my true desire from my last letter. It is really high time that we should think of mamma's journey home, for though we have had various rehearsals of the opera, still its being performed is by no means certain, and if it is not given, we shall probably leave this on the 15th of February. When that time arrives, (after receiving your advice on the subject,) I mean to follow the opinions and habits of my fellow-travellers, and, like them, order a suit of black clothes, reserving the laced suit for Germany, as it is no longer the fashion in Paris. In the first place, it is an economy, (which is my chief object in my Paris journey,) and, secondly, it wears well and suits both country and town. You can go anywhere with a black coat. To-day the tailor brought Herr Wendling his suit. The clothes I think of taking with me are my puce-brown spagnolet coat, and the two waistcoats.

Now for something else. Herr Wieland, after meeting me twice, seems quite enchanted with me. The last time, after every sort of eulogium, he said, "It is really fortunate for me having met you here," and pressed my hand. To-day "Rosamunde" has been rehearsed in the theatre; it is well enough, but nothing more, for if it were positively bad it could not be performed, I suppose,--just as some people cannot sleep without lying in a bed! But there is no rule without an exception, and I have seen an instance of this; so good night! Now for something more to the purpose. I know for certain that the Emperor intends to establish a German opera in Vienna, and is eagerly looking out for a young Capellmeister who understands the German language, and has genius, and is capable of bringing something new into the world. Benda at Gotha has applied, but Schweitzer is determined to succeed. I think it would be just the thing for me, but well paid of course. If the Emperor gives me 1000 gulden, I will write a German opera for him, and if he does not choose to give me a permanent engagement, it is all the same to me. Pray write to every kind friend you can think of in Vienna, that I am capable of doing credit to the Emperor. If he will do nothing else, he may at least try me with an opera, and as to what may occur hereafter I care not. Adieu! I hope you will put the thing in train at once, or some one may forestall me.

90.

Mannheim, Jan. 17, 1778.

NEXT Wednesday I am going for some days to Kirchheim-Boland, the residence of the Princess of Orange. I have heard so much praise of her here, that at last I have resolved to go. A Dutch officer, a particular friend of mine, [M. de la Pottrie,] was much upbraided by her for not bringing me with him when he went to offer his new-year's congratulations. I expect to receive at least eight louis-d'or, for as she has a passionate admiration of singing, I have had four arias copied out for her. I will also present her with a symphony, for she has a very nice orchestra and gives a concert every day. Besides, the copying of the airs will not cost me much, for a M. Weber who is going there with me has copied them. He has a daughter who sings admirably, and has a lovely pure voice; she is only fifteen. [Footnote: Aloysia, second daughter of the prompter and theatrical copyist, Weber, a brother of Carl Maria von Weber's father.] She fails in nothing but in stage action; were it not for that, she might be the prima donna of any theatre. Her father is a downright honest German who brings up his children well, for which very reason the girl is persecuted here. He has six children,--five girls and a son. He and his wife and children have been obliged to live for the last fourteen years on an income of 200 florins, but as he has always done his duty well, and has lately provided a very accomplished singer for the Elector, he has now actually 400 florins. My aria for De' Amicis she sings to perfection with all its tremendous passages: she is to sing it at Kirchheim-Boland.

Now for another subject. Last Wednesday there was a great feast in our house, [at Hofkammerrath Serrarius's,] to which I was also invited. There were fifteen guests, and the young lady of the house [Pierron, the "House Nymph"] was to play in the evening the concerto I had taught her at eleven o'clock in the forenoon. The Herr Kammerrath and Herr Vogler called on me. Herr Vogler seems quite determined to become acquainted with me, as he often importuned me to go to see him, but he has overcome his pride and paid me the first visit. Besides, people tell me that he is now very different, being no longer so much admired; for at first he was

made quite an idol of here. We went up-stairs together, when by degrees the guests assembled, and there was no end to talking. After dinner, Vogler sent for two pianos of his, which were tuned alike, and also his wearisome engraved sonatas. I had to play them, while he accompanied me on the other piano. At his urgent request I sent for my sonatas also. N. B.--Before dinner he had scrambled through my sonata at sight, (the Litzau one which the young lady of the house plays.) He took the first part prestissimo--the Andante allegro--and the Rondo more prestissimo still. He played great part of the bass very differently from the way in which it is written, inventing at times quite another harmony and melody. It is impossible to do otherwise in playing at such a pace, for the eyes cannot see the notes, nor the hands get hold of them. What merit is there in this? The listeners (I mean those worthy of the name) can only say that they have SEEN music and piano-playing. All this makes them hear, and think, and feel as little--as he does. You may easily believe that this was beyond all endurance, because I could not venture to say to him MUCH TOO QUICK! besides, it is far easier to play a thing quickly than slowly; some notes may then be dropped without being observed. But is this genuine music? In rapid playing the right and left hands may be changed, and no one either see or hear it; but is this good? and in what does the art of reading prima vista consist? In this--to play the piece in the time in which it ought to be played, and to express all the notes and apoggiaturas, &c., with proper taste and feeling as written, so that it should give the impression of being composed by the person who plays it. His fingering also is miserable; his left thumb is just like that of the late Adlgasser, all the runs downwards with the right hand he makes with the first finger and thumb!

91.

Mannheim, Feb. 2 1778.

I COULD no delay writing to you till the usual Saturday arrived, because it was so long since I had the pleasure of conversing with you by means of my pen. The first thing I mean to write about is how my worthy friends and I got on at Kirchheim-Boland. It was simply a holiday excursion, and nothing more. On Friday morning at eight o'clock we drove away from here, after I had breakfasted with Herr Weber. We had a capital covered coach which held four; at four o'clock we arrived at Kirchheim-Boland. We immediately sent a list of our names to the palace. Next morning early, Herr Concertmeister Rothfischer called on us. He had been already described to me at Mannheim as a most honorable man, and such I find him to be. In the evening we went to court, (this was on Saturday,) where Madlle. Weber sang three airs. I say nothing of her singing, but it is indeed admirable. I wrote to you lately with regard to her merits; but I cannot finish this letter without writing further about her, as I have only recently known her well, so now first discover her great powers. We dined afterwards at the officers' table. Next day we went some distance to church, for the Catholic one is rather far away. This was on Sunday. In the forenoon we dined again with the officers. In the evening there was no music, because it was Sunday. Thus they have music only 300 times during the year. In the evening we might have supped at court, but we preferred being all together at the inn. We would gladly have made them a present also of the dinners at the officers' table, for we were never so pleased as when by ourselves; but economy rather entered our thoughts, since we were obliged to pay heavily enough at the inn.

The following day, Monday, we had music again, and also on Tuesday and Wednesday. Madlle. Weber sang in all thirteen times, and played twice on the piano, for she plays by no means badly. What surprises me most is, that she reads music so well. Only think of her playing my difficult sonatas at sight, SLOWLY, but without missing a single note. I give you my honor I would rather hear my sonatas played by her than by Vogler. I played twelve times, and once, by desire, on the organ of the Lutheran church. I presented the Princess with four symphonies, and received only seven louis-d'or in silver, and our poor dear Madlle. Weber only five. This I certainly did not anticipate! I never expected great things, but at all events I hoped that each of us would at least receive eight louis-d'or. Basta! We were not, however, losers, for I have a profit of forty-two florins, and the inexpressible pleasure of becoming better acquainted with worthy upright Christian people, and good Catholics, I regret much not having known them long ago.

The 4th.--Now comes something urgent, about which I request an answer. Mamma and I have discussed the matter, and we agree that we do not like the sort of life the Wendlings lead. Wendling is a very honorable and kind man, but unhappily devoid of all religion, and the whole family are the same. I say enough when I tell you that his daughter was a most disreputable character. Ramm is a good fellow, but a libertine. I know myself, and I have such a sense of religion that I shall never do anything which I would not do before the whole world; but I am alarmed even at the very thoughts of being in the society of people, during my journey, whose mode of thinking is so entirely different from mine (and from that of all good people). But of course they must do as they please. I have no heart to travel with them, nor could I enjoy one pleasant hour, nor know what to talk about; for, in short, I have no great confidence in them. Friends who have no religion cannot be long our friends. I have already given them a hint of this

by saying that during my absence three letters had arrived, of which I could for the present divulge nothing further than that it was unlikely I should be able to go with them to Paris, but that perhaps I might come later, or possibly go elsewhere; so they must not depend on me. I shall be able to finish my music now quite at my ease for De Jean, who is to give me 200 florins for it. I can remain here as long as I please, and neither board nor lodging cost me anything. In the meantime Herr Weber will endeavor to make various engagements for concerts with me, and then we shall travel together. If I am with him, it is just as if I were with you. This is the reason that I like him so much; except in personal appearance, he resembles you in all respects, and has exactly your character and mode of thinking. If my mother were not, as you know, too COMFORTABLY LAZY to write, she would say precisely what I do. I must confess that I much enjoyed my excursion with them. We were pleased and merry; I heard a man converse just like you; I had no occasion to trouble myself about anything; what was torn I found repaired. In short, I was treated like a prince. I am so attached to this oppressed family that my greatest wish is to make them happy, and perhaps I may be able to do so. My advice is that they should go to Italy, so I am all anxiety for you to write to our good friend Lugiati [impresario], and the sooner the better, to inquire what are the highest terms given to a prima donna in Verona--the more the better, for it is always easy to accept lower terms. Perhaps it would be possible to obtain the Ascensa in Venice. I will be answerable with my life for her singing, and her doing credit to my recommendation. She has, even during this short period, derived much profit from me, and how much further progress she will have made by that time! I have no fears either with regard to her acting. If this plan be realized, M. Weber, his two daughters, and I, will have the happiness of visiting my dear papa and dear sister for a fortnight, on our way through Salzburg. My sister will find a friend and companion in Madlle. Weber, for, like my sister in Salzburg, she enjoys the best reputation here, owing to the careful way in which she has been brought up; the father resembles you, and the whole family that of Mozart. They have indeed detractors, as with us, but when it comes to the point they must confess the truth; and truth lasts longest. I should be glad to go with them to Salzburg, that you might hear her. My air that De' Amicis used to sing, and the bravura aria "Parto m' affretto," and "Dalla sponda tenebrosa," she sings splendidly. Pray do all you can to insure our going to Italy together. You know my greatest desire is--to write operas.

I will gladly write an opera for Verona for thirty zecchini, solely that Madlle. Weber may acquire fame by it; for, if I do not, I fear she may be sacrificed. Before then I hope to make so much money by visiting different places that I shall be no loser. I think we shall go to Switzerland, perhaps also to Holland; pray write to me soon about this. Should we stay long anywhere, the eldest daughter [Josepha, afterwards Madaine Hofer, for whom the part of the Queen of the Night in the "Flauto magico" was written] would be of the greatest use to us; for we could have our own menage, as she understands cooking.

Send me an answer soon, I beg. Don't forget my wish to write an opera; I envy every person who writes one; I could almost weep from vexation when I hear or see an aria. But Italian, not German--seria, not buffa! I have now written you all that is in my heart; my mother is satisfied with my plan.

The mother, however, adds the following postscript:--

"No doubt you perceive by the accompanying letter that when Wolfgang makes new friends he would give his life for them. It is true that she does sing incomparably; still, we ought not to lose sight of our own interests. I never liked his being in the society of Wendling and Ramm, but I did not venture to object to it, nor would he have listened to me; but no sooner did he know these Webers than he instantly changed his mind. In short, he prefers other people to me, for I remonstrate with him sometimes, and that he does not like. I write this quite secretly while he is at dinner, for I don't wish him to know it."

A few days later Wolfgang urges his father still more strongly.

92.

Mannheim, Feb. 7, 1778.

HERR SCHIEDENHOFEN might have let me know long ago through you that his wedding was soon to take place [see Nos. 7, 10, 19], and I would have composed a new minuet for the occasion. I cordially wish him joy; but his is, after all, only one of those money matches, and nothing else! I hope never to marry in this way; I wish to make my wife happy, but not to become rich by her means; so I will let things alone, and enjoy my golden freedom till I am so well off that I can support both wife and children. Herr Schiedenhofen was forced to choose a rich wife; his title imposed this on him. The nobility must not marry for love or from inclination, but from interest, and all kinds of other considerations. It would not at all suit a grandee to love his wife after she had done her duty, and brought into the world an heir to the property. But we poor humble people are privileged not only to choose a

wife who loves us, and whom we love, but we may, can, and do take such a one, because we are neither noble, nor highborn, nor rich, but, on the contrary, lowly, humble, and poor; we therefore need no wealthy wife, for our riches being in our heads, die with us, and these no man can deprive us of unless he cut them off, in which case we need nothing more.

I lately wrote to you my chief reason for not going to Paris with these people, but another is that I have reflected well on what I have to do in Paris. I could not get on passably without pupils, which is a kind of work that does not suit me--of this I have a strong example here. I might have had two pupils: I went three times to each, but finding one of them not at home, I never went back. I am willing to give lessons out of complaisance, especially when I see genius, and inclination and anxiety to learn; but to be obliged to go to a house at a certain hour, or else to wait at home, is what I cannot submit to, if I were to gain twice what I do. I find it impossible, so must leave it to those who can do nothing but play the piano. I am a composer, and born to become a Kapellmeister, and I neither can nor ought thus to bury the talent for composition with which God has so richly endowed me (I may say this without arrogance, for I feel it now more than ever); and this I should do were I to take many pupils, for it is a most unsettled metier; and I would rather, SO TO SPEAK, neglect the piano than composition, for I look on the piano to be only a secondary consideration, though, thank God! a very strong one too. My third reason is, that I am by no means sure our friend Grimm is in Paris. If he is, I can go there at any time with the post-carriage, for a capital one travels from here to Paris by Strassburg. We intended at all events to have gone by it. They travel also in this way. Herr Wendling is inconsolable at my not going with them, but I believe this proceeds more from self-interest than from friendship. Besides the reason I gave him (about the three letters that had come during my absence), I also told him about the pupils, and begged him to procure something certain for me, in which case I would be only too glad to follow him to Paris, (for I can easily do so,)--above all, if I am to write an opera, which is always in my thoughts; but French rather than German, and Italian rather than French or German. The Wendlings, one and all, are of opinion that my compositions would please much in Paris. I have no fears on the subject, for, as you know, I can pretty well adapt or conform myself to any style of composition. Shortly after my arrival I composed a French song for Madlle. Gustel (the daughter), who gave me the words, and she sings it inimitably. I have the pleasure to enclose it for you. It is sung every day at Wendling's, for they are quite infatuated with it.

93.

Mannheim, Feb. 14, 1778.

I PERCEIVE by your letter of the 9th of February that you have not yet received my last two letters. Wendling and Kamm leave this early to-morrow morning. If I thought that you would be really displeased with me for not going to Paris with them, I should repent having stayed here; but I hope it is not so. The road to Paris is still open to me. Wendling has promised to inquire immediately about Herr Grimm, and to send me information at once. With such a friend in Paris, I certainly shall go there, for no doubt he will bring something to bear for me. The main cause of my not going with them is, that we have not been able to arrange about mamma returning to Augsburg. The journey will not cost much, for there are vetturini here who can be engaged at a cheap rate. By that time, however, I hope to have made enough to pay mamma's journey home. Just now I don't really see that it is possible. Herr de Jean sets off to-morrow for Paris, and as I have only finished two concertos and three quartets for him, he sent me 96 florins (having made a mistake of four florins, thinking this sum the half of the 200); he must, however, pay me in full, for such was the agreement I made with Wendling, and I can send him the other pieces. It is not surprising that I have been unable to finish them, for I never have a single quiet hour here. I can only write at night, so I cannot rise early; besides, one is not always disposed to work. I could, to be sure, scrawl away all day, but a thing of this kind goes forth to the world, and I am resolved not to have cause to be ashamed of my name on the title-page. Moreover, you know that I become quite obtuse when obliged to write perpetually for an instrument that I cannot bear; so from time to time I do something else, such as duets for the piano and violin, and I also worked at the mass. Now I have begun the pianoforte duets in good earnest, in order to publish them. If the Elector were only here, I would very quickly finish the mass; but what must be must be!

I am very grateful to you, dear papa, for your fatherly letter; I will preserve it as a treasure, and always refer to it. Pray do not forget about my mother's journey from Augsburg to Salzburg, and let me know the precise day; and I beg you will also remember the arias I mentioned in my last letter. If I recollect rightly, there are also some cadenzas which I once jotted down, and at all events an aria cantabile with coloraturas? I wish to have these first, for they will serve as exercises for Madlle. Weber. I have just taught her an andantino cantabile of Bach's. Yesterday there was a concert at Cannabich's, where from first to last all the music was of my composition, except the first symphony, which was Cannabich's. Madlle. Rose played my concerto in B, then Herr Ramm (by way of a change) played for the fifth time the hautboy concerto dedicated to Ferlendi, which makes a great sensation here. It is now

quite Ramm's cheval de bataille. Madlle. Weber sang De' Amicis's aria di bravura quite charmingly. Then I played my old concerto in D, because it is such a favorite here, and likewise extemporized for half an hour, after which Madlle. Weber sang De' Amicis's air, "Parto m' affretto;" and, as a finale, my symphony "Il Re Pastore" was given. I do entreat you urgently to interest yourself in Madlle. Weber; it would make me so happy if good-fortune were to attend her. Husband and wife, five children, and a salary of 450 florins! Don't forget about Italy, and my desire to go there; you know my strong wish and passion. I hope all may go right. I place my trust in God, who will never forsake us. Now farewell, and don't forget all my requests and recommendations.

These letters alarmed the father exceedingly, so he wrote a long and very earnest letter to his son as follows:--"The object of your journey was to assist your parents, and to contribute to your dear sister's welfare, but, above all, that you might acquire honor and fame in the world, which you in some degree did in your boyhood; and now it rests entirely with you to raise yourself by degrees to one of the highest positions ever attained by any musician. This is a duty you owe to a kind Providence in return for the remarkable talents with which He has gifted you; and it depends wholly on your own good sense and good conduct, whether you become a commonplace artist whom the world will forget, or a celebrated Capellmeister, of whom posterity will read hereafter in books,--whether, infatuated with some pretty face, you one day breathe your last on a straw sack, your wife and children in a state of starvation, or, after a well-spent Christian life, die peacefully in honor and independence, and your family well provided for." He goes on to represent to him how little he has hitherto fulfilled the object of his journey, and, above all, the folly of wishing to place so young a girl on the Italian stage as a prima donna, both time and great training being previously required. Moreover, it would be quite unworthy of him to wander about the world with strangers, and to compose at random merely for money. "Get off to Paris without delay. Take your place by the side of really great people. Aut Caesar aut nihil. The very idea of Paris should have guarded you from all passing fancies."

To this Wolfgang replies:--

94.

Mannheim, Feb. 19, 1778.

I ALWAYS thought that you would disapprove of my journey with the Webers, but I never had any such intention--I mean, UNDER PRESENT CIRCUMSTANCES. I gave them my word of honor to write to you to that effect. Herr Weber does not know how we stand, and I certainly shall tell it to no one. I wish my position had been such that I had no cause to consider any one else, and that we were all independent; but in the intoxication of the moment I forgot the present impossibility of the affair, and also to tell you what I had done. The reasons of my not being now in Paris must be evident to you from my last two letters. If my mother had not first begun on the subject, I certainly would have gone with my friends; but when I saw that she did not like it, I began to dislike it also. When people lose confidence in me, I am apt to lose confidence in myself. The days when, standing on a stool, I sang Oragna fiaguta fa, [Footnote: Words sounding like Italian, but devoid of meaning, for which he had invented a melody. Nissen gives it in his Life of Mozart, p. 35.] and at the end kissed the tip of your nose, are indeed gone by; but still, have my reverence, love, and obedience towards yourself ever failed on that account? I say no more. As for your reproach about the little singer in Munich [see No. 62], I must confess that I was an ass to write such a complete falsehood. She does not as yet know even what singing means. It was true that, for a person who had only learned music for three months, she sang surprisingly; and, besides, she has a pleasing pure voice. The reason why I praised her so much was probably my hearing people say, from morning to night, "There is no better singer in all Europe; those who have not heard her have heard nothing." I did not venture to disagree with them, partly because I wished to acquire friends, and partly because I had come direct from Salzburg, where we are not in the habit of contradicting any one; but as soon as I was alone I never could help laughing. Why, then, did I not laugh at her in my letter to you? I really cannot tell.

The bitter way in which you write about my merry and innocent intercourse with your brother's daughter, makes me justly indignant; but as it is not as you think, I require to give you no answer on the subject. I don't know what to say about Wallerstein; I was very grave and reserved with Becke, and at the officers' table also I had a very serious demeanor, not saying one word to anybody. But let this all pass; you only wrote it in a moment of irritation [see No. 74]. Your remarks about Madlle. Weber are just; but at the time I wrote to you I knew quite as well as you that she is still too young, and must be first taught how to act, and must rehearse frequently on the stage. But with some people one must proceed step by step. These good people are as tired of being here as--you know WHO and WHERE, [meaning the Mozarts, father and son, in Salzburg,] and they think everything feasible. I promised them to write everything to my father; but when the letter was sent off to Salzburg, I constantly told her that she must have a little patience, for she was still rather too young, &c. They take in all I say in good part, for they have a high opinion of me. By my advice, Herr Weber has engaged Madlle. Toscani (an actress) to give his daughter lessons in acting. All you write of Madlle. Weber is true, except, that

she sings like a Gabrielli, [see Nos. 10, 37,] for I should not at all like her to sing in that style. Those who have heard Gabrielli say, and must say, that she was only an adept in runs and roulades; but as she adopted so uncommon a reading, she gained admiration, which, however, did not last longer than hearing her four times. She could not please in the long run, for roulades soon become very tiresome, and she had the misfortune of not being able to sing. She was not capable of sustaining a breve properly, and having no messa di voce, she could not dwell on her notes; in short, she sang with skill, but devoid of intelligence. Madlle. Weber's singing, on the contrary, goes to the heart, and she prefers a cantabile. I have lately made her practise the passages in the Grand Aria, because, if she goes to Italy, it is necessary that she should sing bravuras. The cantabile she certainly will never forget, being her natural bent. Raaff (who is no flatterer), when asked to give his sincere opinion, said, "She does not sing like a scholar, but like a professor."

So now you know everything. I do still recommend her to you with my whole heart, and I beg you will not forget about the arias, cadenzas, &c. I can scarcely write from actual hunger. My mother will display the contents of our large money-box. I embrace my sister lovingly. She is not to lament about every trifle, or I will never come back to her.

95.

Mannheim, Feb. 22, 1778.

I HAVE been now two days confined to the house, and taking antispasmodics, black powders, and elderflower tea as a sudorific, because I have had a catarrh, a cold in my head, sore throat, headache, pains in my eyes, and earache; but, thank God, I am now better, and hope to be able to go out tomorrow, being Sunday. I got your letter of the 16th and the two unsealed letters of introduction for Paris. I rejoice that my French song pleases you [see No. 92]. You must forgive my not writing much this time, but I really cannot--I am so afraid of bringing back my headache, and, besides, I feel no inclination to write to-day. It is impossible to write all we think--at least, I find it to be so. I would rather say it than write it. My last letter told you the whole thing just as it stands. Believe what you please of me, only nothing bad. There are people who think no one can love a poor girl without evil designs. But I am no Brunetti [a violinist in Salzburg], no Misliweczeck. I am a Mozart; and, though young, still a high-principled Mozart. Pardon me if, in my eagerness, I become somewhat excited--which is, I suppose, the term, though I might rather say, if I write as I feel. I might have said a great deal on this subject, but I cannot--I feel it to be impossible. Among my many faults I have also that of believing that those friends who know me, do so thoroughly. Then many words are not necessary; and if they do not know me, oh! how could I find words sufficient? It is painful enough to employ words and letters for such a purpose. This, however, is not at all meant to apply to you, dearest papa. No! You understand me too well, and you are too kind to try to deprive any one of his good name. I only meant it for--you can guess to whom I allude--to people who can believe such a thing.

I have resolved to stay in the house to-day, although Sunday, as it is snowing heavily. To-morrow I must go out, for our "house-nymph," Madlle. Pierron, my highly esteemed pupil, who has usually a French concert every Monday, intends to scramble through my hochgrafliche Litzau concerto. I also mean, for my sins, to let them give me something to hack away at, and show that I can do something too prima fista; for I am a regular greenhorn, and all I can do is to strum a little on the piano! I must now conclude, being more disposed to-day to write music than letters. Don't forget the cadenzas and the cantabile. Many thanks for having had the arias written out so quickly, for it shows that you place confidence in me when I beg a favor of you.

96.

Mannheim, Feb. 28, 1778.

I HOPE to receive the arias next Friday or Saturday, although in your last letter you made no further mention of them, so I don't know whether you sent them off on the 22d by the post-carriage. I hope so, for I should like to play and sing them to Madlle. Weber. I was yesterday at Raafl's to take him an aria that I lately wrote for him [Kochel, No. 295]. The words are--"Se al labbro mio non credi, nemica mia." I don't think they are by Metastasio. The aria pleased him beyond all measure. It is necessary to be very particular with a man of this kind. I chose these words expressly, because he had already composed an aria for them, so of course he can sing it with greater facility, and more agreeably to himself. I told him to say honestly if it did not suit his voice or please him, for I would alter it if he wished, or write another. "Heaven forbid!" said he; "it must remain just as it is, for nothing can be more beautiful. I only wish you to curtail it a little, for I am no longer able to sustain my voice through so long a piece." "Most gladly," I answered, "as much as ever you please; I made it purposely rather long, for it is always easy to shorten, but not so easy to lengthen." After he had sung the second part, he took off his spectacles, and, looking at me deliberately, said, "Beautiful! beautiful!

This second part is quite charming;" and he sang it three times. When I went away he cordially thanked me, while I assured him that I would so arrange the aria that he would certainly like to sing it. I think an aria should fit a singer as accurately as a well-made coat. I have also, for practice, arranged the air "Non so d' onde viene" which has been so charmingly composed by Bach. Just because I know that of Bach so well, and it pleases me and haunts my ear, I wished to try if, in spite of all this, I could succeed in writing an aria totally unlike the other. And, indeed, it does not in the very least resemble it. I at first intended this aria for Raaff; but the beginning seemed to me too high for Raaff's voice, but it pleased me so much that I would not alter it; and from the orchestral accompaniment, too, I thought it better suited to a soprano. I therefore resolved to write it for Madlle. Weber. I laid it aside, and took the words "Se al labbro" for Raaff. But all in vain, for I could write nothing else, as the first air always came back into my head; so I returned to it, with the intention of making it exactly in accordance with Madlle. Weber's voice. It is andante sostenuto, (preceded by a short recitative,) then follows the other part, Nel seno destarmi, and after this the sostenuto again. When it was finished, I said to Madlle. Weber, "Learn the air by yourself, sing it according to your own taste, then let me hear it, and I will afterwards tell you candidly what pleases and what displeases me."

In the course of a couple of days I went to see her, when she sang it for me and accompanied herself, and I was obliged to confess that she had sung it precisely as I could have wished, and as I would have taught it to her myself. This is now the best aria that she has, and will insure her success whereever she goes. [Footnote: This wonderfully beautiful aria is appended to my Life of Mozart.--Stuttgart, Bruckmaun, 1863.] Yesterday at Wendling's I sketched the aria I promised his wife [Madame Wendling was a fine singer], with a short recitative. The words were chosen by himself from "Didone": "Ah non lasciarmi no." She and her daughter quite rave about this air. I promised the daughter also some French ariettes, one of which I began to-day. I think with delight of the Concert Spirituel in Paris, for probably I shall be desired to compose something for it. The orchestra is said to be good and numerous, so my favorite style of composition can be well given there--I mean choruses, and I am very glad to hear that the French place so much value on this class of music. The only fault found with Piccini's [Gluck's well-known rival] new opera "Roland" is that the choruses are too meagre and weak, and the music also a little monotonous; otherwise it was universally liked. In Paris they are accustomed to hear nothing but Gluck's choruses. Only place confidence in me; I shall strive with all my might to do honor to the name of Mozart. I have no fears at all on the subject.

My last letters must have shown you HOW THINGS ARE, and WHAT I REALLY MEANT. I do entreat of you never to allow the thought to cross your mind that I can ever forget you, for I cannot bear such an idea. My chief aim is, and always will be, to endeavor that we may meet soon and happily, but we must have patience. You know even better than I do that things often take a perverse turn, but they will one day go straight--only patience! Let us place our trust in God, who will never forsake us. I shall not be found wanting; how can you possibly doubt me? Surely it concerns me also to work with all my strength, that I may have the pleasure and the happiness (the sooner the better, too) of embracing from my heart my dearest and kindest father. But, lo and behold! nothing in this world is wholly free from interested motives. If war should break out in Bavaria, I do hope you will come and join me at once. I place faith in three friends--and they are powerful and invincible ones--namely, God, and your head and mine. Our heads are, indeed, very different, but each in its own way is good, serviceable, and useful; and in time I hope mine may by degrees equal yours in that class of knowledge in which you at present surpass me. Farewell! Be merry and of good cheer! Remember that you have a son who never intentionally failed in his filial duty towards you, and who will strive to become daily more worthy of so good a father.

After these frank confessions, which would, he knew, restore the previous good understanding between him and his father, Mozart's genuine good heart was so relieved and lightened, that the natural balance of his mind, which had for some weeks past been entirely destroyed, was speedily restored, and his usual lively humor soon began to revive. Indeed, his old delight in doggerel rhymes and all kinds of silly puns seems to return. He indulges fully in these in a letter to his Basle (cousin), which is undoubtedly written just after the previous one.

97.

Mannheim, Feb. 28, 1778.

MADEMOISELLE, MA TRES-CHERE COUSINE,--

You perhaps think or believe that I must be dead? Not at all! I beg you will not think so, for how could I write so beautifully if I were dead? Could such a thing be possible? I do not attempt to make any excuses for my long silence, for you would not believe me if I did. But truth is truth; I have had so much to do that though I have had time to think of my cousin, I have had no time to write to her,

so I was obliged to let it alone. But at last I have the honor to inquire how you are, and how you fare? If we soon shall have a talk? If you write with a lump of chalk? If I am sometimes in your mind? If to hang yourself you're inclined? If you're angry with me, poor fool? If your wrath begins to cool?--Oh! you are laughing! VICTORIA! I knew you could not long resist me, and in your favor would enlist me. Yes! yes! I know well how this is, though I'm in ten days off to Paris. If you write to me from pity, do so soon from Augsburg city, so that I may get your letter, which to me would be far better.

Now let us talk of other things. Were you very merry during the Carnival? They are much gayer at Augsburg at that time than here. I only wish I had been there that I might have frolicked about with you. Mamma and I send our love to your father and mother, and to our cousin, and hope they are well and happy; better so, so better! A propos, how goes on your French? May I soon write you a French letter? from Paris, I suppose?

Now, before I conclude, which I must soon do because I am in haste, (having just at this moment nothing to do,) and also have no more room, as you see my paper is done, and I am very tired, and my fingers tingling from writing so much, and lastly, even if I had room, I don't know what I could say, except, indeed, a story which I have a great mind to tell you. So listen! It is not long since it happened, and in this very country too, where it made a great sensation, for really it seemed almost incredible, and, indeed, between ourselves, no one yet knows the result of the affair. So, to be brief, about four miles from here--I can't remember the name of the place, but it was either a village or a hamlet, or something of that kind. Well, after all, it don't much signify whether it was called Triebetrill or Burmsquick; there is no doubt that it was some place or other. There a shepherd or herdsman lived, who was pretty well advanced in years, but still looked strong and robust; he was unmarried and well-to-do, and lived happily. But before telling you the story, I must not forget to say that this man had a most astounding voice when he spoke; he terrified people when he spoke! Well! to make my tale as short as possible, you must know that he had a dog called Bellot, a very handsome large dog, white with black spots. Well! this shepherd was going along with his sheep, for he had a flock of eleven thousand under his care, and he had a staff in his hand, with a pretty rose-colored topknot of ribbons, for he never went out without his staff; such was his invariable custom. Now to proceed; being tired, after having gone a couple of miles, he sat down on a bank beside a river to rest. At last he fell asleep, when he dreamt that he had lost all his sheep, and this fear awoke him, but to his great joy he saw his flock close beside him. At length he got up again and went on, but not for long; indeed, half an hour could scarcely have elapsed, when he came to a bridge which was very long, but with a parapet on both sides to prevent any one falling into the river. Well; he looked at his flock, and as he was obliged to cross the bridge, he began to drive over his eleven thousand sheep. Now be so obliging as to wait till the eleven thousand sheep are all safely across, and then I will finish the story. I already told you that the result is not yet known; I hope, however, that by the time I next write to you, all the sheep will have crossed the bridge; but if not, why should I care? So far as I am concerned, they might all have stayed on this side. In the meantime you must accept the story so far as it goes; what I really know to be true I have written, and it is better to stop now than to tell you what is false, for in that case you would probably have discredited the whole, whereas now you will only disbelieve one half.

I must conclude, but don't think me rude; he who begins must cease, or the world would have no peace. My compliments to every friend, welcome to kiss me without end, forever and a day, till good sense comes my way; and a fine kissing that will be, which frightens you as well as me. Adieu, ma chere cousine! I am, I was, I have been, oh! that I were, would to heavens I were! I will or shall be, would, could, or should be--what?--A blockhead! W. A. M.

98.

Mannheim, March 7, 1778.

I have received your letter on the 26th February, and am much obliged to you for all the trouble you have taken about the arias, which are quite accurate in every respect. "Next to God comes papa" was my axiom when a child, and I still think the same. You are right when you say that "knowledge is power"; besides, except your trouble and fatigue, you will have no cause for regret, as Madlle. Weber certainly deserves your kindness. I only wish that you could hear her sing my new aria which I lately mentioned to you,--I say, hear her sing it, because it seems made expressly for her; a man like you who really understands what portamento in singing means, would certainly feel the most intense pleasure in hearing her. When I am happily settled in Paris, and our circumstances, please God, improved, and we are all more cheerful and in better humor, I will write you my thoughts more fully, and ask you to do me a great kindness. I must now tell you I was so shocked that tears came to my eyes, on reading in your last letter that you are obliged to go about so shabbily dressed. My very dearest papa, this is certainly not my fault; you know it is not. We economize in every possible way here; food and lodging, wood and light, cost us nothing, which is all we could hope for. As for dress, you are well aware that, in places where you are not known, it is out of the question to be badly dressed, for appearances

must be kept up.

My whole hopes are now centred in Paris, for German princes are all niggards. I mean to work with all my strength, that I may soon have the happiness of extricating you from your present distressing circumstances.

99.

Mannheim, March. 11, 1778.

I HAVE duly received your letter of the 26th February, and learn from it with great joy that our best and kindest of all friends, Baron Grimm [the well-known Encyclopedist, with whom Mozart had become acquainted during his last visit to France], is now in Paris. The vetturino has offered to convey us to Paris by Metz (which, as you probably know, is the shortest route) for eleven louis-d'or. If to-morrow he agrees to do it for ten, I shall certainly engage him, and perhaps at eleven, for even then it will be the cheapest way for us, which is the main point, and more convenient too, for he will take our carriage--that is, he will place the body on wheels of his own. The convenience is great, as we have so many small packages that we can stow away quite comfortably in our own carriage, which we cannot do in the DILIGENCE, and besides we shall be alone and able to talk as we like. But I do assure you that if, after all, we go in the DILIGENCE, my sole annoyance is the bore of not being able to say what we choose and wish, though, as it is very necessary that we should take the cheapest conveyance, I am still rather disposed to do so.

THIRD PART.--PARIS.--MARCH 1778 TO JANUARY 1779.

100.

Paris, March 24, 1778.

YESTERDAY (Monday, the 23d), at four o'clock in the afternoon, we arrived here, thank God! safely, having been nine days and a half on our journey. We thought we really could not have gone through with it; in my life I never was so wearied. You may easily imagine what it was to leave Mannheim and so many dear kind friends, and then to travel for ten days, not only without these friends, but without any human being--without a single soul whom we could associate with or even speak to. Now, thank Heaven! we are at our destination, and I trust that, with the help of God, all will go well. To-day we are to take a fiacre and go in quest of Grimm and Wendling. Early to-morrow I intend to call on the Minister of the Palatinate, Herr von Sickingen, (a great connoisseur and passionate lover of music, and for whom I have two letters from Herr von Gemmingen and M. Cannabich.) Before leaving Mannheim I had the quartet transcribed that I wrote at Lodi one evening in the inn there, and also the quintet and the Fischer variations for Herr von Gemmingen [author of the "Deutsche Hausvater"], on which he wrote me a most polite note, expressing his pleasure at the souvenir I had left him, and sending me a letter to his intimate friend Herr von Sickingen, adding, "I feel sure that you will be a greater recommendation to the letter than the letter can possibly be to you;" and, to repay the expense of writing out the music, he sent me three louis-d'or; he also assured me of his friendship, and requested mine in return. I must say that all those who knew me, Hofrathe, Kammerrathe, and other high-class people, as well as all the court musicians, were very grieved and reluctant to see me go; and really and truly so.

We left on Saturday, the 14th, and on the previous Thursday there was an afternoon concert at Cannabich's, where my concerto for three pianos was given. Madlle. Rose Cannabich played the first, Madlle. Weber the second, and Madlle. Pierron Serrarius (our "house-nymph") the third. We had three rehearsals of the concerto, and it went off well. Madlle. Weber sang three arias of mine, the "Aer tranquillo" from the "Re Pastore," [Footnote: A festal opera that Mozart had composed in 1775, in honor of the visit of the Archduke Maximilian Francis to Salzburg.] and the new "Non so d' onde viene." With this last air my dear Madlle. Weber gained very great honor both for herself and for me. All present said that no aria had ever affected them like this one; and, indeed, she sang it as it ought to be sung. The moment it was finished, Cannabich exclaimed, "Bravo! bravissimo maestro! veramente scritta da maestro!" It was given for the first time on this occasion with instruments. I should like you to have heard it also, exactly as it was executed and sung there, with such precision in time and taste, and in the pianos and fortes. Who knows? you may perhaps still hear her. I earnestly hope so. The members of the orchestra never ceased praising the aria and talking about it.

I have many kind friends at Mannheim (both highly esteemed and rich) who wished very much to keep me there. Well! where I am properly paid, I am content to be. Who can tell? it may still come to pass. I wish it may; and thus it ever is with me--I live always in hope. Herr Cannabich is an honorable, worthy man, and a kind friend of mine. He has only one fault, which is, that although no longer very young, he is rather careless and absent,--if you are not constantly before his eyes, he is very apt to forget all about you.

But where the interests of a real friend are in question, he works like a horse, and takes the deepest interest in the matter; and this is of great use, for he has influence. I cannot, however, say much in favor of his courtesy or gratitude; the Webers (for whom I have not done half so much), in spite of their poverty and obscurity, have shown themselves far more grateful. Madame Cannabich and her daughter never thanked me by one single word, much less thought of offering me some little remembrance, however trifling, merely as a proof of kindly feeling; but nothing of the sort, not even thanks, though I lost so much time in teaching the daughter, and took such pains with her. She can now perfectly well perform before any one; as a girl only fourteen, and an amateur, she plays remarkably well, and for this they have to thank me, which indeed is very well known to all in Mannheim. She has now neatness, time, and good fingering, as well as even shakes, which she had not formerly. They will find that they miss me much three months hence, for I fear she will again be spoiled, and spoil herself; unless she has a master constantly beside her, and one who thoroughly understands what he is about, she will do no good, for she is still too childish and giddy to practise steadily and carefully alone. [Footnote: Rosa Cannabich became, indeed, a remarkable virtuoso. C L. Junker mentions her, even in his musical almanac of 1783, among the most eminent living artists.]

Madlle. Weber paid me the compliment kindly to knit two pairs of mits for me, as a remembrance and slight acknowledgment. M. Weber wrote out whatever I required gratis, gave me the music-paper, and also made me a present of Moliere's Comedies (as he knew that I had never read them), with this inscription:--"Ricevi, amico, le opere di Moliere, in segno di gratitudine, e qualche volta ricordati di me." [Footnote: "Accept, my dear friend, Moliere's works as a token of my gratitude; and sometimes think of me."] And when alone with mamma he said, "Our best friend, our benefactor, is about to leave us. There can be no doubt that your son has done a great deal for my daughter, and interested himself much about her, and she cannot be too thankful to him." [Footnote: Aloysia Weber became afterwards Madame Lange. She had great fame as a singer. We shall hear more of her in the Vienna letters.] The day before I set off, they would insist on my supping with them, but I managed to give them two hours before supper instead. They never ceased thanking me, and saying they only wished they were in a position to testify their gratitude, and when I went away they all wept. Pray forgive me, but really tears come to my eyes when I think of it. Weber came down-stairs with me, and remained standing at the door till I turned the corner and called out Adieu!

In Paris he at once plunged into work, so that his love-affair was for a time driven into the background. Compositions for the Concert Spirituel, for the theatre, and for dilettanti, as well as teaching and visits to great people, occupied him. His mother writes: "I cannot describe to you how much Wolfgang is beloved and praised here. Herr Wendling had said much in his favor before he came, and has presented him to all his friends. He can dine daily, if he chooses, with Noverre [the famed ballet-master], and also with Madame d'Epinay" [Grimm's celebrated friend]. The mother herself scarcely saw him all day, for on account of their small close apartment, he was obliged to compose at Director Le Gros's house. She had (womanlike) written to the father about the composition of a Miserere. Wolfgang continues the letter, more fully explaining the matter.

101.

Paris, April 5, 1778.

I MUST now explain more, clearly what mamma alludes to, as she has written rather obscurely. Capellmeister Holzbauer has sent a Miserere here, but as the choruses at Mannheim are weak and poor, whereas here they are strong and good, his choruses would make no effect. M. Le Gros (Director of the Concert Spirituel) requested me therefore to compose others; Holzbauer's introductory chorus being retained. "Quoniam iniquitatem meam," an allegro, is the first air by me. The second an adagio, "Ecce enim in iniquitatibus." Then an allegro, "Ecce enim veritatem dilexisti" to the "ossa humiliata." Then an andante for soprano, tenor, and bass Soli; "Cor mundum," and "Redde mihi," allegro to "ad se convertentur." I also composed a recitative for a bass air, "Libera me de sanguinibus," because a bass air of Holzbauer's follows. The "sacrificium Deo spiritus" being an aria andante for Raaff, with a hautboy and a bassoon solo obligato. I have added a short recitative with hautboy and bassoon, for here recitative is much liked. "Benigne fac" to "muri Jerusalem" andante moderate. Chorus. Then "Tunc acceptabis" to "super altare," allegro and tenor solo (Le Gros) and chorus. Finis. [None of this music is known.]

I must say that I am right glad to have done with this task, for it is really detestable not to be able to write at home, and to be hurried into the bargain; but now, God be praised! it is finished, and I hope it will make some effect. M. Gussec, whom you no doubt know, when he saw my first chorus, said to Le Gros (I was not present) that it was charming, and could not fail to be successful, that the words were so well arranged, and, above all, admirably set to music. He is a kind friend of mine, but very reserved. I am not merely to write an act for an opera, but an entire one in two acts. The poet has already completed the first act. Noverre [ballet-master], with whom I dine as often as I please, managed this, and indeed suggested the idea. I think it is to be called "Alexander and Roxana."

Madame Jenome is also here. I am about to compose a sinfonie concertante,--flute, Wendling; oboe, Ramm; French horn, Punto; and bassoon, Ritter. Punto plays splendidly. I have this moment returned from the Concert Spirituel. Baron Grimm and I often give vent to our wrath at the music here; N.B.--when tete-a-tete, for in public we call out "Bravo! bravissimo!" and clap our hands till our fingers tingle.

102.

Paris, May 1, 1778.

THE little violoncellist Zygmatofsky and his unprincipled father are here. Perhaps I may already have written you this; I only mention it cursorily, because I just remember that I met him at a house which I must now tell you about. I mean that of the Duchesse de Chabot. M. Grimm gave me a letter to her, so I drove there, the purport of the letter being chiefly to recommend me to the Duchesse de Bourbon, who when I was last here [during Mozart's first visit to Paris] was in a convent, and to introduce me afresh to her and recall me to her memory. A week elapsed without the slightest notice of my visit, but as eight days previously she had appointed me to call on her, I kept my engagement and went. I waited half an hour in a large room without any fire, and as cold as ice. At last the Duchess came in, and was very polite, begging me to make allowances for her piano, as none of her instruments were in good order, but I might at least try it. I said that I would most gladly play something, but at this moment it was impossible, as my fingers were quite benumbed from the cold, so I asked her at all events to take me to a room where there was a fire. "Oh! oui, Monsieur, vous avez raison"--was her answer. She then seated herself, and drew for a whole hour in company with several gentlemen, all sitting in a circle round a large table, and during this time I had the honor to wait. The windows and doors were open, so that not only my hands, but my body and my feet were cold, and my head also began to ache. Moreover, there was altum silentium, and I really did not know what to do from cold, headache, and weariness. I again and again thought to myself, that if it were not on M. Grimm's account I would leave the house at once. At last, to cut matters short, I played on the wretched, miserable piano. What however vexed me most of all was, that the Duchess and all the gentlemen did not cease drawing for a single moment, but coolly continued their occupation; so I was left to play to the chairs and tables, and the walls. My patience gave way under such unpropitious circumstances. I therefore began the Fischer variations, and after playing one half of them I rose. Then came eulogiums without end. I, however, said all that could be said--which was, that I could do myself no justice on such a piano, but I should be very glad to fix some other day to play, when a better instrument might be found. But the Duchess would not hear of my going away; so I was obliged to wait till her husband came in, who placed himself beside me and listened to me with great attention, while, as for me, I became unconscious of all cold and all headache, and, in spite of the wretched piano, played as I CAN play when I am in the right mood. Give me the best piano in Europe, and listeners who understand nothing, or don't wish to understand, and who do not sympathize with me in what I am playing, I no longer feel any pleasure. I afterwards told all this to M. Grimm.

You write to me that I ought to pay a good many visits in order to make new acquaintances, and to renew former ones. This is, however, impossible, from the distances being so great, and it is too muddy to go on foot, for really the mud in Paris is beyond all description. To go in a carriage entails spending four or five livres a day, and all for nothing; it is true the people say all kinds of civil things, but there it ends, as they appoint me to come on such and such a day, when I play, and hear them exclaim, "Oh! c'est un prodige, c'est inconcevable, c'est etonnant!" and then, Adieu! At first I spent money enough in driving about, and to no purpose, from not finding the people at home. Unless you lived here, you could not believe what an annoyance this is. Besides, Paris is much changed; the French are far from being as polite as they were fifteen years ago; their manner now borders on rudeness, and they are odiously self-sufficient.

I must proceed to give you an account of the Concert Spirituel. By the by, I must first briefly tell you that my chorus-labors were in a manner useless, for Holzbauer's Miserere was too long in itself, and did not please, so they gave only two of my choruses instead of four, and chose to leave out the best; but this was of no great consequence, for many there were not aware that any of the music was by me, and many knew nothing at all about me. Still, at the rehearsal great approbation was expressed, and I myself (for I place no great reliance on Parisian praise) was very much satisfied with my choruses. With regard to the sinfonie concertante there appears to be a hitch, and I believe that some unseen mischief is at work. It seems that I have enemies here also; where have I not had them? But this is a good sign. I was obliged to write the symphony very hurriedly, and worked very hard at it. The four performers were and are perfectly enchanted with the piece. Le Gros had it for the last four days to be copied, but I invariably saw it lying in the same place. Two days ago I could not find it, though I searched carefully among the music; and at last I discovered it hidden away. I took no notice, but said to Le Gros, "A propos, have you given my sinfonie to be copied?" "No; I forgot all about it." As, of course, I have no power to compel him to have it transcribed and performed, I said nothing; but I went to the concert on the

two days when the sinfonie was to have been performed, when Ramm and Punto came to me in the greatest rage to ask me why my sinfonie concertante was not to be given. "I don't know. This is the first I hear of it. I cannot tell." Ramm was frantic, and abused Le Gros in the music-room in French, saying how very unhandsome it was on his part, etc. I alone was to be kept in the dark! If he had even made an excuse--that the time was too short, or something of the kind!--but he never said a syllable. I believe the real cause to be Cambini, an Italian maestro; for at our first meeting at Le Gros's, I unwittingly took the wind out of his sails. He composes quintets, one of which I heard at Mannheim; it was very pretty, so I praised it, and played the beginning to him. Ritter, Ramm, and Punto were all present, and gave me no peace till I agreed to continue, and to supply from my own head what I could not remember. I therefore did so, and Cambini was quite excited, and could not help saying, "Questa e una gran testa!" Well, I suppose after all he did not quite relish this, [The symphony in question has also entirely disappeared.]

If this were a place where people had ears to hear or hearts to feel, and understood just a little of music, and had some degree of taste, these things would only make me laugh heartily, but as it is (so far as music is concerned) I am surrounded by mere brute beasts. But how can it be otherwise? for in all their actions, inclinations, and passions, they are just the same. There is no place in the world like Paris. You must not think that I exaggerate when I speak in this way of the music here; refer to whom you will, except to a Frenchman born, and (if trustworthy) you will hear the same. But I am now here, and must endure it for your sake. I shall be grateful to Providence if I get away with my natural taste uninjured. I pray to God every day to grant me grace to be firm and steadfast here, that I may do honor to the whole German nation, which will all redound to His greater honor and glory, and to enable me to prosper and make plenty of money, that I may extricate you from your present emergencies, and also to permit us to meet soon, and to live together happily and contentedly; but "His will be done in earth as it is in heaven." I entreat you, dearest father, in the meantime, to take measures that I may see Italy, in order to bring me to life again. Bestow this great happiness upon me, I implore you! I do hope you will keep up your spirits; I shall cut my way through here as I best can, and trust I shall get off safely. Adieu!

103.

Paris, May 14, 1778.

I HAVE already so much to do that I don't know how I am to manage when winter comes. I think I wrote to you in my last letter that the Duc de Guines, whose daughter is my pupil in composition, plays the flute inimitably, and she the harp magnificently; she has a great deal of talent and genius, and, above all, a wonderful memory, for she plays all her pieces, about 200 in number, by heart. She, however, doubts much whether she has any genius for composition, especially as regards ideas or invention; but her father (who, entre nous, is rather too infatuated about her) declares that she certainly has ideas, and that she is only diffident and has too little self-reliance. Well, we shall see. If she acquires no thoughts or ideas, (for hitherto she really has none whatever,) it is all in vain, for God knows I can't give her any! It is not the father's intention to make her a great composer. He says, "I don't wish her to write operas, or arias, or concertos, or symphonies, but grand sonatas for her instrument and for mine." I gave her to-day her fourth lesson on the rules of composition and harmony, and am pretty well satisfied with her. She made a very good bass for the first minuet, of which I had given her the melody, and she has already begun to write in three parts; she can do it, but she quickly tires, and I cannot get her on, for it is impossible to proceed further as yet; it is too soon, even if she really had genius, but, alas! there appears to be none; all must be done by rule; she has no ideas, and none seem likely to come, for I have tried her in every possible way. Among other things it occurred to me to write out a very simple minuet, and to see if she could not make a variation on it. Well, that utterly failed. Now, thought I, she has not a notion how or what to do first. So I began to vary the first bar, and told her to continue in the same manner, and to keep to the idea. At length this went tolerably well. When it was finished, I told her she must try to originate something herself--only the treble of a melody. So she thought it over for a whole quarter of an hour, AND NOTHING CAME. Then I wrote four bars of a minuet, saying to her, "See what an ass I am! I have begun a minuet, and can't even complete the first part; be so very good as to finish it for me." She declared this was impossible. At last, with great difficulty, SOMETHING CAME, and I was only too glad that ANYTHING AT ALL CAME. I told her then to complete the minuet--that is, the treble only. The task I set her for the next lesson was to change my four bars, and replace them by something of her own, and to find out another beginning, even if it were the same harmony, only changing the melody. I shall see to-morrow what she has done.

I shall soon now, I think, receive the poetry for my two-act opera, when I must first present it to the Director, M. de Vismes, to see if he will accept it; but of this there can be no doubt, as it is recommended by Noverre, to whom De Vismes is indebted for his situation. Noverre, too, is soon to arrange a new ballet, for which I am to write the music. Rudolf (who plays the French horn) is in the royal service here, and a very kind friend of mine; he understands composition thoroughly, and writes well. He has offered me

the place of organist at Versailles if I choose to accept it: the salary is 2000 livres a year, but I must live six months at Versailles and the remaining six in Paris, or where I please. I don't, however, think that I shall close with the offer; I must take the advice of good friends on the subject. 2000 livres is no such very great sum; in German money it may be so, but not here. It amounts to 83 louis-d'or 8 livres a year--that is, 915 florins 45 kreutzers of our money, (which is certainly a considerable sum,) but only to 383 ecus 2 livres, and that is not much, for it is frightful to see how quickly a dollar goes here! I am not at all surprised that so little is thought of a louis-d'or in Paris, for it does not go far. Four dollars, or a louis-d'or, which are the same, are gone in no time. Adieu!

104.

Paris, May 29, 1778.

I AM pretty well, thank God! but still I am often puzzled to know what to make of it all. I feel neither hot nor cold, and don't take much pleasure in anything. What, however, cheers and strengthens me most is the thought that you, dearest papa, and my dear sister, are well; that I am an honest German, and though I cannot SAY, I may at all events THINK what I please, and, after all, that is the chief thing. Yesterday I was for the second time at Count Sickingen's, ambassador from the Elector Palatine; (I dined there once before with Wendling and Ramm.) I don't know whether I told you what a charming man he is, and a great connoisseur and devoted lover of music. I passed eight hours quite alone with him. The whole forenoon, and afternoon too, till ten o'clock at night, we were at the piano, playing all kind of music, praising, admiring, analyzing, discussing, and criticizing. He has nearly thirty scores of operas. I must not forget to tell you that I had the satisfaction of seeing your "School for the Violin" translated into French; I believe it is about eight years since the translation appeared. I have just returned from a music-shop where I went to buy a sonata of Schobert's for one of my pupils, and I mean to go again soon to examine the book more closely, that I may write to you about it minutely, for to-day I have not time to do this.

105.

Paris, June 12, 1778.

I MUST now write something that concerns our Raaff. [Footnote: Mozart wrote the part of Idomeneo for Raaff in the year 1781.] You no doubt remember that I did not write much in his favor from Mannheim, and was by no means satisfied with his singing--in short, that he did not please me at all. The cause, however, was that I can scarcely say I really heard him at Mannheim. The first time was at the rehearsal of Holzbauer's "Gunther," when he was in his every-day clothes, his hat on his head, and a stick in his hand. When he was not singing, he stood looking like a sulky child. When he began to sing the first recitative, it went tolerably well, but every now and then he gave a kind of shriek, which I could not bear. He sang the arias in a most indolent way, and yet some of the notes with too much emphasis, which is not what I like. This has been an invariable habit of his, which the Bernacchi school probably entails; for he is a pupil of Bernacchi's. At court, too, he used to sing all kinds of airs which, in my opinion, by no means suited his voice; so he did not at all please me. When at length he made his debut here in the Concert Spirituel, he sang Bach's scena, "Non so d' onde viene" which is, besides, my great favorite, and then for the first time I really heard him sing, and he pleased me--that is, in this class of music; but the style itself, the Bernacchi school, is not to my taste. He is too apt to fall into the cantabile. I admit that, when he was younger and in his prime, this must have made a great impression and taken people by surprise; I could like it also, but there is too much of it, and it often seems to me positively ludicrous. What does please me in him is when he sings short pieces--for instance, andantinos; and he has likewise certain arias which he gives in a manner peculiar to himself. Let each occupy his proper place. I fancy that bravura singing was once his forte, which is even still perceptible in him, and so far as age admits of it he has a good chest and a long breath; and then his andantino! His voice is fine and very pleasing; if I shut my eyes and listen to him, I think his singing very like Meissner's, only Raaff's voice seems to me more agreeable. I speak of the present time, for I never heard either in his best days. I can therefore only refer to their style or method of singing, for this a singer always retains. Meissner, as you know, had the bad habit of purposely making his voice tremble at times,--entire quavers and even crotchets, when marked sostenuto,--and this I never could endure in him. Nothing can be more truly odious; besides, it is a style of singing quite contrary to nature. The human voice is naturally tremulous, but only so far as to be beautiful; such is the nature of the voice, and it is imitated not only on wind instruments, but on stringed instruments, and even on the piano. But the moment the proper boundary is passed it is no longer beautiful, because it becomes unnatural. It seems to me then just like an organ when the bellows are panting. Now Raaff never does this,--in fact, he cannot bear it. Still, so far as a genuine cantabile goes, Meissner pleases me (though not altogether, for he also exaggerates) better than Raaff. In bravura passages and roulades, Raaff is indeed a perfect master, and he has such a good and distinct articulation, which is a great charm; and, as I already said, his andantinus and

canzonetti are delightful. He composed four German songs, which are lovely. He likes me much, and we are very intimate; he comes to us almost every day. I have dined at least six times with Count von Sickingen, and always stay from one o'clock till ten. Time, however, flies so quickly in his house that it passes quite imperceptibly. He seems fond of me, and I like very much being with him, for he is a most friendly, sensible person, possessing excellent judgment and a true insight into music, I was there again to-day with Raaff. I took some music with me, as the Count (long since) asked me to do so. I brought my newly completed symphony, with which, on Corpus Christi day, the Concert Spirituel is to commence. The work pleased them both exceedingly, and I am also well satisfied with it. Whether it will be popular here, however, I cannot tell, and, to say the truth, I care very little about it. For whom is it to please? I can answer for its pleasing the few intelligent Frenchmen who may be there; as for the numskulls--why, it would be no great misfortune if they were dissatisfied. I have some hope, nevertheless, that even the dunces among them may find something to admire. Besides, I have been careful not to neglect le premier coup d'archet; and that is sufficient. All the wiseacres here make such a fuss on that point! Deuce take me if I can see any difference! Their orchestra begins all at one stroke, just as in other places. It is too laughable! Raaff told me a story of Abaco on this subject. He was asked by a Frenchman, in Munich or elsewhere,--"Monsieur, vous avez ete a Paris?" "Oui." "Est-ce que vous etiez au Concert Spirituel?" "Oui." "Que dites-vous du premier coup d'archet? avez-vous entendu le premier coup d'archet?" "Oui, j'ai entendu le premier et le dernier." "Comment le dernier? que veut dire cela?" "Mais oui, le premier et le dernier; et le dernier meme m'a donne plus de plaisir." [Footnote: The imposing impression produced by the first grand crash of a numerous orchestra, commencing with precision, in tutti, gave rise to this pleasantry.] A few days afterwards his kind mother was taken ill. Even in her letters from Mannheim she often complained of various ailments, and in Paris also she was still exposed to the discomfort of cold dark lodgings, which she was obliged to submit to for the sake of economy; so her illness soon assumed the worst aspect, and Mozart experienced the first severe trial of his life. The following letter is addressed to his beloved and faithful friend, Abbe Bullinger, tutor in Count Lodron's family in Salzburg.

(Private.) 106.

Paris, July 3, 1778.

MY VERY DEAR FRIEND,--

Mourn with me! This has been the most melancholy day of my life; I am now writing at two o'clock in the morning. I must tell you that my mother, my darling mother, is no more. God has called her to Himself; I clearly see that it was His will to take her from us, and I must learn to submit to the will of God. The Lord giveth, and the Lord taketh away. Only think of all the distress, anxiety, and care I have endured for the last fourteen days. She died quite unconscious, and her life went out like a light. She confessed three days before, took the sacrament, and received extreme unction. The last three days, however, she was constantly delirious, and to-day, at twenty minutes past five o'clock, her features became distorted, and she lost all feeling and perception. I pressed her hand, I spoke to her, but she did not see me, she did not hear me, and all feeling was gone. She lay thus till the moment of her death, five hours after, at twenty minutes past ten at night. There was no one present but myself, Herr Heiner, a kind friend whom my father knows, and the nurse. It is quite impossible for me to describe the whole course of the illness to-day. I am firmly convinced that she must have died, and that God had so ordained it. All I would ask of you at present is to act the part of a true friend, by preparing my father by degrees for this sad intelligence. I have written to him by this post, but only that she is seriously ill; and now I shall wait for your answer and be guided by it. May God give him strength and courage! My dear friend, I am consoled not only now, but have been so for some time past. By the mercy of God I have borne it all with firmness and composure. When the danger became imminent, I prayed to God for only two things--a happy death for my mother, and strength and courage for myself; and our gracious God heard my prayer and conferred these two boons fully on me. I entreat you, therefore, my best friend, to watch over my father for me; try to inspire him with courage, that the blow may not be too hard and heavy on him when he learns the worst. I also, from my heart, implore you to comfort my sister. Pray go straight to them, but do not tell them she is actually dead--only prepare them for the truth. Do what you think best, say what you please; only act so that my mind may be relieved, and that I may not have to dread another misfortune. Support and comfort my dear father and my dear sister. Answer me at once, I entreat. Adieu! Your faithful

W. A. M.

107.

Paris, July 3, 1778.

MONSIEUR MON TRES-CHER PERE,--

I have very painful and sad news to give you, which has, in fact, been the cause of my not having sooner replied to your letter of the 11th. My dearest mother is very ill. She has been bled according to her usual custom, which was indeed very necessary; it did her much good, but a few days afterwards she complained of shivering and feverishness; then diarrhoea came on and headache. At first we only used our home remedies, antispasmodic powders; we would gladly have had recourse to the black powder, but we had none, and could not get it here. As she became every moment worse, could hardly speak, and lost her hearing, so that we were obliged to shout to her, Baron Grimm sent his doctor to see her. She is very weak, and still feverish and delirious. They do give me some hope, but I have not much. I hoped and feared alternately day and night for long, but I am quite reconciled to the will of God, and hope that you and my sister will be the same. What other resource have we to make us calm? More calm, I ought to say; for altogether so we cannot be. Whatever the result may be, I am resigned, knowing that it comes from God, who wills all things for our good, (however unaccountable they may seem to us;) and I do firmly believe (and shall never think otherwise) that no doctor, no man living, no misfortune, no casualty, can either save or take away the life of any human being--none but God alone. These are only the instruments that He usually employs, but not always; we sometimes see people swoon, fall down, and be dead in a moment. When our time does come, all means are vain,--they rather hurry on death than retard it; this we saw in the case of our friend Hefner. I do not mean to say by this that my mother will or must die, or that all hope is at an end; she may recover and be restored to health, but only if the Lord wills it thus. After praying to God with all my strength for health and life for my darling mother, I like to indulge in such consolatory thoughts, and, after doing so, I feel more cheerful and more calm and tranquil, and you may easily imagine how much I require comfort. Now for another subject. Let us put aside these sad thoughts, and still hope, but not too much; we must place our trust in the Lord, and console ourselves by the thought that all must go well if it be in accordance with the will of the Almighty, as he knows best what is most profitable and beneficial both for our temporal and spiritual welfare.

I have composed a symphony for the opening of the Concert Spirituel, which was performed with great applause on Corpus Christi day. I hear, too, that there is a notice of it in the "Courrier de l'Europe," and that it has given the greatest satisfaction. I was very nervous during the rehearsal, for in my life I never heard anything go so badly. You can have no idea of the way in which they scraped and scrambled through my symphony twice over; I was really very uneasy, and would gladly have had it rehearsed again, but so many things had been tried over that there was no time left. I therefore went to bed with an aching heart and in a discontented and angry spirit. Next day I resolved not to go to the concert at all; but in the evening, the weather being fine, I made up my mind at last to go, determined that if it went as badly as at the rehearsal, I would go into the orchestra, take the violin out of the hands of M. La Haussaye, the first violin, and lead myself. I prayed to God that it might go well, for all is to His greater honor and glory; and ecce, the symphony began, Raaff was standing beside me, and just in the middle of the allegro a passage occurred which I felt sure must please, and there was a burst of applause; but as I knew at the time I wrote it what effect it was sure to produce, I brought it in once more at the close, and then rose shouts of "Da capo!" The andante was also liked, but the last allegro still more so. Having observed that all last as well as first allegros here begin together with all the other instruments, and generally unisono, mine commenced with only two violins, piano for the first eight bars, followed instantly by a forte; the audience, as I expected, called out "hush!" at the soft beginning, and the instant the forte was heard began to clap their hands. The moment the symphony was over I went off in my joy to the Palais Royal, where I took a good ice, told over my beads, as I had vowed, and went home, where I am always happiest, and always shall be happiest, or in the company of some good, true, upright German, who, so long as he is unmarried, lives a good Christian life, and when he marries loves his wife, and brings up his children properly.

I must give you a piece of intelligence that you perhaps already know--namely, that the ungodly arch-villain Voltaire has died miserably like a dog--just like a brute. This is his reward! You must long since have remarked that I do not like being here, for many reasons, which, however, do not signify as I am actually here. I never fail to do my very best, and to do so with all my strength. Well, God will make all things right. I have a project in my head, for the success of which I daily pray to God. If it be His almighty will, it must come to pass; but, if not, I am quite contented. I shall then at all events have done my part. When this is in train, and if it turns out as I wish, you must then do your part also, or the whole work would be incomplete. Your kindness leads me to hope that you will certainly do so. Don't trouble yourself by any useless thoughts on the subject; and one favor I must beg of you beforehand, which is, not to ask me to reveal my thoughts more clearly till the time comes. It is very difficult at present to find a good libretto for an opera. The old ones, which are the best, are not written in the modern style, and the new ones are all good for nothing; for poetry, which was the only thing of which France had reason to be proud, becomes every day worse, and poetry is the only thing which requires to be good here, for music they do not understand. There are now two operas in aria which I could write, one in two acts, and the other in three. The two-act one is "Alexandra et Roxane," but the author of the libretto is still in the country; the one in three acts is "Demofonte" (by Metastasio). It is a translation interspersed with choruses and dancing, and specially adapted to the

French stage. But this one I have not yet got a sight of. Write to me whether you have Schroter's concertos in Salzburg, or Hullmandell's sonatas. I should like to buy them to send to you. Both of them are beautiful. With regard to Versailles, it never was my intention to go there. I asked the advice of Baron Grimm and other kind friends on the point, and they all thought just as I did. The salary is not much, and I should be obliged to live a dreary life for six months in a place where nothing is to be gained, and my talents completely buried. Whoever enters the king's service is forgotten in Paris; and then to become an organist! A good appointment would be most welcome to me, but only that of a Capellmeister, and a well-paid one too.

Now, farewell! Be careful of your health; place your trust in God, and then you will find consolation. My dearest mother is in the hands of the Almighty. If He still spares her to us, as I wish He may, we will thank Him for this blessing, but if He takes her to Himself, all our anguish, misery, and despair can be of no avail. Let us rather submit with firmness to His almighty will, in the full conviction that it will prove for our good, as he does nothing without a cause. Farewell, dearest papa! Do what you can to preserve your health for my sake.

108.

Paris, July 9, 1778.

I HOPE you are prepared to receive with firmness most melancholy and painful intelligence. My last letter of the 3d must have shown you that no good news could be hoped for. That very same day, the 3d, at twenty minutes past ten at night, my mother fell asleep peacefully in the Lord; indeed, when I wrote to you she was already in the enjoyment of heavenly bliss, for all was then over. I wrote to you in the night, and I hope you and my dear sister will forgive me for this slight but very necessary deception; for, judging of your grief and sorrow by my own, I could not prevail on myself to startle you suddenly by such dreadful intelligence; but I hope you have now summoned up courage to hear the worst, and that, after at first giving way to natural and only too just anguish and tears, you will eventually submit to the will of God, and adore His inscrutable, unfathomable, and all-wise providence. You can easily conceive what I have had to endure, and what courage and fortitude I required to bear with composure seeing her become daily worse and worse; and yet our gracious God bestowed this boon on me. I have, indeed, suffered and wept, but what did it avail? So I strove to be comforted, and I do hope, my dear father, that my dear sister and you will do likewise. Weep, weep, as you cannot fail to weep, but take comfort at last; remember that God Almighty has ordained it, and how can we rebel against Him? Let us rather pray to Him and thank Him for His goodness, for she died a happy death. Under these heart-rending circumstances there were three things that consoled me--my entire and steadfast submission to the will of God, and the sight of her easy and blessed death, which made me feel that in a moment she had become so happy; for how far happier is she now than we are! Indeed, I would fain at that moment have gone with her. From this wish and longing proceeded my third source of consolation--namely, that she is not lost to us forever, that we shall see her again, and live together far more happily and blessedly than in this world. The time as yet we know not, but that does not disturb me; when God wills it I am ready. His heavenly and holy will has been fulfilled. Let us therefore pray a pious Vater unser for her soul, and turn our thoughts to other matters, for there is a time for everything.

I write this in the house of Madame d'Epinay and M. Grimm, with whom I now live; I have a pretty little room with a very agreeable prospect, and am as happy as it is possible to be under my present circumstances. It will be a great aid in restoring my tranquillity, to hear that my dear father and sister submit with calmness and fortitude to the will of God, and trust Him with their whole heart, in the entire belief that He orders all for the best. My dearest father, do not give way! My dearest sister, be firm! You do not as yet know your brother's kind heart, because he has not yet had an opportunity to prove it. Remember, my loved ones both, that you have a son and a brother anxious to devote all his powers to make you happy, knowing well that the day must come when you will not be hostile to his wish and his desire,--not certainly such as to be any discredit to him,--and that you will do all that lies in your power to make him happy. Oh! then we shall all live together as peacefully, honorably, and contentedly as it is possible to do in this world, and at last in God's good time all meet again above--the purpose for which we were destined and created.

I received your last letter of the 29th, and see with pleasure that you are both, thank God! in good health. I could not help laughing heartily at Haydn's tipsy fit. Had I been there, I certainly should have whispered in his ear "Adlgasser!" It is really disgraceful in so clever a man to render himself incapable by his own folly of performing his duties at a festival instituted in honor of God; when the Archbishop too and his whole court were present, and the church full of people, it was quite abominable.[Footnote: The father had written, "Haydn (organist of the church of the Holy Trinity) played the organ in the afternoon at the Litany, and the Te Deum laudamus, but in such a dreadful manner that we were quite startled, and thought he was about to undergo the fate of the deceased Adlgasser [who was seized with paralysis when playing the organ] It turned out, however, that he was only rather intoxicated, so his head and hands did not agree"] This is one of my chief reasons for detesting Salzburg--those coarse, slovenly, dissipated court

musicians, with whom no honest man of good breeding could possibly live! instead of being glad to associate with them, he must feel ashamed of them. It is probably from this very cause that musicians are neither loved nor respected with us. If the orchestra were only organised like that at Mannheim! I wish you could see the subordination that prevails there--the authority Cannabich exercises; where all is done in earnest. Cannabich, who is the best director I ever saw, is both beloved and feared by his subordinates, who, as well as himself, are respected by the whole town. But certainly they behave very differently, have good manners, are well dressed (and do not go to public-houses to get drunk). This can never be the case in Salzburg, unless the Prince will place confidence either in you or me and give us full powers, which are indispensable to a conductor of music; otherwise it is all in vain. In Salzburg every one is master--so no one is master. If I were to undertake it, I should insist on exercising entire authority. The Grand Chamberlain must have nothing to say as to musical matters, or on any point relating to music. Not every person in authority can become a Capellmeister, but a Capellmeister must become a person of authority.

By the by, the Elector is again in Mannheim. Madame Cannabich and also her husband correspond with me. If what I fear were to come to pass, and it would be a sad pity if it did,--namely, that the orchestra were to be much diminished,--I still cherish one hope. You know that there is nothing I desire more than a good appointment,--good in reputation, and good in money,--no matter where, provided it be in a Catholic country. You fenced skilfully indeed with Count Stahremberg [FOOTNOTE: A prebendary of Salzburg, to whom the father had "opened his heart," and told him all that had occurred in Salzburg. Wolfgang's reinstatement in his situation was being negotiated at the time.] throughout the whole affair; only continue as you have begun, and do not allow yourself to be deluded; more especially be on your guard if by any chance you enter into conversation with that silly goose---; [FOOTNOTE: He probably alludes to the Archbishop's sister, Countess Franziska von Walles, who did the honors of her brother's court, and who, no doubt, also interfered in this matter.] I know her, and believe me, though she may have sugar and honey on her lips, she has gall and wormwood in her head and in her heart. It is quite natural that the whole affair should still be in an unsettled state, and many things must be conceded before I could accept the offer; and even if every point were favorably adjusted, I would rather be anywhere than at Salzburg. But I need not concern myself on the matter, for it is not likely that all I ask should be granted, as I ask a great deal. Still it is not impossible; and if all were rightly organized, I would no longer hesitate, but solely for the happiness of being with you. If the Salzburgers wish to have me, they must comply with my wishes, or they shall never get me.

So the Prelate of Baumburg has died the usual prelatical death; but I had not heard that the Prelate of the Holy Cross [in Augsburg] was also dead. I grieve to hear it, for he was a good, honest, upright man. So you had no faith in Deacon Zeschinger [see No. 68] being made prelate? I give you my honor I never conjectured anything else; indeed, I do not know who else could have got it; and what better prelate could we have for music?

My friend Raaff leaves this to-morrow; he goes by Brussels to Aix-la-Chapelle and Spa, and thence to Mannheim, when he is to give me immediate notice of his arrival, for we mean to correspond. He sends numerous greetings to you and to my sister. You write that you have heard nothing for a very long time of my pupil in composition; very true, but what can I say about her? She will never be a composer; all labor is vain with her, for she is not only vastly stupid, but also vastly lazy.

I had previously answered you about the opera. As to Noverre's ballet, I only wrote that he might perhaps arrange a new one. He wanted about one half to complete it, and this I set to music. That is, six pieces are written by others, consisting entirely of old trumpery French airs; the symphony and contre-danses, and about twelve more pieces, are contributed by me. This ballet has already been given four times with great applause. I am now positively determined to write nothing more without previously knowing what I am to get for it: but this was only a friendly act towards Noverre. Herr Wendling left this last May. If I were to see Baron Bach, I must have very good eyes, for he is not here but in London. Is it possible that I did not tell you this? You shall find that, in future, I will answer all your letters minutely. It is said that Baron Bach will soon return here; I should be glad of that for many reasons, especially because at his house there will be always opportunity to try things over in good earnest. Capellmeister Bach will also soon be here; I believe he is writing an opera. The French are, and always will be, downright donkeys; they can do nothing themselves, so they must have recourse to foreigners. I talked to Piccini at the Concert Spirituel; he is always most polite to me and I to him when we do by chance meet. Otherwise I do not seek much acquaintance, either with him or any of the other composers; they understand their work and I mine, and that is enough. I already wrote to you of the extraordinary success my symphony had in the Concert Spirituel. If I receive a commission to write an opera, I shall have annoyance enough, but this I shall not much mind, being pretty well accustomed to it--if only that confounded French language were not so detestable for music! It is, indeed, too provoking; even German is divine in comparison. And then the singers--but they do not deserve the name, for they do not sing, but scream and bawl with all their might through their noses and throats. I am to compose a French oratorio for the ensuing Lent, to be given at the Concert Spirituel. M. Le Gros (the director) is amazingly well-disposed towards me. You must know that (though I used

to see him every day) I have not been near him since Easter; I felt so indignant at his not having my symphony performed. I was often in the same house visiting Raaff, and thus passed his rooms constantly. His servants often saw me, when I always sent him my compliments. It is really a pity he did not give the symphony--it would have been a good hit; and now he has no longer the opportunity to do so, for how seldom are four such performers to be found together! One day, when I went to call on Raaff, I was told that he was out, but would soon be home; so I waited. M. Le Gros came into the room and said, "It is really quite a marvel to have the pleasure of seeing you once more." "Yes; I have a great deal to do." "I hope you will stay and dine with us to-day?" "I regret that I cannot, being already engaged." "M. Mozart, we really must soon spend a day together." "It will give me much pleasure." A long pause; at length, "A propos, are you disposed to write a grand symphony for me for Corpus Christi day?" "Why not?" "May I then rely on this?" "Oh, yes! if I may, with equal confidence, rely on its being performed, and that it will not fare like the sinfonie concertante." This opened the flood-gates; he excused himself in the best way he could, but did not find much to say. In short, the symphony [Kochel, No. 297] was highly approved of; and Le Gros is so satisfied with it that he says it is his very best symphony. The andante, however, has not the good fortune to please him; he declares that it has too many modulations, and is too long. He derives this opinion from the audience forgetting to clap their hands as loudly, and to be as vociferous, as at the end of the first and last movements. But this andante is a great favorite WITH MYSELF, as well as with all connoisseurs, amateurs, and the greater part of those who heard it. It is the exact reverse of what Le Gros says, for it is both simple and short. But in order to satisfy him (and no doubt some others) I have written a fresh one. Each good in its own way--each having a different character. The last pleases me the best. The first good opportunity I have, I will send you this sinfonie concertante, and also the "School for the Violin," some pieces for the piano, and Vogler's book ("Ton Wissenschaft und Kunst"), and then I hope to have your opinion of them. On August 15th, Ascension Day, my sinfonie, with the new andante, is to be performed for the second time. The sinfonie is in Re, the andante in Sol, for here one must not say in D or in G. Le Gros is now all for me.

Take comfort and pray without ceasing; this is the only resource we have. I hope you will cause a holy mass to be said in Maria Plain and in Loretto. I have done so here. As for the letter to Herr Bahr, I don't think it is necessary to send it to me; I am not as yet acquainted with him; I only know that he plays the clarionet well, but is in other respects no desirable companion, and I do not willingly associate with such people; no credit is derived from them, and I really should feel positively ashamed to give him a letter recommending me to him--even if he could be of service to me; but it so happens that he is by no means in good repute here. Many do not know him at all. Of the two Staunitz, the junior only is here [Mannheim composer]. The elder of the two (the veritable Hafeneder composer) is in London. They are wretched scribblers, gamblers, and drunkards, and not the kind of people for me. The one now here has scarcely a coat to his back. By the by, if Brunetti should ever be dismissed, I would be glad to recommend a friend of mine to the Archbishop as first violin; he is a most worthy man, and very steady. I think he is about forty years of age, and a widower; his name is Rothfischer. He is Concertmeister at Kirchheim-Boland, with the Princess of Nassau-Weilberg [see No. 91]. Entre nous, he is dissatisfied, for he is no favorite with his Prince--that is, his music is not. He urged me to forward his interests, and it would cause me real pleasure to be of use to him, for never was there such a kind man.

109.

Paris, July 18, 1778.

I HOPE you got my last two letters. Let us allude no more to their chief purport. All is over; and were we to write whole pages on the subject, we could not alter the fact.

The principal object of this letter is to congratulate my dear sister on her name-day. I think I wrote to you that M. Raaff had left this, but that he is my very true and most particular friend, and I can entirely depend on his regard. I could not possibly write to you, because I did not myself know that he had so much affection for me. Now, to write a story properly, one ought to begin from the beginning. I ought to tell you, first, that Raaff lodged with M. Le Gros. It just occurs to me that you already know this; but what am I to do? It is written, and I can't begin the letter again, so I proceed. When he arrived, we happened to be at dinner. This, too, has nothing to do with the matter; it is only to let you know that people do dine in Paris, as elsewhere. When I went home I found a letter for me from Herr Weber, and the bearer of it was Raaff. If I wished to deserve the name of a historian, I ought here to insert the contents of this letter; and I can with truth say that I am very reluctant to decline giving them. But I must not be too prolix; to be concise is a fine thing, which you can see by my letter. The third day I found him at home and thanked him; it is always advisable to be polite. I no longer remember what we talked about. An historian must be unusually dull who cannot forthwith supply some falsehood--I mean some romance. Well! we spoke of the fine weather; and when we had said our say, we were silent, and I went away. Some days after--though what day it was I really forget, but one day in the week assuredly--I had just seated myself, at the

piano of course; and Ritter, the worthy Holzbeisser, was sitting beside me. Now, what is to be deduced from that? A great deal. Raaff had never heard me at Mannheim except at a concert, where the noise and uproar was so great that nothing could be heard; and HE had such a miserable piano that I could not have done myself any justice on it. Here, however, the instrument was good, and I saw Raaff sitting opposite me with a speculative air; so, as you may imagine, I played some preludes in the Fischietti method, and also played a florid sonata in the style and with the fire, spirit, and precision of Haydn, and then a fugue with all the skill of Lipp, Silber, and Aman. [Footnote: Fischietti was Capellmeister in Salzburg; Michael Haydn and Lipp, organists.] My fugue-playing has everywhere gained me the greatest applause. When I had quite finished, (Raaff all the time calling out Bravo! while his countenance showed his true and sincere delight,) I entered into conversation with Ritter, and among other things said that I by no means liked being here; adding, "The chief cause of this is music; besides, I can find no resources here, no amusement, no agreeable or sociable intercourse with any one,--especially with ladies, many of whom are disreputable, and those who are not so are deficient in good breeding." Ritter could not deny that I was right. Raaff at last said, smiling, "I can quite believe it, for M. Mozart is not WHOLLY here to admire the Parisian beauties; one half of him is elsewhere--where I have just come from." This of course gave rise to much laughing and joking; but Raaff presently said, in a serious tone, "You are quite right, and I cannot blame you; she deserves it, for she is a sweet, pretty, good girl, well educated, and a superior person with considerable talent." This gave me an excellent opportunity strongly to recommend my beloved Madlle. Weber to him; but there was no occasion for me to say much, as he was already quite fascinated by her. He promised me, as soon as he returned to Mannheim, to give her lessons, and to interest himself in her favor. I ought, by rights, to insert something here, but I must first finish the history of our friendship; if there is still room, I may do so. He was in my eyes only an every-day acquaintance, and no more; but I often sat with him in his room, so by degrees I began to place more confidence in him, and at last told him all my Mannheim history,--how I had been bamboozled and made a fool of, adding that perhaps I might still get an appointment there. He neither said yes nor no; and on every occasion when I alluded to it he seemed each time more indifferent and less interested in the matter. At last, however, I thought I remarked more complacency in his manner, and he often, indeed, began to speak of the affair himself. I introduced him to Herr Grimm and to Madame d'Epinay. On one occasion he came to me and said that he and I were to dine with Count Sickingen some day soon; adding, "The Count and I were conversing together, and I said to him, 'A propos, has your Excellency heard our Mozart?' 'No; but I should like very much both to see and to hear him, for they write me most astonishing things about him from Mannheim.' 'When your Excellency does hear him, you will see that what has been written to you is rather too little than too much.' 'Is it possible?' 'Beyond all doubt, your Excellency.'" Now, this was the first time that I had any reason to think Raaff interested in me. Then it went on increasing, and one day I asked him to come home with me; and after that he often came of his own accord, and at length every day. The day after he left this, a good-looking man called on me in the forenoon with a picture, and said, "Monsieur, je viens de la part de ce Monsieur," showing me a portrait of Raaff, and an admirable likeness. Presently he began to speak German; and it turned out that he was a painter of the Elector's, whom Raaff had often mentioned to me, but always forgot to take me to see him. I believe you know him, for it must be the very person Madame Urspringer, of Mayence, alludes to in her letter, because he says he often met us at the Urspringers'. His name is Kymli. He is a most kind, amiable man, well-principled, honorable, and a good Christian; one proof of which is the friendship between him and Raaff. Now comes the best evidence of Raaff's regard for me, and the sincere interest he takes in my welfare: it is, that he imparts his intentions rather to those whom he can trust than to those more immediately concerned, being unwilling to promise without the certainty of a happy result. This is what Kymli told me. Raaff asked him to call on me and to show me his portrait, to see me often, and to assist me in every way, and to establish an intimate friendship with me. It seems he went to him every morning, and repeatedly said to Kymli, "I was at Herr Mozart's again yesterday evening; he is, indeed, a wonderful little fellow; he is an out-and-outer, and no mistake!" and was always praising me. He told Kymli everything, and the whole Mannheim story--in short, all. The fact is, that high-principled, religious, and well-conducted people always like each other. Kymli says I may rest assured that I am in good hands. "Raaff will certainly do all he can for you, and he is a prudent man who will set to work cleverly; he will not say that it is your wish, but rather your due. He is on the best footing with the Oberststallmeister. Rely on it, he will not be beat; only you must let him go his own way to work." One thing more. Father Martini's letter to Raaff, praising me, must have been lost. Raaff had, some time since, a letter from him, but not a word about me in it. Possibly it is still lying in Mannheim; but this is unlikely, as I know that, during his stay in Paris, all his letters have been regularly forwarded to him. As the Elector justly entertains a very high opinion of the Padre Maestro, I think it would be a good thing if you would be so kind as to apply to him to write again about me to Raaff; it might be of use, and good Father Martini would not hesitate to do a friendly thing twice over for me, knowing that he might thus make my fortune. He no doubt would express the letter in such a manner that it could be shown, if need be, to the Elector. Now enough as to this; my wish for a favorable issue is chiefly that I may soon have the happiness of embracing my dear father and sister. Oh! how joyously and happily we shall live together! I pray fervently to God to grant me this favor; a new leaf will at last be turned, please God! In the fond hope that the day will come, and the

sooner the better, when we shall all be happy, I mean, in God's name, to persevere in my life here, though so totally opposed to my genius, inclinations, knowledge, and sympathies. Believe me, this is but too true,--I write you only the simple truth. If I were to attempt to give you all my reasons, I might write my fingers off and do no good. For here I am, and I must do all that is in my power. God grant that I may not thus impair my talents; but I hope it will not continue long enough for that. God grant it! By the by, the other day an ecclesiastic called on me. He is the leader of the choir at St. Peter's, in Salzburg, and knows you very well; his name is Zendorff; perhaps you may not remember him? He gives lessons here on the piano--in Paris. N. B., have not you a horror of the very name of Paris? I strongly recommend him as organist to the Archbishop; he says he would be satisfied with three hundred florins. Now farewell! Be careful of your health, and strive to be cheerful. Remember that possibly you may ere long have the satisfaction of tossing off a good glass of Rhenish wine with your son--your truly happy son. Adieu!

20th.--Pray forgive my being so late in sending you my congratulations, but I wished to present my sister with a little prelude. The mode of playing it I leave to her own feeling. This is not the kind of prelude to pass from one key to another, but merely a capriccio to try over a piano. My sonatas [Kochel, Nos. 301-306] are soon to be published. No one as yet would agree to give me what I asked for them, so I have been obliged at last to give in, and to let them go for 15 louis-d'or. It is the best way too to make my name known here. As soon as they appear I will send them to you by some good opportunity (and as economically as possible) along with your "School for the Violin," Vogler's book, Hullmandel's sonatas, Schroter's concertos, some of my pianoforte sonatas, the sinfonie concertante, two quartets for the flute, and a concerto for harp and flute [Kochel, No. 298, 299].

Pray, what do you hear about the war? For three days I was very depressed and sorrowful; it is, after all, nothing to me, but I am so sensitive that I feel quickly interested in any matter. I heard that the Emperor had been defeated. At first it was reported that the King of Prussia had surprised the Emperor, or rather the troops commanded by Archduke Maximilian; that two thousand had fallen on the Austrian side, but fortunately the Emperor had come to his assistance with forty thousand men, but was forced to retreat. Secondly, it was said that the King had attacked the Emperor himself, and entirely surrounded him, and that if General Laudon had not come to his relief with eighteen hundred cuirassiers, he would have been taken prisoner; that sixteen hundred cuirassiers had been killed, and Laudon himself shot dead. I have not, however, seen this in any newspaper, but to-day I was told that the Emperor had invaded Saxony with forty thousand troops. Whether the news be true I know not. This is a fine griffonage, to be sure! but I have not patience to write prettily; if you can only read it, it will do well enough. A propos, I saw in the papers that, in a skirmish between the Saxons and Croats, a Saxon captain of grenadiers named Hopfgarten had lost his life, and was much lamented. Can this be the kind, worthy Baron Hopfgarten whom we knew at Paris with Herr von Bose? I should grieve if it were, but I would rather he died this glorious death than have sacrificed his life, as too many young men do here, to dissipation and vice. You know this already, but it is now worse than ever.

N. B. I hope you will be able to decipher the end of the prelude; you need not be very particular about the time; it is the kind of thing that may be played as you feel inclined. I should like to inflict twenty-five stripes on the sorry Vatel's shoulders for not having married Katherl. Nothing is more shameful, in my opinion, than to make a fool of an honest girl, and to play her false eventually; but I hope this may not be the case. If I were her father, I would soon put a stop to the affair.

110.

Paris, July 31, 1778.

I HOPE you have got my two letters of the 11th and 18th. Meantime I have received yours of the 13th and 20th. The first brought tears of sorrow to my eyes, as I was reminded by it of the sad death of my darling mother, and the whole scene recurred vividly to me. Never can I forget it while I live. You know that (though I often wished it) I had never seen any one die, and the first time I did so it was fated to be my own mother! My greatest misery was the thoughts of that hour, and I prayed earnestly to God for strength. I was heard, and strength was given to me. Melancholy as your letter made me, still I was inexpressibly happy to find that you both bear this sorrow as it ought to be borne, and that my mind may now be at ease about my beloved father and sister. As soon as I read your letter, my first impulse was to throw myself on my knees, and fervently to thank our gracious God for this blessing. I am now comparatively happy, because I have no longer anything to dread on account of the two persons who are dearest to me in this world; had it been otherwise, such a terrible misfortune would have utterly overwhelmed me. Be careful therefore of your precious health for my sake, I entreat, and grant to him who flatters himself that he is now what you love most in the world the joy and felicity soon to embrace you.

Your last letter also caused my tears to flow from joy, as it convinced me more than ever of your fatherly love and care. I shall strive with all my might still more to deserve your affection. I thank you for the powder, but am sure you will be glad to hear that I do not require to use it. During my dear mother's illness it would have been very useful, but now, thank God! I am perfectly well and healthy. At times I have fits of melancholy, but the best way to get rid of them is by writing or receiving letters, which always cheers me; but, believe me, these sad feelings never recur without too good cause. You wish to have an account of her illness and every detail connected with it; that you shall have; but I must ask you to let it be short, and I shall only allude to the principal facts, as the event is over, and cannot, alas! now be altered, and I require some space to write on business topics.

In the first place, I must tell you that NOTHING could have saved my mother. No doctor in the world could have restored her to health. It was the manifest will of God; her time was come, and God chose to take her to Himself. You think she put off being bled too long? it may be so, as she did delay it for a little, but I rather agree with the people here, who dissuaded her from being bled at all. The cause of my mother's illness was internal inflammation. After being bled she rallied for some days, but on the 19th she complained of headache, and for the first time stayed in bed the whole day. On the 20th she was seized first with shivering and then with fever, so I gave her an anti-spasmodic powder. I was at that time very anxious to send for another doctor, but she would not allow me to do so, and when I urged her very strongly, she told me that she had no confidence in any French medical man. I therefore looked about for a German one. I could not, of course, go out and leave her, but I anxiously waited for M. Heina, who came regularly every day to see us; but on this occasion two days passed without his appearing. At last he came, but as our doctor was prevented paying his usual visit next day, we could not consult with him; in fact, he did not come till the 24th. The previous day, when I had been expecting him so eagerly, I was in great trouble, for my mother suddenly lost her sense of hearing. The doctor, an old German about seventy, gave her rhubarb in wine. I could not understand this, as wine is usually thought heating; but when I said so, every one exclaimed, "How can you say so? Wine is not heating, but strengthening; water is heating." And all the time the poor invalid was longing for a drink of fresh water. How gladly would I have complied with her wish! My dear father, you cannot conceive what I went through, but nothing could be done, except to leave her in the hands of the physician. All that I could do with a good conscience, was to pray to God without ceasing, that He would order all things for her good. I went about as if I had altogether lost my head. I had ample leisure then to compose, but I was in such a state that I could not have written a single note. The 25th the doctor did not come; on the 26th he visited her again. Imagine my feelings when he all at once said to me, "I fear she will scarcely live through the night; she may die at any moment. You had better see that she receives the sacrament." So I hurried off to the end of the Chaussee d'Antin, and went on beyond the Barriere to find Heina, knowing that he was at a concert in the house of some count. He said that he would bring a German priest with him next morning. On my way back I looked in on Madame d'Epinay and M. Grimm for a moment as I passed. They were distressed that I had not spoken sooner, as they would at once have sent their doctor. I did not tell them my reason, which was, that my mother would not see a French doctor. I was hard put to it, as they said they would send their physician that very evening. When I came home, I told my mother that I had met Herr Heina with a German priest, who had heard a great deal about me and was anxious to hear me play, and that they were both to call on me next day. She seemed quite satisfied, and though I am no doctor, still seeing that she was better I said nothing more. I find it impossible not to write at full length--indeed, I am glad to give you every particular, for it will be more satisfactory to you; but as I have some things to write that are indispensable, I shall continue my account of the illness in my next letter. In the mean time you must have seen from my last letter, that all my darling mother's affairs and my own are in good order. When I come to this point, I will tell you how things were arranged. Heina and I regulated everything ourselves.

Now for business. Do not allow your thoughts to dwell on what I wrote, asking your permission not to reveal my ideas till the proper time arrived. Pray do not let it trouble you. I cannot yet tell you about it, and if I did, I should probably do more harm than good; but, to tranquillize you, I may at least say that it only concerns myself. Your circumstances will be made neither better nor worse, and until I see you in a better position I shall think no more about the matter. If the day ever arrives when we can live together in peace and happiness, (which is my grand object),--when that joyful time comes, and God grant it may come soon!--then the right moment will have arrived, and the rest will depend on yourself. Do not, therefore, discompose yourself on the subject, and be assured that in every case where I know that your happiness and peace are involved, I shall invariably place entire confidence in you, my kind father and true friend, and detail everything to you minutely. If in the interim I have not done so, the fault is not solely mine. [FOOTNOTE: He had evidently in his thoughts, what was indeed manifest in his previous letters, a speedy marriage with his beloved Aloysia.] M. Grimm recently said to me, "What am I to write to your father? What course do you intend to pursue? Do you remain here, or go to Mannheim?" I really could not help laughing: "What could I do at Mannheim now? would that I had never come to Paris! but so it is. Here I am, and I must use every effort to get forward." "Well," said he, "I scarcely think that you will do much good here." "Why? I see a number of wretched bunglers who make a livelihood, and why, with my talents, am I to fail? I

assure you that I like being at Mannheim, and wish very much to get some appointment there, but it must be one that is honorable and of good repute. I must have entire certainty on the subject before I move a step." "I fear," said he, "that you are not sufficiently active here--you don't go about enough." "Well," said I, "that is the hardest of all for me to do." Besides, I could go nowhere during my mother's long illness, and now two of my pupils are in the country, and the third (the Duke de Guines's daughter) is betrothed, and means no longer to continue her lessons, which, so far as my credit is concerned, does not distress me much. It is no particular loss to me, for the Duke only pays me what every one else does. Only imagine! I went to his house every day for two hours, being engaged to give twenty-four lessons, (but it is the custom here to pay after each twelve lessons.) They went into the country, and when they came back ten days afterwards, I was not apprised of it; had I not by chance inquired out of mere curiosity, I should not have known that they were here. When I did go, the governess took out her purse and said to me, "Pray excuse my only paying you at present for twelve lessons, for I have not enough money." This is a noble proceeding! She then gave me three louis-d'or, adding, "I hope you are satisfied; if not, I beg you will say so." M. le Duc can have no sense of honor, or probably thinks that I am only a young man and a thick-headed German, (for this is the way in which the French always speak of us,) and that I shall be quite contented. The thick-headed German, however, was very far from being contented, so he declined receiving the sum offered. The Duke intended to pay me for one hour instead of two, and all from economy. As he has now had a concerto of mine for harp and flute, for the last four months, which he has not yet paid me for, I am only waiting till the wedding is over to go to the governess and ask for my money. What provokes me most of all is that these stupid Frenchmen think I am still only seven years old, as they saw me first when I was that age. This is perfectly true, for Madame d'Epinay herself told me so quite seriously. I am therefore treated here like a beginner, except by the musicians, who think very differently; but most votes carry the day!

After my conversation with Grimm, I went the very next day to call on Count Sickingen. He was quite of my opinion that I ought to have patience and wait till Raaff arrives at his destination, who will do all that lies in his power to serve me. If he should fail, Count Sickingen has offered to procure a situation for me at Mayence. In the mean time my plan is to do my utmost to gain a livelihood by teaching, and to earn as much money as possible. This I am now doing, in the fond hope that some change may soon occur; for I cannot deny, and indeed at once frankly confess, that I shall be delighted to be released from this place. Giving lessons is no joke here, and unless you wear yourself out by taking a number of pupils, not much money can be made. You must not think that this proceeds from laziness. No! it is only quite opposed to my genius and my habits. You know that I am, so to speak, plunged into music,--that I am occupied with it the whole day,--that I like to speculate, to study, and to reflect. Now my present mode of life effectually prevents this. I have, indeed, some hours at liberty, but those few hours are more necessary for rest than for work.

I told you already about the opera. One thing is certain--I must compose a great opera or none. If I write only smaller ones, I shall get very little, for here everything is done at a fixed price, and if it should be so unfortunate as not to please the obtuse French, it is all up with it. I should get no more to write, have very little profit, and find my reputation damaged. If, on the other hand, I write a great opera, the remuneration is better, I am working in my own peculiar sphere, in which I delight, and I have a greater chance of being appreciated, because in a great work there is more opportunity to gain approval. I assure you that if I receive a commission to write an opera, I have no fears on the subject. It is true that the devil himself invented their language, and I see the difficulties which all composers have found in it. But, in spite of this, I feel myself as able to surmount these difficulties as any one else. Indeed, when I sometimes think in my own mind that I may look on my opera as a certainty, I feel quite a fiery impulse within me, and tremble from head to foot, through the eager desire to teach the French more fully how to know, and value, and fear the Germans. Why is a great opera never intrusted to a Frenchman? Why is it always given to a foreigner? To me the most insupportable part of it will be the singers. Well, I am ready. I wish to avoid all strife, but if I am challenged I know how to defend myself. If it runs its course without a duel, I should prefer it, for I do not care to wrestle with dwarfs.

God grant that some change may soon come to pass! In the mean time I shall certainly not be deficient in industry, trouble, and labor. My hopes are centred on the winter, when every one returns from the country. My heart beats with joy at the thought of the happy day when I shall once more see and embrace you.

The day before yesterday my dear friend Weber, among other things, wrote to me that the day after the Elector's arrival it was publicly announced that he was to take up his residence in Munich, which came like a thunder-clap on Mannheim, wholly, so to say, extinguishing the universal illumination by which the inhabitants had testified their joy on the previous day. The fact was also communicated to all the court musicians, with the addition that each was at liberty to follow the court to Munich or to remain in Mannheim, (retaining the same salaries,) and in a fortnight each was to give a written and sealed decision to the Intendant. Weber, who is, as you know, in the most miserable circumstances, wrote as follows:--"I anxiously desire to follow my gracious master to Munich, but my decayed circumstances prevent my doing so." Before this occurred there was a grand court concert, where poor

Madlle. Weber felt the fangs of her enemies; for on this occasion she did not sing! It is not known who was the cause of this. Afterwards there was a concert at Herr von Gemmingen's, where Count Seeau also was. She sang two arias of mine, and was so fortunate as to please, in spite of those Italian scoundrels [the singers of Munich], those infamous charlatans, who circulated a report that she had very much gone off in her singing. When her songs were finished, Cannabich said to her, "Mademoiselle, I hope you will always continue to fall off in this manner; tomorrow I will write to M. Mozart in your praise." One thing is certain; if war had not already broken out, the court would by this time have been transferred to Munich. Count Seeau, who is quite determined to engage Madlle. Weber, would have left nothing undone to insure her coming to Munich, so that there was some hope that the family might have been placed in better circumstances; but now that all is again quiet about the Munich journey, these poor people may have to wait a long time, while their debts daily accumulate. If I could only help them! Dearest father, I recommend them to you from my heart. If they could even for a few years be in possession of 1000 florins!

111.

To HERR BULLINGER.

Paris, August 7, 1778.

MY VERY DEAR FRIEND,--

Allow me above all to thank you most warmly for the proof of friendship you gave me by your interest in my dear father--first in preparing, and then kindly consoling him for his loss [see No. 106]. You played your part admirably. These are my father's own words. My kind friend, how can I sufficiently thank you? You saved my father for me. I have you to thank that I still have him. Permit me to say no more on the subject, and not to attempt to express my gratitude, for I feel too weak and incompetent to do so. My best friend, I am forever your debtor; but patience! It is too true that I am not yet in a position to repay what I owe you, but rely on it God will one day grant me the opportunity of showing by deeds what I am unable to express by words. Such is my hope; till that happy time, however, arrives, allow me to beg you to continue your precious and valued friendship to me, and also to accept mine afresh, now and forever; to which I pledge myself in all sincerity of heart. It will not, indeed, be of much use to you, but not on that account less sincere and lasting. You know well that the best and truest of all friends are the poor. The rich know nothing of friendship, especially those who are born to riches, and even those whom fate enriches often become very different when fortunate in life. But when a man is placed in favorable circumstances, not by blind, but reasonable good fortune and merit, who during his early and less prosperous days never lost courage, remaining faithful to his religion and his God, striving to be an honest man and good Christian, knowing how to value his true friends,--in short, one who really deserves better fortune,--from such a man no ingratitude is to be feared.

I must now proceed to answer your letter. You can be under no further anxiety as to my health, for you must have ere this received three letters from me. The first, containing the sad news of my mother's death, was enclosed, my dear friend, to you. You must forgive my silence on the subject, but my thoughts recur to it constantly. You write that I should now think only of my father, tell him frankly all my thoughts, and place entire confidence in him. How unhappy should I be if I required this injunction! It was expedient that you should suggest it, but I am happy to say (and you will also be glad to hear it) that I do not need this advice. In my last letter to my dear father, I wrote to him all that I myself know up to this time, assuring him that I would always keep him minutely informed of everything, and candidly tell him my intentions, as I place entire faith in him, being confident of his fatherly care, love, and goodness. I feel assured that at a future day he will not deny me a request on which my whole happiness in life depends, and which (for he cannot expect anything else from me) will certainly be quite fair and reasonable. My dear friend, do not let my father read this. You know him; he would only fancy all kinds of things, and to no purpose.

Now for our Salzburg affair. You, my dear friend, are well aware how I do hate Salzburg, not only on account of the injustice shown to my father and myself there, which was in itself enough to make us wish to forget such a place, and to blot it out wholly from our memory. But do not let us refer to that, if we can contrive to live respectably there. To live respectably and to live happily, are two very different things; but the latter I never could do short of witchcraft,--it would indeed be supernatural if I did,--so this is impossible, for in these days there are no longer any witches. Well, happen what may, it will always be the greatest possible pleasure to me to embrace my dear father and sister, and the sooner the better. Still I cannot deny that my joy would be twofold were this to be elsewhere, for I have far more hope of living happily anywhere else. Perhaps you may misunderstand me, and think that Salzburg is on too small a scale for me. If so, you are quite mistaken. I have already written some of my reasons to my father. In the mean time, let this one suffice, that Salzburg is no place for my talent. In the first place, professional musicians are not held in

much consideration; and, secondly, one hears nothing. There is no theatre, no opera there; and if they really wished to have one, who is there to sing? For the last five or six years the Salzburg orchestra has always been rich in what is useless and superfluous, but very poor in what is useful and indispensable; and such is the case at the present moment. Those cruel French are the cause of the band there being without a Capellmeister. [FOOTNOTE: The old Capellmeister, Lolli, had died a short time previously.] I therefore feel assured that quiet and order are now reigning in the orchestra. This is the result of not making provision in time. Half a dozen Capellmeisters should always be held in readiness, that, if one fails, another can instantly be substituted. But where, at present, is even ONE to be found? And yet the danger is urgent. It will not do to allow order, quiet, and good-fellowship to prevail in the orchestra, or the mischief would still further increase, and in the long run become irremediable. Is there no ass-eared old periwig, no dunderhead forthcoming, to restore the concern to its former disabled condition? I shall certainly do my best in the matter. To-morrow I intend to hire a carriage for the day, and visit all the hospitals and infirmaries, to see if I can't find a Capellmeister in one of them. Why were they so improvident as to allow Misliweczeck to give them the slip, and he so near too? [See No. 64.] He would have been a prize, and one not so easy to replace,--freshly emerged, too, from the Duke's Clementi Conservatorio. He was just the man to have awed the whole court orchestra by his presence. Well, we need not be uneasy: where there is money there are always plenty of people to be had. My opinion is that they should not wait too long, not from the foolish fear that they might not get one at all,--for I am well aware that all these gentlemen are expecting one as eagerly and anxiously as the Jews do their Messiah,--but simply because things cannot go on at all under such circumstances. It would therefore be more useful and profitable to look out for a Capellmeister, there being NONE at present, than to write in all directions (as I have been told) to secure a good female singer.

[FOOTNOTE: In order the better to conciliate Wolfgang, Bullinger had been desired to say that the Archbishop, no longer satisfied with Madlle. Haydn, intended to engage another singer; and it was hinted to Mozart, that he might be induced to make choice of Aloysia Weber; (Jahn, ii. 307.) Madlle. Haydn was a daughter of Lipp, the organist, and sent by the Archbishop to Italy to cultivate her voice. She did not enjoy a very good reputation.]

I really can scarcely believe this. Another female singer, when we have already so many, and all admirable! A tenor, though we do not require one either, I could more easily understand--but a prima donna, when we have still Cecarelli! It is true that Madlle. Haydn is in bad health, for her austere mode of life has been carried too far. There are few of whom this can be said. I wonder that she has not long since lost her voice from her perpetual scourgings and flagellations, her hair-cloth, unnatural fasts, and night-prayers! But she will still long retain her powers, and instead of becoming worse, her voice will daily improve. When at last, however, she departs this life to be numbered among the saints, we still have five left, each of whom can dispute the palm with the other. So you see how superfluous a new one is. But, knowing how much changes and novelty and variety are liked with us, I see a wide field before me which may yet form an epoch. [FOOTNOTE: Archbishop Hieronymus, in the true spirit of Frederick the Great, liked to introduce innovations with an unsparing hand; many, however, being both necessary and beneficent.] Do your best that the orchestra may have a leg to stand on, for that is what is most wanted. A head they have [the Archbishop], but that is just the misfortune; and till a change is made in this respect, I will never come to Salzburg. When it does take place, I am willing to come and to turn over the leaf as often as I see V. S. [volti subito] written. Now as to the war [the Bavarian Succession]. So far as I hear, we shall soon have peace in Germany. The King of Prussia is certainly rather alarmed. I read in the papers that the Prussians had surprised an Imperial detachment, but that the Croats and two Cuirassier regiments were near, and, hearing the tumult, came at once to their rescue, and attacked the Prussians, placing them between two fires, and capturing five of their cannon. The route by which the Prussians entered Bohemia is now entirely cut up and destroyed. The Bohemian peasantry do all the mischief they can to the Prussians, who have besides constant desertions among their troops; but these are matters which you must know both sooner and better than we do. But I must write you some of our news here. The French have forced the English to retreat, but it was not a very hot affair. The most remarkable thing is that, friends and foes included, only 100 men were killed. In spite of this, there is a grand jubilation here, and nothing else is talked of. It is also reported that we shall soon have peace. It is a matter of indifference to me, so far as this place is concerned; but I should indeed be very glad if we were soon to have peace in Germany, for many reasons. Now farewell! Your true friend and obedient servant,

WOLFGANG ROMATZ.

112.

St. Germains, August 27, 1778.

I WRITE to you very hurriedly; you will see that I am not in Paris. Herr Bach, from London [Johann Christian], has been here for the last fortnight. He is going to write a French opera, and is only come for the purpose of hearing the singers, and afterwards goes to London to complete the opera, and returns here to put it on the stage. You may easily imagine his joy and mine when we met again; perhaps his delight may not be quite as sincere as mine, but it must be admitted that he is an honorable man and willing to do justice to others. I love him from my heart (as you know), and esteem him; and as for him, there is no doubt that he praises me warmly, not only to my face, but to others also, and not in the exaggerated manner in which some speak, but in earnest. Tenducci is also here, Bach's dearest friend, and he expressed the greatest delight at seeing me again. I must now tell you how I happen to be at St. Germains. The Marechal de Noailles lives here, as you no doubt know, (for I am told I was here fifteen years ago, though I don't remember it.) Tenducci is a great favorite of his, and as he is exceedingly partial to me, he was anxious to procure me this acquaintance. I shall gain nothing here, a trifling present perhaps, but at the same time I do not lose, for it costs me nothing; and even if I do not get anything, still I have made an acquaintance that may be very useful to me. I must make haste, for I am writing a scena for Tenducci, which is to be given on Sunday; it is for pianoforte, hautboy, horn, and bassoon, the performers being the Marechal's own people--Germans, who play very well. I should like to have written to you long since, but just as I had begun the letter (which is now lying in Paris) I was obliged to drive to St. Germains, intending to return the same day, and I have now been here a week. I shall return to Paris as soon as I can, though I shall not lose much there by my absence, for I have now only one pupil, the others being in the country. I could not write to you from here either, because we were obliged to wait for an opportunity to send a letter to Paris. I am quite well, thank God, and trust that both of you are the same. You must have patience--all goes on slowly; I must make friends. France is not unlike Germany in feeding people with encomiums, and yet there is a good hope that, by means of your friends, you may make your fortune. One lucky thing is, that food and lodging cost me nothing. When you write to the friend with whom I am staying [Herr Grimm], do not be too obsequious in your thanks. There are some reasons for this which I will write to you some other time. The rest of the sad history of the illness will follow in the next letter. You desire to have a faithful portrait of Rothfischer? He is an attentive, assiduous director, not a great genius, but I am very much pleased with him, and, best of all, he is the kindest creature, with whom you can do anything--if you know how to set about it, of course. He directs better than Brunetti, but is not so good in solo-playing. He has more execution, and plays well in his way, (a little in the old-fashioned Tartini mode,) but Brunetti's style is more agreeable. The concertos which he writes for himself are pretty and pleasant to listen to, and also to play occasionally. Who can tell whether he may not please? At all events, he plays a thousand million times better than Spitzeger, and, as I already said, he directs well, and is active in his calling. I recommend him to you heartily, for he is the most good-natured man! Adieu!

113.

Paris, Sept. 11, 1778.

I HAVE received your three letters. I shall only reply to the last, being the most important. When I read it, (Heina was with me and sends you his regards,) I trembled with joy, for I fancied myself already in your arms. True it is (and this you will yourself confess) that no great stroke of good fortune awaits me; still, when I think of once more embracing you and my dear sister, I care for no other advantage. This is indeed the only excuse I can make to the people here, who are vociferous that I should remain in Paris; but my reply invariably is, "What would you have? I am content, and that is everything; I have now a place I can call my home, and where I can live in peace and quiet with my excellent father and beloved sister. I can do what I choose when not on duty. I shall be my own master, and have a certain competency; I may leave when I like, and travel every second year. What can I wish for more?" The only thing that disgusts me with Salzburg, and I tell you of it just as I feel it, is the impossibility of having any satisfactory intercourse with the people, and that musicians are not in good repute there, and--that the Archbishop places no faith in the experience of intelligent persons who have seen the world. For I assure you that people who do not travel (especially artists and scientific men) are but poor creatures. And I at once say that if the Archbishop is not prepared to allow me to travel every second year, I cannot possibly accept the engagement. A man of moderate talent will never rise above mediocrity, whether he travels or not, but a man of superior talents (which, without being unthankful to Providence, I cannot deny that I possess) deteriorates if he always remains in the same place. If the Archbishop would only place confidence in me, I could soon make his music celebrated; of this there can be no doubt. I also maintain that my journey has not been unprofitable to me--I mean, with regard to composition, for as to the piano, I play it as well as I ever shall. One thing more I must settle about Salzburg, that I am not to take up the violin as I formerly did. I will no longer conduct with the violin; I intend to conduct, and also accompany airs, with the piano. It would have been a good thing to have got a written agreement about the situation of Capellmeister, for otherwise I may have the honor to discharge a double duty, and be paid only for one, and at last be superseded by some stranger. My dear father, I must decidedly say that I really could not make up my mind to

take this step were it not for the pleasure of seeing you both again; I wish also to get away from Paris, which I detest, though my affairs here begin to improve, and I don't doubt that if I could bring myself to endure this place for a few years, I could not fail to succeed. I am now pretty well known--that is, the people all know ME, even if I don't know them. I acquired considerable fame by my two symphonies; and (having heard that I was about to leave) they now really want me to write an opera, so I said to Noverre, "If you will be responsible for its BEING PERFORMED as soon as it is finished, and will name the exact sum that I am to receive for it, I will remain here for the next three months on purpose," for I could not at once decline, or they would have thought that I distrusted myself. This was not, however, done; and I knew beforehand that they could not do it, for such is not the custom here. You probably know that in Paris it is thus:--When the opera is finished it is rehearsed, and if these stupid Frenchmen do not think it good it is not given, and the composer has had all his trouble for nothing; if they approve, it is then put on the stage; as its popularity increases, so does the rate of payment. There is no certainty. I reserve the discussion of these matters till we meet, but I must candidly say that my own affairs begin to prosper. It is no use trying to hurry matters--chi va piano, va sano. My complaisance has gained me both friends and patrons; were I to write you all, my fingers would ache. I will relate it to you personally and place it clearly before you. M. Grimm may be able to help CHILDREN, but not grown-up people; and--but no, I had better not write on the subject. Yet I must! Do not imagine that he is the same that he was; were it not for Madame d'Epinay, I should be no longer in this house. And he has no great cause to be so proud of his good deeds towards me, for there were four houses where I could have had both board and lodging. The worthy man does not know that, if I had remained in Paris, I intended to have left him next month to go to a house that, unlike his, is neither stupid nor tiresome, and where a man has not constantly thrown in his face that a kindness has been done him. Such conduct is enough to cause me to forget a benefit, but I will be more generous than he is. I regret not remaining here only because I should have liked to show him that I do not require him, and that I can do as much as his Piccini, although I am only a German! The greatest service he has done me consists in fifteen louis-d'or which he lent me bit by bit during my mother's life and at her death. Is he afraid of losing them? If he has a doubt on the subject, then he deserves to be kicked, for in that case he must mistrust my honesty (which is the only thing that can rouse me to rage) and also my talents; but the latter, indeed, I know he does, for he once said to me that he did not believe I was capable of writing a French opera. I mean to repay him his fifteen louis-d'or, with thanks, when I go to take leave of him, accompanied by some polite expressions. My poor mother often said to me, "I don't know why, but he seems to me somehow changed." But I always took his part, though I secretly felt convinced of the very same thing. He seldom spoke of me to any one, and when he did, it was always in a stupid, injudicious, or disparaging way. He was constantly urging me to go to see Piccini, and also Caribaldi,--for there is a miserable opera buffa here,--but I always said, "No, I will not go a single step," &c. In short, he is of the Italian faction; he is insincere himself, and strives to crush me. This seems incredible, does it not? But still such is the fact, and I give you the proof of it. I opened my whole heart to him as a true friend, and a pretty use he made of this! He always gave me bad advice, knowing that I would follow it; but he only succeeded in two or three instances, and latterly I never asked his opinion at all, and if he did advise me to do anything, I never did it, but always appeared to acquiesce, that I might not subject myself to further insolence on his part.

But enough of this; we can talk it over when we meet. At all events, Madame d'Epinay has a better heart. The room I inhabit belongs to her, not to him. It is the invalid's room--that is, if any one is ill in the house, he is put there; it has nothing to recommend it except the view,--only four bare walls, no chest of drawers--in fact, nothing. Now you may judge whether I could stand it any longer. I would have written this to you long ago, but feared you would not believe me. I can, however, no longer be silent, whether you believe me or not; but you do believe me, I feel sure. I have still sufficient credit with you to persuade you that I speak the truth. I board too with Madame d'Epinay, and you must not suppose that he pays anything towards it, but indeed I cost her next to nothing. They have the same dinner whether I am there or not, for they never know when I am to be at home, so they can make no difference for me; and at night I eat fruit and drink one glass of wine. All the time I have been in their house, now more than two months, I have not dined with them more than fourteen times at most, and with the exception of the fifteen louis-d'or, which I mean to repay with thanks, he has no outlay whatever on my account but candles, and I should really be ashamed of myself more than of him, were I to offer to supply these; in fact I could not bring myself to say such a thing. This is my nature. Recently, when he spoke to me in such a hard, senseless, and stupid way, I had not nerve to say that he need not be alarmed about his fifteen louis-d'or, because I was afraid of offending him; I only heard him calmly to the end, when I asked whether he had said all he wished--and then I was off! He presumes to say that I must leave this a week hence--IN SUCH HASTE IS HE. I told him it was impossible, and my reasons for saying so. "Oh! that does not matter; it is your father's wish." "Excuse me, in his last letter he wrote that he would let me know in his next when I was to set off." "At all events hold yourself in readiness for your journey." But I must tell you plainly that it will be impossible for me to leave this before the beginning of next month, or at the soonest the end of the present one, for I have still six arias to write, which will be well paid. I must also first get my money from Le Gros and the Duc de Guines; and as the court goes to Munich the end of this month, I should like to be there at the same time to present my sonatas myself to the Electress,

which perhaps might bring me a present. I mean to sell my three concertos to the man who has printed them, provided he gives me ready money for them; one is dedicated to Jenomy, another to Litzau; the third is in B. I shall do the same with my six difficult sonatas, if I can; even if not much, it is better than nothing. Money is much wanted on a journey. As for the symphonies, most of them are not according to the taste of the people here; if I have time, I mean to arrange some violin concertos from them, and curtail them; in Germany we rather like length, but after all it is better to be short and good. In your next letter I shall no doubt find instructions as to my journey; I only wish you had written to me alone, for I would rather have nothing more to do with Grimm. I hope so, and in fact it would be better, for no doubt our friends Geschwender and Heina can arrange things better than this upstart Baron. Indeed, I am under greater obligations to Heina than to him, look at it as you will by the light of a farthing-candle. I expect a speedy reply to this, and shall not leave Paris till it comes. I have no reason to hurry away, nor am I here either in vain or fruitlessly, because I shut myself up and work, in order to make as much money as possible. I have still a request, which I hope you will not refuse. If it should so happen, though I hope and believe it is not so, that the Webers are not in Munich, but still at Mannheim, I wish to have the pleasure of going there to visit them. It takes me, I own, rather out of my way, but not much--at all events it does not appear much to me. I don't believe, after all, that it will be necessary, for I think I shall meet them in Munich; but I shall ascertain this to-morrow by a letter. If it is not the case, I feel beforehand that you will not deny me this happiness. My dear father, if the Archbishop wishes to have a new singer, I can, by heavens! find none better than her. He will never get a Teyberin or a De' Amicis, and the others are assuredly worse. I only lament that when people from Salzburg flock to the next Carnival, and "Rosamunde" is given, Madlle. Weber will not please, or at all events they will not be able to judge of her merits as they deserve, for she has a miserable part, almost that of a dumb personage, having only to sing some stanzas between the choruses. She has one aria where something might be expected from the ritournelle; the voice part is, however, alla Schweitzer, as if dogs were yelping. There is only one air, a kind of rondo in the second act, where she has an opportunity of sustaining her voice, and thus showing what she can do. Unhappy indeed is the singer who falls into Schweitzer's hands; for never while he lives will he learn how to write for the voice. When I go to Salzburg I shall certainly not fail to plead zealously for my dear friend; in the mean time you will not neglect doing all you can in her favor, for you cannot cause your son greater joy. I think of nothing now but the pleasure of soon embracing you. Pray see that everything the Archbishop promised you is made quite secure, and also what I stipulated, that my place should be at the piano. My kind regards to all my friends, and to Herr Bullinger in particular. How merry shall we be together! I have all this already in my thoughts, already before my eyes. Adieu!

114.

Nancy, Oct. 3, 1778.

PRAY excuse my not having told you of my journey previous to leaving Paris. But I really cannot describe to you the way in which the whole affair was hurried forward, contrary to my expectations, wish, or will. At the very last moment I wanted to send my luggage to Count Sickingen's, instead of to the bureau of the diligence, and to remain some days longer in Paris. This, I give you my honor, I should at once have done had I not thought of you, for I did not wish to displease you. We can talk of these matters better at Salzburg. But one thing more--only fancy how Herr Grimm deceived me, saying that I was going by the diligence, and should arrive at Strassburg in five days; and I did not find out till the last day that it was quite another carriage, which goes at a snail's pace, never changes horses, and is ten days on the journey. You may easily conceive my rage; but I only gave way to it when with my intimate friends, for in his presence I affected to be quite merry and pleased. When I got into the carriage, I received the agreeable information that we should be travelling for twelve days. So this is an instance of Grimm's good sense! It was entirely to save money that he sent me by this slow conveyance, not adverting to the fact that the expense would amount to the same thing from the constant living at inns. Well, it is now past. What vexed me most in the whole affair was his not being straightforward with me. He spared his own money, but not mine, as he paid for my journey, but not for my board. If I had stayed eight or ten days longer in Paris, I could have paid my own journey, and made it comfortably.

I submitted to this conveyance for eight days, but longer I could not stand it--not on account of the fatigue, for the carriage was well hung, but from want of sleep. We were off every morning at four o'clock, and thus obliged to rise at three. Twice I had the satisfaction of being forced to get up at one o'clock in the morning, as we were to set off at two. You know that I cannot sleep in a carriage, so I really could not continue this without the risk of being ill. I would have taken the post, but it was not necessary, for I had the good fortune to meet with a person who quite suited me--a German merchant who resides in Paris, and deals in English wares. Before getting into the carriage we exchanged a few words, and from that moment we remained together. We did not take our meals with the other passengers, but in our own room, where we also slept. I was glad to meet this man, for, being a great traveller, he understands it well. He also was very much disgusted with our carriage; so we proceed to-morrow by a good

conveyance, which does not cost us much, to Strassburg. You must excuse my not writing more, but when I am in a town where I know no one, I am never in a good humor; though I believe that if I had friends here I should like to remain, for the town is indeed charming--handsome houses, spacious streets, and superb squares.

I have one request to make, which is to give me a large chest in my room that I may have all my things within my reach. I should like also to have the little piano that Fischietti and Rust had, beside my writing-table, as it suits me better than the small one of Stein. I don't bring many new things of my own with me, for I have not composed much. I have not yet got the three quartets and the flute concerto I wrote for M. de Jean; for when he went to Paris he packed them in the wrong trunk, so they are left at Mannheim. I can therefore bring nothing finished with me except my sonatas [with violin]; M. Le Gros purchased the two overtures from me and the sinfonie concertante, which he thinks exclusively his own; but this is not the case, for I have it still fresh in my head, and mean to write it out again as soon as I am at home.

The Munich company of comedians are, I conclude, now acting? [in Salzburg.] Do they give satisfaction? Do people go to see them? I suppose that, as for the operettas, the "Fischermadchen" ("La Pescatrice" of Piccini), or "Das Bauernmadchen bei Hof" ("La Contadina in Corte," by Sacchini), will be given first? The prima donna is, no doubt, Madlle. Keiserin, whom I wrote to you about from Munich. I have heard her, but do not know her. At that time it was only her third appearance on any stage, and she had only learned music three weeks [see No. 62]. Now farewell! I shall not have a moment's peace till I once more see those I love.

115.

Strassburg, Oct. 15, 1778.

I GOT your three letters safely, but could not possibly answer them sooner. What you write about M. Grimm, I, of course, know better than you can do. That he was all courtesy and civility I do not deny; indeed, had this not been the case, I would not have stood on such ceremony with him. All that I owe M. Grimm is fifteen louis-d'or, and he has only himself to blame for their not being repaid, and this I told him. But what avails any discussion? We can talk it over at Salzburg. I am very much obliged to you for having put my case so strongly before Father Martini, and also for having written about me to M. Raaff. I never doubted your doing so, for I am well aware that it rejoices you to see your son happy and pleased, and you know that I could never be more so than in Munich; being so near Salzburg, I could constantly visit you. That Madlle. Weber, or rather MY DEAR WEBERIN, should now receive a salary, and justice be at last done to her merits, rejoices me to a degree natural in one who feels such deep interest in all that concerns her. I still warmly recommend her to you; though I must now, alas! give up all hope of what I so much wished,--her getting an engagement in Salzburg,--for the Archbishop would never give her the salary she now has. All we can now hope for is that she may sometimes come to Salzburg to sing in an opera. I had a hurried letter from her father the day before they went to Munich, in which he also mentions this news. These poor people were in the greatest distress about me, fearing that I must be dead, a whole month having elapsed without any letter from me, (owing to the last one being lost;) an idea that was confirmed by a report in Mannheim that my poor dear mother had died of a contagious disease. So they have been all praying for my soul. The poor girl went every day for this purpose into the Capuchin church. Perhaps you may laugh at this? I did not; on the contrary, I could not help being much touched by it.

To proceed. I think I shall certainly go by Stuttgart to Augsburg, because I see by your letter that nothing, or at least not much, is to be made in Donaueschingen; but I will apprise you of all this before leaving Strassburg. Dearest father, I do assure you that, were it not for the pleasure of soon embracing you, I would never come to Salzburg; for, with the exception of this commendable and delightful impulse, I am really committing the greatest folly in the world. Rest assured that these are my own thoughts, and not borrowed from others. When my resolution to leave Paris was known, certain facts were placed before me, and the sole weapons I had to contend against or to conquer these, were my true and tender love for my kind father, which could not be otherwise than laudable in their eyes, but with the remark that if my father had known my present circumstances and fair prospects, (and had not got different and false impressions by means of a kind friend,) he certainly would not have written to me in such a strain as to render me wholly incapable of offering the least resistance to his wish; and in my own mind I thought, that had I not been exposed to so much annoyance in the house where I lived, and the journey come on me like a sudden thunder-clap, leaving me no time to reflect coolly on the subject, I should have earnestly besought you to have patience for a time, and to let me remain a little longer in Paris. I do assure you that I should have succeeded in gaining fame, honor, and wealth, and been thus enabled to defray your debts. But now it is settled, and do not for a moment suppose that I regret it; but you alone, dearest father, you alone can sweeten the bitterness of Salzburg for me; and that you will do so, I feel convinced. I must also candidly say that I should arrive in Salzburg with a lighter heart were it not for my official capacity there, for this thought is to me the most intolerable of all. Reflect on it yourself,

place yourself in my position. At Salzburg I never know how I stand; at one time I am everything, at another absolutely nothing. I neither desire SO MUCH nor SO LITTLE, but still I wish to be SOMETHING--if indeed I am something! In every other place I know what my duties are. Elsewhere those who undertake the violin stick to it,--the same with the piano, &c., &c. I trust this will be regulated hereafter, so that all may turn out well and for my happiness and satisfaction. I rely wholly on you.

Things here are in a poor state; but the day after to-morrow, Saturday the 17th, I MYSELF ALONE, (to save expense,) to please some kind friends, amateurs, and connoisseurs, intend to give a subscription concert. If I engaged an orchestra, it would with the lighting cost me more than three louis-d'or, and who knows whether we shall get as much? My sonatas are not yet published, though promised for the end of September. Such is the effect of not looking after things yourself, for which that obstinate Grimm is also to blame. They will probably be full of mistakes, not being able to revise them myself, for I was obliged to devolve the task on another, and I shall be without my sonatas in Munich. Such an occurrence, though apparently a trifle, may often bring success, honor, and wealth, or, on the other hand, misfortune.

116.

Strassburg, Oct. 20, 1778.

You will perceive that I am still here, by the advice of Herr Frank and other Strassburg magnates, but I leave this to-morrow. In my last letter I mentioned that on the 17th I was to give a kind of sample of a concert, as concerts here fare worse than even at Salzburg. It is, of course, over. I played quite alone, having engaged no musicians, so that I might at least lose nothing; briefly, I took three louis-d'or. The chief receipts consisted in the shouts of Bravo! and Bravissimo! which echoed on every side. Prince Max of Zweibrucken also honored the concert by his presence. I need not tell you that every one was pleased. I intended then to pursue my journey, but was advised to stay till the following Saturday, in order to give a grand concert in the theatre. I did so, and, to the surprise, indignation, and disgrace of all the Strassburgers, my receipts were exactly the same. The Director, M. de Villeneuve, abused the inhabitants of this most detestable town in the most unmeasured terms. I took a little more money, certainly, but the cost of the band (which is very bad, but its pay very good), the lighting, printing, the guard at the door, and the check-takers at the entrances, &c., made up a considerable sum. Still I must tell you that the applause and clapping of hands almost deafened me, and made my ears ache; it was as if the whole theatre had gone crazy. Those who were present, loudly and publicly denounced their fellow-citizens, and I told them all that if I could have reasonably supposed so few people would have come, I would gladly have given the concert gratis, merely for the pleasure of seeing the theatre well filled. And in truth I should have preferred it, for, upon my word, I don't know a more desolate sight than a long table laid for fifty, and only three at dinner. Besides, it was so cold; but I soon warmed myself, for, to show the Strassburg gentlemen how little I cared, I played a very long time for my own amusement, giving a concerto more than I had promised, and, at the close, extemporizing. It is now over, but at all events I gained honor and fame.

I have drawn on Herr Scherz for eight louis-d'or, as a precaution, for no one can tell what may happen on a journey; and I HAVE is better than I MIGHT HAVE HAD. I have read the fatherly well-meaning letter which you wrote to M. Frank when in such anxiety about me. [Footnote: "Your sister and I confessed, and took the Holy Communion," writes the father, "and prayed to God fervently for your recovery. Our excellent Bullinger prays daily for you also."] When I wrote to you from Nancy, not knowing myself, you of course could not know, that I should have to wait so long for a good opportunity. Your mind may be quite at ease about the merchant with whom I am travelling; he is the most upright man in the world, takes more care of me than of himself, and, entirely to oblige me, is to go with me to Augsburg and Munich, and possibly even to Salzburg. We actually shed tears when we think that we must separate. He is not a learned man, but a man of experience, and we live together like children. When he thinks of his wife and family whom he has left in Paris, I try to comfort him, and when I think of my own people he speaks comfort to me.

On the 31st of October, my name-day, I amused myself (and, better still, others) for a couple of hours. At the repeated entreaties of Herr Frank, de Berger, &c., &c., I gave another concert, by which, after paying the expenses, (not heavy this time,) I actually cleared a louis-d'or! Now you see what Strassburg is! I wrote at the beginning of this letter that I was to leave this on the 27th or 28th, but it proved impossible, owing to a sudden inundation here, when the floods caused great damage. You will probably see this in the papers. Of course travelling was out of the question, which was the only thing that induced me to consent to give another concert, being obliged to remain at all events.

To-morrow I go by the diligence to Mannheim. Do not be startled at this. In foreign countries it is expedient to follow the advice of those who know from experience what ought to be done. Most of the strangers who go to Stuttgart (N.B., by the diligence) do not object to this detour of eight hours, because the road is better and also the conveyance. I must now, dearest father, cordially wish

you joy of your approaching name-day. My kind father, I wish you from my heart all that a son can wish for a good father, whom he so highly esteems and dearly loves. I thank the Almighty that He has permitted you again to pass this day in the enjoyment of perfect health, and implore from Him the boon, that during the whole of my life (and I hope to live for a good many years to come) I may be able to congratulate you every year. However strange, and perhaps ridiculous, this wish may seem to you, I do assure you it is both sincere and well-intended.

I hope you received my last letter from Strassburg. I wish to write nothing further of M. Grimm, but it is entirely owing to his stupidity in pressing forward my departure so much, that my sonatas are not yet engraved, or at all events that I have not got them, and when I do I shall probably find them full of mistakes. If I had only stayed three days longer in Paris, I could have revised them myself and brought them with me. The engraver was desperate when I told him that I could not correct them, but must commission someone else to do so. Why? Because, being resolved not to be three days longer in the same house with Grimm, I told him that on account of the sonatas I was going to stay with Count Sickingen, when he replied, his eyes sparkling with rage, "If you leave my house before you leave Paris, I will never in my life see you again. In that case do not presume ever to come near me, and look on me as your bitterest enemy." Self-control was indeed very necessary. Had it not been for your sake, who knew nothing about the matter, I certainly should have replied, "Be my enemy; by all means be so. You are so already, or you would not have prevented me putting my affairs in order here, which would have enabled me to keep my word, to preserve my honor and reputation, and also to make money, and probably a lucky hit; for if I present my sonatas to the Electress when I go to Munich, I shall thus keep my promise, probably receive a present, and make my fortune besides." But as it was, I only bowed, and left the room without saying a syllable. Before quitting Paris, however, I said all this to him, but he answered me like a man totally devoid of sense, or rather like a malicious man who affects to have none. I have written twice to Herr Heina, but have got no answer. The sonatas ought to have appeared by the end of September, and M. Grimm was to have forwarded the promised copies immediately to me, so I expected to have found them in Strassburg; but M. Grimm writes to me that he neither hears nor sees anything of them, but as soon as he does they are to be forwarded, and I hope to have them ere long.

Strassburg can scarcely do without me. You cannot think how much I am esteemed and beloved here. People say that I am disinterested as well as steady and polite, and praise my manners. Every one knows me. As soon as they heard my name, the two Herrn Silbermann and Herr Hepp (organist) came to call on me, and also Capellmeister Richter. He has now restricted himself very much; instead of forty bottles of wine a day, he only drinks twenty! I played publicly on the two best organs that Silbermann has here, in the Lutheran and New Churches, and in the Thomas Church. If the Cardinal had died, (and he was very ill when I arrived,) I might have got a good situation, for Herr Richter is seventy-eight years of age. Now farewell! Be cheerful and in good spirits, and remember that your son is, thank God! well, and rejoicing that his happiness daily draws nearer. Last Sunday I heard a new mass of Herr Richter's, which is charmingly written.

117.

Mannheim, November 12, 1778.

I arrived here safely on the 6th, agreeably surprising all my kind friends. God be praised that I am once more in my beloved Mannheim! I assure you, if you were here you would say the same. I am living at Madame Cannabich's, who, as well as her family and all my good friends here, was quite beside herself with joy at seeing me again. We have not yet done talking, for she tells me of all the events and changes that have taken place during my absence. I have not been able to dine once at home since I came, for people are fighting to have me; in a word, just as I love Mannheim, so Mannheim loves me; and, though of course I don't know it positively, still I do think it possible that I may get an appointment here. But HERE, not in Munich, for my own belief is that the Elector will soon once more take up his residence in Mannheim, for he surely cannot long submit to the coarseness of the Bavarian gentlemen. You know that the Mannheim company is in Munich. There they hissed the two best actresses, Madame Toscani and Madame Urban. There was such an uproar that the Elector himself leant over his box and called out, "Hush!" To this, however, no one paid any attention; so he sent down Count Seeau, who told some of the officers not to make such a noise, as the Elector did not like it; but the only answer he got was, that they had paid their money, and no man had a right to give them any orders. But what a simpleton I am! You no doubt have heard this long ago through our....

I have now something to say. I may PERHAPS make forty louis-d'or here. To be sure, I should have to stay six weeks, or at most two months, in Mannheim. Seiler's company is here, whom you no doubt already know by reputation. Herr von Dalberg is the director. He will not hear of my leaving this till I have written a duodrama for him, and indeed I did not long hesitate, for I have often wished to write this style of drama. I forget if I wrote to you about it the first time that I was here. Twice at that time I saw a similar

piece performed, which afforded me the greatest pleasure; in fact, nothing ever surprised me so much, for I had always imagined that a thing of this kind would make no effect. Of course you know that there is no singing in it, but merely recitation, to which the music is a sort of obligato recitativo. At intervals there is speaking while the music goes on, which produces the most striking effect. What I saw was Benda's "Medea." He also wrote another, "Ariadne auf Naxos," and both are truly admirable. You are aware that of all the Lutheran Capellmeisters Benda was always my favorite, and I like those two works of his so much that I constantly carry them about with me. Conceive my joy at now composing the very thing I so much wished! Do you know what my idea is?--that most operatic recitatives should be treated in this way, and the recitative only occasionally sung WHEN THE WORDS CAN BE THOROUGHLY EXPRESSED BY THE MUSIC. An Academie des Amateurs is about to be established here, like the one in Paris, where Herr Franzl is violin leader, and I am at this moment writing a concerto for violin and piano. I found my dear friend Raaff still here, but he leaves this on the 8th. He has sounded my praises here, and shown sincere interest in me, and I hope he will do the same in Munich. Do you know what that confounded fellow Seeau said here?--that my opera buffa had been hissed at Munich! Fortunately he said so in a place where I am well known; still, his audacity provokes me; but the people, when they go to Munich, will hear the exact reverse. A whole flock of Bavarians are here, among others Fraulein de Pauli (for I don't know her present name). I have been to see her because she sent for me immediately. Oh! what a difference there is between the people of the Palatinate and those of Bavaria! What a language it is! so coarse! and their whole mode of address! It quite annoys me to hear once more their hoben and olles (haben and alles), and their WORSHIPFUL SIR. Now good-bye! and pray write to me soon. Put only my name, for they know where I am at the post-office. I am so well known here that it is impossible a letter for me can be lost. My cousin wrote to me, and by mistake put Franconian Hotel instead of Palatine Hotel. The landlord immediately sent the letter to M. Serrarius's, where I lodged when I was last here. What rejoices me most of all in the whole Mannheim and Munich story is that Weber has managed his affairs so well. They have now 1600 florins; for the daughter has 1000 florins and her father 400, and 200 more as prompter. Cannabich did the most for them. It is quite a history about Count Seeau; if you don't know it, I will write you the details next time.

I beg, dearest father, that you will make use of this affair at Salzburg, and speak so strongly and so decidedly, that the Archbishop may think it possible I may not come after all, and thus be induced to give me a better salary, for I declare I cannot think of it with composure. The Archbishop cannot pay me sufficiently for the slavery of Salzburg. As I said before, I feel the greatest pleasure at the thought of paying you a visit, but only annoyance and misery in seeing myself once more at that beggarly court. The Archbishop must no longer attempt to play the great man with me as he used to do, or I may possibly play him a trick,--this is by no means unlikely,--and I am sure that you would participate in my satisfaction.

118.

Mannheim, Nov. 24, 1778.

MY DEAR BARON VON DALBERG,--

I called on you twice, but had not the good fortune to find you at home; yesterday you were in the house, but engaged, so I could not see you. I hope you will therefore excuse my troubling you with these few lines, as it is very important to me to explain myself fully. Herr Baron, you are well aware that I am not an interested man, particularly when I know that it is in my power to do a service to so great a connoisseur and lover of music as yourself. On the other hand, I also know that you certainly would not wish that I should be a loser on this occasion; I therefore take the liberty to make my final stipulations on the subject, as it is impossible for me to remain here longer in uncertainty. I agree to write a monodrama for the sum of twenty-five louis-d'or, and to stay here for two months longer to complete everything, and to attend all the rehearsals, &c., but on this condition, that, happen what may, I am to be paid by the end of January. Of course I shall also expect free admission to the theatre. Now, my dear Baron, this is all that I can do, and if you consider, you will admit that I certainly am acting with great discretion. With regard to your opera, I do assure you I should rejoice to compose music for it, but you must yourself perceive that I could not undertake such a work for twenty-five louis-d'or, as it would be twice the labor of a monodrama (taken at the lowest rate). The chief obstacle would be your having told me that Gluck and Schweitzer are partially engaged to write this work. But were you even to give me fifty louis-d'or, I would still as an honest man dissuade you from it. An opera without any singers! what is to be done in such a case? Still, if on this occasion there is a prospect of its being performed, I will not hesitate to undertake the work to oblige you; but it is no trifling one--of that I pledge you my word. I have now set forth my ideas clearly and candidly, and request your decision.

119.

Mannheim, Dec. 3, 1778.

I MUST ask your forgiveness for two things,--first, that I have not written to you for so long; and secondly, that this time also I must be brief. My not having answered you sooner is the fault of no one but yourself, and your first letter to me at Mannheim. I really never could have believed--but silence! I will say no more on the subject. Lot us have done with it. Next Wednesday, the 9th, I leave this; I cannot do so sooner, because, thinking that I was to be here for a couple of months, I accepted some pupils, and of course wish to make out the twelve lessons. I assure you that you have no idea what kind and true friends I have here, which time will prove. Why must I be so brief? Because my hands are more than full. To please Herr Gemmingen and myself, I am writing the first act of the melodramatic opera (that I was commissioned to write), but now do so gratis; I shall bring it with me and finish it at home. You see how strong my inclination must be for this kind of composition. Of course Herr von Gemmingen is the poet. The duodrama is called "Semiramis."

Next Wednesday I set off, and do you know how I travel? With the worthy prelate, the Bishop of Kaisersheim. When a kind friend of mine mentioned me to him, he at once knew my name, expressing the pleasure it would be to him to have me as a travelling companion. He is (though a priest and prelate) a most amiable man. I am therefore going by Kaisersheim and not by Stuttgart; but it is just the same to me, for I am very lucky in being able to spare my purse a little (as it is slender enough) on the journey. Be so good as to answer me the following questions. How do the comedians please at Salzburg? Is not the young lady who sings, Madlle. Keiserin? Does Herr Feiner play the English horn? Ah! if we had only clarionets too! You cannot imagine the splendid effect of a symphony with flutes, hautboys, and clarionets. At my first audience of the Archbishop I shall tell him much that is new, and also make some suggestions. Oh, how much finer and better our orchestra might be if the Archbishop only chose! The chief cause why it is not so, is that there are far too many performances. I make no objection to the chamber-music, only to the concerts on a larger scale.

A propos, you say nothing of it, but I conclude you have received the trunk; if not, Herr von Grimm is responsible for it. You will find in it the aria I wrote for Madlle. Weber. You can have no idea of the effect of that aria with instruments; you may not think so when you see it, but it ought to be sung by a Madlle. Weber! Pray, give it to no one, for that would be most unfair, as it was written solely for her, and fits her like a well-fitting glove.

120.

Kaisersheim, Dec. 18, 1778.

I ARRIVED here safely on Sunday the 13th, God be praised! I travelled in the most agreeable way, and had likewise the inexpressible pleasure to find a letter from you here. The reason that I did not forthwith answer it was, because I wished to give you sure and precise information as to my departure, for which I had not fixed any time; but I have at length resolved, as the prelate goes to Munich on the 26th or 27th, to be again his companion. I must tell you, however, that he does not go by Augsburg. I lose nothing by this; but if you have anything to arrange or transact where my presence is wanted, I can at any time, if you wish it, (being so near,) make a little expedition from Munich. My journey from Mannheim to this place would have been most agreeable to a man, leaving a city with a light heart. The prelate and his Chancellor, an honest, upright, and amiable man, drove together in one carriage, and Herr Kellermeister, Father Daniel, Brother Anton, the Secretary, and I, preceded them always half an hour, or an hour. But for me, to whom nothing could be more painful than leaving Mannheim, this journey was only partly agreeable, and would not have been at all so, but rather very tiresome, if I had not from my early youth been so much accustomed to leave people, countries, and cities, and with no very sanguine hope of soon or ever again seeing the kind friends I left. I cannot deny, but at once admit, that not only I myself, but all my intimate friends, particularly the Cannabichs, were in the most pitiable distress during the last few days after my departure was finally settled. We felt as if it were not possible for us to part. I set off at half-past eight o'clock in the morning, and Madame Cannabich did not leave her room; she neither would nor could take leave of me. I did not wish to distress her, so left the house without seeing her. My very dear father, I can safely say that she is one of my best and truest friends, for I only call those friends who are so in every situation, who, day and night, think how they can best serve the interests of their friend, applying to all influential persons, and toiling to secure his happiness. Now I do assure you such is the faithful portrait of Madame Cannabich. There may indeed be an alloy of self-interest in this, for where does anything take place--indeed, how can anything be done in this world--without some alloy of selfishness? What I like best in Madame Cannabich is, that she never attempts to deny this. I will tell you when we meet in what way she told me so, for when we are alone, which, I regret to say, is very seldom, we become quite confidential. Of all the intimate friends who frequent her house, I alone possess her entire confidence; for I alone know all her domestic and family troubles, concerns, secrets, and circumstances. We were not nearly so well acquainted

the first time I was here, (we have agreed on this point,) nor did we mutually under stand each other so well; but living in the same house affords greater facilities to know a person. When in Paris I first began fully to appreciate the sincere friendship of the Cannabichs, having heard from a trustworthy source the interest both she and her husband took in me. I reserve many topics to explain and to discuss personally, for since my return from Paris the scene has undergone some remarkable changes, but not in all things. Now as to my cloister life. The monastery itself made no great impression on me, after having seen the celebrated Abbey of Kremsmunster. I speak of the exterior and what they call here the court square, for the most renowned part I have yet to see. What appears to me truly ridiculous is the formidable military. I should like to know of what use they are. At night I hear perpetual shouts of "Who goes there?" and I invariably reply, "Guess!" You know what a good and kind man the prelate is, but you do not know that I may class myself among his favorites, which, I believe, does me neither good nor harm, but it is always pleasant to have one more friend in the world. With regard to the monodrama, or duodrama, a voice part is by no means necessary, as not a single note is sung, but entirely spoken; in short, it is a recitative with instruments, only the actor speaks the words instead of singing them. If you were to hear it even with the piano, it could not fail to please you, but properly performed, you would be quite transported. I can answer for this; but it requires a good actor or actress.

I shall really feel quite ashamed if I arrive in Munich without my sonatas. I cannot understand the delay; it was a stupid trick of Grimm's, and I have written to him to that effect. He will now see that he was in rather too great a hurry. Nothing ever provoked me so much. Just reflect on it. I know that my sonatas were published in the beginning of November, and I, the author, have not yet got them, therefore cannot present them to the Electress, to whom they are dedicated. I have, however, taken measures in the mean time which will insure my getting them. I hope that my cousin in Augsburg has received them, or that they are lying at Josef Killiau's for her; so I have written to beg her to send them to me at once.

Until I come myself, I commend to your good offices an organist, and also a good pianist, Herr Demmler, from Augsburg. I had entirely forgotten him, and was very glad when I heard of him here. He has considerable genius; a situation in Salzburg might be very useful in promoting his further success, for all he requires is a good leader in music; and I could not find him a better conductor than you, dear father, and it would really be a pity if he were to leave the right path. [See No. 68.] That melancholy "Alceste" of Schweitzer's is to be performed in Munich. The best part (besides some of the openings, middle passages, and the finales of some arias) is the beginning of the recitative "O Jugendzeit," and this was made what it is by Raaff's assistance; he punctuated it for Hartig (who plays Admet), and by so doing introduced the true expression into the aria. The worst of all, however, (as well as the greater part of the opera,) is certainly the overture.

As for the trifles that are not to be found in the trunk, it is quite natural that under such circumstances something should be lost, or even stolen. The little amethyst ring I felt I ought to give to the nurse who attended my dear mother, whose wedding-ring was left on her finger. [A large blot.] The ink-bottle is so full, and I am too hasty in dipping in my pen, as you will perceive. As for the watch, you have guessed rightly. I sold it, but only got five louis-d'or for it, and that in consideration of the works, which were good; for the shape, as you know, was old-fashioned and quite out of date. Speaking of watches, I must tell you that I am bringing one with me--a genuine Parisian. You know what sort of thing my jewelled watch was--how inferior all the so-called precious stones were, how clumsy and awkward its shape; but I would not have cared so much about that, had I not been obliged to spend so much money in repairing and regulating it, and after all the watch would one day gain a couple of hours, and next day lose in the same proportion. The one the Elector gave me did just the same, and, moreover, the works were even worse and more fragile. I exchanged these two watches and their chains for a Parisian one which is worth twenty louis-d'or. So now at last I know what o'clock it is; with my five watches I never got so far as that before! At present, out of four, I have, at all events, one on which I can depend.

121.

Kaisersheim, Dec. 23, 1778.

MA TRES-CHERE COUSINE,--

I write to you in the greatest haste, and in the deepest sorrow and remorse, and with the determined purpose to tell you that it is my intention to set off to-morrow to Munich. I would, I assure you, gladly have gone to Augsburg, but the prelate was resolved to claim me, for which you cannot blame me. It is my loss, so don't be cross. I may perhaps make an escapade from Munich to Augsburg, but this is by no means certain. If you will be as glad to see me, as I shall be to see you, do come to the good town of Munich. Be sure you come by the new year, that I may see your face so dear, and escort you far and near. One thing I very much regret, which

is that I cannot give you house-room, because I am not at an hotel, but am living with--whom do you think? I should like to know this myself [with the Webers]. But now Spassus apart. For that very reason, and for my sake, it would be advisable you should come; perhaps you may have a great part to play, but at all events come. I can then pay you in my own mighty person all proper compliments. Now adieu, angel of piety! I await you with anxiety. Your sincere cousin,

W. A. MOZART.

P.S.--Write to me forthwith to Munich, Poste Restante, a little note of twenty-four pages, but do not mention where you are to lodge, that I may not find you out nor you me.

122.

Munich, Dec. 29, 1778.

I WRITE from the house of M. Becke [flute-player; see No. 60]. I arrived here safely, God be praised! on the 25th, but have been unable to write to you till now. I reserve everything till our glad, joyous meeting, when I can once more have the happiness of conversing with you, for to-day I can only weep. I have far too sensitive a heart. In the mean time, I must tell you that the day before I left Kaisersheim I received the sonatas; so I shall be able to present them myself to the Electress. I only delay leaving this till the opera [Footnote: Schweitzer's "Alceste." (See No. 120.)] is given, when I intend immediately to leave Munich, unless I were to find that it would be very beneficial and useful to me to remain here for some time longer. In which case I feel convinced, quite convinced, that you would not only be satisfied I should do so, but would yourself advise it. I naturally write very badly, for I never learned to write; still, in my whole life I never wrote worse than this very day, for I really am unfit for anything--my heart is too full of tears. I hope you will soon write to me and comfort me. Address to me, Poste Restante, and then I can fetch the letter myself. I am staying with the Webers. I think, after all, it would be better, far better, to enclose your letter to me to our friend Becke.

I intend (I mention it to you in the strictest secrecy) to write a mass here; all my best friends advise my doing so. I cannot tell you what friends Cannabich and Raaff have been to me. Now farewell, my kindest and most beloved father! Write to me soon.

A happy new-year! More I cannot bring myself to write to-day. This letter is scrawled hurriedly, quite unlike the others, and betrays the most violent agitation of mind. During the whole journey there was nothing to which Mozart looked forward with such joy as once more seeing his beloved Madlle. Weber in Munich. He had even destined "a great part" for the Basle (his cousin) in the affair; but he was now to learn that Aloysia had been faithless to him. Nissen relates: "Mozart, being in mourning for his mother, appeared dressed, according to the French custom, in a red coat with black buttons; but soon discovered that Aloysia's feelings towards him had undergone a change. She seemed scarcely to recognize one for whose sake she had once shed so many tears. On which Mozart quickly seated himself at the piano and sang, "Ich lass das Madel gern das mich nicht will," ["I gladly give up the girl who slights me."] His father, moreover, was displeased in the highest degree by Wolfgang's protracted absence, fearing that the Archbishop might recall his appointment; so Wolfgang became very uneasy lest he should not meet with a kind reception from his father on his return home."

123.

Munich, Dec. 31, 1778.

I HAVE this instant received your latter from my friend Becke. I wrote to you from his house two days ago, but a letter such as I never wrote before; for this kind friend said so much to me about your tender paternal love, your indulgence towards me, your complaisance and discretion in the promotion of my future happiness, that my feelings were softened even to tears. But, from your letter of the 28th, I see only too clearly that Herr Becke, in his conversation with me, rather exaggerated. Now, distinctly, and once for all, as soon as the opera ("Alceste") is given, I intend to leave this, whether the diligence goes the day after or the same night. If you had spoken to Madame Robinig, I might have travelled home with her. But be that as it may, the opera is to be given on the 11th, and on the 12th (if the diligence goes) I set off. It would be more for my interest to stay here a little longer, but I am willing to sacrifice this to you, in the hope that I shall have a twofold reward for it in Salzburg. I don't think your idea about the sonatas at all good; even if I do not get them, I ought to leave Munich forthwith. Then you advise my not being seen at court; to a man so well known as I am here such a thing is impossible. But do not be uneasy. I received my sonatas at Kaisersheim; and, as soon as they are bound, I mean to present them to the Electress. A. propos, what do you mean by DREAMS OF PLEASURE? I do not wish to give up dreaming, for what mortal on the whole compass of the earth does not often dream? above all DREAMS OF

PLEASURE--peaceful dreams, sweet, cheering dreams if you will--dreams which, if realized, would have rendered my life (now far rather sad than pleasurable) more endurable.

The 1st.--I have this moment received, through a Salzburg vetturino, a letter from you, which really at first quite startled me. For Heaven's sake tell me, do you really think that I can at once fix a day for my journey; or is it your belief that I don't mean to come at all? When I am so very near, I do think you might be at ease on that point. When the fellow had explained his route to me, I felt a strong inclination to go with him, but at present I really cannot; to-morrow or next day I intend to present the sonatas to the Electress, and then (no matter how strongly I may be urged) I must wait a few days for a present. Of one thing I give you my word, that to please you I have resolved not to wait to see the opera, but intend to leave this the day after I receive the present I expect. At the same time I confess I feel this to be very hard on me; but if a few days more or less appear of such importance to you, so let it be. Write to me at once on this point. The 2d.--I rejoice at the thoughts of conversing with you, for then you will first comprehend how my matters stand here. You need have neither mistrust nor misgivings as to Raaff, for he is the most upright man in the world, though no lover of letter-writing. The chief cause of his silence, however, is no doubt that he is unwilling to make premature promises, and yet is glad to hold out some hope too; besides, like Cannabich, he has worked for me with might and main.

124.

Munich, Jan. 8, 1779.

[Footnote: The second grand aria that Mozart wrote for Aloysia, bears the same date.]

I HOPE you received my last letter, which I meant to have given to the vetturino, but having missed him I sent it by post. I have, in the mean time, got all your letters safely through Herr Becke. I gave him my letter to read, and he also showed me his. I assure you, my very dear father, that I am now full of joy at returning to you, (but not to Salzburg,) as your last letter shows that you know me better than formerly. There never was any other cause for my long delay in going home but this doubt, which gave rise to a feeling of sadness that I could no longer conceal; so I at last opened my heart to my friend Becke. What other cause could I possibly have? I have done nothing to cause me to dread reproach from you; I am guilty of no fault; (by a fault I mean that which does not become a Christian, and a man of honor;) in short, I now rejoice, and already look forward to the most agreeable and happy days, but only in the society of yourself and my dear sister. I give you my solemn word of honor that I cannot endure Salzburg or its inhabitants, (I speak of the natives of Salzburg.) Their language, their manners, are to me quite intolerable. You cannot think what I suffered during Madame Robinig's visit here, for it is long indeed since I met with such a fool; and, for my still further annoyance, that silly, deadly dull Mosmayer was also there.

But to proceed. I went yesterday, with my dear friend Cannabich, to the Electress to present my sonatas. Her apartments are exactly what I should like mine one day to be, very pretty and neat, just like those of a private individual, all except the view, which is miserable. We were there fully an hour and a half, and she was very gracious. I have managed to let her know that I must leave this in a few days, which will, I hope, expedite matters. You have no cause to be uneasy about Count Seeau; I don't believe the thing will come through his hands, and even if it does, he will not venture to say a word. Now, once for all, believe that I have the most eager longing to embrace you and my beloved sister. If it were only not in Salzburg! But as I have not hitherto been able to see you without going to Salzburg, I do so gladly. I must make haste, for the post is just going.

My cousin is here. Why? To please me, her cousin; this is, indeed, the ostensible cause. But--we can talk about it in Salzburg; and, on this account, I wished very much that she would come with me there. You will find a few lines, written by her own hand, attached to the fourth page of this letter. She is quite willing to go; so if it would really give you pleasure to see her, be so kind as to write immediately to her brother, that the thing may be arranged. When you see her and know her, she is certain to please you, for she is a favorite with every one.

Wolfgang's pleasantries, in the following; letter to his cousin, show that his good humor was fully restored. He was received at home with very great rejoicings, and his cousin soon followed him.

125.

Salzburg, May 10, 1779.

DEAREST, sweetest, most beauteous, fascinating, and charming of all cousins, most basely maltreated by an unworthy kinsman! Allow me to strive to soften and appease your just wrath, which only heightens your charms and winning beauty, as high as the heel of your slipper! I hope to soften you, Nature having bestowed on me a large amount of softness, and to appease you, being fond of sweet pease. As to the Leipzig affair, I can't tell whether it may be worth stooping to pick up; were it a bag of ringing coin, it would be a very different thing, and nothing less do I mean to accept, so there is an end of it.

Sweetest cousin, such is life! One man has got a purse, but another has got the money, and he who has neither has nothing; and nothing is even less than little; while, on the other hand, much is a great deal more than nothing, and nothing can come of nothing. Thus has it been from the beginning, is now, and ever shall be; and as I can make it neither worse nor better, I may as well conclude my letter. The gods know I am sincere. How does Probst get on with his wife? and do they live in bliss or in strife? most silly questions, upon my life! Adieu, angel! My father sends you his uncle's blessing, and a thousand cousinly kisses from my sister. Angel, adieu!

A TENDER ODE. [Footnote: A parody of Klopstock's "Dein susses Bild, Edone"]

TO MY COUSIN.

THY sweet image, cousin mine, Hovers aye before me; Would the form indeed were thine! How I would adore thee! I see it at the day's decline; I see it through the pale moonshine, And linger o'er that form divine

By all the flowers of sweet perfume I'll gather for my cousin,--By all the wreaths of myrtle-bloom I'll wreathe her by the dozen,--I call upon that image there To pity my immense despair, And be indeed my cousin fair

[Footnote: These words are written round the slightly sketched caricature of a face.]

FOURTH PART.--MUNICH.--IDOMENEO.--NOVEMBER 1780 TO JANUARY 1781.

MOZART now remained stationary at Salzburg till the autumn of 1780, highly dissatisfied at being forced to waste his youthful days in inactivity, and in such an obscure place, but still as busy as ever. A succession of grand instrumental compositions were the fruits of this period: two masses, some vespers, the splendid music for "Konig Thamos," and the operetta "Zaide" for Schikaneder. At length, however, to his very great joy, a proposal was made to him from Munich to write a grand opera for the Carnival of 1781. It was "Idomeneo, Konig von Greta." At the beginning of November he once more set off to Munich in order to "prepare an exact fit," on the spot, of the different songs in the opera for the singers, and to rehearse and practise everything with them. The Abbate Varesco in Salzburg was the author of the libretto, in which many an alteration had yet to be made, and these were all to be effected through the intervention of the father.

126.

Munich, Nov. 8, 1780.

FORTUNATE and pleasant was my arrival here,--fortunate, because no mishap occurred during the journey; and pleasant, because we had scarcely patience to wait for the moment that was to end this short but disagreeable journey. I do assure you it was impossible for us to sleep for a moment the whole night. The carriage jolted our very souls out, and the seats were as hard as stone! From Wasserburg I thought I never could arrive in Munich with whole bones, and during two stages I held on by the straps, suspended in the air and not venturing to sit down. But no matter; it is past now, though it will serve me as a warning in future rather to go on foot than drive in a diligence.

Now as to Munich. We arrived here at one o'clock in the forenoon, and the same evening I called on Count Seeau [the Theatre Intendant], but as he was not at home I left a note for him. Next morning I went there with Becke. Seeau has been moulded like wax by the Mannheim people. I have a request to make of the Abbate [Gianbattista Varesco]. The aria of Ilia in the second act and second scene must be a little altered for what I require,--"Se il padre perdei, in te lo ritrovo" This verse could not be better; but now comes what always appeared unnatural to me,--N.B. in an aria,--I mean, to speak aside. In a dialogue these things are natural enough, for a few words can be hurriedly said aside, but in an aria, where the words must be repeated, it has a bad effect; and even were this not the case, I should prefer an uninterrupted aria. The beginning may remain if he chooses, for it is charming and quite a natural flowing strain, where, not being fettered by the words, I can write on quite easily; for we agreed to bring in an aria andantino here in concert with four wind instruments, viz. flute, hautboy, horn, and bassoon; and I beg that you will let me have the

air as soon as possible.

Now for a grievance. I have not, indeed, the honor of being acquainted with the hero Del Prato [the musico who was to sing Idamante], but from description I should say that Cecarelli is rather the better of the two, for often in the middle of an air our musico's breath entirely fails; nota bene, he never was on any stage, and Raaff is like a statue. Now only for a moment imagine the scene in the first act! But there is one good thing, which is, that Madame Dorothea Wendling is arci-contentissima with her scena, and insisted on hearing it played three times in succession. The Grand Master of the Teutonic Order arrived yesterday. "Essex" was given at the Court Theatre, and a magnificent ballet. The theatre was all illuminated. The beginning was an overture by Cannabich, which, as it is one of his last, I did not know. I am sure, if you had heard it you would have been as much pleased and excited as I was, and if you had not previously known the fact, you certainly could not have believed that it was by Cannabich. Do come soon to hear it, and to admire the orchestra. I have no more to say. There is to be a grand concert this evening, where Mara is to sing three airs. Tell me whether it snows as heavily in Salzburg as here. My kind regards to Herr Schikaneder [impresario in Salzburg], and beg him to excuse my not yet sending him the aria, for I have not been able to finish it entirely.

127.

Munich, Nov. 13, 1780.

I WRITE in the greatest haste, for I am not yet dressed, and must go off to Count Seeau's. Cannabich, Quaglio, and Le Grand, the ballet-master, also dine there to consult about what is necessary for the opera. Cannabich and I dined yesterday with Countess Baumgarten, [Footnote: He wrote an air for her, the original of which is now in the State Library at Munich.] nee Lerchenteld. My friend is all in all in that family, and now I am the same. It is the best and most serviceable house here to me, for owing to their kindness all has gone well with me, and, please God, will continue to do so. I am just going to dress, but must not omit the chief thing of all, and the principal object of my letter,--to wish you, my very dearest and kindest father, every possible good on this your name-day. I also entreat the continuance of your fatherly love, and assure you of my entire obedience to your wishes. Countess la Rose sends her compliments to you and my sister, so do all the Cannabichs and both Wendling families, Ramm, Eck father and son, Becke, and Herr del Prato, who happens to be with me. Yesterday Count Seeau presented me to the Elector, who was very gracious. If you were to speak to Count Seeau now, you would scarcely recognize him, so completely have the Mannheimers transformed him.

I am ex commissione to write a formal answer in his name to the Abbate Varesco, but I have no time, and was not born to be a secretary. In the first act (eighth scene) Herr Quaglio made the same objection that we did originally,--namely, that it is not fitting the king should be quite alone in the ship. If the Abbe thinks that he can be reasonably represented in the terrible storm forsaken by every one, WITHOUT A SHIP, exposed to the greatest peril, all may remain as it is; but, N. B., no ship--for he cannot be alone in one; so, if the other mode be adopted, some generals or confidants (mates) must land from the ship with him. Then the king might address a few words to his trusty companions, and desire them to leave him alone, which in his melancholy situation would be quite natural.

The second duet is to be omitted altogether, and indeed with more profit than loss to the opera; for if you will read the scene it evidently becomes cold and insipid by the addition of an air or a duet, and very irksome to the other actors, who must stand, by all the time unoccupied; besides, the noble contest between Ilia and Idamante would become too long, and thus lose its whole interest.

Mara has not the good fortune to please me. She does too little to be compared to a Bastardella [see No. 8], (yet this is her peculiar style,) and too much to touch the heart like a Weber [Aloysia], or any judicious singer.

P.S.--A propos, as they translate so badly here, Count Seeau would like to have the opera translated in Salzburg, and the arias alone to be in verse. I am to make a contract that the payment of the poet and the translator should be made in one sum. Give me an answer soon about this. Adieu! What of the family portraits? Are they good likenesses? Is my sister's begun yet? The opera is to be given for the first time on the 26th of January. Be so kind as to send me the two scores of the masses that I have with me, and also the mass in B. Count Seeau is to mention them soon to the Elector; I should like to be known here in this style also. I have just heard a mass of Gruan's; it would be easy to compose half a dozen such in a day. Had I known that this singer, Del Prato, was so bad, I should certainly have recommended Cecarelli.

128.

Munich, Nov. 15, 1780.

The aria is now admirable, but there is still an alteration to be made recommended by Raaff; he is, however, right, and even were he not, some courtesy ought to be shown to his gray hairs. He was with me yesterday, and I played over his first aria to him, with which he was very much pleased. The man is old, and can no longer show off in an aria like that in the second art,--"Fuor del mar ho un mare in seno," &c. As, moreover, in the third act he has no aria, (the one in the first act not being so cantabile as he would like, owing to the expression of the words,) he wishes after his last speech, "O Creta fortuinata, O me felice," to have a pretty aria to sing instead of the quartet; in this way a superfluous air would be got rid of, and the third act produce a far better effect. In the last scene also of the second act, Idomeneo has an aria, or rather a kind of cavatina, to sing between the choruses. For this it would be better to substitute a mere recitative, well supported by the instruments. For in this scene, (owing to the action and grouping which have been recently settled with Le Grand,) the finest of the whole opera, there cannot fail to be such a noise and confusion in the theatre, that an aria, would make a very bad figure in this place, and moreover there is a thunderstorm which is not likely to subside during Raaff's aria! The effect, therefore, of a recitative between the choruses must be infinitely better. Lisel Wendling has also sung through her two arias half a dozen times, and is much pleased with them. I heard from a third person that the two Wendlings highly praised their arias, and as for Raaff he is my best and dearest friend. I must teach the whole opera myself to Del Prato. He is incapable of singing even the introduction to any air of importance, and his voice is so uneven! He is only engaged for a year, and at the end of that time (next September) Count Seeau will get another. Cecarelli might try his chance then serieusement.

I nearly forgot the best of all. After mass last Sunday, Count Seeau presented me, en passant, to H.S.H. the Elector, who was very gracious. He said, "I am happy to see you here again;" and on my replying that I would strive to deserve the good opinion of His Serene Highness, he clapped me on the shoulder, saying, "Oh! I have no doubt whatever that all will go well--a piano piano si va lontano."

Deuce take it! I cannot write everything I wish. Raaff has just left me; he sends you his compliments, and so do the Cannabichs, and Wendlings, and Ramm. My sister must not be idle, but practise steadily, for every one is looking forward with pleasure to her coming here. My lodging is in the Burggasse at M. Fiat's [where the marble slab to his memory is now erected].

129.

Munich, Nov. 22, 1780.

I SEND herewith, at last, the long-promised aria for Herr Schikaneder. During the first week that I was here I could not entirely complete it, owing to the business that caused me to come here. Besides, Le Grand, the ballet-master, a terrible talker and bore, has just been with me, and by his endless chattering caused me to miss the diligence. I hope my sister is quite well. I have at this moment a bad cold, which in such weather is quite the fashion here. I hope and trust, however, that it will soon take its departure,--indeed, both phlegm and cough are gradually disappearing. In your last letter you write repeatedly, "Oh! my poor eyes! I du not wish to write myself blind--half-past eight at night, and no spectacles!" But why do you write at night, and without spectacles? I cannot understand it. I have not yet had an opportunity of speaking to Count Seeau, but hope to do so to-day, and shall give you any information I can gather by the next post. At present all will, no doubt, remain as it is. Herr Raaff paid me a visit yesterday morning, and I gave him your regards, which seemed to please him much. He is, indeed, a worthy and thoroughly respectable man. The day before yesterday Del Frato sang in the most disgraceful way at the concert. I would almost lay a wager that the man never manages to get through the rehearsals, far less the opera; he has some internal disease.

Come in!--Herr Panzacchi! [who was to sing Arbace]. He has already paid me three visits, and has just asked me to dine with him on Sunday. I hope the same thing won't happen to me that happened to us with the coffee. He meekly asks if, instead of se la sa, he may sing se co la, or even ut, re, mi, fa, sol, la.

I am so glad when you often write to me, only not at night, and far less without spectacles. You must, however, forgive me if I do not say much in return, for every minute is precious; besides, I am obliged chiefly to write at night, for the mornings are so very dark; then I have to dress, and the servant at the Weiser sometimes admits a troublesome visitor. When Del Prato comes I must sing to him, for I have to teach him his whole part like a child; his method is not worth a farthing. I will write more fully next time. What of the family portraits? My sister, if she has nothing better to do, might mark down the names of the best comedies that have been performed during my absence. Has Schikaneder still good receipts? My compliments to all my friends, and to Gilofsky's Katherl.

Give a pinch of Spanish snuff from me to Pimperl [the dog], a good wine-sop, and three kisses. Do you not miss me at all? A thousand compliments to all--all! Adieu! I embrace you both from my heart, and hope my sister will soon recover. [Nannerl, partly owing to her grief in consequence of an unfortunate love-affair, was suffering from pains in the chest, which threatened to turn to consumption.]

180.

Munich, Nov. 24, 1780.

I beg you will convey to Madlle. Katharine Gilofsky de Urazowa my respectful homage. Wish her in my name every possible happiness on her name-day; above all, I wish that this may be the last time I congratulate her as Mademoiselle. What you write to me about Count Seinsheim is done long ago; they are all links of one chain. I have already dined with, him once, and with Baumgarten twice, and once with Lerchenfeld, father of Madlle. Baumgarten. Not a single day passes without some of these people being at Cannabich's. Do not be uneasy, dearest father, about my opera; I do hope that all will go well. No doubt it will be assailed by a petty cabal, which will in all probability be defeated with ridicule; for the most respected and influential families among the nobility are in my favor, and the first-class musicians are one and all for me. I cannot tell you what a good friend Cannabich is--so busy and active! In a word, he is always on the watch to serve a friend. I will tell you the whole story about Mara. I did not write to you before on the subject, because I thought that, even if you knew nothing of it, you would be sure to hear the particulars here; but now it is high time to tell you the whole truth, for probably additions have been made to the story,--at least, in this town, it has been told in all sorts of different ways. No one can know about it better than I do, as I was present, so I heard and witnessed the whole affair. When the first symphony was over, it was Madame Mara's turn to sing. I then saw her husband come sneaking in behind her with his violoncello in his hand; I thought she was going to sing an aria obligato with violoncello accompaniment. Old Danzi, the first violoncello, also accompanies well. All at once Toeschi (who is a director, but has no authority when Cannabich is present) said to Danzi (N. B., his son-in-law), "Rise, and give Mara your place." When Cannabich saw and heard this, he called out, "Danzi, stay where you are; the Elector prefers his own people playing the accompaniments." Then the air began, Mara standing behind his wife, looking very sheepish, and still holding his violoncello. The instant they entered the concert-room, I took a dislike to both, for you could not well see two more insolent-looking people, and the sequel will convince you of this. The aria had a second part, but Madame Mara did not think proper to inform the orchestra of the fact previously, but after the last ritournelle came down into the room with her usual air of effrontery to pay her respects to the nobility. In the mean time her husband attacked Cannabich. I cannot write every detail, for it would be too long; but, in a word, he insulted both the orchestra and Cannabich's character, who, being naturally very much irritated, laid hold of his arm, saying, "This is not the place to answer you." Mara wished to reply, but Cannabich threatened that if he did not hold his tongue he would have him removed by force. All were indignant at Mara's impertinence. A concerto by Ramm was then given, when this amiable couple proceeded to lay their complaint before Count Seeau; but from him, also, as well as from every one else, they heard that they were in the wrong. At last Madame Mara was foolish enough to speak to the Elector himself on the subject, her husband in the mean time saying in an arrogant tone, "My wife is at this moment complaining to the Elector--an unlucky business for Cannabich; I am sorry for him." But people only burst out laughing in his face. The Elector, in reply to Madame Mara's complaint, said, "Madame, you sang like an angel, although your husband did not accompany you;" and when she wished to press her grievance, he said, "That is Count Seeau's affair, not mine." When they saw that nothing was to be done, they left the room, although she had still two airs to sing. This was nothing short of an insult to the Elector, and I know for certain that, had not the Archduke and other strangers been present, they would have been very differently treated; but on this account Count Seeau was annoyed, so he sent after them immediately, and they came back. She sang her two arias, but was not accompanied by her husband. In the last one (and I shall always believe that Herr Mara did it on purpose) two bars were wanting--N. B., only in the copy from which Cannabich was playing. When this occurred, Mara seized Cannabich's arm, who quickly got right, but struck his bow on the desk, exclaiming audibly, "This copy is all wrong." When the aria was at an end, he said, "Herr Mara, I give you one piece of advice, and I hope you will profit by it: never seize the arm of the director of an orchestra, or lay your account with getting at least half a dozen sound boxes on the ear." Mara's tone was now, however, entirely lowered; he begged to be forgiven, and excused himself as he best could. The most shameful part of the affair was that Mara (a miserable violoncellist, all here declare) would never have been heard at court at all but for Cannabich, who had taken considerable trouble about it. At the first concert before my arrival he played a concerto, and accompanied his wife, taking Danzi's place without saying a word either to Danzi or any one else, which was allowed to pass. The Elector was by no means satisfied with his mode of accompanying, and said he preferred his own people. Cannabich, knowing this, mentioned to Count Seeau, before the concert began, that he had no objection to Mara's playing, but that Danzi must also play. When Mara came he was told this, and yet he was

guilty of this insolence. If you knew these people, you would at once see pride, arrogance, and unblushing effrontery written on their faces.

My sister is now, I hope, quite recovered. Pray do not write me any more melancholy letters, for I require at this time a cheerful spirit, a clear head, and inclination to work, and these no one can have who is sad at heart. I know, and, believe me, deeply feel, how much you deserve rest and peace, but am I the obstacle to this? I would not willingly be so, and yet, alas! I fear I am. But if I attain my object, so that I can live respectably here, you must instantly leave Salzburg. You will say, that may never come to pass; at all events, industry and exertion shall not be wanting on my part. Do try to come over soon to see me. We can all live together. I have a roomy alcove on my first room in which two beds stand. These would do capitally for you and me. As for my sister, all we can do is to put a stove into the next room, which will only be an affair of four or five florins; for in mine we might heat the stove till it is red-hot, and leave the stove-door open into the bargain, yet it would not make the room endurable--it is so frightfully cold in it. Ask the Abbate Varesco if we could not break off at the chorus in the second act, "Placido e il mare" after Elettra's first verse, when the chorus is repeated,--at all events after the second, for it is really far too long. I have been confined to the house two days from my cold, and, luckily for me, I have very little appetite, for in the long run it would be inconvenient to pay for my board. I have, however, written a note to the Count on the subject, and received a message from him that he would speak to me about it shortly. By heavens! he ought to be thoroughly ashamed of himself. I won't pay a single kreutzer.

131.

Munich, Dec. 1, 1780.

THE rehearsal went off with extraordinary success; there were only six violins in all, but the requisite wind-instruments. No one was admitted but Count Seeau's sister and young Count Seinsheim. This day week we are to have another rehearsal, with twelve violins for the first act, and then the second act will be rehearsed (like the first on the previous occasion). I cannot tell you how delighted and surprised all were; but I never expected anything else, for I declare I went to this rehearsal with as quiet a heart as if I had been going to a banquet. Count Seinsheim said to me, "I do assure you that though I expected a great deal from you, I can truly say this I did not expect."

The Cannabichs and all who frequent their house are true friends of mine. After the rehearsal, (for we had a great deal to discuss with the Count,) when I went home with Cannabich, Madame Cannabich came to meet me, and hugged me from joy at the rehearsal having passed off so admirably; then came Ramm and Lang, quite out of their wits with delight. My true friend the excellent lady, who was alone in the house with her invalid daughter Rose, had been full of solicitude on my account. When you know him, you will find Ramm a true German, saying exactly what he thinks to your face. He said to me, "I must honestly confess that no music ever made such an impression on me, and I assure you I thought of your father fifty times at least, and of the joy he will feel when he hears this opera." But enough of this subject. My cold is rather worse owing to this rehearsal, for it is impossible not to feel excited when honor and fame are at stake, however cool you may be at first. I did everything you prescribed for my cold, but it goes on very slowly, which is particularly inconvenient to me at present; but all my writing about it will not put an end to my cough, and yet write I must. To-day I have begun to take violet syrup and a little almond oil, and already I feel relieved, and have again stayed two days in the house. Yesterday morning Herr Raaff came to me again to hear the aria in the second act. The man is as much enamored of his aria as a young passionate lover ever was of his fair one. He sings it the last thing before he goes to sleep, and the first thing in the morning when he awakes. I knew already, from a sure source, but now from himself, that he said to Herr von Viereck (Oberststallmeister) and to Herr von Kastel, "I am accustomed constantly to change my parts, to suit me better, in recitative as well as in arias, but this I have left just as it was, for every single note is in accordance with my voice." In short, he is as happy as a king. He wishes the interpolated aria to be a little altered, and so do I. The part commencing with the word era he does not like, for what we want here is a calm tranquil aria; and if consisting of only one part, so much the better, for a second subject would have to be brought in about the middle, which leads me out of my way. In "Achill in Sciro" there is an air of this kind, "or che mio figlio sei." I thank my sister very much for the list of comedies she sent me. It is singular enough about the comedy "Rache fur Rache"; it was frequently given here with much applause, and quite lately too, though I was not there myself. I beg you will present my devoted homage to Madlle. Therese von Barisani; if I had a brother, I would request him to kiss her hand in all humility, but having a sister only is still better, for I beg she will embrace her in the most affectionate manner in my name. A propos, do write a letter to Cannabich; he deserves it, and it will please him exceedingly. What does it matter if he does not answer you? You must not judge him from his manner; he is the same to every one, and means nothing. You must first know him well.

132.

Munich, Dec. 5, 1780.

The death of the Empress [Maria Theresa] does not at all affect my opera, for the theatrical performances are not suspended, and the plays go on as usual. The entire mourning is not to last more than six weeks, and my opera will not be given before the 20th of January. I wish you to get my black suit thoroughly brushed to make it as wearable as possible, and forward it to me by the first diligence; for next week every one must be in mourning, and I, though constantly on the move, must cry with the others.

With regard to Raaff's last aria, I already mentioned that we both wish to have more touching and pleasing words. The word era is constrained; the beginning good, but gelida massa is again hard. In short, far-fetched or pedantic expressions are always inappropriate in a pleasing aria. I should also like the air to express only peace and contentment; and one part would be quite as good--in fact, better, in my opinion. I also wrote about Panzacchi; we must do what we can to oblige the good old man. He wishes to have his recitative in the third act lengthened a couple of lines, which, owing to the chiaro oscuro and his being a good actor, will have a capital effect. For example, after the strophe, "Sei la citta del pianto, e questa reggia quella del duol," comes a slight glimmering of hope, and then, "Madman that I am! whither does my grief lead me?" "Ah! Creta tutta io vedo." The Abbato Varesco is not obliged to rewrite the act on account of these things, for they can easily be interpolated. I have also written that both I and others think the oracle's subterranean speech too long to make a good effect. Reflect on this. I must now conclude, having such a mass of writing to do. I have not seen Baron Lehrbach, and don't know whether he is here or not; and I have no time to run about. I may easily not know whether he is here, but he cannot fail to know positively that I am. Had I been a girl, no doubt he would have come to see me long ago. Now adieu!

I have this moment received your letter of the 4th December. You must begin to accustom yourself a little to the kissing system. You can meanwhile practise with Maresquelli, for each time that you come to Dorothea Wendling's (where everything is rather in the French style) you will have to embrace both mother and daughter, but--N. B., on the chin, so that the paint may not be rubbed off. More of this next time. Adieu!

P.S.--Don't forget about my black suit; I must have it, or I shall be laughed at, which is never agreeable.

133.

Munich, Dec. 13, 1780.

Your last letters seemed to me far too short, so I searched all the pockets in my black suit to see if I could not find something more. In Vienna and all the Imperial dominions, the gayeties are to be resumed six weeks hence,--a very sensible measure, for mourning too long is not productive of half as much good to the deceased as of injury to the living. Is Herr Schikaneder to remain in Salzburg? If so, he might still see and hear my opera. Here people, very properly, cannot comprehend why the mourning should last for three months, while that for our late Elector was only six weeks. The theatre, however, goes on as usual. You do not write to me how Herr Esser accompanied my sonatas--ill, or well? The comedy, "Wie man sich die Sache deutet," is charming, for I saw it--no, not saw it, but read it, for it has not yet been performed; besides, I have been only once in the theatre, having no leisure to go, the evening being the time I like best to work. If her Grace, the most sensible gracious Frau von Robinig, does not on this occasion change the period of her gracious journey to Munich, her Grace will be unable to hear one note of my opera. My opinion, however, is, that her Grace in her supreme wisdom, in order to oblige your excellent son, will graciously condescend to stay a little longer. I suppose your portrait is now begun, and my sister's also, no doubt. How is it likely to turn out? Have you any answer yet from our plenipotentiary at Wetzlar? I forget his name--Fuchs, I think. I mean, about the duets for two pianos. It is always satisfactory to explain a thing distinctly, and the arias of Esopus are, I suppose, still lying on the table? Send them to me by the diligence, that I may give them myself to Herr von Dummhoff, who will then remit them post-free. To whom? Why, to Heckmann--a charming man, is he not? and a passionate lover of music. My chief object comes to-day at the close of my letter, but this is always the case with me. One day lately, after dining with Lisel Wendling, I drove with Le Grand to Cannabich's (as it was snowing heavily). Through the window they thought it was you, and that we had come together. I could not understand why both Karl and the children ran down the steps to meet us, and when they saw Le Grand, did not say a word, but looked quite discomposed, till they explained it when we went up-stairs. I shall write nothing more, because you write so seldom to me--nothing, except that Herr Eck, who has just crept into the room to fetch his sword which he forgot the last time he was here, sends his best wishes to Thresel, Pimperl, Jungfer Mitzerl, Gilofsky, Katherl, my sister, and, last of all, to yourself. Kiss Thresel for me; a thousand kisses to Pimperl.

134.

Munich, Dec. 16, 1780.

HERR ESSER came to call on me yesterday for the first time. Did he go about on foot in Salzburg, or always drive in a carriage, as he does here? I believe his small portion of Salzburg money will not remain long in his purse. On Sunday we are to dine together at Cannabich's, and there he is to let us hear his solos, clever and stupid. He says he will give no concert here, nor does he care to appear at court; he does not intend to seek it, but if the Elector wishes to hear him,--"Eh, bien! here am I; it would be a favor, but I shall not announce myself." But, after all, he may be a worthy fool--deuce take it! cavalier, I meant to say. He asked me why I did not wear my Order of the Spur. I said I had one in my head quite hard enough to carry. He was so obliging as to dust my coat a little for me, saying, "One cavalier may wait upon another." In spite of which, the same afternoon--from forgetfulness, I suppose--he left his spur at home, (I mean the outward and visible one,) or at all events contrived to hide it so effectually that not a vestige of it was to be seen. In case I forget it again, I must tell you that Madame and Madlle. Cannabich both complain that their throats are daily becoming larger owing to the air and water here, which might at last become regular goitres. Heaven forbid! They are indeed taking a certain powder--how do I know what? Not that this is its name; at all events, it seems to do them no good. For their sakes, therefore, I took the liberty to recommend what we call goitre pills, pretending (in order to enhance their value) that my sister had three goitres, each larger than the other, and yet at last, by means of these admirable pills, had got entirely rid of them! If they can be made up here, pray send me the prescription; but if only to be had at Salzburg, I beg you will pay ready money for them, and send a few cwt. of them by the next diligence. You know my address.

There is to be another rehearsal this afternoon of the first and second acts in the Count's apartments; then we shall only have a chamber rehearsal of the third, and afterwards go straight to the theatre. The rehearsal has been put off owing to the copyist, which enraged Count Seinsheim to the uttermost. As for what is called the popular taste, do not be uneasy, for in my opera there is music for every class, except for the long-eared. A propos, how goes on the Archbishop? Next Monday I shall have been six weeks away from Salzburg. You know, dear father, that I only stay there to oblige you, for, by heavens! if I followed my own inclinations, before coming here I would have torn up my last diploma; for I give you my honor that not Salzburg itself, but the Prince and his proud nobility, become every day more intolerable to me. I should rejoice were I to be told that my services were no longer required, for with the great patronage that I have here, both my present and future circumstances would be secure, death excepted, which no one can guard against, though no great misfortune to a single man. But anything in the world to please you. It would be less trying to me if I could only occasionally escape from time to time, just to draw my breath. You know how difficult it was to get away on this occasion; and without some very urgent cause, there would not be the faintest hope of such a thing. It is enough to make one weep to think of it, so I say no more. Adieu! Come soon to see me at Munich and to hear my opera, and then tell me whether I have not a right to feel sad when I think of Salzburg. Adieu!

135.

Munich, Dec. 19, 1780.

THIS last rehearsal has been as successful as the first, and satisfactorily proved to the orchestra and all those who heard it, their mistake in thinking that the second act could not possibly excel the first in expression and novelty. Next Saturday both acts are again to be rehearsed, but in a spacious apartment in the palace, which I have long wished, as the room at Count Seeau's is far too small. The Elector is to be in an adjoining room (incognito) to hear the music. "It must be a life-and-death rehearsal," said Cannabich to me. At the last one he was bathed in perspiration.

Cannabich, whose name-day this is, has just left me, reproaching me for discontinuing this letter in his presence. As to Madame Duschek, the thing is impossible at present, but I will do what I can with pleasure after my opera is given. I beg you will write to her and say, with my compliments, that next time she comes to Salzburg we can square accounts. It would delight me if I could get a couple of cavaliers like old Czernin,--this would be a little yearly help; but certainly not for less than 100 florins a year, in which case it might be any style of music they pleased. I trust that you are now quite recovered; indeed, after the friction performed by a Barisani Theres, you cannot be otherwise. You have no doubt seen by my letters that I am well and happy. Who would not feel happy to have completed such a great and laborious work--and completed it, too, with honor and renown? Three arias alone are wanting--the last chorus in the third act, and the overture and ballet; and then--Adieu partie!

One more indispensable remark, and I have done. The scene between father and son in the first act, and the first scene in the second act between Idomenco and Arbace, are both too long, and sure to weary the audience, particularly as in the first the actors are both bad, and in the second one of them is also very inferior; besides, the whole details are only a narrative of what the spectators have already seen with their own eyes. The scenes will be printed just as they are. I only wish the Abbate would point out to me how not only to curtail them, but very considerably to curtail them; otherwise I must do it myself, for the scenes cannot remain as they are--I mean, so far as the music is concerned. I have just got your letter, which, being begun by my sister, is without a date. A thousand compliments to Thresel--my future upper and under nursery-maid to be. I can easily believe that Katherl would gladly come to Munich, if (independent of the journey) you would allow her to take my place at meals. Eh! bien. I can contrive it, for she can occupy the same room with my sister.

136.

Munich, Dec 27, 1780.

I HAVE received the entire opera, Schachtner's letter, your note, and the pills. As for the two scenes to be curtailed, it was not my own suggestion, but one to which I consented--my reason being that Raaff and Del Prato spoil the recitative by singing it quite devoid of all spirit and fire, and so monotonously. They are the most miserable actors that ever trod the stage. I had a desperate battle royal with Seeau as to the inexpediency, unfitness, and almost impossibility of the omissions in question. However, all is to be printed as it is, which at first he positively refused to agree to, but at last, on rating him soundly, he gave way. The last rehearsal was splendid. It took place in a spacious apartment in the palace. The Elector was also within hearing. On this occasion it was rehearsed with the whole orchestra, (of course I mean those who belong to the opera.) After the first act the Elector called out Bravo! rather too audibly, and when I went into the next room to kiss his hand he said, "Your opera is quite charming, and cannot fail to do you honor." As he was not sure whether he could remain for the whole performance, we played the concerted aria and the thunderstorm at the beginning of the second act, by his desire, when he again testified his approbation in the kindest manner, and said, laughing, "Who could believe that such great things could be hidden in so small a head?" Next day, too, at his reception, he extolled my opera much. The ensuing rehearsal will probably take place in the theatre. A propos, Becke told me, a day or two ago, that he had written to you about the last rehearsal but one, and among other things had said that Raaff's aria in the second act is not composed in accordance with the sense of the words, adding, "So I am told, for I understand Italian too little to be able to judge." I replied, "If you had only asked me first and written afterwards! I must tell you that whoever said such a thing can understand very little Italian. The aria is quite adapted to the words. You hear the mare, and the mare funesto; and the passages dwell on the minacciar, and entirely express minacciar (threatening). Moreover, it is the most superb aria in the opera, and has met with universal approbation."

Is it true that the Emperor is ill? Is it true that the Archbishop intends to come to Munich? Raaff is the best and most upright man alive, but--so addicted to old-fashioned routine that flesh and blood cannot stand it; so that it is very difficult to write for him, but very easy if you choose to compose commonplace arias, as for instance the first one, "Vedromi intorno." When you hear it, you will say that it is good and pretty, but had I written it for Zonca it would have suited the words better. Raaff likes everything according to rule, and does not regard expression. I have had a piece of work with him about the quartet. The more I think of the quartet as it will be on the stage, the more effective I consider it, and it has pleased all those who have heard it on the piano. Raaff alone maintains that it will not be successful. He said to me confidentially, "There is no opportunity to expand the voice; it is too confined." As if in a quartet the words should not far rather be spoken, as it were, than sung! He does not at all understand such things. I only replied, "My dear friend, if I were aware of one single note in this quartet which ought to be altered, I would change it at once; but there is no single thing in my opera with which I am so pleased as with this quartet, and when you have once heard it sung in concert you will speak very differently. I took every possible pains to conform to your taste in your two arias, and intend to do the same with the third, so I hope to be successful; but with regard to trios and quartets, they should be left to the composer's own discretion." On which he said that he was quite satisfied. The other day he was much annoyed by some words in his last aria--rinvigorir and ringiovenir, and especially vienmi a rinvigorir--five i's! It is true, this is very disagreeable at the close of an air.

137.

Munich, Dec. 30. 1780.

A HAPPY New-Year! Excuse my writing much, for I am over head and ears in my work. I have not quite finished the third act; and as there is no extra ballet, but only an appropriate divertissement in the opera, I have the honor to write that music also, but I am

glad of it, for now the music will be all by the same master. The third act will prove at least as good as the two others,--in fact, I believe, infinitely better, and that it might fairly be said, finis coronat opus. The Elector was so pleased at the rehearsal that, as I already wrote to you, he praised it immensely next morning at his reception, and also in the evening at court. I likewise know from good authority that, on the same evening after the final rehearsal, he spoke of my music to every one he conversed with, saying, "I was quite surprised; no music ever had such an effect on me; it is magnificent music." The day before yesterday we had a recitative rehearsal at Wendling's, and tried over the quartet all together. We repeated it six times, and now it goes well. The stumbling-block was Del Prato; the wretch can literally do nothing. His voice is not so bad, if he did not sing from the back of the throat; besides, he has no intonation, no method, no feeling. He is only one of the best of the youths who sing in the hope of getting a place in the choir of the chapel. Raaff was glad to find himself mistaken about the quartet, and no longer doubts its effect. Now I am in a difficulty with regard to Raaff's last air, and you must help me out of it. He cannot digest the rinvigorir and ringiovenir, and these two words make the whole air hateful to him. It is true that mostrami and vienmi are also not good, but the worst of all are the two final words; to avoid the shake on the i in the first word rinvigorir, I was forced to transfer it to the o. Raaff has now found, in the "Natal di Giove," which is in truth very little known, an aria quite appropriate to this situation. I think it is the ad libitum aria, "Bell' alme al ciel diletto" and he wishes me to write music for these words. He says, "No one knows it, and we need say nothing." He is quite aware that he cannot expect the Abbate to alter this aria a third time, and he will not sing it as it is written. I beg you will send me an immediate reply. I shall conclude, for I must now write with all speed; the composing is finished, but not the writing out.

My compliments to dear Thresel: the maid who waits on me here is also named Thresel, but, heavens! how inferior to the Linz Thresel in beauty, virtue, charms--and a thousand other merits! You probably know that the worthy musico Marquesi, the Marquessius di Milano, has been poisoned in Naples, but how? He was enamored of a Duchess, whose rightful lover became jealous, and sent three or four fellows to give him his choice between drinking poison out of a cup and being assassinated. He chose the former, but being an Italian poltroon he died ALONE, and allowed his murderers to live on in peace and quiet. I would at least (in my own room) have taken a couple with me into the next world, if absolutely obliged to die myself. Such an admirable singer is a great loss. Adieu!

138.

Munich, Jan. 3, 1780.

MY head and my hands are so fully occupied with my third act, that it would not be wonderful if I turned into a third act myself, for it alone has cost me more trouble than the entire opera; there is scarcely a scene in it which is not interesting to the greatest degree. The accompaniment of the underground music consists merely of five instruments, namely, three trombones and two French horns, which are placed on the spot whence the voice proceeds. The whole orchestra is silent at this part.

The grand rehearsal positively takes place on the 20th, and the first performance on the 22d. All you will both require is to bring one black dress, and another for every-day wear, when you are only visiting intimate friends where there is no ceremony, and thus save your black dress a little; and if my sister likes, one pretty dress also, that she may go to the ball and the Academie Masquee.

Herr von Robinig is already here, and sends his regards to you. I hear that the two Barisanis are also coming to Munich; is this true? Heaven be praised that the cut on the finger of the Archbishop was of no consequence! Good heavens! how dreadfully I was alarmed at first! Cannabich thanks you for your charming letter, and all his family beg their remembrances. He told me you had written very humorously. You must have been in a happy mood.

No doubt we shall have a good many corrections to make in the third act when on the stage; as for instance scene sixth, after Arbace's aria, the personages are marked, "Idomeneo, Arbace, &c., &c." How can the latter so instantly reappear on the spot? Fortunately he might stay away altogether. In order to make the matter practicable, I have written a somewhat longer introduction to the High Priest's recitative. After the mourning chorus the King and his people all go away, and in the following scene the directions are, "Idomeneo kneels down in the Temple." This is impossible; he must come accompanied by his whole suite. A march must necessarily be introduced here, so I have composed a very simple one for two violins, tenor, bass, and two hautboys, to be played a mezza voce, and during this time the King appears, and the Priests prepare the offerings for the sacrifice. The King then kneels down and begins the prayer.

In Elettra's recitative, after the underground voice has spoken, there ought to be marked exeunt. I forgot to look at the copy written for the press to see whether it is there, and whereabouts it comes. It seems to me very silly that they should hurry away so quickly

merely to allow Madlle. Elettra to be alone.

I have this moment received your few lines of January 1st. When I opened the letter I chanced to hold it in such a manner that nothing but a blank sheet met my eyes. At last I found the writing. I am heartily glad that I have got an aria for Raaff, as he was quite resolved to introduce the air he had discovered, and I could not possibly (N. B., with a Raaff) have arranged in any other way than by having Varesco's air printed, but Raaff's sung. I must stop, or I shall waste too much time. Thank my sister very much for her New-Year's wishes, which I heartily return. I hope we shall soon be right merry together. Adieu! Remembrances to friends, not forgetting Ruscherle. Young Eck sends her a kiss, a sugar one of course.

139.

Munich, Jan. 10, 1780.

My greatest piece of news is that the opera is put off for a week. The grand rehearsal is not to take place till the 27th--N. B., my birthday--and the opera itself on the 29th. Why? Probably to save Count Seeau two hundred gulden. I, indeed, am very glad, because we can now rehearse frequently and more carefully. You should have seen the faces of the Robinigs when I told them this news. Louisa and Sigmund are delighted to stay; but Lise, that SNEAKING MISERY, has such a spiteful Salzburg tongue that it really drives me distracted. Perhaps they may still remain, and I hope so on Louisa's account. In addition to many other little altercations with Count Seeau, I have had a sharp contention with him about the trombones. I call it so, because I was obliged to be downright rude, or I never should have carried my point. Next Saturday the three acts are to be rehearsed in private. I got your letter of the 8th, and read it with great pleasure; the burlesque, too, I like very much. Excuse my writing more at this time; for, in the first place, as you see, my pen and ink are bad, and, in the second, I have still a couple of airs to write for the last ballet. I hope you will send no more such letters as the last, of only three or four lines.

140.

Munich, Jan. 18, 1780.

PRAY forgive a short letter, for I must go this very moment, ten o'clock (in the forenoon of course), to the rehearsal. There is to be a recitative rehearsal for the first time to-day in the theatre. I could not write before, having been so incessantly occupied with those confounded dances. Laus Deo, I have got rid of them at last, but only of what was most pressing. The rehearsal of the third act went off admirably. It was considered very superior to the second act. The poetry is, however, thought far too long, and of course the music likewise, (which I always said it was.) On this account the aria of Idamante, "No la morte io non pavento" is to be omitted, which was, indeed, always out of place there; those who have heard it with the music deplore this. Raaff's last air, too, is still more regretted, but we must make a virtue of necessity. The prediction of the oracle is still far too long, so I have shortened it; but Varesco need know nothing of this, because it will all be printed just as he wrote it. Madame von Robinig will bring with her the payment both for him and Schachtner. Herr Geschwender declined taking any money with him. In the meantime say to Varesco in my name, that he will not get a farthing from Count Seeau beyond the contract, for all the alterations were made FOR ME and not for the Count, and he ought to be obliged to me into the bargain, as they were indispensable for his own reputation. There is a good deal that might still be altered; and I can tell him that he would not have come off so well with any other composer as with me. I have spared no trouble in defending him.

The stove is out of the question, for it costs too much. I will have another bed put up in the room that adjoins the alcove, and we must manage the best way we can. Do not forget to bring my little watch with you. We shall probably make an excursion to Augsburg, where we could have the little silly thing regulated. I wish you also to bring Schachtner's operetta. There are people who frequent Cannabich's house, who might as well hear a thing of the kind. I must be off to the rehearsal. Adieu!

The father and sister arrived on the 25th of January, and the first performance of the opera took place a few days afterwards; then the family amused themselves for some little time with the gayeties of the Carnival. The Archbishop had gone to Vienna; and, desiring to appear in the Imperial city in the full splendor of a spiritual prince, he had taken with him, in addition to fine furniture and a large household, some of his most distinguished musicians. On this account, therefore, Mozart, in the middle of March, also received the command to go to Vienna. He set off immediately.

Re-vamping the Social Life of the Planet 18. Man Could Change Human Nature 19. Man Could Break Out of the Age-Long Prison-House of Civilization and Enter a New World

PREFACE

LEARNING FROM HISTORY

Human history may be viewed from various angles. The easiest history to write concerns the doings of a few well known people and their involvement in some memorable events. History may also concern itself with inventions and discoveries: the use of fire, of the wheel or smelting metals. It may center around sources of food, means of shelter, or the making of records. It may be concerned with the construction and decoration of cities, kingdoms and empires.

Social history enters the picture with travel, transportation, communication, trade. Human beings group themselves in families, clans and tribes, in voluntary associations; they compete, plunder, conquer, enslave, exploit; they co-operate for construction and destruction. Political history is but one aspect of man's group contacts and group projects.

There have been histories of particular civilizations and of civilization as a field of historical research. With minor exceptions none of the authors that I have consulted has attempted an analytical treatment of civilization as a sociological phenemenon.

Scientists start from hunches, examine available data, advance tentative conclusions, test them in the light of wider observations, and round out their research by formulating general principles or "laws." This scientific approach has been used in many fields of observation and study. I am applying the formula to one aspect of social history: the appearance, development, maturity, decline and disappearance of the vast co-ordinations of collective, experimental human effort called civilizations.

"Assyria, Greece, Rome, Carthage, where are they?" asked Byron. He might have added: "What were they? How did they come into being? What was the nature of their experience? Why did they rise from small beginnings, develop into wide-spread colossal complexes of wealth and power, and then, after longer or shorter periods of existence, break up and disappear from the stage of social history?"

Such questions are far removed from the lives of people who are busy with everyday affairs. In one sense they _are_ remote; in the larger picture, however, they are of vital concern to anyone and everyone now living in civilized communities. If Assyrians, Egyptians, Greeks, Romans and Carthaginians built extensive empires and massive civilizations that flourished for a time, then broke up and disappeared, are we to follow blindly and unthinkingly in their footsteps? Or do we study their experiences, benefit from their successes and learn from their mistakes? Can we not take lessons out of their voluminous notebooks, avoid their blunders and direct our own feet along paths that fulfil our lives at the same time that they meet the widespread demand for survival and well-being?

Civilization has been extensively experimental. Several thousand years, during which civilizations have appeared, disappeared and reappeared, have been too brief to establish and stabilize a hard and fast social pattern. As the complexity of civilizations has increased, variations and deviations have grown in number and intensity. With the advent of western civilization a culture pattern is being put together which differs widely from its predecessors.

All civilized peoples seem to have developed from simple beginnings and experimented with broader and more complicated life styles. In western civilization the number of experiments has increased and the span of their deviations seems to have broadened. Under the circumstances an analysis of civilization must take for granted not only social change but the development of, human society along lines which link up the outstanding structural and functional ideas, institutions and practices of successive civilizations.

I propose in this inquiry to state certain accepted facts from the history of civilizations and of contemporary experience. I also propose to analyze the facts and generalize them in such a way that the results of the study may provide an understanding of the human social past, together with some guide-lines that will prove useful in the formulation and implementation of the present-day policy and procedure of civilized peoples, nations, empires and of the western civilization.

This book is not a popular treatise, nor is it a textbook. Rather. it is an attempt to summarize an area of critical human concern. Academia may not use such material: nevertheless it should be available to students and administrators who must plan and direct the social future of humankind.

Civilization and Beyond rounds out a series of studies that I began in 1928 with _Where Is Civilization Going_? The series has extended through _The Twilight of Empire_ (1930), _War_ (1931) and _The Tragedy of Empire_ (1946). Up to 1914 my field of study was confined largely to the economics of distribution. The war of 1914-18 pushed me rudely and decisively into the broader field. I have described the process in my political autobiography: _Making of a Radical_ (1971).

I hope that this study will provide a useful link in the chain of material dealing with the structure and function of man's social environment, leading directly into an action program that will conclude the preservation and loving economical use of nature's rich gifts and the dedication of thousands of young aspiring men and women to the good life here, now and indefinitely, into a bright, productive and creative future.

As of this date seven publishers have examined the manuscript of this work and declined to publish it. All felt that it would not find any considerable reading public. Nevertheless, I feel that the work should be printed and distributed because it carries a message that may be of first rate importance to the future of my fellow humans.

Scott Nearing.

Harborside, Maine May 5, 1975

INTRODUCTION

THOUGHTS ABOUT HISTORY AND CIVILIZATION

We may think and talk about civilization as one pattern or level of culture, one stage through which human life flows and ebbs. In that sense we may regard it abstractly and historically, as we regard the most recent ice age or the long and painful record of large-scale chattel slavery.

From quite another viewpoint we may think of civilization as a technologically advanced way of life developed by various peoples through ages of unrecorded experiment and experience, and followed by millions during the period of written history. It is also the way of life that the West has been trying to impose upon the entire human family since European empires launched their crusade to westernize, modernize and civilize the planet Earth.

A third approach would regard civilization as an evolving life style, conceived before the earliest days of recorded human history and matured through the series of experiments marking the development of civilization as we have known it during the five centuries from 1450 to 1975.

Thinking in terms of this age-old experience, with six or more thousand years of social history as a background, it is possible to give a fairly exact meaning to the word "civilization" as it has been lived and is being lived by the present-day West. It is also possible to understand the history of previous civilizations in cycle after cycle of their rise, their development, decline and extinction. At the same time it will enable the reader to recognize the relationship (and difference) between the words "culture" and "civilization".

Human culture is the sum total of ideas, relationships, artifacts, institutions, purposes and ideals currently functioning in any community. Three elements are present in each human society: man, nature and the social structure. Human culture at any point in its history is the social structure: the aggregate of existing culture traits, the products of man's ingenuity, inventiveness and experimentation, set in their natural environment.

Civilization is a level of culture built upon foundations laid down through long periods of pre-civilized living. These foundations consist of artifacts, implements, customs, habit patterns and institutions produced and developed in numerous scattered localities by groups of food-gatherers, migrating herdsmen, cultivators, hand craftsmen and traders and eventually in urban communities built around centers of wealth and power: the cities which are the nuclei of every civilization.

Urban centers, housing trade, commerce, fabrication and finance, with their hinterlands of food-gatherers, herdsmen, cultivators, craftsmen and transporters, are the nuclei around which and upon which recurring civilizations are built. Within and around these urban centers there grows up a complex of associations, activities, institutions and ideas designed to promote, develop and defend the particular life pattern.

A civilization is a cluster of peoples, nations and empires so related in time and space that they share certain ideas, practices, institutions and means of procedure and survival. Among these features of a civilized community we may list:

(1) means of communication, record-keeping, transportation and trade. This would include a spoken language, a method of enumeration, writing in pictographs or symbols; an alphabet, a written language, inscribed on stone, bone, wood, parchment, paper; means of preserving the records of successive generations; paths, roads, bridges; a system for educating successive generations; meeting places and trading points; means for barter or exchange;

(2) an interdependent urban-oriented economy based on division of labor and specialization; on private property in the essential means of production and in consumer goods and services; on a competitive survival struggle for wealth, prestige and power between individuals and social groups; and on the exploitation of man, society and nature for the material benefit of the privileged few who occupy the summit of the social pyramid;

(3) a unified, centralized political apparatus or bureaucracy that attempts to plan, direct and administer the political, economic, ideological and sociological structure;

(4) a self-selected and self-perpetuating oligarchy that owns the wealth, holds the power and pulls the strings;

(5) an adequate labor force for farming, transport, industry, mining;

(6) large middle-class elements: professionals, technicians, craftsmen, tradesmen, lesser bureaucrats, and a semi-parasitic fringe of camp-followers;

(7) a highly professional, well-trained, amply-financed apparatus for defense and offense;

(8) a complex of institutions and social practices which will indoctrinate, persuade and when necessary limit deviation and maintain social conformity;

(9) agreed religious practices and other cultural features.

This description of civilization covers the essential features of western civilization and the sequence of predecessor civilizations for which adequate records exist.

Successive civilizations have introduced new culture traits and abandoned old ones as the pageant of history moved from one stage to the next, or advanced and retreated through cycles. Using this description as a working formula, it is possible to understand the development followed in the past by western civilization, to estimate its current status and to indicate its probable outcome.

Long-established thought-habits cry aloud in protest against such a description of civilization. Until quite recently the word "civilization" has been used in academic circles to symbolize a social idea or ideal. Professor of History Anson D. Morse of Amherst College presents such a view in his _Civilization and the World War_ (Boston: Ginn 1919). For him, civilization is "the sum of things in which the heritage of the child of the twentieth century is better than that of the child of the Stone Age. As a process it is the perfection of man and mankind. As an end, it is the realization of the highest ideal which men are capable of forming.... The goal of civilization ... is human society so organized in all of its constituent groups that each shall yield the best possible service to each one and thereby to mankind as a whole, (producing) the perfect organization of humanity." (page 3).

Such thoughts may be noble and inspired; they are not related to history. We know more or less about a score of civilizations that have occupied portions of the earth during several thousand years. We know a great deal about the western civilization which we observe and in which we participate. Professor Morse's florid words apply to none of the civilizations known to history. Certainly they are poles away from an accurate characterization of our own varient of this social pattern.

We are writing this introduction in an effort to make our word pictures of mankind and its doings correspond with the facts of social history. With the nuclear sword of Damocles hanging over our heads, it is high time for us to exchange the clouds of fancy and the flowers of rhetoric for the solid ground of historical reality. The word "civilization" must generalize what has been and what is, as nearly as the past and present can be embodied in language.

Civilization is a level or phase of culture which has been attained and lost repeatedly in the course of social history. The epochs of civilization have not been distributed evenly, either in time or on the earth's surface. A combination of circumstances, political, economic, ideological, sociological, resulted in the Egyptian, the Chinese, the Roman civilizations. One of these was centered in North Africa, the second in Asia, the third in eastern Europe. All three spilled over into adjacent continents.

No two civilizations are exactly alike at any stage of their development. Each civilization is at least a partial experiment, a process or sequence of causal relationships, altered sequentially in the course of its life cycle.

These thoughts about culture and civilization should be supplemented by noting the relationship between civilizations and empires. An empire is a center of wealth and power associated with its economic and political dependencies. A civilization is a cluster or a succession of empires and/or former empires, co-ordinated and directed by one of their number which has established its leadership in the course of survival struggle.

The total body of historical evidence bearing on human experiments with civilization is extensive and impressive. It covers a large portion of the Earth's land surface, includes parts of Asia, Africa and Europe and extends sketchily to the Americas. In time it covers many thousands of years.

Experiments with civilization have been conducted in highly selective surroundings possessing the volume and range of natural resources and the isolation and remoteness necessary to build and maintain a high level of culture over substantial periods of time. In these special areas it was possible to provide for subsistence, produce an economic surplus large enough to permit experimentation and ensure protection against human and other predators. Egypt and the Fertile Crescent were surrounded by deserts and high mountains. Crete was an island, extensive but isolated. Productive river valleys like the Yang-tse, the Ganges and the Mekong have afforded natural bases for experiments with civilization. Similar opportunities have been provided by strategic locations near bodies of water, mineral deposits and the intersections of trade-routes. Others, less permanent, were located in the high Andes, on the Mexican Plateau, in the Central American jungles.

Histories of civilizations, some of them ancient or classical, have been written during the past two centuries. There have been general histories in many languages. There have been scholarly reports on particular civilizations. Prof. A.J. Toynbee's massive ten volume _Study of History_ is a good example. Still more extensive is the thirty volume history of civilization under the general editorship of C.K. Ogden. These writings have brought together many facts bearing chiefly on the lives of spectacular individuals and episodes, with all too little data on the life of the silent human majority.

At the end of this volume the reader will find a list, selected from the many books that I have consulted in preparation for writing this study. Most of these authorities are concerned with the facts of civilization, with far less emphasis on their political, economic and sociological aspects.

In this study I have tried to unite theory with practice. On the one hand I have reviewed briefly and as accurately as possible some outstanding experiments with civilization, including our own western variant. (Part I. The Pageant of Experiments with Civilization.) In Part II I have undertaken a social analysis of civilization as a past and present life style. In Part III, Civilization Is Becoming Obsolete, I have tried to check our thinking about civilization with the sweep of present day historical trends. Part IV, Steps Beyond Civilization, is an attempt to list some of the alternatives and opportunities presently available to civilized man.

Any reader who has the interest and persistence to read through the entire volume and to browse through some of its references will have had the equivalent of a university extension course dealing with one of the most critical issues confronting the present generation of humanity.

Part I

The Pageant of Experiment With Civilization

CHAPTER ONE

EXPERIMENTS IN EGYPT AND EURASIA

Thousands of years before the city of Rome was ringed with its six miles of stone wall, other peoples in Asia, Eastern Europe and Africa were building civilizations. New techniques of excavation, identification and preservation, subsidized by an increasingly affluent human society, and developed during the past two centuries of archeological research have provided the needed means and manpower. The result is an imposing number of long buried building sites with their accompanying artifacts. Still more important are the records written in long forgotten languages on stone, clay tablets, metal, wood and paper. These remnants and records, left by extinguished civilizations, do not tell us all we wish to know, but they do provide the materials which enable us to reconstruct, at least in part, the lives of our civilized predecessors.

Extensive in time and massive in the volume of their architecture are the remains of Egyptian civilization. The earliest of these fragments date back for more than six thousand years.

The seat of Egyptian civilization was the Nile Valley and its estuary built out into the Mediterranean Sea from the debris of disintegrating African mountains. Annual floods left their silt deposits to deepen the soil along the lower reaches of the river. River water, impounded for the purpose, provided the means of irrigating an all but rainless desert countryside. Skillful engineering drained the swamps, adding to the cultivable area of a narrow valley cut by the river through jagged barren hills. Deserts on both sides of the Nile protected the valley against aggressors and migrants. Within this sanctuary the Egyptians built a civilization that lasted, with a minor break, for some 3,000 years.

Egyptian temples and tombs carry records chiseled and painted on hard stone, which throw light on the life and times of upper-class Egyptians, including emperors, provincial governors, courtiers, generals, merchants, provincial organizers. In a humid, temperate climate these stone-cut and painted records would have been eroded, overgrown and obliterated long ago. In the dry desert air of North Africa they have preserved their identity through the centuries.

Since the Egyptians had a few draft animals, and little if any power-driven machinery, energy needed to build massive stone temples, tombs and other public structures must have been supplied by the forced labor of Egyptians, their serfs and slaves.

Egypt's history dawns on a well-organized society: The Old Kingdom, based on the productivity of the narrow, lush Nile Valley. The products of the Valley were sufficient to maintain a large population of cultivators: some slave, some forced labor, about which we

have little knowledge; a bureaucracy, headed by a supreme ruler whose declared divinity was one of the chief stabilizing forces of the society. Between its agricultural base and its ruling monarch, the Old Kingdom had a substantial middle class which procured the wood, stone, metals and other materials needed in construction; a corps of engineers, technicians and skilled workers, and a substantial mass of humanity which provided the energy needed to erect the temples, monuments and other remains which testify to the political, economic, and cultural competence of the ruling elements and the technical skills present in the Old Kingdom.

Foremost among the factors responsible for the success of the Old Kingdom was the close partnership between the "lords temporal" and the "lords spiritual"--the state and the church. The state consisted of a highly centralized monarchy ruled by a Pharoah who personified temporal authority. This authority was strengthened because it represented a consensus of the many gods recognized and worshiped by the Egyptians of the Old Kingdom. The monarch was also looked upon as an embodiment of divinity. Some Egyptian pharoahs had been priests who became rulers. Others had been rulers who became priests. The two aspects of public life--political and religious--were closely interrelated.

In theory the land of Egypt was the property of the Pharoah. Foreign trade was a state monopoly. In practice the ownership and use of land were shared with the temples and with those members of the nobility closest to the ruling monarch. Hence there were state lands and state income and temple lands and temple income. The use of state lands was alloted to favorites. Each temple had land which it used for its own purposes.

Political power in the Old Kingdom was a tight monopoly held by the ruling dynasty of the period. During preceding epochs it seems likely that rival groups or factions had gone through a period of power-survival struggle which eliminated one rival after another until economic ownership and political authority were both vested in the same ruling oligarchs. This struggle for consolidation apparently reached its climax when Menes, a pharoah who began his rule about 3,400 B.C., in the south of Egypt, invaded and conquered the Delta and merged the two kingdoms, South and North, into one nation which preserved its identity and its sovereignty until the Persian Conquest of 525 B.C.

The unification of the northern kingdom with the South seems to have been a slow process, interrupted by insurrections and rebellions in the Delta and in Lybia. Inscriptions report the suppression of these insurrections and give the number of war-captives brought to the south as slaves. In one instance the captives numbered 120,000 in addition to 1,420 small cattle and 400,000 large cattle.

Using these war captives to supplement the home supply of forced and free labor, successive dynasties built temples, palaces and tombs; constructed new cities; drained and irrigated land; sent expeditions to the Sinai peninsula to mine copper. Such enterprises indicate a considerable economic surplus above that required to take care of a growing population: the high degree of organization required to plan and assemble such enterprises, and the considerable engineering and technological capacity necessary for their execution.

Chief among the binding forces holding together the extensive apparatus known as the Old Kingdom was religion, with its gods, its temples and their generous endowments. Each locality consolidated into the Old Kingdom had its gods and their places for worship. In addition to these local religious centers there was an hierarchy of national deities, their temples, temple lands and endowments. The ruling monarch, who was official servitor of the national gods, interpreting their will and adding to the endowments of the temples, was the embodiment of secular and of religious authority.

Egyptians of the period believed that death was not an end, but a transition. They also believed that those who passed through the death process would have many of the needs and wants associated with life on the Earth. Furthermore they believed that in the course of their future existence those who had died would again inhabit the bodies that they had during their previous existences on Earth. Following out these beliefs the Egyptians put into their tombs a full assortment of the food, clothing, implements and instruments which they had used during their Earth life. They also embalmed the bodies of their dead with the utmost care and buried them in carefully hidden tombs where they would be found by their former users and occupied for the Day of Judgment.

Holding such views, preparation for the phase of life subsequent to death was a chief object of the early Egyptian rulers and their subjects. One of the preoccupations of each new occupant of the throne was the selection of his burial place. Early in his reign he began the construction of suitable quarters for the reception of his embalmed body. The great pyramids were such tombs. Other monarchs constructed rock-hewn chambers for the reception of their bodies. In these chambers in addition to a room for a sarcophagus were associated rooms in which every imaginable need of the dead was stored: food, clothing, furniture, jewelry, weapons.

Adjacent to the royal tomb favored nobles received permission to build their own tombs, similarly equipped but on a smaller, less grandiose scale than that of the pharaoh. By this means the courtiers who had attended the pharaoh in his life-time would be at hand to perform similar services in the after death existence.

Construction and maintenance of temples and tombs absorbed a considerable part of Egypt's economic surplus. These drains on the economy grew more extensive as the country became more populous and more productive. Thanks to the lack of rain in and near the Nile Valley and despite the depleting activities of persistent vandalism these constructs have stood for thirty centuries as monuments to one of the most extensive and elaborate civilizations known to historians. Despite the absence of detailed records, Egyptian achievements under the Old Kingdom indicate an abundance of food, wood, metal and other resources far in excess of survival requirements; a population sufficiently extensive to produce the necessaries of existence and a surplus which made it possible for the lords temporal and spiritual to erect such astonishing and enduring monuments; high levels of technical skills among woodsmen, quarrymen and building crews; the transport facilities by land and water required to assemble the materials, equipment and man power; the foresight, planning, timing and over-all management involved in such constructs as the pyramids, temples and tombs which have withstood the wear and tear of thousands of years; the willingness and capacity of professionals, technicians, skilled workers, and the masses of free and slave labor to co-exist and co-operate over the long periods required for the completion of such extensive structural projects; the utilization of an extensive economic surplus not primarily for personal mass or middle-class consumption but to enhance the power and glory of a tiny minority, its handymen and other dependents; and a considerable middle class of merchants, managers and technicians.

Speaking sociologically, the structure of Egyptian society from sometime before 3,400 B.C., to 525 B.C., passed through four distinct phases or stages. During the first phase, the Nile Valley, which had been separated by tribal and/or geographical boundaries into a large number of more or less independent units, was consolidated, integrated and organized into a single kingdom. This working, functioning area (the land of Egypt) could provide for most of its basic needs from within its own borders. In a sense it was a self-sufficient, workable, liveable area. Egypt was populous, rich, well organized, with a surplus of wealth, productivity and man-power that could be used outside of its own frontiers. Some of the surplus was used outside--to the south, into Central Africa, to the west into North Africa, to the north into Eastern Europe and Western Asia, inaugurating the second phase of Egyptian development. During this second phase Egyptian wealth, population and technology, spilling over its frontiers onto foreign lands, established and maintained relations with foreign territory on a basis that yielded a yearly "tribute," paid by foreigners into the Egyptian treasury. The land of Egypt thus surrounded itself with a cluster of dependencies, converting what had been an independent state or independent states into a functioning empire.

The land of Egypt was the nucleus of the Egyptian Empire--center of wealth and power with its associates and its dependencies. The empire was held together by a legal authority using armed force where necessary to assert or preserve its identity and unity.

Expansion, the third phase of Egyptian development, involved the export of culture traits and artifacts beyond national frontiers, extending the cultural influence of Egypt into non-Egyptian lands inhabited by Egypt's neighbors. Merchants, tourists, travelers, explorers and military adventurers carried the name and fame of Egypt into other centers of civilization and into the hinterland of barbarism that surrounded the civilizations of that period.

Thus the land of Egypt expanded into the Egyptian Empire and the culture of Egypt (its language, its ideas, its artifacts, its institutions) expanded far beyond the boundaries of Egyptian political authority and established Egyptian civilization in parts of Africa, Asia and Europe.

The era of Egyptian civilization was divided into two periods by an invasion of the Hyksos, nomadic leaders who moved into Egypt, ruled it for a period and later were expelled and replaced by a new Egyptian dynasty.

The fourth period of Egypt's experiment with civilization was that of decline. From a position of political supremacy and cultural ascendancy Egyptian influence weakened politically, economically, ideologically and culturally until the year of the Persian Conquest, 525 B.C., when Egypt became a conquered, occupied, provincial and in some ways a colonial territory.

Egyptian civilization can be summed up in three sentences. It covered the greatest time span of any civilization known to history. Its monuments are the most massive. Its records, chiefly in stone, picture massed humans directed for at least thirty centuries toward providing a satisfying and rewarding after-life for a tiny favored minority of its population. To achieve this result, the natural resources of three adjacent continents were combined and concentrated into the Nile Valley through an effective imperial apparatus that enabled the Egyptians to exploit the resources and peoples of adjacent Africa, Asia and Europe for the enrichment

and empowerment of the rulers of Egypt and its dependencies. The disintegration and collapse of Egyptian civilization occupied only a small fraction of the time devoted to its upbuilding and supremacy.

Before, during and after Egyptians played their long and distinguished parts in the recorded history of civilization, the continent of Asia was producing a series of civilization in four areas: first at the crossroads joining Africa and Europe to Asia; then in Western Asia (Asia Minor); in Central Asia, especially in India and Indonesia and finally in China and the Far East.

Experiments with civilization during the past six thousand years have centered in the Eurasian land mass, including the North African littoral of the Mediterranean Sea. Within this area of potential or actual civilization, until very recent times, the centers of civilization have been widely separated geographically and temporally. Occasionally they have been unified and integrated by some unusual up-thrust like that of the Egyptian, the Chinese or the Roman civilizations. In the intervals between these up-thrusts various centers of civilization have maintained a large degree of autonomy and isolation. Only in the past five centuries have communication, transportation, trade and tourism created the basis for an experiment in organizing and coordination of a planet-wide experiment in civilization.

Nature offered humankind two logical areas for the establishment of civilizations. One was the cross-roads of migration, trade and travel by land to and from Asia, Africa and Europe. The other was the Mediterranean with its possibility of relatively safe and easy water-migration, trade and travel between the three continents making up its littoral. Both possibilities were brought together in the Eastern Mediterranean with its multitude of islands, its broken coastline, and its many safe harbors.

The Phoenicians developed their far-flung trading activities around the Mediterranean as a waterway, and the tri-continental crossroads as a logical center for a civilization built around business enterprise.

Aegean civilization occupied the eastern Mediterranean for approximately two thousand years. Its nucleus was the island of Crete. Its influence extended far beyond its island base into southern Europe, western Asia and North Africa. Experiments with civilization on and near the Indian sub-continent centered around the Indonesian archipelago and the rich, semi-tropical and tropical valleys of the Ganges, the Indus, the Gadari, the Irra-waddy and the Mekong. Although they were contiguous geographically and extended over a time span of approximately two thousand years they were aggregates rather than monolithic civilizations, retaining their localisms and avoiding any strong central authority.

Beginnings of civilization have been made outside the Asian-European-African triangle centering around the Mediterranean Sea and the band of South Asia extending from Mesopotamia through India and Indonesia to China. They include the high Andes, Mexico and Central America and parts of black Africa. In no one of these cases did the beginnings reach the stability and universality that characterized the Eurasian-African civilizations.

CHAPTER TWO

ROME'S OUTSTANDING EXPERIMENT

Among the many attempts to make the institutions and practices of civilization promote human welfare, Roman civilization deserves a very high rating. First, it was located in the eastern Mediterranean area, the home-site of so many civilizations. Second, it was part and parcel of a prolonged period of attempts by Egyptians, Assyrians, Hittites, Babylonians, Mycaenians, Phoenicians and others in the area to set up successful empires and to play the lead role in building a civilization that would be more or less permanent. Third, the Romans seemed to have the hardiness, adaptability, persistence and capacity for self-discipline necessary to carry such a long term project to a successful conclusion. Among the widely varied human groups occupying the eastern Mediterranean area between 1000 B.C. and 1000 A.D., the Romans seem to have been well qualified to win the laurel crown.

Western civilization is an incomplete experiment. Its outcome remains uncertain. Its future still hangs in the insecure balance between construction and destruction, between life and extinction. It is "our" civilization in a very real sense. It was developed by our forebears. We live as part of its complex of ideas, practices, techniques, institutions. Since we are in it and of it, it is difficult for us humans to judge it objectively.

Roman civilization, on the contrary, is a completed experiment, one that came into being, developed over several centuries, attained a zenith of wealth and power, then sank gradually from sight, until it lived only as a part of history. A study of Roman civilization has two advantages. First, its life cycle has been completed. Second, it is close enough to us in history and its records are so numerous and so well preserved that we can form a fairly accurate picture of its structure and its functions. It was written up

extensively by the Romans themselves, by their Greek and other contemporaries and by a host of scholars and students; since the break-up of Roman civilization as a political, economic and cultural force in world affairs.

Rome's experiment is sometimes called Graeco-Roman civilization because Greece and Italy were close geographical neighbors and also because Greek culture, which reached its zenith by 500 B.C. and was closely paralleled by the rise of Roman culture, had a profound effect in determining the total character of Roman civilization. In a very real sense Graeco-Roman civilization was the parent of western civilization. Among the many completed civilizations of which we have fairly adequate records, those concerning Rome are most complete and most available.

The story of Roman civilization begins in the Eastern Mediterranean Basin in an era when Greek and Phoenician cities, together with segments and fragments of the Egyptian-Assyrian-Babylonian civilizations were competing for raw materials, trade and alliances. Egyptians had been supreme in the area for centuries. The Sumerian, Aegean, Chinese, Hittite, Assyrian and Indian civilizations had enjoyed periods of dominance but had never reached the level of supremacy enjoyed by the Egyptians.

When Rome came on the scene as a first-rate power, circa 300 B.C., the crucial land bridge joining Africa, Europe and Asia was being passed from hand to hand, with no power strong enough to succeed Egypt as the dominant political-economic-cultural force in the region. Historically speaking it was an interregnum, a period of transition. Egypt had ceased to dominate the public life of the area. The trading cities of the Greeks and the Phoenicians were pushing their way of life into the front ranks among the recognized powers. The kingdoms of Asia-Minor were still warring for supremacy in a field which none of the local kingdoms was able to dominate and hold for any considerable period of time.

Public affairs at the African-European-Asian crossroads were being periodically disturbed and upset by the intrusion of Asian marauders and nomads who came in successive waves, defeated and drove the native inhabitants off from the choicest land and settled down in their places, only to be pushed out in their turn by fresh Asian migrants.

The African-European-Asian triangle was a meeting place and a battle ground. Phoenician and Greek cities brought to this scene new factors and new forces: the rudiments of science; trade and commerce, including a money economy, accounting and cost keeping; the elements of economic organization; the conduct of public affairs by governments based on law rather than on the whim and word of a deified potentate; and the construction of cities and city states built on these foundations.

Rome entered the picture when the forces of political absolutism based upon an agriculture operated by serfs and slaves had fought themselves to a standstill and exhausted their historical usefulness. The times called for new forces capable of adapting themselves to a new culture pattern extending over a greatly enlarged world. The Romans, with their Greek associates, were in a position to fill the gap.

Romans lived originally in Latium, a small land area in southern Italy on the Tiber River far enough inland to be protected against pirates. They built a city which finally covered seven adjacent hills and developed a community of working farmers, merchants, craftsmen and professionals. The farms were small, averaging perhaps eight to fifteen acres, an area large enough to provide a family with a stable though meagre livelihood. The farmers were hard working and frugal.

At this period of Roman history and mythology Latium was one of many communities occupying Italy. Each was self-governing. Each took the steps necessary for survival and expansion. Like their neighbors, the inhabitants of Latium were prepared to defend themselves against piracy, brigandage and ambitious, aggressive rivals. Defense took the form of an embankment and a water-filled moat which surrounded the early settlements and provided shelter for herdsman and farmers in case of emergencies.

At some point in pre-history, presumably when Etruscan princes were in control of Roman affairs, the protective earth embankment which surrounded the Roman settlements was strengthened by building a moat 100 feet wide and 30 feet deep. Behind the moat was a stone wall 10 feet thick and 30 feet or more in height. Parts of this defense were built and rebuilt at various times. When completed they were about six miles in length, enclosing an area sufficient to accommodate the chief buildings of the city and living space for a population of perhaps 200,000 people.

The defenses were designed to prevent interference or intrusion into the life of the Romans. Behind them the inhabitants constructed temples, a forum, palaces and other public buildings, bringing in clean mountain water by an aqueduct that eventually reached a length of 44 miles, constructing an extensive system of drains and sewers that disposed of city wastes, building a network of roads that eventually gave the Romans access first to all parts of Italy and later to the entire Mediterranean Basin. They also replaced the wooden bridges over the Tiber and other rivers by stone bridges carried on stone piers and arches.

Early in their building activities the Romans learned to make a cement so weather-resistant that many of their constructs are still usable two thousand years after the Romans built them. These and similar building operations made Rome one of the show places of the Graeco-Roman world. They also provided for the Romans a level of stability and security far beyond that of their neighbors in that part of the unstable Italian peninsula.

At the time Rome was founded, presumably about 700 B.C., the Italian peninsula was occupied by a large number of principalities, kingdoms and tribal nomads, newly arrived from eastern Europe and Asia. The struggle for pasturage and fertile soil, for dwelling sites and trading opportunities, went on ceaselessly. Romans, like their neighbors and competitors, were reaching out to provide themselves with food, building materials, trade opportunities, strategic advantages. They expanded peacefully if possible, using diplomacy up to a certain point and only engaging in war as a last resort. But since the entire Italian peninsula was occupied by more or less independent groups, each of which was seeking a larger and safer place in the sun, the outcome was ceaseless diplomatic maneuvering, using war as an instrument of policy in the struggle for pelf and power. Four centuries of power struggle, in which Romans played an increasingly prominent role, gave the Roman Republic and its allies substantial control of the entire Italian peninsula. Beginning as one among many small independent states in Italy, the inhabitants of Latium emerged from four centuries of competitive diplomatic and military struggle as the de facto masters of all Italy.

Power struggles are carried on by contestants who occupy a particular land area with its resources and other advantages. Latium was small in extent (some 2,000 square miles) and had very limited natural advantages. Operating from this restricted base, through four centuries of diplomacy, intrigue and war, the Romans enlarged their base of operations to include the whole of Italy. In this crucial era of its history Rome expanded its geographic-economic base to a point from which it could use the natural and human resources of all Italy as a nucleus upon which to build the Roman Empire in Europe, West Asia and North Africa.

At the beginning of this period the Mediterranean Basin housed a number of African, Asian and European empires. Each exercised authority over a part of the Mediterranean littoral. Each empire was built around its central city or cities. Each empire had its distinctive institutions and practices. During these centuries all of the empires were defeated, conquered, occupied and either dismembered or otherwise brought under Roman control.

Extension of Roman authority, first over the Italian peninsula and subsequently over parts of Europe, Africa and Asia, was the result of a policy of expansion that was aggressively, persistently and patiently followed by Roman leaders and policy makers. Neighboring territories were amalgamated into the nucleus of the Roman Empire. More remote territories were associated by treaty as allies of Rome, as dependent or client dependencies of Rome, and as colonies or provinces of the Roman Empire. In all cases they were integral parts of an expanding political, economic and military sphere of influence with Rome, and later Italy, as the center and nucleus. In the course of this development the expanding Roman Empire grew to be the wealthiest and most powerful political, sociological and cultural unit in the Euro-Asian-African area.

The Roman imperial cycle spanned some thirteen centuries. During this period Roman life was transformed from its small, local seat of authority in Central Italy into its new stature as the outstanding power in the Mediterranean area. Economically it extended from peasant proprietorship and a use economy to a market-money economy; from a society of working peasant farmers to an economy resting upon war captives reduced to slavery; from an economy based on production for trade and profit to an economy based on power-grabbing, special privilege, speculation and corruption; from an austerity economy based on primary production to an economy based on affluence, exploitation, and gluttony.

These revolutionary transformations in the Roman economy were accompanied, politically, by hardening of the division of Roman society along class lines with the resulting contradictions, antagonisms, and class struggles, including open class warfare.

Domestic contradictions, confrontations, civil strife and formal civil war were present throughout the entire history of Rome. They existed in embryo in the earliest days of the original settlements on the seven hills over which the city of Rome eventually spread. As Rome and its interests became more complex socially and more extensive geographically the number and variety of contradictions, confrontations, civil and military conflicts increased correspondingly.

In terms of individual human lives the changes which took place in Roman society during the six or seven centuries that elapsed between the early Roman settlements and the reign of their Emperor Augustus were profound and far-reaching. Many communities of diverse and often incompatible backgrounds and interests were herded together, helter-skelter, into the City of Rome, Latium, the Italian nucleus and the subsequent alliances, federations, conquests, consolidations into colonies, occupied areas, provinces and spheres of influence. The greater the number and diversity of these interests and relationships, the greater the probability of

conflict. This empire building process was not gradual and directed with scrupulous care to preserve the amenities and niceties of polite social intercourse. The job was done by and under the direction of military leaders who are traditionally in a hurry to get results. The subordinates who carried out military decisions were volunteer-professional soldiers, mercenary adventurers and conscripts drawn form the four corners of the empire. As the empire grew in extent and as its troubles multiplied, the military was more frequently called upon to take over and iron out difficulties.

Domestically, in the city of Rome and its immediate environs, there were several sharp lines of cleavage; between Roman citizens and non-citizens; between the aristocracy, the bourgeoisie, the working proletariat and the idle proletariat; between the rich and the poor; between freeman (citizens) and the slaves who grew in numbers as the wars of conquest and consolidation multiplied war captives; between the civilian bureaucrats and the members of the military hierarchy.

In the brief period of maximum territorial expansion following the defeat and destruction of Carthage, the frontiers of the Roman Empire were pushed out ruthlessly, North, East, West and South. In the hurly-burly of rapid expansion individual rights were ignored, local communities and entire regions were overrun, depopulated and resettled with the tough disregard of individual and local interests that must characterize any quick, general movement--economic, sociological or military. If the expansion, expulsion and rehabilitation had produced greater degrees of stability and security for individuals and social groups they might have been tolerated and assimilated by the diverse populations caught up in the maelstrom of drastic expansion. But rapid, coercive social transformation produces neither stability nor security. Its normal consequence is chaos, conflict and further change. In the course of these internal conflicts the Roman Republic was gradually phased out. In theory it persisted until the establishment of the military dictatorship of Julius Caesar. Practically, while many of its forms remained, the conduct of public affairs passed more and more into the hands of political leaders who were able to command the backing of the legions.

When the first war against Carthage was launched in 265 B.C., Carthage was at the height of her power. Situated on the North African Coast almost directly across the Mediterranean from Italy, the Carthaginians were in effective control of the western Mediterranean. Carthage was firmly entrenched in Spain. It was trading extensively with the British Isles. Fleets of Carthaginian war ships patrolled the Mediterranean guarding against piracy and economic or political interference by rivals.

Roman political and business leaders, inexperienced in international political dealings and the promotion of international trade, found their further expansion to the west blocked by Carthaginian political, economic and military installations. The result of the confrontation was a series of three wars that began in 265 B.C., and ended in 146. During these 119 years an established power, Carthage, struggled to preserve its position against aggressive Roman efforts to take control of the West Mediterranean basin. The Carthaginians, under the able generalship of Hannibal, mobilized a military force (including elephants), marched from Spain over the Alpine passes into Italy reaching the gates of Rome. Romans countered with the slogan: "Carthage must be destroyed!" When the third Punic war ended in 146 B.C., with the defeat of the Carthaginian military forces, the city of Carthage was leveled.

The defeat of Carthage gave the Romans control of the western Mediterranean. During the same period Roman interests were pushing into East Europe and Western Asia. In 214 B.C., Philip of Macedon had made an alliance with Hannibal, directed against Rome. Consequently, three wars between Rome and Macedonia followed, the third ending in 168 B.C., with the defeat of the Macedonians and their subordination to Roman authority in the form of a Roman governor.

When opposition to Roman influence developed in Greece in 148 B.C., a commission of ten was appointed by the Roman Senate to settle affairs in the Greek peninsula. The city of Corinth was burned to the ground and its lands were confiscated. Thebes and Chalcis were also destroyed. The walls of all towns which had shared in the revolt against Rome were pulled down. All confederations between Greek cities were dissolved. Disarmament, isolation and Roman taxation were imposed on the Greek cities and the oversight of affairs was assigned to the Roman governor of neighboring Macedonia.

Successful wars against Syria and Egypt extended Roman control over additional territory in West Asia and North Africa. A map of Italy at the time of the Roman Federation in 268 B.C. shows Rome as the most powerful among two score minor associates in the federation. A map of the Roman Empire at the death of Augustus in 14 A.D. shows a Roman Empire extending from the Atlantic seaboard on the west to Central Europe on the north, the Black Sea on the east and a generous strip of Africa on the south.

Within three centuries Rome had expanded from its position as a minor state in Italy to the effective control of those portions of three continents which bordered the Mediterranean. Conquests during the following century further extended the Roman frontiers.

Under the Caesars Rome was a society in the throes of political transition. Roman Emperors, backed and frequently selected by the military, were exercising despotic power. They still paid lip service to the Constitution, an instrument that had relevance during the life of the defunct Republic. In the era of the Caesars the law slumbered and might ruled. The turbulent masses were fed and housed by the Roman Oligarchy to which the Emperors were ultimately responsible. The far flung territories conquered by military power and held by military occupation were subject to the authority of the same Roman Oligarchy.

Behind the shams, frauds and tyrannies of a political dictatorship paying lip service to the corpse of a defunct Republic lay the stark realities of a bankrupt economy. Throughout the era of the Caesars the Roman Empire continued to expand geographically. It also came into contact and conflict with peoples so remote from Italy that for them Rome was only a name for tyranny, extortion and exploitation. Julius Caesar and his immediate successors penetrated these remote territories, subjugating them, levying tribute, appointing governors and other officials, policing them, pretending to rule over them. To do this soldiers were marching on foot into regions that lay thousands of miles from the mother city. To be sure, they marched over Roman roads and bridges so well constructed that some of them are still being used at the present day.

But the excellence of Roman engineering could not match up to the implacable limitations of time and distance. Nor could they overlook the need for building the physical structure of Roman economy as they advanced into enemy territory. Equally decisive were the political consequences of the property confiscation and forced labor required to establish and maintain Roman power and enrich greedy Roman officials and their lackeys and overseers.

Rising overhead costs, with no corresponding growth of income, an empty treasury in Rome, and a persistent policy of fleecing the provinces to pay for the normal costs of bureaucracy, plus its extravagances and excesses, could lead to only one possible outcome. Higher taxes and more ruinous levies in the newly conquered provinces could not fill the insatiable maw of deficit spending.

Inflation was the immediate result, accompanied and followed by the debasement of currency and new expropriations of private property. Government expenses consistently exceeded income. The situation was aggravated by the growth of parasitic elements which persistently produced little or nothing and as persistently multiplied their luxuries and extravagances. The parasites grew richer. The impoverished masses suffered the normal deprivations of poverty plus the weight of steadily rising over-head costs. As Roman authority extended farther from its center, the chasm between its income and its out-go widened.

Slave labor aggravated the situation. There was a time when Roman farmers and craftsmen did their own work. That time ended with the enslavement of war captives who swamped the labor market. Like any parasitic growth, slavery and forced labor destroyed the fabric of a largely self-contained economy based on peasant proprietorship.

Roman economy was honey-combed with problems created by deficit spending, currency devaluation and exploitation. At its base was a foot-loose urban proletariat made up largely of refugees from a countryside given over increasingly to the employment of military captives as slave labor. The city masses at the outset were extensively unemployed. Increasingly they became unemployable, parasitic, restless, demanding.

At the outset the slave revolts were local and occasional. As the slaves grew more numerous unrest spread and hardened into organized resistance. Spartacus, a slave, led a revolt which mobilized armies, defeated the Roman legions in a series of battles and ended only with the death of Spartacus and the dispersal of his forces.

Local and provincial affairs under the Roman Empire were administered by a self-seeking corrupt bureaucracy.

Expansion by means of military conquest increased the influence of the military at the expense of the civilian administrators. The consequent burdens of militarism reached from the bottom to the top of Roman society. Eventually, under the Caesars, the military selected emperors from among the rivals for the purple of imperial authority, and used the legions under their command to protect and promote their own political fortunes, thus maintaining a form of latent and frequently open civil war.

Colonial unrest and provincial self-seeking were promoted by conspiracies among Rome's less dependable allies.

Wars of rivalry between Roman candidates for top preferment shifted the power-balance out of civilian hands into the grip of the military. Step by step and stage by stage the Roman Empire became a warfare state maintained at home and abroad by the intervention of the military. Wars of rivalry at home in Rome were paralleled by wars of rivalry abroad.

During the Era of the Caesars Rome became the Eurasian-African honey pot. Wealth centered there. Authority was enthroned there. Power was generated there. Throughout the sphere of Roman political influence, of trade and travel, the central position of Rome was recognized and acknowledged. Not only knowledge and authority, but folklore mushroomed, with Rome as its central theme. Asian nomads, searching for grass, Asian potentates seeking new worlds to conquer and plunder, heard of Rome and finally went there. All roads led to Rome. Thousands of miles of stone roads were built as binding forces to hold the Empire together and defend it against all possible enemies. It was along these roads that the legions marched as they pushed back potential invaders and extended the frontiers. It was these same roads and bridges that made easy and sure the advance of the Asian hordes that would one day occupy and loot the home city. Roads and bridges enabled Roman authority to maintain and extend itself. The same roads and bridges provided a freeway that led into the citadel of Roman power.

Under the Caesars the Roman Empire achieved its greatest geographical extent and exercised its widest cultural influence. The city of Rome was the capital of the western world. There was one state, one law, one economy, one official language, one military authority.

Despite its apparent massiveness, Roman civilization was not a monolith. Rather it was a conglomerate, consisting of many parts held together by connecting social tissues which Rome and Italy alone supplied. In the first instance there was a division into provinces, colonies and newly acquired territories. The provinces, under their Roman appointed governors, enjoyed a large measure of economic and cultural self-determination within the Roman Empire. Beyond the Roman Empire lay territories and peoples associated with Rome by treaties, bound to Rome by trade and travel, in some cases paying tribute to Rome, but enjoying sufficient autonomy as peoples, nations and empires maneuvering for position and advantage, frequently allying themselves with non-Roman areas and occasionally conspiring to by-pass Roman authority and even to challenge Roman supremacy.

This political diversity along the defense perimeter of the Roman Empire existed in a chaos ranging from questioned authority to open defiance and military challenges to Rome and the threat of Romanization. Along this defense perimeter were stationed the legions that guarded the frontiers. Across it moved trade, travel, incursions, invasions and periodic reprisals as a result of which the more turbulent neighbors were brought within the sphere of Rome's influence or, in cases of extreme dissidence and resistance, were depopulated, colonized and added to the Roman conglomerate.

It goes without saying that the influence of Roman culture extended far beyond the Roman defense perimeter, reaching peoples, nations and empires to which Rome was little more than a name. The no-man's land between what-was and what-was-not Rome not only existed in a state of perpetual uncertainty, but provided a battle field for the smuggling, brigandage, the periodic border clashes, the migrations, incursions, invasions and punitive expeditions that are the characteristic features of every ill-defined political boundary.

Roman civilization under the Caesars was a centralized absolutism with a large measure of peripheral deviation and autonomy. It was directed by a central oligarchy and patrolled, defended and extended by a military force unified in theory but in practice grouped around the outstanding personalities and subjected to the vagaries and upsets always associated with power politics in the hands of military backed political despots.

Roman civilization, like all social organisms, came into being, moved toward maturity, reached a plateau of fulfillment from which it declined, broke up and eventually disappeared into the interregnum known as the Dark Ages. The entire episode occupied a dozen centuries. Its beginnings were unimpressively local. At the height of its wealth, power and cultural influence it bestrode the Eurasian-African triangle. Its decline and disappearance were no less spectacular than its meteoric rise to fame and fortune.

I would like to summarize the Roman experiment and some of its lessons by listing and commenting briefly on the forces that built up Roman civilization and those forces which resulted in its decline and dissolution.

Primary up-building forces in the Roman experiment:

1. Establishing the city of Rome as a stable, defensible center of merchandising and commerce, transport, finance, population, wealth and power with a hinterland of associates and dependencies. As it turns out, the city of Rome has outlived both the Roman Empire and Roman Civilization.

2. Steadfast dedication to Roman interests first, by all necessary means and despite costs which at the time seemed to be excessive.

3. A recognition of that which is possible, especially in political relationships. The acceptance with good grace of a half-loaf where no more was available.

4. Consistent, persistent aggression and expansion where such policies were beneficial to Rome, with little or no regard for their effects on Roman associates, allies, friends or enemies. Studied ruthlessness.

5. Rewarding Rome's friends, allies and associates with economic, political and cultural advantages. Implacably punishing and where necessary exterminating Rome's persistent enemies.

6. Wide tolerance of local cultural variation in matters that did not conflict with the major principles and practices of Rome's central authority.

7. Taking defeats in their stride, paying the price, and recovering lost momentum. Again advancing along avenues which led to Roman success and aggrandizement.

8. Indomitable persistence in the pursuit of major objectives.

9. After the reigns of Julius Caesar and Augustus, concentrating power in a single person and his chosen brain trust, using that power to further aggrandize the Roman Empire and Roman Civilization.

This category is not complete. It aims to answer the basic question: In a situation where a thousand contestants entered the knock-down and drag-out struggle, first for survival and then for supremacy, what qualities or qualifications enabled Romans to win the laurel crown of victory?

Paralleling the up-building forces that established Roman supremacy were counter-forces which undermined and eventually destroyed the Roman Empire and Roman civilization:

1. The growth of city life at the expense of rural existence. At the outset of its life cycle, Rome was essentially rural. At the end of the cycle Roman culture was turning its back upon ruralism and moving into a culture that was to be chiefly urban during an entire millennium. In that millennium Rome, her associates and dependencies, experimented with a culture that was essentially urban, but encircled, dependent and eventually replaced by a culture that was essentially rural.

2. During the millennium between 600 B.C. and 500 A.D. the Romans and their associates succeeded in bringing large parts of Europe, Asia and Africa under their control, but the control was so rigid and temporary that tribalism and local nationalisms broke loose from the fetters of central authority and coercive integration, shattering the structure of Roman civilization and its structural core--the Roman Empire. Instead of resulting in closer cooperation, the strategy and tactics of the Roman builders and organizers led to contradictions, bitter feuds, civil strife, independence movements which combined with expansionist diplomacy and periodic wars to discourage, frustrate and eventually to eliminate peace, order and planned progress.

2. The spread of chattel slavery had a profound effect upon the texture of Roman life. At the outset Roman family farms housed the bulk of the population. During the cycle of Roman civilization unnumbered millions of captives were seized in the course of military operations and reduced to slavery. By the end of the Roman cycle the work-load of agriculture, commerce, industry, mining, transport, and the domestic life of the well-to-do was carried by slaves. Basically, therefore, the Roman world was divided first into Romans and non-Romans and second into masters and slaves, with a third category which consisted of an immense bureaucracy (including the military), a professional and technological group and a heavy burden of persistent parasitism.

4. Growth of the abyss that separated wealth and the wealthy from mass poverty in the cities and the countryside. The abyss was widened and deepened by the presence of slavery. More extensive and more frequent foreign conquests added to the volume of slave labor in a market already glutted and reduced the price of slaves. Against this super-abundant cheap slave labor, free labor could compete only by reducing its standard of living and thus deepening the abyss of poverty. At the other end of the social arc, the rich were able to surround themselves with multitudes of slaves who provided the energy needed to carry on the complex life of Roman civilization. As the Roman world expanded, the abyss widened, deepened and became all but impassable. It was from such lower depths that Spartacus and other leaders of rebellious slaves drew sufficient manpower to challenge and for a time even defeat the full military power of Rome.

5. Built into the structure of Roman civilization was the potential of civil war. The contradictions of mass slavery and poverty side by side with boundless leisure and abundance was only one side of the picture. Each of the more distant provinces became a possible

base from which ambitious governors or generals could wage wars of independent conquest at the expense of Roman authority. Each newly subjugated people, smarting under defeat and the heavy hand which Rome laid on its dissidents and opponents, became a potential center for disaffection, conspiracy and rebellion against Roman authority.

6. Conflicts over power succession, in the provinces, and more significantly in the mother city, added another aspect to the many sided pressures. As there was no legal means of determining the succession, the end of each imperial reign offered the probability of military intervention.

7. Deification of emperors, during the era of the Caesars, led to the denigration and degradation of the common man. The fact that the common men of Rome were more and more likely to be poor slaves furthered the process and deepened the abyss between the haves and have-nots.

8. Among the forces of disintegration operating in Rome none was more potent and more decisive than the numerical growth of the military and the increasing probability that any one of the growing contradictions and conflicts would lead to intervention by the military. Roman emperors were dictators and their retention of authority was increasingly decided by the legions which were willing and able to fight for the perpetuation and extension of their authority.

9. The extensive, complicated, elaborate structure of Roman civilization involved a persistent and implacable rise of overhead costs of food and raw materials, of production, of transportation, of the bureaucracy, including the military. The area of Roman civilization increased arithmetically. Overhead costs rose geometrically. They were expressed in an empty treasury, rising taxes, inflation, expropriation, the degradation of the currency.

10. Side by side with the rise in overhead costs went the increase of parasitism among the rich and among the poor. Something-for-nothing was the order of the day. Speculation was rampant. Gambling was universal. Instead of living by production of goods and services, Romans let the slaves do their work and lived by their wits.

11. From top to bottom of Roman society negative forces replaced positive forces. Self directed labor gave place to slavery; participation in productive activity yielded to parasitism; productivity was subordinated to destructivity; the spirit of independence was replaced by the acceptance of increasing arbitrary individual authority.

12. Roman society constantly faced and consistently failed to solve the contradiction between centralism and local interests and local rights. This contradiction increased with increasing size, diversity and complexity.

13. Psychological forces played a part in the breakdown and break-up of Roman civilization. People lost faith and hope. They became disillusioned and cynical. They forgot the common good and devoted themselves to the gratification of body hungers. They turned from proud service of fatherland to the pursuit of pleasure for pleasure's sake. Romans lost freshness and vigor. Creativeness had never been as highly regarded among the Romans as it was among the Greeks. Life was lived closer to the surface. It was confined more and more to the present. Growth in the volume of Roman life sapped its vitality so that there was less surplus for experiment and innovation as more and more of the social income was devoted to meeting overhead costs.

Moralists have insisted that the decline and dissolution of Roman civilization resulted from the abandonment of moral standards. Undoubtedly this was true. The upstanding womanhood and manhood of early Rome was replaced by a wealth-seeking, pleasure-loving, parasitically inclined population. But these features of Roman life under the empire and during the period of Roman decline were the outcome of political, economic and social forces that have characterized one civilization after another. Instead of insisting that Rome declined and fell because it was immoral, it would be far more accurate to insist that Rome declined and fell because the objectives which it sought, the means it employed and the civilized institutions which it developed contained within themselves oppositions and contradictions which led to decline and dissolution. Rome declined and fell because the ideas, institutions and practices upon which it depended--the ideas, institutions and practices of civilization--could lead to no other outcome.

CHAPTER THREE

THE ORIGINS OF WESTERN CIVILIZATIONS

An experiment with civilization presently spans the planet Earth. It is called "modern," "contemporary" or "western civilization." Its artifacts, institutions and practices predominate in Europe, North America and Australasia. They play a prominent role in the lives of

Asians, South Americans and Africans.

Two thousand years ago a long established Egyptian civilization was passing into the shadows. Civilizations in China and India were developing. Roman civilization was approaching the zenith of its ascendancy.

A thousand years ago Roman civilization, like that of Egypt, was a memory; Chinese and Indian civilizations were holding their own, while the followers of Islam were reaching out into Central Asia, North Africa and Eastern Europe.

In east central Europe and around the Mediterranean the beginnings of western civilization had made their appearance and were expanding their control along the Eurasian trade routes and beginning to penetrate western and northern Europe. The Crusades had introduced Asian culture traits into the European backwoods. Hardy European and Asian mariners were penetrating the Americas. Dark ages of ignorance and superstition which had held sway in Europe for centuries were coming to an end. Western civilization was beginning to draw the breath of a new life.

The vast structure of Roman civilization had split West from East. The Eastern Empire retained its form and continued its culture for centuries after its break with the West. Meanwhile the West fragmented into smaller and smaller units, increasingly self-contained and increasingly isolated. Cities raised and manned their own walls. The countryside broke up into smaller and smaller divisions over which the Holy Roman Empire exercised little more than a shadowy authority. Each landed estate had its stronghold or castle. Each locality looked after its own interests. The massive Roman Universal State, stretching for centuries across parts of three continents, had broken up into a multitude of tiny semi-sovereign, semi-independent fragments. Some of the fragments as leagues, alliances and coalitions were reaching nationhood.

New dawn was illuminating the Dark Ages. Western man was sorting and re-assembling some of the scattered fragments of the defunct and dismembered Roman civilization. The task was colossal. Rome's "one authority, one law, one language" hegemony had been replaced by an all pervading diversity. The closely knit Greco-Roman Empire had been superseded in Europe by a sparsely inhabited, roadless wilderness, largely bereft of trade, using waterways as the easiest means of communication and transport. The economy was built around wood cutting, charcoal burning, backward animal husbandry, hand-tool agriculture, hand-craft industry, the rudiments of commerce and finance centered in trading cities. The great houses of the aristocracy and the gentry, scattered villages, towns and walled cities were preoccupied and disrupted by endless feuding and between-seasons warfare.

Adding to the chaos of this dismembered society were the controversies over dynastic succession. Intermittent incursions of migrating hordes from central Asia pushed their way into central and southern Europe. Covert and open conflicts between ecclesiastical and secular authority added to the general lethargy, confusion and chaos.

Europe struggled for centuries to free itself from Asian invasion and occupation. At the same time Europe was improving its agriculture, restoring its trade and expanding its hand-craft industries and its commerce. Towns grew in population and productivity. Life-standards rose in the cities. Cities based on trade and commerce extended their authority and became city-states. Commercial cities joined their forces to form trading leagues.

Lords spiritual and temporal, who had ruled Europe for centuries, were joined by lords commercial, enriched by the growth of trade, transport and developing industry.

Generations passed into centuries--the fourteenth, fifteenth, sixteenth and seventeenth. From small local beginnings the nations of western Europe emerged: Spain, Portugal, the Low Countries, France, Britain, Italy, Austria and eventually Russia. Each was a consolidation of local principalities, earldoms, dukedoms, kingdoms. Each was passing through the rural-urban transformation. Each was outgrowing feudalism and producing a larger and larger group of businessmen, professionals, tradesmen, craftsmen and maturing a middle class and a proletariat. After the fifteenth century each state was spilling over its own frontiers, annexing or losing neighboring territory, spreading beyond the boundaries of Europe into the teeming markets of Asia and the newly discovered treasure-house of the Americas.

A score of European peoples were engaged in the give-and-take of this struggle for wealth and power--for land and its resources in Europe, North Africa and the Near East; for booty, trade and overseas colonies. As the struggle grew more intense smaller and weaker nations dropped out of the contest or were partitioned and gobbled up piecemeal.

Such was the condition of Europe's free-for-all in the closing years of the seventeenth century and the opening decades of the eighteenth century, while three developing forces pushed into the forefront of European life: the enlightenment and science, representative government, and the industrial revolution.

Enlightenment broadened the social basis of knowledge and learning. During the Dark Ages, knowledge and learning were a monopoly of a tiny privileged minority composed of priests, scholars and a segment of the aristocracy. Monasteries, great houses and trading cities sheltered this monopoly. The countryside was a sea of ignorance, superstition, oppression and exploitation. With the printing press came books. Books promoted literacy and curiosity. Literacy and curiosity led to speculation, experiment, discovery and the formulation and spread of ideas. The product of these forces was science, which had had a long period of gestation in North Africa and Asia.

Dark Ages of localism, with landlords, priests and soldiers directing public affairs led to the concentration of wealth and power in the landed aristocracy and the church. But traders in the countryside and merchants in the centers of commerce held a talisman that opened before them ever increasing sources of wealth. Country dwellers harvested one crop a year. When crops were poor they starved. At best the margin of profit was thin. Traders and merchants made a profit every time they found a customer. The countryside lived on a use economy supplemented by barter. As money increased in quantity it was loaned at rates of interest by merchants and bankers who owned it and used it for their purposes. Accumulating wealth and money enabled the traders, merchants, bankers and manufacturers to out-buy and out-point landlords and churchmen. Politically, these changes reduced the authority of absolute monarchies. In their places representative governments made their appearance.

The third force that surfaced in Europe after the end of the Dark Ages was the industrial revolution, which led to fundamental changes in the means of production at the same time that advances in natural and social science produced their practical counterpart--an explosive expansion of technology.

Science, representative government and the industrial revolution led to a rapid and extensive transformation of western society sometimes referred to as the bourgeois revolution. As the bourgeois revolution worked its way into the structure and function of European society, the developing class of businessmen and professionals who had begun to challenge the power-monopoly of the "lords spiritual and temporal" ended by establishing a higher power monopoly under the control of business, military, public relations oligarchy. This revolutionary transformation of modern society took place during the thousand years that elapsed between the crusades and the closing years of the nineteenth century. The resulting social transformation had its geographical homeland in Europe from which it spread around the planet. Politically, these forces found expression through the commerce-dominated, profit-seeking, colonizing empires, with the nation-state as nucleus. Colonizing empires became the dominant force in Europe and in the non-European segments of the planet which were gradually brought under European imperial control.

In the course of voyaging, "discovery" and the establishment of trade, Europeans set up military outposts and maintained increasingly large naval forces. The avowed object of these military and naval build-ups was to defend and promote Spanish, Dutch, Portuguese, French and British imperial interests. Actually military and naval installations were marking out and maintaining the defense perimeters of their respective colonial empires. One of the widely accepted axioms of the period equated colonies with national prosperity. The more successful colonizing empires of the seventeenth and eighteen centuries became the strongholds of nineteenth century monopoly capitalism.

Industrial revolution, flowering in Europe during the eighteenth and nineteenth centuries, gave the European commercial empires a lead over potential rivals based on Asian wealth-power centres. As a result of this lead European empire builders were able to establish and maintain their authority in India and Indonesia, dismember the Turkish and Chinese empires and partition Africa among themselves. Their only potential rivals were the lumbering, isolationist United States of North America and the newly awakened Island Kingdom of Japan. Both of these non-European nations began playing serious wealth-power roles in the same period from 1895 to 1910. Up to that point Europe continued to be the homeland of monopoly capitalism. The chief centers of heavy industry, commerce and finance were in Europe. European merchant fleets and European navies sailed the seas. European banks and business houses dominated planetary financing, insuring and investing.

Viewed from outside, the ascendancy of Europe seemed to be complete. Europe held the strategic strong points: productivity, wealth, the means of transportation, mobile fire-power. By the end of the nineteenth century Europe was the monopoly-capitalist motherland. The rest of the planet was made up of actual or potential dependents under European authority. From these outsiders living at subsistence levels, Europeans could get their supplies of food and raw materials at low prices and to them Europeans

could sell their surplus manufactures, their commercial services, and their investment capital at high prices. The resulting European prosperity was expected to continue indefinitely into the future.

This planetary structure, with Europe as the center of wealth, power, art, science, free business enterprise and wage slavery, progress and poverty, left the majority of mankind living as dependents and colonials. The situation embodied several confrontations:

1. The masters of Europe might quarrel among themselves.

2. Non-Europeans might set up rival wealth power centers and challenge Europe's world hegemony.

3. Colonials and other dependants might demand independence, and equal status in the family of nations.

4. Rootless middle classes and the wretched of the earth might join forces and pull down western civilization's house of cards.

Western civilization, like its predecessors, was accepting and following one central principle: expand, grab and keep. The application of this principle took the form of an axiom of public and private life: might makes right; let him take who has the power; let him keep who can.

Grab and keep, in a period of rapid economic expansion, led each of the burgeoning European empires to the zealous defense of its frontiers as the first principle of imperial policy. The second principle: geographical expansion, followed as a matter of course. Expansion inside Europe, with its tight frontier defenses, meant war with aggressive rivals. Expansion abroad, especially in Asia and Africa, was less costly and might prove more profitable. As a consequence, from 1870 onward, British, French, Dutch, Russia and German colonial territory increased; European armaments multiplied. Each expanding empire prepared for the day which would give it additional square miles of European and foreign real estate.

Grab-and-keep, with its resultant chaotic free-for-all, was the rule of thumb accepted and followed by the West during the decline of Roman power and through the middle ages to modern times.

The "might makes right" formula was in violent conflict with the "love and serve your neighbor" professions of Christian ethics. Nevertheless, it was the accepted overall principle of private enterprise economy and the ruling ethic of Western statecraft. The principle was formulated in five propositions or axioms:

1. Make money, honestly if possible, but make money.

2. Every businessman for himself and the devil take the laggards.

3. We defend and promote our national interests.

4. Our national interests come first.

5. Our country, right or wrong.

These five propositions were the outcome of a millennium of experience with the Crusades and extending to the present century. They are the outcome of preoccupation with material incentives that can be stated in two words, profit and power.

Such propositions, applied to everyday affairs, produced an economy and a statecraft which favored the interests of a part before those of the entire community. Where the whole is favored before any part there is a possibility of co-existence and even of cooperation. Placing a part before the whole involves competition all the way from the marketplace to the chancelleries where the fate of nations is discussed and decided.

The above five propositions or axioms result from preoccupation with material incentives: profit and power for managers, disciplined co-ordination for subordinates, affluence, comfort and recognition for the favored few. They provide the ideological background for twentieth century western civilization.

CHAPTER FOUR

THE LIFE CYCLE OF WESTERN CIVILIZATION

Like its predecessors, western civilization from its inception was essentially competitive. As it developed, the commercially, technically and politically supreme Spanish, Dutch, French and British Empires battled individually, or in rival alliances, for plunder, colonies, markets and raw materials.

From the end of the Napoleonic Wars in 1815, to the Victorian Jubilee in 1897, Great Britain became and remained top dog economically, politically and to a large extent culturally. Britain was the workshop. British shipping was omnipresent. The pound sterling was the chief medium of foreign exchange. The British Navy patrolled the seas. English was replacing French as the language of commerce and diplomacy.

During this British Century, from 1815 to 1897, Great Britain was dominant among the European great powers, but it was never supreme. Always there were countervailing forces. For centuries France had been a major factor in the control and direction of European affairs. Defeat at Waterloo reduced but did not destroy French influence. After 1870 Bismark's Germany began playing a major role. Russia, Austria, Holland, Italy and Spain were also European powers. Overseas, the United States of America and Japan were spreading their imperial wings.

With the explosive advances made by science, technology, productivity, income and wealth accumulation, other countries were moving to the fore. Even though Britain maintained her actual levels of economic output and potential diplomatic presence she was one among several relatively equal European states and world empires. At the same time her natural resources were being depleted and with the growing importance of cotton, rubber and petroleum, all of which Britain must import, her economic ascendancy was progressively undermined. During the wars of 1914-18 and 1936-45 Britain entered an era of decreasing relative importance. Her empire was largely intact, but her economic and political strength was stretched to the breaking point.

Throughout its history, until the wars of 1914-45, western civilization had its headquarters in central and west Europe, with branch offices elsewhere on the planet. At no time after 1870 did any one European power occupy a position of easy superiority over its rivals. If Great Britain was top dog, France, the long established continental power was snapping at her heels. Germany was an expanding power of major consequence. To the North and East lay Russia, with its vast territories and its persistent pressures into East Europe and Far Asia. By any standard of political measurement Europe was in no sense a universal state. Literally it was a potential battle field. War fortunes and misfortunes revolutionized the Europe of 1870-1910. They also realigned the planetary power structure. Heavy war losses down-graded all of the erstwhile European powers. Central and West Europe ceased to be the planetary hub. At the same time America and Asia shouldered their way toward the center of the world stage. From London, Paris, Berlin and other European vantage points the 1870-1945 era could be described as a period of world revolution.

For half a century United States money and arms were used to stabilize capitalism. For many years Washington through its control of all Latin American states (except Cuba after 1960) had been able to dominate United Nations policy, exclude socialist nations, notably China, and hem in socialism. Through this period Washington subsidized and armed counter revolution. Its anti-socialist-communist doctrine had been accepted and largely followed by the West.

Washington's drive to cripple and stamp out socialism-communism was accepted and followed particularly by the states with fascist leanings. Since many western states had large and influential socialist minorities and since several of them had been governed by coalitions in which socialists-communists played a substantial role, acceptance of Washington's anti-socialist program never won wholehearted support in Europe. Atlantic alliance countries voted against the admission of People's China to the United Nations during the Dulles Era. The stalemated outcome of the Korean War (1950-3) called Washington anti-socialist policies into serious question. The stupidities, mendacities and wanton cruelties of the United States' undeclared Vietnam War, even before the advent of Johnson and Nixon, had so weakened Washington leadership that no major power would associate itself with the adventure. The "Allies" in Vietnam were the U.S.A. and two or three vassal Asian states.

Half a century of cold war and co-existence punctuated by military invasions and hot wars, fought between groups from both sides in the class struggle, faced mankind with several undeniable facts:

1. Planet-wide economic, political and social changes had been made during the previous half-century.

2. Capitalism was no longer supreme as it had been before 1900. On the contrary, since 1950 the planet has been divided along class lines--capitalism versus socialism.

3. Socialism-communism is one of the most obvious facts of present-day planetary life.

4. Capitalism is losing ground, especially in Europe.

5. Socialism is gaining ground, especially in Eurasia.

Co-existence presupposes recognition of these five propositions and a willingness to abide by the outcome of the evolutionary-revolutionary process, through which the western world is passing.

During several centuries, ending in 1900, western civilization passed through an era of consolidation and integration that brought its sovereign segments into increasing stable relationships. The most advanced of these relationships took political shape in the half-dozen European empires which controlled the planet in 1900. Side by side with the consolidation of the planet into nations and empires there was another process, world-wide in scope, which made the facts and products of science and technology and their duplication the common property of mankind, creating a cultural synthesis far more universal than the political synthesis in nations, empires, the League of Nations or the United Nations.

Any social synthesis includes positive and negative aspects which function side by side. One builds up. The other wears down. For centuries the building forces in western civilization were in the ascendant. Since the turn of the century a shift of forces has been under way. The wearing down forces presently are in the ascendant. Had it been less competitive and more cooperative and co-ordinated, western civilization might have taken another step in advance by extending cultural unification into the political arena. The League of Nations and the United Nations were efforts in this direction. Neither succeeded in breaking down sovereignty far enough to permit planet-wide political federation.

Having failed to co-ordinate and establish a planet-wide authority during the critical years following 1870, western civilization accepted the antithesis of co-ordination and entered a period of fragmentation:

1. During the century and a half from 1815 to the present day, as facilities for co-ordination were multiplied by discovery and invention, Europe remained stubbornly fragmented into more than a score of sovereign states. Minor changes were made in boundary lines and in internal relationships of property and privilege, but the European maps of the period present a record of persistent fragmentation of the continent into strongly frontiered sovereign segments.

2. Break-up of the European empires after two general wars led to the fragmentation of each empire into self-determining sovereign units.

3. The "third world," consisting chiefly of European empire fragments, has not consolidated, but after the Bandung Conference of 1955 has consisted of a fragmented Africa and Asia torn by domestic and inter-state conflicts and harried by the persistent intervention of the western powers.

4. Rivalry in the Pacific and in Asia has been heightened by the meteoric rise of Japan as a world power, the dismemberment of the Japanese Empire after 1945 and the fierce subsequent economic competition between Japan and her planetary competitors, chiefly the United States.

5. United States efforts to coordinate Latin America as a source of raw materials and a market for manufactures and investment capital have not produced a United Latin American front against a common Yankee menace, but a sturdy refusal even of the tiniest Latin American Republic to surrender or limit its sovereignty has pushed a thorn into the vulnerable side of Washington's Monroe Doctrine control of the western hemisphere.

6. The high point in divisiveness was the decision of the United States spokesmen to inaugurate the American Century by establishing control over the Pacific Ocean, making itself the chief power in Asia and installing U.S.A. authority in the power vacuum left by the expulsion of Britain, France, Holland and Japan from the territories composing their former empires. Local wars begun in Korea (1950) and extending across Southeast Asia have strengthened the determination of the local peoples to defend themselves at all costs against imperialist invaders from Europe and North America.

7. The United States has been rich enough since 1945 to build and maintain a navy that can patrol the Atlantic and Pacific Oceans and the Mediterranean Sea and maintain large military forces in various European and Asian waters. This policy has been justified by the Truman-Johnson-Nixon Doctrine of determined opposition to the extension of socialism-communism and the consequent perpetuation of the cold war.

8. In theory the socialist world is unitary. In practice it is so fragmented by national boundary lines and ideological differences that its members have not been able (during recent years) to get together and discuss their major common problems.

United States wealth and military equipment have been sufficiently over-whelming to support the program of an American Century during which one nation might establish a universal state exercising planet-wide authority along the lines of the Universal State established by the Romans at the zenith of their power. In practice the program has not worked out. On the contrary, opposition to the United States as _the_ world power or even as _the_ power in Asia has grown steadily and quickly into a widespread "Anti-Americanism" or "anti-Yankeeism."

Conceivably a universal anti-American movement might develop a hot war similar to the anti-Hitler coalition of the 1930's. If that precedent is followed, however, the defeat of the United States would be followed by a period of fragmentation similar to or even more intense than the fragmentation of the 1950's and 1960's.

Present efforts to shore up the insolvent U.S.A. economy and the resulting opposition of America's leading European trading partners is not reassuring. If western civilization has passed the zenith of its development and entered a period of decline and fragmentation even a figure of Napoleonic capacities would be sorely pressed to breathe new life into its disintegrating social structure. At the moment, to the best of our knowledge, no such genius is in sight.

Western civilization is in some ways unique. In the main, however, the development of its life cycle has been typical. May we take it for granted that western civilization has turned its corner or may we assume that it is still replete with the possibilities of further maneuver, development and expansion? Perhaps the best way to approach the problem would be to ask three questions: What contribution has western civilization made to human nature, to human society and to mother nature, and what further contribution can it make in the foreseeable future?

Individuals, born or reared in any form of society are adjusted, shaped and conditioned by the social pattern of which they are a part. Each society attempts to stamp the individuals with its own image and likeness. The success or failure of this effort to assure individual adjustment to the social norm and conformity to its practices varies with the prosilitizing enthusiasm of the society and with the ration of adaptability and self-consciousness of its individual members.

Western civilization has produced a bourgeois human being intensively conscious of his capacities and anxious to try himself out in the rough-and-tumble of the market place and on the battlefield; to initiate, undertake, direct, administer. In the main, these are characteristics of the human male, though the female often possesses them in a greater or lesser degree.

Western civilization has opened the doors wide to aspirants eager to win out in the game of grab-and-keep. It has been equally kind to their chief executives, organizers and managers who rank second or third in the chain of command. These individuals come from widely different backgrounds. The social mobility of a bourgeois society gives them opportunity to climb high on the ladder of preferment.

Many of those who fall into line, adapt themselves to the civilizing process, accept with alacrity the chances that come their way, but do not reach the top of the success ladder. They have the health, energy and assertiveness necessary to keep climbing. They accept their assignments and carry them out with modest success. They are the lesser executives who work themselves out by the time they are fifty and find some sinecure or safe position near the top of the social pyramid.

Below the high command posts there is a wide range of handymen and specialists who fill particular positions and place their time, energy, experience and expertise at the disposal of the high command. Among them are scientists, engineers, technicians. Equally important are their spokesmen, advisers and apologists: lawyers, preachers, teachers, writers, speakers, publicists, carefully chosen for their ability to apologize, passify, justify and reassure. On the political side are the diplomats and politicians. Protection for their persons and property is provided by the police and the armed forces, composed of highly paid, well-trained, well-armed destroyers and killers.

Social stability and mass support come from an extensive middle class composed of public servants and body servants, small tradesmen, self-employed craftsmen, rentiers and retired persons who are assured body comforts, social recognition and preferment for themselves, their relatives and dependants. Members of this middle class are recognized on occasion, pampered, amused, diverted, bored, frustrated and eventually corrupted by the soft living which their middle class status makes possible.

Close to the middle class come the white collar workers and the better paid blue collar workers. Their lives are cluttered with gadgets and fringe benefits. Their homes are paid for or bought on credit.

Below these more or less regularly employed workers on salaries and wages come the semi-employed, racial or class underlings living in poverty at or near the subsistence level.

Associated with this range of bourgeois occupations and often closely identified with it are owners of family farms, tenants and hired hands.

Outside of the employment range, but dependent upon the economy are the defectives and delinquents, the parasites who live on cake and the parasites who live out of garbage cans.

Beyond these categories, in the American Empire, there are the colonial compradors and handymen who enjoy standards of living comparable to their opposite members in the North America nucleus. Below them are the colonial masses who live their entire lives under conditions of uncertainty and insecurity.

Millions of young people across the planet, born into the complicated and bewildering social network of western civilization after war's end in 1945 and graduated from school after the onset of the Vietnam War in 1965, find themselves in a complex, frustrating jungle. Should they fit in or drop out? Those who are more conventional and adaptable fit in as best they can, although the recent high unemployment rate among the youth indicates that the adjustment is often difficult. Millions of the less adaptable drop out.

Such a situation could have been foreseen by the initiated. Preparations could have been made in advance to deal with it when it arose. In the absence of adequate preparation the result is the chaos incident to every downturn of the private enterprise business cycle, magnified in this case by the regressive forces released during the disintegration of the entire social fabric.

Two other areas require a word of comment. Among human faculties are ambition, imagination, ingenuity, inventiveness, creativity. Human beings are, to a greater or lesser degree, cosmically aware. In the physical field western civilization handsomely rewards initiative. In the social field it has been far less generous. Imagination and cosmic consciousness have been quite generally listed among the undesirable endowments of mankind.

Western civilization, in the early years of the present century, produced a generation of insecure, unsettled, anxious, worried, harried people. This is generally true of young, middle aged and old, of rich and poor. Rapid social transition from expansion and advance to contraction and retreat is a traumatic, hectic experience for any human being.

Western civilization in the early years of its decline has not brought out the more generous aspects of human nature. In the best of times a materialistically oriented society appeals to the more material and less spiritual aspects of human beings. A period of social decline leads away from principled conduct toward unashamed opportunism.

The current generation, born and reared in a disintegrating civilization has been sorely tested and tried. From such tests the strong and purposeful are likely to emerge stronger and more determined. For the weak and vacillating the consequences are likely to prove disastrous. The individual born into western society during its current "time of troubles" has not had an easy row to hoe.

What has western civilization done to human society as such?

Western civilization has urbanized its society. Until recently in Europe and until very recently in North America, the majority of people were living outside of cities, in villages or on the land. From their flocks and herds or from their cultivated land they fed themselves and the cities. Mechanization reduced the demand for labor power in the countryside. At the same time the growth of industry, trade, commerce and "services" increased the demand for labor power in the cities. Relatively the countryside was poor while the cities were rich. The high prizes were in the cities, bright lights, crowds and the seductive excitements of seething mass life. Incessant human contacts were part and parcel of city life. City landlords collected high rents, city merchants found many customers. City manufacturers could pick and choose their wage and salary underlings among throngs of young and not so young jobseekers.

Western civilization grew in and around its cities. Both in form and function it was urban rather than rural.

Western civilization specialized its society, mechanized it and later computerized it, making social relationships depend less and less on personality and more on the position of the individual in a working team or on an assembly line. Human beings ceased to have names. Instead they acquired numbers on the payroll, on their homes, on their identity cards.

Specialization and division of labor, plus power-driven machines increase productivity, income, surplus. In the countryside goods and services often are scarce. In the city they are likely to be super-abundant.

Growth of wealth and income provide support for an increase in population. Hence the population explosions in cities and in centers of developing industry, trade and commerce. Countries passing through the industrial revolution expanded their populations. Recently, the population of some countries has doubled each twenty-five years.

Western civilization has been militarized as it was mechanized. Every tool is a potential weapon. The truck becomes a tank, the airplane a bomber. War making, like other aspects of western civilization, was mechanized. Formerly war had pitted man against man. Mechanized war pitted machines and their attendants against other machines and their human attachments. The same mechanical forces that built cities, factories and ships converted these agencies of production into instruments of destruction. Each country in the civilized West fortified its frontiers, trained officers in special schools, mobilized young men and women for military service, stockpiled weapons, multiplied fire-power, making western civilization an armed camp, with guns pointing in every direction.

Regimentation of city life, of industry and commerce, of war, of education and public health followed one after another as the individual human became more and more a cog in a vast social mechanism. This regimentation dulled imagination at the same time that it deified greed, with "gimme, gimme;" "more, more;" as its watch words.

At certain points in its development western civilization has lifted itself temporarily above the material forces that hemmed in the life of primitive man. The Renaissance was one such period. The Enlightenment was another. A third was the scientific breakthrough from Darwin and Marx to the research and experiments which split the atom and inaugurated the space age. These gains were offset by the growing planet-wide chasm between wealth and poverty, the plunder and pollution of man's natural and social environment and the terrifying growth of destructive power revealed during two prolonged general wars in one generation.

Mechanized war demonstrated its destructivity, physically, socially, psychologically. Prolonged war accustomed an entire generation of mankind to unnecessary suffering and the deliberate twisting, maiming and destroying which are characteristic features of the war-waging civilized state.

Exposure of an entire generation to wholesale destruction and mass murder as a way of life had two quite divergent effects. It converted sensitive introverts into pacifists. It produced millions of trained destroyers and killers, experienced in the science and art of mechanized warfare. Pacifists opposed, denounced and resisted the warfare state and its progeny. Masses of trained destroyers and killers, the "new barbarians," gained experience and improved their qualifications by taking part in conventional warfare and in the innumerable guerrilla adventures and operations that accompanied and followed conventional wars.

Previous civilizations have been harried, hectored and undermined by migrating "barbarians" who had heard of accumulated wealth and had come to share or perhaps to take over the "honey-pot" and lick up the honey. Western civilization has faced the problem of migration, intensified by population explosion. But the "barbarians" who are tearing the social body of western civilization limb from limb are not outsiders, invading a civilization in order to plunder and sack it, but the offspring of well-to-do civilized affluent communities who have repudiated the acquisition and accumulation of material goods and services, turning, instead to the satiation of body hungers and the freedom of social irresponsibility.

Western man has spent ten centuries in building a civilization aimed at economic stability and social security for the privileged. The "new barbarian" progeny have rejected this civilization of affluence and are busily engaged in fragmenting the social apparatus that has made affluence possible. In a word, western civilization has organized and coordinated, but in the process it has sowed the seeds of disorganization and chaos.

One last word about the effect of western civilization on human society. The West has littered and cluttered the planet with an immense variety and with enormous quantities of gimmicks and gadgets from tin cans to airplanes that fly faster than sound, and rockets that carry their occupants to the moon. Western productivity has multiplied greatly. Too often it has by-passed utility, ignored quality and outraged beauty. More often than not its goods, services, institutions, practices and ideas have remained at the surface without reaching down to life's essentials.

If life can be fragmented into "physical," "mental," "emotional," "energetic," "spiritual," and "creative" it must be evident that the western way has smothered life's more significant aspects under a blanket of trivialities, non-essentials and inconsequentials.

Western civilization has stressed competition, aimed at the acquisition and accumulation of material goods and services. The competitive struggle, in its civilian and military aspects, has played fast and loose with the contents of nature's storehouse.

Through uncounted ages Mother Nature has set up a knife-edge balance among the multitude of aspects and differentiated forms that have existed and still exist on the planet. Humanity has increasingly upset this balance of nature, ignorantly and often stupidly, without pausing to determine the resultant changes. Nowhere is this upset more in evidence than the changes in climate and animal life and their possibilities of survival brought about by the erosion of topsoil. Paul Sears, in his _Deserts on the March_, has told the story. It can be summed up in four words: deforestation, overgrazing, erosion, drifting sands.

Another aspect of man's aggressions against nature is the wanton destruction of wildlife--like the American bison and the wood pigeon.

Still another example is the extraction from the earth's crust of minerals and metals accumulated through ages and used to turn out frivolous gadgets or, more disastrously, the materials and machines of civilized warfare. Instead of conserving natural wealth, rationing it and thus extending its use to succeeding generations, western man has burnt it up in the firestorms deliberately kindled during the seven disaster years from 1939 to 1945.

In the course of its existence western civilization has replaced food gatherers, cultivators and artisans by hucksters and professional destroyers of mankind and ravagers of the living space afforded by the earth's land mass.

Western civilization has done its most far-reaching disservice to mankind by separating and estranging man from nature. For ages man lived with nature as one aspect of an evolving ecological balance. Civilization's basic unit--the city--as it sprawls, cuts off man from more and more contacts with the earth and its multitudinous life forms; with fresh air, sunshine, starshine; with nature's sequences--day and night, the procession of the seasons; with the birth, growth, death animating so many of nature's aspects. The city is man-made. Well planned, properly built and organized, it might have become an ornament beautifying and exalting nature. Page the cities of the West one by one--they are monotonous, ungainly, ugly slums and rookeries set off by an occasional bit of creative architecture.

Western civilization has differed in certain respects from the long line of its predecessors, stretching back through the centuries. In one sense it has matured, ripened, taking its ideas and practices from its nearest of kin. In the course of its life cycle it has already made distinctive contributions:

1. It has become more nearly planet-wide than any of its known forerunners.

2. It has developed unique approaches and controls through its science and its technology, inaugurating the power age by making riotous use of nature's energy sources.

3. It has extended man's conquest of the planet and begun his adventures into space.

4. It has enlarged the field of human creativity by increasing the number and proportion of men and women trained and experienced in productive and creative enterprises.

5. It has opened the door to study and experimentation in extrasensory perception--man's "sixth" sense.

6. It has made possible an unprecedented increase in the human population of the planet.

7. It has raised its potential for destruction far above and beyond its potential for production and construction.

8. It has brought together, classified and indexed the ideas, materials, techniques and generalizations which made possible this study of civilization, its appearances, disappearances and reappearances.

9. Europeans have carried the burdens of western civilization and inherited its disintegrative consequences for so long a period that the fate of western civilization and the fate of present day Europe are closely interwoven. Western civilization seems to have reached and passed the zenith of its lifecycle without achieving the political integration, the stability or the unified authority attained by the Romans and the Egyptians at the high points in their lifecycles.

CHAPTER FIVE

FEATURES COMMON TO CIVILIZATIONS

Each civilization that has left legible records or significant traditions during the past five or six thousand years has made distinctive contributions that modified the culture pattern of its predecessors and its contemporaries. At the same time all of the civilizations have had certain common features that are the characteristic aspects which justify the general definition of civilization presented in the Introduction to this study.

Civilization is the most comprehensive, extensive and inclusive life pattern achieved by terrestrial humanity. Starting locally and following the three basic principles of urbanization, expansion and exploitation, each civilization has charted a course that led from tentative local beginnings through a cycle of growth, maturity, decline, decay and dissolution.

The civilizing process is essentially collective, subordinating the interests of each part to the interests of the whole, while allowing sufficient home rule to enable each part to have the political, economic and cultural advantages enjoyed by the other parts, always excepting the privileged position occupied by the civilization's dominant empire and its nucleus.

Necessarily a civilization is composed of more or less disparate segments, each one (before its inclusion in the collective whole) maintaining a large measure of sovereign independence. Utilizing advanced techniques of communication, exchange, and transportation, the separate sovereign units are coordinated, consolidated, unified and universalized. The result is an aggregate of parts, differing in many local respects, but acknowledging the authority of the power center and contributing material goods and manpower to its support and defense. The main sociological purpose of each civilization has been to impose central authority and universality upon political, economic and ideological diversity.

Every civilization has been confronted with the advantages of unity over diversity. Every civilization has professed its devotion to unity. Every civilization at one or another stage in its development has subordinated unity to the increasingly insistent demands of diversity.

For at least six thousand years one civilization after another has sought to achieve centralization and universality. In every instance of which history provides a legible record, centralized, universalized institutions and practices have fragmented into diversity and stubborn localism.

Western civilization is part and parcel of this generalization. Generation by generation and century by century it has professed and proclaimed the advantages of universality while it yielded to the persistent demands of nationalism, regionalism and localism. Throughout the latter years of the nineteenth century the will to unify gained much ground. The tide turned with the turn of the century. For the first half of the present century the forces of unity and of diversity seemed stalemated. War's end in 1945 saw the shadow of a universal state flicker across the screen of history. With the adjournment of the Bandung Conference in 1955 the shadow dissolved and was replaced by the strident nationalisms that have become an outstanding feature of planetary politics, economics and social organization.

Despite the insistence of reason and experience that strength and stability are the result of unity,--tradition, custom and habit have held human society at the level of political, economic and ideological diversity. Nowhere in history is this generalization more emphatic than in the failure of the European standard-bearers of western civilization to replace a millennium of diversity, discord and conflict by a unified, coordinated, co-existing, cooperating European community.

At its best a civilization is insecure and even unstable, disturbed and upset by an increasing domestic struggle for preferment and power that includes rivalry, competition, revolt, rebellion, civil war and wars of self-determination carried on by unassimilated regional, provincial and colonial elements. From beyond their frontiers civilizations have been assailed by rival aspirants for power, by armed bands in search of plunder or by migrating peoples seeking greener pastures. All of these forces have held the ground for diversity and barred the way to universality.

Another factor of great consequence leading to the instability of civilizations has been the concentration of wealth, power, privilege, comfort and security in the hands of a minority, in sharp contrast with poverty and insecurity among the less well-placed majority. Generally, the privileged minority has been relatively small and the exploited majority overwhelmingly large.

Still another disturbing factor in each civilization is the transformation of its military arm from a means of defense against external enemies into a major factor in the direction of domestic affairs. The professional military build-up has frequently usurped the state power and became king-maker by virtue of its monopoly of weapons, organization, and its highly trained personnel of professional destroyers and killers.

Upset by one or another of these disturbing and disruptive forces, civilized populations have panicked and retreated from their collectiveness toward more localized, more fragmented, less social and more individual life patterns. Such a retreat rounds out the later phases of a cycle of civilization--the phases of decline and final dissolution.

Civilizations perish in the first instance because of internal contradictions and conflicts, the struggle to grab, monopolize, and keep wealth, status, power.

They perish because of the division of the nucleus and its associates and dependencies between those who work for a living, those who have an unearned income and those parasites who scrounge for a living. They perish because of the hard class and caste lines that grow out of economic contradictions; because of the development of a social pyramid, layer above layer, until the summit is reached where there is standing room for only a few. Competent, talented persons may rise from level to level in this pyramid. A political and social bureaucracy develops which feeds at the public trough. Then comes a bitter struggle to get both feet in the trough and keep them there side by side with an equally determined effort to exclude outsiders and other intruders. An army of volunteers and novices is converted into a military establishment which becomes a state within the state, extending its control until it makes policy, selects top leaderships and carries on its internal feuds and wars of succession dividing the defense forces and using them for partisan purposes. Overhead costs rise; deficits in the public treasury grow; so does public debt. Inflation follows, and the debasement of the currency. Levies are made on private wealth for public purposes. There is expropriation of the property of political enemies. Espionage, secret agents, the growth of informers become part of the society, along with the use of assassination as a political weapon, the increase of violence and crime, and eventually, a flight from the cities.

This tragic enumeration only skims the surface of the many and various aspects of a situation that reaches its breaking point in civil war, famine, pestilence and eventually in depopulation.

Social dissolution is accelerated by provincial revolts against central authority; by survival struggle between the empires which were coordinated and consolidated into the civilization; by revolt in the subordinate and dependent segments of the civilization; by rivalry and conflict between racial, cultural and political sub-groups forced into the civilization, held there by coercion, policed by armed force and taking the first opportunity to win political independence and self determination.

While the momentum for expansion lasted, the civilization grew in wealth and power. When it waned, disintegration set in. Changelessness seems to be impossible in a social group. A civilization either expands or withers, builds up or falls to pieces.

Starting from one or more local groups, each civilization has reached out "to conquer the world", occupy it, organize it, dominate it, exploit it, perpetuate itself. In each case expansion, occupation, domination and exploitation are limited by human capacity (human nature); by the relative brevity of a single human life; by the extreme variations in the capacity of successive leaders. It is limited by geography; by the means of transportation and communication; by overhead costs that increase geometrically as the civilization expands arithmetically; by the means of delegating responsibility; by accounting devices, available raw materials and labor power; by power struggles inside the ruling oligarchies; by the failure to maintain a balance between centerism and localism; by growing local demands for self-determination; by the invasion of nomads seeking to plunder the tempting honey pot at the nucleus of the civilization.

Such limitations are political, economic and sociological. Psychological forces are also at work. The vigor and vitality of the early builders gradually spends itself. The will to austerity and the sense of loyalty and social responsibility are diffused and diluted. Bureaucracy degenerates into a rat race. The paralysis of parasitism replaces the will to power. Physical gratification gains priority over the service of the gods. Consistently, through its entire written history, civilization has been built upon what the civil law of all nations calls "robbery with violence". In every instance when the robbers have grabbed everything in sight, and gorged to the point of physical satiety, they fall to quarreling among themselves or turn with boredom and disgust from the whole sodden mess of discord, disorder and degeneration.

Each step, from the establishment of an urban nucleus of expansion, through the building of rival empires to the final struggle for supreme power, involves the violent subordination of lesser interests to the interests of one supreme authority. Violence takes precedence over persuasion and negotiation. In each case the final appeal is to armed combat using the most sophisticated weapons available.

During the "time of troubles" which overtakes each civilization, war and the threat of war become normal aspects of domestic and international relations. A specialized war-making bureaucracy is organized; war plans are made; war games (rehearsals) are

carried on, and wars are fought as a means of determining which nation or combination of nations shall have access to raw materials and markets, dominate the trade routes, control the weaker peoples, own and exploit the colonies.

To the victor, war is the means of extending national or imperial frontiers and legalizing expansion at the expense of the vanquished. Defeat in war leads to the imposition of indemnities, the payment of tribute, the transfer of territory to the victor and in extreme cases the extermination of the defeated nations or empires.

Settlements imposed by violence and policed by victors lead to resentment, antagonism, hatred and the build-up of a desire for revenge, including the restoration to the vanquished of lost territories. The logical outcome of such a situation is preparation for a war of independence by the vanquished, countered by military occupation, rigid suppression, and exploitation by the victors in the previous struggle.

War is taken for granted as an instrument of policy. It is employed by civilized nations and empires as a means of expansion. Wars of independence and restitution follow conquest, dismemberment and annexation. Civilized nations and empires prepare for war and wage war as a normal aspect of civilized life.

Civilization, and in particular western civilization, is a time-bomb, built to detonate and scatter its fragments far and wide. It is a type of booby trap in which humanity has been caught periodically and horribly mangled. Without exception, each civilization has contained the forces and equipment needed for its own annihilation. At no time reported by history has this formulation been more obvious than during the decades immediately following war's end in 1945. Destructivity was lifted to new levels of efficiency by electronic communication, the tank and the airplane. It was further escalated by atomic fission and nuclear fusion. Advances in science and technology had made dramatic increases in the tempo of production and construction. Utilization of atomic energy had stepped up destructivity to the nth power.

Based on assumptions that oft-repeated experience has proved to be false and misleading, civilization in the 1970's is unstable and insecure. Most civilizations are strangled in their cradles or plundered and demolished in the course of the never-ending political, economic and military conflicts which have marked and marred civilizations since the dawn of history. The national and imperial survivors of these struggles in every known instance have been largely or wholly led by military adventurers and plunderers in search of booty, fame and power. With professional plunderers, destroyers and murderers occupying the seats of power, it is only a question of time and occasion before rising overhead costs and the misfortunes of war result in their overthrow and replacement by better organized, better armed invaders who slaughter and enslave their predecessors and usurp and abuse their power. Of necessity, civilizations are self-destructive, built as they are on the ebb and flow of power struggle.

Successive conflicts involve an indefinite volume of overhead costs, which grow with the intensity and extent of the expansive survival struggle, creating a series of crises along a path that leads to self-destruction and the return of the experimenters to a condition of pre-civilized self-containment.

We in the West, looking back on our own immediate history, refer to this pre-civilized status as the Dark Ages. Actually, such Dark Ages are the transition stages between two periods of experiments with the building of civilizations. In view of this oft-repeated experience, modern man must look upon an epoch of civilization not as a way of life, but an adventure of suicidal self-degradation and ultimate self-destruction.

Each cycle of civilization has had its peculiarities, determined by the geographical and historical factors surrounding its origin and development. Yet all have had features in common. Among the common features we would list:

1. A revolutionary movement within the societies under consideration. In each experiment with civilization the culture pattern was transformed from pastoral and/or agricultural to a culture based on trade, commerce and finance; from rural to urban; from simple to complex; from local toward universal.

2. In each case an independent, self-directing, expanding state was built around an urban center.

3. In each experiment a simple, local, social structure was extended, expanded, specialized, sub-divided, integrated, consolidated.

4. In each experiment a relatively static society passed into the control of an emerging class of peddlers, merchants, traders, speculators, business enterprisers and professionals who were not directly involved in the conversion of nature's gifts into goods and services ready for human use, but in political and cultural practices which enabled the emerging bourgeois class to stabilize and extend its wealth and power and build an economic structure that augmented unearned income and laid the foundation for

predation, exploitation and parasitism.

5. In each experiment an amateur apparatus for defense and/or aggression matured into a professional military means for enlarging the geographical area and strengthening the economic and political authority of the new trading-ruling classes. In each empire and each civilization there was an evolution of "defense" forces from voluntary to professional status, from subordinate to dominant status, from participation in public life to political supremacy over all aspects of public life.

6. In each experiment massed labor power (slave, serf, or wage-earner) was assembled, organized and trained to build roads, bridges, aqueducts, housing facilities and eventually to operate agriculture, construction, industry, trade and commerce, public utilities and other services in the interests of an oligarchy.

7. In each experiment a capital city (and associated cities) became the nucleus for accumulating wealth, constructing public buildings, providing means of transportation and sources from which raw materials could be secured for city maintenance and for the provision of sanitary facilities, means of recreation and diversion.

8. In each experiment there was a competitive struggle between rival communities, each passing through the rural-urban transformation. The result was an increasing conflict for survival, for expansion and for local supremacy.

9. Each experiment expanded along lines that led the more successful to build traditional empires consisting of wealth-power centers and peripheries of associates and dependents.

10. Each experiment produced a competitive survival struggle between rival empires that would determine eventual supremacy.

11. In each experiment one among the local and regional contestants defeated, conquered, dismembered, assimilated or destroyed its rivals and emerged as victor, giving its name to a civilization: Egyptian, Babylonian, Persian, Roman.

12. In each experiment the victims of imperial aggression, conquest, exploitation and assimilation, conspired, united, resisted and revolted against the dominant power. The result was endemic civil war.

13. Within each experiment, as the civilization matured, the same confrontations appeared at the nuclear center and in the provincial-colonial periphery:

a. Extremes of riches side by side with slum-dwelling poverty.

b. Expanding unearned income, with one class (the propertied and privileged) owning for a living and another class (peasants, artisans, serfs, slaves) working for a living.

c. Intensified exploitation of mass labor side by side with the proliferation of parasitism throughout the body social, consisting of individuals and social sub-groups whose contribution in the form of goods produced and services rendered was less than the cost of maintaining the participants.

d. Economic stagnation. Public spending in excess of public income; higher levies and taxes to replenish the empty treasury; rising prices due to excess of demand over supply; public borrowing with no means for repayment; the issue of money without corresponding reserves; degradation of currency through decrease of its metal content; unemployment among citizens due chiefly to increase in forced labor of war captives and other slaves; public insolvency due to territorial over-expansion; excessive overhead costs; nepotism, bribery, corruption in public service; an over-large bureaucracy feeding at the public trough.

e. Revolution in the nuclear center and fierce suppression. Provincial revolt. Revolt in the colonies. Endemic civil war.

f. Migration toward the central honey-pot; invasion by rivals and adventurers seeking to control it, plunder it and guzzle its contents.

g. Dissolution of the society; boredom; ennui; loss of purpose and direction; growing dissension; power struggle and avoidance of responsibility for trends that were little understood and generally beyond the control of existing officialdom.

Histories of individual nations and empires and histories of civilizations and civilization assemble and present a great body of factual information which support and substantiate this factual summary. The present study aims to organize the facts, to compare them and to draw conclusions as to the benefits and detriments; the practicality or futility; the wisdom or folly of building empires and merging them into civilizations.

These conclusions are based on several thousand years of experiment and experience with the civilized life pattern. Time after time, in age after age, human beings by the millions have poured faith, hope and unbounded energy, devotion and dedication into the upbuilding of the urban nuclei of successive civilizations. Details have varied. Ultimate conclusions have been the same. One civilization after another has passed into the limbo of history leaving, sometimes, splendid ruins as a testimonial to its evident inadequacy to meet the survival needs of oncoming generations.

Such conclusions, based on history, are underlined by current experience with the over-ballyhooed, over-priced variant of the life pattern which signs itself western civilization. Dating from the Crusades a thousand years ago, western civilization has been promoted, built up and carried forward by the blood, sweat and tears of credulous, hopeful, eager human beings. Its promises have been wonderful; its performance, especially since 1900, has been pitifully inadequate, superficial and unsatisfying.

Part II

A Social Analysis of Civilization

CHAPTER SIX

THE POLITICS OF CIVILIZATION

Several thousand years ago humankind began experimenting with the life style which we are now calling civilization. Presumably it was not thought out and blueprinted in advance but worked out by trial and error, episode by episode, step by step--perhaps, also, leap by leap.

Historical and contemporary experiments with this lifestyle supply a fund of valuable information, some of which has been covered in the earlier chapters of this book. Our next task is to analyze and classify this information under four headings: the politics, the economics, the sociology and the ideology of civilization. (When the information is properly arranged, we can do something with it and about it.)

Politics is the part of social science and engineering which is concerned with the organization, direction and administration of human communities. We use the word to cover the conduct of public affairs in any social group more extensive than a family. Hence we refer to village politics, town politics, national politics, international politics and, in the present instance, to the politics of civilization as a way of life.

Each sample, referred to in our examination of typical civilizations, was built around a center, nucleus or homeland consisting of one or more cities with their adjacent hinterlands. The nucleus of the developing civilization was also the nucleus of an empire. Each nucleus was a center of planned production; accumulating wealth, growing population and expanding authority. Certain locations are better suited than others to provide the essentials of a civilization nucleus.

The first requirement for a nucleus is a tolerable climate, primarily a satisfactory balance between heat and cold. Before the general use of fire as a source of warmth human populations were concentrated at or near the tropics. With the increasing use of artificial heating and lighting human beings were able to cluster farther and farther away from concentrated equatorial sunlight.

The second requirement of such a location is a strategic position in a crossroads, in a network of transportation and communication.

The third requirement is a readily available source of the food and building materials necessary to feed, house, and clothe a community and provide it with some of the niceties of daily living.

The fourth requirement is the presence of sufficient man-power to operate the nucleus and provide a surplus for defense and for its extension and expansion.

The fifth requirement is defensibility against aggression or invasion.

The sixth essential is the availability of sufficient raw materials to meet the requirements of the nucleus, provide the exports needed to maintain a favorable trade balance for the nucleus and permit of its expansion, advancement and enrichment.

Seventh, and in some ways, the most important requirement for the establishing of an empire or a civilization nucleus, is the presence of a will to live, a will to grow, a will to advance, competence in management, and a dogged persistence that will remain constant through generations or centuries of adversity, and still more demanding, through long periods of security, comfort and affluence.

Eighth, and by no means least important, is the capacity to fight and win the aggressive trade and military wars incidental to the defense and expansion of the nucleus, of the empire, and eventually of the civilization.

The ninth requirement is tolerance, receptivity to new ideas and practices, the capacity to adapt and to assimilate the outside elements which are constantly incorporated into the growing, expanding empire or the civilization.

Finally, as we read the history and observe the development of nuclei, empires and civilizations, we are impressed by the role of outstanding individuals who occupy positions of responsibility over sufficiently long periods or with sufficient intensity to leave a lasting impression on the ideas, practices and institutions of their times. This requirement covers the practice of effective leadership.

Our concern, at this point, lies primarily with the first eight of these requirements for survival and success in building up empires and civilizations.

Empires and civilizations are established during periods of social expansion when the up-building and out-going urges are widely felt. The surge produces not a single center of growth and expansion but dozens or scores of competitors, each aiming to win and keep a position well in advance of its rivals. The resulting up-surge and free-for-all, which usually lasts for centuries, is a characteristic and recurring feature in the political life of every civilization.

This statement is less a requirement for success in organizing the nucleus of a civilization, than a generalization about the natural and social milieu out of which competing nuclei arise. Success of one among the many competitors is a characteristic feature of the struggle for nuclear survival, development and perhaps for eventual supremacy.

From earliest times waterways have provided the readiest means of getting about. All that was needed was a hollow log, a raft, a primitive canoe. Movement by land was impeded by mountains, deserts, forests, swamps, water courses. Movement by water was a natural.

More and bigger boats required shelter against storms and protection against destruction by enemies. A good harbor with an adjacent walled town or city was the answer to this need.

Good harbors and navigable waterways are notably absent along the west coast of South America and notably present in the Eastern Mediterranean. Consequently, the South American West Coast line is sparsely settled to this day, while the Eastern Mediterranean has been crowded with peoples, teemed with trade and commerce, carried largely by sea, between cities that occupied the best access to waterways.

Safe harbors and navigable waterways made trade and transport easy and cheap. As each wave of human advance turned from animal husbandry and agriculture to bourgeois practices of industry, commerce and finance, locations at strategic points along trade routes were first occupied by occasional markets and fairs and eventually by trading towns and cities. Geography was a decisive factor.

Fertility was equally important. In the early stages of social development transportation was difficult, dangerous and expensive. Sources of food and building materials were found within a short distance of the growing trade center. Again geography played a decisive role. A deep, sheltered harbor backed by a desert could not attract and support a thriving trade center. Food and raw materials are indispensable to concentrations of human beings.

The Nile Valley, like that of the Ganges and the Yellow River, provided the fertility and transport, the food and raw materials that have sustained concentrated human populations for many thousands of years, forming part of the base for Egyptian, Indian and Chinese civilizations. Animal husbandry and grain farming, coupled with fishing and forestry, made possible the growth of cities and laid the foundations for the nuclei of these civilizations.

Temples, tombs and other public constructs provided the centers around which Egyptian civilization was built. The stone, wood and other raw materials used in the building of these unique examples of human handiwork were floated up and down the Nile from

their sources of origin. Annual Nile floods provided silt deposits necessary to fertilize farms and gardens. Nile water, impounded during floods, irrigated the land during the long dry seasons. Banked by deserts, the Nile was a ribbon of fertility running through a largely uninhabited wilderness. The upper reaches of the Nile lay in the mountains of Central Africa. The Nile delta, built up through ages by silt deposits, provided a meeting place where African, European and Asian traders could exchange their wares and lay the foundations for the civilization of lower Egypt. The Nile also provided the means of communication which connected Lower Egypt with Upper Egypt and led, finally, to the unification of the two areas in a long enduring and prestigious Egyptian civilization. Once again geography was laying down the guide lines within which civilizations have been built up and liquidated.

Thus far we have noted the role of physiographic factors that have led to building the nuclei of empires and civilizations. They have been parallelled by social factors as men took advantage of natural opportunities to concentrate, feed and house ever larger human aggregates.

Empires and civilizations have been built up by comparatively large numbers of human beings concentrated in relatively small spaces. Wandering food gatherers and herdsmen ranged widely in search of game and grass. Cultivators settled in villages from which they could work the land. If crops were scanty, population was sparse. Only abundant crops, dependable, season after season, provided the basis for large settled populations.

Large, settled populations, adequately supplied with the essentials of life, enabled human beings to organize social centers in which a comparatively few people, tending their animals and working the land, could release a comparatively large part of the population to devote its time and energy to trade and commerce, to industry and transport, to the arts and sciences and to the organization, direction and administration of large scale enterprises such as government, the military, construction and the mobilization of sufficient labor power to carry on and enlarge their enterprises. In its simplest essence this was politics.

Egyptian government, in its broad sense, rested on a class structured society: the aristocracy, the priesthood, officialdom, businessmen, highly trained scientists and engineers, skilled craftsmen and an immense proletariat consisting of tenant farmers, peons, slaves and war captives.

At the top of the political structure was an absolute monarch who wielded power that was limited only by the ambition, tolerance and loyalty of his associates--nobles, priests, soldiers, businessmen and political advisers, and by the willingness of the rural and urban masses to work and fight for their overlords. A number of the monarchs (Pharaohs) ruled for long periods--up to sixty years. It was during these long reigns that the Egyptian Kingdom was organized, strengthened and unified, the rule of the monarch was safeguarded; ambitious nobles were placated or destroyed; and the leadership succession was determined and assured.

The nucleus of the Egyptian Empire was a dictatorship by a self-perpetuated elite, headed by lords spiritual and temporal. Both groups held land, accumulated wealth and exercised authority. It was a government combining the theory of absolutism with the practice of public responsibility. It was sufficiently arbitrary to get things done. It was sufficiently inclusive to recognize and utilize special ability. It was sufficiently structured to carry on from dynasty to dynasty. It was sufficiently flexible to consolidate scattered communities into the Old Kingdom, to unite Lower and Upper Egypt, to extend its authority into Central Africa, the Near and Middle East and parts of Eastern Europe, thus laying the foundations for history's most extensive and long-lasting civilization during the period 3500 to 500 B.C.

I have used the Egyptian example of nucleus organization because of the phenomenal successes achieved by the Egyptians in maintaining an empire for at least 3,000 years. For a considerable part of those thirty centuries Egypt was top dog in the strategic area where Africa joins Eurasia.

The nucleus is the hub from which the spokes of empire and of civilization radiate. The radius of authority and the vast stretches of occupied, exploited territory constitute the circumference of the wheel. The nucleus is the center of wealth and power surrounded by a cluster of associates and dependencies. The control, direction and administration of the nucleus is parallelled by the control, direction and administration of the total complex--the empire and/or the civilization.

The development from nucleus to empire and from empire to civilization creates three sets of political problems: those arising from the administration of the nucleus; those arising out of contacts between the nucleus and the circumference, between the associates and dependencies and the nucleus, and those arising out of the determination of the associates and dependencies to sever their connections with the nucleus, win their independence, and take part in the unceasing efforts to establish new nuclei, win the unending power struggle and shift the power center.

Relationship between nucleus and periphery are the normal outcome of the expansion of a nucleus into an empire. Each growing urban center reaches out for an extension of its territory; for the food and raw materials required by a growing population; for markets that can absorb the goods and services exported by the urban center to pay for its necessary imports of food and raw materials.

Politically speaking, the essential problem is to maintain a relationship that will keep the imports coming in and keep the exports going out. Imports may take the form of plunder seized by the strong in contacts and conflicts with weaker neighbors; tribute paid by the weak to the strong at the insistence of the strong, or trade in which each side gains something. Empire building involves all three methods.

In virtually all instances the nucleus is richer and stronger; the periphery is poorer and weaker. In virtually all instances these relative positions have been the outcome of military operations in which each party has tried to impose its will upon its rivals. In each case the spoils went to the victor, who forced defeated rivals to cede territory, to pay tribute, to give hostages or in some other fashion to agree upon a settlement that left the victor richer and stronger and the vanquished poorer and weaker.

Politically speaking, the relation of nucleus to periphery was that of superior to inferior. Where the discrepancy was very great it resulted in a relation of master and vassal or even master and slave.

An empire or a civilization, consisting of a wealth-power center and a periphery of associated and dependent territories and peoples, led to a living-standard differential in favor of the center. It also involved the establishment of a political apparatus strong enough to perpetuate the relationship by collecting tribute and taxes from the weak and depositing them in the treasure chests of the strong. The outcome was a civil bureaucracy backed by a military or police strong enough to defend and perpetuate an unpalatable superior-inferior position.

Once established, both the civilian bureaucracy and the military apparatus tended to maintain themselves, to extend their privileges and strengthen their positions. Since controversial issues, domestic and foreign, are generally decided by force or the threat of force, the military became the strong right arm of authority.

These confrontations and contradictions created three sets of political problems: centralism versus localism; established central authority versus provincial rights and self-determination; the concentration or centralization of authority in the hands of a select few civilian and/or military leaders, responsible to the central authority, who made on the spot decisions and took action.

Under the institutions and practices of civilized society, the select few were in a position to call in the military which was organized for emergency action and was constantly standing-by. The military was trained, disciplined and held a monopoly of weapons.

Civilizations frequently begin as commonwealths or federations forged in the course of survival struggle. In any such struggle the military will of necessity play a major role. As the competitive survival struggle develops, one of the contending parties establishes its superiority by winning military victory. In the course of this struggle the commonwealth, a cluster of equals, yields place to the pattern of empire--a center of wealth and authority with its associates, subordinates and dependencies.

The strong right arm of politics includes man-power, money and weapons. The politics of civilization faces a simple mandate: establish, stabilize and perpetuate a nucleus of wealth and authority; build around the nucleus a periphery of associates and dependencies.

Historically, the process was a long one extending through generations and probably centuries. Throughout the struggle individuals must have the necessities of daily life. Community activities must be housed, equipped, staffed, supported.

Pastoral and village life were based on a use economy. People produced what they needed and consumed their own products. Each tribe, family, village was a more or less self-sufficient unit. When they were threatened or invaded people defended themselves as best they could. At worst they abandoned their homes to the invaders and fled into the forests, mountains or deserts.

Towns and cities, with their industries, trade, commerce, their permanent housing and capital equipment faced a radically different situation. Since they could not carry their wealth on their backs they must stay put and defend themselves or face irreparable losses. Defense required careful, extensive, expensive preparations: walls, equipment, stored food, personnel. Unless the city was sacked and burned during survival struggles it remained as a vantage point to be held at all costs. If surrendered and occupied by assailants, it was equally valuable to invaders who were prepared to settle down, take advantage of the site, the capital equipment

and exploit the available manpower.

Whether occupied by friend or enemy, towns and cities were centers of actual or potential wealth and power. They were also consumers of goods and services many of which could not be home-produced. Food must come from herdsmen or farmers. Building materials must come from forests or mines. Such raw materials, the essentials of daily life, must be brought into urban centers when and as wanted.

Food and raw materials could be secured occasionally by plunder. A regular supply depended on trade and commerce, or on tribute levied and collected periodically from associated or dependent peoples. In the long run trade and commerce proved to be more reliable and more productive than plunder.

As urban centers grew and developed, they established regular channels of trade and communication, by land and water. Along these channels needed imports moved into the urban centers and exports in exchange moved from the urban centers into the back country or the provinces. At every stage in the process care must be taken to prevent intervention by thieves, robbers or envious rivals. Two devices were used to meet this situation: money to facilitate exchange and a defense organization to deal with intruders.

Money and its uses developed money changers, money lenders and banks. Bankers and banks exchanged currency at a profit and extended credit.

Weapons in the hands of trained personnel evolved into locally employed police and centrally organized armed services, performing police functions and fighting wars, domestic and foreign.

Politics, local, regional or national, developed with the growth of population, the profits of expanding urban life, production, technology. As its scope broadened geographically city survival depended increasingly on wealth and power (money and weapons).

During periods of peace and stability the civil authorities controlled public affairs. In emergencies, such as natural disasters, invasion, civil or international wars, the military authorities took command.

Military authority is an institutional feature of every civilization. In periods of public danger it enjoys complete ascendancy. Like civil authority, the military is a permanent and frequently the dominant feature of each civilization. It is assured of ample income and entrusted with the installations and implements of war making. Both in income and in prestige the military holds a preferred position.

Since military functions center about destroying the person and property of the "enemy"--domestic or foreign--public funds are made available or are pre-empted by the military during periods of martial law. As a civilization becomes more complex and extensive, the funds at the disposal of the military tend to increase. The same factors of extent and complexity lead to larger and larger numbers of confrontations and conflicts in which the military is called upon to play the leading role. Increasingly, therefore, the military is at the center of policy making. Finally a point is reached at which war, civil, colonial or international is always in progress somewhere within the territories occupied by the civilization. At such periods civil law slumbers and military authority is more or less dominant and permanent.

Under the slogan "defense of civilization," military necessity and military adventurism shape public policy, empty the public treasury, bankrupt and eventually destroy the superstructure of a civilization.

The nucleus which lies at the heart of an empire or a civilization has a political life cycle that runs from the unstructured or little structured aggregation of confederation or self-determining local groups to a highly centralized political absolutism holding and exercising its authority by the use of the military. The steps in this process have been clearly marked in earlier civilizations. They are playing a decisive role in the day-to-day life of western civilization. They extend from early forms of government under leaders selected or elected by popular acclaim or at least by popular consent, to more or less permanent leadership enjoying many political privileges, including the selection of its successors.

Under the pressure of social emergency, engendered within the social group or imposed from outside the group by migration, intrusion or invasion, leadership takes the measures which it considers necessary to preserve and/or extend its authority. Each emergency offers leadership an opportunity or an excuse to by-pass custom and/or law, overlook whatever public opinion may exist and proceed to the measures needed to meet the emergency. In each organized social group the exercise of authority has provided the leadership with a near-monopoly of money and weapons in the hands of a permanent military elite. The use of this

elite to deal with the emergency is accepted by civil authority as a matter of course.

When social division of function has produced and armed a military elite, leadership turns to this elite in any emergency arising from natural disaster or social crisis. The outcome is a community directed by a military arm seeking to perpetuate and enlarge its own role in the determination and exercise of public authority, using any means which seems likely to produce the desired results.

Politically, therefore, any expanding empire or civilization reaches a point at which absolute monarchy, exercising unquestioned authority, makes and enforces public policy by the use of the military or with its help.

Many commentators write as though the essence of civilization was its art galleries, concert halls, its universities and its libraries. Such agencies are the trappings, decorations and fringes of a civilization. There is no justification for such a selective approach. The strong right-arm of every civilization has been its wealth (money) and its martial equipment (its guns).

Success in politics has been described as the art of selecting the possible and bringing it to fruition. Every community is more or less fragmented by deviations, contradictions, confrontations and conflicts. These fragmentations begin in the personality and extend through the entire social structure--from the individual, through the family, such voluntary associations as the sports club, the trade union, the merchants' association, the educational system, the political party, the municipal or the national government.

Unrestrained and undirected social fragmentation leads to conflict, destruction, perhaps to chaos. Success in politics rests on an understanding of the chaos and its causes and an integration of conflicting forces behind specific programs and around charismatic personalities.

One aspect of the problem is especially disturbing and baffling to the uninitiated. Compared with the brief adulthood of an individual the life span of communities is immensely long. The individual is at his or her best for a few years or decades. Communities and their institutions endure for hundreds and in some cases for thousands of years. Under the most favorable conditions an individual can hope to play a part in community affairs for a decade or two. Before he comes on the stage of public affairs and after he leaves it, social life stretches indefinitely.

Politics is one aspect of that more or less extensive social experience. Its immediate objective is to bring order out of chaos and replace randomness by purpose and if possible by plan.

In the wake of the bourgeois revolution, which was directed particularly against monarchy and generally against absolutism, the most obvious and attractive social pattern was a republic, ruled by the citizens in a manner which in their opinion was best calculated to promote their safety and happiness.

Under a republican government public affairs would be openly and freely discussed by the citizens at a time or place of their choice by word of mouth, through a free press or in public gatherings. At stated intervals elections would be held at which all citizens of proper age would select representatives and a legislature or parliament where questions of public concern could be debated and appropriate measures adopted. Implementation or execution of these measures would be placed in the hands of executive officers responsible to the parliament. As a safeguard against any miscarriage of the public will, the right of petition was guaranteed. In some instances the right of referendum and recall was provided. To obviate any miscarriage of justice, provision was made for courts, responsible to the citizenry, as an independent arm of government competent to protect and assert popular rights.

Overall, citizens of the republic, through duly elected representatives, would draw up and proclaim a constitution containing a general plan of the governmental machinery. When adopted by the legislature or parliament this constitution became the law of the land. Governmental activities were carried out and laws were enacted in conformity with constitutional provisions. In practice the citizens of the freest republic were face to face with one of the oldest political dilemmas confronting mankind: the question of leadership and followership.

In almost any social situation, from trivial to grave and critical, some one woman or man volunteers advice and often initiates action. If no one approves, the initiative falls flat. If there is a chorus of approval, the crowd follows the lead of its spokesman. If some approve while others disapprove or remain silent, a show of hands is in order. If there are real differences in the group, some taking one side, some another side with no chance of common action, the group may divide into several factions, some remaining in the assemblage, others departing, with their spokesmen leading the way.

In such confrontations there are many determining factors, the experience and wisdom of the leadership; the urgency of the subject under discussion; the depth of the separation between opposing factions; the experience of the citizenry and their willingness to

compromise on divisive issues; the willingness of the factionalists to abide by a majority decision.

Experienced leadership, which has enjoyed a period of public approval long enough to build up not only a group of devoted followers, but a group of place-men and office-holders who owe their positions to the leader, can assemble a bureaucratic or political machine, adopt measures and take the steps necessary to keep its chosen leader in a life job, with the possibility of naming a successor.

Republics have adopted various measures to prevent the establishment of a self-perpetuating dynasty, by limiting public office-holding to a stated number of years; by providing that the office holder may not succeed himself. Political leaders may avoid such provisions by staying in the background, having their closest associates elected to office, and when their term is ended, secure the selection of other associates upon whose personal fidelity they can rely.

All such measures require that the leader keep the favor of a considerable number of his constituents. To avoid this often difficult or disagreeable task the leader and his close associates may persuade their constituency to by-pass both constitution and parliament, enlist the support of the military, seize power and establish an arbitrary dictatorship of admirals and generals or establish a committee of military leaders who will pick out civilian office holders willing to follow the political line laid down by the military leaders.

As republics gain in wealth, increase their power and broaden their geographical base by bringing outside peoples under their sway, their dependence upon military means of resolving public controversies becomes greater. This is particularly true where outsiders brought under the republic's authority have mature political institutions including their own leaders and their own ways of dealing with public relations.

Given such a situation, the control by the republic over the policy-making apparatus of dependencies is likely to have been established by force of arms. In such a case it is only a matter of time and occasion when the dependency will demand the right of self-determination and be prepared to fight for independence of "foreign tyrants, oppressors and exploiters."

Minor inexpensive military operations for the suppression of colonial revolt which are quickly and successfully ended may add to the stature of empire-building leaders. But major operations, long continued, expensive and inconclusive, will undermine the prestige and weaken the position of the most firmly seated imperialist. The Boer War against the British and the wars waged by the Koreans and the Vietnamese against a series of occupiers and exploiters are excellent examples of the operation of this principle.

As empire building proceeds under its inescapable expansionist drive, a point will be reached at which the overhead costs of maintaining the empire will exceed the income. As that point is approached in one after another of the empires comprising the civilization, the central authority will be successfully challenged by the dependent, colonial periphery. Ordinarily, such challenges will coincide with the inter-imperial wars which have periodically disrupted every civilization known to history. When such a coincidence does occur, as it did in western civilization from 1914 to 1945, the bell is likely to toll loudly for the civilization in question.

Measures usually adopted to prevent such a catastrophe--martial law, military dictatorship, self-perpetuating monarchy, divine authority, are more than likely to heap fuel on the flames of rebellion and lead into a social revolution.

An unstructured social group operating under the competitive principle "Let him take who has the power" tends to develop into absolutism. At any stage in the history of a civilization this development can take place.

Civilization, therefore, comes into being with this built-in contradiction: the strong and predatory exploit the weak, but at a certain point protect the weak and nurture the defenseless. Exploitation by the rich and powerful is recognized and accepted as a prerogative enjoyed by the rich and powerful. At the same time limitations are placed on the character and intensity of the exploitation.

This dichotomy is perpetuated by agreements, laws and constitutions which guarantee the property rights and social privileges by which the rich and powerful safeguard and increase their wealth and power. Under the same agreements, laws and constitutions, the privileges and rights of the defenseless and weak, are specified.

Political institutions in every civilization, including that of the West, have accepted and adopted a regulatory structure under which limits are imposed on profiteering. The domestic life of a civilization consists of an establishment within which exploitation can continue in a manner which the constitution makers and legislators consider to be as efficient as possible and as fair as possible to

all of the parties concerned.

As a civilization matures, wealth and power (the means of exploitation) are increased in volume and concentrated in fewer hands. The resulting absolutism with its immense structure of wealth production and its well-organized military arm, imposes conformity to its decrees, servility, peonage and even slavery on the working masses. The masses, in their turn, organize, agitate, demonstrate, strike, sabotage, and periodically take up, arms in defense of their lives and their livelihood.

We are describing certain political aspects of a process of social selection which has dominated one civilization after another. At the present moment it has reached a critical stage in the West. We apply the term "social selection" to the result of this process because there is a parallel between the natural selection of the biologists and the social selection which sociologists observe in the rapid and extensive changes presently taking place in the centers of western civilization.

Natural selection is a process in the course of which many compete and contend while only a few survive and mature.

Social selection is a similar knock-down and drag-out struggle in which peoples, nations, empires and civilizations take part. Many enter the contest but only a few live to write their story in the long and complex history of civilizations.

At the outset of such a contest, the European-Asian-African cradle of the coming western culture contained numerous political fragments--kingdoms, principalities, cities, city states, inert peasant masses, migrating tribes--struggling locally and regionally for a place in the sun, or for additional territory and extended authority. These struggles reached the military level in local wars, regional wars, general wars. In the course of this survival struggle, the weakest and least effective contestants were defeated, dismembered and gobbled up by their stronger and more efficient opponents.

Local struggles--in the Near and Middle East, in North Africa, in eastern, central and western Europe--were trial heats in the course of which many contestants were eliminated, while the survivors continued the process of city, nation and empire building at higher and broader levels. It was only after five hundred years of such conflicts that the outlines of western civilization took definite political form:--a group of battle-hardened contestants, centered in Europe, heavily armed and equipped, intent on protecting and enlarging their home territory and extending their authority over dependencies and colonies in various parts of the planet.

This survival struggle continued for another three hundred years, down to the beginning of the present century, reaching its highest level of intensity between 1914 and 1945, with contestants from all of the continents taking an active part. In this present round the contestants are nations and empires, organized in ever-changing alliances. Some of the contestants are old, scarred and battle weary. Others are young and vigorous, recent entrants in the planet-wide contest for pelf, possessions and power.

During the later years of the struggle, after war's end in 1945, erstwhile dependencies and colonies of the disintegrating European empires declared their independence, joined the United Nations as sovereign states and played active parts in the battle for survival.

African development typifies the process during the later phases of western civilization. When voyaging and discovery became a leading activity of European nations around 1450 A.D. northern Africa was directly involved, but the bulk of the continent--Equatorial Africa--remained almost entirely untouched. After 1870 the pattern was dramatically altered as British, French, Spanish, Portuguese, German and Italian forces moved inland, staking out their claims.

Division of Africa among the great powers reached its culmination when this process was completed, about 1910, when the whole vast continent of Africa excepting Ethiopia, Egypt and South Africa had been parcelled out among the rival European empires. In terms of geography and population, Africa was still African. Politically it was pre-empted, occupied, dominated and exploited by European empire builders, who used the over, all trade name of western civilization.

Excessive costs of empire building, including the disastrous losses of military struggle from 1914 to 1945, impoverished and weakened the European overlords to such an extent that they could no longer maintain their footholds in Africa. At the same time African minorities in various parts of the continent launched independence movements under the slogan of self-determination, drove out the European occupiers, organized political states and declared that Africa must be governed by and for Africans.

Much of Africa, at the time, was organized along tribal lines, which cut across the boundaries drawn by the European imperialists between their colonial territories. The resulting chaos temporarily removed Africa from any meaningful role in the planet-wide contest for pelf and power. Africans are politically sovereign. Economically and culturally they remain dependent on their former European masters.

Politically, western civilization is in a state of flux. Its European homeland is basically divided by potent fears, ambitions, feuds and conflicts, and separated geographically from North America and Asia. Despite several attempts to unify the continent politically, Europe was disrupted, fragmented and weakened by two general wars in a single generation. The European empires were politically and economically upset by widespread colonial revolt in Asia and Africa. Spectacular achievements of socialism-communism, particularly in East Europe and Asia, added to the previous fragmentation a new line of division between capitalist West Europe and socialist East Europe. This process of fragmentation is giving separatist forces ascendancy over the forces of integration and unification.

In Roman and Egyptian civilizations, the period of survival conflict led to the centralization of wealth and authority. After five centuries of suicidal competitive struggle, the European homeland of western civilization is criss-crossed by sharp lines of division. Furthermore, the shift of production and military power from Europe to North America and Asia reduces the probability of speedy European integration.

In the more important centers of western civilization the chief item of public expenditure is preparation for a war of air, water and land machines that may extend technologically into a nuclear war. While we have no precedent that would enable us to gauge the consequences of an extensive nuclear war it seems reasonable to assume that it would further fragment an already fragmented European continent.

The heavy burdens of militarism which western civilization is presently carrying, have unbalanced budgets, which lead to inflation and to onerous burdens of debt and taxes. It seems unlikely that a group of warfare states like the top western European powers can escape the economic contraction which presently threatens them and regain solvency and stability through fiscal reforms or readjustments in tariffs and trade.

Our analysis of the politics of civilization may be summarized in four general statements:

1. Each civilization has consisted of a cluster of empires, nations and peoples which at some previous period have enjoyed independence and sovereignty.

2. Relations between these erstwhile sovereign units have been determined by a shifting mixture of diplomacy and armed force, with war playing a determining role in the process.

3. In the course of survival struggle, political leadership within the civilization has shifted back and forth as one group has succeeded in establishing and maintaining its authority over the entire civilization.

4. A general axiom of the politics of civilization might read:

At the conclusion of each war among civilized peoples the victors are entitled to make the following declaration: We operate under the Law of the Jungle: "Let him take who has the power and let him keep who can." We have the power. We have grabbed the real and personal property of our neighbors and we propose to keep it. Our friends are welcome to attend our Feast of Victory. Let our enemies beware.

CHAPTER SEVEN

THE ECONOMICS OF CIVILIZATION

Politics involves the exercise of authority--the policy making, planning, control, direction and administration of a community. Economic forces provide the wealth, income and livelihood--the wherewithal upon which a community depends for its physical existence, its survival, its geographical extension, the continuance of its life cycle.

There is no sharp line separating economics from politics. While the two fields are different in character and scope, they are so interrelated and interwoven that any successful attempt to separate them would leave the inquirer with two segments of a lifeless social cadaver. In the course of this exposition it will become increasingly evident, as the political and economic lines cross and re-cross, that the two fields are inseparable parts of a total body social.

One civilization after another has begun with a predominantly rural economy that has become increasingly urban as it matured. Food gathering, pastoral life and small scale agriculture were rural. Trade, commerce, manufacturing and finance, concentrated populations, increased division of labor, specialization, inter-communication and interdependence produced the trade center, the

commercial metropolis and the general purpose city.

Herdsmen and land workers, dependent on grass and rainfall, lived close to the subsistence margin and were at the mercy of forces they could not control. Traders and money changers, with an eye for business in a growing marketplace made a more ample living. At the same time the more successful among them accumulated capital which they loaned or invested in stocks of goods, shops, warehouses, caravans, ships. By hiring labor-power they multiplied their own limited physical capacities. By investing in varied enterprises they assured themselves against possible loss in any one of them. They also multiplied the possibilities of profit.

Trade, finance and commerce, by producing a regular flow of abundant income, brought into existence a new field of occupations and a new class--business and the businessmen. Herdsmen and farmers depended for their livelihood on nature, her niggardliness or generosity. The businessmen required only the presence of a group large enough to purchase goods and services, pay rent and interest, work for wages and leave the profits to the enterpriser. Each profit beyond the subsistence level enabled the businessmen to expand, buying more goods, hiring more labor, making still greater profits.

Communities of businessmen pooled their profits, extended their markets, built fleets, enlarged cities. Through joint action they engaged in plundering expeditions and collected tribute from their victims. Organized fabrication turned out the goods and services which were marketed for profits. The resulting wealth enabled the successful businessmen to build houses, stock them with consumer goods and art treasures, hire servants, live sumptuously. Productivity, wealth, prosperity filled their honey pot to overflowing.

Honey pots provide the "good things" of life for their owners. They also tempt outsiders. Honey-pot owners fear pilfering by their servants; fear sponging by their relatives, friends, neighbors; fear robbers and kidnappers; fear migrating hordes on the lookout for plunder. Defense is a necessary aspect of each rich household, neighborhood, city, nation, empire, civilization.

The sequence from productivity, through prosperity, wealth accumulation, abundance and the measures needed to defend and safeguard the accumulations, leads to an affluent community or society. It also calls into being new and distinctive class forces.

I. The business class (hucksters and profiteers), a self-seeking, aggressive group of adventurers, promoters and organizers of bourgeois society to whom _profit_ comes first. At one or another stage in the life cycle of every civilization aggressive bourgeois greed for wealth and power makes itself felt. Their role in western civilization has been outstanding. The business class through its control of the productive apparatus and the sources of credit has been able to surround itself with subordinates, scientists and other experts, apologists, strong-arm squads (police and military), spies and assassins.

II. A middle class, made up of business class subordinates plus self employed tradesmen, professionals, independent farmers and craftsmen.

III. A class of blue collared and white collared producers of goods and services who hold their jobs during good behavior. When not needed or wanted they are pushed into the ranks of the partially or wholly unemployed. Most civilizations have added to the working force serfs, peons and/or chattel slaves.

IV. A class of hangers on--economic parasites--who consume more than they produce. The payment of unearned income to property holders and the creation of monopolies enables this class to live on rent, interest and profit in proportion to their ownership. As parasitism increases and multiplies it proves to be a dead weight which eventually drags down any economy that tolerates it.

V. A class of dependents, defectives and delinquents, supported by society but contributing little or nothing to its maintenance or its advancement.

Every civilization has maintained a greater or lesser degree of mobility between the classes. Mobility makes it possible for those with greater ability and energy to leave the countryside, settle near the market-place and climb the ladder of success. It has also made it possible for policy makers to dump those whose services are no longer needed or wanted by the ruling oligarchy.

Among the driving economic forces in a civilization are hunger, fear, greed, ambition. In practice these forces have proved far more effective than whips and clubs in the hand of slave drivers. They animate the rat-race for pelf, power, "success", which attracts idealism, energy, ability and throws out the carcases of those no longer able to make a contribution to the wealth and power of the oligarchy and its establishment.

Hunters, herdsmen, cultivators, craftsmen, mariners, miners perform services that maintain the solvency of any economy in which they play a leading role. Fast talkers, adventurers, promoters, manipulators, gamblers add little or nothing to the income of the communities in which they operate. Often, however, as gargantuan consumers, they play an important role in building up the deficits which finally wreck an economy.

Accumulations of wealth in market centers tempts the ambitious and the adventurous to enter the rat-race and grab more than their pro-rata share of the honey. The most obvious way to do this is to secure possession of the honey pot.

Far away, in the tribal past of a civilization, lay a period of scarcity in which the members of the community shared the scarce income or starved. As the tribal wealth increased, the leaders, their families and retainers got more than a fair share of the available goods, services, preferment, privileges. At a very early stage the "ants" stored away what they could spare, while the "grasshoppers" had a "good time". Investing their stored wealth in land or productive enterprises the "ants" added unearned income to their normal earnings from productive labor.

Because the "ants" held the wealth of the community they were able to exercise authority and determine community policy. One result of their decisions was the creation of titles to land and stored wealth. A second result was the institution of property-custom and later of property-law under which those who owned property enjoyed special privileges which gave them still larger shares of the community wealth and income.

Wealth ownership and the exercise of authority, concentrated in one person or family, created a basic division in the community between those whose livelihood depended on their labor and those whose income was determined by their ownership of property and their exercise of authority. In the course of time this development divided the community into a property-owning, governing minority which was wealthy, and a property-poor majority whose livelihood depended upon the willingness of the property holding minority to use their land and productive implements in operations that turned out goods and services.

Property ownership and income were protected by law. Labor income depended on the bargaining power of the property-less majority. Property income yielded wealth to the property owners. Labor income, under the pressure of competition in the labor market, yielded only subsistence. Thus the community was divided into owners and workers. The owners controlled and spent or invested the income. The workers were provided with the necessaries and a few crumbs of comfort.

Private property and property law supported by state power institutionalized a basic division in every civilization. One segment of a civilized community enjoyed wealth and power; other segments produced goods and performed services. The owners were rich; the producers were poor. Riches side by side with poverty are characteristic features of a civilized society.

Exploitation has been the economic backbone of every civilization from earliest times to the present day. Each civilization has exploited and used up its natural resources. In every civilization individuals, groups, classes and sometimes castes have exploited or used up fellow humans and fellow creatures to suit their own purposes and advance their own interests.

Abraham Lincoln gave a classical definition of human exploitation in a simple sentence: "It is the principal that says you work and toil and earn bread and I will eat it."

Exploitation of nature and of fellow beings by man began long before written history. During periods of civilization, and notably in present-day civilization, exploitation has determined social relationships. It has also become one of the pillars of every civilized community.

Civilized peoples use up natural resources as a matter of course. The more advanced technically have stripped their environments of replaceable and irreplaceable resources. They have also perfected techniques for using the productive power of their fellow creatures. One way to do this is by owning the body. Another way is ownership of land, capital and consumer goods which enable the owner to live without labor on the products resulting from the labor of others.

Owners of property and wealth receive an income because they are owners. They may be very young or very old, able-bodied or helpless. Their livelihood comes to them not because of anything they do, but because of the property titles which they own.

The owner of land may collect rent. The owner of capital may collect interest. The owner of an enterprise may collect profits. Each lives by owning.

Workers produce goods and services. They are paid an income proportioned to their production.

Owners of land, capital and consumer goods are paid incomes proportioned to their ownership.

Workers work for a living. Owners live by ownership, chiefly of land and the implements of production.

Owners of property frequently are rich. Workers, by comparison, are poor. The line separating owners from workers also separates riches from poverty.

Income from services rendered, from work, is earned income. Income from property ownership, by contrast, is unearned income.

The relation between earned and unearned income is not confined to one generation. Under laws passed by the owners and their retainers the owners of private property may give or bequeath this property to their descendants. In the course of time a community is divided between workers who are poor and owners who are rich. Since the rich need not work in order to live, they and those associated with them may live on the unearned income derived from property ownership. In a word, they may become parasitic.

Parasitism may lead to social decay. Generation after generation, the owners and their dependants may live in comfort or even in luxury while those who work and their dependents may lack simple necessities. This is the confrontation of riches and poverty which has played so large a role in every civilization.

Through the ages, in one civilization after another, the glaring contrast between riches and poverty has appeared, dividing the community and laying the foundation for class struggle and class war, both of which decrease social efficiency, intensify class antagonism.

In the early stages of any culture cycle, barter is replaced by a money economy. Money is a medium of exchange, usually issued by a public authority and used in daily transactions, to pay tribute or taxes and to meet other general expenses. In its earlier forms it is made of relatively scarce materials that are in general demand, limited in supply and easily divisible into smaller units. Gold, silver and other metals meet these requirements and have been used as money through the ages.

Cash money and promises to pay speed up wholesale and retail exchanges in the market place. They fill the bill in normal times. But there are emergencies and other exceptions. One of the commonest of the emergencies is war.

In a previous chapter we pointed out that war is a characteristic feature of a civilization that has passed the top-point of its expansion and begun to decline. Then the chickens come home to roost. Civil war, colonial wars and wars between imperial rivals follow each other, creating emergencies in which demand for certain strategic goods and services rises steeply, with no corresponding increase in supply. Prices increase. The common defense requires immediate purchase of supplies. The public treasury is exhausted. The government borrows from money lenders (bankers). It also prints paper money and puts it in circulation.

If the credit of the government is good, if the emergency is of short duration, matters right themselves and the economy survives without serious derangements. But war-emergency disrupts and sometimes destroys an economy. This outcome often results from military defeat.

Another exception to normal economic transactions is buying on credit--buying today and paying tomorrow. The temporary gap between purchase and payment is filled by credit--a promise of the purchaser to pay later and the confidence of the seller that the bill will be paid. Such credit transactions are covered by notes, bonds and mortgages made out by the buyer and accepted by the seller. Until the debt is settled, the borrower pays the seller interest at an agreed rate. Bankers enter the picture, providing capital and collecting interest on their loans.

Where credit is abundant and relatively cheap, borrowers spend beyond their incomes, hoping to pay later when the loan falls due. Borrowing and over-spending are among human frailties. They are also forms of risk-taking or gambling. Who knows whether the banker who promises to pay on demand will be alive and doing business next week when his promise to pay is presented for settlement? When the promise to pay is issued by a government which decides the value of currency, and accepted by that government as payment for taxes and other obligations, it is more readily acceptable than paper issued and guaranteed by an individual money lender or banker.

Each civilization has had a background of simple use economy--food gathering, animal husbandry, agriculture--in which most of the people produced what they needed and consumed what they produced. Such an economy employs money rarely.

In a money economy those who have cash use it to pay their bills or settle their accounts.

Those who buy on credit pay interest to money lenders. The money lenders, later the bankers, make their profits by helping others to spend beyond their own means. The money-lender also accepted loans from others, promising to pay them back at a later date, and giving the lender a piece of paper, specifying the amount of the loan. The paper promise to pay became a bank-note, passed from hand to hand. It had no intrinsic value, but as the money lender promised to pay cash for the note on demand, it was accepted in payment of debts or for the purchase of commodities.

When a shirt-maker turns out a product and exchanges it for a pair of shoes made by a shoemaker there are no overhead costs. Each producer adds to his wardrobe an item that makes his life more satisfactory.

Examples of simple barter are seldom found in market economies. Civilized society assembles quantities and varieties of goods and services in the market place, invites consumers to choose among the wares and provides money to make transactions quick and easy. Civilized society supplements money with credit on the principle: buy and use today; pay tomorrow. Civilization goes beyond these bare essentials of merchandizing by furnishing transportation and communication, making long term loans at interest, writing insurance, developing the techniques of accounting and management. Customers who visit the market have basic human needs--the necessities of life. Beyond these necessaries, there are conveniences, comforts, luxuries. The markets of civilization cover the entire range of human needs and human wants from necessaries to luxuries.

Civilized merchandizers take two other steps aimed to activate consumption. They develop new lines of merchandise that will have more customer appeal, leading to new wants. They also advertise new wares that will create new wants, bring back old customers and attract new ones.

For the foot-weary customer who has shopped away his energy and enthusiasm for buying more and more, a civilized marketplace furnishes food and shelter, recreation, entertainment and culture--beer, libraries, concert halls and circuses as well as food, clothing and shelter.

These multiple functions of a civilized economy are part and parcel of the changes which have converted the simple barter deal of exchanging a pair of shoes for a shirt into a specialized, civilized market place. They also cause civilized economies to devote far more time and money to marketing goods and services than they spend in their manufacture. In a broad sense, these supplementary costs are "overhead."

Shirt makers and shoemakers convert raw materials and partly finished goods into shirts and shoes. Operating costs of manufacture are minimal in a civilized economy. The major items that go into the final price of the product are overhead costs.

Current accounting practices include in overhead: taxes, interest, insurance and general items. Actually the price of goods and services in a civilized economy includes minimal charges for raw materials and labor and maximum charges for overhead.

There is another phase of overhead which pyramids with each advance in the extent and complexity of a civilization--taxes to cover the costs of government. As the civilization expands and specializes, governmental services multiply. The number of government workers grows in proportion and often out of proportion to the total production costs. Expenses of government rise and with them the corresponding need to increase taxes.

Overhead costs in the village or small town are low. Much of the "public service" is done by citizens who volunteer their time and energy. In the centers of civilization public service is a profession, often well paid and usually quite permanent.

Expansion is a basic feature in the life of every civilization. Expansion increases overhead costs. When American Indians made their silent way through the forests or roamed the plains there was no overhead. Each provided his own means of locomotion. With roads came bridges. With roads and bridges came capital costs. As dirt roads gave way to macadam and macadam to asphalt and concrete, as country roads, winding over hill and through dale were replaced by graded superhighways cut straight through or built over all obstacles, the cost per mile rose fantastically. All of these added costs appeared somewhere in the tax bills which citizens were required to pay.

In any enterprise overhead costs rise in direct proportion to the extent and complexity of the social order. As they rise, they increase the prices of the goods and services which citizens (or consumers) must pay for their livelihood. A good illustration of this principle is the price of an identical acre of land: in the remote countryside; on an improved highway; in the suburbs of a growing city and at the city center.

Increasing wealth brings greater risks. Wealthy cities like wealthy individuals and families must pay for their protection against robbery and piracy; against extortion and expropriation. Among important business enterprises insurance ranks high. The costs and profits of insurance are suggested by elaborate insurance company buildings and the high salaries paid to their officials.

Insurance, usually a private overhead, comes high. Public insurance: maintenance of law and order, crime and punishment, the secret and open police, the armed forces, (land and sea and air) are vastly more expensive. If, to these limited costs of overhead are added the costs of militarism as a public enterprise and the ruinous costs of military adventurism and its inevitable wars, the mounting costs lead to insolvency and eventual economic and social ruin.

Another overhead cost which plays havoc with civilized nations and peoples is the support of a bureaucracy. Increased extent and complexity exhaust the community capacity for voluntary service and lead into an era where the volunteers who carried on the limited public activities of a village are supplemented and eventually replaced by a constantly growing body of public servants. Growing extent and complexity plus the need for finding safe places for those who are useful to the rich and powerful, widens and deepens the public crib. In large enterprises, private as well as public, paper work employs a small army, which must be fed and housed at a level worthy of "a great nation." Business machines reduce the personnel necessary for a given social enterprise, but their high capital and operational costs increase overhead.

Another aspect of overhead costs is the multiplication of parasitic professions. In simple villages, there are few body servants, no able-bodied individuals who fetch and carry at the word of command, or who only stand and wait for the moment when some whim, fancy or real need may call for their services.

Village life, with its limited area and still more limited resources, has little economic surplus upon which parasitism can feed. There is landlordism, of course, but the margin of surplus is small. The city, the province, the nation, the empire present a different picture. Parasitic professions abound and proliferate: money changers, money lenders, realtors, confidence men, gamblers, fortune tellers, priests, entertainers, artists, thieves, robbers, and prostitutes abound, consume more than their share of the community income, without making an equivalent return in production or service. Their support adds to the social overhead.

Another source of social overhead are the numerous followers of the "something for nothing" cult who receive unearned income--an income derived from civilization in its mature and its final stages.

Broadly there are two types of income--earned income and unearned income. Earned income is something for something--or return for goods provided or service rendered. Unearned income is something for nothing--an income derived from some monopoly, privilege, sinecure or form of property ownership.

Property in persons or things has been a characteristic feature of all civilizations. Property owners, receiving rents, interest, dividends, in proportion to the amount of property which they own are not called upon to make equivalent return in exchange for their property--based income. This personal parasitism of property owners is aggravated by provisions of property law under which the owners of property can give, sell or bequeath these sources of unearned income to family members, friends, associates.

Eventually, unearned income, handed on through generations, creates a class or even a caste of citizens who live without rendering an equivalent of services, on the labor of their fellows, adding a significant amount to the total of overhead costs.

Wealth ownership, the exercise of power, living in luxury on unearned income, add to overhead costs, but are accepted as respectable in civilized communities. Another and far less respectable form of social parasitism is the manipulation of social forces in a way that will bring the operator more than a fair share of social income with no equivalent in service. Such is "politics" or "politicising." "Politics" as a source of livelihood takes many forms, some less legitimate than others.

The most usual source of office-holding is the humble work of the clerk, handyman or messenger, responsible for carrying out the nagging routine of government. Beyond this common labor of public service are public servants skilled in their several professions. Beyond and above them are department heads and still higher are the appointed or elected officials responsible for the success or failure of a given public policy.

Who are the occupants of town, city, state, and national positions of authority and responsibility? Preferably they are elected or appointed because of their popularity or are the successful product of civil service examinations. At worst they are appointed as a return for favors or else because they are relatives or friends of successful politicians or their backers.

Whatever its source and however efficient or inefficient its performance, the body of paid public servants increases with the expanding life of locality, region, province, state, nation and empire. With its growth goes corresponding accommodations in wages and salaries, office space and equipment and other routine outlays. Frequently the increase of the emoluments of bureaucrats, especially at the higher levels of authority and responsibility, creates sinecures which are filled by parasites or by individuals who are engaged in shoring up the bureaucracy rather than rendering a public service. The outlays necessary to finance such a top-heavy bureaucratic fabric grow in direct proportion to the age and rigidity of the bureaucracy, draining off public funds into private coffers and adding uncompensated elements to overhead costs. If inflation is a problem, at or beyond the apex of an imperial epoch or cycle of civilization, financial costs rise correspondingly.

The chief overhead cost in every civilization is and has been war. Examine the budget of the United States or any other leading civilized power. From two-thirds to three-quarters of central government outlays are for war in the past and preparation for war in the future.

The net result of rising overhead costs appears in the history of all previous civilizations. They are eating out the vitals of western civilization while we write and read these words.

CHAPTER EIGHT

THE SOCIOLOGY OF CIVILIZATION

Sociology is the science and art of association.

Human associations range from kinship groups like the family, tribe and clan to larger more complex groups like villages, towns, cities, nations, empires, to still more inclusive leagues, federations and civilizations.

In a broad view, sociology includes politics, economics and ideology. For the purposes of our social analysis, we have divided the field into four separate categories, beginning with politics, continuing through economics and drawing our study together under the general headings of sociology and ideology.

No civilization that we have studied can be regarded as an intentional or projected or planned enterprise. On the contrary, civilizations have developed and matured in true pragmatic fashion, taking one step after another because their predecessors had followed this course or because, given the human urges and the available natural and social opportunities, the next step seemed to be determined by previous steps plus the momentum of the enterprise. In the course of this development an ideology was built up and modified in such a way as to justify and strengthen the entire project.

When William Penn received a grant of land from the English Crown, he was already committed, ideologically, by the Quaker faith to Quaker methods. Without ever seeing his proposed home across the Atlantic he drew up a plan for his City of Brotherly Love (Philadelphia), and for the organization and conduct of his enterprise. The entire project was formulated in Penn's mind and put on paper. This is a good example of an intentional community.

No civilization so far as I know, has followed such a sequence. Certainly in the civilizations with which we are most familiar, political and economic forces, the principles of necessity and availability have led to the formulation of an ideology that would justify and promote the interests of the social group which was controlling and directing the community or communities in which the civilization was maturing.

Perhaps it would be more accurate to say that each of the component elements making up the expanding civilization--each people, city, state, nation, empire--developed its own total culture pattern, subject to the pressures mutually exerted by neighboring communities. The aggregate of these culture patterns, separately and often antagonistically matured, comprised a lesser totality called an empire and a larger totality called a civilization. It is with this larger totality that we are concerned.

We propose to analyse the sociology of civilization under the following headings: (1) the structure or anatomy; (2) the function, physiology, or process; (3) motive forces in civilization; (4) contradictions and conflicts, with a final section on the life cycle of civilization.

The structure of human society consists of specialized economic, political, administrative and cultural groupings assembled and maintained in relationships that supply necessities, conveniences, comforts, luxuries for the individuals, together with capital goods and services for the social groups composing the civilization.

In terms of social history the growth of structure has proceeded from the horde, tribe and clan to the family, village, city, city-state, nation, empire, civilization. These steps are not necessarily sequential. Under varying social conditions they have been determined and modified by particular historical situations. The smallest and most intimate building block of human society has been the family. The largest and most inclusive has been the civilization. The family as a social group has existed for long periods, over wide areas, in immense numbers. Civilizations have been few and often far between. They have arisen out of particular historical situations, played distinctive roles, written their own histories and made varying contributions to the sum total of human culture. In the long time intervals and the wide geographical distances that have separated civilizations human beings have lived within more local and less complex social structures.

Civilized human society is distinctive in structure. While it varies in detail from one civilization to another, its broad outline is unmistakable. Each civilization has been built, defended and perpetuated in and around cities.

Between civilizations, in time and space, most human communities have been self-sufficient. Whether as food gatherers, pastoral people or cultivators of the soil they have produced and consumed the food, shelter, clothing, implements and weaponry required for their survival.

The city, whether a political capital or a center of trade and commerce, was sharply separated from the self-sufficient countryside. The city, by its very nature, could not be self-sufficient. Food, building supplies and raw materials were not produced inside the city limits, but must be produced in the hinterland from which they were transported to the cities. City dwellers devised means of paying for the production, transportation and marketing of these necessary imports. The countryside can and does exist independently of the city because it can provide the goods and services on which its existence depends. The city, on the contrary, cannot exist without the supplies produced in the hinterland and transported to the city.

Urban centers of civilization have for their background a pastoral and agricultural source of food supplemented by fabrication, merchandising and financing. Instead of the occupational uniformity of the countryside, the city offers a wide range of occupations, increased productivity, quick and substantial profits resulting in a build-up of capital on one side and enlarged consumer spending on the other. Consequently the successful competitor in the race for supremacy develops productivity, accumulates wealth, expands capital spending, enlarges the scope of the arts, thereby augmenting the city's attractiveness to business enterprise and migrants from the hinterland.

As the capital city grows in wealth and opportunity it requires larger imports of food, raw materials, building supplies, manpower. Growing internal need leads to greater external expansion. Economic, political, administrative and cultural needs not only increase the demands of the city on its existing hinterland, but they lead to a demand for a more widely extended hinterland.

The countryside is the goose that lays the golden eggs. The city gathers, guards and eventually consumes the eggs or converts them into capital forms and lives in part on this unearned income.

The city is the mecca which attracts by its wide ranging opportunities. It is also the center in which policies are made and offered to the countryside as normal facts of life. The countryside accepts city leadership including a higher wealth-power per capita ratio for the city.

Cities, with their accumulations of population and wealth, are walled or otherwise defended. When danger threatens, countrymen often move inside the walls until the danger abates.

Cities and city life increase and expand with the growth and expansion of civilization. Cities are the centers from which civilization grows and expands. Historically, a number of cities or city-states have competed for survival and supremacy. One by one they have dropped out of the race or have been out-classed, defeated and/or absorbed by the victors in the competitive struggle. One location proved to be more advantageous than others. The inhabitants of one locality were more skillful, more far sighted than those of rival localities. Many competed. Eventually one survived the final round of struggle, emerging as the nucleus of an expanding empire and a maturing civilization. A protracted conflict raging first in Italy and later in the entire Mediterranean basin, resulted in the Roman Empire and eventually in Roman civilization. A similar series of struggles, this time planet-wide, gave the British a taste of planetary supremacy in the nineteenth century and opened the door wide enough to give the United States oligarchy a glimpse of an American Twentieth century, which never eventuated.

Occupational differences within the city led to a differentiated class structure. As the trading city developed, businessmen eventually played a dominant role because they were able to command larger incomes, accumulate more wealth and offer more

aggressive leadership.

Nuclei of both empire and civilization were associated with a cluster of allies, client states, dependencies and colonies related to the center by economic interests and by diplomatic bargains or political controls. They paid tribute or taxes as the price of living within the defense perimeter of the ruling elite, conforming to the chief aspects of its culture and in emergencies taking refuge inside the city defenses.

The city center made and implemented policy and provided local leadership in emergencies. Inhabitants of the city enjoyed a superior status and had a higher standard of consumer-living than most of those who inhabited the countryside and the hinterland.

A structured society based on division of labor and/or function enjoys a competitive superiority over a classless community. The structured city was not only richer than the countryside, but it was in a position to provide leadership, to plan and implement policy and act more effectively.

A civilization consists of a cluster of associated allies, clients, dependencies, and colonies bound together by economic, political and cultural ties. Since armed force has been the chief instrument for bringing these elements together, the agency responsible for exercising armed force enjoys priority in a listing of the structural institutions of civilization.

Land owners, often acting as military chieftains, dominated the hinterland of a civilization. The city was dominated by businessmen. The unification of city and hinterland and the complex of cities and hinterlands composing a civilization established a governmental apparatus in which all ruling elements were represented. In the earlier stages of a civilization there may have been assemblies or parliaments composed of representatives of various interests. As the civilization was unified by war, representation was replaced by some form of monarchy in which one supreme commander, emperor or pharoah was the final judge and arbiter. The monarch set up a network of public authority, regional as well as universal, provincial as well as central, and garrisoned it with professional soldiers and sailors paid by the monarch and responsible to him.

Corresponding with this political structure was an economic structure consisting of a central treasury, a uniform system of weights, measures and values, a system of spending priorities, decided by the central authority, a source of income: taxes, tribute, booty, sufficient to cover expenditures.

A civilization which ran a chronic deficit--over-spending its income--moved year by year, through debt, inflation, currency degradation, and repudiation toward its own disintegration and ultimate bankruptcy. The historical record is very clear on this point, especially in Roman civilization and in western civilization after 1870.

Most civilizations have had a body of religious institutions staffed by a priestcraft, which has shared power with the economic overlords. During certain periods in the long history of Egyptian civilization the priestcraft held the balance of power. So great was its ascendancy that the spoils of war and the gains of peace were shared by the temple treasury and the royal treasury. In some cases the temple treasuries had priority.

All civilizations for at least five thousand years have had a professional military of sufficient consequence to play a leading role in policy making and to claim a lion's share of the spoils of military victory. In some cases civil and military authority were merged in one supreme commander--emperor, pharoah. At other times, notably in Rome, after the fall of the Republic, the Pretorian Guard nominated and appointed its emperors.

Well up toward the summit of each known civilization, four groups have shared authority and competed for supremacy: land-lords, wealth-lords, war-lords and priests. Where these four major shapers of public policy and directors of public administration were of like mind, they shared wealth and power. When they differed, one or another enjoyed priority and exercised some measure of control over the other three.

Less personal, but of major concern among the institutions of civilization were the channels of communication and transportation that have played so decisive a role in the life of every civilization. Top ranking among the means of communication were common language, spoken and written on metal, papyrus, paper; a unified system of accounting and cost keeping; permanent records. Among the means of transport were waterways, including canals, viaducts, roads, bridges skillfully built and kept in good repair.

Another significant institution of civilization is the idea of ownership, the division of property into public property and private property and the right of the private property owner to do what he will with his property, subject always to the over-riding principle of eminent domain: the right of the community to expropriate private property for public uses, with or without compensation.

Another institution of civilization is the provision of public services in addition to means of communication and transportation. These public services include a water supply; the disposal of waste; public defense of life and property; food and diversion (bread and circuses) for the needy; fire prevention and fire fighting apparatus; educational facilities, including libraries and reading rooms; outside recreational facilities such as parks and play-grounds. All of these facilities could be provided by the rich and powerful for themselves and members of their families. They could be supplied more effectively and apportioned more justly when they were public services open to all.

The countryside lacks the financial and the administrative means of providing a wide range of public services. Indeed, countryside dwellers pride themselves on being able to provide necessary services on a family, household or village basis. City dwellers learn to regard such public services as a matter of public right. Their existence is a magnet which draws a steady stream of migrants from the countryside into the cities.

Civilizations are dominated by business interests. It is for them to provide facilities for the transaction of business, cash money, credit instruments, installment buying, means for changing money, insurance, discounting facilities. As a civilization grows in wealth and population the political apparatus becomes a major employer, a major producer of goods and services, a major purchaser of producer and consumer goods, a major agency for borrowing, lending, insuring, in short a major factor in the multitudinous activities of a commercial, industrial community.

Classes, class interests and class lines are a part and parcel of all civilizations. They are less rigid and more flexible than similar lines existing in an agrarian community where land ownership plays so large a role in determining social forms and social functions. In a static agrarian community dominated by landlords, war-lords and the clergy, rigid class lines help to hold the community together. In a community dominated by business interests, both labor power and purchasing power must be free to respond to demand and supply. This is as true in a planned public economy as it is in a private enterprise economy. In accordance with the same principle, facilities are provided for the movement of individuals back and forth across class lines.

The specialized, interdependent structure of civilization with its city control of the hinterland, its products and inhabitants, enabled the city-centered oligarchy to accumulate and concentrate wealth and monopolize power, to skim the cream from the available milk, monopolize the cream, distribute the skimmed milk judiciously and thus perpetuate its ascendancy through generations and centuries. During periods of expansion civilized communities develop a dynamism which maintains their ascendancy. In subsequent periods of contraction form takes over, imposing conformity on the status quo.

During their periods of expansion civilizations are dynamic. Their history records growth at home, expansion abroad, exploitation, domestic and foreign under the pressure of effective motivating forces. The resulting dynamism leads to the contradictions, confrontations and conflicts which have studded the internal and external life story of every civilization.

Perhaps the most outstanding aspect of the dynamic functioning of civilization is its growth in magnitude. It might be more accurate to describe the process as an explosive expansion--explosive because rapid and spectacular.

Form limits function. At the same time function modifies and ultimately determines form. The two factors are omnipresent and complementary. Except for purposes of analysis they are two inseparable aspects of every human society. Where form predominates, social status results. Where function predominates fluidity, flexibility and dynamism are the outcome. Rapid change occurs on the home front at the same time that it is taking place abroad.

Growth at home takes place in two fields. The first is the extension of the homeland frontiers, broadening the geographical area of the nucleus around which the civilization is being built. The second aspect of growth involves an increase in multiplicity, variety and complexity and perhaps also a higher level of quality. Increase in quality is an optional feature of growth and expansion. Toward the end of a cycle of civilization quality declines.

For the record we list fourteen aspects of the domestic growth of civilization: (1) population; (2) production of goods and services; (3) trade, commerce, finance; (4)wealth, capital, income, capital construction; (5) the defense establishment; (6) growth in numbers and in variety of consumer goods and services; (7) specialization; (8) formal education, literacy, learning; (9) advances in science and technology; (10) growth in the arts; (11) rising standards of luxury for the oligarchy and growth in the volume of the professional and technical middle class and their living standards; (12) growth of the state bureaucratic apparatus in its complexity and in the number of its personnel; (13) growth of the sources of unearned income and especially in the number of persons living on unearned income; (14) growth of dependents, delinquents, criminals and other outlaws. This list is not exhaustive, but it is indicative of the

wide area in which domestic growth takes place.

Paralleling their domestic expansion, civilizations expand geographically up to the point of diminishing returns, determined by the growth of overhead costs. This process has taken the civilization, its personnel, its institutions and practices into territory not heretofore occupied, sometimes with the consent of the "foreigners", but more often in the teeth of their determined and long-continued opposition.

Expansion of a civilization is of necessity a movement from an urban center and beyond the urban center. Each civilization has been built around one or more urban nuclei which accepted and practiced expansion as the primary law of their beings.

Expansion takes many forms. It may be peaceful, as travel is peaceful. It may be competitive, as trade is competitive. It may be economically aggressive; the search for markets, for raw materials, for investment opportunities carried on simultaneously by representatives of long time rival cities, states, empires. It may be a movement for a place in the sun; mass migration, colonization. It may take the form of planned military invasion having as its purpose the conquest and occupation of foreign territory; the subjugation of the citizenry of the conquered lands; the establishment of an alien government in the conquered territory; the reduction of the "natives" to the status of second class citizens in their own homelands; exploitation of the natural resources; the levying of tribute; the imposition of taxes and the expropriation of moveable articles such as bullion, works of art and other treasure by the invaders, conquerors and occupiers.

Policies of expansion, conquest and occupation rely upon weaponry and war-making as essential instruments. Historically their role has been frankly recognized by builders of every empire and the leaders of every civilization. All civilizations known to history prepared for war and utilized war as the final arbiter in their pursuit of expansionist policy. Empire builders and civilizers have taken it for granted that might made right. The mighty, in terms of military striking power and killing power, have fought over and inherited the earth.

The practices of every civilization have centered about exploitation--of natural resources, of labor power, of rivals in the race for supremacy, of weaker and less aggressive peoples. Expansion gives the ruling oligarchy of the expanding nation, empire or civilization command of the strategic vantage points from which the principle of exploitation can be made continuously operative.

We have dealt with exploitation in connection with the economics of civilization (Chapter 7). Its central concept is the "you work--I eat" formula. In sociological terms it extends far beyond livelihood, into the relations of man with the natural environment (ecology); the management and direction of labor power and policy making; social administration and policy implementation, including policing of the territories lying within the frontiers of the nation, empire or civilization, plus contacts and relationships with territories lying outside the frontiers: in short, with the success or failure, the domination or subordination of the territory under consideration.

Structurally and functionally a civilization cannot remain static. It must expand or contract. If it expands, crossing frontiers and penetrating areas heretofore considered foreign or alien, and proposes to remain in those alien territories, it must have sufficient means at its disposal to continue the administration of its home territory and at the same time to take on the administration of the newly acquired foreign territory.

Home territory administration has as its broad purpose the utilization of available means to attain its ends and serve its interests. Administration of areas into which the home forces are penetrating must attain the same ends and serve the same interests on the "you work--I eat" axiom. Unless the newly acquired territory can attain those ends and serve those interests it is a liability, not an asset, and its continued existence will pose a threat to the expansionist venture.

Natural resources, plus labor power, plus effective management and direction must be integrated in the interests of the entire enterprise. Self determination is of secondary consequence, coming into play only after the interests of the whole have been assured and safeguarded.

There is of course the collective principle under which the interests of the whole can be best served through the cooperation of its component elements. But this is a horse of quite another color. It presupposes the willingness of the respective parts to enter voluntarily into a cooperative relationship. Sociologically speaking this is the antithesis of the situation we have been considering: expansion and exploitation in the interests and for the purposes of the expanding forces. So long as expansion and exploitation are accepted and practiced as the basic principles of any community, so long independence and self-determination will be irrelevant and inimical to the dominant elements in the nation, empire or civilization under consideration.

Under the "you work--I eat" formula natural resources will be utilized in the manner best calculated to advance the interests of the ruling oligarchy. Who will be the judge, jury and executioner in the case? Who else but the concerned ruling oligarchy?

In the history of civilization this principle has been followed systematically. The forests have been cleared away, the land has been overgrazed, cultivated and exposed to the erosive attacks of sunlight, air, water and frost. Wood from the forests has been hauled to the cities and burned, has been used to construct palaces and temples, houses and ships, with no recognition of the principles of priority or renewal. If wood was available where must it go? The oligarchy decided the issue in terms of ostentation and expediency. Rarely during recorded human history have there been oligarchs who said: "Irreplaceable resources like minerals must be used with extreme economy. Replaceable resources like forests or top-soil must be used and at the same time replaced and if possible augmented."

Decision making in the civilizations reported by history has been chiefly in the hands of specially privileged minorities. The purpose of these minorities has revolved around the provision of comforts and luxuries for the decision makers and their dependents and the increase of their wealth and power. Rarely has any ruling oligarchy said: "The continuance of our privileges and our barest existence is the result of labor power applied to natures gifts. We must safeguard nature and improve the health and vitality of those who do the world's work. If, due to unforeseen circumstances, over which we have failed to exercise adequate control, there is some shortage, let the idler and the wastrel suffer. Under all circumstances the producers must have all those goods and services needed to preserve their productive efficiency."

Through the entire course of written history the shrewdest, the strongest, the best fed and most comfortably housed have gained wealth and power, kept them and added to them. This has been the central sociological principle followed by the wealth-owning, power-wielding oligarchs of one civilization after another. Nature has been polluted, despoiled, pillaged. Society has been exploited and plundered. Most civilizations, during most of their history, have been led and ruled by the rich and powerful, who have used their wealth and power to advance their own interests, with scant respect for the hewers of wood, the drawers of water and the tillers of the soil. Those at the imperial center have milked the periphery. Cooperation has been occasional and confined largely to pre-civilized communities. In all civilizations exploitation has been the rule; the exploitation of nature, of labor power and of the social fabric.

The record of natural resources exploitation is well known. Paul Sears' _Deserts on the March_; Fairfield Osborn's _Our Plundered Planet_; William Vogt's _Road to Survival_, and Rachel Carson's _Silent Spring_ tell the story of the misuse and the extravagant abuse of nature. The record of labor power exploitation is less publicized.

Food gatherers like the North American Indians had no machinery and a minimum of implements or weapons. They migrated with the weather and the available game, traveling with their possessions. Herdsmen also moved about in search of pasture. Land workers faced four new problems. They must stay with their land and make a weather-proof habitat in dwellings and villages. They must make the implements needed for farming, building and defense against marauders. They must accumulate and preserve enough food to carry them from one harvest to the next. They must improve and beautify their artifacts and constructs. Traders added a fifth must--they must produce and accumulate stocks to meet the needs of various customers as well as their own greed for profits.

Successive stages, from food gathering to trading and manufacturing, required more energy--human energy, animal energy, and eventually mechanical energy. Part of this energy enabled humans to survive, another part enabled them to multiply. Still another part made it possible for one portion of the population to live without productive work on the work output of their fellow creatures. This exploiting minority was headed by land owners, soldiers and priests.

Landowners built themselves and their dependents strong houses and castles. Much of the labor power that went into this construction was "forced." The laborer gave the landlord labor time in exchange for the privilege of working part of the land for his own support. Soldiers defended the landlord and joined plundering forays on the territory of neighbors. The priests, in exchange for sustenance, mollified "higher powers" and built temples in which the people could gather, worship and be admonished.

Farsighted, energetic, resourceful men (and women), using mass productive energy, built themselves castles, built their priests temples and mobilized serfs, war captives and slaves who worked in gangs for generations and centuries to assemble the raw materials, construct and decorate the buildings, and perform the services needed to operate the enterprises and to provide their owners and masters with the necessaries, comforts, luxuries.

As centers of civilization grew richer and more powerful they defeated neighboring peoples, brought some of them home as war captives and exacted from their defeated rivals promises to pay yearly tribute in the form of timber, metals, food and often of slaves.

Mobilization of energy resources had been proceeding on a small scale for ages. Successful civilizers made this one of their chief tasks, mobilizing energy forces and materials and using them to build palaces, temples, mausoleums and whole city complexes with appropriate defenses against marauders and other enemies.

Administrative networks, adequate to produce such results, planned and directed the construction and administered and policed the operations. Using elaborate techniques of communication, transportation, fabrication, beautification, accounting, planning, initiative, leadership, mobilization, maintenance and replacement of labor power, imposition and sharing of authority, discipline, adjustment to deviation and opposition, means for dealing with revolt and rebellion, the builders of civilization performed their necessary tasks.

As civilizations have matured they have grown at the nucleus, expanded abroad and experimented more or less successfully with various means of exploiting nature, man and human society. Most of the competitors for survival and supremacy dropped out or were forced out in the course of continuous survival struggles.

Survivors of the obstacle race dealt successively with personal rivalries; class conflicts; civil wars; dictatorships; tyrannies; with overhead costs that grew more rapidly than income; with empty treasuries, inflation, depression, economic stagnation; with increases in top-heavy bureaucracies; with parasitism; with hooliganism; with the growing role of the military in decision making and administration; sharing the honey-pot with migrants and invaders; with rivalry and power struggle at home and abroad; with division, fragmentation and eventual dissolution.

Any student of the sociology of civilization must turn from this analysis of function with the conviction that whatever the advantages of civilization as opposed to earlier phases of human association, the pattern of civilization in action is workable only to a very limited extent. Civilization is not an example of perpetual motion. Rather it is a social life cycle, with a beginning and an end, and a peck of troublesome contradictions and conflicts in between.

Civilization is an integrative process. During the course of its competitive survival struggle, potential building units of an expanding civilization are tested out and included or rejected in much the same way that a stone-mason checks and tests the individual stones of which his wall is being built. The analogy is not entirely accurate. A wall becomes a completed part of a total structure. A civilization is a process of existence from conception and birth to dissolution and death. At any point in the process there is a delicate balance between integration and disintegration. As a matter of fact, both integration and disintegration exist and act, constantly, side by side. If the integrative forces are in the ascendant, form is built and function is accelerated. If the disintegrative forces are dominant, form breaks down and function stagnates.

This shifting balance and/or imbalance with its resulting build-up and/or break-down exists geographically, biologically, sociologically. It can perhaps be best described as successive change. It cannot be referred to as evolution except in its integrative aspect. Disintegratively it becomes devolution.

Civilization is a result of sociological build-up at a certain cultural level. It has not been universal in all human societies, but exceptional, both in time and in geographical space.

What has caused the pattern of civilization to appear, disappear and reappear again and again during the period of written history?

There have been many answers. The most general answer is divine intervention by beings above and beyond mankind. Whether such intervention has taken place or is taking place, human beings are unable to say with finality, but several thousand years of recorded history, plus our own daily experience provides convincing proof that the political, economic, ideological and sociological constructs which have appeared and disappeared in the course of social history are, at least in large part, the products of human brains and human hands. They are man-made.

The social pattern of civilization, like other social patterns which preceded civilization and which continue to exist side by side with civilized communities, is the result of human ingenuity and human energy, of human inertia, ineptitude, and the human urges to build, decorate and destroy.

Variety in human culture is caused by the variety in the human natural environment, the human social environment and in man himself.

Natural advantages exist and vary from place to place. There are fertile valleys; there are also mountains and deserts. There are a few fine harbors, but for the most part landings are difficult and dangerous. Certain islands have become the bases of civilizations, but this is true of only a very small number of many existing islands.

Civilizations have flourished in certain climatic zones and not elsewhere. At one historical period civilizations were established in the tropics and semi-tropics. In the present period they are located chiefly in temperate climatic belts.

Another source of differences between civilizations is the variation and the adaptability of certain peoples to the peculiar conditions out of which civilization grows.

Still another explanation of the presence or absence of civilization in particular times and places is the "great man" theory of history. All human communities, pre-civilized and civilized, have had gifted leaders whose thoughts and actions have brought about social changes. These "greats" were the divinely, ideologically or sociologically inspired. Divine inspiration or revelation led to the founding of religious faiths. Ideological and sociological inspiration resulted in domestic cultural changes and the extension of economic, cultural and ideological activities into foreign lands, thus pushing the frontiers of nations, empires, and civilizations farther from the chief wealth-power centers.

Thomas Carlyle wrote that history is the lengthened shadows of a few great men. Arnold Toynbee concluded from his _Study of History_ that religion has been a prime motive force in the building and preservation of civilizations.

Technology has been a motive force of hard-to-define importance in revitalizing, changing, expanding and perpetuating civilizations. Increased productivity, expressing itself as increases in income, accumulated wealth and various forms of capital investment, have provided the economic basis for population growth and the more effective exploitation of natural resources and labor power, advances in the means for transportation and communication, accounting, planning management and "defense."

Among the social motive forces responsible for the development of civilization is the accumulation of wealth in an impoverished world. The most important single factor in this connection was the development of a class of businessmen in a society dominated by landlords, churchmen and soldiers. Landlords, churchmen and soldiers lived during periods of animal husbandry and primitive agriculture on the very narrow margins produced during bountiful harvests. When harvests were bad, husbandmen and farmers were reduced to starvation levels. Lacking means of storage and refrigeration as well as facilities for transporting heavy materials such as food, fuel and building materials, pre-civilized society accumulated wealth slowly in mobile forms (precious metals and jewels) and made few productive investments.

The advent of trade (business) and the trading class created a small but potentially powerful class whose income and wealth were not derived from direct contact with nature but came from trade, money changing, lending, insuring and other activities associated with the accumulation and investment of wealth in profit-yielding enterprises. Only in a secondary sense did business depend on animal husbandry or agriculture. As their primary task businessmen devoted themselves to the exploitation of labor power and the storage and merchandising of the products turned out by herdsmen, farmers, craftsmen. Part of their profits went into more elaborate standards of feeding, clothing and housing themselves and their dependents. Another, and a more crucial part of their profits went into ships, warehouses, and the implements used in converting raw materials into consumer goods and services, transporting them to the markets, displaying them and persuading consumers to diversify their needs, purchase a greater variety of goods and services and thus increase the number and profitability of business transactions.

As this process mushroomed with the expansion of civilization, consumers demanded a greater number of more expensive artifacts and consumer capital goods, from housing and house furnishings such as bathrooms and well-stocked kitchens to refrigerators, washing machines, air conditioners, telephones, television sets, bicycles, automobiles and elaborate recreation facilities and equipment. The expansion of mass production and the mass market paced one another, constantly raising the ante.

Mass production, mass marketing and pyramiding profits resulted, first and foremost in the enrichment of businessmen. Their riches automatically pushed them into a position of pre-eminent importance from which they were able to make public policy and utilize public authority for the protection and advancement of their own class interests. It also called into being a vast array of new professionals; teachers, engineers, scientists, technicians, social workers and propagandists, converting the "middle class" from a shadowy remnant of feudal society into the largest class numerically and the most influential class politically in the entire modern community.

At the same time, economic enrichment and expansion increased the importance of the war-making apparatus. The expansion of civilization has involved a competitive struggle carried on constantly along several fronts, economic, political, cultural, ideological. The means of struggle in every civilization has included the military as a political force and as a final arbiter in deciding who should win and who should lose civil and inter-group wars. Victory and defeat determined the fate of land and natural resources, populations, capital installations, taxing facilities, domestic policing. This deterministic role of the war machine has never been more dramatically in the foreground than during the crucial years from 1910 to the present day, when war apparatus costs have topped the list of government expenditures.

Growth of state functions with the expansion of the economy has resulted in the creation of a vast state bureaucratic apparatus. Heading this bureaucracy are the ministers of state, each with a separate department. Under the department heads are sub-departments, sub-divided in their turn into bureaus or separate offices. At each level, functions are assigned and salaries are fixed. Entrance into this anthill is sometimes by personal favor, sometimes by examination. Once in, however, barring misbehavior, or some catastrophe like the abolition of a particular bureau, the office holder is in for life with a pension when he is retired for age.

Inside the bureaucracy there is a slow movement determined by seniority. There is also some skipping, as when new bureaus are formed or when death or retirement offer opportunities for the favored few to move forward or skip upward. As we read the record, the bureaucracy existed in the days of Egypt's Amenhotep, or in those of Rome's Augustus Caesar, as it exists today--locally in every municipality, province, nation and empire and generally throughout western civilization.

Every civilization known to history has had its priestcraft as well as its statecraft. Statecraft spawned its bureaucracy. Priestcraft spawned its theocracy. Both patterns have inter-penetrated entire civilizations. Each locality, region and district has had its representatives of state and of church. In some instances the church took precedence. In others the state was supreme. As the civilization matured, using war as the chief instrument of policy, the state in the person of military dictators has tended to predominate. In every civilization the state has collected its taxes and the church has collected its tithes.

The net result, in every civilization, has been a ruling oligarchy, self-appointed and self-perpetuating, which has shaped policy, planned and directed administration, exercised authority and lived comfortably and at least semi-parasitically on the backs of the underlying urban and rural masses, sharing its sinecure with its middle class handymen. In some times and in certain localities the oligarchy has maintained a representative front. Elsewhere it has functioned arbitrarily. In extreme cases one man has ruled for a brief period. Generally the oligarchy has held the reins of authority.

Each phase of human society has had its oppositions, its confrontations, its conflicts, proportioned to its magnitude, its specialization and the interdependence of its component parts, its ratio of change to stability and its foresight, plans and preparations for dealing with changes when they occur. Since civilization, of all known forms of human association, is the largest, most specialized and most interdependent, it is in civilization that we should expect to find the most intensive and extensive contradictions, confrontations and conflicts.

Among the many oppositions of civilized association five are outstanding: the we-they relationship; rural versus urban life; subsistence versus acquisition and accumulation; hard work versus ease, luxury and parasitism; poverty versus wealth.

Civilization is not only complex and interdependent in form, it is avowedly competitive in its functioning. Politically, nation building, empire building and the establishment and maintenance of each civilization is a competitive struggle between declared rivals to gain and keep place and power. Economically, the efforts to get and keep natural resources and labor power and to use them to _Our_ advantage and _Their_ disadvantage dominates the field of livelihood. Ideologically _We_ are right, while _They_ are wrong. Culturally _We_ are superior. _They_ are inferior.

The _We-They_ relationship developed very early in the history of the human family. Individuals and small, more advanced groups have reached a level of understanding and living based on the cooperative inclusive formula of _"We, Ours, Us",_ but every civilization known to history has accepted and adopted the competitive, divisive formula and poured energy and wealth into the political, economic, ideological and cultural struggle to take and keep for individual, local or class advantage.

Resulting oppositions fragmented civilization: (1) urban vs. rural life, city vs. hinterland; (2) cooperation vs. competition; (3) acquisition and accumulation vs. sharing; (4) riches vs. poverty; (5) the individual vs. the group; (6) status vs. change.

These fragmenting forces have been accepted, adopted and given priority by civilizations as they developed predominance. As they grew in magnitude they limited or subordinated the forces of integration and unification.

Opposites and oppositions lead to confrontations along class lines, geographic lines, cultural lines, color lines, racial lines. The traditional confrontation of rural vs. urban life is doubly underlined by two factors: first, the countryside operates generally on a use economy with pay for services largely in kind or by barter. The city operates under a market economy with payment for services usually in money. Second, the standards of life and work are more primitive in the countryside than in the city. Third, as the civilization advances toward maturity, city population increases while it declines in the countryside. Consequently vigorous, energetic, adventurous people leave the deteriorating countryside.

Increasingly the owners of land and capital live in the cities, visiting the countryside for holidays and recreation, leaving rural areas to servants, peons, serfs and slaves. Small owning farmers are bought out or expropriated. Unable to make a living in the countryside they move to the city. Lacking city skills they work as casual labor or are unemployed. The city is divided between enterprisers, their subordinates, owners of country estates and members of the state bureaucracy on one side and vassals, servants, serfs, and slaves and the unemployed on the other. The rich and powerful become richer and more powerful. The poor and dependent grow in numbers--protest, demonstrate, riot, revolt.

This class struggle dominates public life in the urban centers of every civilization. The rich offer petty reforms and minor benefits to the impoverished, semi-employed city masses. At the same time the urban oligarchy breaks up into rival factions: the Ins and the Outs. The Ins hold public jobs, spend public money, award contracts and pass around favors. The Outs wait and maneuver for their turn at the public pie-counter. Both Ins and Outs appeal for mass support.

Oppositions and confrontations lead to conflicts which have studded the life of every civilization. Conflicts include wars which may be divided into six groups: (1) Wars of expansion, conquest, colonization directed toward the enlargement of the territories included in the civilization. (2) Wars of survival among adjacent nations and empires. (3) Wars fought to suppress unrest and revolt in the colonies and dependencies of an empire or civilization. (4) Wars fought to repel the invasion of migrating peoples attempting to occupy territory over which an empire or a civilization claims jurisdiction. (5) Peasant, serf and slave revolts and rebellions against the authority of empires or civilizations. (6) Civil wars to determine the leadership of particular empires; wars of leadership succession; conflicts and power seizures within particular oligarchies.

In every civilization final decisions regarding domestic and foreign issues have been made by an appeal to arms. There were laws and legal institutions in many civilizations under which confrontations might have been prevented and armed conflict avoided. Where these legal means failed to provide solutions, contestants turned to armed force as the final arbiter.

Competitive survival struggle has played a prominent role in the life of every civilization known to history. Competition at its highest level employs armed force as its instrument of policy. War, domestic and foreign has, therefore, dominated the history of every civilization. Walter Bagehot called war a state maker. In the same context, war may be referred to as a civilization maker.

Conflict, including war, has played a major role, often a determining role in building and maintaining civilizations. It has also been a major and perhaps _the_ major factor in undermining and destroying civilizations. Arnold Toynbee contends that war has been a "proximate cause" of the overthrow of one civilization after another. No observer of current western civilization can fail to note the determining part played by war during the first half of the present century.

Every completed civilization known to historians has passed through a sociological life cycle: origin, growth, expansion, maturity, violent premature dismemberment and death in the competitive survival struggle or gradual decline and eventual dissolution.

Every completed civilization has had small, local beginnings, on an island like Crete, or a group of islands like the Japanese Archipelago, or a tiny spot like Latium on the Tiber River, or an isolated area like the desert-surrounded Nile River Valley in Africa. The seed ground or nucleus of each civilization has been a small, well-knit group of vigorous, energetic people, well-led, living in an easily defended, limited area, enjoying relative isolation, but also having ready access to the outside world.

At the beginning the growth cycle has moved slowly, from victory to victory, as competing neighboring peoples have been brought under the authority of the victor in local wars. After generations or centuries of struggle a point is reached at which the nucleus of the growing empire begins to expand, through trade, colonization, diplomatic alliances, conquest, into an era of survival struggle in which rival cities reach out for the same piece of fertile land, the same markets, the same mineral deposits. Again the life and death survival struggle tests out the people, their leaders, their ambitions, determination, tenacity.

Earlier struggles were local. Now the struggle area has become regional. At the outset the peoples were amateurs in the science and art of expansion, occupation, consolidation, exploitation. Through the hard school of struggle they became professionals. From

victory to victory they gained in territory, in wealth, in administrative skill. One by one, rivals were eliminated, annexed or associated with the nascent empire which was by way of becoming the central empire of a maturing civilization.

Generations of effort and centuries of time have gone into the empire building process. The farther the civilization has expanded, the greater the necessary input of manpower, wealth, enterprise and administrative talent needed to keep the enterprise strong, solvent, masterful.

Eventually the expanding civilization reaches a point at which the costs of further expansion are greater than the income derived from further extension of its authority. Up to this point expansion had paid its own way. Beyond this point it is a losing proposition--politically, economically, sociologically. At this point begin times of troubles; bad harvests; colonial or provincial revolts; power struggles between individuals or classes in the homeland; new rivals moving in to share in the prospective plunder of the mother-city.

From this time of troubles the civilization enters a new phase of its lifecycle. Up to this point victory has brought plunder and prosperity which have financed new foreign adventures and led to new victories. Beyond this point lies stalemate, economic stagnation, military defeat. Building an empire and establishing it as the central force in a civilization is a long and arduous process. Once the process is reversed, the decline may move quickly or slowly, but as it proceeds the civilization is fragmented and eventually dissolved or taken over by a more vigorous rival.

At all stages of this cycle there have been life and death survival struggles. Peoples, nations and empires entered the contest, played their parts, made their contribution to the up-building process. There were ups and downs, advances and withdrawals, victories and defeats. There were many contenders for survival and supremacy. Usually there was one survivor which gave its name to the civilization.

The period of ascendancy of any civilization has been historically brief. The struggle to the summit was long and exhausting; the descent from the summit more rapid than the ascent. Literally, like the bear that went over the mountain to see what he could find, and who found the other side of the mountain, the civilizations that have reached the summit of wealth and power have found on the other side of the summit a steep downward sloping time of troubles that ended in dissolution and liquidation.

Civilization, as a sociological life pattern, has proved to be seductive and alluring in prospect, but in retrospect unsatisfactory and frustrating. Civilization has proved to be not an opportunity for the ambitious, but a trap for the ignorant, inexperienced and unwary. For the many contestants who set out to conquer the world the experience has been disappointing and on the whole disastrous. For the few who have reached the summit the experience has been frustrating.

Civilization as a way of life is like any other contest. The struggle is good for those who are able to benefit from it by learning its lessons. Whether they win or lose is a matter of no great consequence. For the losers the experience often is heart breaking and death-dealing.

Students of social history have been tempted to draw a parallel between the biological life cycle of an individual and the sociological lifecycle of a civilization. There are elements of likeness between biological birth, growth, maturity, old age and death of human individuals and of human civilizations. All of the individuals and civilizations that we know have passed or are passing through such a lifecycle. The same thing may be true of the larger universe of which we are a minute fragment. However exact or inexact it may prove to be, the parallel certainly is unmistakable, alluring. It may also be seductive and mortal.

CHAPTER NINE

IDEOLOGIES OF CIVILIZATION

This study was laid out along inductive lines: an examination of the facts with such generalizations as the facts suggest or justify. We began our social analysis of civilization by presenting noteworthy facts concerning the politics, economics, and sociology of various civilizations. In the present chapter we deal with their ideologies.

We are accepting and following the fourth variant definition of "ideology" presented by Webster's New World Dictionary: "The doctrines, opinions or way of thinking of an individual, class, etc." In this case we are reporting on the doctrines, opinions, thought forms and action patterns of entire civilizations.

Our concern is not with the doctrines, opinions and ways of thinking and acting advanced by elite minorities. Such an approach would involve a study of comparative ideologies. Rather we are asking what civilized peoples were trying to do, as measured by their political, economic and sociological activities, programs and purposes.

It may be presumptuous for an individual to generalize about civilizations of which he knows so little. On the other hand, if we recognize the limitations under which all assumptions and generalizations operate it is possible and often helpful to assume and generalize, although the generalizations may be no more than interim reports, subject to later amendment, correction or rejection.

What were the prevailing ideas of civilizations and what ideas were put into practice? What purposes dominated and directed the lives of civilized peoples? How successful have civilized peoples been in achieving their objectives?

At the outset we must realize that in any complex society there are wide ranges of ideology, from the body of ideas held by small uninfluential sects to the purposes, ideas, policy declarations and actions of governing oligarchies. We do not wish to defend or attack the ideas, but to summarize them and understand them in a way that will give a group picture of the purposes, ideas, policies and day-to-day activities of the civilizations in question. For convenience in our discussion we will take up, first, civilized societies as collectives, and then the operation of civilized ideology as expressed in the lives of individuals.

Presumably the most immediate purpose of all civilized peoples has been survival, getting on as a collective or group from day to day, through summer and winter, under normal conditions, and/or in periods of stress and emergency. If the group cannot survive it loses its identity, breaking up into the self-determining parts of which it is composed.

Survival means continued existence as a group--in the face of disruption from within or attack and invasion from without. The group which survives continues to exist and to act as a group that maintains the common defense and promotes the general welfare.

Each social group competing for survival has a sense of its own identity and a belief in its capacity to survive. This ideology is strengthened by the belief that the group has special qualities and is protected by powerful entities that will guarantee its success in the survival struggle. The group considers itself better qualified to survive than neighbor groups. Such ideas, carried to their logical conclusion, make the group in question superior to its neighbors in survival qualities and a people chosen by its gods.

A superior people, chosen by its gods, is in a class by itself. Other people, by comparison, are inferior. It is the destiny of the superior people to take the lands of their inferior neighbors, and, whenever opportunity offers, to defeat the neighbors in battle, capture them and force them to do the bidding of the captors.

Cults of ideological superiority are widespread. Put into successful practice by a victorious tribe, nation or empire, they develop into cults of superiority which assert: "We, the victors, are stronger, better people than our weaker neighbors." As one victory follows another the belief in superiority grows. People in an expanding empire or burgeoning civilization are obviously better survivors than their less successful competitors.

Competitive survival struggle modifies the cultures of both victors and vanquished. The dispersal and adoption of culture traits, supplemented by negotiation and accommodation, broaden the geographical area of the victors, increasing the population and adding to the material resources, the wealth and income of the enlarged group. It may also involve the corresponding decrease of the geographical area, population, wealth and income of the vanquished.

In order to protect itself, preserve itself, to enlarge itself and, where possible, to improve itself, each competing groups aims to set up standards of ideas and conduct to which all living members of the group are presumed to agree and to which they must adhere. When new members enter the group, by birth or adoption, they are duly indoctrinated with the group ideology. Early in their history the individuals and sub-groups composing every civilization adopted such standards and promulgated them by the decree of a leader or by the common consent of associated groups, as the outcome of negotiation, discussion, give and take. During the history of every civilization such agreements were reached and recorded in compacts, treaties, laws, constitutions, specifying the nature and limits of the collective cultural uniformity at which the community aimed.

The struggle for collective uniformity was long and often bitter. Individuals and factions resented and resisted the imposition of group authority. Internal conflict led to civil wars in the course of which the group was divided or the solidarity of the group was reaffirmed despite hardships imposed on disagreeing, divergent minorities.

Closely paralleling the group need for survival and uniformity (solidarity) was the need for group expansion, or extension. In the competitive struggle for survival which played such an important role in the life of pre-civilized communities, strategic geographic

location was often decisive. Soil fertility, mineral deposits, timber reserves, access to waterways, location on trade routes all played a part in community survival, stability and growth.

Such geographical advantages are few and far between. Often they are already occupied and defended by stable communities. Their control and utilization are basic in determining the survival or elimination of rivals in the competitive struggle.

Above and beyond the need to occupy the "corner lots" of the planetary land mass was the urge of civilized peoples to advance from littleness to bigness as a goal in itself. Confined by limitations on communication and transportation, pre-civilized man was circumscribed and localized. With the advent of cultivation, land workers were tied to a particular piece of real estate on which they lived and worked. When asked whether the village across the valley was Sunrise Mountain the local peasant could reply: "How should I know? I live here."

Reacting against restricted living and pressed by curiosity and the spirit of adventure, the imaginative and adventurous members of each generation pressed outward from the homeland toward wider horizons. Many traveled. Some migrated. Others pursued the will o' the wisp of expansion by adding field to field. The grass always looked greener on the other side of the mountain. The ambitious expansionist therefore tried to control both sides.

"Move on! Move on!" became the watchword, without any particular emphasis on quality. In one civilization after another bigness (magnitude) was accepted as a symbol of success, because "the more you get and keep, the happier you will be."

Mastery of strategic advantages, plus the illusion of mere bigness, without any specification to quality, became keys to survival and success.

Civilized man exploited natural advantages and augmented his power over nature and society by increasing his wealth and multiplying the population. At the outset of the struggle strategic geographical advantages were occupied and utilized by local groups. Through survival struggle, one of the groups, better organized, better led, more determined and productive, succeeded in securing possession of one strong point after another, until an entire region, like the Nile Valley or the Mediterranean Basin had been conquered and occupied by a single great power. The measure of success in the power struggle is the occupation of strategic strong points. Natural resources, including land and labor power, are among the chief spoils of victory.

Seven basic goals or principles were involved in the building of civilizations: group survival; propitiating the gods; recognizing and following aesthetic principles; achieving and stabilizing property and class relations; expansion (bigness); individual conformity to the collective pattern; and collective uniformity in a united world of human brotherhood. At times and in places the basic propositions were accepted, rejected, fought over. Each civilization which followed them successfully was able to establish itself, maintain itself, and up to a certain point add to its prestige, wealth and power.

The first goal was success in the struggle for survival. Collective uniformity and expansion opened the path to wealth and power, in the city, state, the empire, the civilization. From a multitude of local beginnings the struggle for expansion and consolidation led to ever larger aggregations of land, population, capital and wealth concentrated in the hands of an increasingly rich, powerful oligarchy, protected and defended by a military elite pushing itself ceaselessly toward a position from which it could make and enforce domestic policy and order.

A second collective goal has been propitiating and wooing the unseen forces of the universe: holding their attention; keeping them on "our" side; relying on their influence for defense against enemies, mortal and immortal, and help in providing water in case of drought, fertility, assistance in healing the sick, comfort for the dying, consolation for the bereaved and success in business deals. These multiple aspects of ideology are summed up under the term "religion".

Each civilization has had its religious ideas and ideals, its religious practices and institutions. Many civilizations have divided their attention between civil ideology and religious ideology. In some cases religious ideology took precedence, resulting in a theocratic society under the leadership of religious devotees. In other cases, notably Roman civilization and western civilization, religious ideology was subordinated to secular interests.

In the early stages of western civilization, religious ideology took precedence over secular ideology. With the rise of the bourgeoisie, secular ideology moved into the foreground, making loud religious professions, but also making sure that business-for-profit had the last word in the determination of public policy.

A third collective ideological goal of civilization has been aesthetic; the yen for symmetry and balance; the love of beauty; the desire for harmony; the quest for excellence; the lure of magnificence; the search for truth. Out of these urges have arisen the pictorial and plastic arts, architecture, music, the dance, science, and philosophy, providing outlets, occupations and professions that have colored and shaped many aspects of civilized living.

A fourth collective goal of civilization has been the establishment and maintenance of social structure, including classes and/or caste lines based partly upon tradition, partly on function and partly upon proximity to the honey-pot, the wellspring of wealth, income, prestige and power.

Since the principle of private property has been implicit in every known civilization, the ownership of land, capital and consumer goods and services has been a prerogative of the ruling oligarchies, shared by them with their associates and dependents and used as their chief means of establishing and maintaining the "you work, I eat" principal of economic relationships.

Private property, and its derivative, unearned or property income, has enabled the ruling oligarchies of civilized communities to receive the first fruits of every enterprise. They have also enabled the oligarchs to establish a priority scale of income distribution under which those who held property and its derivatives could have first choice among available consumer goods and services. Second choice went to the associates, retainers and defenders of the oligarchs. Third choice went to the preferred, professional experts who spoke for and represented the oligarchy. Fourth choice went to the artisans--skilled designers, builders, fabricators. What remained went to hewers of wood and drawers of water, the workers, women and men, who provided the necessaries, comforts, luxuries upon which physical survival and social status depended. Generally this proletarian mass, including chattel slaves, serfs, tenant farmers and war captives, were outside the pale of respectability. In a caste-divided community they were scavengers and untouchables, living a life close to that of domestic animals.

Most civilizations have permitted gifted individuals to move vertically, from the bottom toward the top levels of the social pyramid. Vertical movement was severely restricted, however. Generally people lived, served and died on the class or caste level into which they were born.

Members of classes and castes are not free agents. They have privileges and rights. They also have obligations and duties. Classes and castes are functioning parts of an interdependent social whole which can maintain balanced order only so long as each segment recognizes its obligations and performs its duties.

Social balance therefore depended on class collaboration. Successful collaboration, in its turn, is the outcome of a general acceptance of class and caste and general willingness to go on living and functioning in a class divided society.

A fifth collective goal of civilization has been expansion from the nucleus outward, with final authority exercised by and from the nucleus. At the outset of the survival struggle which led to the establishment of one language, one religion, one law, one authority, one loyalty, each among the many contestants had its own language, its own religion, its own law, its own authority.

These rival forces were temporarily confederated against internal disruption or foreign invasion. ("Liberty and union, now and forever, one and inseparable.") In the course of the survival struggle, the separate parts of which the civilization was composed began with the local autonomy permitted by confederation, and ended up with one among the many contestants donning the imperial purple and establishing itself as the master and supreme dictator--the Caesar or Pharoah of the conquered, unified world.

Foreign territories conquered and brought by force of arms within this imperium were subjects of a central authority which they never really accepted. Authority continued to be exercised from the imperial nucleus. The newly conquered territories were policed by professional soldiers whose primary loyalty was national but whose responsibility was to the aggregate composing the Roman or the Egyptian civilization.

The acid test of the expanding civilization was embodied in the degree of acceptance of wholeness as opposed to self-determination. Were the individual members--the provinces and colonies composing the whole--willing and able to sink their differences in an unquestioned wholeness, or were they prepared at the first opportunity to exercise their right to self-determination and declare their independence of the whole?

The resolution of this question constituted the sixth collective goal of civilization: to establish a whole in which the component members were able and willing to recognize the axiom that the interests of the whole come before the interests of any of its component parts.

The issue of central authority versus local self determination has been one of the basic issues of the present century because during the preceding period, the British, French, Dutch and Spanish Empires had been built up by the conquest and occupation of foreign lands. If the nineteenth century was an epoch of expanding imperial authority, the twentieth century has been an epoch of the dismemberment of empires by movements for independence and self-determination.

Seventh, and finally, among the collective goals of civilization, each has developed an ideology that justified empire building by conquest, exploitation, chattel slavery, peonage, wagery, the supremacy of the empire nucleus, the subordination of the periphery to the nucleus and other aspects of ascendancy and mastery including "divine" rights in politics and "natural" rights in economics.

Civilizations expect the individuals and groups of which they are composed to preserve the status quo, work as disciplined members of an effective team and be satisfied with the outcome. This brings us back to the goal with which we began this discussion of the collective goals of civilizations: The primary task of any civilization is to survive.

Each individual human being, living and working in a civilized community occupies a sphere of action, enjoys the advantages and disadvantages and accepts the responsibilities and duties which pertain to his sphere. Within his sphere the individual succeeds or fails in so far as he leads a rewarding personal life and contributes his share toward the collective life of the group to which she or he belongs.

If the individual in a civilized community is to live a good life, the first task is to maintain normal health, good spirits and a determination to get the most out of life and to contribute at least the equivalent of what he receives in service to his group.

As a civilization expands and extends its influence, the individual must contribute his mite to the entire enterprise while adding to his own store of goods and services. Acquisition and accumulation satisfy a human desire to have and to keep. They also add to the wealth and well being of the community on the widely accepted utilitarian formula: happiness comes in direct proportion to the extent and variety of ones possessions.

In most civilized communities the building unit is a family. It is this family unit, usually directed by a male or father figure, who acts for the family and represents it in the community.

In passing, the reader should note that the breakdown in family life now so prevalent in many parts of western civilization is a departure from the civilized norm. It is really a measure of the extent to which western civilization itself is disintegrating.

The revolution in science and technology, mass production and the distribution of goods and services through a mass market have put acquisition and accumulation of goods and services as a life-goal to a severe test. Until the early years of the present century no civilization had provided affluence for more than a small fraction of its population. The vast majority consisted of slaves, serfs, war captives, and tenant farmers. Only an exceptional few were in a position to live in comfort or luxury on unearned income. As each civilization matured, ownership of land and capital diverted the flow of consumer goods and services into the coffers of a diminishing proportion of the total population. The vast majority lived at or below the subsistence level. General affluence was a goal that was talked about and dreamed about, but there was no way to test its practical effects on the population as a whole.

Under conditions presently existing in many parts of the West, millions of individuals and families following the utilitarian principles of acquisition and accumulation have secured and kept an abundance of goods and services in strict accordance with utilitarian principles. Yet they have not been and are not happy.

Quite the contrary, in many cases they are unhappy, particularly in the second and third generations of affluent family life. This is notably true in the United States, Scandinavia, Switzerland and other parts of western Europe. It is true to a lesser degree in New Zealand and Australia.

Millions of families in these countries, with all their possessions, fail to enjoy peace and happiness. On the contrary, they are so acutely unhappy that many of them have come to regard acquisition and accumulation as a sterile rat-race. Consequently multitudes of people, young and old, have turned their backs on civilization, separating themselves from their affluent homes with their glut of consumer goods to live at non-civilized or pre-civilized levels. These individuals are avowedly anti-civilization in so far as its material incentives are concerned.

Similar attitudes were expressed in previous civilizations. Socrates went barefoot through the streets of Athens. Diogenes lived in a tub. Uncounted numbers of Indian holy men and early Christians rejected all affluence, embraced poverty, lived simply and austerely. Religious asceticism is no novelty. But the wholesale rejection of acquisition and accumulation as a way of life certainly

marks a turning point in the popular attitude toward the utilitarian axiom that human happiness is directly proportioned to the quantity and variety of material possessions.

Civilization presupposes getting, keeping and exercising power over nature, society and man. Each civilization has added to man's utilization of nature. This has been a notorious aspect of western civilization since the inauguration of the scientific-technological revolution. After a century of intensified exploitation of the natural environment, entire communities are reacting with dismay and disgust against the resulting pollution of air, water and land, the wanton waste of soil fertility, forests and minerals, and extermination of various forms of "wilderness." Freedom to exploit nature's storehouse has not brought happiness. On the contrary, it threatens the existence of other life forms and even the continuance of human life on the planet.

Private enterprise and other forms of permissiveness have led to practices that circumscribe and hamper life. Their declared objective is the liberation and enlargement of human life and well being. Where they have been tested out they have proved themselves to be obstructive and destructive rather than creative and constructive.

Notable advances in science and technology have greatly increased the human capacity to transform nature and remake society. Designed and executed as a means of enhancing the general welfare, science and technology might have promoted human well-being. But employed as a means of exploiting nature and society for the benefit of a favored few, science and technology, whether directed by European and American promoters of the African slave trade, Spanish conquerors in Latin America, by Belgians in the African Congo, by European whites in their dealings with the North American Indians, by the Nazis in Europe, or by Americans in South East Asia, have involved merciless exploitation accompanied by revolting atrocities.

Never in recorded history was the capacity of man to modify nature and exploit society more publicly tested out than in the atom bombing of Hiroshima and Nagasaki and the purposeful devastation of jungle life and village life in large parts of Vietnam and Cambodia. Reported in the public press and pictured, live, over radio and television, these latest developments in the ugly record of man's exploitation of nature have become part of the record of the decline and dissolution of western civilization.

Exploitation of human society for the benefit of the few at the expense of the many is an old story that extends through the entire record of written history. Every civilization has produced a cluster of institutions and practices that enabled a few rich and privileged to live in affluence at the expense of the impoverished many. This juxtaposition of riches and poverty is the logical outcome of a system of social relations designed to provide the few with comfort and luxury while the many are forced to accept penury and hardship. Exploitation, carried to its logical conclusion, permits and requires a parasitic minority to live in abundance while the majority must content itself with scarcity, extending to death from malnutrition.

Another goal presented to individuals by the promoters and fashioners of civilization is individual perfection, physical, mental, emotional, moral. Every generation of human beings contains individuals who are beyond the average--bigger, stronger, more talented, seeing farther, searching more deeply, endowed with greater sensitivity, working more conscientiously, imbued with a love of their fellows and determination to serve them. Such individuals have genius in one or another form and offer themselves and their products as a gift to the general welfare of their generation. Scientists, poets, musicians, inventors, artists, teachers, healers, philosophers, statesmen have appeared in each civilization adding their mite to the sum-total of community culture.

Innovators, moralists and counselors of perfection have played a noteworthy part by advocating and often by living noteworthy lives. Reports of their sayings and doings are part of the folklore and the history of each civilization. If they did not set the tone of their generation, they provided it with a model toward which their less talented, less creative fellows might aspire. If they were creative artists their works provided models which were admired, copied and emulated by their successors. If they were moralists or philosophers their sayings were recorded, respected and repeated by successive generations.

Each civilization has adopted lines of thinking and codes of action which embody the best and most advantageous in theory and in practice. These codes of thought, feeling and action are attributed to some outstanding individual and passed on from generation to generation as codes of conduct to which all right-thinking individuals may or should aspire.

Human beings know everything about themselves except whence they came, what they should do and whither they will go. To compensate for this lack of knowledge and wisdom each civilization has established and maintained religious organizations and institutions whose duty it was to search out the truth, record it and teach it to successive generations.

In some civilizations the religious institutions have dominated the secular. At other times and in other places the secular has maintained its ascendancy over the religious. In still other cases the religious and the secular forces have maintained an uneasy

balance leading to acrimonious bickering and sometimes to civil war.

Central to their discussions is the nature of life. Is it continuous, as it appears in vegetation and the animal kingdom, or is it discontinuous like the rocks on the mountainside or the grains of sand on the seashore? Those who live for the moment prefer discontinuity. Those who observe their natural environment are forced to the conclusion that life today is part of a sequence or progression which relates the life of yesterday to that of tomorrow.

Recorded history, from fossil and geological remains, to the books on library shelves assures us that man has had a past. Projecting this experience, it seems quite reasonable that barring accident or a purposed intervention, man will have at least some future. To prepare for that future, using the knowledge and wisdom at our disposal, seems to be a must for any reasoning creature.

Even for the short planetary life-span of the average human, the logic of this position seems inescapable, whether it applies to the next hour, day, year, or century. In terms of our children and grandchildren it is even more impressive. Today we find it desirable to live as well as possible. If there is any future, the same principle should apply to its implementation and utilization.

If the "hereafter" begins tomorrow and if those whose well-being concerns us will probably be "alive" tomorrow, the science and art of the future (futurology) takes its place beside other fields of theory and practice as a must for all responsible members of the human race.

If the conditions presently existing in human society affordment, skills and technical experience necessary to make significant changes, why wait? Why not proceed forthwith to live a better life?

This dilemma has confronted individuals and sub-groups in various civilizations. It has been particularly in evidence during periods of decline and social disintegration. It has led people of both sexes and all ages to uproot themselves from the old social order and reestablish themselves in a social order "nearer to the heart's desire."

Such efforts have been described as "intentional communities" to distinguish them from a traditional, currently existing social order which emerged from the past encumbered with vestigial remains and obsolete institutions and practices having little or no relation to the needs and wants of a changing world.

Pilgrim Fathers in New England, William Penn in Pennsylvania, Lord Baltimore in Maryland aimed to organize local intentional communities. Similar efforts were made by the Mennonites, the Dukhobors, the Hutterites, the Mormons in North America. The Christians during the decline of Roman civilization led a movement to convert a large geographical area to a new and better way of life. Followers of Mohammed, several centuries later, made a similar effort to convert the Eurasian-African world to their ways of thinking and acting.

Young people by the thousands, in the United States and other western countries, are turning their backs on western civilization and are organizing enlarged families and communes that provide their members with a modified social order which aims at improvements here and now.

Necessarily such social experiments are looked upon with suspicion by the Establishment. They are "new", "different", "subversive", "godless", "wicked." Hence, they are criticized, denounced, raided and often broken up as threats to existing law and order.

Intentional communities may grow out of consumers' cooperation. They may begin as farm collectives. Generally, however, they consist of the followers of outstanding leaders of religious or ethical sects. Many intentional communes spring up, mushroom-fashion, and disappear with equal rapidity. Others endure for generations and centuries.

In a very real sense they are pilot plants designed to correct individual or social maladjustments and substitute new ways for old ones. As pilot plants they experiment with deviations from existing social norms, acting as a social laboratory in which new ideas and practices are tested, modified, accepted, rejected.

Change is one of the essential aspects of every society. There are changes in personnel. In each generation individuals grow old and retire. Others grow up and take over the tasks of organizing the communities in which they live. Profound social changes result from discoveries and inventions: the wheel, the arch, steam and gas engines, electricity, atomic power. Cyclic changes occur in the economy. Social changes follow alterations in the weather. Nations, empires, civilizations are produced by the changing life forms.

During long periods, social changes are so gradual that they are unnoticed save by the more sensitive and perceptive. At other times, social changes tumble over one another in an overwhelming revolutionary flood which sweeps away the old, yielding place to new, "lest one good custom should corrupt the world".

Changes in society beget changes in ideology. Reciprocally, changes in ideology lead to changes in social structure and function. The more rigid the social order, the more stubborn its resistance to change. By the same token, more fluid societies lend themselves more readily to changes in practice and in theory.

It is not possible to discuss ideology without some reference to the closely related problems of means and ends. As we consider our existing social establishment, in the light of unceasing social change, we must deal with goals or objectives, with practicable modifications of social form and function and with the way in which changes can be, might be, will be brought about.

One fact is obvious. Whether social change is major or minor, local or general, it shifts the social balance. Any shift in the social balance involves reactionaries, conservatives, liberals, radicals, some of whom will gain, while others will lose in the course of each social transformation. All will be concerned and involved.

Since political change involves some alteration in the balance of social forces, it behooves those who advocate and those who oppose social change to maximize acceptance and minimize opposition in order to take advantage of the gains and cut down the losses incident to all change.

For present purposes we wish to make seven notes about means and ends.

1. _Opportunists_ propose to act now and win what they can today. Never mind about tomorrow with its sequences and consequences of today's action. Sufficient for the day is the evil thereof.

2. _Pragmatists_ believe in serving their own interests, on the theory that whatever serves personal interests must have first priority. "What is good for me/us is good for the universe".

3. _Experimentalists_ are prepared to try out any suggestion which promises to achieve the desired goals. Singly and in working teams they test and try out, seeking the most effective means of reaching desired ends.

4. _Innovators_ formulate projects and test out results, checking and rechecking as they search for more effective means of achieving results.

5. _Radicals_ seek out the roots, digging, sifting, classifying, assembling their findings, announcing their conclusions and working to apply them in theory and practice to the structure and function of their communities.

6. _Revolutionists_ are in a hurry. Disillusioned with the past and the present they seek by "direct action" to create a new social order, out of whole cloth, quickly, here and now. Never mind the means, get results!

7. _Totalists_ have the whole truth, attained through reasoning, experimentation, revelation. Having learned the truth, they dedicate their energies to the propagation of the faith. Where they encounter opposition they counter it and, if necessary, annihilate it with its originators and advocates.

As a matter of practical experience, proponents of all seven approaches to social problems and social change employ a wide range of techniques from persuasion to coercion. To support their projects they advance logical arguments, elaborate half-truths, make emotional appeal; employ trickery, deceit, preferment, privilege, flattery, soft living, bribery, coercion, physical and social violence--individual and collective extermination.

Civilization as reported in history and in its current practice is based on five faulty ideological assumptions:

1. _Competitive survival struggle results in social improvement._ Survival struggle has certainly played a role in stimulating discovery, invention and the diffusion of culture traits. Its end results have always included civil and inter-group war with its unavoidable costs in destruction, dissolution and death.

2. _The effort to grab and keep, with its accompanying competition, is a chief source of social progress._ The game of grab and keep is play for children. Mature human beings should strive to create, produce, share.

3. _The accumulation of goods and services brings happiness._ At the out-set of life this may be true. But accumulation for its own sake produces the miser. Misers are not happy people. Riches yield happiness only as they are distributed. Accumulation brings many headaches, and few abiding satisfactions.

4. _Successful accumulators "have fun."_ Perhaps they do, for a time, at the expense of others on whose backs they ride and whose life blood they suck. But mature men and women do not "have fun"; they shoulder and carry their share of social responsibility.

5. _Progress can be measured by the multitude of personal possessions._ Not so. True progress for humanity consists in movement from having to doing; from the possessive to the creative; from the material toward the spiritual.

Ideologies have played a role in determining the structure and function of every civilization. As civilization grows up, matures, and declines, ideologies change with the changing times. In its early history each civilization seeks acceptance for its picture of reality and its techniques for reaching individual and social goals. As each civilization declines and disintegrates, a multitude of counselors clamors for attention to a particular formula that will prove acceptable and workable in the existing emergent circumstances.

Part III

Civilization Is Becoming Obsolete

CHAPTER TEN

WORLDWIDE REVOLUTION DISRUPTS CIVILIZATION

Every organism, mechanism or social construct reaches a point in its life cycle at which its existing apparatus must be repaired, renovated and updated or scrapped, redesigned and replaced. Today western civilization in its totality faces that dilemma.

The culture pattern variously known as European, western or modern civilization, dating from the Crusades, has existed for about a thousand years, and spread across the planet. During that millennium western civilization has passed through a life cycle similar to that of its predecessors. According to Oswald Spengler's historical perspective, a civilization passes through its life cycle in about a thousand years. If the Spenglerian assumption is in line with the course of history, western civilization should be in an advanced stage of decline and should eventually disappear as a decisive factor in world affairs.

Spengler's argument is fully and floridly presented in _The Decline of the West_. The author offers a theory of history based on the existence of an arbitrary and rather mechanical life cycle. It includes a period of gestation, rise and expansion, a period of maturity and stability and a final period of decline and dissolution. Spengler believed that western civilization is in the grip of an irreversable decline.

The Spenglerian perspective is based on the assumption of a normal pattern in the growth and decline of civilizations. The normalcy on which Spengler based his assumption was disrupted around 1750 when a series of new dynamic factors entered the stream of modern social history:

I. Mankind gained access to immense stores of energy which supplemented human energy, the energies of domesticated animals and a miniscule use of water power and air power. To these traditional energy sources the revolution in science and technology has added steam, electricity, and the energy stored in the atom.

II. These new sources of energy were harnessed and directed through mechanical and chemical agencies that greatly extended human capacity to convert nature's stored wealth into goods and services available for human consumption, and to develop a surplus of wealth and a release of manpower sufficient to build up a backlog of capital which, in its turn, produced goods and services with economic surpluses convertible into additional capital.

III. This revolution in the tempo of production and capital accumulation was parallelled by a like revolution in transportation and communication by land, water, and eventually by air and in space. Electricity played an essential part in the process by speeding communication and helping to put transportation on wheels.

IV. Building construction was also revolutionized--metals, concrete, glass and synthetics replaced wood and stone as the basic construction materials.

V. New energy sources and the new capital expanded the volume and variety of production far more rapidly than the increase in population and turned the resulting surplus into a technical apparatus that made possible mass production for a mass market.

VI. Mass production, transportation, construction and marketing ushered in an era of surplus that replaced the age of comparative scarcity with an age of rapidly increasing abundance.

Changes in the means of production play havoc with any established social pattern. The economic alteration that accompanied and followed the eighteenth and early nineteenth century transformation of western economy overturned various aspects of the western social structure:

1. Representative government made its appearance and spread widely;

2. Social services and social security, previously reserved for the elite, were provided for wider and wider circles of the population;

3. Changes in technology, advances in science, the replacement of landlords, clergymen and soldiers by businessmen and professionals, including the military, as the recognized leaders of the modern society, put social control in the hands of a new ruling bourgeois class;

4. The bourgeois revolution brought into existence two other classes: the industrial proletariat as an ally and/or an acceptable leader of the peasant masses of Europe. At the same time it enlarged the middle class to a point at which it was able to play a decisive role in the formulation and direction of social policy in industrialized communities.

5. Fragments of the industrial proletariat and the greatly enlarged middle class came together in an avowedly revolutionary movement: socialism-communism, which reached the power summit between 1910 and 1917.

6. The bourgeoisie countered with a cold war aimed to exterminate socialism-communism, using propaganda, petty reform and armed intervention as its chief agencies.

7. The high birth rate, the prolongation of life and mass education provided society with a substantial body of skilled, experienced, socially conscious, alert citizens, increasingly aware of the historical changes through which they were living and determined to intervene whenever their well-being was threatened.

8. Extension and equalization of opportunity opened the way for an informed citizenry to express itself and defend its interests.

9. Emerging planet-wide social consciousness spread an awareness that the concerns, plans and programs of any part of the human family are of vital importance to the whole of mankind.

Change is a universal force which operates in nature, in society, in man himself. At times it takes place so gradually that one day seems like another. At other times it operates with furious energy, turning things upside-down overnight. Such change, whether it takes place in nature or in society is revolutionary.

Rome's demise as a world power was followed by centuries of quietude--The Dark Ages. These in turn yielded to a period of revolutionary change that found its early expression in the voyages and discoveries that spanned the earth after 1450. Three centuries later the rebirth of western humanity expressed itself in the industrial revolution that flooded across the planet and became an early stage of the planet-wide sweep that has played havoc with nature, turned the old society upside down and presently promises to produce a new society for a reborn human race.

World-wide revolution is the predominant force in the twentieth century. Its existence and some of its consequences have become an all-embracing theme for thought and discussion. They have put into the hands of present-day humanity the ideas, experiments and experiences needed for transforming nature, rebuilding social institutions and practices and opening the way for mankind to move confidently into a future replete with intriguing and exciting possibilities.

An excellent summary of this entire field is appearing in a six volume _History of Mankind_, sponsored by the United Nations Educational, Scientific and Cultural Organization (UNESCO). Volume six of the history is titled _The Twentieth Century_. Particularly noteworthy is an Introduction of more than a hundred printed pages, Part I, _The Development and Application of Scientific Knowledge_, and Part II on _The Transformation of Societies_. Events surrounding the war of 1914-18 are correctly described as "a turning point in world history." (Vol. VI p. 11)

World revolution is one aspect of present-day society. From our present vantage point we cannot tell how far it will go or what it will do to humanity and its present habitat.

Advances in science and technology have provided mankind with a new stage on which to go through a new act and speak a new piece. What effect will they have on the institutions and practices of western civilization? Have they rendered the forms and functions of civilization obsolete? Or can western civilization adapt itself or be adapted to the very difficult situation created by the revolution through which human society is presently passing? Can western civilization be reformed to meet the new historical situation created by the great revolution or must it be rejected and replaced?

If the institutions and practices of western civilization can be adjusted to meet the demands of the new situation created by the scientific, technological, political and cultural revolution, the reformed social apparatus may function in a new day that is dawning for the human family. If reform proves to be impossible, the apparatus of western civilization must be replaced by a social structure in keeping with the requirements of the new age inaugurated by the innovations introduced into the human culture pattern by the revolution of our time.

There is widespread recognition of the need to keep the structure of a society in harmony with necessary functions and updated to the consequences of probable or possible discovery and invention. This is no mean task as western experience during recent centuries has so clearly demonstrated. Power elites of feudal Europe neither anticipated nor prepared for the consequences of the industrial revolution. The result was the smash and clatter of the American and French Revolutions (1776 and 1789) and minor revolutionary shocks through the nineteenth century. Power elites in western Europe dealt with mass production and its consequent abundance of goods and services with mass marketing, social security and other crumbs of affluence scattered among the restless masses. But when the trade winds of the scientific and technological revolution blew in the Mexican Revolution of 1910, the Chinese Revolution of 1911 and the Russian Revolution of 1917, the Romanoff dictatorship was still ordering back the tide of social change and the dominant United States oligarchy cold-shouldered the Mexican Revolution, took sixteen years to recognize officially the Russian Soviets and waited twenty-three years after 1949 before they were even on speaking terms with the Chinese Communists.

For two centuries, new ideas, institutions and practices have followed discoveries and inventions as regularly as day follows night. The consequent flood of innovations that has swept through the West and across the planet in the past two generations has made drastic social change a matter of the utmost urgency. The only open questions concern the direction of the changes, their rapidity, and the success of the social system in adapting itself to the shattering effects of newly released social forces.

Social change can come with the rush and turmoil of revolution or the studied step-by-considered-step constancy of the conscious improvement of society by society. Two powerful social forces limit gradualness. One is human impatience. The other is the rapidity with which masses of people all over the planet are being informed of the good-life potential implicit in present-day western affluence.

Impatience is emotional rather than rational. It is a compound of human urges on one hand and on the other hand of the frustrations built up in individuals and populations attracted by new wants and frustrated by barriers of custom-habit; the carefully constructed apparatus of direction, division and restriction (the State, the Church, the communication media), and the potent class forces of the counter-revolution.

In every modern community the media of mass communication are broadcasting information regarding the widening consumer prospects created by the current revolution in science and technology. In every modern community there are eager, ambitious, hopeful individuals urging their fellow workers and fellow citizens to get moving toward the promised land of peace and plenty. In every community the bureaucracy, representing the more comfortable and secure elements of the population, is asking the less well placed class groups to "take it easy," take "one step at a time," and remember that "Rome was not built in a day."

Conservatives, urging law and order under the status quo, have reason on their side. The movement of a technologically oriented community from monopoly capitalism into socialism-communism is without historical precedent and therefore largely experimental. Plans are tentative; there are shortages of materials and particularly of skills based on experience. Costly mistakes are made leading to delay until they can be corrected. The counter-revolution, abundantly financed by the forces of reaction, operates constantly, in critical situations almost always through the military, to preserve the "law and order" which are the prime forces behind its wealth and its power. In an untrod, untested area ignorance is a blank wall until it is pierced by ingenuity and innovation. There are many ways to miss a defined objective and only a few ways to reach it.

Cautious, experienced people, living comfortably, are inclined to let well enough alone. Restless, hopeful idealists are eager to reject, modify, improvise and replace.

Conservatives try to preserve both the structure and the traditional activities of a community on the plea that a bird in the hand is worth two in the bush. Liberals (moderates) would preserve the structure but bring its activities up to date. Radicals would scrap the old and replace it with a new structure and new activities geared to the new possibilities and the new requirements.

Survival wars from 1914 to 1945 marked not only the end of Britain's planetary domination but the termination of Europe's planetary regency. The events of the period also loosened the bonds that had held western civilization together.

A social structure which includes imperial nuclei and colonial dependencies is constantly threatened by colonial unrest and revolt. Colonial revolt, endemic in every civilization, became epidemic after 1943. The path to independence had been blazed by North and South American colonials. It was followed after 1943 by the inhabitants of British, French, Dutch, Spanish and Portuguese colonies in Asia and Africa. The slogan of the independence movement was "self-determination."

Before self-determination can operate there must be a "self" capable of making decisions and carrying them into practice. Identification of the "self," or "nationhood" as it was called in this era, involved bitter domestic struggle, internal reorganization and consolidation. The process was typified in the British Colonies of North America between 1770 and 1789 which produced the United States of North America. Asians and Africans who gained their independence after 1945 faced a double problem: the establishment of nationhood, and regional consolidation.

The British colonies in North America won their independence as a loose confederation of sovereign states. After war's-end in 1783, they were able to form a regional federation: the United States of North America. Despite their efforts, they were unable to include Canada, which was under strong French influence. British colonials in Asia and Africa after 1943 were less fortunate. After winning their independence as Indians or Burmese, they were unable to take the next step and organize a United States of Southern Asia.

The Bandung Conference (in 1955) of representatives from Asia and African countries failed to realize the hopes of its conveners. After prolonged deliberations it was able to go no further than the "five principles" of self-determination and co-existence, under which the independence of each participating nation was reaffirmed and each agreed not to interfere in the internal affairs of its neighbors. The conference adjourned without establishing any form of organization or making provision for further meetings.

After the Cuban Revolution in 1959, hopes ran high for the establishment of a bloc of Latin American States, led by the elected president of Brazil, Joao Goulart, that might act as a bulwark against further "yankee aggression" in Latin America. In 1962 a military coup overthrew Goulart, drove him into exile, jailed and disenfranchised his supporters and lined up Brazil, largest and most populous nation of Latin America, solidly behind the Monroe Doctrine of United States supremacy in the Americas, implemented by Washington's burgeoning "Pentagon diplomacy."

African developments were even less fruitful than those in Asia and Latin America. Asians and Latin Americans generally had reached the level of self-identification necessary for statehood and national self-determination. Large parts of Africa living at pre-national levels of tribal identification, devoted their energies to the realization of nationhood. Their constitutions announced their frontiers and proclaimed their sovereignty, but inter-tribal rivalries and personal ambitions turned each new nation into a battle field for prestige and authority, with the military often making the final decisions.

Asians and Africans had won telling victories in their struggle to drive out their former imperial masters. When it came to the affirmative task of organizing responsible regional federations, their failure was dismal. Asia and Africa were regionally disunited. Former colonial people, still monitored by alien representatives of monopoly capitalism, were fragmented by the self-determination struggle into theoretically sovereign nations many of which lacked the experience and the local expertise which are the indispensible prerequisites of self-determination and of fruitful regional federation.

Another aspect of the world revolution produced more tangible results. The latter half of the nineteenth century brought into being a grass-roots movement of peoples demanding everything from petty reforms of administrative machinery to planned revolutionary transformations of the established monopoly capitalist structure. This movement crystallized as an anti-capitalist, anti-imperialist, pro-socialist national and international struggle. From the publication of the Communist Manifesto in 1848 until the beginnings of socialist construction in 1917, it was a movement of protest against poverty, unemployment, war, waste, inequality, exploitation. After 1917 it became a movement to end imperialism, war and exploitation and substitute a planet-wide social system that would

give every human being a chance to play a meaningful part in utilizing nature, improving society and creating socialist women and men, capable of cooperating for the general welfare of mankind.

The Enlightenment had diminished ignorance, spread information and brought elementary education to the masses. Self-government had given people confidence in their ability to make the phrase "we, the people" a working formula for social improvement. The Industrial Revolution had converted millions of superstitious, frustrated peasants into craftsmen and professionals confident in their ability to use nature effectively, to advance their own interests and to improve society. These and secondary social forces laid the foundation for the social revolution that mushroomed across the planet during the opening years of the present century. The occasion for the revolution was four years of destructive war (1914-18) during which two rival gangs of imperialists led their dupes and victims to shed blood and destroy property in a struggle to decide which band of plunderers should exploit natural resources and labor power for its own advantage.

General war presented twentieth century man with a dilemma, an opportunity and a choice. Should he continue the grab-and-keep society that had flowered in Europe and elsewhere during the previous century, with its consequent poverty for the many, unemployment, exploitation and the power-struggle of the empires, or make a revolutionary change? As the stalemated war of 1914-18 with its frightful destruction of life and property continued year after year, the determination in favor of revolutionary change grew and crystalized.

David Lloyd George, Britain's Prime Minister, put the situation into words presented to the Versailles Peace Conference on March 25, 1919: "The whole of Europe is filled with the spirit of revolution.... The whole existing order in its political, social and economic aspects is questioned by the masses of the population from one end of Europe to the other." (Memorandum of Lloyd George to the Peace Conference, 1922 Cmd. 1614.)

Lloyd George proved a true prophet. Mass discontent and the spirit of revolt spread rapidly. Soldiers at the front mutinied. The armies of Tsarist Russia dissolved as the privates and officers alike returned to their homes, determined to stop war, end Romanoff tyranny and build a better life for the Russian people. To gain these results they replaced the Tsarist absolutism by local, regional and nationally elected people's Soviets.

Before the War began in July, 1914, the socialist parties of Europe were divided between moderates who were willing to accept welfare-state reforms and allow the grab-and-keep structure of monopoly capitalism to continue in authority, and revolutionaries who demanded the abolition of capitalist imperialism and its replacement by socialism. European reformist socialists shouldered arms in July, 1914, and shot down their comrades across the frontiers. European revolutionary socialists, led by Lenin in Russia, Liebknecht in Germany and Jaures in France gained in strength as the war proceeded. Liebknecht and Jaures were assassinated. Lenin lived in exile until he went back to Russia and led the revolutionary forces that liquidated Tsarism in the closing months of 1917.

For the first time in the history of western civilization, a proletarian revolutionary force had established its authority over one of the most extensive and populous nations on the planet. For the first time a responsible government threatened to abandon the fundamental assumptions and principles of western civilization. Could this new "subversive" government survive in the merciless free-for-all in which western man was engaged? Could it not only survive but build up a social system which contradicted and condemned the underlying precepts of the West? In a word, could socialism be built in one country, surrounded by civilized monopoly capitalist powers?

Historical events have answered these questions in the affirmative. At this writing the Soviet Government has survived continuously for more than half a century. During that period it has transformed economically, politically and culturally backward portions of Europe and Asia into one of the most advanced areas on the planet.

Monopoly capitalist society assumes that productivity, wealth and fire-power, effectively co-ordinated under competent authority, will guarantee survival and perhaps win supremacy. Beginning its life in one of the backward areas of the planet, the Soviet Union has met all of these tests by converting itself into a first class world power. Its productivity is second only to that of the United States. In wealth it stands second among the nations. Its fire power has carried the Soviet Union to victory in civil and international war. Its ruling oligarchy--the Soviet Communist Party--has maintained its authority through the stresses of domestic strife and major international conflict. In terms accepted by the existing free-for-all West, the Soviet Union is an established world power.

Through the first three decades of its existence the Soviet Union was the only government avowedly engaged in building a socialist rival to monopoly capitalism and determined to replace capitalism as the dominant planet-wide social system. After 1943 it was joined by a dozen other European, Asian and American countries, dedicated like the Soviet Union to the task of building socialism. In addition to these dozen countries, several others such as India, Burma, Indonesia, Ceylon, Ghana and Libya, declared their intention of building socialism by legal, and gradual stages. Almost all of the countries busied with socialist construction were in East Europe and Asia. The countries building toward socialism were more widely scattered, but by and large they were Eurasian.

From 1919 to 1943 socialist construction was directed, at least in theory, by the Communist International with headquarters in Moscow--the "general staff of the World Revolution". Under war pressure the Communist International was dissolved in 1943. No equally inclusive international socialist authority has since been established.

World revolution is not confined to the Old World of Africa--Asia--Europe. It is widely prevalent in the Americas where it can claim a certain priority. Outstanding among colonial uprisings of modern times was the rebellion of the British colonies of North America, from 1776 to 1783. Even more widespread was the rebellion of the Spanish, Portuguese and French colonies of Central and South America which spanned most of the nineteenth century and extended on into the twentieth. Russian Bolsheviks held the headlines on revolutionary activity from 1917 to 1943 but it should not be forgotten that one of the most prolonged and thorough-going revolutions of the present century gripped Mexico from 1910 to 1917. At the beginning of this period Mexico was a political semi-dependency of the United States. It was semi-feudal, with a large population of Amerindians and a pre-industrial economy. Foreign capitalists and entrepreneurs, including those from the United States, played a leading role in the country.

Mexico's 1910-1917 revolution was prolonged. It was also radical, up-rooting many aspects of its old social pattern, speeding up the bourgeois revolution, and preparing the way for a Mexican form of populism and a Mexican foretaste of a proletarian revolution, initiated, led and manned by Mexicans.

Mexico's revolution resulted in two important developments that have played a major role in socialist construction. Both contributions appeared in the Mexican Constitution of 1917, adopted eight months before the Russian Bolsheviks seized power in November.

The first contribution was a chapter on the rights of labor. Bourgeois constitutions had emphasized "civil" rights: the right to vote, trial by jury; freedom of speech, press, assembly; the right to go and come; the right to compensation when private property is taken for public purposes; the right to modify or replace the existing constitution. The Mexican Constitution of 1917 contained a detailed specification of the rights of labor, including proper working conditions, adequate compensation, education, health, social security. The Constitution also contained a crucial property provision: the natural resources of Mexico are the property of the Mexican people and cannot be alienated.

This second provision was inserted in the Mexican Constitution at a time when extensive concessions to develop Mexican resources had been handed out to North American and European capitalists. It was inserted in part because the social ownership and sharing of land and other natural resources has been one of the basic demands of the Socialist--Communist--Anarchist movements from their inception.

Monopoly capitalism depends primarily on the private ownership of the means of production, including natural resources. Capitalist opposition to socialism is not only a matter of theory. In practice the private ownership of natural resources enables the owner to charge rent to any and all users. Natural resources are sharply limited and usually localized. As population grows, demand for living space is intensified and rents rise. It is not an accident that the stretches of "black earth", of copper, iron, petroleum, the precious metals, and the land occupied by Mexico City, London, New York and other population centers, poured a stream of wealth into the treasuries and augmented the power of their owners.

Effects of the insertion into the Mexican Constitution of the provision making natural resources "the property of the Mexican people" have been far-reaching. One socialist country after another has written into its constitution a provision that its natural wealth is the inalienable heritage of its people. This provision has two important results: it establishes natural resources as part of the public sector of the national economy; it also limits the possibility of handing out concessions to foreign exploiters, private or public.

During the opening years of the present century socialist parties and other forward looking organizations were demanding social ownership of natural resources, public utilities and other social means of production as the next logical step toward a more equitable distribution of wealth and income. There was a possibility that such revolutionary changes could be made under

bourgeois law by exercising the right of eminent domain, upon the payment of reasonable compensation to former owners. At least in theory, the democratic majority in any bourgeois country could put an end to private enterprise capitalism and establish socialism by a constitutional amendment, legislative enactment, and a caretaker political apparatus to administer and supervise the transition.

Socialist parties were making "reformist" demands for better working and living conditions and "revolutionary" demands for changes in property and class relationships. Increased productivity and growing affluence made it possible for a progressive bourgeois state to meet the reformist demands, establishing a welfare state legally and constitutionally.

Under the bourgeois constitutions generally existing at the beginning of the present century, a popular majority could adopt necessary constitutional amendments, pass the necessary enabling laws and launch a program of socialist construction.

Such a program was part of the thinking of European and other socialist leaders during the opening years of the present century. Inspired and encouraged by the successes of socialist construction in the Soviet Union and other socialist countries, middle of the road socialists proposed to move gradually and legally from capitalism to socialism.

Conservative socialists who were members of coalition governments in parts of Eurasia, described such welfare states as victories for socialism, despite the fact that they left the essentials of state power in bourgeois hands.

Between 1920 and 1950 the western world found itself in this essentially revolutionary situation: the world-wide revolution in science and technology had opened the way for the human race to turn its back on the limitations and inadequacies of civilization and advance to a new level of culture and human opportunity.

The impact of this revolutionary situation expressed itself at several levels:

1. Much of west and central Europe, important parts of North America, much of Australasia, important parts of East Asia and fringes of Africa had at least two generations of experience with some degree of affluence.

2. Scientifically and technologically maturing societies that had opted for socialism constitutionally and legally were engaged officially in socialist construction. These countries and peoples were located chiefly in Eurasia.

3. Former colonial and client dependencies of the nineteenth century empires struggling for self-determination and statehood were entering a stage of affluence. These countries and peoples were mainly Afro-Asian. Some of them were located in Latin America.

4. Countries and peoples still under the political, economic and cultural umbrella of the formerly dominant empires were at different stages in the completion of the bourgeois revolution. Their ruling oligarchies--fascist or neo-fascist--were stubborn defenders of remnants and fragments of the nineteenth century bourgeois culture. Their stronghold was the Atlantic Community.

During the cold war years following 1945 each of these groups was undergoing the drastic social changes incident to the worldwide revolution of the period. Meanwhile mini-wars, civil and international, were fought in the Americas, Africa and Asia. By common consent conventional weapons were used and atomic weapons were kept in mothballs.

These experiences were highlighted in British Guyana and Cuba. British Guyana was a Crown Colony, with a London-appointed Governor and a small occupying force of British troops with an elected legislative assembly and a considerable measure of home rule.

Democratic socialists Cheddi and Janet Jagan helped to organize the Peoples Progressive Party of British Guyana. Twice Jagan won a popular electoral majority and was established as Prime Minister of the British Colony. His two periods of administrative responsibility were badgered and hectored by every reactionary force that could be mobilized inside and outside British Guyana, from the British appointed governor to the domestic and foreign business interests and the urban trade unions. Before a third election British and American governments, business and labor interests got together. Money was funnelled into the country through trade union connections. Protests were staged. Riots were organized. The electoral system under which the Peoples Progressive Party had won its victories was altered in London and Jagan was replaced by a system of proportional representation under which the P.P.P. was defeated and a new regime inaugurated.

Throughout the struggle the Peoples Progressive Party had insisted upon winning popular majorities as a basis for establishing socialism in the colony by democratic methods and legal means. Imperialist reactionaries from Britain's Prime Minister and the President of the United States to the A.F. of L.-C.I.O. retorted: "No you don't", and backed up their veto with money, riots and guns. As a consequence of this counter-revolutionary conspiracy, the Peoples Progressive Party was forced out of office and an

administration favorable to British, United States and native Guyanese capital was substituted.

A revolt was led by Fidel Castro and his associates against the Washington-backed Batista regime in Havana, Cuba. When Cuba was seized by United States armed forces during the Spanish-American War of 1898 much of the island was in the hands of anti-Spanish rebels who were demanding independence of Spain's imperialist rule. Between 1898 and 1959 seven million Cubans enjoyed technical independence. Actually the island, located only 90 miles from Florida, was economically a United States colony and politically a Washington dependency, with United States armed forces stationed in the Guantanamo Bay Naval Base. After seizing power in 1959, Castro went to the United States seeking a market for Cuba's chief export, sugar; a source of food supplies not produced in Cuba, and the manufactures necessary for the economic and social life of an essentially agricultural island.

Batista had emptied the Cuban treasury before he fled the island in 1959. Castro therefore needed loans to meet the immediate needs of the Cuban economy. He also sought to continue arrangements under which the chief market of Cuban sugar was in the United States. Castro was turned down cold. All doors, political and economic, were closed to him. As a revolutionary with left leanings he got the cold shoulder in New York as well as in Washington.

Faced by economic bankruptcy and political hostility in the West, Castro turned to the Soviet Union and other socialist countries. They bought his sugar on long term contracts; provided him with manufactures; extended loans. Under these economic and political conditions Castro's Cuba had no choice. Of necessity it became a part of the socialist bloc, took over the property of Americans and other foreign investors, planned its economy and announced socialist goals, thus making the island of Cuba the only outpost of socialist construction in the Americas.

Socialists exercised authority in one country from 1917 until 1943. Thereafter the land area devoted to building socialism steadily increased. By the time China threw off imperialist leading strings and opted for socialist construction in 1949, a third of mankind was living on territory under nominally socialist control. Most of this territory was Asian. An important part lay in eastern Europe. Until 1917, effective control of the planet was held by a half-dozen empires headed by the British, who exercised authority over a quarter of the human race living on a quarter of the earth's land area. After 1917 socialism mushroomed as a potential competing social system, challenging monopoly capitalism in Europe, replacing it in large sections of Asia and even threatening to destroy the foundations of western civilization.

"Action and reaction are equal and opposite" is an axiom of physical science which is also applicable in the social field. The sweep of world revolution and the growth of socialism-communism after 1945 called into being an opposing force of counter-revolution. The greater the successes of socialism, the more ardent and assiduous was the counter drive, aimed to modify, negate and, if possible, to destroy the revolution and restore the social system of imperialism-colonialism built by monopoly capitalism to its prerevolutionary status of planet-wide ascendancy.

Winston Churchill personified this counter revolutionary drive. It was he who proposed to "strangle the Bolshevik infant in its cradle". The Peace Conferees, meeting in Versailles, heeded Lloyd George's warning of March, 1919, and turned their attention to the urgent task of strangling socialism. Revolutionary beginnings in central Europe were stamped out. Funds were raised and arms were supplied to the anti-Bolshevik forces in European Russia and Siberia. At the height of the counter-Bolshevik crusade there were sixteen armies in Soviet Russia with the common aim of destroying Bolshevism and restoring the country to its previous status as one of the pillars of western civilization. This military phase of the counter-revolution lasted for four years. It failed. By 1922 the Soviet leaders were able to turn their energies to the task of rebuilding a devastated country while they planned and organized a socialist society.

Counter revolutionary forces failed to overthrow the Bolsheviks during the civil war of 1918-1921. They failed again when the Nazi armies swarmed into the Soviet Union in June, 1941. The years from 1941 to 1945 cost the Russians perhaps twenty million dead, six million dwelling units and immense damage to their economy and their social organization. When the war ended, responsible observers in the West predicted that if the Soviet power survived, decades must elapse before the country was back on its feet.

War destruction had played havoc with much of Europe. The Soviet Union was especially hard hit. Under the Marshall Plan billions of dollars of United States aid were poured into Britain, France, Belgium and West Germany. At the same time, the Soviet request for United States loans was refused categorically by President Truman. Alone and unaided the Soviet People repaired the extensive damage inflicted by the 1914-18 war, the Russian Civil War and the 1941 military invasion from the West, and went on with the task of socialist construction which the war had interrupted. Within five years--by 1950--the Bolsheviks were again on their feet, going strong, extending substantial aid to China and other professedly socialist countries and playing a crucial part in the

struggle for disarmament and peace.

At war's end in 1918 the Soviet Union was struggling to draw the first breath of socialist life. Three decades later, after expelling the Nazis, the Soviet Union was a sturdy giant of a nation standing head and shoulders above its nearest European competitors. During the interval, Soviet Russia was attacked, denounced, boycotted, encircled, invaded, ostracized as the leading figure in "an international communist conspiracy". When the policy of intervention and invasion failed, the counter-revolutionaries turned to cold war.

Whether or not there was a "communist conspiracy" to overthrow capitalism, there was certainly an organized capitalist conspiracy to overthrow socialism-communism. Representatives of the chief capitalist empires made repeated attempts to subsidize anti-Bolshevik forces in the Soviet Union. From 1918 to 1921 and from 1941 to 1945 they used every available means, including military invasion, to overthrow the Soviet Union and stamp out the beginnings of socialist construction in Central and East Europe.

From the military invasions of the Soviet Union immediately following war's end in 1918, western spokesmen, led by President Wilson, did their utmost to subsidize counter-revolution inside the Soviet Union, to send American and other armed forces into the country, to villify, denounce, boycott and handicap the Soviet Government. Sixteen years passed (1917-1933) before Washington extended diplomatic recognition to the Union of Soviet Socialist Republics. President Wilson did his best to keep the Soviet Union and Mexico, both under the control of revolutionary governments, out of the League of Nations.

After the 1936-1945 war Washington played the same role with regard to China, refusing for twenty-two years to recognize Socialist China diplomatically, leading the drive in the United Nations to exclude China from membership, although the United Nations Charter specified that China should be one of the permanent members of the Security Council. Secretary of State John Foster Dulles justified the policy of blacklisting and boycotting China by declaring that there was no such nation as China on the Asian mainland, only 650 million slaves, and that Chiang Kai Shek's rump government on the island of Formosa was the "China" specified in the U.N. Charter.

Under the Truman Doctrine announced immediately after war's end in 1945, the United States refused to tolerate any extension of socialism, whether by revolution from within or by invasion from without any country. This doctrine was applied to Greece, to Iran, to Guatemala, to Santo Domingo, to Chile. During the Korean War, which began in June, 1950, one of President Truman's first directives ordered the United States Seventh (Pacific) Fleet to occupy the waters about Taiwan (Formosa), which was historically part of China.

In order to implement this anti-communist policy, Washington used a newly created international secret service, the Central Intelligence Agency or C.I.A., gave it an initial appropriation of $100,000,000 and turned it loose to spy, corrupt, undermine and overthrow governments that refused to accept or follow Washington's leadership.

Between 1815 and 1914 the planet enjoyed a measure of peace and order. In the three decades between 1914 and 1945, two general wars, a plague of lesser wars, a general economic depression and a hurricane of revolutions scourged the planet. Meanwhile, the revolution in science and technology and its products penetrated almost every crack and cranny of human society.

Had the changes incidental to these rapid transformations been carefully planned and supervised, the disturbances in the ecology and the shocks to human society would have been less disturbing and upsetting. In the absence of any planet-wide authority, there could be neither general planning nor general supervision. There were warnings aplenty from liberals and radicals who were attempting to keep the situation in perspective, but such utterances failed to reach the great bulk of mankind.

Disturbing and upsetting products of the revolution in science and technology--the harnessing of steam, the internal combustion engine, the air plane, electronics, plastics, and the release of atomic energy--were used to mutilate, destroy and kill. During the half century that began in 1910, tens of millions were mobilized, fed, taught, armed, and led to the slaughter fields by the masters of western civilization in two long orgies of wholesale destruction and mass murder--1914-18 and 1936-1945. Energies and techniques that might have brought peace and plenty to the human family were used to set fire storms that incinerated property while it degraded humanity to the horrors of mass suicide.

In a very real sense these ghoulish results were the logical outcome of competitive nationalism armed and equipped with the technology produced during the two centuries of the great revolution. War is the most carefully planned, most elaborate and most intensive form of competition--the decisive climax of a life and death struggle for survival.

The great revolution had put into human hands almost infinite possibilities for utilizing nature and improving the social environment. With foresight, careful planning and skillful manipulation of forces and trends the cultivatable portions of the planetary land mass might have been turned into a garden of unending plenty dotted with marvelous city centers of light and learning.

In order to achieve such results it would have been necessary for the human family to coordinate its efforts around an agreed division of labor, share the goods and services produced and move from one level of affluence to a level of abundance.

Instead of joint efforts to achieve abundance and security, the most prosperous and most highly developed centers of western civilization consolidated their authority in sovereign states, surrounded by forbidding frontiers, armed them with the most destructive agencies that human imagination and ingenuity could devise, schooled the citizens of each nation in the suicidal formula: "might makes right; every nation for itself and woe betide the laggard and the loser."

The logical ideology of such a formula was egomania, suspicion, fear and hatred. Its outcome was a competitive life and death struggle for wealth and power, with the nation or a bloc of nations as the units of competition. The struggle at its highest level involved occasional local wars and periodical general wars like those of 1914-18 and 1936-45.

Before the great revolution such struggles were waged chiefly with weapons wielded by human muscle power, supplemented with whatever animal power was available. Equipped with the products of the technological revolution, the struggle became a war of machines, powered by the energies of nature. Retail killing and destruction was replaced by mass murder and wholesale annihilation.

Given the assumptions, the practices and the institutions of civilization, the catastrophic losses of the present century could have been foretold and, with competent leadership and disciplined followership, could have been averted. But leadership was self-serving, shortsighted and for the most part untrained, while followership was split up into national and local segments, each following the suicidal doctrine of every nation for itself and the devil take the laggards.

Socialists-communists around the earth have spent a wealth of time and energy during several generations predicting the present revolutionary upset and preparing for it. They have been derided, denounced and persecuted for their efforts. Despite bitter opposition they have prepared for change, they accept change, they welcome it, because in change they see the only path to improvement and betterment.

They are learning to live with change and even to welcome it because the time of troubles through which their society is passing is warning them of the dangers they face. At the same time they are learning, bit by bit, of the spectacular achievements of the billion human beings in socialist-communist countries.

The majority of mankind has been unprepared for revolutionary change. When change came they resented it, maybe resisted it at the outset.

Those who have a vested interest in capitalist imperialism--the real backbone of the counter-revolution--join and support counter-revolutionary organizations and take part in counter-revolutionary activities.

Planners and organizers of the counter-revolution have the bourgeois state generally on their side and enjoy the backing of the bourgeois establishment, its organizations and its facilities. Since their object is defense, they have no constructive program. Instead they stumble, fumble and bungle as their system flounders into one disastrous crisis after another.

CHAPTER ELEVEN

WESTERN CIVILIZATION ATTEMPTS SUICIDE (1914-1945)

Each bit of handiwork, each artifact, tool and machine is an expression of man's wish and will. Each transcends nature and is an affirmation that takes its place in the vast storehouse of human culture.

Cities, the building blocks of civilization, not only transcend nature; they replace her. Up to a certain point man lived more or less consciously as a part of nature. Bit by bit and step by step man shifted from the stream, the glade, the tree and the cave to the hut, the village, the city, the nation, the empire, the civilization.

Early in this study I wrote of civilization as an experiment: an aspiration, a creative urge, a concept, a purpose, a unity of thought and act, a conscious sequence of related actions, a construct of multiplying complexity.

These terms, by and large, are constructive and, to a degree, creative. I might have written a parallel series of words associated with destructiviness. In every social situation construction and destruction are Siamese twins. One does not appear without the other. The same forces, the same implements, the same institutions and practices that construct can be used to destroy.

Through ages, men learned how to establish, maintain and perpetuate community and organize society. At every stage of the building process it was necessary to check, to question, to evaluate, unlearn, tear down, make a new start. Pushing up and tearing or wearing down is implicit in nature. It is an essential aspect of human society.

Each human being is a living example of production and destruction. Each generation repeats the affirmation, modifying it little or much in accord with circumstances.

Modification means purposeful change--partially or wholly abandoning the old and replacing it with something new. In the course of these changes the conservative elements in man and in society, voluntarily or under coercion, give up the old and learn how to use the new. The learning process is always more or less painful, especially to people past middle age.

The world-wide revolution resulted from a long-continued related series of affirmations, punctuated and interrupted by contradictions and conflicts.

Trends inherent in the world-wide revolution of 1750-1970 suggest a cycle that reached its high point at the turn of the century and began its downward course around 1900. The chief European empires were jointly and severally involved in the bitter struggle for survival and supremacy from 1870 onward. Until the outbreak of war in 1914, events followed an irregular course marked by the shifting relationships of Italy and the increased pressure from Germany for a showdown. The showdown was the war of 1914-18, continued in a second phase from 1936 to 1945.

Immediate political results of the showdown were victory for one side and defeat for the other side. Economic, sociological and ideological consequences were profound and far reaching. We noted some of them in the previous chapter.

UNESCO's _History of Mankind_ devotes its final volume six to the twentieth century. The authors note that the chief European powers emerged from the general war of 1914-18 "weakened in every way: in men and wealth, in the balance of their economies and the stability of their political structure and above all in their relation to other powers rising or beginning to rise in other parts of the world". (Vol. VI p. 10.)

Aside from the victory-defeat relationship which led to political realignments during the post-war years, the essence of the experience is to be found in the UNESCO phrase "weakened in every way". Another way of describing the experience is to state that the participants in this four year blood bath were "bled white."

It is easy to be specific. In the course of the war sixty million people were mobilized. Most of these people stopped what they had been doing until mid-summer of 1914 and began an entirely new line of activity. Up to that point most of them had been living with their families, in their neighborhoods, going through a daily routine that included household cares, production or service work, the conduct of neighborhood affairs, the maintenance of normal livelihood activities, the upbringing of the new generation and perhaps most important of all, adaptation to a rapidly changing social situation.

The changes that took place in the summer of 1914 involved an almost complete reversal of purpose and direction. Up to that point Europeans were devoting a considerable proportion of their time to production and the maintenance of the normal life routine. At that point they left their homes, exchanged ordinary clothes for uniforms, laid down the implements of peace, picked up the weapons of war and prepared, under very expert leadership and direction, a series of mass movements designed to disrupt the ordinary life routine of other human beings on the other side of lines drawn on a map, but having little relation to customary life activity and even less to geography.

Execution of this purpose involved a mass movement from the home territory into that occupied by the "enemy". If the enemy resisted he must be forced to do the will of the invaders. Instead of cooperating in a joint effort to maintain and improve the general welfare, uniformed, armed, expertly-led masses began beating up each other, until one side gave in and cried "enough."

Plans for war had been drawn and redrawn for years, for decades. Elaborate preparations had been made. Destructive weapons had been designed and built. Transport had been provided, food stored. Defensive preparations had also been made in the form of fortifications so placed as to obstruct or prevent "the enemy" from crossing the "frontier".

When sport-lovers go from home for a day to play a competition in another city or province, they go, play the game and then go back home to continue the ordinary life routine. In the case of the project we are now considering they left home in July, 1914 and returned months or years later. Many never got back home because they were killed in battle or died of wounds; many were "missing"; they disappeared.

If casualties in the 1914-18 war had been numbered in dozens, or scores or even in hundreds, the communities from which they came could have gone on without them--handicapped perhaps but not seriously disrupted. But when they were numbered in thousands and tens of thousands it was a quite different story. Actually, they were numbered in millions.

Mobilized to carry on the war were 42.2 million on the Allied side. On the side of the Central Powers, 22.8 millions. The total: 65 million. 12 million of those mobilized were Russian, 11 million were Germans, 8.4 million were French, 8 million were from the British Empire. From Austro-Hungary came 7.8 million, from Italy, 5.6 million. Turkey furnished 2.9 million, Bulgaria 1.2 million; 4.4 million came from the United States; 0.8 million from Japan. Lesser numbers came from other countries.

Except for Spain, the largest contributions of war conscripts came from the countries with the largest populations. With the exception of Spain, all of the great powers of Europe provided the "cannon fodder"; the human beings which Europe's "great powers" assembled to take part in this profligate orgy of mass murder which went on for more than four years, from July 1914 until November 1918.

Body count reports and "estimates" give the total number of human beings murdered in the four year period as 8,538,315. (The legal definition of "murder" is killing, not accidentally but with the intention of taking life.)

This figure of 8.5 million murdered human adults, most of them in the prime of life, refers to the murdered bodies that were recovered and disposed of. In addition there were "prisoners" and "missing."

As the 1914-18 war proceeded it became less a series of combats between human beings; more and more it was a war of machines such as battleships, tanks, big guns and by war's end, of airplanes. Human beings drew up the plans, made the blueprints, shifted the gears, pushed the buttons. Their efforts were supplemented and multiplied by the killing power of physics, chemistry and mechanics brought to the task of wholesale murder, which produced 8.5 million dead human bodies.

"Prisoners and missing" accounted for 7,750,000 additional human beings. Many of them were torn to shreds and smithereens by the gigantic concentration of mechanical and explosive power, designed, constructed and transported to the European battlefields for the express purpose of carrying on this month-long and year-long collective endeavor to take as much life as possible and destroy as much property as possible while war declarations authorized and legalized mass murder and wholesale destruction.

Not all victims of the hideous 1914-18 blood bath were killed. "Wound casualties" numbered 12.8 million among the Allies; 8.4 million among the boys, young men and adults mobilized by the Central Powers. Some of the wounded were crippled for life. Some were less severely injured, but all 22.2 million were more or less severely handicapped when they stood up to face the rigors of civilian life at war's end. All were denied the possibility of living normal, productive, creative, satisfying lives.

Wars are fought on battlefields. In the war of 1914-18 many of the battlefields included villages, towns, cities. These complex institutions, occupied by men, women and children were smashed and burned wholesale.

The figures which I have used in listing the 1914-18 war losses were compiled by the United States War Department. They are more or less accurate, but they underline the fact that for years on end the centers of western civilization concentrated their energies and devoted every means at their disposal to cripple or destroy fellow human beings and their habitations.

When we read of the destruction of the Roman Empire we console and perhaps try to fool ourselves by saying that the immense network of civilization which the Romans and their Greek associates spread across Eurasia and Africa during the historical period that began about 700 B.C. was destroyed by hordes of migrating "barbarians." When we turn to our own civilization, however, there are no barbarian hordes to take the blame. The wholesale destruction which took place in Europe from 1914 to 1918 and which was repeated and multiplied during the wars of 1936-1945 was carried on officially by spokesmen for the most advanced, most highly developed, most civilized countries of the western world.

We have been using the word "murder" to describe the wholesale slaughter of Europeans by Europeans that took place from 1914 to 1918 and from 1936 to 1945. The word "murder" is inaccurate. The Europeans who carried on the wholesale destruction and mass murder during the two most general wars of modern times were committing murder in one sense. In quite another sense they were engaged in collective suicide. Europeans were blotting out the life and well-being of fellow Europeans. When the process came to a temporary halt in 1945 every European participant in the struggle was weaker in human potential and poorer in economic means than they were when the war began.

Arnold Toynbee describes the entire episode as the "down grading" of Europe. He might have added two words and reported "the down grading of Europe by Europeans", as a glaring example of large scale, long continued, deliberate self-destruction.

Fundamental social changes were bound to follow the revolutionary technical transformations that took place during the world-wide revolution of 1750-1970. Changes may be made in various ways. Some are slow and relatively painless, particularly when they extend over generations; other changes are so rapid that they are agonizingly painful. Involuntary changes, made under outside pressure are almost always painful. World-wide revolution, under the best of conditions, promises to be painful. When it comes from alien sources, and is under forced pressure, the costs are almost sure to be excessively high.

This brings us face to face with one of the most important problems facing mankind at the present moment. Given the worldwide revolution of the past two centuries, what changes--political, economic, sociological and ideological--must be made to prepare the way for the new society and shift the family from the old homestead to the new apartment with a minimum of pain and a maximum of satisfaction?

CHAPTER TWELVE

TALKING PEACE AND WAGING WAR

Blatant contradictions disorganized human life after war's end in 1945. In the crucial area of war and peace three groups were bidding for attention: dedicated peace partisans (peacenicks); nationalist enthusiasts waging wars of liberation; and massive semi-official and official nationalistic groups busily preparing for the next big war.

Occasionally these groups joined hands on "hot" issues. Generally they were far apart. Often they were in active opposition.

Dedicated peace advocates were an important factor in this post-war period. They had been vocal and influential in July, 1914 immediately before the outbreak of the first general war. They had continued to play an active role between the first and second general wars. In the autumn of 1972 the World Peace Council called together a peace assembly in Moscow representing significant elements from 143 countries. The largest single element in the World Peace Council was the Socialist bloc, headed by the Soviet Union.

Peace advocates mobilized wide public support for the "no more war" movement that developed during the closing months of the 1914-18 war; for the Briand-Kellogg Treaty of 1928 which renounced war as an instrument of policy; for the effort to secure general disarmament that resulted in the General Disarmament Conference of 1933 and for the United Nations Charter of 1945.

Official declarations in favor of disarmament and peace had been paralleled by the organization of unofficial peace committees and societies in western Europe, in the Americas and in the socialist countries.

Peace efforts had been strengthened by the outbreak of local wars--between India and Pakistan, between Israel and the Arab League; by wars of independence and liberation in Korea, Vietnam, Cambodia, North Africa.

Much of the public backing for the peacenicks came from student groups in official and private high schools, colleges and universities.

Nationalist liberation movements were active in settled communities such as Ireland and Canada's Province of Quebec. There were less established movements in newly liberated restless ex-colonies and remaining colonies of the chief European empires, of Japan and of the United States. The widely advertised World Peace Council turned more and more from general advocacy of peace, such as the Stockholm Peace Petition, to the support of liberation movements among colonials and supressed minor nationalities.

Preparations for another general war were expanded and intensified as the competitive struggle for oil and other natural resources mounted. By the end of the 1960's total arms expenditures of the chief powers were running at $200 billion per year. In 1973 the total reached $225 billion.

There was much general talk about peace, but the most insistent note sounded for a high level of spending on armaments. Britain's Prime Minister Heath voiced a sentiment vigorously promulgated by every representative of national security "British interests come first".

Confusion was heightened by the presence of men who faced all three ways: talking peace, waging small wars and preparing for the next big one. In February, 1974 in his State of the Union message to the U.S. Congress, President Nixon spoke of "our goal of building a structure of lasting peace in the world." At the same moment the Washington administration was feeding the fires of war in South East Asia and asking the United States Congress to increase 1975 U.S.A. defense appropriations from $80 billion to $90 billion per year.

When war ended in 1945 there was a planet-wide sigh of relief and a devout hope that after so many years of local and general wars, the time had come for western man to take a long decisive step in the direction of peace. The United Nations Charter expressed this hope to end the use of war as an instrument of policy.

Since the period of general social relaxation usually known as the Dark Ages was superceded by the multiple innovations of the Reformation, the Renaissance, the Enlightenment and the scientific-technical developments of the 1750-1970 Revolution, man the dreamer, inventor, designer, planner, architect and engineer has modified many aspects of nature and transformed the social environment.

Until the Reformation and the Renaissance, European ruling oligarchies in territories along the Mediterranean and throughout western Europe were able to perpetuate their privileges and preserve the life styles of an agricultural-feudal society. Improvements in navigation and the growth of trade, commerce and industry opened the way for the bourgeois revolution with its rapid growth of cities and the parallel increase of wealth, income, and living standards among the newly-enriched businessmen and their associates and dependents.

Social changes in feudal Europe had been gradual. The dynamism implicit in the bourgeois revolution escalated the rate of social change with corresponding modifications in the pattern of European political, economic and cultural institutions and practices.

In the early stages of the transformation the awareness of change was limited to a minority of city dwellers. To the rural illiterate majority, change was a closed book. A great social gulf separated the feudal countryside from the growing centers of trade, commerce and industry. Bourgeois life processes narrowed and gradually bridged the gulf. Differences between city and country living persisted, but the stark contrast between city abundance of goods and services and their virtual absence from the common life of the countryside grew less and less marked as the proportion of the total population living in the countryside declined with the trek to cities and their suburbs.

Europeans living for the most part in a pre-civilized rural environment passed through generations of illiterate unawareness of the social process through which European life was expanding. The rapid extension of industry and commerce after 1750 (the bourgeois revolution) completed the transformation of a rural, semi-feudal west and central Europe into a continent of town and city dwellers devoting their lives to pursuits unknown to their immediate forebears. In this new Europe the countryside played a decreasing role, as food supplies and raw materials came increasingly from less developed parts of eastern Europe or from the colonies which were opened up by the planet-wide trade and commerce promoted by the aggressive expansion of the European empires.

Most Europeans, satisfied with the axiom "old fashions please me best" were stand-patters in the early stages of this transformation. As the conversion of Europe from feudal status to urban dynamism continued, however, an ever larger part of the population became aware of the change through which their society was passing. With the Renaissance and the Enlightenment inert unawareness gave place to enthusiastic propaganda in the writings of pamphleteers, essayists, poets, novelists and social reformers who set the intellectual tone for the new society.

In a very real sense, the bourgeois Europe which emerged after 1750 was something new under the sun. Large elements of the population, previously engaged in producing and consuming the bare necessaries of food, shelter and clothing were increasingly engaged in trades and professions and rendering services unknown to the feudal countryside. As the expansion of western

civilization continued, entire European nations like the Low Countries, England and Germany turned to trade, commerce, industry, leaving only a dwindling minority engaged in agricultural pursuits. The change was speeded by the revolution in science and technology.

Changes in economic and social relations are paralleled by corresponding alterations in the total way of living. Western civilization was, in its entirety, a cultural departure from the pattern of any preceding experiment with civilization because of the drastic changes that the revolution in science and technology had introduced into human society.

Throughout the life-cycle of western civilization minor and major alterations have been made in its structure and its function. Some of the earlier political changes were part and parcel of the bourgeois revolution. They included:

1. The abolition of absolute monarchies and hereditary aristocracies and their replacement by limited monarchies and republics with various types of representative and popular governments selected by ballot.

2. The replacement of personal tyrannies and autocracies by written constitutions and laws passed by elected parliaments.

3. Replacement of war as the sport of kings and the chief instrument of policy makers, by negotiation, diplomacy, and treaties which became the core of existing "international law."

4. Arbitrary national sovereignty was supplemented by more or less permanent alliances and by the formal international organizations such as the Universal Postal Union, the World Court and the League of Nations.

5. Regional Associations were organized; the North Atlantic Treaty Organization; the Organization of American States and the Organization for European Unity.

6. Disarmament conferences were held. General peace treaties were signed like the Kellogg-Briand Peace Pact of 1928 and the United Nations Charter.

7. Two major efforts were made to establish a general confederation of nations and empires--the League of Nations in 1919 and the United Nations a quarter of a century later. Both the League of Nations and the United Nations proved to be feeble and ineffectual efforts to bridge the gulf between limited national sovereignty and planet-wide order and peace. But they were tentative steps in the direction of a federation of the world and they did mark a notable advance from the chaos and conflict incident to the planet-wide expansion of the European empires toward more stable economic and social conditions and more orderly international relationships.

Paralleling these changes in the political life of western civilization there have been a number of drastic economic reforms. One was the abolition of chattel slavery. A second was the replacement of serfdom and peonage by free labor receiving fixed wages and salaries. A third change was the division of large feudal estates and other concentrated landed properties into small units owned and operated by working farmers. A fourth change was the establishment of free trade areas within and among sovereign states. A fifth innovation was the transfer of individually operated and family businesses into associations and corporations with limited liability and widespread ownership by bond and stockholders. Sixth, trade unions and consumers' cooperatives were recognized and legalized. Seventh, legal provisions were made for social security against accident, sickness, unemployment, old age. Minimum incomes were guaranteed. Eighth, many steps were taken toward public or social ownership of the means of production, including land and other natural resources. Ninth, repeated governmental efforts were made to deal with the inflation that attends prolonged exhausting wars. These efforts included the regulation of credit and debt and the substitution of new currencies for old ones that had been hopelessly devalued.

Political and economic changes in the life-patterns of western civilization have been accompanied by far-reaching cultural reforms such as the provision of free public education; the emancipation of women; the provision of public recreation facilities; popularized culture through information, the drama, music, literature, art; equalizing opportunity and facilitating movement up and down the ladder of recognition, approval, disapproval.

Political reforms of western civilization date from the Reformation and the Renaissance. Economic reforms were speeded by the industrial revolution. Together they are often described as the bourgeois revolution, which resulted in the power shift from landlords, ecclesiastics and knights in armor to businessmen, protected and assisted by the state, the church, channels of information and propaganda, the police and other armed forces. Cultural reforms accompanied the reforms in politics and economics.

Underlying the changes and supplementing reforms were improvements in the means of communication and transportation; the discovery and use of new sources of energy and the changes in production and merchandizing which have played so vital a role in the transition from a skimpy economy of scarcity to an open-handed economy of abundance, extravagance and conspicuous waste.

Through all of the political, economic and social changes made in the structure and function of western civilization its basic activities have remained unchanged. The nuclei of civilized life have been cities concerned primarily with trade, commerce, industry, finance--planned, organized and administered by businessmen, their professional and technical associates and assistants. In practice, city centers of wealth and power have expanded, using the military as the readiest means of implementing policy. They have occupied and garrisoned the foreign territory brought under their control. At home and abroad they have exploited nature, men and other animals in their interest and for their profit. The trading cities of medieval Europe, the emerging nations of the fifteenth and sixteenth centuries, the colonizing empires of the seventeenth and eighteenth centuries, and the industrial European empires of the nineteenth century devoted their energies increasingly to expanding into new territory, occupying and exploiting it, and fighting the wars which pock-marked the ceaseless struggle for pelf and power. In short, they continued to build up the institutions and to follow the practices of civilized peoples. This has been true of the millennium that began with the crusades and has hastened the rise of western civilization and its extension to planet-wide proportions.

Similar conclusions can be drawn from the life stories of the score or more of civilizations that rose, flourished and sank into inconsequence during the previous five thousand years.

Each civilization has had its own habitat, its own life pattern. Each has had its own languages, laws, traditions and customs. But despite such local differences, all of the civilizations have had in common those characteristics which justify their inclusion in the family of civilizations.

Anyone who wishes to test the accuracy of these generalizations may be satisfied by reading and observing the events that began with the wars between Japan, China and Russia, the Spanish American War, the Boer War, and the revolts in Cuba, China and the Philippines, all of which took place between 1895 and 1905. The present century opened in a period of critical struggle between empires, within empires and between imperial centers and colonial dependencies. These preliminary skirmishes led up to two general wars in 1914-1918 and 1936-1945, accompanied and followed by a score of minor wars and a planet-wide rash of civil wars and wars of independence waged by peoples of the erstwhile colonies.

Three johnnie-come-lately empires played star-roles in the drama: Germany, the United States and Japan. The histories of all three countries from 1870 to 1950 provide ample support for the contention that the central theme of western civilization, as of its predecessors, is a competitive struggle for wealth and power, aimed at expansion and exploitation, using war and the threat of war as instruments of policy.

Even under the pressures generated by the innovations and the political and economic changes of the current world wide revolution, the principle objectives of civilization have remained constant: geographical expansion; military, economic and cultural occupation; exploitation of the newly acquired territories and peoples. Each civilization has built up and maintained a professional military apparatus and used it as the final arbiter in the determination of domestic and foreign policy.

The means used to achieve these objectives have varied from time to time and from place to place. The basic pattern of civilization has appeared, disappeared and reappeared.

Each civilization has made heroic efforts to reform itself when submerged in a time of troubles that made its institutions and its practices intolerable to those in power or those groups and classes which had grown so desperate under its exploitation and oppression that they preferred death to continuance of the established order.

Each civilization has made its contribution, retaining its essential form while modifying its practices to meet the requirements of particular situations. Western civilization is no exception to this general rule.

Following the all but universal principle that "action and reaction tend to be equal and opposite," subjugated, occupied peoples revolt against "foreign" occupation and exploitation. Again western civilization is no exception, as the movements for independence and self-determination that followed the 1946 post-war collapse of the European empires clearly showed.

Reaction against western civilization went beyond revolt to include the rejection of the obsolete concepts, forms and practices inherent in civilization. Rejection has been accompanied and followed by proposals for replacing civilization by concepts, forms and practices more in keeping with the social relations and situations resulting from the current world revolution.

Most reforms of civilization have been attempted during the life of western civilization because during that era both the structure and functioning of civilization have been called into question. In no civilization (Egypt, Rome or the modern West) have the essential principles of civilization been seriously modified. Again and again, during the times of trouble that marked the breakdown of successive civilizations, particular institutions were rejected but civilization as a way of life has been accepted and re-established in the course of each new cycle.

During previous cycles the breakdown of a civilization had been followed by a period of rest and recuperation before the beginning of the next experiment. The breakdown of western civilization, a negative reaction, has been accompanied by a planet-wide drive to replace the concepts, forms and practices of civilization by the concepts, forms and practices of socialism-communism.

Socialism-communism as a way of life for nations and continents is a new experiment on the planet earth. Heretofore there have been small groups--families, tribes and sects--that have adopted and followed cooperation as a way of life, but widespread planned cooperation on a national or continental scale is a novelty.

As a result of these changes, conflict-torn and fragmenting western civilization found itself divided into three factional groups:

I. Corporate business organized domestically and internationally to preserve and extend its wealth and power. Big business interests, their dependents and backers were concentrated chiefly in West Europe and North America. Their network of interests and controls was planet-wide. Literally they were the backbone of western civilization.

II. Builders of socialism-communism, an alternative and rival life pattern, have been concentrated in East Europe and Asia. The socialists-communists occupied a minority position in most of the countries dominated by big business. Their program called for the replacement of capitalist competition and conflict by a cooperating, planned, planet-wide society operated for service rather than for profit.

III. A third segment, made up largely of nations and peoples located in Africa, Asia and Latin America, who up to war's end in 1945 had been colonies or dependencies of the big business directed empires. Since 1945 they have become increasingly independent and self-determining.

The three-fold division of the planet was determined in part by the age-old ideas, principles and practices of civilized peoples during the past six thousand years. In part, it was the outcome of the planet-wide revolution of 1750-1970. It was likewise the result of the wars, revolutions and independence movements that have upset and realigned the world since 1776. Under the impact of these forces human society was being unmade, re-examined and remade.

By comparison with its own beginnings and with its predecessors, western civilization has made many changes in its political, economic and sociological way of life. It has also developed national and regional variants of its overall pattern.

Despite these changes, and with the possible exception of its very large and significant socialist-communist sector, the West has retained the structural and functional features of previous civilizations: urban nuclei supporting themselves by trade, commerce and finance; expansion up to and beyond the point of no return; the life and death power struggle within and between its constituent peoples, nations and empires; the use of war as the final arbiter in these struggles; the rise of the military to a position of supremacy in policy making and public administration; an all-pervasive pattern of exploitation within the urban nuclei and between rival provincial factions; speculation in the necessaries of life; the growth of overhead costs far beyond the increase of production and of income; the degradation of currency; multiple taxation; the abuse of credit; inflation, unemployment and chronic hard times.

Western civilization differs from its predecessors in one crucial respect: it is planet-wide. Previous civilizations known to history have been limited by oceans, deserts and other geographical barriers. The revolution in communication and transportation has by-passed geographic barriers.

The French saying "the more things change the more they remain the same" finds ample justification in the story of western civilization and its predecessors. In one instance after another, for at least six thousand years, civilizations have been built up to summits of wealth and power. Then, on the downward sweep of the cycle, they have declined, decayed and been dumped on the scrap heap of history. No two of these cycles were exactly alike. Each cycle was a social experiment that followed a well marked

path. There were variations, innovations, deviations from the norm, but institutions and practices were strikingly similar. In this broad sense, and despite minor departures, the life patterns of civilization have appeared, disappeared and reappeared with close similarity in structure and function.

Western civilization has had a life cycle of approximately a thousand years. During that millennium it has undergone many changes--political, economic, sociological, ideological. Throughout these changes its basic characteristics have remained; have appeared and reappeared. In the 1970's western civilization retains the essential features which justify us in describing it as a civilization.

The great revolution which began about 1750 and has increased in breadth and depth throughout the past two centuries had led to vital changes in structure and functioning, particularly of the West but generally in the entirety of human society. So far-reaching are these changes, and so deep running, that human society, particularly in the West, has outgrown or is outgrowing the life pattern evolved by civilizations during the past four or five millenia. As a consequence, geographical expansion by the time-honored method of grab-and-keep has become more difficult, far more expensive in manpower and material wealth and is in growing disrepute among a sizeable minority of individuals and social groups, even in the centers of western civilization. It is in notable disfavor among the former colonies and dependencies of the European empires.

At the same time, war as a means of achieving social ends has fallen into greater and greater disrepute. War costs, measured in terms of human well-being and welfare had soared to fantastic heights before 1945. The devastation, during that year, of two moderate sized cities, Hiroshima and Nagasaki, was a foretaste of the increasingly bleak chances of human survival with the stockpiling of nuclear weapons far more destructive than the fission bombs used on the two Japanese cities.

Under the conditions prevailing before the great revolution, competitive struggle between nations and empires, expanding as a result of victory in war, had ceased to be a practicable means of gaining, holding and increasing wealth and power. If the costs of the international power struggle exceeded the gains, there were no longer victors who won and vanquished who lost. Instead, everybody lost as the entire social structure was wrenched, dislocated, wracked and down-graded. Certainly this seemed to be the plain-as-day lesson of the two general wars and the flurry of minor wars which swept the earth after 1910.

Expansion through armed struggle no longer paid its way. It was the obvious lesson stressed by J.A. Hobson and Nicolai Lenin in their respective studies of imperialism (1903 and 1916). It was the theme of Norman Angel's _Great Illusion._ It was summarized by Arnold Toynbee's _War and Civilization._

If the costs of expansion exceeded the income, the outcome of expansion would be dismemberment for the vanquished and bankruptcy for the victors. Indeed, this formula generalises the experience of the survival struggles during the war years which began in 1911. I summarized the experience in _The Twilight of Empire_(1929).

The catastrophic economic breakdown during the Great Depression of 1929-1938, the spectacular and fateful rise of Hitlerism in Germany after 1927, the destructive Civil War in Spain from 1936 to 1939, followed immediately by the war devastations of 1939-45 were part and parcel of the same picture. The same may be said for the revolt of the colonial peoples, downgrading all European "victors" in the war of 1914-18, and the social revolutions following 1945 that shook up the planetary power structure and opened the way for socialist-communist forces to begin socialist construction in one country after another.

Some European states had become super-states, armed to the teeth, surrounded with their satellites, dependencies and colonies. They expanded, exploited and battled as they played the absorbing and ruinous game of "Beggar My Neighbor". Politically and economically the struggle reached and passed its high point between 1914 and 1945. The subsequent years have revealed the aftermath--a down-graded Europe and an ascendant Asia.

Empire building has been made prohibitively expensive by the revolution in science and technology; if the human family is to survive in anything like its present numbers, a way must be found to end the use of war as a means of attaining social objectives. New techniques, chiefly non-competitive, must be discovered and employed in the maintenance of social relations.

Not only must war be abandoned as a means of achieving social objectives, but exploitation of nature and man must be superceded by a planet-wide life style that conserves natural wealth and shifts the center of economic endeavor from competition to cooperation.

Abandonment of war as an instrument of policy and the renunciation of exploitation of man by man and nation by nation as a means of enrichment would put an end to the scandalous and corrosive extremes of riches and poverty that have cursed every civilization of which we have a written record.

Western civilization, like its predecessors, had consisted of rival nations and empires competing for living-space, wealth, position, expanding territorially as they exploited nature and available labor power for the advantage of the few.

Civilization as a life style, built around the competitive struggle for wealth and power, using war as an instrument of policy and multiplying the techniques of expansion and exploitation, has had a series of experimental tryouts already under way at the dawn of written history. Under no circumstances has civilization proved to be wholly rewarding and satisfying. The current revolution in science and technology has rendered civilization unreformable as well as obsolete.

The structure or pattern of civilization has divided western civilization into separate parts that benefit by separateness and profit from conflict. The result is a typical example of a self-destroying life style struggling through an impasse from which there is no escape save through a third fratricidal war.

Today civilization is a bad buy, especially for young people starting out in life. Civilization still has its advantages for those who have lived actively, achieved many of their material objectives and retired to spend their declining years in a well-feathered nest. For some privileged young people, willing to settle for comfort and conformity, civilization offers the leisure to learn, and an opportunity to test themselves out against a big field of ardent competitors. But for energetic, forward-looking, idealistic young people, the opportunities offered by western civilization are deemed inconsequential, trivial and in the long run, inadequate. For them, the game is not worth the candle.

Today civilization is a bad buy for two reasons. The first is that antisocial, predatory, exploitive and parasitic elements are unfortunately and unnecessarily prominent in the lives of all civilized peoples, including the present West. The second reason is the arrogant, self-righteous, peremptory, bragging, bullying, dictatorial approaches adopted by civilized people in their dealings with those who live on the fringes or outside the pale of civilization. The first reason is an inescapable consequence of the political, economic, ideological and sociological assumptions of the civilizing process. The second reason is inherent in the methods used by civilized peoples in their dealing with the uncivilized majority of humanity.

Part IV

Steps Beyond Civilization

CHAPTER THIRTEEN

TEN BUILDING BLOCKS FOR A NEW WORLD

In the previous chapter I argued that we are marking time in a fool's paradise while western civilization slips backward and downward toward dissolution and oblivion. Like many of its predecessors, our civilization seems to have exhausted its capacity to create, progress, advance. Instead it is disintegrating and breaking up in our current time of troubles.

In an earlier epoch of human history civilization helped to bridge the wide gap between man the victim and plaything of nature, and man as the user, director and, to a limited degree, the coordinator of natural forces. Today questions of our demise or our survival and advance are pressing and urgent.

Civilization has played an important role in the social history of mankind during the several thousand years when segments of the human family have turned their backs on barbarism, regrouped their forces, revamped their patterns of association and experimented with the more complicated, specialized and integrated life pattern of civilization. These experiments have paralleled or followed one another, separated by shorter or longer ages of rest and recuperation. Each epoch of civilization has contributed ideas, artifacts and institutions to the sum total of human culture. This has been the case with past civilizations. It is true of western civilization.

Civilization, like other aspects of human culture, is never static but always dynamic. It changes constantly, waxing and waning. It develops, expands and contracts. It reaches out toward universality, then breaks down and dissolves into a welter of conflicting regional and local interest groups. These changes are the outcome of hard-nosed experience. They are related to alterations in

ideas, outlooks and purposes. They are often associated with technical discoveries and inventions. They come and go in more or less clearly defined cycles. They are influenced by deep running political, economic and social forces and trends.

Each civilization matures into forms and develops functions and institutions that tend to consolidate and crystallize in well defined social patterns and habit grooves in which two forces oppose each other: one force is status--preserving that which is; the other force is change--that which tends to become or is becoming.

Status and change confront each other at all social levels. During periods of rapid social change they take the center of the stage and dominate the drama.

The planet-wide revolution of 1750-1970 is an outstanding example of rapid change. The current opposition of status and change has pushed other aspects of social life into second place and has made the social status of yesterday outmoded today and obsolete tomorrow.

The disintegration of western civilization (indicated by its 1910-1975 time of troubles) is having profound effects on western man. The effects are physical, mental, energenic and moral for individuals. Socially they find expression in vandalism, hooliganism, major crime, in the break-up of the family; in alienation, inertia, boredom; in laxity, indiscipline; loss of faith, weakness or absence of purpose. Most serious of all, perhaps, western peoples are learning to ignore principle, live for the moment, satisfy their already sated appetites and pay little or no attention to the future. These attitudes are widespread in the western world of the 1970's, particularly among the young. These effects, on the whole negative, are offset by a number of positive factors. Human beings are curious and imaginative. They are also ingenious, inventive and intuitive. All of these attributes are assets when dealing with the future and the unknown.

In a previous generation, preceding the war of 1914-18, a very large part of the West was under the influence of the Christian church, which promised good things in the hereafter. During the ensuing years of military conflict, planned destruction and wholesale murder, another considerable part of the West, both socialist and liberal, was promising security, comfort and convenience here and now. The influence of the Christian church on life style, even among its own membership, has declined in the past half century. Affluent monopoly capitalism, meanwhile, has provided the rich, the middle class and important numbers of workers and farmers with necessaries and amenities far beyond the levels imagined by reformers and revolutionaries of a previous generation. As an integral part of this maturing revolutionary situation a generation of human beings born since war's end in 1945 has come on the scene, surrounded by the concrete and glass buildings, block printed nylons, the automobiles and domestic appliances of monopoly capitalism and by the social security of socialism. In both segments, capitalist and socialist, the more gifted, original, sensitive, creative members of this comfort-pampered generation have turned their backs on affluence and security and begun shouting a new slogan: "We want to live!"

There is nothing surprising about this development. Many trained, experienced observers have been predicting it. Youth, idealism, aspiration, optimism, ambition--cannot be satisfied with status in any form. They want to live, to achieve, to face difficulties, to overcome dangers, to express themselves, to create. They are not content merely to arrive at physical affluence. Affluence and social security cannot satisfy. They merely sharpen the appetite for a continuance of the life journey, on the best terms permitted by the current time of troubles.

Among the members of the post-war generation, this ambitious, perceptive elite is aware of two disturbing and compelling realities. The first is the peril to mankind implicit in a continuance along its present disaster course of war, with its inescapable counterpart, social dissolution. The second is the possibility that out of the wreckage and rubble of an outmoded cultural pattern, a mature, chastened, more experienced, more consciously purposive generation will arise, possessing the wit to see the necessity of creative advance, and the wisdom to guide the pioneers of humanity along the difficult and dangerous path that they must follow if they are to reach the land of purpose and promise.

Current frustrating experience with the breakdown of western civilization, coupled with historical precedents, confront the present generation of mankind with a compelling challenge and a unique, precious opportunity. The challenge arises out of experiments with particular civilizations and with civilization as a way of life. Our analysis of this situation leads to only one possible conclusion: Repeated experiments with civilization unmask it as a way, not of life, but as a cycle of rise, expansion, maturity, decline and certain death.

The challenge is emphasized by the failure of reforms and reformers of civilization to make changes in structure and function sufficient to meet the challenge of the birth-maturity-death cycle. Nor has it been possible for western civilization to take advantage of the drastic changes and challenges arising out of the current world revolution.

Man's top negative priority at the present moment is to reject the wiles, the temptations, the mortal conflicts and the annihilative destruction which have disrupted and decimated civilized society during the past six thousand years and reached their apex in the Great Revolution of 1750-1970. These experiences prove beyond the shadow of doubt that this pattern of human collective life is inadequate to meet the present and future needs of the human family.

Man's top positive priority is the present-day occupancy of the planet Earth by 3,700 million human beings who wish to survive, to utilize and conserve the natural habitat and to improve the social environment. Within narrow limits, almost all members of the human family want to live and to help other humans to do likewise. Multitudes of human beings, particularly among the youth, want to enjoy outward looking, satisfying, productive, creative lives. They also want those near and dear to do the same thing.

What steps must they take in order to realize their hope and fulfill their aspirations?

Broadly speaking, they must pick their way warily through the maze of artifacts, gadgets and gimmicks produced by human ingenuity during the current world revolution. Most of them are superficial and time consuming. A few are fundamental. They are of the utmost importance as implements to human advance. Taking what advantage they can of recent innovations, avoiding dead-ends and illusion leading to rainbows, the more sensitive and more competent segments of mankind must close ranks and move upward and onward to a new level of culture. The chief instrument available for such an enterprise is the twentieth century version of the political state. The bourgeois revolution was achieved through the developing, evolving political state. The political state is the binding force that held scattered fragments of the human family together during the stresses and strains of the current revolution in science and technology. It is the political state that must be depended upon to resist the fragmentating forces of a disintegrating western civilization, to preserve the social structure and administer human society through the transition from civilization into the structure and functioning of the new social order which is presently supplanting civilization.

Through Europe's transition from feudalism to capitalism, the feudal state, here and there, step by step, was replaced by the bourgeois state as the chief structural building block of western civilization. The bourgeois revolution, in various parts of Europe, lasted for several centuries; the process was well under way by 1450. As lately as 1945 feudal pockets remained in Eastern Europe.

An even more profound transformation of European society is made in the course of the Great Revolution of 1750-1970. The transformation is in its early stages. During the process, the political life of Europe-in-transition will be administered by the political institutions of the bourgeois state, together with the closely related state patterns of socialism-communism which have come into being during the present century.

During this transition the bourgeois state itself has evolved. At the outset it was a revolutionary force devoting its energies to the elimination of feudal institutions and practices and replacing them by the institutions and practices needed for the advancement of bourgeois interests.

Today the bourgeois state is a bulwark of conservatism; devoting its energies to the preservation of bourgeois forms and practices and doing its utmost to fulfill its counter-revolutionary role of resisting and, if possible, destroying the institutions and practices needed to replace the political institutions and practices of civilization by the new institutions required to move mankind from the outmoded lifestyle of civilization to a lifestyle beyond and above that to which humanity has become adapted during the now obsolete epoch of civilization.

At the same time, the socialist-communist variant of the bourgeois state pattern is providing the framework within which the institutions and practices needed for the transition from civilization to a newer and more universal social order are being matured. At the next stage in the birth process, the institutions and practices necessary for upbuilding the social order that will replace civilization are being worked out in theory and embodied in experimental practice.

In practice, an accurate distinction must be made between the conservative bourgeois state, the temporary transitional state and the universal socialist-communist state that will shepherd humanity along the difficult and dangerous path of the political life pattern beyond civilization. In theory such distinctions are needed as part of the scaffolding within which the social pattern of beyond-civilization will be constructed.

Like most decisive epochs of human history, the revolution through which we are passing has had both a negative and a positive aspect. In Chapter 11 I wrote about one of its destructive aspects--the extreme destructivity of two periods of general war. At this point, I would like to list ten positive contributions made by the same revolution toward the development of a social life style that is offering itself as an alternative to civilization.

1. NEW SOURCES OF ENERGY. Up to 1750 human beings had the energy of the human body plus the energy of domestic animals. They used wind to turn mills and sail ships and water to turn crude wheels. They also burned various things, particularly vegetable fibres, to produce heat. During the revolution they have learned to use steam, electricity and chemical explosives. Recently they have learned to use the energy in the atom, to use water power extensively and, to a slight extent, the energy of the sun and the tides.

2. The revolution has taught people who previously feared CHANGE, to welcome change and take full advantage of discoveries and inventions that modified nature and profoundly altered human society.

3. Among the INVENTIONS were the extensive use of the wheel for movement on land, the use of steam engines and electric motors for moving, manufacturing and transportation and the use of electricity for communication.

4. INCREASED HUMAN MOBILITY on land and water, and, more recently, in the air and, still more recently, in outer space. Easy and rapid movement, and almost instantaneous communication brought people together in towns and cities, built up trade in goods and services, increased speed of communications and enabled people living at a distance from one another to keep in close touch, bringing human enterprises and human beings into continuing contact. Human life, thought and action were coordinated. Increased mobility UNIFIED HUMAN SOCIETY.

5. RESEARCH is now an accepted aspect of all phases of human life and activity. Research is a recognized occupation. Research teams solve problems, map the paths of enterprise. We are learning first to think, then, only after careful study, decide on courses of action and follow them through.

6. The field of inquiry and research covered the entire range of human experience. Information, resulting from research, provided the subject matter of new sciences. In the new fields new skills were developed and new professions built up. The members of this new TECHNOLOGICAL INTELLIGENTSIA, added to the learned professions, created a large group who expected and enjoyed affluent living conditions.

7. SPREADING AFFLUENCE increased the number of families that enjoyed abundance of goods and services, comforts and luxuries mass produced and offered in a mass market, lifting people out of scarcity by growing abundance. Scarcity ceased to restrain. Instead, people learned the values of RESTRAINT, ECONOMY, FRUGALITY, SIMPLICITY.

8. Increase in size and complexity called into being a new profession. MANAGEMENT with the necessary PLANNING, BUDGETING, COST KEEPING.

9. Large numbers of well-fed, housed, educated and aware human beings created the possibility of arousing, mobilizing and utilizing people--especially young people--to take part in voluntary group projects, co-operate and create. Such experiences developed SOCIAL AWARENESS and led to LARGE SCALE MASS ACTION.

10. People growing up in affluence, living above the rigors of poverty, asked questions about themselves, their society and the universe in which they lived. They learned that they and their fellows had not only the five accepted "senses," but additional senses with corresponding experiences. This opened their eyes to the possibility of additional or extra senses, opening the immense field of "EXTRA SENSORY PERCEPTION," E.S.P.

These ten areas, opening up largely during the years of the great revolution are "new wine" which cannot be contained in the old wine skins. They raise questions and open up vistas which transcend the narrower confines of civilization. They are among the materials and facilities out of which a new world is coming into existence.

CHAPTER FOURTEEN

MOVING TOWARD WORLD FEDERATION

One of man's earliest collective experiences is summed up in the saying: United we stand; divided we fall.

United we survive and prosper. Divided we quarrel, fight and sooner or later break up into smaller sovereign competing groups. If human beings wish to utilize nature or to enjoy the advantages of collective action and group life they must get together and stay together.

This necessity for collective action has appeared and reappeared all through written history. It is one of the most important lessons of present-day human experience. It holds for families, neighborhoods, villages, cities, nations, for mankind as a whole. It is joint action for the general welfare.

The principle of collective action has been recognized and put into practice during the ten centuries that span the rise of western civilization--put into practice up to a certain point--the nation or the empire. Beyond that point, collective action has taken two forms: competition and conflict, including war, and coordination or cooperation under agreement, contract or treaty.

Among the outstanding results of the great revolution, improvement in communication and transportation have brought humans into contact with one another on an increasingly extensive scale, reaching its high water mark in planet-wide networks of trade, travel, migration and diplomacy, leading up to the One World which was so much in the foreground of public discussions between the two general wars of 1914 and 1939.

Much has been written on the subject. I contributed by two bits in _The Next Step_, a book published in 1922 and _United World_, published in 1945. Perhaps the most critical failure of western civilization was its inability or unwillingness to take that next step during the decisive years that followed the Hague Conference of 1899.

In listing the Ten Building Blocks for a New World (Chapter 13 of this book) I began with world federation because in terms of the public life of the earth around 1900, the planet was divided into two alliances of nations and empires--the Allies, headed by Great Britain and the Central Powers, headed by Germany.

Instead of cooperating to gain their declared objectives of peace, prosperity and progress these two power blocs engaged in an armament race from 1903 to 1914, leading up to general war in 1914, with a second general war between the rivals in 1939.

When I was organizing Part II of this study (A Social Analysis of Civilization) I had to decide whether to begin with economics or politics. As an economist I was inclined to put economics first, but since the study centered on civilization, and since all known civilizations were not groupings of economic subdivisions but aggregates of nations, empires and their dependencies, and since the expansion of civilization has consisted in enlarging the geographical area of the civilization in question, I decided to begin with politics. As the study has progressed I have seen no reason for reversing the choice.

On the contrary, since I began collecting data for this study at the time of the first general war, I have watched the unfolding political struggle for economic and cultural objectives with the increasing conviction that politics is the primary focus, with economic forces always in play, but usually in the background, leaving the center of the stage to politics.

This is another way of saying that the present-day world is divided primarily into political nation states rather than into areas of economic function. Always, economics is important. But, at least superficially, political considerations are in the foreground to clinch decisions. A time may come when economists or sociologists occupy the central offices where primary decisions are made. That time has not yet arrived. In so far as the present generation is concerned, politics is in the foreground. The politicians make the crucial announcements and sign the key documents.

Therefore our survey of the Steps Beyond Civilization begins with politics. Our attention centers on the political aspects of World Federation with economic considerations present and always operating, but not dominating the crucial decisions.

For better or worse, in 1975 and the years immediately succeeding, we will be living on a planet divided into some 140 politically sovereign states. In view of the widespread pressure toward self-determination, the number of sovereign states has increased considerably, especially since war's end in 1945.

Presumably the principal "united we stand" applies to those 140 sovereign states.

Sovereignty includes the right of self determination--putting the interests of one particular state above the interests of the entire family of nations--the part before the whole. Here is a contradiction and a possible conflict of interest. Britain's Prime Minister Heath, like many another spokesman in his position, summed up the issue in the pithy phrase: "British interests come first."

If the French, Italian, Japanese and other prime ministers take a similar stand, implied by the principle of sovereignty, situations are bound to arise in which the interests of two or more nations clash, opening the way for conflicts at many levels: differences of interpretation, negotiations in the course of which concessions may be made by both parties. The differences may be settled by diplomats sitting around conference tables or by armies on the battlefield.

With 140 sovereign states on the planet, the probability of conflict would seem to be overwhelming. As a matter of daily experience such confrontations and conflicts do occur. Most of them are handled by negotiation. A few lead to armed struggle.

Since 140 sovereign states exist on one earth, means must be found that will enable them to co-exist, if possible, without conflict, and certainly without military conflict. The means generally relied upon today for dealing with such problems is negotiation between representatives of all parties at interest. At the national level this would mean negotiations between representatives of the involved governments.

Negotiations between representatives of various governments are always going on--dealing with political, economic and cultural issues. Within each nation such negotiations are conducted between spokesmen for various government departments. Internationally they are conducted by representatives of various governments working through their diplomatic or consular services. Within each nation and between nations confrontations may be settled by negotiation. At each level they may result in armed conflict.

Governments exist to deal with conflicts and, where possible, to resolve them before they reach the shooting stage. This is notably true in domestic affairs because there are usually public officials charged with the duty of dealing with problems. Internationally, unless there is an international agency such as the Universal Postal Union of the Organization of American States, the issue must be settled by special representatives of the parties.

The argument for a world government begins with the assumption that means should exist to deal with international issues before they reach an acute stage. Such means exist within each local government. Similar arrangements should exist at the international level to deal with issues that arise between governments.

The political core of a social stage beyond civilization will be a planet-wide, international, regional and local network of institutions, integrated, coordinated and administered on the federal principle: local affairs controlled locally; regional affairs controlled regionally; international affairs controlled by a planet-wide political authority. Such a relationship would imply states rights for the local authority; regional rights for the regional authority, and full awareness in the central authority of the possibility, at this juncture, of establishing order, justice and mercy on the planetary level--in our present terminology, a "world government."

Basic to this federal structure would be the Jeffersonian assumption: "That government governs best which governs least", with an amendment: "provided that the authority in question governs sufficiently to establish and maintain physical health, social decency, order, justice and mercy in reasonable proportions throughout the area subject to its jurisdiction".

At each level, local, national, regional and planetary, there will be committees, councils or other authorities with full responsibility for the conduct of public administration at the local, the national, the regional and the planetary or international level.

Currently the federal principle is widely established at local and national levels. Attempts are being made in various regions to effectuate stable authorities at the regional level, such as the United States of North America or the United States of Mexico. There has been much talk of planet-wide government established by one wealthy and militarily powerful nation over its peers, or by a voluntary association with its peers. Institutions established thus far: League of Nations, The United Nations, The World Court, the Universal Postal Union, have fallen far short of stable, planet-wide, all inclusive political authority.

At the moment there are 122 states which are members of the United Nations. There are perhaps an additional score of nations which have applied for membership or which might be accepted if they made an application. Accept this rounded figure, and we have perhaps 140 nations or potential nations on the planet. Some are long established and stable. Other nations are new-born, with small populations, few resources and minimal means of defense or offense. By and large this is the family of nations which might be coordinated into an effective world authority which would be responsible for order, decency and peace in a federally coordinated world.

World authority, to be effective and reasonably stable, must be equipped with sufficient delegated powers to maintain orderly and decent relations between its members, establish peace, and carry out policies necessary to provide and promote ecological and

sociological welfare. To achieve such results it must have a built-in balance between central authority and local-regional self-determination. It must also enjoy sufficient elbow-room to provide for social change and for consistent social improvement.

The goal of world government, as of any political enterprise that pretends to represent human needs, will be social stability, security, efficiency of service, and enlarged opportunities for citizens to speak and act for themselves, directly or through their representatives, at all levels. Politics is the theory and practice of the possible in any given situation. Executives and administrators in Los Angeles, London and Tokyo or in the United States, Britain and Japan will deal with public transportation, public education and public law and order in terms of general principles such as those stated in the opening sentences of this paragraph. They will also face specific situations arising out of climate, access to raw materials, custom, habit and other ecological and cultural factors which differ profoundly from continent to continent, nation to nation, city to city and district to district in the same nation.

Human communities have sought and found different means of dealing with the problems of community administration. At one extreme of social administration are various types of arbitrary, personal dictatorships. The Greeks called them tyrannies--arbitrary rule by individuals or small groups subject only to their own decisions.

At the other extreme are social groups that arrive at decisions as the outcome of discussion in which all group members may take part. Group decisions may require unanimity or they may be the outcome of voting, with a majority or plurality vote carrying with it the right and duty to put decisions into effect as part of the public life of the community.

Various forms of government have been established locally and regionally. At the level of a civilization, the government has been established almost universally as the outcome of armed struggle and military conquest, and has been exercised through the use of armed force in the hands of armed minorities.

A century without general war, 1815 to 1914, led to a widespread balance-of-power assumption that planet-wide peace and prosperity could be established and maintained by preserving a balance between the armed forces of individual nations or alliances. Hence there need be no more general wars fought for survival or supremacy.

The bitter struggle for markets, raw materials and colonies that followed the French-German War of 1870 developed into an armament race after 1899. From the Hague Peace Conference of 1899 to the outbreak of general war in 1914, desperate efforts were made to maintain the power-balance and avert a general war. The failure of these efforts proved the ineffectiveness of the balance-of-power formula.

Today it is generally taken for granted that a balance of power between armed nations is no guarantee of peace and order. It is also taken for granted that frivolous talk like that of an "American Century" after 1945 has no justification in the light of present-day history. As matters now stand neither a balance between rival armed powers, nor the domination of the planet by any one power can be relied upon to maintain world order and keep world peace.

Forms of self-government and representative government developed during the bourgeois revolution and advocated and partially applied during the proletarian up-surge, are being continued or are reappearing during the current struggle for power and prestige at the planetary level. As the planet approaches one world technologically, there is an increasing possibility of a planetary political federation, directed by a world governmental apparatus.

CHAPTER FIFTEEN

INTEGRATING A WORLD ECONOMY

Repeated efforts have been made to establish large-scale, widely ranging economies. This was the case during Egyptian and Phoenician civilizations. It was certainly true of the economy of the Roman Empire and of Roman civilization.

Such efforts faced drastic limitations. The most formidable was the narrow margin of surplus produced by hand labor in the forests, on the fields and in the workshops, operated, in the main, with hand tools, with minor inputs of energy supplied by domestic animals and with the small amounts derived from wind and moving water.

Two further limitations existed. First, as each civilization matured its leaders and policy makers ceased to labor on the land or in the workshops, preferring to keep their hands and clothes clean, to free themselves from irksome demanding toil and devote themselves to tasks more befitting "gentlefolk." This was notably true of landlords as a class. It was also true of the richer traders, merchants and moneylenders, particularly of the third and fourth generations.

Expansion of empires and the civilizations which they developed entailed military operations. Military operations, in their turn, produced war-captives, who must earn their keep and, if possible, something more. Sold in the market to the highest bidder, war captives and their descendants became chattel slaves. As civilizations were expanded by conquest and matured by struggle, they developed some type of forced labor to balance the increased parasitism of the masters and the growing numbers who were called upon to produce "services" rather than material goods.

Certain areas of civilized economies were taken over by the public authorities. Planning and building of cities and their ports, of highways, including bridges, of viaducts, aqueducts, of drainages for the cities, of public buildings. The construction of defenses, including city walls, were partly or wholly public enterprises. Temples and tombs for the mighty were often in the same category.

Maintenance of large elaborate households by political leaders, and in later periods of empire building, by the successful merchants and technicians, led to the employment of many servants, including subordinate members and relatives of the elite.

Much necessary labor was performed by members of each household. The resulting economy was therefore fragmented at the household level with virtually all of the energy supplied by human beings and domestic animals.

As each civilization developed its pattern of forced labor, including the labor of war captives, it launched the deadly competition between freemen and slaves which almost inevitably ended in favor of the slaves, who were housed and fed by the masters and who could operate at overhead costs lower than those involved in the hiring of wage or salaried workers.

Land ownership tended to center in the political-military leaders, the temples and, as each civilization matured, in the hands of its bourgeoisie.

Integrating such economies proved to be a difficult, arduous task, well beyond the powers of the average political, military or hereditary leader. In a very real sense, the problems of management were extremely personal and correspondingly concentrated in the hands of skillful acquisitors. Nowhere was the impact of the 1750-1970 revolution more far reaching than in the area of management.

Economic activities, in the course of the great revolution, had less and less connection with the homestead, and except for a tiny minority of the personnel, had no connection with the family of the owner-operator. The seat of the family--the home--continued to exist, but on a far more restricted basis. Arts and crafts moved from the household into the workshop, where they expanded both in extent and in complexity. Domestic tasks were associated with hand labor and simple tools. The great revolution filled the workshop with the ancestors of present day machinery, but with a prodigious difference. In the early step from home workshop to factory, hand tools in plenty were being used in the workshops. As "modernization" progressed, hand tools were replaced by specialized machines.

The implements of specialization--the machine building tools and the machine tools themselves--were housed in forests of associated workshops. The mechanics of specialization sprawled over acres and square miles of factory floor space. Nowhere were the results of the great revolution more in evidence than in the vast difference between the workshop attached to the house of the early industrialist and the forest of chimneys and stacks, and the acres and square miles of floorspace in present-day industrial establishments, with their personnel numbered in thousands and the capital invested in plant and equipment running into the millions or billions of dollars.

Two centuries of the great revolution have given present-day industrial society a capital plant the like of which has never existed on the planet in any historical period. After two hundred years of meteoric development, it exists today on a planet-wide scale and at a level of all-pervasive dominance undreamed of even up to the middle of the last century.

Modern industry "plants"--steel plants, cement plants, open pit mines, textile plants, machine tool plants, auto plants, rubber factories, oil refineries--not only occupy extensive acreage per plant, but the same interests and corporate managements operate dozens of plants in widely separated geographical areas and produce a great variety of goods and services. An experienced observer feels entirely at home in any industrial center, on any continent. In Detroit, in Dusseldorf, in Osaka, in Shanghai, in Bombay, the architecture of the plants is essentially the same, the machines in the widely separated plants bear a striking resemblance to one another, and the problems of management are similar.

Unit plants and their coordinated managements in the aggregate compose the present-day world economy. They are the essence of its being. They occupy the skyline and dominate the economic life of modern industrial society. They are the units which make up

the sum-total of modern industry which, in its turn, is the bony structure around which have grown the sinews and muscle of present-day planetary economy.

Modern state structure goes back through the half dozen centuries during which it has been developing. Its ancestors may be met with in the history of previous civilizations.

Modern industrial structure on the other hand is something essentially new under the sun--newly imagined, designed, constructed, productive. It has no ancestry before 1750 because its essential building unit--the modern machine--did not exist previous to that date.

In the last chapter we dealt with the growth of states into empires and the aggregation of empires into civilizations with the possibility that the existing states could be welded into a world federation. One of the chief obstacles to such a development is the centuries of conflict during which modern nations have been built up and the strong bonds of nationalism have been established as a means of holding divergent groups of people in line by particular oligarchies operating in particular civilizations.

On the economic level such difficulties are minimal. The process of coordination and consolidation was far advanced before the end of the last century. The practice of integration--joining productive units in functional sequences--was also accepted and followed, with little regard for political or cultural considerations. The result has been an economic integration which has developed inside the chief industrial nations and across national boundaries.

Despite political obstacles, economic integration has proceeded with giant strides, especially during the past hundred years. Under a well developed world political federation the world economy could be integrated and used to provide the necessaries, conveniences and minimal comforts for the entire human family. There are nationalistic obstacles to political federation. Economic integration is an obvious must and a logical outcome of the industrial integration that has gone on so swiftly during the great revolution of 1750-1970.

When we talk about integrating the world economy we are dealing with a problem which no previous civilization has faced because no previous civilization had machines or the social and cultural institutions which have grouped themselves around the ultra-modern machine phenomena.

World economy in 1975 includes three essential elements: the planet earth and its resources; the institutional structure of modern society; and human beings with their diverse concepts and skills which provide its motive force. These three factors, land, capital equipment, and human energy, are the three-fold apparatus upon which 3.7 billion human beings depend for the goods and services which sustain them from day to day and year to year.

At an earlier period this economic apparatus centered around the land and its cultivation (agriculture). Since the onset of the great revolution the goods and services have come increasingly from a factory-office centered occupational apparatus. When we consider the integration of the world economy, it is this industrialized, modern economy that we have chiefly in mind. No previous civilization faced such a problem. There are no real precedents upon which we can rely. We must go forward, if we do go forward, experimenting with problems which face the human family for the first time.

The integration of planetary economy in 1975 is a total, or unitary, problem. It is not a problem of one continent, of one nation or empire, of one racial or cultural group. It is a problem which the human family faces as a human family, occupying our planet Earth. It is our capital equipment. It is the success with which we apply our know-how to the earth, using our capital equipment and our skills, producing the goods and services upon which our physical existence depends. We rise or fall, sink or swim in terms of our own capacities, our own abilities to adapt ourselves to historical circumstances which will determine the conditions of life on the earth. Indeed, our decisions and consequent actions may determine our own extinction or survival.

Planetary economy will aim to provide the means of livelihood for its constituents along six lines: to conserve the human heritage of natural resources, using them sparingly and, where possible, adding to them; to produce and distribute those goods and services which are needed to maintain health and provide for social decency; to produce and distribute goods and services honestly, efficiently and economically; to assure simple necessaries for all, including dependents, defectives and delinquents; to give high priority to local self-sufficiency; to maintain enough central economic authority to guarantee adequate goods and services to successive generations of the planetary population.

An effective world government, therefore, must adopt and administer an economic program designed to: (a) Utilize and conserve natural resources, making them available, on a just basis, for the use of successive generations; (b) End involuntary poverty and insecurity and the exploitation of man by man and of one social group by another social group; (c) Make necessary public services generally available on equal terms, to all mankind; and (d) Guarantee equal opportunity to earth-dwellers based on the greatest good to the greatest number.

Feeding, clothing, housing and educating an agricultural village was a prime consideration at an early stage in social history. Providing the necessaries and amenities of life in a commercial-industrial city occupied the attention of city fathers as a consequence of the shift from agriculture to trade and commerce as the principle source of livelihood. Caring for the physical, physiological and cultural needs of populations in the United States, Britain, Japan and other growing commercial-industrial nations presented difficult challenges. The organization, expansion, defense and improvement of the American, British, Japanese and any other contemporary empire, posed even larger and more complex problems which have nagged mankind during recent generations. Recently, the planet-wide revolution of 1750-1970 has brought the entire human family with 3,700 million members isolated in 140 different nations, face to face with political, economic and social problems on a planet-wide scale. These problems are planet-wide in their dimensions. Measures designed for their solution must be equally planet-wide.

Villages, cities, regions and nations have learned, often the hard way, how to think, plan and act in terms of their own interests, or, more concretely, in the interest of their owners, masters and exploiters. It is with politics and economics of this planet-wide level that we of the present generation are particularly concerned.

Dwellers in western Europe and North America have to deal with the politics and economics of monopoly capitalism. Its central offices are generally located in particular countries--Britain, Holland, France, Germany, where big business enterprises had their beginnings and from which representatives of oil, steel, textile, motor and banking enterprises spilled over into the territory of their competitors as well as into the "third world" of erstwhile colonies and other dependencies.

Monopoly capitalism has made no real effort to organize a functioning world economy. On the contrary, it has established, maintained and consolidated centers of economic interests and activities at the national level. In theory and in practice the bourgeois-dominated planet is divided into economic and political states and spheres of influence, each equipped with the separatist institutions of political sovereignty.

Politically the task of setting up a competent world government has not been seriously taken in hand. The same may be said for the organization of a planned, organized, supervised planetary economy. So far as we know, such world economic institutions and practices cannot exist in the chaos of one hundred forty sovereign states, each exercising authority over its economy, each with its own program for growth and expansion, and putting its claims for wealth and power above peace, order, justice, and mercy for the entire human family.

General economic practice throughout the 1450-1970 experiments with nation building, empire building, competitive struggle and sporadic efforts at world conquest, occupation and exploitation have crossed national boundary lines as a matter of necessity. It could not be otherwise, because no nation has been able to reach the cultural level of civilization on a basis of economic self-containment. Primitive agriculture can maintain a high degree of self sufficiency. City populations abandon self-sufficiency and adopt the principles of expansion, occupation and utilization of foreign territory and exploitation of resources and manpower, at home and abroad.

As western civilization has matured, power struggles at the top, conquest, occupation and exploitation have come more and more to the fore until, in the era of monopoly capitalism, they dominate the field. In this period of human history nothing less than the just sharing of available goods and services will implement the principle of "to each according to his need".

Monopoly capitalism, throughout its entire history, has tended to function internationally, moving across frontiers in search of raw materials, markets, and fields of profitable investment. Inter-group trade has been carried on between and through "foreign" markets, cities and states. Not only has the flag followed the investor, but the investor has used governmental agencies, including the military, to protect economic interests, promote them and expand them. Early in their history, western nations subsidized private organizations like the Dutch East India Company and the British Hudson Bay Company and authorized them to exercise quasi-public authority. International banking and insurance paralleled international trade.

Western civilization, from its earliest beginnings in foreign business relations and ideological adventures like the Crusades, has spilled across national frontiers in its search for adventure, for experience, for information, for pelf and power. A part of the expansionist drive was "strictly business" in character. Another part--international conferences, public and private; tourism; the export of artifacts and of information, were promoted by mixed motives, from missionary zeal for the propagation of The Faith to international business for profit, public and private.

One of the most spectacular aspects of European expansion during modern times has been the growth of production and trade; the rapid increase in "foreign" investment; and governmental efforts to tie together geographically and ethnically remote places and peoples into neat bundles tagged Spanish Empire, British Empire, French Empire, Russian Empire. Nineteenth and early twentieth century history centered around such international experiments and included inter-state build-ups like the European Common Market and the Organization of American States.

War losses and emergency spending incident to warfare led to large scale financial assistance from one government to another. Such transactions are not confined to recent times, but during the war years from 1914 to 1945 they reached fantastic proportions. The United States foreign aid program alone, following the war of 1939-45, involved grants and loans of $125,060 million dollars from July 1, 1945 to December 31, 1970 (_Statistical Abstract_ 1971 p. 958). Similar grants and loans were made by other countries to their allies and associates. These examples illustrate the build-up of an extensive international relationship that has been an integral aspect of the 1750-1970 world revolution.

Throughout this experience two parallel forces have been at work. One was the effort to establish a stable, renewable and self-renewing social environment. The other was the effort to adapt and remake man (human nature) to fit into the rapidly changing social environment and to expand and deepen relations with nature.

Sociology, the science and art of staying together in more or less permanent social groups, thus becomes the theory and practice of association. Politics and economics are specialized aspects of association. Political relations, economic relations and other aspects of association make up the overall field of the human community or human society.

Groups of human beings are brought together and held together by various means, among which communication is outstanding. At every level, from the local to the general or universal, and in every aspect of politics, economics and other forms of association, human beings communicate.

One function of planetary association involves the establishment and maintenance of a network of planetary communication. Locally, nationally, regionally, and internationally the channels or means of communication have been extensively developed.

Devices designed to reproduce and elaborate oral and written communication blanket the planet so extensively that the individual and family privacy enjoyed by human beings before the middle of the last century has literally ceased to exist. In its place is a communications network that operates twenty-four hours in the day and seven days in the week. By a move of the hand and a flick of a switch everybody can be in touch with anybody and anybody with everybody almost everywhere.

Channels of communication, trade and travel keep members of the human race constantly in touch with one another. Except for the solitary, living alone in the wilderness (urban or rural) there is no hiding place. Mechanisms supplementing man's five senses, see, feel, hear and report everything.

Facility in communication provides a wealth of information. Using available means of human communication, a central planetary authority can inform, alert and arouse the entire human family with its 3,700 million members. Socially minded, it could announce and initiate the measures necessary to maintain peace and order through conformity to a common program of social action. Coordinating, integrating and administering the channels of communication at the planetary level will be a primary responsibility of any planet-wide economic program.

Planetary government will be responsible for establishing, maintaining and improving a network of communication and education designed to ensure both uniformity and diversity in the human population. The revolution in science and technology has been particularly noteworthy in the field of communication, extending from the family to the entire human race; from the home telephone, the morning newspaper, the phonograph, radio and television to regular mail delivery, the printing press, the camera, lithography, the typewriter, tele-communication, the computer, public address systems and the various devices for overhearing and recording that produce more or less permanent records of casual vocal expressions.

Planet-wide communication in the 1970's provides an example of the transformation from economic localism to economic worldism during recent times. By its very nature, communication tends to involve all four corners of the planet. In that sense, communication tends to become unique. It is not a real exception, however. Through communication channels, knowledge concerning every aspect of man's economy, from agriculture to commerce and finance, crosses frontiers almost automatically, strengthening, deepening and integrating planet-wide economy.

A planet-wide economy will not be designed, planned and coordinated as a result of either military conquest or political expansion and predation. Rather, it will be a public enterprise of the entire human family, operated by a world government in the public interest for the social service and well-being of mankind.

The worldwide revolution of 1750-1970 provides the economic basis for a planet-wide society--for One World. The real danger--that any local or regional war may grow into another general war in which nuclear weapons are used--provides reason aplenty to put the whole before the part and, in the pursuit of general human welfare, to federate the political life of the human family, following the many steps toward worldism already taken by various aspects of its economy.

CHAPTER SIXTEEN

CONSERVING OUR NATURAL ENVIRONMENT

Beyond civilization we will conserve, share, beautify and, if possible, improve the earth, which is our physical base of operations.

The earth is an irregular sphere, one of a number of planets circling the sun, from which we get light, heat and radiation. The earth has a shell or crust made of various minerals. Two-thirds of its surface is water of various depths up to six miles. Above the surface is an atmosphere, some twenty miles thick, composed of various gases, dust particles and water vapor. Operating throughout the earth there are vibrations of different wave lengths.

As a whole the earth is a going concern that carries out its daily, seasonal, yearly business of providing a home for an immense variety of forces; for living forms, in the earth, on the earth, in the water and in the air. The earth and its attributes are the common host or mother of us all.

Some of earth's inhabitants are "alive". Many of the living forms move about--and reproduce themselves, passing through a life cycle from birth to death.

Some among the living forms cluster together into more or less permanent groups which develop social relationships including communities in which individuals are born, live and die.

Speaking in metaphors, the sun is the common father of us all, providing us with light and heat, the earth is the common mother of us all, providing us with sustenance. We living beings, progeny of sun and earth, pass through a span or cycle of earthly existence--helping one another, ignoring one another, jostling one another, annoying and even killing and devouring one another.

This is a roundabout way of saying that nature, human beings and human society are part and parcel of a total relationship which includes the planet earth, the solar system and an immense range of celestia which includes minute particles of celestial dust, like our earth, and majestic assemblies of celestial notables like the Island Universe of which we are unnumbered and barely noticed particles.

At some point in this vast assemblage, actually before the assemblage came into existence, there were responsible, animating forces in play. There was also the responsibility for the use or exercise of the operating forces. We humans are a product of those forces. We also share in their functioning. Consequently we share in the responsibility which is associated with their exercise.

It is the task of philosophy to designate the responsibility; to describe it, measure it and perhaps to assign it. At any rate, we find ourselves in a position where certain things are expected of us, perhaps even required of us as members of the human family and/or of the human family as a functioning whole.

It is entirely possible that, instead of overlooking, ignoring, bickering, quarreling and periodically maiming and killing each other wholesale, we humans should be devoting our energies, emotions, thoughts and plans to furthering the larger purpose of which the earth and its inhabitants are small segments. In a word, that we humans should be acting as a responsible part of a functioning whole engaged in the vast enterprise of being and becoming.

Whatever our ultimate tasks may be, our immediate problem is three-fold: (1) To make the earth the fittest possible living place for all of its inhabitants; (2) to organize human society in the way best calculated to achieve that objective; and (3) to make every reasonable effort to prepare ourselves to play a meaningful part in this cosmic drama to which we have been assigned.

Item (1) is the theme of this chapter, item (2) is the theme of Chapter 17. Item (3) is the theme of Chapter 18.

Passing beyond civilization we will attempt to conserve, share, beautify and if possible to improve our earth.

Our first task is to make the earth the fittest possible place for _ALL_ of its inhabitants. In a way that is a simple assignment, but its implementation will take us into every nook and corner of the land, water, air, radiational field, and every other aspect of the planet, including the weather.

When we say _ALL_ forms and phases of life we mean all. All microscopic life, all lichens and mosses, all vegetation on land, in the water, in the air. All insects, all birds, all fish, all quadrupeds. All two legged animals. All centipedes and all those in between.

All forms of life have been assigned to our earth for a purpose, or have made a place for themselves in the vast scheme of things or are clinging parasitically to life after their assignments have been fulfilled or as their usefulness is drawing to a close.

In a broad sense, that which lives on the earth, including mankind, has a right or an opportunity to be here, living to the utmost of its always limited capacity. How limited? Limited by the similar rights of all other forms and aspects of life. In a word life on the earth--each life and all life--is a shared opportunity.

Doubtless there are planners, regulators and arbitrators whose task it is to decide, at any particular moment, who shall survive and who shall perish. Actually we humans perform a part of that function every time we thin out a forest, weed a garden, select our seed or teach a class. At one stage of life we are the judges, at another stage we are the judged, performing multiple tasks that must be fulfilled during each moment of each day and each year.

In our Island Universe this earth is small. But in each backyard, on each acre or square mile of earth, decisions may be made or are being made that determine survival, utility, order, beauty. The results of those decisions appear constantly in the life all about us.

We have all been in homes where neatness, usefulness and good taste abound. We have been in villages and towns where the same conditions prevailed. On the other hand, we have been in situations that can be described only by the words littered, disorderly, chaotic. We have also seen neat orderly homes in disorderly, slovenly neighborhoods. Much depends upon who makes the decisions and whether the plans that are carried into effect promote or obstruct the ultimate purpose.

At the moment, we have the satisfaction of orderly, beautiful neighborhoods at the same time that we are surrounded by a disorderly, littered, chaotic international battleground.

The earth with its oceans and its atmosphere is a storehouse containing many if not most of the essentials for survival, growth and development, for mankind as well as a multitude of other life forms. Perhaps its most valuable single asset from the human viewpoint is its topsoil. Topsoil plus light, air and moisture provide the elements necessary for producing vegetation. Vegetation, in its turn, furnishes the nourishment on which animals thrive.

At the top of our priority list for the well-being of the earth stands the injunction: conserve and build topsoil.

Topsoil is lost through erosion--wind erosion, water erosion, erosion through over cropping. It is held in place by stones, grasses, and the roots of shrubs and trees. Untouched by human hands, on the prairies and in the forests, topsoil is deepened year by year as winter frosts break up soft rocks, as dead grasses, leaves, twigs break down into humus, to become part of the topsoil and provide the nourishment for a new round of vegetation.

Topsoil is renewable, replaceable. Lost through cropping and erosion, it may be rebuilt and deepened by natural processes. In temperate climates with normal rain and snowfall, the topsoil of grasslands or a forest may be deepened year by year and century by century. Topsoil may also be deepened by dust storms that pick up particles of humus from dry lands and carry them to moister areas.

Through a carefully controlled sequence, semi-desert lands planted first to grasses and then to shrubs and trees can be protected against wind erosion. As vegetation flourishes it increases dew formation and rainfall. Plant roots prevent runoff and retain the water in gulleys and low places. Evaporation builds up moisture content in the atmosphere. Water vapor forms drops and falls in

rain or snow.

Foresighted husbandry not only prevents erosion but, practiced on a sufficiently broad scale, increases air moisture and modifies climate--the weather.

We are less fortunate with some of the critically important minerals that make up the earth crust.

During early centuries in the history of western civilization adventurers and prospectors concentrated on the precious metals. The voyagers and discoverers who sailed fifteenth century seas were seeking supplies of gold, silver and precious stones that could be cut and converted into the highly prized jewels adorning the crowns and scepters of the mighty.

Production at that stage meant agriculture, with side occupations such as hunting, fishing, weaving, tanning, pottery, thatching and peat cutting, in the all but continuous countryside. There was a very little mining, but outside of the commercial towns and the growing capital cities people made their living by taking care of domestic animals and tilling the soil. Between seed time and harvest they tightened their belts and prayed the Powers that Be for a bountiful yield. If it came they feasted. If the crop failed they struggled to survive on the narrow margin between hunger and starvation.

If they saw any money it was likely to be copper, with perhaps an occasional piece of silver. Gold was for the rich, of whom at that period there were precious few, even among the owners of land and the wielders of power.

Country folk barely scratched the surface of the earth. Roads were wheel tracks in the mud. Bridges were fords that became more or less impassable with high water.

These assertions sound strange and romantic to the modern beneficiaries of asphalt and reinforced concrete. They were the lot of most Europeans and North Americans when our great grandfathers and great grandmothers were in their prime.

What has made the difference between their use of the earth and ours? Chiefly, the newly tapped sources of energy and the wide variety of minerals--whose names were unknown except to scholars and scientists before 1750. It is the new sources of energy and the only recently utilized metals that have made the difference.

Farm land can be used and abused many times before its productive possibilities are exhausted. Even then, with foresight, technical proficiency, the investment of labor and capital, agricultural land can be restored to fertility. Iron ore, tin, copper and tungsten are extracted from the earth, refined, put to some use or wasted as the case may be, but they are gone. They may be replaced by other minerals. Through geological ages they may redeposited in the earth's crust. But to all intents and purposes, they are finished.

It is a source of pride to promoters and propagandists for the status quo that western man has removed more metals and minerals from the earth's crust in the past two hundred years than his predecessors removed during the previous two thousand years. It is also a source of danger, because the possibilities of taking those particular minerals from that particular cubic foot of the earth are ended.

Replaceable natural resources such as soil fertility, grasses and trees can be restored and reproduced. Irreplaceable natural resources are exhausted by one use. In so far as they are concerned, that part of the earth's crust has been impoverished--made poorer.

Wasted through neglect and careless use, squandered in the senseless destruction of war, the earth is still a rich treasure house for its multitudinous forms of life. Its remaining treasures can be carefully conserved. Such replaceable resources as topsoil, vegetation and water can be husbanded. Oceans, mountains and, deserts can be dealt with as we proceed with our programs for the most economical use of the natural resources that remain to us.

Western man is presently emerging from a boisterous era of invention, discovery, of multiplying productivity and corresponding waste of irreplaceable natural resources-temporarily justified by "national security" and "war emergency." The temporary loss of replaceable reserves and the permanent loss of irreplaceable resources is none the less tragic, no matter how urgent the immediate cause for their consumption.

At this stage in the history of earth's conservation, when so much is waiting to be done, if each family, each village and town, each city state and nation will do its bit to conserve, plan, shape, utilize, beautify, improve what remains of the natural environment, the results will be impressive enough to justify the time and means devoted to the enterprise.

Wherever we go with our plea for the foresighted and economical use of the earth and its remaining resources, we are met with the question: "But what can I do?" The answer is simple. Find your place in the nearest team working to utilize, conserve, and, where possible, enlarge the natural wealth of the planet. If no such team exists, join with your neighbors in organizing one. Take seriously your assignment to use the part of the earth with which you are in contact intelligently, economically, wisely.

Whether you are a novice or a professional, a homesteader or a longtime resident, be sure that each contact you make with the earth enlarges its possibilities of utility, order, beauty.

This crusade to save and utilize the earth as the common mother of so many forms of life must be carefully planned and well organized through successive generations. Men have spent far too much time and energy in destroying. The time has come when they must conserve, plan, shape, utilize, beautify, improve.

If the energies now going into business, sport, social events, frivolities, make-believe and the deliberate destruction of waste and war could be directed to planning, utilizing, beautifying on the circumferences and at the centers of population concentrations, immense forward strides could be taken in a single generation.

The planet still has immense, unused or little used reserves of natural resources. The old order is slipping, floundering, wasting. Civilization has told the best of its story and is busy writing its epitaph. The revolution of 1750-1970 provides the opportunity for a new beginning. The place is here. The time is now. Let us conserve, beautify, share, utilize and, in so far as possible, improve our natural surroundings.

CHAPTER SEVENTEEN

REVAMPING THE SOCIAL LIFE OF THE PLANET

Beyond civilization we could develop a sociology-a cluster of associations, institutions, outlooks, purposes and practices designed to revamp the social life of the planet in much the same way and with the same general outlook with which we approach the political, economic, sociological and ideological problems arising from the presence, on the planet Earth, of some 3,700 million different human beings.

There are at least two approaches to the sociological aspects of our planet-wide, coordinated society. One way is that with which nature's cyclism has made us familiar--the "day" of manifestation (activity) and the "night" of rest (recuperation, restoration and renewal). This might be described as a natural, gradual evolutionary way.

The other way is based on creative intervention which shortcuts evolutionary gradualism in the same way that a great leap shortcuts many ordinary steps.

Perhaps the conception can be illustrated in a most effective way by the alternative presented during the great revolution of 1750-1970. At the beginning of this epoch man walked the earth literally, except when he sailed on the water or used the horse or some other swift animal to travel by land. In the course of the great revolution mankind has learned to move his body at speeds which sometimes exceed the movement of sound, on the land, on the water, through the air and into space. He has done this short-cutting by revolutionary changes in types of energy coming from outside his physical body. In another sphere--communication devices--man has stepped up the movement of his emotions and thoughts and his creative imagination beyond the speed of light.

This analogy is not complete, nor is it wholly convincing. But the great revolution in science and technology, applied in the field of social science can quite conceivably provide humanity with the means of short-cutting the normal or "natural" processes in sociology as it has already short-cutted the normal or "natural" process in human transportation and communication.

As long as human beings accept the normal, traditional, "natural" principles of association and group action, humanity will continue on the tread-mill of civilization with its long established cycles of beginning, expansion, exploitation, maturity, conflict, decline and extermination.

This aspect of planetary sociology may be illustrated by the rise and decline of total membership in the human family. We know that Roman civilization passed through a completed cycle of population expansion to an optimum, followed by a catastrophic population decline. Western civilization has been experiencing a population expansion or explosion that can be measured with a moderate degree of statistical accuracy. Planetary human population doubled from 500 million in 1650 to 1000 million in 1850. Between 1850

and 1950 population more than doubled (from 1000 million to 2,500 million). In 1975 the human population of the earth is close to 3,700 million.

An essential aspect of world government will be a population program designed to adjust social structure and planning to the means of production and to make generally available to all humans and, where possible, all living things, the results of invention, discovery and experience with affluence, general security and wide variations of vocational and avocational choice. In practice such a program would include the planned utilization and conservation of nature and the conscious improvement of society by society.

Social planning at the planetary level could deal chiefly with large national or regional groupings, more or less divergent in viewpoint but conscious of the necessity for bringing local and regional groups together in order to secure common agreement and to take part in directed joint actions. Such efforts must aim at sufficient cohesion to provide for normal social function at all levels; sufficient permissiveness to allow for a measure of self-determination at all levels; sufficient authority to carry on production and distribution at all levels, and sufficient libertarianism to tolerate discussion and opposition at all levels, with a maximum degree of self sufficiency and self-determination at all levels.

Nowhere is the need for social planning more in evidence than in the sphere of human population. In the early years of the present twentieth century, the human population was doubling in about 50 years (from 1500 million in 1900 to 2500 million in 1950, from 1,900 million in 1925 to 3,800 million in 1975). Had this rate of growth continued for another hundred years the planet's fertile acres would have been fully occupied by jostling crowds with _standing-room only_ signs in the more desirable living spaces. Japan, the United States, several countries of West Europe and China have launched campaigns to reduce net population increase to one percent per year or less.

A culture level, to be effective in the present predicament of a human race (oscillating uneasily between the possibility of social advance and the probability of recession into another Dark Age of ignorance, superstition and social stagnation), must include certain essential elements. First and foremost, it must be planet-wide. Given planetary unification by communication, transportation, travel, migration, trade and commerce, and cultural interchange, one world has become a factual reality. World oneness is laced by contradictions, confrontations, conflicts; by traditional, customary, habitual, ideological, legal, and national barriers of greater or lesser rigidity. Despite these divisive forces, our need to function in terms of planetary oneness is so great that the term "citizens of the world" not only makes sense, but is accepted and even flaunted in the face of tough restrictions and hard nosed nationalism.

Segments of humanity that are ready and willing to sign up as world citizens already enjoy world consciousness, carrying world passports; and are experimenting with various aspects of worldist thinking, contact, organization. They are ready and willing to take part in a multitude of planetary experiments in world-wide human association.

The great revolution of 1750-1970 has made two notable contributions to the institutions of western civilization. In the field of politics it has contributed the nation state. In the field of economics it has contributed industrialization with its twin sociological consequence, mechanization and urbanization.

Machines and cities are the Siamese twins of the modern age. They are also the twin forces that helped to push the nation state into its strategic position of sovereign independence.

Nationalism today is a unifying force inside the frontiers of the 140 nations that presently litter and clutter the earth. Beyond each frontier, however, nationalism has become one of the most divisive sources of misunderstanding, controversy, disruption and conflict presently cursing mankind. In the exercise of their sovereignty the oligarchs who make policy and direct procedure in each sovereign state put national interests first. On a planet which currently hosts 140 sovereign states this policy of putting the interests of the part before the interests of the whole results in controversy, conflict, and may result in collective self-destruction.

It is reassuring and encouraging to compare the rise of nationalism and Europeanism during the past thousand years with the rise of planetism and worldism from 1450 to 1970. The development of nationalism and Europeanism is still incomplete, but the drive in that direction has thus far survived the fragmenting forces of self-determination and political independence which have played so vital a role in human society since the beginning of the present century. Europeanization is still a dream rather than a reality. The forces of regionalism, nationalism, and separatism still dominate European life. But the ideology and techniques of Europeanization are widely recognized, accepted and put into practice. The development of worldism seems to be following a parallel course.

Consequently, wisdom, foresight, and the acceptance of change as a major factor in all social relationships seem to justify our assumption that sooner or later man's survival on the planet will depend on a degree of worldist thinking, association and

institutionalism that will guarantee the preservation of order and decency at the planetary level.

Since conformity implies and involves a will to diversity, measures to establish and maintain order and peace would include the widest possible latitude and the utmost effort to encourage the greatest possible diversity at regional, national and local levels. Thus diversity would become a virtue in much the same sense that conformity became a virtue in bourgeois Europe toward the end of the last century and in North America during the Joseph MacCarthy period. Through the past dozen years American youth has reversed the trend, adopting a permissiveness under which the sky is the limit in language, clothing, sexual conduct and professional choice and behavior.

Non-conformity is all very well as protest against super-conformity, but it fails utterly to meet the basic need of the 1970's for a mass movement away from the institutions and practices of civilization, plus a disciplined and purposive mass determination to assume attitudes, adopt practices and establish institutions leading beyond civilization to a world culture pattern which insists upon conformity up to a point necessary for survival and social advance, and beyond that point, a diversity--including recognized and organized opposition at the planetary center. At the same time there must be a degree of regional and local diversity that will provide for the utmost independence, self-confidence, self-expression and regional and local self-determination compatible with the basic principle: to each in accordance with need.

Beyond civilization, matters of general concern will take precedence at the same time that matters of regional and local concerns will be dealt with regionally and locally. In such a society individuals and communities at all levels will be schooled and experienced in self-discipline and prepared to follow conduct patterns that emphasize the principle: live and help others to live to the fullest and the utmost.

Beyond civilization lies the recognition and practice of the principle that the welfare of the whole takes precedence over the demands of any of its parts. At the same time, each part or segment of the social whole has specific rights that the directors of the whole are bound to recognize, respect, defend and implement.

Such results can be achieved under a social pattern aimed at respect for life--all life; the preservation and improvement of the conditions under which the good life can be lived by all members of each community as well as by the human family as a whole. If human society is to be preserved and progressively improved it must encourage individuals and cherish institutions whose responsibility and duty it is to stimulate self-criticism to a point that will make survival and social improvement the first charge on community life--from the locality, through the region to the whole human family.

Should self-discipline and self-criticism falter, militant minorities must urge and initiate those revolutionary changes which are necessary for the health and well-being of any ailing human community. This is one of the contradictions that faces every human enterprise, including the human race itself.

Cyclic renewal or regeneration is one aspect of life on our Island Universe. The principle operates in the life cell, and from the cell on up and out, to the more extended and extensive aspects of life and being. The course is well marked and increasingly understood. Alternatively, humanity can put its creative imagination to work; plan, organize, prepare and by a carefully designed, revolutionary technique take a great leap onto another culture level, establishing other norms beyond those currently accepted by civilized peoples.

"Beyond civilization" lifestyles are being planfully introduced in order to save humankind from impending disaster. In that sense, they are emergency measures. Developmentally, they are being designed as a planned replacement of the life style current in the matured centers of western civilization.

Under such conditions the habit patterns of civilizations could be deliberately abandoned or superceded by life styles more appropriate to the institutions and practices of human beings prepared to live and able to live and develop in a community which is establishing itself on a level beyond civilization.

Let no reader retort: Old things are best; old ways are most secure; beware of the errors of human judgment, the lures and wiles of human imaginings, the reckless enthusiasm of inexperience; the machinations and subversions of the counter-revolution.

Whether he will or no, man has already advanced far along the path that leads beyond the culture level of civilization into a culture pattern which includes new means of association and new social institutions. The most obvious examples of the universal pattern which the human race has been developing during the present epoch are to be found in the "one world" consequences of the

planet-wide revolution in science and technology.

Planetary fragmentation which accompanied the dissolution of Roman civilization divided and sub-divided mankind into unnumbered self-contained segments: families, tribes, classes, villages, cities, kingdoms, principalities, nations, empires. They were separated from one another by geographic, ethnic, ideological and political barriers which were intensified by tradition, custom, migration, and the competitive struggles among the elite for pelf and power. Ignorance and superstition played a major role in the decentralizing process. Conflicts at various levels led to further social segmentation and isolation of autonomous social groups.

In the backwardness of those Dark Ages--curiosity, fellow feeling, mass migration, the spirit of adventure, trade, travel and the need for common action to master nature and repel enemies--broke down barriers and created fields of mutual interest and general well-being, reversing the trend toward fragmentation and replacing it by a trend toward universality which reached its high point during the closing years of the nineteenth century. The slogan of this movement was "United we stand, divided we fall. The bell which tolls for one, tolls for all. When one benefits all benefit. Peace, progress and prosperity promote general welfare."

Two general wars in 1914-18 and 1939-45, brought pre-meditated, deliberated suffering, hardships and death to multitudes. Each war led to a clamor for peace and order that resulted in a World Court, The League of Nations and the United Nations. The efforts at planet-wide united action for peace and disarmament were paralleled and supplemented by the growth of specialized public services for communication, travel, scientific interchange, arms limitation. They were further augmented by a spectacular expansion of trade, travel, capital investment and scientific research and interchange.

Events since war's end in 1945 have marked out the steps which the human race might take in the immediate future to deal with the new problems arising out of the world revolution of 1750-1970 and to stabilize human life on the planet.

Step 1. Revise the United Nations Charter to make all citizens of member nations also citizens of the United Nations and therefore under its direct jurisdiction.

Step 2. Delegate to the United Nations authority to levy taxes or otherwise provide its own income.

Step 3. Call a planet-wide convention of delegates from all nations, authorized to draft a world federal constitution and submit it for ratification by all member states.

Step 4. When approved by two thirds of the states represented at the constitutional convention the constitution so adopted would became the basis for world law and the administration of world affairs.

Step 5. Inaugurate a world government that would be responsible for maintaining and promoting peace, order, stability, justice, equality of opportunity and general welfare at the international level.

Heretofore, the nearest approach to a universal state has been an empire like that of Egypt or Rome built by conquest and maintained by military authority exercised by the imperial nucleus over its associated and subordinated territories. The universal state described above would be an association of sovereign states, each delegating a sufficient measure of its sovereignty to enable the World Federation to act as a responsible planet-wide government.

The probable consequences of these five forward steps have been summarized by Barbara Ward and Rene Dubos (_Only One World_ N.Y. Nostrom 1972 pages 28-29). "In every case the needed steps take us away from division, from single shot interventions, separatist tendencies and driving ambitions and greeds. We have to grasp and foster more fully the truly integrative aspects of science. We have to revise our economic management of incomes, of environments, of cities. We have to place what is useable in nationalism within the framework of a political world order that is morally and socially responsible as well as physically one."

Up to this point in social history, critical situations have usually been dealt with on the battlefield. Might measured right. The victors carried the day, won the right to exploit their defeated rivals and weaker neighbors. The result was planet-wide political chaos, and an economic free-for-all, in which political power and economic superiority bestowed upon their possessors the right to plunder and exploit geographic areas limited only by existing means of communication and transportation. At no known point in social history were conquerors and exploiters able to unify the earth politically and exploit its total economic resources.

A planned, stabilized future for humanity will be assured when the earth is governed much as cities, states, nations and empires have been governed in the past and the present, but with one essential difference. At no known past time have all human beings been represented in a government authorized to make and enforce world law. In the absence of law, chaos and armed conflicts have determined the course of human affairs. Under a recognized world federal government, world law will bring, for the first time, the practical possibility of a law and order determined by and for the human population and charged with the responsibility for establishing and maintaining planetary public policy.

World law will be only one aspect of the new situation that will result from the establishment of a planned, stabilized future for humanity. Other aspects of the new society will include:

1. Shaping the future of nature on and in the planet, with all of its potential riches.

2. Perhaps also taking a hand in determining the future of other celestial bodies making up our solar system.

3. Shaping human society, the man-made and man-remade human heritage that plays so vital a role in determining the course of human life--individual and social.

4. Shaping and guiding man--the gregarious, imaginative, venturesome, productive--destructive, creative animal.

5. Building up in human society respect (reverence) for being, respect for life with its multitudinous variations of opportunity for individual and social activity.

6. Arousing interest and dedicating time, thought and energy to the new science and new arts grouped together under the title Futurology.

7. Having a hand in perpetuating and shaping one segment of our expanding universe in accord with the Cult of Excellence: good, better, and best ever! This is an exciting, constructive, long-range project worthy of the attention and devotion of any being, even the most ambitious and omniscient.

8. Aiming at the Truth--the workability, improvement and the perfectability of our planet Earth as a recognized, accepted and essential part of our planetary chain and of our Island Universe.

CHAPTER EIGHTEEN

MAN COULD CHANGE HUMAN NATURE

Man could conserve natural resources; he could remake human society. But man himself? There, perhaps, is the root of the problem we are discussing.

Can man change himself? Can he change human nature? Could human beings as we know them be transformed sufficiently to live and survive under the life-style that replaces civilization?

In our universe as we know it today, from the least to the greatest, from the most minute to the most extensive, change is one of the basic principles of existence. Nature changes. Human society changes. Changes in nature and in society are paralleled by changes in man himself--changes in outlooks and purposes, changes in ways of feeling, thinking and acting.

Human beings have lived under the aegis of tradition, custom, habit--thinking and acting "normally" and "naturally" in ways accepted by their forebears and followed by them with little or no regard for reason, foresight, or creative imagination. Rudiments of all three capacities were known to exist in human beings. On the whole, the status quo has been preferred; innovation frowned upon and innovators discouraged, denounced, reviled and sometimes even put to death.

In the field of natural science revolutionary short-cutting through the use of man's creative imagination has been widely used. The great revolution is one aspect of the anticipated result. Similar revolutionary short-cutting in the field of social science and social technology is bound to produce a "new man" in the same way that similar practices have remodeled, regenerated and renewed man's relations with nature, and his theories and practices of association.

Despite efforts of the Establishment to impose conformity, non-conforming individuals continued to be born and to grow up as deviants, misfits and intentional non-conformists. Some of these rebels against the established social order left home, joined the

army or went to sea. Others stayed at home, bided their time and, when opportunity offered, joined with like-minded fellows in organized underground opposition or open rebellion against the status quo.

History reports the existence of such dissident individuals and social groups and movements in one civilization after another.

In a very real sense any invention, discovery or innovation in any field of human thought or action, if widely accepted or adopted automatically, becomes a revolt against the status quo. Our experience with innovation during two centuries of the great revolution gives us every reason to suppose that the flow of scientific and technical invention and discovery will continue for an indefinite period into our future. On the whole the evidence suggests increase rather than decrease of innovation and therefore of change.

A time of troubles such as that through which western civilization is now passing offers individuals and social groups unique opportunities to play significant roles in shaping the course of events. In every human population there are individuals who are dissatisfied with the status quo and prefer change to status. For such individuals a time of social troubles is a holiday.

There is also an ever-renewing social group for whom a time of troubles presents a challenge and an opportunity--the young people of the on-coming generation.

Adults are generally conditioned and shaped by the social situation into which they were born and in which they matured. Young people are passing through the conditioning process. They are undergoing the process of rapid change.

Young people in their teens and early twenties stand, usually hesitant, on the threshold of life. They are bursting with energy, eager, hopeful, anxious to enter the stream of adult activity. Inexperienced, they under-estimate the difficulties, taking up any line of activity that promises quick results. They are impressionable and generally seeking "a good life."

Such resources of energy and idealism exist in every generation and reappear as the generations follow one another. Youth groups have played active roles in one country after another where opportunities were restricted by the establishment and revolutionary propagandists painted a rosy future. Political nationalism in the eighteenth century and economic and social emancipation in the nineteenth century mobilized high school and college age youth in the Americas, Europe, Asia and Africa.

It is folly to assert that human nature is a given and unalterable quantity in every social situation and that since "you cannot change human nature" intentional social changes are out of the question. The facts are otherwise:

1. There is a wide diversity in human beings ranging from herculean physical strength to pitiable weakness; from the mental power of genius to the nonentity of imbecility; from outstanding and unquestionable talent in arts and letters to illiteracy and clumsy inefficiency. This wide diversity in human capacity is one of the outstanding features of human nature, recorded again and again in history and encountered in all human aggregates.

2. There is a period in human life when the habit patterns of childhood are exchanged for the habit patterns of adulthood. At this turning point, youth is likely to follow dynamic and purposeful leadership.

3. There is a wide diversity in social situations, from rock-ribbed stability, to entire communities teetering on the brink or plunging over the brink into the maelstrom of revolution. Such diverse situations have existed again and again during the 1750-1970 revolutionary epoch.

4. When a revolutionary situation develops, a revolutionary leader well-established in a community trembling on the brink of a revolutionary overturn may seize the reins of power and establish a regime founded on opposition principles, dedicated to another set of principles and practices. When such a revolutionary coup is successful the bells of history have tolled for the older order and the trumpets of victory have sounded for the new society.

5. The intensity and the direction of the social changes which radiate out from the climax of a revolutionary situation and the consequent, subsequent attempts at counter-revolution, are the outcome of active, purposive intervention by all of the social groups present at the center of revolutionary activity.

The current shift from a laissez-faire economy ("letting nature take her course"), to a planned, managed, controlled economy is a precedent which gives us a foretaste of what will lie ahead when a planet-wide federal government undertakes the planning, direction and management of a planet-wide economy and society.

The outcome cannot be determined in advance. Unexpected situations will arise, the resolution of which will shape the fate, present and future, of mankind. In a very real sense, our eggs are all in one basket--the Earth. Our future, for generations to come, may be determined by the decisions we are making or the social policy we are initiating at the present moment.

Large scale research and experiment should go a long way toward developing the skills required by competent and successful planetary leadership. Political experiments like the United States of North America or the Union of Socialist Soviet Republics or the League of Nations or the United Nations, the planet-wide search for petroleum or the joint scientific efforts that went into the splitting of the atom, have given us opportunities to develop the science and art of planet-wide leadership.

Behind and beyond our training courses--our formal educational system (which should be in the front rank of our priorities)--we could train apprentices in every occupational field, selecting the most apt, the most eager, the seemingly best qualified and giving them every opportunity to try out their skills and improve their qualifications in their chosen fields of endeavor.

Aspirants for any occupational assignment would divide themselves into three groups: those who feel that they have chosen wisely, find themselves in congenial surrounds and want to spend coming years in the occupation of their choice; those who are uncertain and still unable to decide upon the field of their life activity; and third, those who have chosen badly, are dissatisfied with the occupational groove in which they find themselves and who are ready to move into another field at the first opportunity.

The well adjusted will constitute the elite of their chosen occupations, learning its skills and joining with other well satisfied professionals in passing on their enthusiasm and knowledge to the next generation of aspirants for inclusion in the same production teams. The undecided should be the object of special attention. They have entered an occupational field on an experimental basis and should be advised and helped during the experimental period when they are deciding to make a go of it or to try for something more congenial or at least more acceptable.

Misfits who have made a wrong choice and who have no clear call to stay where they are should be advised and helped to find more congenial occupational surroundings.

We may think and experiment with this selective process as though it was easy and probably final. Nothing could be further from the reality. Even the best adjusted have moments of uncertainty and indecision about their occupational futures. The less adjusted spend a part of their lives looking around for a more attractive field.

In every field, some of the best adjusted go as far as their interests and capacities carry them and then shift over into other occupations which, in turn, offer them more chances to employ their talents to greater advantage.

In every field of human endeavor individuals come and go. They should stay where they seem to be useful and go when their usefulness is decreasing or coming to an end.

Balance between status and change is as desirable for the individual as it is for the group. The decision to stay or go should remain open to the endless round of individuals who comprise any working team. The existence of such flexibility is limited, however, by the need to maintain a working force of interested, alert, eager individuals--skilled, adjusted and disciplined in group endeavor and achievement.

We are describing the unending process of selection which goes on from hour to hour and day to day in any well ordered social group. Every group has its fields of endeavor, its goals and its scale of priorities. Individuals come and go. The group carries on. Excellence in group performance depends upon its competence in selecting, training and coordinating its endeavors.

Every social group has its hard corps of trained and tested veterans. Also it has its problem of aging. The apprentice of yesterday becomes the experienced, skilled operator of today. Tomorrow brings retirement for those who have reached the age limit of service and who as a matter of group routine are replaced by newcomers. In the course of this cycle the directors of the group have their opportunity to improve the level of group efficiency by phasing out the old and incorporating the new.

The range of capacity, from perception and facility to ineptitude and incompetence, holds for the new generation as it did for the old. The tone and performance level of each group is determined by the effectiveness of this selective process.

At some point it becomes necessary to inquire into the biologic aspects of any social enterprise. We are doing our utmost to select and educate and train the fit. Are we producing potential fitness?

Long experience has taught us that we cannot produce a silk purse from a sow's ear. Eugenics emerges as an important aspect of every long term group endeavor. Qualities and capacities are handed on from parent to offspring. Are we reproducing fitness or unfitness?

As we move beyond civilization onto a more mature and more complicated culture level, we may have a workable system of social priorities, but does our oncoming stream of manpower have the interest, the imagination, the competence, the sense of social responsibility and the staying power necessary to arouse in a series of generations the will and determination to carry out social policy?

Are the oncoming generations able and willing to shoulder the loads of clearing out the rubbish accumulated through ten centuries of western civilization, make effective use of science, technology _and_ available human capacity and move onward and forward to new levels of social achievement?

We could develop a corps of socially responsible technicians as we have developed a corps of competent scientists and technicians in the field of natural science. In each field priorities are constantly changing. Each field is called upon to meet the changes by making corresponding changes in its personnel, its education and its apprenticeships.

In addition to formal schooling and apprenticeship we have a vast network for the distribution of information and the formation of public opinion. The printing press, the camera and other means of communication determine the levels of information and the willingness of the public to keep abreast of the shifting social scene.

A social structure resembles every other human meeting place--it tends to accumulate dead wood. There are two answers to this problem: periodic housecleaning, without fear or favor, together with careful scrutiny of the apprentices and other newcomers in the field.

Every social group has its quota of defectives and delinquents--biological and social, physical, mental, emotional. Here the critical problem is where to draw the line. Perhaps the best general answer is to measure productiveness, including those who make a net contribution, including those whose presence is desirable and excluding undesirables. Again this involves periodic housecleanings.

Throughout the past two centuries mankind has been confronted by an epoch-making, many sided development--the great revolution of 1750-1970. As I write, the great revolution is modifying the structure and functioning of human society and, consequently, the forces which condition, shape and, in large measure, determine the directions and channels in which humanity lives, moves and has its being.

The great revolution is changing man's relation to nature, to the structure and function of human society and the ways in which men think, feel, act and live. The great revolution has shifted the human living place from rural to urban, replaced a large measure of self-employment by wagery, lifted large segments of mankind out of scarcity into abundance, led to widespread migrations across Europe and from continent to continent, expanded nations and built empires. In the course of these developments Europe became the center of world economic, political and cultural affairs, held the position briefly and lost it in the course of two general, suicidal wars.

Speaking broadly, such a period in the life of any society may be described as a revolutionary situation--one in which changes are made frequently, rapidly and with far reaching consequences. In a word, the existing social pattern is in process of being turned over, turned upside down, transformed by forces which seem to operate according to their own principles and often quite independently of human intention or intervention.

Our society--western civilization--is undergoing a revolution. People born into a rapidly changing society are often tempted and sometimes compelled to play significant roles in the revolutionary process. Unconsciously or consciously, unwilling and unwitting or deliberately and purposefully they are revolutionaries.

Among the participants in the revolutionary process, the far-seeing, imaginative, perceptive and mature develop into purposive revolutionaries. In the course of a series of political, economic and cultural revolutions like those which played so fateful a part in China between 1899 and 1969, an entire generation is born, grows up and, in larger part, retires from active life or dies off.

Long continued cultural changes play a part in local history. They have an equally important role in the lives of neighboring nations and peoples. With present means of communication, transportation and travel, the influence of revolutionary events such as those in China from 1899 to the present day may be profound.

The bourgeois revolution from 1750 to 1840 centered largely in West Europe and the Americas. In scope it was economic, political, cultural. The Chinese and other revolutions of the present period, beginning with the Mexican Revolution of 1910 and the Chinese Revolution of 1911, are once more transforming the economic, political and cultural life of mankind.

UNESCO's _History of Mankind_ (Harper and Row), particularly its Volume 6 titled _The Twentieth Century_, presents voluminous comments from a wide range of qualified scientists and commentators on the changes associated with the great revolution of 1750-1970.

The economic, political and cultural life of the majority of human beings has been modified by the events comprising the great revolution. Its influence has been, and continues to be, planet-wide. Consciously or unconsciously, human beings have been brought into contact with influences that are transforming them as they revolutionize human society.

Western man and his way of life have been primarily responsible for this great revolution. The changes brought about in the human life pattern in the course of the great revolution have created a new world--in structure, in function, in outlook, in stepped-up capacity for even more spectacular changes in the future.

Instead of regarding human beings and human society as unchangeable and sacred we must regard both as a part of our social problem: taking the steps necessary to reach and occupy the highest possible levels of social and individual health and effectiveness. We can and should make every effort to improve human society. We should be equally concerned to improve man and his nature.

CHAPTER NINETEEN

MAN COULD BREAK OUT OF THE AGE-LONG PRISON HOUSE OF CIVILIZATION AND ENTER A NEW WORLD

We humans have been living for ages with various lifestyles--as hunters and fishermen, as herdsmen, as cultivators of the soil, as craftsmen, as traders and merchants, as professionals, as exploiters, as parasites, wreckers and plunderers. On the whole, our energies have been spent in relatively small, self-sufficient groups, staying close to nature, as a part of nature.

Occasionally we have turned from this "natural" way of life, to build towns and cities, experimenting with large scale mass enterprises and expanded aggregates of population, wealth and centralized authority to which we have given the name of civilizations.

These civilizations, in their turn, have passed through a recognizable life cycle--the cycle of growing, developing, maturing, aging, breaking up and disappearing. One aspect of their civilized life was the keeping of records. Another aspect was building with baked clay and stone. Baked clay, some metals and stone, have withstood the wear and tear of time, sheltered in the temples and tombs which we are uncovering, deciphering, translating.

While engaged in these scholarly pursuits, our variant of the pattern--western civilization--has been passing through the customary life cycle. If we read the signs correctly, western civilization reached the high point in its cycle toward the end of the last century. Since then, for seventy-five years, it has been on the decline.

If we accept the cycle of civilization as one of the facts or sequences presented to us by history, we may continue to pass submissively through the successive stages of decline until western civilization is liquidated by the same forces that wiped out preceding civilizations. This would be the normal course of a cycle of civilization as it appears in recorded history.

Need we follow this course? Must we follow it?

History answers "yes" and also "no."

History answers "yes"--the record to date reads that way.

But the record of history also shows that men have repeatedly interfered and intervened in the historical process by discovery and invention. The historical record is subject to change. Man is not entirely free. Neither is he helplessly bound on the wheel of necessity, presently known as civilization.

In Chapter 10 we listed a number of discoveries and inventions which have greatly increased man's control over his own destiny. As these innovations are embodied in the life styles of planet-wide human society, there is every likelihood that men can deal with

the future almost as comprehensibly as they now deal with the past. Those who take this position argue that humanity has reached a point at which it may break out of the present cycle of civilization and begin a new cycle which will correspond with the possibilities brought to mankind during the great revolution of 1750-1970.

The idea is not new. It has appeared repeatedly in various forms: individual withdrawal from the world and its troubles to live solitary, perfected, sin-free existences; the formulation of plans for utopian or ideal communities; the establishment of such communities--apart from the workday world; revolutionary mass movements away from the current time of social troubles into a more workable, more acceptable, more basically productive and fundamentally creative life style.

Hermits and reclusive monastic life need not concern us here. They are to be found in many parts of the existing society. They live their lives apart from the main currents of human life. We may make the same comment, with slight modifications, on intentional communities organized within the bounds of surrounding civilizations. They meet the needs of exceptional individuals who find the existing order intolerable and who wish to move at once into a more congenial community life. Intentional communities founded to demonstrate particular social or economic theories usually are short-lived, covering, at best, one or two generations.

Intentional communities organized around ethical or social principles are more enduring, lasting through generations and sometimes through centuries. During their existence they may have considerable influence on the communities of which they are a part. At best they parallel the life of the civilization against which they protest, while they share its problems. Religiously oriented intentional communities may be found today in many of the countries composing western civilization.

What concerns us here is the split of western civilization into two broadly divergent groups: capitalism and socialism-communism.

Capitalism, in its present monopoly form, is the outcome of a thousand years of development. Throughout its existence it has been politically and economically competitive. The vehicle of political competition began as the nation, then continued as the empire. Economically, the vehicle of competition has become the profit-seeking business corporation, backed politically and often subsidized economically by the nation or empire.

As western civilization has developed, nations and empires have tended to form more or less permanent alliances. Business corporations likewise have tended to establish conglomerates which include widely divergent businesses, some limited to one nation or empire, some international.

Historically, the present-day business community developed out of a segmented European feudal society as a protest against political restrictions. Its early key-note was laissez-faire--freedom of businessmen to make economic policy and accumulate profits. The practical outcome of laissez-faire economy has been monopoly or finance capitalism functioning through the sovereign state or empire.

Marxian socialism-communism, organized and developed largely since 1848, has grown up as a rebellion against monopoly capitalism. At it matured, after revolutions in Mexico, China, Tsarist Russia and East Europe, it became an alternative and even a competitive life style. Marxism has been, at least in theory, cooperative rather than competitive. Its objective has been not private profit but a higher standard of economic and social life for exploited masses of the business community and of the Third World. Capitalism has had as its slogan "Every man for himself". The slogan of Marxism is "Serve the whole people".

Until 1917 Marxism was a body of social theory and a program of specific political demands. In the period from 1848 to 1917 Marxism operated through minority political parties organized in each nation, but linked together internationally in loose federations, except during the brief existence of the Communist International from 1919 to 1943.

Beginning with the Russian Revolution of 1917, Marxism became a basic state doctrine, first in the Soviet Union and subsequently in more than a dozen other nations of East Europe and Asia. The area of Marxist influence, as expressed in socialist construction, spread slowly from 1917 to 1943 and rapidly during and immediately after the war of 1936-1945.

Today about a billion human beings live in countries of East Europe and Asia calling themselves socialist-communist. A second billion human beings live chiefly in West Europe, the Americas and Australasia calling themselves capitalist. A third billion, the remaining segment of mankind, living chiefly in Africa, Asia and Latin America make up the "Third World," most of which consists of former colonies and dependencies of the 19th century empires.

At the beginning of the great revolution in 1750 the planet was occupied by the European empires, their colonies and dependencies, with a segment under the control of the crumbling Chinese and Turkish empires. The ensuing two centuries

witnessed a political, economic and social transformation that reached across every continent.

The revolutionary process is far from complete in 1975. Capitalism and Marxism are still pitted against each other--ideologically, politically, culturally. The Marxians form a revolutionary front. Capitalists retort with counter-revolution. Nation by nation the third world is taking sides.

The capitalist world is suffering from the rise and fall of the business cycle, from inflation and unemployment, from the scourge of militarism; from the exhaustion of two general wars in one generation; from absence of any positive common program or commonly accepted means of administering public affairs; from its failure to provide its young people with a satisfactory reason for existence, and from the fatal malady of fragmentation which is the logical counterpart of every major effort at coordination, consolidation and unification. Western civilization, despite repeated efforts, was never able to establish the kind of superficial unity that marked the high point in the Egyptian and Roman civilizations. The stresses and strains of the current great revolution have introduced into western civilization new disintegrative forces of which the capitalist-Marxist confrontation is the most extensive, divisive and decisive.

The Marxist world, in its spectacular rise during less than a century, offers the only workable alternative to declining and disintegrating western civilization. It presents an alternative theoretical program for dealing with the transition from the built-in competitiveness of western civilization to the built-in cooperativeness of a planned, coordinated, federated socialist-communist world order.

The Soviet Union and its East European socialist neighbors have survived the wars of 1914 and 1936; have survived the capitalist conspiracy to strangle infant Marxism in its cradle. In a remarkably brief period the Soviet Union has moved from a position of cultural backwardness to become the number two nation in productivity and perhaps even number one in fire power.

Today Asia's active development of several variants of Marxism is defended against any repetition of Hitler's 1941 drive to the East by the massive land barrier of the Soviet Union and its East European Marxist associates.

On the west, Asia is protected by the vast expanses of the Pacific Ocean against the determined efforts of the Washington government to check the spread of Marxism. Washington's current effort to become _The_ Pacific power and also _The_ Asian power have been blocked and perhaps thwarted by the defeat of General MacArthur and his international forces in the Korean War of 1950-53, and by the unanticipated and unbelievable resistance mounted by the peoples of South East Asia against the repeated efforts made by Washington to replace the French imperial presence there after its overwhelming defeat in 1954.

The decisive political developments in South and East Asia following war's end in 1945 were first, the expulsion of the British, French and Dutch from their military strongholds in the area; second, the spectacular unification of China and its rapid advance from inferiority and political inconsequence to a place among the three major world powers; third, the meteoric comeback of Japan after its unconditional surrender in 1945; and fourth, the failure of the costly effort mounted by Washington after 1954 to establish itself in a position from which it could dominate the Pacific Ocean and East Asia.

So much we may learn from history. Turning from the past and looking at the trends of the immediate future, it seems likely that Marxism will continue for at least some years to be the dominant force in Asia. Furthermore, the Marxian presence in Asia will include both the Soviet Union in Northern Asia and China in South Asia. Both countries are unquestionably stabilized economically and viable politically. Both are headed away from capitalist imperialism. Both are moving toward Marxian forms of socialism-communism.

The wars in South East Asia after the expulsion of the French in 1954 were organized, financed and armed primarily by the Washington government. They were avowedly aimed at the up-rooting of Marxism from the area. They not only failed in their main objective but they gave the Soviet Union and the Chinese a chance to pit their advisers, technicians and military equipment against that of the United States as the major capitalist contender in the area. This phase of the counter-revolutionary drive to reestablish monopoly capitalism and imperialism in the Far East thus far has met with decisive and humiliating defeat.

This defeat marks the end of the capitalist occupation of Far Asia. It also opens the way for the Marxists to demonstrate the workability of socialism-communism as a lifestyle for Asians and, presumably, for other segments of the Third World.

Success of the Marxists in maintaining and extending their presence in Asia will make it politically and culturally possible for them to take five essential steps:

First, to extend the developing pattern of collective responsibility and collective action around the earth as rapidly as possible. If such an extension proves feasible, it should give Marxism a real priority in stabilizing the economy and building up the political vigor of the Far East.

Second, organized counter-revolution could be liquidated and revolutionaries, willing to take on the responsibility, could be provided with necessary authority, leadership and equipment.

Third, moving along with the formulation and fulfillment of carefully developed plans for socialist construction in all of its ramifications, to close the door gradually, step by considered step, on exploitation and profiteering. In their places, well-laid plans could be drawn up for developing a people's socialist-communist economy in the more backward areas of Africa, Asia and the Americas.

Fourth, the new economy could be federated as it was established and stabilized, with special attention to the need for a maximum of local self help to balance against pressures toward bureaucracy and the development of overhead costs.

Fifth, with one eye on its need for integration into a socialist-communist collective planetary economy, the other eye must be kept on the planetary chain of which the earth is an essential part.

Life is a process operating through the linking of causes and their effects. This is as true of social life as it is of individual life. Reviewing history we check man's past actions and learn by so doing. Turning to the future we plan and prepare to set in motion that conglomerate of causes (plans) best calculated to assure a good life individually, socially, cosmically--with a strong emphasis on the time honored sequence: good, better, best.

It is our opportunity, our destiny, and our responsibility to keep on living, constructing, creating. We must live, not die. We must not stop. We must go on.

By such steps we humans could by-pass the restrictions and limitations imposed on human creative genius by the structure and function of civilization. In its place we could elaborate a substitute inter-planetary culture in which a chastened, improved, rejuvenated humanity could play a creative role, in accordance with our capacities and our destiny as an integral part of the joint enterprise to which our sun furnishes light, warmth and vibrant energy. We have latent among us the talent and genius necessary to play such a part. Do we also have the imagination, courage and daring to accept the challenge and take our post of duty in the team that is directing the expansion of our expanding universe?

SUGGESTED READINGS AND REFERENCES

Among the books consulted in preparation of this essay on civilization as a social institution, UNESCO _History of Mankind_ holds first place. The authors describe the work as "the first global history, planned and executed from an international viewpoint". The subtitle of the six volumes is "Cultural and Scientific Development".

The work is published under the auspices of the United Nations Educational, Scientific and Cultural Organization by an International Commission presided over by Professor Pauls E. deBerredo Carneiro of Brazil. The Commission consists of 23 members, mostly academicians from 23 countries. The commission also has a corresponding membership of 93 drawn chiefly from the academic personnel of 42 countries.

Textual material for the _History of Mankind _was prepared and edited by hundreds of experts in the widely ranging fields covered by the _History_. Final approval of the text came from the Commission. In cases where there were differences of opinion or of interpretation, varying and opposing points of view are presented.

_The History of Mankind _is in six volumes.

I. Prehistory and The Beginnings of Civilization.

II. The Ancient World.

III. The World A.D. 400 to A.D. 1300.

IV. The World A.D. 1300 to the End of the Eighteenth Century.

V. The World in the Nineteenth Century.

VI. The Twentieth Century. All but the first volume of the _History_ deal with the epoch during which civilization has played a fateful role in world affairs.

Professor Arnold J. Toynbee's ten volume _Study of History_ is concerned chiefly with the rise and decline of those civilizations which have left a noteworthy historical record. His emphasis is geographical and political rather than cultural and social. The same thing may be said of other histories of civilization. They stress personalities, nations and empires.

There are few books which approach the study of civilization as a stage or level of human culture. Among them are:

Abbott, Wilbur C, _The Expansion of Europe_, N.Y.: Holt, 1918. 2 vols.
